ACCREDITATION

Stanford University is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the Registrar.

STATEMENT OF NONDISCRIMINATORY POLICY

Stanford University admits students of either sex and any race, color, religion, sexual orientation, or national and ethnic origin to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. It does not discriminate against students on the basis of sex, race, age, color, disability, religion, sexual orientation, or national and ethnic origin in the administration of its educational policies, admissions policies, scholarships and loan programs, and athletic and other University-administered programs.

ADDITIONAL INFORMATION

Additional information on Stanford University can be obtained through Stanford's website at www.stanford.edu.

Every effort is made to ensure that the course information, applicable policies, and other materials contained in this bulletin are accurate and current at the time the bulletin goes to press. The University reserves the right to make changes at any time without prior notice. The bulletin is also available on the University's web site at: www.stanford.edu/dept/registrar/bulletin/.
The Stanford Bulletin may be purchased from the Stanford Bookstore. To receive the bulletin via second class periodical mail (U.S. only), send a $7.45 check or money order (payable to Stanford University) to the address below. To receive the bulletin via first class mail (U.S. only) send a $11.30 check or money order (payable to Stanford University) to the address below. The price is subject to change. California residents add $.60 state sales tax.

Welcome to Stanford

On October 1, 1891, nearly 500 enthusiastic young men and women were on hand for opening day ceremonies at Leland Stanford Junior University. They came from all over: many from California, some who followed professors hired from other colleges and universities, and some simply seeking adventure in the West. They came to seize a special opportunity, to be part of the pioneer class in a brand new university. They stayed to help turn an ambitious dream into a thriving reality. As a pioneer faculty member recalled, "Hope was in every heart, and the presiding spirit of freedom prompted us to dare greatly."

For Leland and Jane Stanford on that day, the University was the realization of a dream and a fitting tribute to the memory of their only son, who had died of typhoid fever weeks before his 16th birthday, at an age when many young men and women were planning their college educations.

From the beginning, it was clear that Stanford would be different. It was coeducational at a time when single-sex colleges were the norm. It was non-sectarian when most private college were still affiliated with a church. And it offered a broad, flexible program of study while most schools insisted on a rigid curriculum of classical studies. Though there were many difficulties during the first months (housing was inadequate, microscopes and books were late in arriving from the East) the first year foretold greatness. As Jane Stanford wrote in the summer of 1892, "Even our fondest hopes have been realized."

What manner of people were this man and this woman who had the intelligence, the means, the faith, and the daring to plan a major university in Pacific soil, far from the nation's center of culture?

ABOUT LELAND STANFORD

Although he was educated as a lawyer, Leland Stanford, together with Jane, came to California in 1852 to join his five brothers in their mercantile business in the gold fields. They established large-scale operations in Sacramento, where Mr. Stanford became a leading figure in California business and politics. One of the "Big Four" who built the western link of the first transcontinental railroad, he was elected Governor of California and later United States Senator. One of the founders of the Republican Party in California, he was an ardent follower of Abraham Lincoln and is credited with keeping California in the Union during the Civil War.

THE CASE FOR A LIBERAL EDUCATION

Despite the enormous success they achieved in their lives, Governor and Mrs. Stanford had come from families of modest means and had built their way up through a life of hard work. So it was natural that their first thoughts were to establish an institution where young men and women could "grapple successfully with the practicalities of life." As their thoughts matured, however, theses ideas of "practical education" enlarged to the concept of producing cultured and useful citizens who were well-prepared for professional success. In a statement of the case for liberal education that was remarkable for its time, Leland Stanford wrote, "I attach great importance to general literature for the enlargement of the mind and for giving business capacity. I think I have noticed that technically educated boys do not make the most successful businessmen. The imagination needs to be cultivated and developed to assure success in life. A man will never construct anything he cannot conceive."

STANFORD LANDS AND ARCHITECTURE

The campus occupies what was once Leland Stanford's Palo Alto farm and the favorite residence of the Stanford family. The Stanfords purchased an existing estate in 1876 and later acquired much of the land in the local watershed for their stock farm, orchards, and vineyards.

The name of the farm came from the tree El Palo Alto, a coast redwood (Sequoia sempervirens) that still stands near the northwest corner of the property on the edge of San Francisquito Creek. Many years ago, one of the winter floods that periodically rushed down the arroyo tore off one of its twin trunks, but half of the venerable old tree lives on, a gaunt and time-scared monument. Named in 1700 by Spanish explorers, El Palo Alto has been the University's symbol and the centerpiece of its official seal.

The Stanfords gave their farm to the university in the Founding Grant of 1885. They personally financed the entire cost of construction and operation of the University until 1903, when surviving founder Jane Stanford turned over control to the Board of Trustees. The founding gift was in excess of $21 million, not including the land and buildings.

The general concept for the University grounds and buildings was conceived by Frederick Law Olmsted, the designer of Central Park in New York. A brilliant young Boston architect, Charles Allerton Coldidge, further developed the concept in the style of his late mentor, Henry Hobson Richardson. The style, called Richardsonian Romanesque, is a blend of Romanesque and Mission Revival architecture. It is characterized by rectilinear sandstone buildings joined by covered arcades formed of successive half-circle arches, the latter supported by short columns with decorated capitals.

More than one hundred years later, the University still enjoys the original 8,180 acres (almost 13 square miles) of grassy fields, eucalyptus groves, and rolling hills that were the Stanfords' generous legacy, as well as the Quadrangle of "long corridors with their stately pillars" at the center of campus. It is still true, as the philosopher William James said, during his stint as a visiting professor, that the climate is "so friendly . . . that every morning wakes one fresh for new amounts of work."

CURRENT PERSPECTIVES

In other ways, the University has changed tremendously on its way to recognition as one of the world's great universities. At the hub of a vital and diverse Bay Area, Stanford is an hour's drive south of San Francisco and just a few miles north of the Silicon Valley, an area dotted with computer and high technology firms largely spawned by the University's faculty and graduates. On campus, students and faculty enjoy new libraries, modern laboratories, sports facilities, and comfortable residences. Contemporary sculpture, as well as pieces from the Stanford Museum's extensive collection of sculpture by Auguste Rodin, is placed throughout the campus, providing unexpected pleasures at many turns.

The Iris and B. Gerald Cantor Center for Visual Arts at Stanford University opened in January 1999. The center includes the historic museum building, the Rodin Sculpture Garden and a new wing with spacious galleries, auditorium, cafe, and bookshop. At the Stanford Medical Center, world-renowned for its research, teaching, and patient care, scientists and physicians are searching for answers to fundamental questions about health and disease. Ninety miles down the coast, at Stanford's Hopkins Marine Station on the Monterey Bay, scientists are working to better understand the mechanisms of evolution, human development, and ecological systems.

The University is organized into seven schools: Earth Sciences, Education, Engineering, the Graduate School of Business, Humanities and Sciences, Law, and Medicine. In addition, there are more than 30 interdisciplinary centers, programs, and research laboratories (including the Hoover Institution on War, Revolution and Peace; the Institute for International Studies; the Stanford Linear Accelerator Center; and the Stanford Center for the Study of Families, Children, and Youth) where faculty from a wide range of fields bring different perspectives to bear on issues and problems. Stanford's Overseas Studies Program offers students in all fields remarkable opportunities for study abroad, with campuses in Berlin, Buenos Aires, Florence, Kyoto, Oxford, Paris, Puebla, Rome, and Santiago.

STANFORD PEOPLE

By any measure, Stanford's faculty, which numbers approximately 1,595, is one of the most distinguished in the nation. It includes 16 Nobel laureates, 3 Pulitzer Prize winners, 20 National Medal of Science winners, 114 members of the National Academy of Sciences, 204 members of the American Academy of Arts and Sciences, 72 members of the National Academy of Engineering, and 25 members of the National Academy of Education. Yet beyond their array of honors, what truly distin-
guishes Stanford faculty is their commitment to sharing knowledge with their students. The great majority of professors teach undergraduates both in introductory lecture classes and in small advanced seminars.

Enrollment in Autumn Quarter, 1998 totaled 14,144, of whom 6,591 were undergraduates and 7,553 were graduate students. Like the faculty, the Stanford student body is distinguished. Approximately eight students apply to Stanford for every place in the freshman class. Seventy-one Stanford students have been named Rhodes Scholars and 39 have been named Marshall Scholars. In 1997-98, the completion or graduation rate for students who entered Stanford University full-time in 1992 was 93 percent. Stanford awarded 4,557 degrees in 1997-98, of which 1,694 were baccalaureate and 2,863 were advanced degrees.

Stanford students also shine in a tremendous array of activities outside the classroom from student government to music, theater, and journalism. Through the Haas Center for Public Service, students participate in dozens of community service activities, such as tutoring programs for children in nearby East Palo Alto, the Hunger Project, and the Arbor Free Clinic.

In the athletic arena, Stanford students have enjoyed tremendous success as well. Stanford fields teams in 33 Division I varsity sports. Of Stanford’s 59 NCAA team titles, 14 have been captured in the past four years, placing Stanford at the top among the nation’s most title-winning schools of the early ’90s. In 1998-99, Stanford won one NCAA team title in women’s tennis and a collegiate championship in synchronized swimming. Seven teams placed second in the nation, including men’s cross country, men’s soccer, men’s and women’s swimming, men’s track and field, and men’s and women’s water polo. Last year’s success once again affirmed Stanford as one of the nation’s top athletic programs, as the Cardinal captured a fifth consecutive Sears Director’s Cup title. Athletic success has reached beyond The Farm, as well, with 49 Stanford athletes and coaches taking part in the 1996 Olympics in Atlanta. Intramural and club sports are also popular; over 1,000 students take part in the club sports program, while participation in the intramural program has reached 9,000, with many students active in more than one sport.

Stanford graduates can be found in an extraordinary variety of places: in space (Sally Ride, ’73, Ph.D. ’78, was the first American woman in space); on the news (Ted Koppel, A.M. ’62, created the successful program Nightline); off-Broadway (David Henry Hwang, ’79, received a Tony Award for his celebrated work, M. Butterfly); at the helm of major corporations (Bill Hewlett and David Packard, both ’34, Engr. ’39, started their multi-billion dollar company, Hewlett-Packard, in a nearby garage, and, more recently, Scott McNealy, ’80, founded Sun Microsystems, and Chih-yuan (Jerry) Yang, ’94, and David Filo, ’90, founded Yahoo); and on the U.S. Supreme Court (four Stanford graduates, Sandra Day O’Connor, ’50, J.D. ’53; Anthony Kennedy, ’58; William Rehnquist, ’48, J.D. ’52; and Stephen Breyer, ’59, currently sit on the high court).

LOOKING AHEAD

In her address to the Board of Trustees, in 1904, Jane Stanford said, “Let us not be afraid to outgrow old thoughts and ways, and dare to think on new lines as to the future of the work under our care.” Her thoughts echo in the words of current Stanford President Gerhard Casper, who has said, “The true University must reinvent itself every day. . . . At Stanford, these are days of such reconsideration and fresh support for our fundamental tasks, teaching, learning, and research.”

ADMINISTRATIVE ORGANIZATION

EXECUTIVE OFFICERS, 1999-2000

President: Gerhard Casper
Provost: John L. Hennessy
Vice President for Business Affairs and Chief Financial Officer: Mariann Byerwalter
Vice President for Development: John B. Ford
Vice Provost and Dean of Research and Graduate Policy: Charles H. Kruger
Vice Provost and Dean for Institutional Planning and Operations: Geoffrey Cox
Vice Provost and Dean of Student Affairs: James Montoya
Chief Executive Officer, Stanford Management Company: Laurence R. Hosagland
Chief Information Officer, Information Technology Systems and Services: Raman Khanna
General Counsel: Michael Roster
President and Chief Executive Officer, UCSF Stanford Health Care: Peter W. Van Etten
University Librarian and Director of Academic Information Resources: Michael A. Keller
Dean of Graduate School of Business: Robert Joss
Dean of Continuing Studies Program: Charles Junkerman
Dean of School of Earth Sciences: Franklin M. Orr, Jr.
Dean of School of Education: Richard J. Shavelson
Dean of School of Engineering: James D. Plummer
Dean of School of Humanities and Sciences: Malcolm R. Beasley
Dean of School of Law: Kathleen Sullivan
Dean of School of Medicine: Eugene A. Bauer
Director of Hoover Institution: John Raisian
Director of Stanford Linear Accelerator Center: Jonathan Dorfan

ORGANIZATION

BOARD OF TRUSTEES

Powers and Duties—The Board of Trustees is custodian of the endowment and all properties of the University. The Board administers the invested funds, sets the annual budget, and determines policies for operation and control of the University. The powers and duties of the Board of Trustees derive from the Founding Grant, amendments, legislation, and court decrees. In addition, the Board operates under its own bylaws and a series of resolutions on major policy.

Membership—Board membership is set at 35, including the President of the University who serves ex officio and with vote. Trustees serve a five-year term and are eligible for appointment to one additional five-year term. At the conclusion of that term, a Trustee is not eligible for reelection until after a lapse of one year. Eight of the Trustees are elected or appointed in accordance with the Rules Governing the Election or Appointment of Alumni Nominated Trustees. Four of the Alumni Nominated Trustees must be 35 years of age or under and four older than 35 when elected. They serve a five-year term.

Officers of the Board—The officers of the board are a chair, one or more vice chairs, and a secretary. Officers are elected to one-year terms at the annual meeting in June. Their terms of office begin July 1.
THE PRESIDENT

The Founding Grant prescribes that the Board of Trustees shall appoint the President of the University and that the Board shall give to the President the following powers:

To prescribe and enforce the course of study and the mode and manner of teaching.

Such other powers as will enable the President to control the educational part of the University to such an extent that the President may justly be held responsible for the course of study therein and for the good conduct and capacity of the professors and teachers.

The President is also responsible for the management of financial and business affairs of the University, including operation of the physical plant.

The President appoints the following, subject to confirmation by the Board: Provost, Vice President for Business Affairs and Chief Financial Officer, Vice President for Development, and General Counsel.

COMMITTEES AND PANELS

University committees are appointed by and are primarily responsible to the President. Such committees deal with matters on which the responsibility for recommendation or action is clearly diffused among different constituencies of the University. In accordance with the Report on the Committee Structure of the University, Academic Council members are appointed to University committees on nomination of the Senate Committee on Committees and student members on nomination of the Associated Students of Stanford University (ASSU) Committee on Nominations. The President takes the initiative in the appointment of staff members to such committees. Although immediately responsible to the President, University committees may be called upon to report to the Senate of the Academic Council or the ASSU Senate. Charges to such committees are set by the President on recommendation of the Committee on Committees and others. There are nine standing University committees, as follows:

Advisory Panel on Investment Responsibility (APIR)
Committee on Athletics, Physical Education, and Recreation (C-APER)
Committee on Faculty and Staff Benefits (C-FSB)
Committee on Health and Safety (C-HS)
Committee on Land and Building Development (C-LBD)
Committee on Public Events (C-PE)
Editorial Board of the Stanford University Press (EB-SUP)
KZSU Board of Directors
Panel on Outdoor Art

Additionally there are six standing administrative panels which are appointed by the Vice Provost and Dean of Research and Graduate Study, and which report through him to the President.

Administrative Panel on Biosafety
Administrative Panel on Human Subjects in Medical Research-A
Administrative Panel on Human Subjects in Medical Research-D
Administrative Panel on Human Subjects in Non-Medical Research
Administrative Panel on Laboratory Animal Care
Administrative Panel on Radiological Safety

PROVOST

The Provost, as the chief academic and budget officer, administers the academic program (instruction and research in schools and other unaffiliated units) and University services in support of the academic program (student affairs, libraries and information resources, and institutional planning). In the absence or inability of the President to act, the Provost becomes the Acting President of the University. The Provost shares with the President conduct of the University’s relations with other educational institutions, groups, and associations.

Schools of the University—The program of instruction in the University is organized into seven schools: Graduate School of Business, School of Earth Sciences, School of Education, School of Engineering, School of Humanities and Sciences, School of Law, School of Medicine.

The deans of the schools report to the Provost.

THE ACADEMIC COUNCIL

According to the Articles of Organization of the Faculty, originally adopted by the Board of Trustees in 1904 and revised in 1977, the powers and authority of the faculty are vested in the Academic Council consisting of: (1) the President of the University; (2) tenure-line faculty—Assistant, Associate, and Full Professor; (3) nontenure-line faculty—Associate and Full Professor followed by the parenthetical notation (Teaching), (Performance), (Applied Research), or (Clinical); (4) nontenure-line research faculty—Research Assistant Professor, Associate Professor (Research), Professor (Research); (5) Senior Fellows in specified policy centers and institutes; and (6) certain specified officers of academic administration.

In the Spring of 1968, the Academic Council approved the charter for a Senate to be composed of 55 representatives elected by the Hare System of Proportional Representation and, as ex officio nonvoting members, certain major officers of academic administration.

In the allocation of representation, each school constitutes a major constituency. The Senate may create from time to time other major constituencies as conditions warrant. Approximately one-half of the representatives are allocated to constituencies on the basis of the number of students registered in those constituencies and the remainder on the basis of the number of members of the Academic Council from each constituency.

COMMITTEES

Committees of the Academic Council are created by and responsible to the Senate of the Academic Council and are appointed by the Committee on Academic Committees of the Senate. Such committees deal with matters on which the primary responsibility for action and decision lies with the Academic Council or, by delegation, the Senate. Pursuant to the Senate’s acceptance on September 25, 1969 of the Report from the Committee on Committees on the Committee Structure of the University and subsequent Senate action, the Senate has established seven standing Committees of the Academic Council, as follows:

Committee on Academic Appraisal and Achievement (C-AAA)
Committee on Academic Computing and Information Systems (C-ACIS)
Committee on Graduate Studies (C-GS)
Committee on Libraries (C-Lib)
Committee on Research (C-Res)
Committee on Undergraduate Admissions and Financial Aids (C-UAFA)
Committee on Undergraduate Studies (C-US)

Information regarding charges to these committees is available from the Office of the Academic Secretary to the University.

ASSOCIATED STUDENTS

Two weeks after the University opened in 1891, students met to form the Associated Students of Stanford University (ASSU). All registered students are members of the Association. They are governed by the ASSU Constitution and Bylaws, which was last revised and approved by student vote in April 1996, and approved by the President in May 1996.

Executive—The President and Vice President serve as the chief executives and representatives for the Association. The Financial Manager acts as business manager of the ASSU and controller of the Students’ Organizations Fund, wherein ASSU and student organization funds are deposited.

Legislative—The ASSU Senate is composed of 30 elected representatives, 15 from the undergraduate and graduate communities. The Senate elects its own chair and meets every other week to discuss and act on
issues pertinent to student life at Stanford. The Senate has responsibility to determine the budget of the Association and its agencies, and their budgetary, financial, investment, business, and operating policies, and to establish rules ensuring that funds derived from fees levied upon the members of the Association are expended and accounted for properly.

Judicial—An ASSU Constitutional Council evaluates the constitutionality of acts of the Senate or President. For information about University judicial policies, see "The Legislative and Judicial Charter" section of this bulletin.

Note—Revisions to the ASSU Constitution were under construction at the time the Stanford Bulletin went to press.
ADMISSION

UNDERGRADUATE

MATRICULATED STUDY

In order to preserve the residential character of the University and to maintain a favorable student-faculty ratio, Stanford has a limited undergraduate enrollment. The anticipated size of the freshman class is 1,600 students. Between 100 and 120 transfer students, entering either the sophomore or junior class, are also admitted each year. For both freshman and transfer admission, the University receives many more applications from qualified students than there are places available.

Stanford's undergraduate community is drawn from throughout the United States and many other countries. It includes men and women whose abilities, intellectual interests, and personal qualities will allow them to benefit from and contribute to the University's wide range of teaching and research programs in the humanities, sciences, and engineering. The University admits students with highly developed skills in particular areas, as well as those with versatility in a number of fields. A comprehensive financial aid program aims to promote broad socioeconomic representation. Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant's economic resources except in the case of some international students.

Affirmative action programs encourage development of a truly multicultural community, and special effort is made to attract, enroll, and provide support services for a group of undergraduates that is diverse in many ways. Admission practices are in accordance with University policies on nondiscrimination, and there are no restrictive quotas of any kind.

The primary criterion for admission is academic excellence: a compound of exceptional ability, scholastic performance in relation to available opportunities, and promise of intellectual growth. A secondary criterion is personal achievement outside the classroom in a range of pursuits including academic activities, the creative and performing arts, community service and leadership, athletics, and other extracurricular areas. Persistence and marked effectiveness in one or more distinct areas of personal achievement count for more than scattered involvement; initiative, curiosity, and vigor are also valued. The consideration of applicants for admission focuses on scholastic performance (grades, honors, and strength of program); scores on standardized national tests; documented perseverance and attainment in activities outside the classroom; quality of conception and writing in the personal statement; and enthusiasm of recommendations from staff at the secondary school. Admission officers base their comparative evaluation of each applicant on these criteria.

Applicants in certain categories may receive special consideration provided they meet the basic requirements of academic excellence and personal achievement. The University is committed to a substantial representation in the undergraduate community of African Americans, Mexican Americans, and Native American Indians, as well as others whose backgrounds and experience provide additional dimensions that will enhance the University's programs. Children of Stanford graduates receive preferential consideration in choices among applicants with approximately equal qualifications, and children of eligible Stanford faculty and staff receive favorable consideration provided they too meet basic requirements. The Department of Athletics may request special consideration for outstanding athletes. In all cases, the final decision on an application rests with the Dean of Admission and Financial Aid.

Stanford expects students to adhere to the principles of its Fundamental Standard: "to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens." Admission officers seek undergraduates they believe will benefit most from the University's resources, contribute to its community and to the education of their fellow students, and proceed to a lifetime of intellectual, personal, and societal accomplishment.

Since application procedures and requirements vary from year to year, specific information regarding application for admission as either a freshman or transfer student should be obtained by writing to the Office of Undergraduate Admission, Stanford University, Stanford, CA 94305-3005.

NONMATRICULATED STUDY

Admission to Stanford as a nonmatriculated student during Autumn, Winter, and Spring Quarters is not routinely approved except under extenuating circumstances. Nonmatriculated students authorized to enroll at Stanford University are not admitted to any Stanford degree program and are permitted to register for a specific period, usually one, two, or three quarters. Financial assistance from Stanford University is not available. Acceptance as a nonmatriculated student does not guarantee subsequent admission as a matriculated student. Students interested in nonmatriculated status during the Autumn, Winter, and Spring Quarters should contact the Registrar's Office. The two most common categories of nonmatriculated undergraduate status are described below.

High School Nonmatriculated Students—Local high school students are eligible to be considered to attend Stanford as nonmatriculated students on a limited basis when they have exhausted all of the courses in a given discipline offered by their high school. Nonmatriculated high school students are permitted to enroll in one course per quarter and are required to pay the applicable tuition if admitted.

Post-High School Nonmatriculated Students—Stanford admits nonmatriculated undergraduates, who have already earned a high school degree or equivalent, only under extraordinary circumstances. Such students are required to pay full tuition if admitted, and are not eligible for financial assistance from Stanford University.

Students wishing to enroll as nonmatriculated students during Summer Quarter should contact the Summer Visitor Program. Admission to the Summer Visitor Program does not imply regular admission to Stanford for subsequent quarters or to one of Stanford's regular degree programs.

GRADUATE

MATRICULATED STUDY

Applicants from colleges and universities of recognized standing who hold a U.S. bachelor's degree or its equivalent are eligible to be considered for admission for graduate study. Details regarding degrees offered in specific departments are given in the Guide to Graduate Admission included with application materials. The number of applicants who can be admitted for work in a particular field of study at any time is limited by the facilities of the school or department and by the number of matriculated students who continue their work in that field.

The Coterminal Degree Program—This program permits matriculated Stanford undergraduates to study for bachelor's and master's degrees simultaneously in the same or different departments. Application procedures are established by each master's department. Applications must be submitted no earlier than the student's completion of 105 units, or eighth quarter of undergraduate study. Stanford quarters and transfer quarters are included (calculated by dividing the total transferred units by 15). Applications must be submitted at least four quarters before the expected conferral of the master's degree, and approved no later than the eleventh quarter of undergraduate study (Stanford quarters and transfer quarters included and calculated as above). Students who decide to apply for admission to master's programs after these deadlines are not eligible for the coterminal program and must apply through the regular graduate admission process.
APPLICATION PROCESS

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed in the Guide to Graduate Admission.

Graduate fellowship funds and assistantships are generally committed in March for the entire period comprising Autumn, Winter, and Spring Quarters of the next academic year. Awards are seldom made to students who enter the University in Winter, Spring, and Summer Quarters; such applicants must meet the same financial aid application requirements as those entering in Autumn Quarter.

Applications may be submitted electronically for graduate programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, and the Biosciences (non-M.D. programs in Medicine). Application instructions may be found at www.stanford.edu.

The Guide to Graduate Admission and application forms for graduate matriculated study may be obtained from Graduate Admissions, Registrar’s Office, Old Union, Stanford University, Stanford, California 94305-3005, except for the following programs:

Business—Applicants should write to Director of Admissions of the M.B.A., Ph.D., or Sloan Program, Graduate School of Business, Stanford University, Stanford, California 94305-5015 for information and application forms.

Law—Applicants should write to Director of Admissions, School of Law, Stanford University, Stanford, California 94305. The Law School Admissions Test is required.

M.D. Program—Applicants should write to Admissions Committee, School of Medicine, 851 Welch Road, Palo Alto, California 94304 for an AMCAS (American Medical College Application Service) application request card and information about the M.D. program. Applications and transcripts must be received by AMCAS by November 1. The Medical College Admissions Test is required.

Coterminal Master’s Program—Interested Stanford undergraduate students should contact directly the department in which they wish to pursue a master’s degree and must adhere to the application deadlines described in The Coterminal Degree Program above.

UNIVERSITY DIVISION

Under exceptional circumstances, students may be accepted for matriculated graduate study without having obtained the bachelor’s (or equivalent foreign) degree. These exceptional admissions are classified as “University Division” students. Applicants are considered for University Division admission if (1) a normal course of study has not been followed but high professional skills in the field of interest have been demonstrated; (2) the undergraduate record is exceptional and the applicant has obtained at least senior standing at an educational institution of recognized standing; or (3) the undergraduate record at a foreign institution is exceptional and is considered by Stanford to represent an amount of work that is the equivalent of a bachelor’s degree. University Division students may be required to complete additional course work to fulfill degree requirements.

NONMATRICULATED STUDY

Graduates of colleges and universities of recognized standing who hold a U.S. bachelor’s degree or its equivalent are eligible to apply for nonmatriculated graduate student status. This status may be granted to graduates of the University who have not yet enrolled or who have not been admitted to a graduate program. Applicants must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a graduate program may apply for housing but will have a low priority for assignment. No fellowships, assistantships, or Stanford loans are available for nonmatriculated students.

Nonmatriculated students who later apply for admission to a degree program must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a degree program may apply for a maximum of one quarter of nonmatriculated study toward the residency requirement for a master’s degree and two quarters for the Engineer or Ph.D. degree.

Application forms for nonmatriculated status during the regular academic year are available from Graduate Admissions, Registrar’s Office, Old Union, Stanford, CA 94305-3005. Deadlines for applying are included with the forms and are generally two months before the start of the quarter.

Applications interested in nonmatriculated student status for the Summer Quarter only should contact the Summer Session Office, Building 590, Room 104, Stanford University, Stanford, CA 94305-3005.

POSTDOCTORAL SCHOLARS

Prospective postdoctoral scholars should write directly to the department in which they wish to study.

Postdoctoral scholars who are paid as Research Affiliates through Stanford grants and contracts must enroll as nonmatriculated graduate students each quarter of their appointments. They are thereby eligible for most student benefits. Scholars who are supported by other funds have the option of registering, except in the School of Medicine which requires that all postdoctoral scholars be registered. Postdoctoral scholars must have received the Ph.D. within the last three years or the M.D. within the last six years.

The School of Medicine has an additional special student category, the School of Medicine Fellow, which is open to those holding the M.D. for more than six years or the Ph.D. for more than three years and who have been invited to Stanford to undertake further training in modern medical technology.

Postdoctoral scholars who are not required to register as nonmatriculated students may request Visiting Scholar status. This option is available only to an individual who is visiting from an outside institution or organization, who has a doctoral degree or is a recognized expert in his or her field, and whose source of funding is not Stanford. Appointments are authorized by department chairs. Visiting scholars are not eligible for student benefits.

VISITING RESEARCHERS

In limited instances, it is to the benefit of Stanford faculty to permit persons who have not yet obtained a Ph.D. (or its foreign equivalent) or who are not recognized experts in their fields to engage in research on the Stanford campus using Stanford research facilities. Such instances might include students at other universities who are engaged in doctoral research in a field of interest to the faculty member, a person doing a laboratory rotation as part of a larger research study or grant, or employees of companies who are conducting research which requires specialized equipment available only at Stanford.

In these instances, since the person is not eligible for Visiting Scholar status, they may be eligible to register as nonmatriculated graduate students in the Visiting Researcher category for a maximum of one year. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford graduate students, and the research must be of benefit to Stanford as well as to the visitor. Admission forms for visiting researchers are submitted to the Registrar’s Office by the department issuing the invitation.

Visiting researchers are charged the Permit to Attend for Services Only tuition rate quarterly and may waive the University’s student medical insurance plan only if they have comparable coverage with another
carrier. They may not enroll in or audit any courses, but in quarters they are registered, are eligible for the usual student benefits of nonmatriculated student status. Visiting researchers may apply for housing, but will have a low priority for assignments. No fellowships, assistantships, or Stanford loans are available for visiting researchers. Stanford cannot certify visiting researchers for deferment of U.S. educational loans. Citizens of other countries who enter the United States to be visiting researchers at Stanford must have an IAP-66 issued by the Bechtel International Center and must register each quarter, including Summer Quarter, to maintain their visa status.

**VISAS FOR FOREIGN STUDENTS**

All students who are not U.S. citizens or permanent residents must obtain visas for their stay in the United States. The types of visas available for students are the following:

1. **Student Visa (F-1)**, obtained with an I-20 Certificate of Eligibility issued by Stanford University. The graduate student on an F-1 visa must enroll in a full course of study. The accompanying spouse or child enters on an F-2 visa. F-2 visa holders may not work.
2. **Exchange-Visitor Visa (J-1)**, obtained with an IAP-66 Certificate of Eligibility issued by Stanford University or a sponsoring agency. This visa is issued to graduate students supported by certain agencies, foundations, and governments. In some cases, Exchange-Visitors must leave the United States at the conclusion of their programs, may not change visa status, and may not apply for permanent residency in the United States until they have returned to their home countries for at least two years. The spouse of an Exchange-Visitor enters on a J-2 visa and may, in some cases, obtain permission to work.

The certificate of eligibility is issued to a student accepted for admission only upon receipt of evidence of satisfactory proficiency in the English language and certification of adequate financial support. A student transferring from another school must obtain a new visa with a Stanford certificate of eligibility.

Information on visas is sent to admitted graduate students from the Graduate Admissions Office. Information on visas for postdoctoral scholars may be obtained from the Bechtel International Center.

The University requires that all students who are not U.S. citizens or permanent residents maintain a visa status that allows registration as students.

**FINANCIAL AID**

**UNDERGRADUATE**

The University has a comprehensive need-based financial aid program for its undergraduate students (except some international students) who meet various conditions required by the state or federal government, the University, and other outside donors.

In awarding its own funds, the University assumes that students and their parents (or spouse, in the case of married students) accept the first and primary responsibility for meeting the standard educational costs established by the University. Additionally, Stanford expects financial aid applicants to apply for and use resources from state, federal, and private funding sources, contribute from their earnings during enrollment periods, for example, summer, and use student loans and earnings from part-time employment during the academic year to meet educational expenses. If Stanford determines that an applicant and his or her family cannot meet these expenses, the University may offer student loans, recommend part-time employment during the academic year, and/or award scholarships or grants to help meet these costs. Stanford’s policy generally is to exclude undergraduates from being considered financially independent of their parents for University-administered scholarship and grant aid unless the student is an orphan, a ward of the court, or at least age 25, or has an extremely adverse home situation.

In awarding Stanford financial aid funds to meet need, that is, any gap remaining after reducing the standard budget by the University-determined need, any outside resources to which the student is entitled such as state or Pell grants, tuition benefits, and so on, Stanford first offers "self-help," which includes student loans and an academic year earnings expectation. The University normally expects that during enrollment periods, students will work and borrow up to approximately 20 percent of the standard budget. The self-help expectation may be lower for certain categories of students including those from very low-income families, those who are academically in the top five to ten percent of an entering class, and those who bring diversity to the Stanford student body. If the University-determined need is greater than the self-help expectation, Stanford awards scholarship or grant funds to meet the remaining need.

Scholarships or grants from outside private sources may change the University’s financial aid award. If the total in outside scholarships exceeds the need-based earnings expectation and loan portion of the financial aid package, the University then reduces its own scholarship or grant offer dollar for dollar.

The University considers applicants for its own scholarship and grant support beyond the twelfth quarter only if enrollment is essential in order to complete the minimum requirements for the first baccalaureate degree or major; a total of fifteen quarters is the limit for such aid. Students who enroll for a fifth year in pursuit of a coterminous program, a minor, a second major, a second degree, or the B.A.S. degree are not eligible for University scholarship and grant consideration but may apply for student loans.

**APPLICATION AND AWARD NOTIFICATION PROCESS**

**FILING DEADLINES**

- **Prospective freshmen**: Early Decision, November 1, 1999
- **Prospective freshmen**: Regular Review, February 1, 2000
- **Prospective transfers**: March 15, 2000
- **Returning students**: April 15, 2000

**APPLICANT DOCUMENTS**

The documents the applicant must submit each year for financial aid consideration vary depending on the applicant’s nationality and the type of funds sought.

- U.S. citizens and permanent residents who wish to be considered for all available funding administered by Stanford should submit the following documents. Canadians file the following except the FAFSA.
  1. **Free Application for Federal Student Aid (FAFSA)**, which must be processed by the federal processor. California residents must also submit a GPA Verification Form or SAT scores to the California Student Aid Commission (CSAC) by March 2, 2000, for Cal Grant consideration.
  2. **The PROFILE processed by the College Scholarship Service (CSS)**.
  3. **Copies of 1998 W-2 forms from the applicant’s parents for continuing students. Copies of 1998 W-2 forms and tax statements from the applicant’s parents for new students.**

A complete application for U.S. citizens and permanent residents applying for Stafford loan consideration only include:

- **Free Application For Federal Student Aid (FAFSA)**, which must be processed by the federal processor
- **Copies of 1998 W-2 forms from the applicant’s parents for continuing students. Copies of 1998 W-2 forms and tax statements from applicant’s parents for new students.**

A complete application for international students (except Canadians) includes the Foreign Student Financial Aid Application and the Certificate of Finances.

Students whose application materials are filed after the published deadlines, who have not borrowed or worked in prior years, who have not secured all external funds such as Pell and Cal Grants, can expect higher levels of self-help in their financial aid packages.

Applicants and their parents are required to submit accurate and complete information on all application documents. To monitor for accuracy and reliability of information, the University participates in a U.S. Department of Education project that samples the reliability of the data.
on a number of applications. The FAO may request documents, in addition to the application materials, to verify this information. Students will have their financial aid funds withheld or canceled and their future registration held if they fail to submit the information requested. Financial aid awards may change as a result of the verification process.

NOTIFICATION DATES

The FAO will notify early decision applicants who apply by the November filing date in December. The FAO will notify the freshman applicants who apply by the February 1 filing date in early April. Transfer applicants who submit complete applications by the March 15 filing date are normally notified of their financial aid award within 10 days of their notice of admission.

The FAO begins mailing award notices to continuing and returning applicants approximately the middle of July. Applicants who file after the filing date may not have a financial aid award or funds secured for disbursement by the Autumn Quarter payment due date.

PAYMENT AND FINANCING OPTIONS

Students whose financial aid is not available at the time registration fees are due may use the University's Deferred Payment Plan.

Parent loan and financing options may help families of students receiving financial aid meet the expected parent contribution. Many of these options are also available to families who do not qualify or apply for financial aid but feel the need for some extended financial credit to help meet the costs of attendance. Parents should also contact their employers for information about programs that may be available to them as employees' benefits to help meet college costs.

GRADUATE

Academic departments at Stanford University offer financial support to many graduate students. Funds are most often targeted to doctoral candidates and rarely cover all of a student's expenses. In addition to Stanford support, students usually need to use long-term loans, savings, liquidated assets, a spouse's earnings, or parental support. They are expected to study full time in order to attain the degree as soon as possible. Students with families to support or with medical or other special needs should budget income and expenses carefully. Loan funds alone may be insufficient to meet the expenses not covered by the Stanford award.

Students should consider part-time employment only after consultation with their department advisers and if no other alternative is possible. Students fully supported by Stanford are limited to additional employment of no more than eight hours per week; due to visa restrictions, international students may not be similarly employed.

Note—No fellowships, assistantships, or loans are available for nonmatriculated students.

FELLOWSHIPS AND ASSISTANTSHIPS

Fellowships, research assistantships, and teaching assistantships provide funds for graduate student support. Departments determine the disposition of funds available for graduate fellowship and assistantship appointments. Academic merit and availability of funds are the primary considerations in the awarding of graduate financial support. The availability of aid varies considerably among departments and programs. Support offers range from partial tuition fellowships to awards that provide full tuition and a living stipend. Some departments admit only those students to whom they can offer support or who have guaranteed funds from outside sources. Other departments may offer admission but are unable to provide financial assistance due to limited financial resources. Very few awards are given for study toward terminal master's degrees.

Application procedures and deadlines for admission and financial aid are described in the Guide to Graduate Admission. Fellowships and assistantships are normally awarded between March 15 and April 15, in accordance with the Council of Graduate Schools resolution. Acceptance of a Stanford award obliges the student to inform the department of any other support received. The Stanford award may be adjusted (see "Outside Fellowships" below). Recipients of all graduate fellowships and assistantships must register each quarter of their appointment.

POSTDOCTORAL FELLOWSHIPS

Stanford has two categories of postdoctoral scholars. Postdoctoral Research Affiliates are classified as advanced students who are employed on contracts and on research and training grants. Postdoctoral Fellows are categorized as advanced students whose funding is from outside sources, typically foundations and foreign governments. Inquiry should be made directly to the department.

OUTSIDE FELLOWSHIPS

Many Stanford graduate students hold fellowships won in national competition from outside agencies such as the National Science Foundation. Information on application procedures and terms of such fellowship programs may be obtained from reference materials in the applicant's current academic institution. If not, the student should write for information directly to the national office of the agency or foundation administering the program. A student who receives support from an outside source must notify the department immediately. The Stanford award may be adjusted.

LOANS

Graduate students who believe they will require loan assistance can apply for Federal Stafford Student Loan, Federal Perkins Loan, and University Loan programs. Inquiries for publications outlining loan program terms can be directed to Financial Aid Office, 520 Lasuen Mall, Old Union, Room 322, Stanford, CA 94305-3021; phone (888) FAO-3773 from outside the Bay Area and (650) 723-3058 locally. International students who are not permanent residents are not eligible for long-term loans.

Application—(The following information applies to all graduate students, except those in the schools of Law and Business and in the M.D. program in the School of Medicine, who should receive information about the aid application process through their respective schools.) Graduate student loan information is sent after admission; a tear off portion of that brochure may be used to request a graduate loan application packet, including detailed loan program information, forms, and instructions. Required application documents are:

1. The results of filing the Free Application for Federal Student Aid (FAFSA) with the federal processor.
2. Stanford Graduate Supplemental Application

Students who anticipate the need to use loan proceeds to pay Autumn Quarter bills should have their completed application filed with the FAO by the June prior to the beginning of the academic year. The FAO will notify the student of loan eligibility, which is based on a review of computed financial need, satisfactory academic progress, level of indebtedness, credit history, and availability of funds.

Debt Management—The University encourages wise debt management. Software is available to help students plan for future repayment.

Short-Term Loans—Emergency loans are available to all students with a good credit history, including international students, upon demonstration of ability to repay the loan within three months. These loans are not available to pay University bills.

COTERMINAL STUDENTS

Stanford undergraduate scholarship and grants are reserved for students in their first four years of undergraduate study at Stanford. University graduate fellowships are rarely given to coterminous students, but some departments award research and teaching assistantships to coterminous master's students who are eligible for such appointments in the quarter after they have completed 180 units. Students on 50 percent assistantships register for 9 units per quarter and accrue 62 percent of a full-tuition quarter of residency; such assistantships provide a salary and coverage. Most private and federal graduate fellowships are awarded only to students who have received the bachelor's degree.
HONORS COOPERATIVE PROGRAM

Under a graduate cooperative program in engineering and science, employees from over 200 companies in the San Francisco Bay area are released from work, with full compensation, to attend regular classes at Stanford. Most of these companies have joined a Stanford four-channel television network that enables students to observe live lectures with talk-back privileges in their own plants. For a list of participating companies, write to the Stanford Center for Professional Development, 496 Lomita Mall/Durand Building, Stanford University, Stanford, CA 94305-4036.

VETERANS' BENEFITS

Liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans' benefits is provided by the Office of the Registrar located in the Old Union Building. All students eligible to receive veterans' benefits while attending the University...
Tuition, Fees, and Housing

ASSESSMENTS

TUITION

Regular tuition for the 1999-2000 academic year, payable Autumn, Winter, and Spring Quarters, is as follows:

<table>
<thead>
<tr>
<th>Department/Program</th>
<th>Tuition Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>All departments and schools (except those below)</td>
<td>$7,686</td>
</tr>
<tr>
<td>Graduate Division in Engineering</td>
<td>$8,196</td>
</tr>
<tr>
<td>Graduate School of Business</td>
<td>$9,081</td>
</tr>
<tr>
<td>School of Medicine (M.D. Program)</td>
<td>$9,516</td>
</tr>
<tr>
<td>School of Law (payable Autumn and Spring semesters)</td>
<td>$13,079</td>
</tr>
<tr>
<td>J.D./M.B.A. Program (payable Autumn and Spring semesters)</td>
<td>$13,269</td>
</tr>
</tbody>
</table>

Regular tuition fees apply to the undergraduate Overseas Studies and Stanford in Washington programs. For Summer Quarter tuition rates and policies, see the Stanford University bulletin, Summer Session Catalogue, 2000.

GRADUATE STUDENTS

Advanced Graduate Registration (AGR): doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, accrued 10.5 quarters of residency, and submitted a Doctoral Dissertation Reading Committee form may request Advanced Graduate Registration status to complete their dissertations. Students pursuing Engineer degrees may apply for TGR status after admission to candidacy, completion of all required courses, and six quarters of residency. Students enrolled in master's programs may apply for TGR status upon completion of all required courses and three quarters of residency only if their program requires a final master's project.

TGR status may also be granted for one quarter only to a graduate student who is returning after a leave of absence or after reinstatement, or to graduate students who register for one final term to take a University Oral Examination, submit a thesis or dissertation, or file an Application to Graduate. Doctoral students applying for a one-quarter TGR status must also meet the doctoral criteria above except that they need only nine quarters of residency. Requirements for one-quarter TGR for master's and Engineer students are as above, but master's students need not be in a program with a final writing project requirement to qualify.

Each quarter, all TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. After the first TGR quarter, this enrollment will be conducted by the Registrar's Office if the TGR student is registered by the Friday before the study list deadline and if the TGR student has an 801 or 802 enrollment in a previous quarter. Enrollments will not be created for the TGR student who is attending a professional school. TGR students register at a special tuition rate: $940 in 1999-2000. Within certain restrictions, TGR students may enroll in additional courses, at the appropriate unit rate.

Graduate Final Requirement Registration: graduate students who need only a few remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 8 units) to cover the deficiency. This status may be used only once during a degree program.

Additional information on these registration categories is available from the Degree Progress Office in the Old Union.

Matriculated graduate students who have Stanford fellowships or assistantships that require less than full-tuition registration may register at the unit rate required by their award. Honors Cooperative students register at the unit rate.

During the Autumn, Winter, and Spring Quarters, matriculated graduate students in most departments may register at the 8-, 9-, or 10-unit rate if their enrollment plans are accepted by their departments. Students in the departments of Applied Physics, Mathematics, and Statistics, because of department affiliation with the Honors Cooperative program, are not eligible to register at less than the full-tuition rate, unless they are eligible for one of the special categories above or a departmentally-approved exception. Students in the School of Engineering may register at the 9-unit rate. Students in the schools of Law and Business, or the M.D. program in the School of Medicine, should consult appropriate school officials about tuition reduction eligibility.

Tuition exceptions may also be available for students who are faculty spouses, regular Stanford employees, or full-time educators in the Bay Area.

During Summer Quarter, most matriculated graduate students may register on the unit basis for 3 or more units. Students in schools and departments affiliated with the Honors Cooperative program, as listed above, may not register below the 12-unit rate (9-unit minimum in Statistics only).

Nonmatriculated graduate students may pay the same tuition rates as matriculated students, but must register at the 8-unit rate or above. Post-doctoral scholars who are registered as students and Visiting Researchers enroll in no courses and pay the TGR rate. Within certain restrictions,
postdoctoral students may enroll in courses if the appropriate unit rate for tuition is paid.

INTERNATIONAL STUDENTS

F1 or J1 visas are required by the U.S. Immigration and Naturalization Service. International students must be registered as full-time students during the academic year. Summer Quarter registration is not required. International graduate students comply with immigration regulations while enrolled for partial tuition if their Stanford fellowships or assistantships require part-time enrollment, if they are in AGR or TGR status, or if they are in the final quarter of a degree program. Nonmatriculated international students must register for at least 8 units.

FEES

APPLICATION FEE

Contact the Undergraduate Admissions Office for information about the undergraduate application fee and the Graduate Admissions section of the Registrar’s Office for the current graduate application fee. Application fees for the School of Law, the School of Medicine, and the Graduate School of Business vary by program. Fees are payable at the time of application and are not refundable.

ASSU FEES

The Associated Students of Stanford University (ASSU) fees are established by student vote in Spring Quarter. Fees directly fund activities of student organizations and not operations of ASSU. The 1999-2000 fees are:

- Undergraduates—Autumn, $56; Winter, $55; Spring, $60
- Graduates—Autumn, $23; Winter, $24; Spring, $25
- Law—Autumn, $23; Spring, $49

Fees are assessed each term. All fees are refundable. Refunds can be requested during the first three weeks of each quarter per instructions advertised in the Stanford Daily. Those eligible are mailed refund checks by the eighth week of the quarter or receive credit on their University bill.

DOCUMENT FEE

Stanford charges a one-time Document Fee to all students admitted to new degree or non-degree programs in 1993 or later. The fee is paid once only, regardless of the number of degrees a student may ultimately pursue. It covers the cost of a variety of University administrative services such as enrollment and degree certification, course drops and adds, diplomas, and official transcripts and their production.

HEALTH INSURANCE FEE

The University requires all registered students to carry medical insurance to provide coverage for services not provided by Cowell Student Health Services. Students are enrolled in and charged for the Stanford student health insurance plan, unless they have completed waiver procedures by the second day of instruction. Those who carry medical insurance through an alternate carrier are generally eligible for waiver of the health insurance fee.

SPECIAL FEES

New Student Orientation Fee—A fee is charged to all entering undergraduates for the costs of orientation, including room and board, and for the cost of class dues to provide funds for later activities of the class.

School of Law Course Materials Fee—A fee is charged each semester to School of Law students for supplementary course materials.

Late Fees—Charges are imposed for late registration and late submission of study lists. Amounts are listed in the quarterly Time Schedule.

Laboratory Fee—Students in chemistry laboratory courses are charged a nonrefundable fee.

Music Practice; Athletics, Physical Education, Recreation; and Dance—Courses for which special fees are charged are indicated in the Time Schedule.

Dissertation Fee—Each Ph.D., D.M.A., and Ed.D. candidate is charged a fee to cover the cost of microfilming and binding the dissertation and the cost of publishing the abstract.

International Scholar Service Fee—A one-time fee for Visa authorization documents is charged to international postdoctoral and visiting scholars.

Vehicle Registration Fee—Students must register their motor vehicles with the campus Department of Public Safety. Parking permits may be purchased at Parking and Transportation, 855 Serra Street.

HOUSING

Bulletins with further information on housing rates are Summer Session Catalogue, 2000, for Summer Quarter; School of Law for Law School; Overseas Studies for Overseas Centers.

Campus housing rates are generally below local area market rents. The approximate room rates for the 1999-2000 academic year are as follows:

<table>
<thead>

</tbody>
</table>

* All rates are approximate and subject to minor changes.

All rates are per student. Room rates are charged quarterly on the University Bill. Information on payment options and procedures is discussed in housing assignment information from Housing Assignment Services and is available in complete detail from the Bursar’s Office, Old Union, Room 105, Stanford University, Stanford, CA 94305.

A quarterly house dues fee for students is generally determined by the local staff and/or residents of the house and may be included with room and board charges on the University Bill.
MEAL PLANS*

Meal plan rates are as follows for the 1999-2000 academic year:

<table>
<thead>
<tr>
<th>Meal Plans</th>
<th>Quarterly Rates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aut</td>
<td>Win</td>
</tr>
<tr>
<td>&quot;Traditional&quot; Meal Plans (all-you-can-eat): for residents of Branner, Lagunita, Moore, Roble, Sterling Quad, Stern, and Wilbur</td>
<td>$1,437</td>
</tr>
<tr>
<td>19 meals/week</td>
<td>14 meals/week</td>
</tr>
<tr>
<td>&quot;A La Carte&quot; Plans† (declining balance): for residents of Manzanita Park</td>
<td>$1,437</td>
</tr>
<tr>
<td>Premium a la Carte</td>
<td>Regular a la Carte</td>
</tr>
<tr>
<td>Open Kitchen Plans: for residents of American Studies and Yost</td>
<td>$1,274</td>
</tr>
</tbody>
</table>

* All rates are approximate and subject to change.  
† An administrative fee is withheld from the a la carte dollars given to spend. Up to $50 in a la carte points may be carried over each quarter until Spring Quarter.

Cardinal Dollars may be purchased through University Dining Services by non-meal plan members and meal plan members who wish to supplement their plan. Cardinal Dollars may be used at any University Dining Services facility for regular meals, afternoon service, late night pizza, and the Sports Cafe in the Arrillaga Family Sports Center. Cardinal Dollars carry over until the end of the academic year and are not refundable, except for the first two weeks of the quarter in which they were purchased. Cardinal Dollars are not accepted at Tresidder Memorial Union. The minimum buy-in is $10.00.

All University Dining Services locations also accept the Stanford Card, which is available through the Cashier’s Office, Old Union, room 107.

PAYMENTS

All charges and credits from offices within the University are aggregated in a student’s individual account and presented on the University Bill. The bill may include tuition, housing, food service, ASSU fees (special student-approved association fees set by the ASSU Senate), health insurance, and any miscellaneous charges incurred such as music lessons, cleaning, or re-keying charges. All amounts are due and payable upon receipt of the University Bill, but term-based charges (that is, tuition, room and board, ASSU, and health insurance fees) are always due by the day preceding the first day of instruction whether or not a bill has been received. Payment made on a Student Account after that date is subject to late fees 30 days after the first bill for it has been issued.

A Student Account (and its associated University Bill) may be paid with personal check (drawn on U.S. banks in U.S. funds), cash, scholarships, loan proceeds (for example, Perkins, Stafford, or University-issued), or proceeds of loans to parents (for example, CLAS, PLUS). Payments must be made in a form acceptable to the University. Shortfalls from any of the above categories may be made up in whole or in part from the University’s Deferment Loan Program (described below) for matriculated students. The University does not accept credit card payments.

LATE PAYMENT

All charges recorded in a Student Account must be paid by 5 p.m. on the day preceding the first day of instruction whether or not a bill has been received. Payment made on a Student Account after that date is subject to an additional charge in accord with the following fee schedule:

- $25 if payment is made on or after the first day of instruction, but during the first week of the term
- $40 if payment is made during the second week of the term
- $55 if payment is made during the third week of the term
- $75 if payment is made during the fourth week of the term
- $100 if payment is made during the fifth week of the term
- $125 if payment is made during the sixth week of the term or later

DEFERMENT LOAN PROGRAM

Deferment Loans (also known as “deferments”) are short-term loans and are available to matriculated students at the beginning of each term. The proceeds from a Deferment Loan may only be used to pay current term fees. The Deferment Loan may be used to avoid the application of Late Payment Fees described above. The terms of the Deferment Loan are:

1. $20 Deferment Loan Application Fee.
2. An annual interest rate of 10 percent assessed on the Deferment Loan principal until the date payment is received or until the due date, whichever comes first, in accord with the following schedule:

   - **Quarter** | **Deferment Due Date**
   - Winter | November 5, 1999
   - Spring | May 11, 2000
   - Summer | July 19, 2000

3. Any portion of the amount of the loan may be prepaid before the due date without prepayment penalty.
4. Amounts remaining unpaid after the due date are delinquent and subject to a late charge of $25.00, and additional interest at the maximum rate permitted by California law (including California Financial Code §28000), or such lesser rate as the University may determine, in its sole discretion, from the due date until paid.

DELINQUENT ACCOUNTS

Delinquent accounts (such as for tuition, fees, housing, meal plans, or for other amounts owed to the University) are reported to the Registrar’s Office, which places a “hold” on the student’s further registration and on the release of transcripts and diplomas until the past-due account has been paid. In addition, delinquent accounts may be reported to one or more national credit bureaus and/or commercial collection agencies.

REFUNDS

TUITION

Students who withdraw from the University before the end of a term may receive refunds of portions of their tuition as described below.

ANNULED REGISTRATION

Students who withdraw from the University voluntarily on or before the first day of instruction may have their registrations annulled. Tuition is refunded in full. Such students are not included in University records as having registered for the term and new students will not secure any privileges for admission for any subsequent quarter as returning students. An annulment does not automatically cancel health coverage unless the annulment is granted by the first day of instruction. Financial aid recipients should be aware that a proportion of any refund is returned to the various sources of aid.

CANCELLATION OF REGISTRATION OR SUSPENSION FOR CAUSE

Students who have their registrations canceled or are suspended from the University for cause receive refunds on the same basis as those receiving leaves of absence unless otherwise specified in the disciplinary action taken. A student whose registration is canceled less than one week after the first day of instruction for an offense committed during a preceding quarter receives a full refund of tuition fees.
INSTITUTIONAL INTERRUPTION OF INSTRUCTION

It is the University’s intention to do everything possible to avoid taking the actions described in this paragraph. However, should the University determine that continuation of some or all academic and other campus activities is impracticable, or that their continuation involves a high degree of physical danger to persons or property, activities may be curtailed and students requested or required to leave the campus. In such an event, arrangements will be made as soon as possible to offer students the opportunity to complete their courses, or substantially equivalent work, so that appropriate credit may be given. Alternatively, the University may determine that students will receive refunds on the same basis as those receiving leaves of absence, or on some other appropriate basis.

LEAVE OF ABSENCE

A student in good standing who voluntarily withdraws voluntarily from the University after the first day of instruction, but before the end of the first 50 percent of the quarter, may file a petition for a leave of absence with the Registrar’s Office. A leave of absence after the first 50 percent of the quarter is only granted for approved health and emergency reasons. Students granted a leave of absence are shown on the University transcript as having registered for the term. Courses in which the student was enrolled after the drop deadline will appear on the students record and will show the grade of ‘W’ (withdraw). Undergraduates who take a leave while in good standing may enroll in the University for a subsequent quarter with the privileges of a returning student. Graduate students are subject to special registration requirements (see Leave of Absence in the “Graduate Degrees” section of this bulletin).

TUITION REFUND SCHEDULE

Students who take a leave of absence are eligible for a tuition refund during the first 50 percent of the term according to the following schedule:

<table>
<thead>
<tr>
<th>Date of Withdrawal</th>
<th>Refund Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st day of classes</td>
<td>100</td>
</tr>
<tr>
<td>2nd day of classes through first 10 percent of the quarter</td>
<td>90</td>
</tr>
<tr>
<td>First 11 percent of quarter through first 25 percent</td>
<td>50</td>
</tr>
<tr>
<td>First 26 percent of quarter through first 50 percent</td>
<td>25</td>
</tr>
<tr>
<td>After the first 50 percent of quarter</td>
<td>0</td>
</tr>
</tbody>
</table>

To illustrate, the refund schedule for the Autumn Quarter 1999, is as follows:

<table>
<thead>
<tr>
<th>Autumn Quarter</th>
<th>Standard Tuition</th>
<th>9-Unit Tuition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sept. 22</td>
<td>$7,686</td>
<td>$4,782</td>
</tr>
<tr>
<td>Sept. 23-Sept. 29</td>
<td>6,917</td>
<td>4,304</td>
</tr>
<tr>
<td>Sept. 30-Oct. 12</td>
<td>3,843</td>
<td>2,391</td>
</tr>
<tr>
<td>Oct. 13-Nov. 1</td>
<td>1,922</td>
<td>1,196</td>
</tr>
<tr>
<td>Nov. 2-Dec. 10</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

Different refund rates are applicable for students paying the graduate department, medical, law, and graduate business tuition rates. The full tuition refund schedule for each quarter (including the Summer Quarter), and for each tuition rate, is available from the Registrar’s Office and at http://www.stanford.edu/dept/registrar/registration. Tuition refunds are based on the last date of attendance in classes.

A student in the first quarter of matriculated enrollment is subject to a slightly different refund schedule and should consult with the Registrar’s Office for details.

ROOM AND MEAL PLAN REFUNDS

Students assigned to a University residence are subject to the conditions of the University Residence Agreement. Under this agreement, single students and couples without children are required to live somewhere in the University residence system for the entire academic year. Students with children may give notice of termination of occupancy for the end of each academic term. Room refunds are made only when students move out of the residence system and withdraw from the University. Students in all-male fraternities or all-female sororities are billed directly by the fraternity or sorority, and refunds are arranged between the student and the fraternity or sorority.

A meal plan refund is based on the date when a student moves out of his or her University residence. If a student uses the meal plan after that date, an additional daily charge will incur.

Any decision to refund prepaid room and meal plan charges or to waive liability for deferred charges shall ultimately be made at the sole discretion of the University. Students with questions about refunds should contact Housing Assignment Services (for room refunds) or the central office of University Dining Services (for meal plan refunds).

HOUSING

University housing is available to registered Stanford students. Planning of educational programs, counseling and crisis intervention by residence deans, and administration of residence offices is coordinated by the department of Residential Education and Graduate Residences (http://rescomp.stanford.edu/resed.html), or telephone (650) 725-2800.

University housing assignments, community housing services, custodial services and maintenance, and dining services are provided by Student Housing and Dining Services (http://www.stanford.edu/dept/ hds/), or telephone (650) 723-2287.

Information on housing assignments, options, policies, application procedures, and deadlines may be obtained from Housing Assignment Services, Old Union, Room 214, Stanford University, Stanford, CA 94305-3012, or telephone (650) 725-2810.

UNDERGRADUATE STUDENT RESIDENCES

RESIDENTIAL EDUCATION PROGRAM

The program in Residential Education provides for undergraduates certain dimensions of a college experience within a large research university. The essential conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students’ preparation for a life of leadership, intellectual engagement, citizenship, and service.

ASSIGNMENT TO UNDERGRADUATE RESIDENCES

Approximately 94 percent of undergraduates live in University housing (excepting students studying abroad during the academic year). All freshmen are required to live in University residences for educational reasons and are automatically assigned housing following admission. Residence assignments for continuing undergraduates are made on the basis of an annual lottery (called the Draw) and quarterly waiting lists. Undergraduates who enter Stanford as freshmen are guaranteed four years of University housing if they are willing to live anywhere on campus. Transfer students are guaranteed two or three years of housing, based on their entering class standing.

Undergraduate residences include traditional dormitories, academic theme, cross cultural and focus houses, ethnic theme houses, student-managed and cooperative houses, apartments, suites, fraternities, and sororities.

GRADUATE STUDENT RESIDENCES

RESIDENCE PROGRAM

The University’s philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the University. By providing affordable housing in proximity to academic resources, the University creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members.
ASSIGNMENT TO GRADUATE RESIDENCES

Approximately 46 percent of matriculated graduate students at the home campus live in University housing. Residence assignments are made on the basis of an annual lottery and quarterly waiting lists. New matriculated single students and couples without children who apply for housing by the May deadline and are willing to live in any residence for which they are eligible are guaranteed housing their first year at Stanford. New matriculated master's students with children who apply by the May deadline are assured two years of on-campus housing while registered, and new matriculated doctoral students with children who apply by the May deadline are assured six years of on-campus housing while registered. At Stanford University, new matriculated students are students who are in a graduate program for the first time. Students starting a second graduate degree are not considered new matriculated students and therefore are not guaranteed housing.

Single graduate students may request assignment to graduate apartments and dormitories, or to spaces in six undergraduate cooperative houses.

One-, two-, three-, and four-bedroom apartments are provided for couples without children and students with children, both graduate and undergraduate, based on student status and the number of dependents. Couple housing is available to students who are married and to students who have a same-sex or opposite-sex domestic partner. At Stanford University, a domestic partnership is defined as an established, long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare. Housing for students with children is available to married couples, domestic partners, and single parents who have dependent children living with them. Housing is not provided for extended families, including the parents and siblings of students, or live-in day care staff.

COMMUNITY HOUSING

Community Housing Services maintains computerized listings of private rooms, houses, and apartments in surrounding communities that are available to students desiring to live off campus. Students must make rental arrangements directly with landlords. Information and publications on community housing may be obtained from Community Housing Services, Old Union, Room 214, Stanford University, Stanford, CA 94305-3012 or telephone (650) 723-3906. During early September, temporary accommodations are available in a student dormitory at a modest charge for students searching for off-campus housing for Autumn Quarter. Contact Summer Conference Services for more information at (650) 725-1429.

RESIDENCE DEANS

Residence Deans provide assistance to on- and off-campus students. They can advise students about academic and personal matters, occasionally intervene directly in behavioral problems, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of women or minorities, and administrative matters. Residence Deans work closely with the Dean of Students and other University offices. Residence Deans are assigned to specific residences and to off-campus students; for further information, call Residential Education at (650) 725-2800.
Undergraduate Degrees

DEGREE PROGRAMS

BACHELOR OF ARTS (A.B.), BACHELOR OF SCIENCE (B.S.)

Stanford University confers the degree of Bachelor of Arts (A.B.) or the degree of Bachelor of Science (B.S.) on those candidates who have been recommended by the Committee on Academic Appraisal and Achievement (C-AAA), who have applied in advance for conferral of the degree, and who have fulfilled the following requirements:

1. A minimum of 180 units of allowable University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit basis cannot be counted towards the 180 minimum.)
2. The Writing, General Education, and Language Requirements (see below).
3. Curricular requirements of at least one major department or program and the recommendation of the department(s). (Descriptions of curricular and special degree requirements are included in each department’s section of this bulletin.)
4. A minimum of 90 units (including the last 15) at Stanford. In special cases, students who have earned at least 135 units in resident work and who have completed the Writing, General Education, and Language Requirements, as well as all major requirements, may petition for a waiver of the last 15 units-in-residence requirement.

Stanford confers the Bachelor of Science degree on candidates who fulfill these requirements in the School of Earth Sciences, in the School of Engineering, or in the departments of Applied Physics, Biological Sciences, Chemistry, Mathematics, or Physics in the School of Humanities and Sciences. The University also awards B.S. degrees to candidates in the Program in Science, Technology, and Society; in the Program in Mathematical and Computational Science; in the Program in Symbolic Systems; and, when appropriate, in the Program for Individually Designed Majors. Candidates who fulfill these requirements in other schools or departments receive the Bachelor of Arts degree.

Students who complete the requirements for two or more majors which ordinarily would lead to the same degree (A.B. or B.S.) should review “The Major” section of this bulletin to ensure that they have an understanding of the requirements for multiple or secondary majors.

BACHELOR OF ARTS AND SCIENCE (B.A.S.)

The University confers the degree of Bachelor of Arts and Science (B.A.S.) on candidates who have completed, with no overlapping courses, the curricular requirements of two majors which ordinarily would lead to different bachelor’s degrees (that is, a Bachelor of Arts degree and a Bachelor of Science). These students must have applied in advance for graduation with the B.A.S. degree instead of the A.B. or B.S. degree, been recommended by the C-AAA, and have fulfilled requirements 1, 2, and 4 above in addition to the requirements for multiple majors.

Students who cannot meet the requirements for both majors without overlapping courses are not eligible for the B.A.S., but may apply to have a secondary major recorded on their transcripts. (See “The Major” section below.)

DUAL BACHELOR’S DEGREES (CONCURRENT A.B. AND B.S.)

A Stanford undergraduate may work concurrently toward both an A.B. and a B.S. degree. To qualify for both degrees, a student must complete:

1. A minimum of 225 units of University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit basis cannot be counted towards the 225 minimum.)
3. The curricular requirements of two majors (one of which leads to a Bachelor of Arts degree and the other to a Bachelor of Science degree).
4. A minimum of 135 units (including the last 15) at Stanford. In special cases, as described above, students may petition for waiver of the last 15 units-in-residence requirement.

A student interested in dual bachelor’s degrees should file a statement of intention with the Registrar’s Office no later than two quarters in advance of completing the program. The statement should be submitted on a standard petition form along with recommendations of appropriate representatives from the two departments whose major requirements the student is expecting to fulfill.

Students who do not meet the higher unit and residence requirements of the dual degree option may be eligible instead for the B.A.S. degree as described above.

SECOND BACHELOR’S DEGREE

Stanford does not award a second Bachelor of Arts degree to an individual who already holds a Bachelor of Arts, nor a Bachelor of Science degree to an individual who already holds a Bachelor of Science degree. However, the holder of a Bachelor of Arts degree from Stanford may apply to the Subcommittee for Exceptions to Academic Policy for admission to candidacy for a Bachelor of Science degree, and the holder of a Bachelor of Science degree from Stanford may apply for candidacy for a Bachelor of Arts degree. A recommendation of the major department for the second bachelor’s degree must accompany the application.

Generally, a student may not apply for a second bachelor’s degree after having been a graduate student, although a student may submit a petition for exception. The Office of the Registrar’s Academic Standing section in the Old Union, room 141, reviews these petitions. A student approved for this program may register as an undergraduate and is subject to the usual rules and regulations affecting undergraduates. Requirements for a second Stanford bachelor’s degree are the same as those described above for dual bachelor’s degrees.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES

The coterminal degree program allows undergraduates to study for a master’s degree while completing their bachelor’s degree(s) in the same or a different department. Undergraduates with strong academic records may apply for admission to a coterminal master’s program as early as the eighth quarter (or upon completion of 105 units) but no later than early in the 11th quarter of undergraduate study, and at least four quarters in advance of the anticipated date of conferral of the master’s degree. Units completed during summer quarters, as well as undergraduate transfer credit, are also counted towards quarters of undergraduate study. Students who wish to apply for a master’s program after these deadlines must apply through the regular graduate admissions process.

To apply for admission to a coterminal master’s program, students must submit to the prospective graduate department the following: coterminal application, statement of purpose, preliminary program proposal, two letters of recommendation from Stanford professors, and a current Stanford transcript. Graduate Record Examination (GRE) scores or other requirements may be specified by the prospective department.

For coterminal students, the quarter following completion of 180 units (or 225 units for dual undergraduate degree students) is identified as the first graduate quarter. Beginning with this quarter, coterminal students are subject to graduate student policies and procedures, as described in the “Graduate Degrees” section of this bulletin. These policies include continuous registration or leave of absence for quarters not enrolled (rather than the stopping out procedure for undergraduates) and minimal progress guidelines.

In the first graduate quarter, a coterminal student is assigned an advisor in the master’s department for assistance in planning a program of study to meet the requirements for the master’s degree. The plan is outlined on the Program Proposal for a Master’s Degree, which is approved by the master’s department by the end of the first graduate quarter. Authorizations for master’s programs expire three calendar years from the
first graduate quarter. An extension requires review of academic performance by the department.

The specific University residency, unit requirement, and additional policies for bachelor’s/master’s program are described under Residency and Unit Requirements in Coterminal Programs in the “Graduate Degrees” section of this bulletin.

Completion of each degree is applied for separately by the deadlines given in the University Time Schedule. The master’s degree must be conferred simultaneously with, or after, the bachelor’s degree.

DEGREE REQUIREMENTS

A LIBERAL EDUCATION

As do all major universities, Stanford provides the means for its undergraduates to acquire a liberal education—an education that broadens the student’s knowledge and awareness in each of the major areas of human knowledge, that significantly deepens understanding of one or two of these areas, and that prepares him or her for a lifetime of continual learning and application of knowledge to career and personal life.

The undergraduate curriculum at Stanford allows considerable flexibility. It permits each student to plan an individual program of study that takes into account personal educational goals consistent with particular interests, prior experience, and future aims. All programs of study should achieve some balance between depth of knowledge acquired in specialization and breadth of knowledge acquired through exploration. Guidance as to the limits within which that balance ought to be struck is provided by the University’s General Education Requirements and by the requirements set for major fields of study.

These educational goals are achieved through study in individual courses that bring together groups of students examining a topic or subject under the supervision of scholars. Courses are assigned credit units. To earn a bachelor’s degree, the student must complete at least 180 allowable units and, in so doing, also complete the Writing Requirement, to fulfill the General Education Requirements, and to meet the Language Requirement, and the requirements of a major.

The purpose of the Writing Requirement is to promote effective communication by ensuring that every undergraduate can write clear and effective English prose. Words are the vehicles for thought, and clear thinking requires facility in writing and speech.

The Language Requirement ensures that every student gains a basic familiarity with a foreign language. Foreign language study extends the student’s range of knowledge and expression in significant ways, providing access to materials and cultures that otherwise would be out of reach.

The General Education Requirements provide guidance toward the attainment of breadth and stipulate that a significant share of a student’s work must lie outside an area of specialization. These requirements ensure that every student is exposed to different ideas and different ways of thinking. They enable the student to approach and to understand the important “ways of knowing”—to assess their strengths and limitations, their uniqueness, and, no less important, what they have in common with others.

Depth, the intensive study of one subject or area, is provided through specialization in a major field. The major relates more specifically to a student’s personal goals and interests than do the general requirements outlined above. Stanford’s curriculum provides a wide range of standard disciplinary majors in addition to department offerings, and the opportunity for students to design their own major programs.

Elective courses, which are not taken to satisfy requirements, play a special role in tailoring the student’s program to individual needs. For most students, such courses form a large portion of the work offered for a degree. Within the limitations of requirements, students may freely choose any course for which previous studies have prepared them.

Following are more detailed descriptions of these various requirements and the rationales upon which they are based.

THE WRITING REQUIREMENT

All instructors expect that students will express themselves effectively in speech and writing. The Writing Requirement helps students meet that expectation.

All candidates for the bachelor’s degree, regardless of the date of matriculation, must satisfy the requirement. Transfer students are individually informed at matriculation of their status with regard to the requirement.

The Writing Requirement was revised for undergraduates who entered Stanford in Autumn 1996 and thereafter. In addition to the requirement detailed below for completion of the first-year courses, these students must complete a writing-intensive course in their major. Courses available to fulfill the Writing in the Major Requirement (WIM) are designated under individual department listings.

All undergraduates must satisfy the first-year course(s) requirement in one of four ways:

1. English 1-2, a two-quarter sequence of composition courses. (Note: a few students who demonstrate sufficient skill in the first quarter of the English 1-2 sequence will be exempted from English 2 upon certification by the instructor.)
2. English 3, an intensified one-quarter course open only to students with a score of 4 or 5 on the CEEB Advanced Placement Test in English.
3. Special writing instruction in connection with the Area One Requirement.
4. Approved transfer credit.

A complete list of courses is distributed to all entering undergraduates and is also available at the Writing and Critical Thinking office.

Courses available to fulfill the first-year Writing Requirement are designated (W) in this bulletin.

THE GENERAL EDUCATION REQUIREMENTS

PURPOSE

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is two-fold: to introduce students to a broad range of fields and areas of study within the humanities, social sciences, natural sciences, applied sciences, and technology, and to help students prepare to become responsible members of society. Whereas the concentration of courses in the major is expected to provide depth, the General Education Requirements have the complementary purpose of providing breadth to a student’s undergraduate program. The requirements are also intended to introduce students to the major social, historical, cultural, and intellectual forces that shape the contemporary world.

Fulfillment of the General Education Requirements in itself does not provide a student with an adequately broad education any more than acquiring the necessary number of units in the major qualifies the student as a specialist in the field. The major and the General Education Requirements are meant to serve as the nucleus around which the student is expected to build a coherent course of study by drawing on the options available among the required and elective courses.

Information regarding specific courses that have been certified to fulfill the General Education Requirements and regarding a student’s status in meeting these requirements is available at the Office of the Registrar. Course planning and advising questions related to the General Education Requirements should be directed to the Undergraduate Advising Center.

It is the responsibility of each student to ensure that he or she has fulfilled the requirements by checking in Axess within the Undergraduate Progress function or by checking with the Office of the Registrar. This should be done at least two quarters before graduation.

Students should be extremely careful to note which set of General Education Requirements apply to them. The date of matriculation at Stanford determines which requirements apply to an individual student.

CURRENT SYSTEM

To fulfill the General Education Requirements (GER), undergraduates who entered Stanford in Autumn Quarter 1996 and thereafter must

22
complete a minimum of nine courses certified for this purpose in four areas as follows:

**Area 1 Program**—Introduction to the Humanities courses (one-quarter introductory courses followed by two-quarter thematic sequences)

Students are expected to satisfy the Area One Requirement during their freshman year.

**Area 2: Natural Sciences, Applied Science and Technology, and Mathematics**—Students can fulfill this requirement in two different ways:

1) by completing one of the integrated three-course Science, Mathematics, and Engineering Core sequences or
2) by completing three certified GER courses in this area, with no more than two of these courses from the same subarea.

**Area 3: Humanities and Social Sciences**—Students are required to complete three certified GER courses in this area with at least one course in the humanities subarea and one in the social sciences subarea.

**Area 4: World Cultures, American Cultures, and Gender Studies**—While satisfying requirements for areas 1 or 3, or by taking additional courses, students must complete at least one certified GER course in two of the three subareas.

Courses certified as meeting the General Education Requirements must be taken for a letter grade and a minimum of 3 units of credit. A single course may be certified as fulfilling only one subarea within the General Education Requirements; the one exception is that a course may be certified to fulfill an Area 4 subarea in addition to Area 1 or an Area 3 subarea.

Courses that have been certified as meeting the requirements are identified throughout this bulletin with the notational symbols listed below. A comprehensive list of certified courses also appears as an Appendix to this bulletin.

**Area 1 Program**

GER 1a: first-quarter course
GER 1b: second-quarter course
GER 1c: third-quarter course

**Area 2: Natural Sciences, Applied Science and Technology, and Mathematics**

GER 2: three-quarter Science, Mathematics, and Engineering Core sequence
   or
GER 2a: Natural Sciences subarea
GER 2b: Applied Science and Technology subarea
GER 2c: Mathematics subarea

**Area 3: Humanities and Social Sciences**

GER 3a: Humanities subarea
GER 3b: Social Sciences subarea

**Area 4: World Cultures, American Cultures, and Gender Studies**

GER 4a: World Cultures subarea
GER 4b: American Cultures subarea
GER 4c: Gender Studies subarea

Continuing undergraduates who entered Stanford prior to Autumn 1996 may elect to complete either the set of Distribution Requirements in effect when they entered or the set of General Education Requirements effective Autumn 1996 and described above. Note: students will not, however, be permitted to mix the requirements of the two systems or to change from one system to the other after they have elected the system under which they wish to be monitored for graduation. If the 1996 program of General Education Requirements is chosen, only certified courses passed with a letter grade and taken for 3 or more units can fulfill the requirements.

**CREDIT TRANSFER**

While courses taken in fulfillment of the General Education Requirements should be taught by Stanford faculty members who are Academic Council members or Senior Lecturers, students may propose that work taken at another college or university be accepted in fulfillment of a General Education Requirement. In such cases, the Office of the Registrar’s Credit Evaluation staff determines, after appropriate faculty consultation, whether the work is comparable to any of the specifically certified courses or course sequences.

**UNDERGRADUATES WHO ENTERED PRIOR TO AUTUMN 1996**

Stanford has a long tradition of ensuring curricular breadth through some system of requirements, variously described as “distribution requirements,” “general studies requirements,” or “general education requirements.” A student returning to Stanford to complete an interrupted degree program may satisfy either the distribution program in place at the time of matriculation or the current program of requirements. Such a student should consult the Stanford Bulletin or its predecessors appropriate to the original entrance year or seek the advice of the Undergraduate Degree Coordinator, room 132, Old Union. Students completing requirements in effect 1991 or later may find the Appendix to this bulletin helpful in providing them with a list of certified courses. This list indicates which courses fulfill the Distribution Requirements in effect in 1991, as well as the General Education Requirements in effect beginning Autumn 1996.

**THE LANGUAGE REQUIREMENT**

To fulfill the Language Requirement, undergraduates who entered Stanford in Autumn 1996 and thereafter are required to complete one year of college-level study in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year language course at Stanford or the equivalent at another recognized post-secondary institution.
2. Score 4 or 5 on the Advanced Placement (AP) test in a language other than English.
3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages:
   - Chinese 630 Italian 630
   - French 640 Japanese 620
   - German 630 Latin 630
   - Hebrew 540 Spanish 630
4. Take a diagnostic test in a particular language which either:
   a) Places them out of the requirement, or
   b) Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered on-line throughout the summer in Chinese, French, German, Japanese, Russian, Spanish, and Spanish for home background speakers.

**CREDIT**

**ADVANCED PLACEMENT**

Stanford University allows up to 45 units of credit toward graduation for work completed in high school as part of the College Entrance Examination Board (CEEB) Advanced Placement curriculum. The awarding of such credit is based on CEEB Advanced Placement test scores and is subject to University and department approval.

The faculty of a given department determine whether any credit toward the 180-unit requirement can be based on achievement in the CEEB Advanced Placement Program in their discipline. Stanford departments electing to accept the Advanced Placement (AP) credit are bound by these University policies:

1. Credit is usually granted for an AP score of 4 or 5. Usually, 10 quarter units are awarded (but occasionally fewer than 10). No more than 10 quarter units may be given for performance in a single examination. If the student has scores of 4 or 5 on two exams within the same language (for example, French Language and Literature), or within the same subject (for example, Music Theory and Music History), the student is given a maximum total of 10 quarter units based on only one of the scores—the higher of the two, if different. The Studio Art...
and Art History examinations are treated separately and yield 10 quarter units each for scores of 4 or 5.

2. Whether credit is to be given for an AP score of 3 is a matter of departmental discretion; up to 10 units may be awarded.

3. No credit may be authorized for an AP score lower than 3.

Performance on an AP exam can indicate the appropriate placement for continuing course work in that subject at Stanford. Students may not enroll in courses at Stanford for which they received equivalent credit through the AP program. The chart below shows the current AP credit and placement policies. Further information is available from the Office of the Registrar’s Transfer Credit Evaluator, room 141, Old Union.

</table>

* Students may skip Computer Science 106A, B and X and complete Computer Science 103, 107, or 109 to receive an additional 5 quarter units.
† A minimum score of 4 on both tests will receive 5 units.

ACTIVITY COURSES

For undergraduates who entered Autumn 1996 and thereafter, a maximum of 8 units of credit earned in activity courses, regardless of the offering department or if accepted as transfer units, count towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. All activity courses are offered on a satisfactory/no credit basis.

Undergraduates who entered Stanford between Autumn 1986 and the end of the 1995-96 academic year may apply a maximum of 12 units in activity courses (Physical Education or Music Activity) to the 180/225 unit requirement for graduation.

COURSES TAKEN ON SATISFACTORY/NO CREDIT OR CREDIT/NO CREDIT BASIS

For undergraduates who entered Autumn 1996 and thereafter, a maximum of 36 units of credit taken at Stanford or its overseas campuses for a "CR" or "S" grade may be applied towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. For those who entered Stanford as transfer students in Autumn 1996 and thereafter, the maximum is 27 units.

Departments may also limit the number of satisfactory or credit courses accepted towards the requirements for a major. Satisfactory/credit courses applied towards a minor may be similarly limited. Courses not letter-graded are not accepted in fulfillment of the General Education Requirements or Writing in the Major Requirement applicable to undergraduate students who entered Stanford in Autumn 1996 and thereafter.

INTERNSHIP GUIDELINES

Undergraduate internships should not by themselves carry any credit. However, an individual student may arrange with a faculty member for a research or other academic project to be based on the internship. Arrangements between students and faculty regarding credit are expected to be made well in advance of the internship. Credit should be arranged within departmental rules for directed reading or independent study and should meet the usual departmental standards.

TRANSFER WORK

Academic credit for work done elsewhere will be allowed toward a Stanford bachelor’s degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.

2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactorily completed work, may be credited toward a Stanford bachelor’s degree, subject to the approval of the credit evaluator and the appropriate departments.

3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.

4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.

5. Credit from another institution will be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.

6. The credit allowed at Stanford for one quarter’s work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.

7. Credit is allowed at Stanford for work graded ‘A,’ ‘B,’ ‘C,’ or ‘Pass,’ but not for work graded ‘D’ or below.

8. No more than 90 quarter units of credit for work done elsewhere may be counted toward a bachelor’s degree at Stanford.

9. Credit earned in extension and correspondence courses is transferable only if the university offering the courses allows that credit toward its own bachelor’s degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence study, and a maximum of 45 quarter units for the combination of extension and correspondence courses.

10. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and is evaluated as above by the credit evaluator.
THE MAJOR

The primary purpose of the major is to encourage each student to explore a subject area in considerable depth. This in-depth study complements the breadth of study promoted by the General Education Requirements and, in many cases, by a student’s choice of electives. Work in depth permits practice in critical analysis and the solving of problems. Because of its depth, such study also provides a sense of how knowledge grows and is shaped by time and circumstances.

The structure of a major should be a coherent reflection of the logic of the discipline it represents. Ideally, the student should be introduced to the subject area through a course providing a general overview, and upper-division courses should build upon lower-division courses. The course of study should, if feasible, give the student the opportunity and responsibility of doing original, creative work in the major subject. Benefits of the major program are greatest when it includes a culminating and synthesizing experience such as a senior seminar, an undergraduate thesis, or a senior project.

REQUIREMENTS

Undergraduates must select a major by the time they achieve junior status (85 units completed). All undergraduate major programs listed in this bulletin, except for certain honors degree programs that require application and admission in advance, are open to all students. Students may use Axcess to declare, drop or exchange a major at any time. In some departments or programs, though, a late change could easily result in extending the period of undergraduate study. Students who have applied to graduate, wish to declare an individually-designed major or pursue a dual AB/BS degree, and co-term students must use printed forms to select or change a major. Students requiring assistance should contact the Registrar’s Degree Progress Office, Old Union, room 132.

Check individual department or program listings in this bulletin for the undergraduate degrees offered and for specific major requirements. If an area of study has no baccalaureate degree, that discipline is not available as a regular undergraduate major.

Faculty set the minimum requirements for the major in each department. These requirements usually allow latitude for tailoring a major program to a student’s specific educational goals. The responsibility for developing a major program within department or program requirements lies ultimately with the individual student working in consultation with the major adviser.

MULTIPLE MAJORS

Although most students declare only one major, a student may formally declare more than one major within a single bachelor’s degree (A.B., B.S., or B.A.S.) program. The student may do that either at the time of initial major declaration or, as may be more advisable given the planning required to complete more than one major, by amending the original declaration. The student’s major departments or programs will have access routinely to all information pertinent to that student’s academic record (for example, course and grade information), and each is expected to provide advising and other assistance. Students may pick up appropriate information regarding major declarations from the Registrar’s Office. To be awarded a bachelor’s degree with multiple majors, the student must fulfill the following requirements:

1. Formally declare all majors to the Registrar’s Office.
2. Satisfy the requirements of each major without applying any course towards the requirements of more than one major or any minor unless:
   a) overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language)
   b) overlapping courses enable the student to meet school requirements (for example, for two majors within the School of Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Students pursuing multiple majors must complete a multiple major program sheet indicating which courses they plan to apply toward each major and any minor(s). Departments must certify that the plan of study meets all requirements for the majors and any minor(s) without unallowable overlaps in course work. To facilitate advance planning, multiple majors program sheets are available at any time in the Degree Progress Office, room 132, Old Union.

When students cannot meet the requirements of multiple majors without overlaps, the secondary major, outlined below, may be relevant.

SECONDARY MAJOR

In some cases, students may complete course requirements for more than one major, but they may not meet the requirements outlined for the multiple major option. For example, the student may develop a course plan in which courses requisite for one major overlap with requirements for another. In these cases, the student may declare a secondary major which will result in the transcript bearing an annotation that the course requirements for that major have also been met.

LIMITS OF THE MAJOR

In order to achieve the values of study in depth, a well-structured major should constitute approximately one-third of a student’s program (55-65 units). To ensure the values of breadth, a major should comprise no more than two-thirds of a student’s program (115-125 units). And, to avoid intellectual parochialism, a major program should not require a student to take more than about one-third of his or her courses from within a single department.

Major requirements in cognate subjects essential to the structure of a given major should be counted as part of the major program in applying these guidelines. Department or school requirements designed to provide extra disciplinary breadth should not be counted.

For a limited number of qualified students, many departments and programs offer special programs leading to degrees with honors. A student may apply to the major department or program for acceptance into the honors program. Demands on the student may vary, but all honors programs encourage creative, independent work at an advanced level in addition to the major requirements.

The guidelines set forth here are deliberately general; implementation must take into account the specific needs of a student’s program and the nature of the discipline or disciplines involved. The exercise of responsibility in achieving the desired educational balance belongs first with the student, who, after all, has the strongest interest in the value of his or her education. It belongs secondarily to departments and major programs, which must set the requirements of competence in the many majors offered.

MINORS, HONORS, ACADEMIC STANDING, AND ADVISING

THE UNDERGRADUATE MINOR

Students completing a bachelor’s degree may elect to complete one or more minors in addition to the major. Minors must be officially declared by students no later than the deadline for their applications to graduate, according to declaration procedures developed and monitored by the Registrar. Earlier deadlines for declaration of the minor may be set by the offering school or department. Satisfactory completion of declared minors is noted on the students’ transcripts after degree conferral.

A minor is a coherent program of study defined by the department or degree program. It may be a limited version of a major concentration or a specialized subset of a field. A minor consists of no fewer than six courses of 3 or more units to a maximum of 36 units of letter-graded work, except where letter grades are not offered. Departments and degree programs must adhere to the policy above and within specific guidelines developed by the deans of schools. Programs which do not offer undergraduate degrees may also establish the structure and requirements of each minor in accordance with the standards for its undergraduate majors.

Undergraduate students use Axcess to declare or drop a minor. Students with questions about declaring minors or double-counting courses towards combinations of majors and/or minors should consult with the departments or programs involved or the Registrar’s Degree Office, room 132, Old Union.

BACCALARUREATE HONORS

With Distinction—In recognition of high scholastic attainment, the University, upon recommendation of a major department or program, awards the Bachelor’s Degree with Distinction to approximately 15 percent of the graduating class.

Students are also urged to consider the departmental honors programs that may give depth to their major study and to consider, as well, how the interdisciplinary honors programs might contribute to the quality of their undergraduate education.

Departmental Honors Programs—In recognition of successful completion of special advanced work, departments in more than 30 fields of study may recommend their students for honors. Departmental honors programs demand independent creative work at an advanced level in addition to the major requirements.

Interdisciplinary Honors Programs—In recognition of successful completion of honors program requirements, the following interdisciplinary programs can recommend students majoring in any field for honors in their program:

- Education
- Environmental Science, Technology, and Policy
- Ethics in Society
- Feminist Studies
- Humanities
- Jewish Studies
- Latin American Studies
- Science, Technology, and Society

The interdisciplinary honors programs are designed to complement study in a department major. The requirements for these honors programs are described in the department sections of this bulletin.

Foreign Language Proficiency—The notation “proficiency in (language)” appears on the official transcripts of those students whose levels of achievement are found by procedures established by the language department to be roughly equivalent to knowledge an excellent student can be expected to demonstrate late in the third quarter of the third year of study in that language.

ACADEMIC STANDING

Undergraduates matriculating in Autumn Quarter 1999, and thereafter, are required to adhere to the academic standards described below. The standards include maintaining a minimum 2.0 cumulative GPA and a quantitative unit requirement for good academic standing. In addition, a minimum 2.0 cumulative GPA is required for a baccalaureate degree.

Undergraduates matriculating prior to Autumn 1999 are required to adhere to the academic standards described below but are exempt from the minimum 2.0 cumulative GPA requirement for academic standing pur-
poses. However, departments can elect to require a minimum GPA for course work applicable to the major and the minor. Refer to departmental literature for specific requirements.

Undergraduate students normally are expected to plan their academic programs so that they can complete 180 units in four years (twelve quarters), including the requirements for a major and the General Education, Writing, and Language Requirements. Satisfactory academic progress is, on average, 45 units per academic year for four years leading to at least 180 units, a cumulative grade point average of at least 2.0, and a baccalaureate degree.

While undergraduate students are expected to register for a minimum of 12 units, they are required to complete at least 9 units each quarter and at least 36 units in their most recent three quarters of Stanford enrollment. In addition, students are expected to maintain an overall grade point average of at least 2.0. Transfer work completed at other institutions is not considered in this calculation. A student earning fewer than 9 units per quarter or fewer than 36 units in three quarters, or earning less than a 2.0 cumulative grade point average, is placed on probation. Students on probation or provisional registration status (see definitions below) are required to earn a minimum of 12 units per quarter, by the end of the final quarter examination period for three consecutive quarters, and maintain a cumulative grade point average of at least 2.0 to attain good academic standing. A Stanford Summer Session Quarter counts toward the three consecutive quarter requirement if 11 or more units are completed. The faculty Subcommittee on Academic Standing may stipulate otherwise by acting upon a petition for fewer units.

Full-time enrollment is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Under extenuating circumstances, students may petition to the faculty Subcommittee on Academic Standing to take fewer units. Work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time enrollment in the current quarter. All students registering for less than 12 units should consider the effects of that registration on their degree progress, visas, deferments of student loans, residency requirements, and their eligibility for financial aid and awards.

All undergraduate students validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification and athletic participation.

Units are granted for courses completed with grades 'A', 'B', 'C', 'D', 'Satisfactory' ('CR' or 'S'), and 'L'. Courses graded 'N' are counted provisionally as units completed, provided the student enrolls in the continuing segment of that course the following quarter. When the course is completed, the student receives the units for which he or she enrolled. No units are granted for a course in which the student receives an 'I' or an 'IP' until the course is completed satisfactorily and the final grade reported. (See "Grading Systems" above.)

PROBATION

A student who fails to complete at least 36 units of work in his or her most recent three quarters of enrollment at the University, or who fails to complete by the end of the final examination period at least 9 unit of work in his or her most recent quarter of enrollment at the University, or who has a cumulative grade point average of less than 2.0, shall be placed on probation (warning status).

A student shall be removed from probation after three subsequent quarters of enrollment at the University if, in each quarter, he or she completes a minimum of 12 units of new course work by the end of the final examination period and maintains a cumulative grade point average of at least 2.0. A student may also be removed from probation at the discretion of the subcommittee as a result of a review of individual records.

PROVISIONAL REGISTRATION

A student who fails to complete a minimum of 12 units of new course work by the end of the final examination period in any quarter of registration, or who fails to achieve a cumulative grade point average of at least 2.0 while on probation, in general, shall be placed on provisional registration status. Also, a student may be suspended directly from probation.

Provisional registration requires that a student submit a properly endorsed request to return to Stanford. A student shall be removed from provisional registration after three subsequent quarters of enrollment at the University if, in each quarter, he or she completes a minimum of 12 units of new course work by the end of the final examination period and maintains a cumulative grade point average of at least 2.0. A student may also be removed from provisional registration at the discretion of the subcommittee as a result of a review of individual records.

SUSPENSION

A student who fails to complete a minimum of 12 units of new course work by the end of the final examination period in any quarter of provisional registration, or who fails to maintain a cumulative grade point average of at least 2.0 while on provisional registration (and in some cases probation), shall be suspended. In general, students suspended for the first time are suspended for one year. Students suspended a subsequent time are suspended for three years.

Students suspended for one year are not eligible to enroll for four quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students suspended for three years are not eligible to enroll for twelve quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students are required to submit a properly endorsed petition for provisional registration to request reenrollment after the suspension period has been completed.

Return from Suspension—Students who have been suspended are required to petition for provisional registration to return after their suspension has been completed. Students are strongly encouraged to submit their petition for provisional registration at least three months prior to the desired quarter of return, but no later than the first week of the desired quarter of return.

Appeal of Suspension—Students who have been suspended, and who believe they have a compelling reason to appeal their suspension, without a break in enrollment, are required to submit a petition for provisional registration. See “Petition Deadlines” for deadline dates to submit petitions for provisional registration to appeal a suspension.

Early Return from Suspension—Students who have been suspended and who believe they have a compelling reason to return early from their suspension are required to submit a petition for provisional registration. See “Petition Deadlines” for deadline dates to submit petitions for provisional registration to return early from suspension.

PETITIONING

Specific instructions for requesting provisional registration or an early return from suspension should be obtained from the Registrar’s Academic Standing Office, Old Union, room 141. The faculty Subcommittee on Academic Standing, or those designated by the subcommittee, shall act upon all requests concerning academic standing, including requests for provisional registration. Questions concerning academic standing or the petitioning process should be directed to the Academic Standing Office.

Late petitions to return from suspension, appeal a suspension, or return early from suspension will not be considered. Students are strongly encouraged to submit petitions as early as possible.

Students applying for financial aid and/or on-campus housing should be aware of the deadlines and procedures for those offices.

Contact the Academic Standing Office for future deadline dates.
NOTIFICATION

Written notification that a student is on probation, provisional registration, or suspension is sent to the student and to the student's academic adviser as soon as possible after the close of the quarter. Students also receive written notification of the outcome of their provisional registration petition.

UNDERGRADUATE ACADEMIC ADVISING

The Undergraduate Advising Center (UAC) partners with faculty and staff to address students' intellectual and developmental goals. The staff coordinates a comprehensive array of programs and advising services designed to support and enhance the undergraduate curriculum. For example, the UAC coordinates the Freshman Advising, Resources, and Mentoring (FARM) program through which freshmen make connections with students, faculty, and staff who share their interests. The Partners for Academic Excellence (PAE) program is another example of a mentoring program designed to increase participants' connection to and involvement in the academic and social networks of the campus.

Freshmen are assigned to general academic advisers according to their residence and their preliminary academic interest. Freshman advisers work with advisees each quarter to plan their academic programs; advisers must provide an approval code for the on-line filing of study lists through Axess for each quarter of the students' freshman year.

Sophomores who are undecided about their majors continue to work with the advisers they had as freshmen, and to seek out their advisers' guidance and approval code. By the time they achieve junior status, undergraduates must declare a major, at which time they are assigned to an adviser from the faculty of the major department or program.

The UAC's staff of professional advisers, located on the first floor of Sweet Hall, provides advising to all students, freshmen through seniors. The UAC staff offers students help when the official adviser is unavailable or when additional advice is needed; assistance with curriculum planning, including four-year plans; help with choosing a major; information on designing an individually designed major; academic and personal counseling related to academic performance; advice regarding plans to attend graduate or preprofessional school; peer tutoring; and learning skills classes, counseling, and workshops. Reference guides to graduate and professional schools are available. For detailed information see the UAC web site at http://uac-server.stanford.edu/ or request a copy of the UAC brochure.
Graduate Degrees

GENERAL REQUIREMENTS

For each Stanford advanced degree, there is an approved course of study which meets University and department requirements. The University’s general requirements, applicable to all graduate degrees at Stanford, are described below. University requirements pertaining to only a subset of advanced degrees are described in the “Degree-Specific Requirements” section.

See the “Graduate Programs” section of each department’s listing for specific department degree requirements. Information on professional school programs is available in the bulletins of the Graduate School of Business, the School of Law, and the School of Medicine.

REGISTRATION REQUIREMENTS

Graduate students must register for all terms of each academic year (Autumn, Winter, and Spring Quarters or, for Law students, Autumn and Spring Semesters), from the admission term until conferment of the degree. The only exception to this requirement occurs when the student is granted an official leave of absence. Failure to register for a term during the academic year without taking a leave of absence results in denial of further registration until reinstatement to the degree program is granted and the reinstatement fee paid. Registration in Summer Quarter is not required and does not substitute for registration during the academic year.

In addition to the above requirement for continuous registration during the academic year, graduate students are required by the University to be registered:

1. In each term during which any official department or University requirement is fulfilled, including qualifying exams or the University oral exam.
2. In any term in which a University dissertation/thesis is submitted or at the end of which a graduate degree is conferred, unless the student was registered the prior term.
3. Normally, in any term in which the student receives financial support from the University.
4. In any term for which the student needs to use University facilities such as on-campus housing, libraries, Cowell Health Service, and so on.
5. For international students, in any term of the academic year for which they have non-immigrant status (for example, a J1 or F1 visa).

Individual students may also find themselves subject to the registration requirements of other agencies (for example, external funding sources such as Federal financial aid). Course work and research are expected to be done on campus unless the department gives prior approval for study in absentia and a petition for in absentia registration is approved by the Registrar’s Office.

LEAVES OF ABSENCE

Graduate students who do not meet the requirement for continuous registration during the academic year must obtain an approved leave of absence, in advance, for the term(s) they will not be registered. The leave of absence must be reviewed for approval by the chair or director of graduate studies of the student’s major department and, if the student is in the United States on a visa, by the Bechtel International Center.

New graduate students and approved coterminous students may not take a leave of absence during their first quarter. Coterminous students are required to register their first graduate quarter. However, new Stanford students may request a deferment.

Leaves of absence are granted for a maximum of one calendar year. Leaves requested for a longer period are approved only in exceptional circumstances (for example, mandatory military service). An extension of leave (a maximum of one year) for students in master’s programs or for doctoral students not yet admitted to candidacy, is approved only in unusual circumstances. Extension requests must be made before the expiration of the original leave of absence. Leaves of absence may not exceed a cumulative of two years.

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period.

Students on leave may complete course work for which an Incomplete grade was awarded in a prior term and are expected to comply with the usual one-year time limit for resolving incompletes.

REINSTATEMENT

Students who fail to be either registered or approved for a leave of absence by the start of a term have to apply for reinstatement through the Graduate Admissions Office before they can return to the same degree program. The decision to approve or deny reinstatement is made by the student’s department or program. Departments are not obliged to approve reinstatements of students. Reinstatement decisions may be based on the applicant’s academic status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, and the ability of the department to support the student both academically and financially, as well as any other factors or considerations regarded as relevant by the department.

Reinstatement information is available from the Graduate Admissions Office. A fee is required. Reinstatement applications must be submitted by the first day of the term for which reenrollment is requested if the student is registering for courses.

RESIDENCY

At Stanford, as at other research universities, each advanced degree program has a residency requirement of a minimum number of full-tuition quarters of registration or the equivalent in partial-tuition quarters. Where more than one advanced degree is pursued, the residency requirement may be unique to that particular combination of degrees.

The residency requirements for most degrees and degree combinations are listed in the chart below. Residency measures tuition assessments; the number of course units attempted or completed has no bearing on residency. It should also be noted that the residency requirement represents the minimum tuition requirement for a degree; an individual student, depending on his or her program, preparation, and choices, may need to accrue more residency than the requirement states to earn the degree.

The fundamental reason for this requirement is educational: the minimum residency fixed for each program is the shortest period that students generally need to attain the level of expertise that a particular Stanford advanced degree signifies, by completing specified course work and other degree requirements, and by immersing themselves in the intellectual life of the University.

The residency requirement also ensures that a reasonable proportion of the University’s expenses for providing the requisites of a high quality education are met from tuition income, particularly the expense of small classes and the need for state-of-the-art laboratory facilities and comprehensive library collections. These expenses remain constant even if, as sometimes happens, a student satisfies his or her other degree requirements before completing the residency requirement.

In such cases, the student can receive the degree early but must pay tuition for the full residency period. A tuition deficiency (a percent of residency less than the required number of quarters) for a degree may be paid to obtain the degree or to qualify for Terminal Graduate Registration (TGR) status.

Residency is stated in terms of full-tuition quarters. Registration at the full-tuition rate (11 or more units during the academic year and 15 units during Summer Quarter) earns one quarter of residency. Residency for partial tuition quarters during the academic year accrues as follows:

- 3 units = .24
- 4 units = .31
- 5 units = .37
- 6 units = .43
- 7 units = .50
- 8 units = .56
- 9 units = .62
- 10 units = .68

Residency is most commonly accrued through registration at Stanford as a matriculated graduate student. Within applicable policy, it may also
be earned through graduate work done elsewhere (see below), registra-
tion as a non-matriculated student at Stanford, or payment of a tuition
deficiency.

Further information about the residency requirement is available from
the Degree Progress Office in the Old Union.

RESIDENCY AND UNIT REQUIREMENTS IN COTERMINAL
PROGRAMS

Unit Requirement—The University minimum requirements for co-
terminal bachelor's/master's program are 180 units for the bachelor's
degree plus 36 (or higher departmental requirement, as determined by
each graduate department) unduplicated units for the master's degree.
The requirements for the coterminal program with dual undergraduate
degrees are 180 units for the first bachelor's degree, 45 units for the sec-
ond bachelor's degree, 36 to 45 units for the master's degree. Of the 36-
unit University minimum for the master's degree, all courses must be at
or above the 100 level and 50 percent must be courses designated prima-
arily for graduate students (typically at least at the 200 level). Department
requirements may be higher. Units for a given course may not be count-
ed to meet the requirements of more than one degree, that is, no units may
be double-counted. No courses taken more than two quarters prior to
admission to the coterminal master's program may be used to meet the
36-unit University minimum requirement for the master's degree.

Residency Requirement—All Stanford master's degree students are
required to complete a residency requirement.

The residency requirement for a student pursuing an A.B., B.S., or
B.A.S., and a coterminal master’s degree can be fulfilled by completing
three full-tuition quarters (or the equivalent in partial-tuition quarters),
after reaching 180 units (90 units completed at Stanford). For example,
the student who has 180 units at the end of a Autumn Quarter, will begin
to accrue graduate residency during the Winter Quarter. If the student has
179 units at the end of Autumn Quarter, graduate residency will not ac-
crue during the Winter Quarter as the 180 unit minimum had not been
reached during Autumn Quarter. Advanced Placement and undergradu-
ate transfer units on the student’s transcript assist the student in reach-
ing the 180-units milestone sooner, but cannot be counted towards the
three required quarters thereafter.

The residency requirement for a student pursuing dual degrees (an
A.B. and a B.S.) and a coterminal master’s degree can be fulfilled by
completing three full-tuition quarters (or the equivalent in partial-tuition quarters), after reaching 225 units (135 units completed at Stanford). This
higher requirement follows the same rules as described in the above para-
graph, except the student will begin to accrue graduate residency the
quarter after reaching the 225-units milestone.

A full-tuition quarter is registration at the full-tuition rate (11 or more
units during the regular academic year and 15 or more units during the
Summer Quarter). A partial tuition quarter is registration below the full-
tuition rate. For example, students who register for 9 units during an
academic quarter accrue 62 percent (0.62) of one full-tuition quarter (see
residency for partial tuition quarters as those described above).

Tuition Rate for Graduate Engineering—The tuition rate for gradu-
ate Engineering is higher than for undergraduate programs. Students
enrolled in a coterminal program in the School of Engineering need to
earn three quarters for graduate residency, as do other master’s degree
students. They begin to pay the higher graduate Engineering tuition rate
in the quarter after they have reached 180 units and after they have been
enrolled for twelve quarters as undergraduates, at the 11 or more unit rate
during the regular academic year (or the 15 or more unit rate during the
summer quarters). In effect, undergraduate students are allotted twelve
quarters of undergraduate tuition. For example, a student in a cotermi-
nal program in the School of Engineering who earned 180 units by the
end of the eleventh quarter of enrollment, would begin to accrue gradu-
ate residency during the twelfth quarter, but would only start to pay the
graduate Engineering tuition rate during the thirteenth quarter of enroll-
ment.

Coterminal students in the School of Engineering, with two under-
grade degrees, are assessed the graduate Engineering tuition rate in
the quarter after they have reached 225 units and after they have been
enrolled for fifteen quarters as undergraduates, at the 11 or more unit rate
during the regular academic year (or the 15 or more unit rate during the
summer quarters).

Engineering coterminal students would also start paying the gradu-
ate Engineering tuition rate if any undergraduate degree is conferred or
if they are granted any graduate aid. Once charged under the graduate
Engineering tuition schedule, the tuition will not revert thereafter to the
undergraduate rate.

For additional information on the coterminal bachelor's/master pro-
gram, see Coterminal Bachelor’s and Master’s Degrees in the “Under-
graduate Degrees” section of this bulletin.

RESIDENCY CREDIT FOR GRADUATE WORK DONE
ELSEWHERE

After at least one quarter of enrollment, students pursuing an Engi-
neer, Ed.S., D.M.A., Ed.D., or Ph.D. may apply for residency credit for
graduate work done at another institution. Engineer or Ed.S. candidates
who also earned their master’s at Stanford are not eligible for transfer
residency credit, nor are any master’s degree students. The chart below
shows the maximum number of transfer quarters that will be accepted
towards Stanford’s residency requirement for each degree or degree
combination. Regardless of whether transfer residency credit is approved,
transfer courses may be used to fulfill department course requirements
at the department’s discretion, but cannot be applied to Stanford’s min-
imum unit requirement for the degree.

Students enrolled at Stanford who are going to study elsewhere dur-
ing their degree program should obtain prior approval of any transfer
residency sought before their departure.

The following criteria are used for awarding transfer residency cred-
it for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are
approved by the student’s department. A maximum of 12 units of courses
with no Stanford counterparts and/or research units may be granted
transfer residency credit.
2. The student must have been registered in a student category which
yields graduate credit. The maximum amount of credit given for ex-
tension and non-matriculated (non-degree) courses is one quarter. No
transfer credit is given for correspondence work.
3. Courses must have been taken after the conferral of the bachelor’s
degree. The only exception is for work taken through programs struc-
tured like the Stanford coterminal bachelor’s/master’s program.
4. Courses must have a grade point average (GPA) of ‘B’ or better. Pass
grades are accepted only for courses for which letter grades were not
an option and for which the standard of passing is ‘B’-quality work.
5. Courses must have been taken at a regionally accredited institution
in the U.S. or at an officially recognized institution in a foreign coun-
try. Courses taken at foreign universities must be at the level of study
comparable to a U.S. graduate program.

The Application for Residency Credit for Graduate Work Done Else-
where is reviewed by the department and the Degree Progress Office.

### UNIVERSITY MINIMUM UNITS REQUIREMENT

Each Stanford graduate degree or combination of degrees is subject to a requirement specifying the minimum number of units that must be earned at Stanford. The minimum units requirement for most degrees and degree combinations is listed in the chart above. The minimum units requirement measures the units completed by the student, without regard for whether the units were earned in courses re-
required for the degree and/or in courses that are not part of the department's course requirements. Study at another institution never counts towards the minimum units requirement, unless the courses were taken through Stanford's Exchange Scholar Program or formal exchange program with U.C.-Berkeley or U.C. San Francisco.

When multiple degrees are being pursued, units must be "unduplicated." This means that units counted towards one degree may not be counted again towards another.

For all graduate degrees, the University's expectation is that the units counted towards the minimum unit requirement are primarily in graduate courses. The University has set specific requirements for units applied to the minimum unit requirement for the A.M., M.S., M.A.T. and M.F.A. degrees: all units must be in courses at or above the 100 level and at least 50 percent of those must be courses designated primarily for graduate students (typically at least the 200 level). Units earned in courses below the 100 level may never be counted towards the minimum unit requirement for the master's degree. Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications.

**SATISFACTORY PROGRESS REQUIREMENTS**

The academic requirements for graduate students include timely completion of department and program requirements, such as admission to candidacy, successful completion of qualifying exams, and so on. The standards for students in professional degree programs are described in the bulleted section. Students in other degree programs must also meet the following standards of satisfactory progress as indicated by registration and reporting of grades.

Graduate students registered at full tuition must enroll for at least 11 units and must pass, over the course of three quarters, a total of 24 units, and at least 8 units per term. Units earned in courses below the 100 level may never be counted towards the minimum unit requirement for the master's degree. Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications.

**GUIDELINES FOR DISMISSAL OF GRADUATE STUDENTS FOR ACADEMIC REASONS**

Admission to graduate programs at Stanford is highly selective. It is anticipated that every admitted student will be able to fulfill the requirements for the advanced degree. This policy provides guidelines for the unusual circumstance that a department must consider dismissal of a graduate student for academic reasons. These guidelines apply to all advanced degree programs except those in the schools of Law or Business or the M.D. program in the School of Medicine. Business, Law, and M.D. programs follow guidelines issued by the respective school.

The principal conditions for continued registration are a timely completion of the University, department, and program requirements for that program, and satisfactory progress (as discussed in the preceding section). The guidelines that follow specify procedures for dismissal of graduate students who are not meeting these conditions. In such cases, the department (through the chair, the Director of Graduate Studies, or the student's faculty adviser) will:

1. Where possible and as early as possible, warn students, in writing, of the situation and deficiency. A detailed explanation of the reason for the warning should be provided.
2. Consider extenuating circumstances.
3. Place a summary of department discussions, votes, and decisions about this matter in the students' files.
4. Provide students the opportunity to examine their department files, if requested.
5. Provide students with information on their rights to appeal under the statement on Student Academic Grievance Procedures. (This is included in this bulletin.)

Careful records of department decisions safeguard the rights of both students and faculty.

**ADDITIONAL SPECIFICS FOR DEGREES WITH CANDIDACY**

**Before Candidacy**—A department committee may vote to dismiss a student who is clearly not making satisfactory progress before review for admission to candidacy. Before considering dismissal, the committee should communicate with the student (which may include a meeting with the student) concerning his or her academic performance and how to correct deficiencies.

In a review for admission to candidacy, if the department votes not to recommend the student for admission to candidacy, the vote will result in the dismissal of the student from the program. The Director of Graduate Studies or the student's adviser shall communicate the department's decision to the student in writing and orally. The student may submit a written request for reconsideration. The committee shall respond in writing to the request for reconsideration; it may refuse to reconsider its decision.

**During Candidacy**—When a student admitted to candidacy is not making satisfactory progress or not completing University, department, or program requirements, the student's adviser, the Director of Graduate Studies, and other relevant faculty should meet with the student. A written summary of these discussions shall be sent to the student and the adviser and added to the student's department file. The summary should specify the student's academic deficiencies, the steps necessary to correct them, and the period of time that is allowed for their correction (normally a minimum of one academic quarter). At the end of the warning period, the department's Graduate Studies Committee shall review the student's progress and notify the student of its proposed actions. If the student has made satisfactory progress, he or she should be notified in writing that the warning has been lifted.

If at the end of the warning period the student has not in the view of the Graduate Studies Committee corrected the deficiencies, the committee may initiate proceedings for dismissal. The student shall be notified, in writing, that the case of dismissal will be considered at an impending department committee meeting. The student has the right to be invited to attend a portion of the scheduled meeting to present his or her own case; a student may also make this case to the committee in writing.

After full discussion at the department committee meeting, the committee, without the student present, reviews the case and votes on the issue of dismissal. A minimum of three faculty members must be present, and a decision is by majority vote. The student is sent a written summary of the discussion, including the committee's decision and the reasons for it. The student may submit a written request for reconsideration. The department committee may refuse to reconsider its decision. The committee's response to the request for reconsideration shall be made in writing.
CONFERRAL OF DEGREES

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Graduate Studies, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer terms. All diplomas, however, are prepared and awarded in Spring Quarter. Stanford University awards no honorary degrees.

Students must apply for conferral of a graduate degree by filing an Application to Graduate before the deadline of each term. The application should be filed preferably in the second week, but no later than the last day of classes of the conferral quarter, as listed on the University calendar. A separate application must be filed for each degree program and for each conferral term. Applications are filed through Axess, the online service which allows students to update their administrative/academic records.

Requests for conferral are reviewed by the Degree Progress Office, and the student’s department, to verify completion of degree requirements. Registration is required in the conferral term or the term immediately preceding. Students with unmet financial obligations resulting in the placement of a hold on their registration will not receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by the Bursar’s Office.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Degree Progress Office in writing. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate for a subsequent term.

CHANGES OF DEGREE PROGRAMS

Graduate students are admitted to Stanford for a specific degree program. Students who have attended Stanford for at least one term and who are currently enrolled or on an approved leave of absence may submit a Graduate Program Authorization Petition to make one of the following changes: (1) change to a new degree program in the same department; (2) change to a new degree program in a different department; (3) add a new degree program in the same or a different department to be pursued with the existing program.

It is important that the attempt to add or change degree programs be made while enrolled. Otherwise, a new Application for Graduate Admission must be submitted and an application fee paid. The Graduate Program Authorization Petition is submitted directly to the department in which admission is requested. If applying for a higher degree program, students may also be required to submit other application materials such as GRE Subject Test scores, a statement of purpose, or new letters of recommendation.

International students changing departments or degree programs must also request the Foreign Student Adviser at the Bechtel International Center. If the requested change lengthens their stay, they also are required to submit verification of sufficient funding to complete the new degree program.

Students who wish to terminate study in a graduate program should submit to the department a letter indicating the program from which they wish to withdraw and the effective date. To return to graduate study thereafter, the student is required to apply for reinstatement (if returning to the same degree program) or admission (if applying to a different program). Both applications require payment of a fee.

DEGREE-SPECIFIC REQUIREMENTS

MASTER OF ARTS AND MASTER OF SCIENCE

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for a Master of Arts (A.M.) or Master of Science (M.S.) degree must complete their degree requirements within the time limit specified below and must outline an acceptable program of study on the Master’s Degree Program Proposal.

MASTER’S PROGRAM PROPOSAL

Students pursuing an A.M., M.F.A., M.A.T., or M.S. are required to submit an acceptable program proposal to their department during the first quarter of enrollment. Coterminal students must submit the proposal during the first quarter after their completion of 180 units. The program proposal establishes a student’s individual program of study to meet University and department degree requirements. Students must amend the proposal formally if their plans for meeting degree requirements change.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master’s degree will be met through the proposed program of study.

TIME LIMIT FOR COMPLETION OF THE MASTER’S DEGREE

All requirements for a master’s degree must be completed within three years after the student’s first term of enrollment in the master’s program (five years for Honors Cooperative students). Students pursuing a coterminal master’s degree must complete their requirements within three years of their first quarter of graduate standing.

The time limit is not automatically extended by a student’s leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obliged to grant an extension. The maximum extension granted is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department and approval by the department.

MASTER OF BUSINESS ADMINISTRATION

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found in the Graduate School of Business Bulletin. The M.B.A. must be completed within the time limit for completion of the master’s degree.

MASTER OF ARTS IN TEACHING

The program leading to the Master of Arts in Teaching (M.A.T.) is designed for experienced teachers or for individuals who have previously completed programs of teacher preparation. In addition to completing the general requirements for advanced degrees and the program requirements specified by the School of Education and by one of the academic departments participating jointly in the program, M.A.T. candidates must fulfill the requirements for a master’s program proposal as specified above and complete their degrees within the time limit for completion of the master’s degree.

MASTER OF FINE ARTS

In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Art and Art History" section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must fulfill the requirements for a master’s program proposal and complete their degrees within the time limit for completion of the master’s degree, as specified above.

ENGINEER

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for
the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

CANDIDACY

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

THESIS

A University thesis is required for the Engineer degree. Standards for professional presentation of the thesis have been established by the Committee on Graduate Study and are detailed in Directions for Preparing Theses for Engineer Degrees, available from the Degree Progress Office in the Old Union.

The deadline for submission of theses for degree conferment in each term is specified by the University calendar. Three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Degree Progress Office before the quarterly deadline listed on the University calendar. A fee is charged for binding copies of the thesis.

Registration is required for the term, or the immediately preceding term, in which the thesis is submitted. The period between the last day of final exams of one term and the first day of the subsequent term is considered an extension of the earlier term. Students submitting a thesis during this period would meet the registration requirement but would be eligible for degree conferment only in the subsequent term.

EDUCATIONAL SPECIALIST

In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Education" section of this bulletin, candidates for the degree of Educational Specialist (Ed.S.) must complete a field-based project.

MASTER OF LEGAL STUDIES

Admission to study for the Master of Legal Studies degree (M.L.S.), a nonprofessional degree, is granted to students who hold the Doctor of Philosophy (Ph.D.) or other nonlaw doctoral degree, or who have been admitted to a nonlaw doctoral program and have completed a program of study amounting to 45 quarter units or 30 term units of work toward the doctorate, and who meet an admission standard equivalent to that required of candidates for the Doctor of Jurisprudence degree.

The M.L.S. degree is conferred upon candidates who, in not fewer than two academic terms in residence and in not more than two consecutive academic years, successfully complete 30 term units of work in the School of Law, including three first-year courses in the first autumn term and at least one course or seminar requiring a research paper. All work shall conform to the rules and regulations of the University and the School of Law.

DOCTOR OF JURISPRUDENCE

The degree of Doctor of Jurisprudence (J.D.) is conferred on candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the School of Law over not less than three academic years and who otherwise have satisfied the requirements of the University and the School of Law.

DOCTOR OF PHILOSOPHY

The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have satisfied the general requirements for advanced degrees, the program requirements specified in the "Music" section of this bulletin, and the candidacy requirement as described below in the "Doctor of Philosophy" section.

DOCTOR OF EDUCATION

In addition to completing the general requirements for advanced degrees and the requirements specified by the School of Education, candidates for the Doctor of Education (Ed.D.) must fulfill the following requirements as detailed in the "Doctor of Philosophy" section below: candidacy, University oral examination, and dissertation.

MASTER OF THE SCIENCE OF LAW

The degree of Master of the Science of Law (J.S.M.) is conferred upon candidates who have completed one academic year (26 term-units) with distinction in accordance with the rules of the University and the School of Law.

The degree is primarily designed for those qualified students who hold a J.D. or its equivalent and who are at the Stanford School of Law for independent reasons (for example, as teaching fellows) and who wish to combine work toward the degree with their primary academic activities. Specially qualified lawyers, public officials, academics, and other professionals who have worked outside the United States may apply for the degree through the Stanford Program in International Legal Studies (SPILS). Full particulars concerning requirements may be found in the Stanford University bulletin School of Law.

DOCTOR OF THE SCIENCE OF LAW

The degree of the Doctor of Science of Law (J.S.D.) is conferred upon candidates who hold a J.D. or its equivalent, who complete one academic year in residence, and who, as a result of independent legal research, present a dissertation that is, in the opinion of the faculty of the School of Law, a contribution to knowledge. Such work and dissertation shall conform to the rules of the School of Law and the University, as described below in the "Doctor of Philosophy" section.

Candidacy is limited to students of exceptional distinction and promise. Full particulars concerning requirements may be found in the Stanford University bulletin School of Law.

DOCTOR OF MEDICINE

Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. All requirements for the M.D. degree are detailed in the Stanford University School of Medicine Catalog.

DOCTOR OF PHILOSOPHY

The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and ability to do independent investigation and present the results of such research. They must satisfy the general requirements for advanced degrees, the program requirements specified by their departments, and the doctoral requirements described below. The option for a Ph.D. minor is also described below, though it is not a Ph.D. requirement.

CANDIDACY

Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty of the student’s potential to complete successfully the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy by the end of their second year in the Ph.D. program. Honors Cooperative students must apply by the end of their fourth year.

The Application for Candidacy specifies a departmentally approved program of study to fulfill degree requirements, including required course work, language requirements, teaching requirements, dissertation (final project public lecture-demonstration for D.M.A.), and University oral examination (for Ph.D. and Ed.D.). At least 3 units of work must be taken with each of four Stanford faculty members.

If the Ph.D. student is pursuing a minor, approval by the department awarding the minor is also required on the Application for Candidacy.
TIME LIMIT FOR COMPLETION OF A DEGREE WITH CANDIDACY

All requirements for the degree must be completed before candidacy expires. Candidacy is valid for five years unless terminated by the department for unsatisfactory progress. The time limit is not automatically extended by a student’s leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obliged to grant an extension. The maximum extension granted is one additional year. Extensions require review by the department of a dissertation progress report, a timetable for completion of the dissertation, any other factors regarded as relevant by the department, and approval by the department.

TEACHING REQUIREMENTS

A number of departments require their students to teach for one or more quarters during their doctoral programs. Detailed information is included in the department sections of this bulletin.

FOREIGN LANGUAGE REQUIREMENT

Some departments require a reading knowledge of one or more foreign languages as indicated in department sections of this bulletin. Fulfillment of language requirements must be endorsed by the chair of the major department on the Foreign Language Report form.

UNIVERSITY ORAL EXAMINATION

Passing a University oral examination is a requirement of the Ph.D. and Ed.D. degrees. The purpose of the examination is to test the candidate’s command of the field of study and to confirm fitness for scholarly pursuits. Departments determine when, after admission to candidacy, the oral examination is taken and whether the exam will be a test of knowledge of the field, a review of a dissertation proposal, or a defense of the dissertation.

Students must be registered in the term in which the University oral examination is taken. The period between the last day of final exams of one term and the first day of the following term is considered an extension of the earlier term. Candidacy must also be valid.

The University Oral Examination Committee consists of at least five Stanford faculty members: four examiners and the committee chair from another department. All members are normally on the Stanford Academic Council, and the chair must be a member. Emeritus faculty are also eligible to serve as examiners or chair of the committee. (A petition for appointment of an examining committee member who is not on the Academic Council may be approved if that person contributes an area of expertise that is not readily available from the faculty.) The chair of the examining committee may not have a full or joint appointment in the adviser’s or student’s department, but may have a courtesy appointment in the department. The chair can be from the same department as any other member(s) of the examination committee and can be from the student’s minor department provided that the student’s adviser does not have a full or joint appointment in the minor department.

The University Oral Examination form must be submitted to the department graduate studies administrator at least two weeks prior to the proposed examination date. The examination is conducted according to the major department’s adopted practice, but it should not exceed three hours in length, and it must include a period of private questioning by the examining committee.

Responsibility for monitoring appointment of the oral examination chair rests with the candidate’s major department. Although the department cannot require the candidate to approach faculty members to serve as chair, many departments invite students and their advisers to participate in the process of selecting and contacting potential chairs.

The candidate passes the examination if the examining committee casts four favorable votes out of five or six, five favorable votes out of seven, or six favorable votes out of eight. Five members present and voting constitute a quorum. If the committee votes to fail a student, the committee chair sends within five days a written evaluation of the candidate’s performance to the major department and the student. Within 30 days and after review of the examining committee’s evaluation and recommendation, the chair of the student’s major department must send the student a written statement indicating the final action of the department.

DISSERTATION

An approved doctoral dissertation is required for the Ph.D., Ed.D., and J.S.D. degrees. The doctoral dissertation must be an original contribution to scholarship or scientific knowledge and must exemplify the highest standards of the discipline. The dissertation is approved for the school or department by the doctoral dissertation reading committee. Each member of the reading committee signs the signature page of the dissertation to certify that the work is of acceptable scope and quality. One reading committee member reads the dissertation in its final form and certifies on the Certificate of Final Reading that department and University specifications have been met.

Dissertations must be in English. Approval for writing the dissertation in another language is normally granted only in cases where the other language or literature in that language is also the subject of the discipline. Such approval is routinely granted for dissertations in the Division of Literatures, Cultures, and Languages, in accordance with the policy of the individual department. Dissertations written in another language must include an extended summary in English.

Directions for preparation of the dissertation are available from the Degree Progress Office in the Old Union. The signed dissertation copies and accompanying documents must be submitted to the Degrees Progress Office on or before the quarterly deadline indicated in the University’s academic calendar. A fee is charged for the microfilming and binding of the dissertation copies.

Registration is required for the term, or the immediately preceding term, in which the dissertation is submitted. The period between the last day of final exams of one term and the first day of the subsequent term is considered an extension of the earlier term. Students submitting a dissertation during this period would meet the registration requirement but would be eligible for degree conferral only in the subsequent term. At the time the dissertation is submitted, an Application to Graduate must be on file. All of the department requirements must be complete, and candidacy must be valid through the term of degree conferral.

DOCTORAL DISSERTATION READING COMMITTEE

The Doctoral Dissertation Reading Committee consists of the principal dissertation adviser and two other readers. At least one member must be from the student’s major department. Normally, all members are on the Stanford Academic Council. The student’s department chair may, in some cases, approve the appointment of a reader who is not on the Academic Council, if that person is particularly well-qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree.

Former Stanford Academic Council members, emeritus professors, and non-Academic Council members may serve on a reading committee. If they are to serve as the principle dissertation adviser, however, the appointment of a co-adviser who is currently on the Academic Council is required.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on the Doctoral Dissertation Reading Committee form. This form must be submitted before approval of Terminal Graduate Registration (TGR) status or before scheduling a University oral examination that is a defense of the dissertation. The reading committee may be appointed earlier, according to the department timetable for doctoral programs. All subsequent changes to the reading committee must be approved by the chair of the major department.

Ph.D. MINOR

Students pursuing a Ph.D. may pursue a minor in another department or program to complement their Ph.D. program. This option is not available to students pursuing other graduate degrees. Ph.D. candidates cannot pursue a minor in their own major department or program.
Except for a Ph.D. minor in Applied Linguistics and Social Science History, only departments that offer a Ph.D. may offer a minor, and those departments are not required to do so. The minor should represent a program of graduate quality and depth, including core requirements and electives or examinations. The department offering the minor establishes the core and examination requirements. Elective courses are planned by the students in conjunction with their minor and Ph.D. departments.

The minimum University requirement for a Ph.D. minor is 20 units of course work at the graduate level (courses numbered 200 and above). If a minor department chooses to require those pursuing the minor to pass the Ph.D. qualifying or field examinations, the 20-unit minimum can be reduced. All of the course work for a minor must be done at Stanford.

Units taken for the minor can be counted as part of the overall requirement for the Ph.D. of 72 units of graduate course work done at Stanford, but cannot be counted as part of the 36 unduplicated units for the Ph.D. itself. Courses used for a minor may not be used also to meet the requirements for a master’s degree.

A Ph.D. minor form outlining a program of study must be approved by the major and minor departments. This form is submitted at the time of admission to candidacy and specifies whether representation from the minor department on the University oral examination committee is required.

ADVISING AND CREDENTIALS

ADVISING

By the start of their first term, students should be paired by the department with faculty advisers who assist them in planning a program of study to meet degree requirements. The department should also ensure that doctoral students are informed in a timely fashion about procedures for selecting a dissertation adviser, reading committee members, and orals committee members. Departments should make every effort to assist doctoral students who are not admitted to candidacy in finding an appropriate adviser.

Students are obliged to follow department procedures for identifying advisers and committee members for their dissertation reading and orals examinations.

Occasionally, a student’s research may diverge from the area of competence of the adviser, or irreconcilable differences may occur between the student and the faculty adviser. In such cases, the student or the faculty adviser may request a change in assignment. If the department decides to grant the request, every effort must be made to ensure that the student is paired with another suitable adviser. This may entail some modification of the student’s research project.

In the rare case where a student’s dissertation research on an approved project is in an advanced stage and the dissertation adviser is no longer available, a new adviser must be appointed, usually from the student’s reading committee. This may also require that a new member be added to the reading committee before the draft dissertation is evaluated, to keep the reconstituted committee in compliance with the University requirements for its composition.

PUBLIC SCHOOL CREDENTIALS

Stanford University acts as agent for the California Commission on Teacher Credentialing in recommending students for credentials for service in California public schools upon completion of a Stanford approved program. The University offers complete training programs for the Single Subject Teaching Credential and the Preliminary Administrative Services Credential.

The student expecting to complete the fifth-year requirement for a teaching credential must submit a proposed course of study to the Credential Office in the School of Education at the beginning of the first quarter of study.
Academic Policies and Statements

COMPLIANCE WITH UNIVERSITY REGULATIONS

Registration as a student constitutes an agreement to abide by University regulations, including those concerning admissions, registration, academic performance, student conduct, public health, use of the libraries, operation of vehicles on campus, University facilities, and the payment of fees and assessments. Many of these regulations are set forth in this bulletin while others are available in relevant University offices.

Graduate students should also take responsibility for informing themselves in particular of University policy on intellectual property, environmental health and safety, and scientific misconduct. These policies are described in the Research Policy Handbook and the Graduate Student Handbook.

The University reserves the right to withhold registration privileges or to require the withdrawal of any student who is not in compliance with its regulations.

ACADEMIC INSTRUCTIONAL USE OF VERTEBRATE ANIMALS

It is the policy of Stanford University that the use of either live or deceased vertebrate animals for solely instructional purposes is permitted (1) when the cognizant instructor(s) judges that the educational goals of the program or course are best achieved by such usage, and (2) when the Administrative Panel on Laboratory Animal Care determines that such usage is humane, proper, and appropriate and that it is consistent with government principles and regulations for the utilization and care of vertebrate animals used in teaching and research. Only the minimum number of animals essential to instructional objectives should be used. Instructors should be encouraged to use alternatives to animals whenever feasible.

INFORMATION TO STUDENTS

Academic departments and programs should alert prospective students if any courses required for a major or degree involve the use of animals. This requirement may be met by a statement to the effect that some required courses for certain degrees may involve the use of animals or animal tissue and that interested students should seek further information about such requirements from the department.

Instructors must inform their students during the first week of class if animals or animal tissue will or may be used as part of that course. Students who have concerns about the use of animals may then choose whether or not to take the class. Students should feel free to discuss their concerns with the instructor, but they should be aware that instructors and departments are not obligated to alter course requirements that are consistent with University policies.

PROCEDURES FOR USE OF ANIMALS

Any faculty member who intends to use vertebrate animals for teaching purposes must submit an Animal Use Protocol, signed by the department chair, to the Administrative Panel on Laboratory Animal Care. Reuse of previously preserved material requires no approval. Courses taught each year with no significant changes in animal usage must submit a Renewal Animal Use Protocol every year.

The protocol must include information about the sources from which animals are procured. In addition, the protocol must explain why animals are needed to achieve the goals of the course and must justify the species and the number of animals to be used. Questions from the Administrative Panel on Laboratory Animal Care regarding the species of animal chosen, the procurement process, the number of animals to be used, or other related matters must be resolved before the animals may be ordered.

Live vertebrate animals must be cared for according to the Division of Laboratory Animal Medicine policies and procedures governing the use of laboratory animals. Disposal of animal tissue must be in compliance with relevant health and safety regulations.

REGISTRATION AND RECORDS

REGISTRATION AND STUDY LISTS

Students register for each term by submitting a Registration Commitment form through the mail, in person, or through the computerized registration system, Axess. No student may attend any classes without a valid student identification card.

As early as possible, but no later than the second Sunday of the quarter, students (including those with TGR status) must submit to the Registrar’s Office, via Axess, a study list to enroll officially in classes for the quarter. Students may not enroll in more units than their tuition charge covers, nor enroll in courses for zero units unless those courses, like TGR, are defined as zero-unit courses. Undergraduate students are subject to academic load limits described in the “Amount of Work” section below.

The University reserves the right to withhold registration from, and to cancel the advance registration or registration of, any student having unmet obligations to the University.

For full registration procedures, see the quarterly Time Schedule.

STUDY LIST CHANGES

Students may add courses or units to their study lists through the end of the third week of classes. (Individual faculty may choose to close their classes to new enrollments at an earlier date.) Courses or units may be dropped only if the revised program remains within the normal load limits.

Courses may be dropped by students through the end of the fourth week of classes, without any record of the course remaining on the student’s transcript. No drops are permitted after this point, regardless of the grade or notation recorded in the course.

A student may withdraw from a course after the drop deadline through the end of the eighth week of each quarter. In this case, a grade notation of “W” (for “Withdrew”) is automatically recorded on the student’s transcript for that course. Students who do not officially withdraw from a class by the end of the eighth week are assigned the appropriate grade or notation by the instructor to reflect the work completed.

Through the end of the sixth week of classes, students may elect the grading option of their choice in courses where the option of letter or Credit/No Credit grading is offered.

If the instructor allows a student to take an ‘I’ (incomplete) in the course, the student must make the appropriate arrangements for that with the instructor by the last day of classes.

These policies reflect changes adopted by the Faculty Senate on June 2, 1994 which were effective Autumn Quarter 1995-96. The deadlines described above follow the same pattern each quarter but, due to the varying lengths of Stanford’s quarters, they may not always fall in exactly the week specified. Students should consult the Time Schedule for the deadline dates each term.

REPEATED COURSES

Students may not enroll in courses for credit for which they received either Advanced Placement or transfer credit.

Some Stanford courses may be repeated for credit; they are specially noted in this bulletin. Most courses may not be repeated for credit. Under the general University grading system, when a course which may not be repeated for credit is retaken by a student, the following special rules apply:

1. A student may retake once any course on his or her transcript (regardless of grade or notation earned), or from which she or he withdrew, and have the original grade or notation replaced by the notation ‘RP’
(repeated course). When retaking a course, the student must enroll in it for the same number of units originally taken. Upon completion of the retake, units for the first occurrence are automatically lowered to zero, the grade is changed to an ‘RP,’ and the second occurrence is flagged on the student’s transcript to indicate that it is a repeated course.

2. The student may not retake the same course again (for a third time), unless he or she received a ‘NC’ (No Credit), ‘NP’ (Not Passed), or ‘W’ (Withdraw) when it was taken the second time. Upon completion of the third attempt, the units for the first and second time are automatically lowered to zero. The third attempt appears on the transcript with its units, grade, and the special flag to indicate that it is a repeated course.

These policies reflect changes adopted by the Faculty Senate on June 2, 1994.

AMOUNT OF WORK

The usual amount of work for undergraduate students is 15 units per quarter; 180 units are required for graduation. Registration for fewer than 12 units is rarely permitted and may cause the undergraduate to be ineligible for certification as a full-time student. The maximum is 20 units (21 if the program includes a 1-unit activity course). The maximum may be exceeded only for compelling reasons. A past superior academic performance is not considered to be sufficient justification for exceeding the maximum. Petitions for programs of fewer than 12 or more than 20 units must be signed by the student’s adviser and submitted to the Office of Academic Standing, Old Union, room 141. For additional information regarding satisfactory academic progress, refer to the “Academic Standing” section of this bulletin.

Graduate students are normally expected to enroll in no more than 24 units; registration for more than 24 units must be approved by the department. Under certain circumstances, graduate students may register on a part-time basis. See the “Tuition, Fees, and Housing” section of this bulletin.

During the eight-week Summer Quarter, 16 units is the maximum for all students. For details, see the Stanford University bulletin, Summer Session Catalogue, 2000.

UNIT OF CREDIT

Every unit for which credit is given is understood to represent approximately three hours of actual work per week for the average student. Thus, in lecture or discussion work, for 1 unit of credit, one hour per week may be allotted to the lecture or discussion and two hours for preparation or subsequent reading and study. Where the time is wholly occupied with drawing, field, or laboratory work, or in the classroom work of conversation classes, three full hours per week through one quarter are expected of the student for each unit of credit; but, where such work is supplemented by systematic outside reading or experiment under the direction of the instructor, a reduction may be made in the actual drawing, field, laboratory, or classroom time as seems just to the department.

AUDITING

No person shall attend any class unless he or she is a fully registered student enrolled in the course or meets the criteria for auditors. Auditors are not permitted in courses that involve direct participation such as language or laboratory science courses, fieldwork, art courses with studio work, or other types of individualized instruction. Auditors are expected to be observers rather than active participants in the courses they attend, unless the instructors request attendance on a different basis. Stanford does not confer credit for auditing, nor is a permanent record kept of courses audited.

In all cases of auditing, the instructor’s consent and the Registrar’s approval are required. Further information is available from the Registrar’s Office.

WITHDRAWAL FOLLOWING REGISTRATION

Students who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a leave of absence petition with the Registrar’s Office. More information is available in the “Refunds” section of this bulletin and, for graduate students, in General Requirements in the “Graduate Degrees” section of this bulletin.

RECORDS

TRANSCRIPTS

Transcripts of Stanford records are issued by the Registrar’s Office upon the student’s request when submitted in writing or via the online Axess system. There is no charge for official transcripts. The courses taken and grades given in one quarter will not appear on any student’s transcript until all grades received by the grade deadline have been recorded; generally, this is two weeks after final exams. The University reserves the right to withhold transcripts or records of students with unmet obligations to the University.

CERTIFICATION OF ENROLLMENT OR DEGREES

Requests for official certification of enrollment or degrees should be addressed to the Registrar’s Office. Oral confirmation of registration or degrees earned can often be made at the time of the phone inquiry. Requests for written certification of enrollment should be submitted by the student to the Registrar’s Office.

Degrees are conferred quarterly, but diplomas are issued at the Commencement exercises which are held only in June. After conferral, the degree awarded to a student can be verified by contacting the Registrar’s Office for an official transcript, a certification form, or an oral confirmation via telephone. Requests for transcripts must be made by the student in writing or through Axess.

Full-time enrollment for undergraduates is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Work necessary to complete units from previous quarters will not count toward the 12 units necessary for full-time status in the current quarter. Enrollment in 8 to 11 units is considered half-time enrollment. Enrollment in 1 to 7 units is considered less-than-half-time, or part-time enrollment.

All undergraduate students validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification. Stanford uses the following definitions to certify the enrollment status of graduate students each quarter:

- Full-time: 9 or more units
- Half-time: 6, 7 or 8 units
- Part-time: 5 or fewer units
- Registered TGR students are certified as full-time.

Only information classified by the University as directory information (see below) can be confirmed to inquirers other than the student.

PRIVACY OF STUDENT RECORDS

NOTIFICATION OF RIGHTS UNDER FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. These are:

1. The right to inspect and review the student’s education records within 45 days of the date the University receives a request for access.

The student should submit to the Registrar, Dean, chair of the department, or other appropriate University official, a written request that identifies the record(s) the student wishes to inspect. The University official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the University official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student’s educational records that the student believes are inaccurate or misleading.
A student may ask the University to amend the record that he or she believes is inaccurate or misleading. The student should write the University official responsible for the record, clearly identify the part of the records he or she wants changed, and specify why it is inaccurate or misleading.

If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment.

Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent.

One exception which permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person employed by the University in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the University has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Another exception is that the University discloses education records without consent to officials of another school, in which a student seeks or intends to enroll, upon request of officials at that other school.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA.

The name and address of the office that administers FERPA is: Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue, SW., Washington, DC, 20202-4605.

DIRECTORY INFORMATION

The University regards the following items of information as “directory information,” that is, information that the University may make available to any person upon specific request (and without student consent):

Name
Date of birth
Place of birth
Directory address and phone number
Electronic mail address
Mailing address
Campus office address (for graduate students)
Secondary mailing or permanent address
Residence assignment and room or apartment number
Specific quarters or semesters of registration at Stanford
Stanford degree(s) awarded and date(s)
Major(s), minor(s), and field(s)
University degree honors
Institution attended immediately prior to Stanford
Photographs for University purposes (such as classroom use) only

Students may prohibit the release of any of these items listed above by designating which items should not be released on the Privacy function of Axess.

Students, faculty, and others with questions regarding student records should contact the Registrar’s Office.

CONSENT TO USE OF PHOTOGRAPHIC IMAGES

Registration as a student and attendance at or participation in classes and other campus and University activities constitutes an agreement by the student to the University’s use and distribution (both now and in the future) of the student’s image or voice in photographs, videotapes, electronic reproductions, or audiotapes of such classes and other campus and University activities.

If any student in a class where such photographing or recording is to take place does not wish to have his or her image or voice so used, the student should raise the matter in advance with the instructor.

STANFORD UNIVERSITY ID NUMBER

The Stanford University ID is a number assigned to each student’s academic record for unique identification. It is printed on the Stanford University ID card and on documents distributed by the Registrar’s Office and other administrative offices.

SUNET ID

The SUNet ID provides access to the Stanford University Network (SUNet) and its services, and identifies authorized users of these services. Each member of the Stanford electronic community creates a unique SUNet ID and password for him/herself.

SUNET IDs provide:

Axess services
Email service
Storage space within Stanford’s distributed file system
Usenet newsgroups
World Wide Web services, including serving of personal web pages on the Leland system and access to Stanford Web Resources

IDENTIFICATION CARDS

ID cards are available to registered students, faculty, and regular staff through the Office of the Registrar, Old Union.

Married students or students with a domestic partner (same or opposite sex) may obtain a courtesy identification card for their spouse/partner through the Registrar’s Office, Old Union. The spouse/partner card enables use of some campus services during terms for which the student is registered.

Similar courtesy cards are also available to the spouses and same-sex partners of faculty and regular staff.

PERSONAL IDENTIFICATION NUMBERS

Students eligible to use on-line services such as Axess obtain a PIN through the Registrar’s Office. The PIN, coupled with the assigned University identification number, uniquely identifies the student and serves in a place of a signature on electronic forms. The PIN and SUNet ID password must remain confidential. It is a violation of University policy to use another’s PIN or identification number to misrepresent yourself in any way. Use of another student’s PIN or SUNet ID password can result in loss of student privileges or other disciplinary action.

EXAMINATIONS

MIDTERMS

Classes that give midterm examinations outside of regular class hours must: (1) announce the date and time during the first week of the academic quarter, and (2) provide reasonable alternative times to those students for whom these announced times are not convenient. According to Honor Code interpretations and applications, different examinations may be given at these alternative times.

END-QUARTER POLICY STATEMENT

The End-Quarter Period is a time of reduced social and extracurricular activity preceding final examinations. Its purpose is to permit students to concentrate on academic work and to prepare for final examinations.

In Autumn, Winter, and Spring Quarters, End-Quarter starts seven full days (to begin at 12:01 a.m.) prior to the first day of final exams. In Spring Quarter, final examinations begin on Friday; no classes are held on Thursday, the day before. In Summer Quarter, this consists of the weekend and the four class days preceding the final examinations, which take place
on Friday and Saturday of the eighth week. (See the Time Schedule for dates.)

During the End-Quarter Period, classes are regularly scheduled and assignments made; this regular class time is used by instructors in whatever way seems best suited to the completion and summation of course material. Instructors should neither make extraordinary assignments nor announce additional course meetings in order to "catch up" in course presentations that have fallen behind. They are free, however, and even encouraged to conduct optional review sessions and to suggest other activities that might seem appropriate for students preparing for final examinations.

No graded homework assignments, mandatory quizzes, or examinations should be given during the End-Quarter Period except:

1. In classes where graded homework assignments or quizzes are routine parts of the instruction process.
2. In classes with laboratories where the final examination will not test the laboratory component. In such a case, the laboratory session(s) during the End-Quarter Period may be used to examine students on that aspect of the course.

Major papers or projects about which the student has had reasonable notice may be called due in the End-Quarter Period.

Take-home final examinations, given in place of the officially scheduled in-class examination, may be distributed in the End-Quarter Period. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course. Such a policy respects the principle that students' final examinations are to be scheduled over a period of several days.

End-quarter examinations may not be held during this period. This policy preserves the instruction time for courses and protects the students' opportunities for extensive review and synthesis of their courses.

During the End-Quarter Period, no musical, dramatic, or athletic events involving compulsory student participation may be scheduled, unless approved as exceptions by the Committee on Academic Appraisal and Achievement, or may routine committee meetings be scheduled (such as those of the ASSU, the Senate of the Academic Council, or the committees of the President of the University) when such meetings normally would involve student participation.

Note—Students who believe that there are faculty who are violating End-Quarter policy should contact the Registrar's Office.

END-QUARTER EXAMINATIONS

Examinations are part of the process of education at the same time that they are a means to measure the student's performance in course work. Their structure, content, frequency, and length are to be determined in accordance with the nature of the course and the material presented in it, subject only to the limitations contained herein.

Great flexibility is available regarding the types of examinations that an instructor may choose to employ. Examinations, including final examinations, may be, for example, in-class essay examinations, take-home essay examinations, objective examinations, oral examinations, or appropriate substitutes such as papers or projects. Instructors may use any type of examination, paper, or project, or any combination thereof, guided only by the appropriateness of the types of examinations, papers, or projects for the material upon which the student is being examined.

When the final examination is an in-class examination, the following regulations apply:

1. A three-hour period is reserved during examination week for the final examination in each course of more than 2 units. This examination period must be available for students, but not necessarily in its entirety, if an in-class examination is given. In courses with extraordinary meeting times, such that ambiguity might exist as regards the period reserved for the final examination, the schedule should be clarified and students informed no later than the end of the second week of the quarter.
2. Examinations in 1- or 2-unit courses must be completed by the end of the last class meeting before the End-Quarter Period, except in Summer Quarter when examinations must be completed during the last regularly scheduled class session.

When the final examination or its appropriate substitute is not an in-class examination (for example, when an instructor chooses to employ a take-home examination, paper, or project in lieu of an in-class examination), the following regulations apply:

1. The schedule and format of the final examination or its appropriate substitute shall be made known not later that the end of the second week of the quarter and, if changed subsequently, may be only an option of the plan originally announced by the instructor.
2. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course.

In submitting official Study Lists, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. In selecting courses, students should take cognizance of the official schedule of final examinations announced in the quarterly Time Schedule. Students anticipating conflicts in final examination schedules should seek to resolve these with the instructors involved before submitting Study Lists at the end of the second week of the quarter. If accommodation cannot be made at that time, the student should revise his or her Study List in order to be able to meet the required final examination.

If unforeseen circumstances prevent the student from sitting for the regularly scheduled examination, instructors should make alternative arrangements on an individual basis. Such unforeseen circumstances include illness, personal emergency, or the student's required participation in special events approved as exceptions by the Committee on Academic Appraisal and Achievement (for example, athletic championships).

STATEMENT CONCERNING EARLY EXAMINATIONS

Students are reminded that taking final examinations earlier than the scheduled time is a privilege, not a right. They should request this privilege only in the event of extraordinary circumstances.

Since the final examination schedule is published quarterly in the Time Schedule at the time of course selection and enrollment, students are expected to make their academic plans in light of known personal circumstances that may make certain examination times difficult for them.

In general, faculty members are discouraged from giving final examinations earlier than the published and announced times. If faculty nevertheless decide to administer early examinations, either the questions should be completely different from those on the regularly scheduled examination or the early examination should be administered in a highly controlled setting. An example of such a setting would be a campus seminar room where the examination questions would be collected along with students' work and students would be reminded of their Honor Code obligations not to share information about the examination contents. Giving students easy opportunities to abuse the integrity of an examination is unfair to honest students and inconsistent with the spirit of the Honor Code.

Academic fields differ in the degree to which early examination requests present dilemmas for faculty. If, for example, an examination format consists of a small number of essay questions, where students would be greatly advantaged by knowing the question topics, faculty should be especially reluctant to allow early examinations unless they are willing to offer totally different examinations or a different kind of academic task, for example, a final paper in lieu of an examination.

GRADING SYSTEMS

GENERAL UNIVERSITY

The general University grading system is applicable to all schools of Stanford University except the Graduate School of Business, the School of Law, and M.D. students in the School of Medicine. Note that the GPA
(grade point average) and rank in class are not computed under the general University grading system. Stanford does use an internal-only GPA system, which is based on units completed up to the time of conferment of the first bachelor's degree. This information is used for the internal purposes only and is not displayed on the official transcript which is sent outside the University. Note also that, as to graduate students, there may be departmental requirements as to grades that must be maintained for purposes of satisfactory progress.

**DEFINITION AND EXPLANATION**

The following reflects changes adopted by the Faculty Senate on June 2, 1994 and effective Autumn Quarter 1995-96. All grades/notations for courses taken in 1995-96 or later are to be visible on student transcripts.

- **A** Excellent
- **B** Good
- **C** Satisfactory
- **D** Minimal pass

(Plus (+) and minus (-) may be used as modifiers with the above letter grades)

- **NP** Not Passed
- **NC** No Credit (unsatisfactory performance, 'D+' or below equivalent, in a class taken on a satisfactory/no credit basis)
- **CR** Credit (student-elected satisfactory; A, B, or C equivalent)
- **S** No-option Satisfactory; A, B, or C equivalent
- **L** Pass, letter grade to be reported
- **W** Withdrew
- **N** Continuing course
- **I** Incomplete
- **RP** Repeated Course
* No grade reported

**NC** The notation 'NC' represents unsatisfactory performance in courses taken on a satisfactory/no credit basis. Performance is equivalent to letter grade 'D+' or below.

**NP** The notation 'NP' is used by instructors in courses taken for a satisfactory/no credit basis. Performance is equivalent to letter grade 'D+' or below.

**CR** In a course for which some students will receive letter grades, the 'CR' represents performance that is satisfactory or better when the student has elected the 'CR' grading option. This option is available in any course, subject to the consent of the instructor and department and to the student's observance of the time limit for electing or dropping the option (the end of the sixth week of the quarter).

**S** For an activity course or a course in which the instructor elects to grade students only on a satisfactory/no credit basis, the 'S' represents performance that is satisfactory or better. For such a course, no letter grades may be assigned for satisfactorily completed work.

It should be noted that the Registrar is unable to record course grades submitted when the instructor has not observed the required distinction between 'S' and 'CR'.

The "satisfactory" options are intended to relieve the pressure on students for achievement in grades. The "satisfactory" options in no way imply fewer or different course work requirements than those required of students who elect evaluation with a letter grade. A department may limit the number of "satisfactory" courses to count for a major program. For those students admitted as freshmen for Autumn Quarter 1996-97 or later, no more than 36 units of Stanford course work in which a 'CR' or 'S' was awarded can be applied toward the 180 (225 if dual degrees are being pursued) units required for a bachelor's degree. Students who enter Stanford as transfer students in 1996-97 or later are limited to 27 'CR' or 'S' units applied toward the 180/225 minimum.

**L** The 'L' is a temporary notation that represents creditable completion of a course for which the student will receive a permanent letter grade before the start of the next quarter. The 'L' is given when the instructor needs additional time to determine the specific grade to be recorded, but it is not appropriate if additional work is expected to be submitted by the student. A student receives unit credit for work graded 'L' at the same number of units, but the grade for all quarters of such a course must be the same.

**N** The 'N' indicates satisfactory progress in a course that has not yet reached completion. Continuation courses need not continue at the same number of units, but the grade for all quarters of such a course must be the same.

- The 'N-' grade indicates unsatisfactory progress in a continuing course. The first 'N-' grade constitutes a warning. The adviser, department chair, and students should discuss the deficiencies and agree on the steps necessary to correct them. A second 'N-' should cause the student to be denied further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Any 'N-' grades received after that point are grounds for dismissal from the program.

- The 'I' is restricted to cases in which the student has satisfactorily completed a substantial part of the course work. No credit will be given until the course is completed and a passing grade received. When a final grade is received, all reference to the initial 'I' is removed.

In courses taken before 1994-95, satisfactory completion of the course work when an 'I' has been given is expected within a year from the date of the course's final examination, but an alternate time limit may be set by the instructor. Students may petition that these courses with an 'I' grade be removed from their records.

In a course taken 1994-95 or later, 'I' grades must be changed to a permanent notation or grade within one year (that is, prior to the first day of the fifth quarter which follows the course, including Summer Quarter). An alternate time limit may be set by the instructor. If the 'I' remains uncleared at that time, it is changed automatically by the Registrar's Office to an 'NP' or 'NC' as appropriate for the grading option selected. Courses from 1994-95 or later with an 'I' grade may not be dropped.

**RP** The notation 'RP' (meaning Repeated Course) replaces the original grade recorded for a course when a student retakes a course. (See repeated courses above.)

**W** The notation 'W' (meaning Withdrew) is recorded when a student withdraws from a course.

- When the Registrar receives an End-Quarter Report (EQR) from an instructor with a grade omitted, or receives an End-Quarter Report too late for processing with other End-Quarter Reports, a '*' (no grade reported) shows as the grade for the course on a student's transcript. The asterisk may also be reported by the instructor when he or she is unable to record any other grade or symbol. The '*' symbol remains in the record until changed.

**GENERAL**

The back of the End-Quarter Report (EQR) sheet shall carry only information explaining the significance of the various forms of entries described therein and a calendar for required submission of grades. No description of a "curve" system shall appear on EQR sheets, and instructors are discouraged from awarding grades according to any predetermined distribution system.

A student who takes a course in a school or program of the University other than the one in which he or she is matriculated is subject to the grading system of the school or program in which the course is given.

**REPORTING OF GRADES**

All grades must be reported within 96 hours after the time and day reserved for the final examination, and in no case later than noon of the fourth day (including weekends) after the last day of the final examination period.

In the case of degree candidates in Spring Quarter, final grades must be reported within 24 hours of the end of the final examination period.

**REVISION OF END-QUARTER GRADES**

When duly filed in the Registrar's Office, end-quarter grades are final and not subject to change by reason of a revision of judgment on the instructor's part; nor are passing grades to be revised on the basis of a second trial (for example, a new examination or additional work undertaken or completed after the date of the End-Quarter Report). Changes may be made at any time to correct an actual error in computation or in transcribing, or where some part of the student's work has been intentionally overlooked; that is, if the new grade is the one that would have
been entered on the original report had there been no mistake in comput-
ing and had all the pertinent data been before the instructor, the change is a proper one.

If a student questions an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or in transcribing, or work unintentionally overlooked, but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned whether an error is discovered by the student or the instructor; however, chang-
ing a grade is not permitted by reason of revision of judgment on the part of the instructor.

In the event that a student disputes an end-quarter grade, the estab-
lished grievance procedure should be followed (see the "Statement on Student Academic Grievance Procedures" section of this bulletin).

GRADUATE SCHOOL OF BUSINESS

Effective September 1971, the following grade scale applies only to
courses offered by the Graduate School of Business:

H Distinction. Work that is of markedly superior quality.
P+ Work that is of high quality and exceeds in a significant way all of the basic requirements of the course.
P Pass. Work that is of good quality and clearly satisfies all the basic requirements of the course.
P- Work that satisfies most of the basic requirements of the course, but is deficient in some minor ways.
U Unsatisfactory. Work that does not satisfy the basic requirements of the course and is deficient in significant ways.
EX Course exempted. (Does not affect grade point calculations.)
+ Pass (P-or better).

SCHOOL OF LAW

The two grading systems previously employed at the School of Law were revised effective September 1983. Under the letter grade systems (with numerical equivalents), the range of satisfactory grades runs from 4.3 to 2.3 as outlined in the following distribution. Below the grade of 2.3 is one level of restricted credit (R=2.2) and one level of failure (F=2.1). The letter grades and numerical equivalents are as follows:

- A+ 4.3
- A 4.0
- B+ 3.3
- B 3.0
- C+ 2.3
- C 2.0
- D+ 1.3
- D 1.0

'A' is a temporary notation used in a continuing course; it is replaced with a final grade upon completion of the course series.

Students may elect to take a limited number of courses on a credit/
restricted credit/no credit system (K/RK/NK). 'K' shall be awarded for work that is comparable to numerical grades 4.3 to 2.3, 'RK' for R-level work (2.2), and 'NK' for F-level work (2.1). A limited number of courses are offered on a mandatory credit (KM)/no credit basis.

SCHOOL OF MEDICINE

The following grades are used in reporting on the performance of
students in the M.D. program:

Pass Indicates that the student has demonstrated to the satisfaction of the department or teaching group responsible for the course that he or she has mastered the material taught in the course.

Fail Indicates that the student has not demonstrated to the satisfaction of the department or teaching group responsible for the course that he or she has mastered the material taught in the course.

Incomplete Indicates that extenuating medical or personal circumstances have prevented the student from completing the course requirements. This grade shall be given when requested by the student with the prior approval of the Dean for Student Affairs in the School of Medicine.

EXempt Indicates a course that is exempted by examination. No units are awarded for courses completed.

A "Fail" grade can be cleared by repeating and passing the particular course or by other arrangement prescribed by the department or teaching group. An "Incomplete" grade can be made up in a manner specified by the department or teaching group within a reasonable time; if the deficiency is not made up within the agreed-upon time, the "Incomplete" grade becomes a "Fail" grade. The opportunity to clear a "Fail" grade or an "Incomplete" grade cannot be extended to individuals who are not registered or eligible to register as students in the M.D. program.

STATEMENT ON STUDENT ACADEMIC GRIEVANCE PROCEDURES

The following policy was effective beginning in the 1999-2000 academic year and is subject to periodic review.

1. Coverage

a) Any Stanford undergraduate or graduate student or postdoctoral fellow who believes that he or she has been subjected to an improper decision on an academic matter is entitled to file a grievance to obtain an independent review of the allegedly improper decision, followed by corrective action if appropriate. A grievance is a complaint in writing made to an administrative officer of the University concerning an academic decision, made by a person or group of persons acting in an official University capacity, that directly and adversely affects the student or postdoctoral fellow as an individual in his or her academic capacity.

b) Grievance procedures apply only in those cases involving a perceived academic impropriety arising from decision taken by: (1) an individual instructor or researcher; (2) a school, department, or program; (3) a committee charged to administer academic policies of a particular school, department, or program; (4) the University Registrar or a Senate committee or subcommittee charged to administer academic policies of the Senate of the Academic Council. They do not pertain to complaints expressing dissatisfaction with a University policy of general application challenged on the grounds that the policy is unfair or inadvisable, nor do they pertain to individual school, department, or program academic policies, as long as those policies are not inconsistent with general University policy.

c) Individuals should be aware that the University Ombudsperson's Office is available to all Stanford students, postdoctoral fellows, faculty, and staff to discuss and advise on any matter of University concern and frequently helps expedite resolution of such matters. Although it has no decision-making authority, the Ombudsperson's Office has wide powers of inquiry, including into student complaints against instructors.

2. Grievance and Appeal Procedures

a) Informal Attempts at Resolution: the student or postdoctoral fellow first should discuss the matter, orally or in writing, with the individual(s) most directly responsible. If no resolution results, the student or postdoctoral fellow should then consult with the individual at the next administrative level, for example, the chair or director of the relevant department or program, or, for those cases in which there is none, with the school dean. At this stage, the department chair or program director, if any, may inform the dean that the consultation is taking place and may solicit his or her advice on how to ensure that adequate steps are taken to achieve a fair result. Efforts should be made to resolve the issues at an informal level without the complaint escalating to the status of a formal grievance.
b) The Filing of the Grievance:
1. If informal means of resolution prove unsatisfactory, the student or postdoctoral should set forth in writing a statement of the decision that constitutes the subject matter of the dispute, the grounds on which it is being challenged, and the reasons why the grievant believes that the decision was improperly taken. The statement should also include a description of the remedy sought and the informal efforts taken to date to resolve the matter. It is at this point that the complaint becomes a formal grievance. The written grievance should specifically address the matters set forth in the Standards for Review, as stated in Section 4 below. The grievance should include an allegation of any adverse effects on the grievant, known to the grievant at the time of filing.
2. The grievance document should be submitted to the dean of the school in which the grievance arose; for a grievance concerning a decision of the University Registrar or of a Senate committee or subcommittee, the procedures set forth herein for grievances and appeals shall be modified as stated in Section 3 below. A grievance must be filed in a timely fashion, that is, normally within 30 days of the end of the academic quarter in which the adverse decision occurred or should reasonably have been discovered. A delay in filing a grievance may, taking all circumstances into account, constitute grounds for rejection of the grievance.

c) The Response to the Grievance:
1. The relevant dean shall consider the grievance. The dean may attempt to resolve the matter informally or make whatever disposition of the grievance that he or she deems appropriate. The dean may, in appropriate cases, remand the grievance to a lower administrative level (including to the level at which the grievance arose) for further consideration.
2. The dean may also refer the grievance, or any issue therein, to any person (the "grievance officer") who shall consider the matter and report to the dean as the latter directs. The dean shall inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and shall specify the matters referred, the directions to the person to whom the referral is made (including the time frame within which the person is to report back to the dean), and the name of that person.
3. In undertaking the review, the dean or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information considered relevant, including faculty, staff, and students.
4. Should attempts be made to resolve the matter informally not be successful, the dean shall decide the grievance, and shall notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the matter and the grounds for the disposition at the earliest practicable date after his or her receipt of the grievance.
5. Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. If, because of absence of key persons from the campus or other exigencies, the dean decides that prompt disposition is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of that in writing, giving the grounds therefor and an estimate of when a disposition can be expected.

d) The Filing of an Appeal:
1. If the grievant is dissatisfied with the disposition of the grievance at the dean level, either on substantive or on procedural grounds, he or she may appeal in writing to the Provost.
2. The appeal must specify the particular substantive or procedural bases of the appeal (that is, the appeal must be made on grounds other than general dissatisfaction with the disposition) and must be directed only to issues raised in the grievance as filed or to procedural errors in the grievance process itself, and not to new issues. The appeal shall contain the following:
   a. A copy of the original grievance and any other documents submitted by the grievant in connection therewith.
   b. A copy of the determination made by the dean on that grievance.
   c. A statement of why the reasons for the determination of the dean are not satisfactory to the grievant. This statement should specifically address the matters set forth in the Standards for Review in Section 4 below.
3. The grievant shall file his or her appeal at the earliest practicable date after the grievant’s receipt of the determination by the dean. Normally, no more than 30 days should elapse between the transmittal of the dean’s decision on the grievance and the filing of the appeal. A delay in filing an appeal may, taking all circumstances into account, constitute grounds for rejection of the appeal.

e) The Response to the Appeal:
1. The Provost may attempt to resolve the matter informally, or refer the appeal, or any issue thereof, to any person (the "grievance appeal officer") who shall consider the matter and report to the Provost as the latter directs. The Provost may also, in appropriate cases, remand the matter to a lower administrative level (including to the level at which the grievance arose) for further consideration.
2. The Provost shall inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and shall specify the matters referred, the directions to the person to whom the referral is made (including the time frame within which the person is to report back to the Provost), and the name of that person.
3. Should attempts be made to resolve the matter informally not be successful, the Provost shall decide the appeal, and shall notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the appeal. The decision of the Provost shall be final, unless the grievant requests a further appeal to the President pursuant to Section 2f below, and the President agrees to entertain this further appeal.
4. Normally no more than 45 days should elapse between the filing of the appeal and the disposition by the Provost. If, because of absence of key persons from the campus or other exigencies, the Provost judges that prompt disposition is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of the fact in writing, giving the grounds therefor and an estimate of when a disposition can be expected.

f) The Request to the President: if the student or postdoctoral fellow is dissatisfied with the disposition of the appeal by the Provost, he or she may write to the President of the University, giving reasons why he or she believes the grievance result to be wrong (following the general format set forth in Section 2d above). No more than 30 days should elapse between the transmittal of the Provost’s disposition and the written statement to the President urging further appeal. In any case, the President may agree or decline to entertain this further appeal. If the President declines to entertain the further appeal, the decision of the Provost shall be final. If the President decides to entertain the further appeal, he or she shall follow the general procedures set forth in Section 2e above, and the decision of the President shall be final.

3. Grievances Concerning Decisions of the University Registrar or of a Senate Committee or Subcommittee
a) For a grievance concerning a decision of the University Registrar or of a Senate committee or subcommittee, the grievant shall file his or her grievance with the Provost, rather than with the dean, and the Provost shall handle that grievance in accordance with the procedures set forth in Section 2c above.
b) There shall be no appeal of the Provost's disposition of that grievance, except as may be available under Section 2f above.

4. Standards for Review and Procedural Matters

a) The review of grievances or appeals shall usually be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

b) The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.

c) Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.

3. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

b) The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.

c) Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.
COURSES OF INSTRUCTION
1999-2000

Unless otherwise specified, courses numbered from 1 through 99 are primarily for first- and second-year undergraduates; courses numbered from 100 through 199 are for third- and fourth-year undergraduates; and those from 200 through 699 are for graduate students.

Amendments to course offerings announced in the Stanford Bulletin are found in the Time Schedule, issued quarterly.

Starting Autumn Quarter 1996, a new set of undergraduate degree requirements went into effect. In this edition of the Stanford Bulletin, a special notation follows each course description if the course can fulfill a requirement under the 1996 set of General Education Requirements or under the set of Distribution Requirements in effect Autumn 1991 through the end of the 1995 academic year. The 1991 set of requirements are designated within parentheses. Thus a course marked GER:2a may be used only towards the Natural Sciences sub-area within Area 2 of the new General Education Requirements. A course marked (DR:5) may be used only towards the Area 5 Natural Sciences requirement under the older 1991 set of Distribution Requirements. A course marked GER:2a (DR:5) has been approved to fulfill either requirement.

The Appendix of this bulletin presents a comprehensive list of courses certified as fulfilling a requirement under the 1996 system of General Education Requirements or the 1991 Distribution Requirements system.

Undergraduates fulfilling requirement sets in effect prior to 1991 should consult the Registrar's Undergraduate Degree Coordinator for information about whether a course may be applied to the requirement set applicable to them. Graduate students should ignore the various markings since such requirements do not apply to them.

SUMMER SESSION

Summer session courses are eight weeks in length, except in certain departments that offer ten-week courses.

This bulletin includes, for the Summer Session, only those courses that can be tentatively scheduled at publication time by each department. For the complete list of courses and faculty, refer to the Stanford University bulletin, Summer Session Catalogue, 2000, issued in January.
The Graduate School of Business provides graduate education for careers in management, research, and teaching. The two-year Master of Business Administration (M.B.A.) degree program is designed for the student preparing for a general management career. No specific undergraduate major or courses are required for admission, although prospective applicants are encouraged to have two or more years of managerial experience and to include some mathematics and economics in their undergraduate programs. Curricular options within the M.B.A. program include a certificate in Public Management or Global Management, the joint J.D.-M.B.A. degree, and dual master’s degrees in business and engineering.

The Stanford Sloan Program is an intensive one-year course of study for middle management executives leading to the degree of Master of Science in Management. Participants must be sponsored by their company and have demonstrated superior achievement.

Those interested in college teaching and research are served by the Doctor of Philosophy program.

For detailed information on programs, curricula, and faculty, write to the Graduate School of Business, Stanford University, Stanford, California 94305-5015 for the current School of Business bulletin.
School of Earth Sciences

Dean: Franklin M. Orr, Jr.

The School of Earth Sciences includes the departments of Geological and Environmental Sciences, Geophysics, and Petroleum Engineering. The interschool Earth Systems Program offers study of the geological and biological processes that operate on global scales and how they interact with international environmental issues and policies. An honors program in Environmental Science, Technology, and Policy is also available through the Institute for International Studies.

The aims of the school are (1) to prepare students for careers in the fields of environmental studies, engineering, geology, geochemistry, geomechanics, geophysics, geostatistics, hydrogeology, petroleum engineering, and petroleum geology; (2) to conduct research in the Earth sciences; and (3) to provide opportunities for Stanford undergraduates to learn about our planet’s history, to understand the natural energy and resource base that underlies our economy, and to appreciate the geological and geophysical hazards that affect human societies, as well as those factors that contribute to the quality of our environment.

To accomplish these objectives, the school offers a variety of programs adaptable to the needs of the individual student: a four-year undergraduate program leading to the degree of Bachelor of Science (B.S.); a five-year program leading to the coterminal Bachelor of Science and Master of Science (M.S.), combining degrees in Earth sciences, social sciences, physical sciences, or engineering; and a graduate program offering the degrees of Master of Science, Engineer, and Doctor of Philosophy as described below. Details of individual departmental degree programs are found in the section for each department. In addition, it is possible for an undergraduate to develop an individually designed major in the Earth Sciences.

UNDERGRADUATE PROGRAM

Any undergraduate student admitted to the University may declare a major in one of the Earth Science departments or the interschool Earth Systems Program by contacting the appropriate department or program office. Students interested in creating an individually designed major should visit the dean’s office.

Specific requirements for the B.S. degree are listed in each department or program section. Departmental academic advisers work with students to define a career or academic goal and assure that the student’s curricular choices are appropriate to the pursuit of that goal. Advisers can help devise a sensible (and enjoyable) course of study that meets degree requirements and provides the student with opportunities to experience advanced courses, seminars, and research projects. To maximize such opportunities, students are encouraged to complete basic science and mathematics courses in high school or during their freshman year.

Each department (as well as Earth Systems) offers an honors program that involves research during the senior year. Each department also offers an academic minor for those undergraduates majoring in compatible fields.

COTERMINAL BACHELOR’S AND MASTER’S DEGREES

The Stanford coterminal degree plan enables an undergraduate to embark on an integrated program of study leading to the master’s degree before requirements for the bachelor’s degree have been completed. This may result in more expeditious progress towards the advanced degree than would otherwise be possible, making the program especially important to Earth scientists because the master’s degree provides an excellent basis for entry into the profession. The coterminal plan permits students to be admitted to a graduate program as early as their eighth quarter at Stanford, or after earning 105 units, and no later than the eleventh quarter.

Under the plan, the student may meet the degree requirements in the more advantageous of the following two ways: by first completing the 180 units required for the B.S. degree and then completing the three quarters required for the M.S. degree; or by completing a total of 15 quarters during which the requirements for the two degrees are completed concurrently. In either case, the student has the option of receiving the B.S. degree upon meeting all the B.S. requirements or of receiving both degrees at the end of the coterminal program. Students earn degrees in the same department (including Earth Systems), in two different departments, or even in different schools; for example, a B.S. in Physics and an M.S. in Geological and Environmental Sciences. Students are encouraged to discuss the coterminal program with their advisers during their junior year. Additional information is available in the individual department offices.

GRADUATE PROGRAM

Admission to the Graduate Program—A student who wishes to enroll for graduate work in the school must be qualified for graduate standing in the University and in addition must be accepted by one of the school’s three departments. One requirement for admission is submission of scores on the verbal and quantitative sections of the Graduate Record Exam. Admission to one department of the school does not guarantee admission to other departments.

Faculty Adviser—Upon entering a graduate program, the student should report to the head of the department who will arrange with a member of the faculty to act as the student’s adviser. The student, in consultation with the adviser, then arranges a course of study for the first quarter and ultimately develops a complete plan of study for the degree sought.

Financial Aid—Detailed information on scholarships, fellowships, and research grants is available from the school’s individual departments. Applications should be filed by the various dates listed in the application packet for awards that become effective in Autumn Quarter of the following academic year.

EARTH SYSTEMS PROGRAM

Director: Joan Roughgarden

Steering Committee: David Ackerly (Biological Sciences), Carol Boggs (Biological Sciences), Robert Dunbar (Geological and Environmental Sciences), Gary Ernst (Geological and Environmental Sciences), Walter Falcon (Institute for International Studies, Food Research Institute), Deborah Gordon (Biological Sciences), Lawrence Gould (Economics, Institute for International Studies), Donald Kennedy (Biological Sciences, Institute for International Studies), Jeffrey Koseff (Civil and Environmental Engineering), Gilbert Masters (Civil and Environmental Engineering), Pamela Matson (Geological and Environmental Sciences, Institute for International Studies), Michael McWilliams (Geological and Environmental Sciences), Harold Mooney (Biological Sciences), Franklin Orr, Jr. (Dean, School of Earth Sciences), Stephen Schneider (Biological Sciences, Institute for International Studies), Jonathan Stebbins (Geological and Environmental Sciences), James Sweeney (Engineering-Economic Systems and Operations Research), Barton Thompson (Law), Peter Vitousek (Biological Sciences), Virginia Walbot (Biological Sciences), Mark Zoback (Geophysics)

Senior Lecturer and Academic Coordinator: Julie Kennedy

The Earth Systems Program (ESys) was conceived to meet new teaching and research needs at Stanford, and is approved as an undergraduate major. It was created to bind the expertise around Stanford into a unified, coherent, and demanding curriculum on environmental subjects. The concept of the Earth as a system views Earth as a dynamic integrated system with physical and biological processes linking the ocean, atmosphere, and solid earth together with Earth’s biological components, including people, and especially their economic and political institutions. The Earth Systems Program emphasizes the interaction between the Earth sciences, ecology and evolution, economics, and environmental technology. The program serves as a model for a number of institutions around the world.
Earth Systems has coalesced as a discipline from activities in more than six departments spread across three schools in the University. The Earth Systems Program coordinates an undergraduate major with courses from traditional departments together with courses it has originated. Its course offerings are aided by the Goldman Honors Program in the Institute of International Studies. Earth Systems also hosts faculty from traditional subjects such as climatology, meteorology, oceanography, and remote sensing that in a larger university might be found in separate departments, but that are perhaps best carried out in a more integrated academic context.

The central principle of the undergraduate major is that a career in Earth Systems springs from a perspective that synthesizes the many components involved in how the earth functions, followed by a coherent focus in one of five Earth Systems specialties. Education in these specialties is accomplished with defined tracks of intermediate courses, followed by advanced electives. Each track concludes with an internship that provides an opportunity for research and work experience, or an internship with a government, conservation, or other appropriate agency. The electives and internship must be approved by an Earth Systems adviser.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The B.S. in Earth Systems (ESys) requires the completion of at least 108 units that can be divided into three levels of courses. The student must complete a series of courses comprising a broad base specialized study and must complete five required and three elective courses in that track. Finally, the student must carry out a senior-level research or internship project and participate in the senior seminar.

</tbody>
</table>

* Students may take either Physics 47 or Chem. 33; Biosphere students must take Chem. 33.

More extensive work in mathematics and physics may be expected for those planning graduate study. Graduate study in ecology and evolutionary biology and in economics requires familiarity with differential equations, linear algebra, and stochastic processes. Graduate study in geology and geophysics may require more physics and chemistry. Check with your adviser about recommendations beyond the requirements specified above.

TRACKS

GEOSPHERE

Geochemistry (choose one): Geol. & Envir. Sci. 90. Introduction to Geochemistry 3
Geol. & Envir. Sci. 170. Environmental Geochemistry 3
Geol. & Envir. Sci. 171. Geochemical Thermodynamics 3

Oceans/Atmosphere (choose one): Geol. & Envir. Sci. 8. The Oceans: Introduction to the Marine Environment 3
Civ. & Envir. Engr. 163. Meteorology and Water Resources 3

Geol. & Envir. Sci. 196. Introduction to GIS 2

Rocks/Minerals: Geol. & Envir. Sci. 80. Earth Materials 5

Surface Processes (choose one): Geol. & Envir. Sci. 140. Geomorphology 3
Geol. & Envir. Sci. 151. Sedimentary Geology and Petrography 4-5

BIOSPHERE

Biol. Sci. 51. Evolution, Genetics, and Ecology 5
Biol. Sci. 52. Biochemistry, Molecular Biology, and Cell Biology 5
Biol. Sci. 53. Development and Physiology of the Organism 5

Biogeochecmy (choose one): Biol. Sci. 124. Ecosystem Physiology 4
Biol. Sci. 216. Biogeochecmy/Ecosystem Ecology (same as Geol. & Envir. Sci. 220) 4

or Biol. Sci. 173H. Marine Conservation Biology 3

Biol. Sci. 142. Principles of Ecology (same as Geophys. 176) 4

ANTHROSPHERE

Environmental and Economic Policy (choose 3): Econ. 51. Economic Analysis II 5
Econ. 102. Introduction to Econometrics 5
Econ. 106. The World Food Economy 5
Econ. 118. Economics of Development 5
Econ. 150. Economics and Public Policy 5
Econ. 160. Game Theory and Economic Application 5

Legal and Political Institutions and the Environment (choose one): Econ. 154. Economics of Legal Rules and Policy 5

LAND SYSTEMS MANAGEMENT

Surface Processes/Soils (choose one): Geol. & Envir. Sci. 140. Geomorphology 3

Urban and Environmental Planning (choose one): Geol. & Envir. Sci. 130. Environmental Earth Sciences I 5
Geol. & Envir. Sci. 131. Environmental Earth Sciences II 5
Geol. & Envir. Sci. 132. Environmental Earth Sciences III 5
ENERGY SCIENCE AND TECHNOLOGY
Civ. & Envir. Engr. 176A. Energy Efficient Buildings       4
Civ. & Envir. Engr. 176B. Electric Power: Generation and Conservation 4
Engr. 30. Engineering Thermodynamics          3
Pet. Engr. 103. Energy Resources     3

UPPER-DIVISION ELECTIVES

Three intermediate to advanced courses consistent with the primary track are required of all majors and are to be selected with the advice and consent of the adviser. Eligible upper-division electives are listed below. Additional courses may be selected; see the program office for the most current list.

GEOSPHERE TRACK
Geol. & Envir. Sci. 110. Structural Geology               5-6
Geol. & Envir. Sci. 111. Structural Geology and Rock Mechanics 4
Geol. & Envir. Sci. 112. Structural and Engineering Geology II 3
Geol. & Envir. Sci. 164. Stable Isotopes                    3
Geol. & Envir. Sci. 185. Volcanology                        4
Geol. & Envir. Sci. 162. Cosmochemistry                     3
Geol. & Envir. Sci. 220. Biogeochemistry                   3
Geol. & Envir. Sci. 221. The Origins of the Solar System    3
Geol. & Envir. Sci. 223. Seminar in Environmental Problem Solving 3
Geol. & Envir. Sci. 254. Paleoceanography                  3
Geol. & Envir. Sci. 255. Introduction to Micropaleontology 5
Geol. & Envir. Sci. 257. Climate Variability                3
Pet. Engr. 103. Energy Resources                            3

BIOSPHERE TRACK
Biol. Sci. 120. General Botany                            5
Biol. Sci. 125. Ecosystems of California                  3-4
Biol. Sci. 139. Biology of Birds                          3
Biol. Sci. 184. Principles of Biosystematics              4
Biol. Sci. 161H. Invertebrate Zoology                      5
Biol. Sci. 163H. Principles of Oceanic Biology            4
Biol. Sci. 164H. Marine Botany                            4
Biol. Sci. 170H. Seminar: Topics in Marine Biology         1
Biol. Sci. 217. Climate Theory, Modeling, Applications, and Implications 3
Biol. Sci. 283. Theoretical Populations Genetics           3
Geol. & Envir. Sci. 255. Introduction to Micropaleontology 5

ANTHROSPHERE TRACK
Anthro. Sci. 161. Conservation and Community Development in the Amazon 3-5
Civ. & Envir. Engr. 171. Environmental Planning Methods   4
Civ. & Envir. Engr. 266. Environmental Policy Design and Implementation 4
Econ. 158. Antitrust and Regulation                        5
Econ. 165. International Economics                       4
Econ. 243. Economics of the Environment                  5
Econ. 386. Seminar on Conflict Resolution                 2
Geol. & Envir. Sci. 133. Introduction to Assessment of Environmental Risk 3
Pol. Sci. 216M. Environmental Politics in the Asia/Pacific Region 5
Pub. Pol. 103. Introduction to Political Philosophy        3
Urban Studies 133. The Politics of Development            4
Urban Studies 182. Urban Environmental Policy             4
Urban Studies 183. Land Use Control                       4

LAND SYSTEMS MANAGEMENT TRACK
Civ. & Envir. Engr. 163. Introduction to Meteorology       3
Civ. & Envir. Engr. 171. Environmental Planning Methods   4
Geol. & Envir. Sci. 133. Introduction to Assessment of Environmental Risk 3

Geol. & Envir. Sci. 230. Hydrogeology                    5
Urban Studies 110. Introduction to Urban Studies          4
Urban Studies 182. Urban Environmental Policy             4
Urban Studies 183. Land Use Control                       4

ENERGY SCIENCE AND TECHNOLOGY TRACK
Esys 179. Energy Systems                                 5
Econ. 158. Antitrust and Regulation                       5
Mech. Engr. 130. Internal Combustion Engines              3
Mech. Engr. 131A. Heat Transfer                           3
Pet. Engr. 120. Fundamentals of Petroleum Engineering     3
Pet. Engr. 260. Groundwater Pollution and Oil Spills       3
Pet. Engr. 269. Geothermal Reservoir Engineering          3

SUMMARY OF COURSE REQUIREMENTS AND UNITS
Earth Systems Introduction and Core                        16
Required allied courses                                      47-50
Tracks: Geosphere                                           20
       Biosphere                                             20
       Anthroposphere                                         20
Land Systems Management                                    23
Energy Science and Technology                              23
Upper-division electives                                    9-15
Senior project or internship                               9
Senior seminar                                             3
Total units (depending on track, electives)                108-124

COTERMINAL B.S. AND M.S. DEGREES

The Stanford coterminal degree enables an undergraduate to embark on an integrated program of study leading to the master’s degree before requirements for the bachelor’s degree have been completed. An undergraduate majoring in Earth Systems may apply to work simultaneously toward B.S. and M.S. degrees. The M.S. degree in Earth Systems provides the student with enhanced tools to evaluate the primary literature of the discipline most closely associated with the student’s track and allows an increased specialization through additional course work that may include 9 units of thesis research. Integration of earth systems concepts is furthered by participation in the master’s seminar.

To apply, complete and return to the Earth Systems office an application that includes a statement of purpose; a Stanford transcript; two letters of recommendation, one of which must be from a faculty member of the program; and a list of courses that fulfill degree requirements signed by the master’s adviser. Students may be admitted as early as their eighth quarter at Stanford, or after earning 105 units, but no later than their eleventh quarter. Students may either (1) complete 180 units required for the B.S. degree and then complete the three quarters required for the M.S. degree, or (2) complete a total of 15 quarters during which the requirements of the degrees are fulfilled concurrently. The student has the option of receiving the B.S. degree after completing that degree’s requirements or receiving two degrees concurrently at the end of the master’s program.

Three levels of requirements must be fulfilled to receive an M.S. degree:

1. All requirements for the B.S. degree.
2. Further course work (and/or thesis research), all of which should be at the 100-level or above, including 18 units at the 200-level or above, leading to further focus within the student’s track.
3. Participation in the master’s seminar.

The program consists of a minimum of 36 units of course work and/or thesis research, at least 18 of which must be at the 200-level or above. The student must devise a program of study that shows a level of specialization appropriate to the master’s level, as determined in consultation with the adviser. At least 18 units must be at the 200-level or above. The program should demonstrate further specialization and focus within the student’s undergraduate track.

With the adviser’s approval, 9 units may be in the form of research. This may culminate in the preparation of a master’s thesis; however, a
thesis is not required for the degree. Master’s students must take part in the Winter Quarter master’s seminar (ESys 290) and have additional responsibilities appropriate to the master’s level (thesis presentation, modeling problems, and so on), 2 units.

A more detailed description of the coterminous master’s degree program may be obtained from the program office.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

UNDERGRADUATE

10. Introduction to Earth Systems—For non-majors and prospective Earth Systems majors. Multi-disciplinary approach to how the Earth works as a system, utilizing the tools of geology, biology, and economics to understand global change on all time scales. Topics: origin of the solar system and earth, paleoclimatic and climate modeling, ocean-atmosphere circulation, extinction and speciation, energy and mineral resources, economic attitudes and the environment. Case studies: acid rain, hunger and food, policy and the environment. GER:2a (DR:5)

3-5 units, Win (Ernst)

110. Geosphere—(Same as Geological and Environmental Sciences 120.) Geoloigcal processes, from local to global, affect people and civilization. The reverse is also true; civilization is beginning to influence the geosphere. Processes experienced at the earth’s surface (catastrophic earthquakes, volcanic eruptions, and longer term atmospheric and climate changes) are linked to what goes on in the earth’s deep interior. How geochemical, geophysical, and biological processes interact over time scales from 4.5 billion years to the nearly instantaneous. Topics: the origin and evolution of the atmosphere and oceans, heat flow and global tectonics and how they have changed over time, geochemical cycles, climate change, catastrophic impacts, and the roles played by organisms. Prerequisite: Geological and Environmental Sciences 1 or 2.

3 units, Win (Ernst)

111. Biosphere—(Same as Biological Sciences 117.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisites: Biology or Human Biology core or graduate standing in any department.

3 units, Win (Matson, Vitousek, Mooney)

112. Anthrosphere: Human Interactions with the Earth and Environment—(Same as Economics 155.) The economic sources of environmental problems and the alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). An evaluation of the policies addressing regional air pollution, global climate change, water allocation in the Western U.S., and the use of renewable resources. The connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: Economics 50.

5 units, Spr (Staff)

150/240. Seminar in Sustainable Agriculture—Exploration of the interactions of agriculture and environment and the range of meanings and approaches to sustainable agriculture. Topics: ecological, economic, institutional, and political aspects of sustainability as they pertain to a range of cropping systems. For 2 units: participation in team research evaluating current and potential sustainable agriculture approaches in specific global cropping systems. Group presentation on research findings.

1-2 units (Matson, Naylor, Kennedy) alternate years, given 2000-01

169/269. The Scientific, Economic, and Political Issues of Radioactive Waste—(Graduate students register for 269.) Seminar on the scientific, economic, and political issues associated with the production and disposal of high- and low-level radioactive waste, focusing on scientific and economic issues. Class formulates answers to important questions which enter the political arena (the balance between risks and rewards to society). Enrollment limited to 15.

2 units, Spr (McWilliams)

2-3 units (Thompson) not given 1999-2000

179. Energy Systems: Achieving Energy Efficiency in the Real World—How are energy conservation and efficiency decisions made in the “real world?” Many opportunities for energy efficiency are not exploited, even when cost effective. Topics: fundamentals of energy and economic efficiency; energy efficient and alternative energy technologies and applications; incentives and obstacles to implementation. Students study and design an energy efficiency or alternate energy systems project. Prerequisites: Earth Systems 10, Economics 50, or consent of instructor.

3 units (Schneider) not given 1999-2000

210. Senior Seminar in Earth Systems—Focuses on communication skills, oral and written. Each student presents results of the Earth Systems internship in an oral presentation and leads a follow-up round table discussion subsequent to talk. Group project analyzing local environmental problems requiring an Earth Systems approach. Peer-reviews of internship papers as required. (WIM)

3 units, Aut, Spr (J. Kennedy)

223. Seminar in Environmental Problem Solving—(Same as Geological and Environmental Sciences 223.) For upper-division undergraduates and graduate students in the earth and biological sciences. Using case studies, evaluates and contrasts the approaches that different natural and social science disciplines bring to environmental problem solving. 2-3 units, Spr (Matson, Naylor) alternate years, not given 2000-01

250. Directed Research—Independent research into an aspect of earth systems related to the student’s primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision, or can see adviser for research ideas. 10-15 page thesis required.

9 units, quarter by arrangement (Staff)

260. Internship—Supervised field, lab, private sector, or advocacy project, normally through an internship sponsored by government agencies, research institutions or other organizations, or independently developed by the student with the prior written approval of the academic coordinator. Provides hands-on experience within the student’s primary track. 10-15 page report required.

9 units, quarter by arrangement (J. Kennedy)

290. Master’s Seminar—Open to Earth Systems master’s students only. Focus is on critical examination and discussion of advanced topics in Earth Systems. Requires independent research, oral presentation of results, and preparation of an original proposal for innovative Earth Systems science/policy research.

2 units, Win (J. Kennedy)

298. Advanced Topics in Earth Systems—Open to Earth Systems master’s students only. Continuation of Winter Quarter master’s seminar.

2 units, Spr (J. Kennedy)
The Writing in the Major (WIM) requirement may be fulfilled by taking one of the following courses designated (WIM) for the larger unit total indicated: GES 51, 110, 112, 130, 151, 152, 185, 198 along with the one-unit WIM Project course, GES 190. Students choosing to take a course for WIM credit should consult with the instructor early in the quarter; additional writing-intensive work is assigned.

### GEOLOGICAL SCIENCES

The Geological Sciences curriculum leading to the B.S. degree in Geological and Environmental Sciences prepares students for professional careers and graduate studies in the earth sciences and other fields requiring an earth sciences background. The field of geological sciences is broad and involves the study of the physical and chemical processes that build continents, shape the earth’s landscape, and determine the distribution of elements in minerals, rocks, soils, and natural waters; the oceans and atmosphere; Earth’s history and the evolution of life; and materials that constitute the earth, including those of economic importance. Geological sciences are also concerned with the ways in which society is affected by natural hazards (for example, volcanic eruptions, landslides, and earthquakes) and the ways in which society affects the planet (for example, the pollution of groundwater and depletion of resources).

An important emphasis of the B.S. program in the Geological Sciences curriculum is the study of earth processes and history in the natural laboratory of the field. Stanford University’s location near the Pacific continental margin, the Sierra Nevada mountain range, and the San Andreas fault system provides a nearly unparalleled setting for field studies. The field of geological sciences has evolved over the last two centuries from mostly observational and descriptive into a quantitative science dealing with the chemistry and physics of the earth and other planets and with interactions between the biological and physical systems of the earth. Thus, the Geological Sciences curriculum includes significant course work in chemistry, physics, and mathematics. The diversity of these requirements and experience results in graduates with versatility and a broad range of skills. Our program is designed to recognize the diversity of this field and to provide a great deal of flexibility. A significant proportion of the required courses can be selected by the student in consultation with his or her faculty advisor, allowing the B.S. program to be tailored to individual goals and interests while providing a solid background in basic earth sciences, the supporting sciences, and mathematics.

GES majors who select the Geological Sciences curriculum are expected to complete a set of courses in supporting sciences and mathematics, a core course sequence that defines the curriculum, and a set of electives chosen from the prescribed list below. Students who elect this major must also enroll in the joint San Jose State University/Stanford summer field camp (see Professor Miller). Substitutions for core courses must be approved by the adviser and the department chair. Letter grades are required, if available, in all courses.

Physics 43. Electricity† W 3
Physics 45. Magnetism† S 3
Physics 46. Electricity and Magnetism Lab† S 1

Physics 47. Light and Heat† A 4

Subtotal 65

* Math. 41, 42, 51 are recommended for students planning graduate study in the sciences or engineering.
† Physics 41, 43, 45, 47 are recommended for students planning graduate study in the sciences or engineering.

ELECTIVES

Choose four courses from the following list or, with faculty approval, four related, but more advanced courses:

Biol. Sci. 117. Biology and Global Change W 3
Chem. 33. Structure and Reactivity W, S, Sum 4
Comp. Sci. 106A. Programming Methodology A, W, S 5
GES 2.3. Earth History and Lab (if not used above) A 3
GES 8. Oceans S 3
GES 132. Environmental Earth Sciences III S 5
GES 140. Geomorphology W 3
GES 162. Cosmochemistry S 3
GES 165. Radiogenic Isotopes and Geochronology S 3
GES 170. Environmental Geochemistry W 4
GES 185. Volcanology S 4-5
GES 187. Introduction to Ore Deposits A 4
GES 230. Physical Hydrogeology A 5
Geophys. 150. Plate Tectonics S 2-3
Geophys. 183. Interpretation of Seismic Reflection Profiles W 2-3
Geophys. 190. General Geophysics A 3-4

Subtotal 49-68

Total 79-102

ENVIRONMENTAL SCIENCES

Environmental Sciences in the School of Earth Sciences is concerned with the combined chemical, physical, and mathematical study of the outer crust of the earth and the hydrosphere as they are found today, and of the processes and stages through which our planet’s surface has evolved. The program also deals with the impact of the use of land and natural resources, processes through which the earth may respond to this use, and the hazards these processes present to people on local and regional scales. In comparison, earth systems science focuses on some of the same topics on a global scale, and environmental engineering focuses on prevention, control, or mitigation of the negative aspects of human impact on the environment.

The Environmental Sciences curriculum provides a background in selected fundamental geological and physical sciences, basic quantitative analytical and problem-solving tools, and an introduction to the use of this background in anticipating, recognizing, and defining or diagnosing environmental problems. The primary focus is on earth sciences, the natural environment, and anthropogenic changes. Graduates should be equipped for positions in environmental consulting and remediation firms or government agencies or, with appropriate selection of electives, for graduate study in related fields including the geological sciences, environmental sciences or engineering, business or law, and others.

GES majors who elect the Environmental Sciences curriculum are expected to complete a core course sequence in supporting sciences and mathematics and a set of electives chosen from the prescribed list below.

Substitutions for core and elective courses must be approved by the advisor and the department chair. Letter grades are required, if available, in all courses.

CORE COURSE SEQUENCE

Course No. and Subject Qtr. and Units

Civ. & Envr. Engr. 170. Environmental Science and Technology A 3

Subtotal 50

Total 99-119
The Engineering Geology and Hydrogeology curriculum is intended for undergraduate students interested in the application of geological and engineering data and principles to the study of rock, soil, and water to recognize and interpret geological and environmental factors affecting engineering structures and groundwater resources. Students learn to characterize and assess the risks associated with natural geological hazards such as landslides and earthquakes and with groundwater flow and contamination. The curriculum prepares students for graduate programs and professional careers in engineering and environmental geology, hydrogeology, geotechnical engineering, and geology. Students interested in this major track should contact faculty advisers Professors Pollard, Loague, or Gorelick.

GES majors who elect the Engineering Geology and Hydrogeology curriculum are expected to complete a core course sequence and a set of courses in supporting sciences and mathematics. The core courses come from two areas: Earth Sciences and Engineering. Any substitutions for core courses must be approved by the faculty adviser and the department chair. In addition, four elective courses, consistent with the core curriculum and required of all majors are to be selected with the advice and consent of the adviser. Typically, electives are selected from the list below. Letter grades are required, if available, in all courses.

#### LAND RESOURCES PLANNING

The Land Resources curriculum is intended for students who anticipate graduate study and careers in city or regional planning, conservation, landscape architecture, environmental law, land resource management, and allied fields. The program is flexible and provides ample opportunity for expansion in scope or depth to accommodate the demands of an anticipated career or an individual’s interests. Students planning graduate study in the sciences or engineering should select one of the other GES programs.

GES majors in the Land Resources Planning curriculum are expected to complete a set of courses in supporting sciences and mathematics, a core course sequence, and several electives chosen from prescribed groups listed below. Course substitutions must be approved by the adviser and the department chair. Letter grades are required, if available, in all courses.

MINORS
A minor in Geological and Environmental Sciences consists of a small set of required courses plus 12 elective units.

Required courses are:

GES 1. Fundamentals of Geology
or GES 2. Earth History and GES 3. Earth History Lab
or GES 130. Environmental Earth Sciences I
GES 80. Earth Materials
GES 102. Introduction to Field Geology
or GES 112. Mapping the Geologic Environment

A minimum of 12 additional units in GES courses, including three courses from the list below:
GES 8. The Oceans
GES 90. Introduction to Geochemistry
or GES 120. Geosphere
GES 102. Introduction to Field Geology
or GES 112. Mapping the Geologic Environment (if not used above)
GES 110. Structural Geology
or GES 111. Structural Geology and Rock Mechanics
GES 131. Environmental Earth Sciences II
GES 140. Geomorphology
GES 151. Sedimentary Geology and Petrography
GES 152. Stratigraphy and Applied Paleontology
GES 170. Environmental Geochemistry
GES 181. Igneous and Metamorphic Processes
GES 185. Volcanology
GES 195. Integrating Remote Sensing and GIS

All students pursuing a minor in GES are encouraged to take one of the freshman or sophomore seminars (courses with numbers 40–49) and to participate in the undergraduate seminar (GES 4). Up to 3 units of Stanford Introductory Seminar courses may be used in fulfilling the 12-unit requirement above.

Contact the GES department for further information. The variety of courses that may be used to satisfy the requirements should make it possible for students with a wide range of interests and backgrounds to complete a minor in GES.

HONORS PROGRAM
The Department of Geological and Environmental Sciences offers a program leading to the Bachelor of Science in Geological and Environmental Sciences with honors. The program provides an opportunity for independent study and research on a topic of special interest culminating in a written report. The honors program is open to all seniors with a grade point average (GPA) of at least 3.5 in earth and environmental science courses and a minimum of 3.0 in all University course work. Modest financial support is available to help defray laboratory and field expenses incurred in conjunction with honors research. Students intending to pursue the honors program must submit an application to the department before the beginning of their senior year.

A student selects a research topic and prepares a research proposal in consultation with a faculty adviser of his or her choosing. Research undertaken for the honors program can be of a theoretical, field, or experimental nature, or a combination of these approaches.

Upon approval of the research proposal and formal entrance to the program, course credit for the honors research project and report preparation is assigned by the student’s faculty adviser within the framework of GES 199; 3 units each quarter are assigned to the project for three quarters of the student’s senior year for a total of 9 units. Research undertaken for the honors program cannot be used as a substitute for regularly required courses.

Both a written and an oral presentation of research results are required of honors students. A formal written report must be submitted to the student’s research adviser no later than the fourth week of the student’s final senior quarter. To graduate with honors, the report must be read, approved, and signed by the student’s faculty adviser and a second member of the faculty. Before the end of the senior year, each honors candidate gives a public seminar on his or her research results.

COTERMINAL B.S./M.S. PROGRAM

The coterminal B.S./M.S. program offers a special opportunity for students to pursue a graduate research experience and a M.S. degree concurrently with or subsequent to their B.S. studies. The master’s degree is viewed as an entrance professional degree in a number of subdisciplines within the earth sciences (for example, engineering geology, environmental geology). Alternatively, graduate course work and the master’s research experience can provide an intermediate step prior to pursuit of the Ph.D. Regardless of their professional goal, coterminal B.S./M.S. students are treated as members of the graduate community and are expected to meet all of the standards set for regular M.S. students. Students should apply to the program after their seventh quarter (or after earning 105 units) but no later than their eleventh quarter. They are required to submit an application for entrance to the GES coterminal program including a statement of purpose, a copy of their current Stanford transcript, official Graduate Record Examination scores, letters of recommendation from two members of the Stanford faculty (at least one of whom must be in this department), and a list of courses in which they intend to enroll to fulfill degree requirements. Each student must complete a thesis or master’s report describing the results of his or her research. Specific research interests should be noted in the statement of purpose and discussed with a member of the GES faculty prior to submission of an application to the coterminal program.

Students must meet all requirements for both the B.S. and M.S. degrees. Students may either (1) complete 180 units required for the B.S. degree and then complete three full-time quarters for the M.S. degree, or (2) complete a total of fifteen quarters during which the requirements of the two degrees are fulfilled concurrently. The student has the option of receiving the B.S. degree upon completion of that degree’s requirements, or receiving the B.S. and M.S. degrees concurrently at the completion of the master’s program. Unit requirements for the coterminal program are a minimum of 180 units for the B.S. degree and a minimum of 36 units of course work at the 100 level or above for the M.S. degree. At least half of the courses used to satisfy the 36-unit requirement must be designated as being primarily for graduate students, normally at the 200 level or above. No more than 15 units of thesis research may be used to satisfy the 36-unit requirement. Further information about this program may be obtained from the GES office.

GRADUATE PROGRAMS

Graduate studies in the Department of Geological and Environmental Sciences (GES) involve academic course work and independent research. Students are prepared for careers as professional scientists in research or the application of the earth sciences to mineral, energy, and water resources. Programs lead to the M.S., Engineer, and Ph.D. degrees. Course programs in the areas of faculty interest are tailored to the student’s needs and interests with the aid of his or her research adviser. Students are encouraged to include in their program courses offered in other departments in the School of Earth Sciences as well as in other departments in the University. Diplomas designate degrees in Geological and Environmental Sciences and may also indicate the following specialized fields of study: Geomathematics, Geostatistics in the Earth Sciences, and Hydrogeology.

The broad areas of faculty teaching and research are divided into three fields that have diploma designation and an additional six areas of specialization.

Admission—For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Previously admitted students who wish to change their degree objective from M.S. to Ph.D. must petition the GES Admissions Committee.
FIELDS WITH DIPLOMA DESIGNATION

Hydrogeology—The Hydrogeology program, which leads to an M.S., Engineer, or Ph.D. degree in GES, balances research in the purely scientific and applied aspects of groundwater resources and near-surface processes. Key department faculty in hydrogeology are Professors Gorelick and Loague, but there are strong interactions with faculty in the departments of Civil and Environmental Engineering, Geophysics, and Petroleum Engineering and with scientists at the USGS. Investigations typically involve field sites and focus on topics ranging from understanding groundwater flow through large basins to optimal design of aquifer remediation strategies. The scales of interest extend from the domain of pores and fractures to vast regional flow systems. One important aim is to develop conceptual and quantitative predictive models. Such models enhance our understanding of the role of groundwater flow as a geological process and provide means for evaluating and managing resources.

The program requires students to obtain a broad background in earth sciences and engineering. Students in the program must have a strong general scientific background in basic physics, chemistry, computer science, and mathematics, and a demonstrated aptitude for solving quantitative problems. They must complete a core curriculum involving courses in fluid mechanics, hydrogeology, hydrology, and water quality. A list of required and recommended courses is supplied upon request.

Geostatistics—The Geostatistics program, which leads to a M.S. or Ph.D. degree in GES, is under the direction of Professor Journel. It focuses on the probabilistic modeling of earth sciences phenomena such as oil reservoirs, ore deposits, and pollution sites in view of their development and management. As opposed to traditional mapping algorithms, stochastic imaging provides alternative, equiprobable, very high resolution numerical models of the phenomenon under study. These models integrate data from various sources such as well data, geophysical logs, and geological interpretation. Strong interactions have been developed with faculty and students in the departments of Geophysics and Petroleum Engineering.

The program requires a geological background and a fair level of calculus and programming (Fortran and/or C). Recent graduates have found jobs in the extractive (mining, oil) and environmental (EPA) fields.

Geomathematics—The Geomathematics program, under the direction of Professor Harbaugh, leads either to a M.S. or Ph.D. degree in GES. It focuses on the use of mathematics in simulating geologic processes in petroleum-bearing sedimentary basins. Geological processes are represented in terms of their underlying physical principles by differential equations that have been placed in finite-difference form for numerical solution by computer. The numerical solutions are linked with graphics workstations to create dynamic three-dimensional displays, which are then used in simulating actual sedimentary basins.

Students in the program should have demonstrated aptitude for mathematics and computer programming. A list of required and recommended courses is supplied upon request.

AREAS OF SPECIALIZATION

Geochemistry, Petrology, and Mineralogy—The research and teaching interests of a number of the faculty in the Department of Geological and Environmental Sciences involve biogeochemistry, cosmochemistry, environmental geochemistry, geochemistry and its applications in the atomic-level structure and properties of earth materials, hydrothermal systems, igneous and metamorphic petrology, mineralogy and mineral physics, mineral surface and colloid reactions, and ore deposits. Techniques include Ar-Ar, U-Pb, Sm-Nd, Rb-Sr, and U series geochronology, computer prediction and modeling, electron microprobe and sensitive high-resolution ion microprobe analysis, field-oriented studies, laboratory experiments at high temperatures and pressures on phase equilibria and mineral-fluid interactions, and x-ray scattering and spectroscopic studies of organic and inorganic earth materials. The scale of problems studied ranges from global to atomic. Students with strong backgrounds in chemistry are especially urged to contact faculty in these fields, including Professors Bird, Brown, Einseidler, Ernst, Fendorf, Ireland, Liou, Mahood, Matson, McWilliams, Moldowan, and Stebbins.

Structural Geology and Geomechanics (http://pangea.stanford.edu/geomech/index.html)—Research opportunities in this specialization include: structural geology, geomechanics; rock fracture and fault mechanics; hydraulics of faults and fractures; reservoir description, and characterization, and engineering geology. Program advisers are Professors Aydin and Pollard. Correspondence with the advisers before application is suggested to clarify the nature and requirements of the program. Other faculty members with related research interests are: Professor Bird, Gorelick, Graham, Journel, Loague, Miller, and Moldovan (from GES); Professors Beroza, Klempner, Markov, Nur, Segall, and Zoback (from Geophysics); Professor Aziz, Durlofsky, Hewett, and Orr (from Petroleum Engineering); and Professor Borja (from Civil and Environmental Engineering).

One focus of the program is on characterizing and modeling physical processes responsible for geological structures. Topics include the evolution of crustal structures such as faults, folds, and fractures, and natural hazards related to earthquakes and volcanoes. Another focus is on the role of geologic structures (faults, folds, and fractures) in fluid flow in groundwater aquifers and petroleum reservoirs. This research is under the umbrella of the Rock Fracture Project, an industrial affiliates program.

The methodologies used in this program include field mapping of ancient or active structures, laboratory investigations using physical models; seismic mapping and interpretation of crustal subsurface structures; and theoretical analyses based on solid, fluid, and fracture mechanics. Research goals include delineating stress, strain, and displacement fields associated with geologic structures at scales ranging from laboratory samples to plate boundaries, and understanding the geologic and hydraulic properties of fractures and faults.

Sedimentary Geology Paleoclimatology, Marine Geology and Paleontology—Research in sedimentary geology at Stanford spans a wide range of specialized studies in modern and ancient settings. Sedimentary processes are studied at scales ranging from single sediment-gravity flows to the mechanisms by which continental margin basins subside. Time-dependent phenomena are investigated at levels that range from the deposition and organic geochemical and paleoecological signatures of annually varved sediments to that of the fill of long-lived foreland basins. Venues span the globe from Asia, around the Pacific Rim to South America, and across to Africa in stratigraphic units that range from Archean to Recent; these are investigated with special focus on the tectonics, sedimentation, and paleoclimate of continental margins and sedimentary basins in the western U.S. These investigations employ the tools of many subdisciplines, including computer modeling/simulation, geochemistry, geochronology, micropaleontology, paleoecology, paleomagnetism, sedimentology, and seismic interpretation, with emphasis on interdisciplinary integration. Current projects include application of sedimentology to interpreting surface conditions and crustal evolution on the Archean earth, computer simulation of sediment flows and deposits, evolution of modern shallow carbonate depositional systems in the Gulf of California, organic geochemistry of paleoclimatic events such as El Niño, paleoclimatology and sedimentation of modern western Pacific marginal seas, research on the origins and evolution of sedimentary basins in Asia, sequence and seismic stratigraphic architecture of active margin basins, and sediment-gravity flow mechanisms and the structure of associated deposits. Core faculty are Dunbar, Graham, Ingle, Lowe, and Paytan; faculty with related or overlapping interests include Fendorf, Gorelick, Harbaugh, McWilliams, Miller, and Moldovan.

Structural Geology, Regional Geology, and Tectonics—Research is a structural geology, regional geology, and tectonics. Research opportunities in this specialization include: structural geology, geomechanics; rock fracture and fault mechanics; and field-oriented studies. Laboratory experiments at high temperatures and pressures on phase equilibria and mineral-fluid interactions, and x-ray scattering and spectroscopic studies of organic and inorganic earth materials. The scale of problems studied ranges from global to atomic. Students with strong backgrounds in chemistry are especially urged to contact faculty in these fields, including Professors Bird, Brown, Einseidler, Ernst, Fendorf, Ireland, Liou, Mahood, Matson, McWilliams, Moldowan, and Stebbins.
scales. Geophysical studies include seismic imaging of the crust and mantle, stress and strain measurement in regions of active deformation, and paleomagnetic measurement of crustal deformation and continental accretion. Faculty with general interests in these topics include Professors Aydin, Ernst, Graham, McWilliams, Miller, and Pollard in Geological and Environmental Sciences, and Klemperer, Nur, Segall, Sleep, Thompson and Zoback in Geophysics.

Surface and Aqueous Geochemistry—Professors Brown and Parks (emeritus) lead the Surface and Aqueous Geochemistry Group (SAAG) in the alteration and partitioning reactions that determine the mobility, bioavailability, and ultimate fate of solutes and contaminants in natural waters. Research focuses on the fundamental physical and surface/interfacial chemistry underlying reactions among water, aqueous solutes, and minerals under earth-surface conditions, and how the composition and structure of the solutions and mineral surfaces influence them. Students study speciation or complexation, dissolution, precipitation, and especially sorption reactions using a variety of classical surface chemistry and surface-sensitive spectroscopic methods, as well as computer simulations of the macroscopic and molecular-scale behavior of solutes and properties of solute-surface complexes. Results can be used to understand mechanisms of element partitioning and cycling in geochemical systems; they have applications in a wide variety of contexts including hazardous waste management, remediation of contaminated sites, petroleum migration and recovery, and weathering under the influence of acid rain.

SAAG students are expected to accumulate a sound background in physical and inorganic chemistry as well as geochemistry, and at least one field of application such as environmental engineering, environmental geosciences, or hydrogeology. Preference is given to applicants who have a strong quantitative background in chemistry and physical chemistry and experience with computers and laboratory methods.

Volcanology—Professors Aydin, Mahood, and Pollard have overlapping interests with Professors Segall and Zebker in Geophysics in deformation of volcanic edifices; eruption triggers; explosive volcanism and emplacement of pyroclastic flows; formation of dikes, geologic evolution of caldera systems; magma degassing and impact of volcanic gases on the atmosphere; the physics of magma transport in the crust; magma reservoirs, and sills; planetary volcanology; and seismic signatures of volcanic activity.

MASTER OF SCIENCE

Objectives—The purpose of the master's program in Geological and Environmental Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

Procedures—The graduate coordinator of the department appoints an academic adviser during registration with appropriate consideration of the student's background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The student should select a thesis adviser within the first year of residence and submit to the thesis adviser a proposal for thesis research as soon as possible. The academic adviser supervises completion of the department requirements for the M.S. program (as outlined below) until the research proposal has been accepted; responsibility then passes to the thesis adviser. The student may change either thesis or academic advisers by mutual agreement and after approval of the graduate coordinator.

Requirements—The University's requirements for M.S. degrees are outlined in the "Graduate Degrees" section of this bulletin. Practical training (GES 385) may be required by some programs, with adviser approval, depending on the background of the student. A summary of additional department requirements is presented below:

1. A minimum of 36 units of course work at the 100 level or above.
   a. Half of the courses used to satisfy the 36-unit requirement must be intended as being primarily for graduate students, usually at the 200 level or above.
   b. No more than 15 units of thesis research may be used to satisfy the 36-unit requirement.

2. Each student must have a research adviser who is a faculty member in the department and is within the student's thesis topic area or specialized area of study.

3. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence.

4. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis, who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

ENGINEER DEGREE

The Engineer degree is offered as an option for students in applied disciplines who wish to obtain a graduate education extending beyond that of an M.S., yet do not have the desire to conduct the research needed to obtain a Ph.D. A minimum of two years (six quarters) of graduate study is required. The candidate must complete 72 units of course work, no more than 10 of which may be applied to overcoming deficiencies in undergraduate training. The student must prepare a substantial thesis that meets the approval of the thesis adviser and the graduate coordinator.

DOCTOR OF PHILOSOPHY

Objectives—The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

Requirements—The University's requirements for the Ph.D. degree are outlined in the "Graduate Degrees" section of this bulletin. Practical training (GES 385) may be required by some programs, with adviser approval, depending on the background of the student. A summary of additional department requirements is presented below:

1. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 'B' or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. At least two of three courses must be from two different GES faculty members.

2. Each student must qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three parts: oral presentation of a research proposal, examination on the research proposal, and examination on subject matter relevant to the proposed research. The exam should be scheduled for prior to May 1, so that the outcome of the exam is known at the time of the annual spring evaluation of graduate students.

3. Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, in the month of March or April, the candidate must organize a meeting of the research committee to present a brief progress report covering the past year.

4. Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research. The format of the dissertation must meet University guidelines. The student is
strongly urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

5. The doctoral dissertation is defended in the University oral examination. The department appoints the research adviser and two other members of the research committee to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Ph.D. MINOR

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in Geological and Environmental Sciences must complete, with a GPA of 'B' or better, 20 units in the geosciences in lecture courses intended for graduate students. The selection of courses must be approved by the student’s GES adviser and the department chair.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

UNDERGRADUATE

1. Fundamentals of Geology—For non-majors or prospective majors in Earth Systems or Geological and Environmental Sciences. Introduction to and survey of the processes, past and present, that shape the earth’s landforms, produce the minerals and rocks that comprise the earth, create soils, deform the earth’s crust, and move continents. The ways in which man interacts with the earth, constructively and destructively. Surficial processes involving water, water’s role in erosion, and in the production of sediment. Processes acting within the earth’s interior, emphasizing global tectonics. Geologic hazards: earthquakes, volcanic eruptions, flooding, landslides, and their mitigation. Nonrenewable resources, energy, environmental problems. Lectures, one all-day field trip, and weekly lab. Recommended: high school chemistry and physics. GER:2a (DR:5)

   5 units, Aut (Mahood)
   Win (Bird)
   Spr (Staff)

2. Earth History—For non-majors or prospective Earth Systems or geology majors. The earth is a dynamic planet, its surface continuously remolded by changing patterns of plate movements, climatic variation, the rise and fall of sea level, mountain building, volcanism, erosion, and sedimentation. It has hosted an evolutionary parade of organisms, from self-replicating molecules to man, that have interacted with and strongly modified surrounding environments. The evolution of the earth and its biosphere, hydrosphere, and atmosphere represent active areas of current research and discussion. Topics: the formation of the earth, origin of life, evolution of the continents, oxygenation of the atmosphere, development of metazoans, history of glaciations and climate, the role of extraterrestrial events in geological and biological evolution. Non-required lab in GES 3 examines the materials and organisms discussed. Majors in geology must take 3 concurrently or in a subsequent year. $10 field trip fee required. GER:2a (DR:5)

   3 units (Lowe) alternate years, given 2000-01

3. Earth History Laboratory—Introduction to the methods and materials of historical geology. Lab sessions on stratigraphic interpretation, geologic maps and cross sections, sedimentary environments, and metazoan evolution and fossils. Recommended for students taking GES 2; required for geology majors who took Geology 2 in 1985-86 or later. Corequisite: 2.

   2 units (Lowe) alternate years, given 2000-01

4. Undergraduate Seminar—For prospective majors in the School of Earth Sciences and non-majors. Informal lectures introduce students to the earth sciences: the scope of research and teaching in the School of Earth Sciences at Stanford, career possibilities, and the importance of studying the Earth. (AU)

   1 unit, Aut, Win, Spr (Dunbar)

7A.B. An Introduction to Wilderness Skills—Introduction to living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. In-class topics: geological processes, land management, environmental ethics, first aid, animal tracking, and plant ecology. Four weekend outings focus on minimum impact backcountry skills including backcountry ski technique, backpacking, caving, food preparation, orienteering, rock climbing, snow shelter building, and telemarking. Students research the geological history of trip locations and make short presentations on their findings. 7A emphasizes navigation on foot and rock climbing, and 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Students provide own clothing. Fee for food and transportation. (AU)

   7A. 1 unit, Aut (Bird)
   7B. 1 unit, Win (Bird)

7C. Advanced Wilderness Skills: An Introduction to Mountaineering—Introduction to mountaineering techniques and issues. AWS addresses topics and skills of interest to those more experienced with outdoor travel, focusing on the techniques and skills applicable to mountaineering. Fee for food and transportation. (AU)

   1 unit, Spr (Bird)

8. The Oceans: An Introduction to the Marine Environment—For non-majors and prospective geology, earth science, and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins, the circulation of the ocean and atmosphere, the nature of sea water, waves, tides, and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. The relationships between the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. Lectures and required one-day field trip to measure and analyze waves and currents. GER:2a (DR:5)

   3 units, Spr (Ingle)

   3 units, Spr (Dunbar) alternate years, not given 2000-01

42N. Stanford Introductory Seminar: Early Life on Earth—Preference to freshmen. An exploration of the first billion years of Earth history, with emphasis on the environments, conditions, and processes that led to the origin of life on Earth; the likelihood that life has evolved elsewhere in the solar system; examination and discussion of the geological record of the oldest preserved life forms, and the environments in which they lived. Term paper. Use of Stanford’s rock collection containing the oldest evidence for life on earth. GER:2a (DR:5)

   3 units (Lowe) alternate years, given 2000-01

44N. Stanford Introductory Seminar: Emerging Issues in Global Environmental Change—Preference to freshmen. Surveys the current understanding of environmental issues that are global in extent or effect, developing skills in researching primary literature and presenting the
results of research in writing and orally. Topics: atmospheric change, climate change, land use change, change in biotic resources, change in biogeochemistry. Structure: six weeks of lectures/discussions focused on the identification of global changes, and their causes and consequences; four weeks of oral presentations and discussions of student research. Five-page paper term project, written individually, exploring the social or natural science research in specific changes; students critique draft papers and give an oral presentation on their own research. Discussions on the integration of the social and biophysical aspects of various global changes.

3 units, Spr (Matson) alternate years, not given 2000-01

45N. Stanford Introductory Seminar: Detecting Changes in Climate and the Environment—Preference to freshmen. What is the evidence for global warming? How can we distinguish anthropogenic warming from Earth’s natural warming and cooling; what changes have actually occurred in regional and global climate, including surface temperature, precipitation and extreme weather events. How can we detect environmental change and discriminate between trends and natural variability. Students assemble historical data, apply statistical techniques to describe and interpret their data, and present oral reports and critiques of other student papers.

3 units (Switzer) alternate years, given 2000-01

46N. Stanford Introductory Seminar: The Beach—Preference to freshmen. Open coast beaches represent one of the most complex and dynamic natural environments of Earth: a triple point where the ocean, atmosphere, and continent meet and interact on time scales of seconds to millennia. The beach environment through lectures/discussion and reading, and by study in the field. Field work involves repeated measurement of waves, currents, and beach character and sample collection at sites from Point Reyes south to Monterey Bay, California, with the goals of assembling and analyzing a quantitative record of environmental change. Research paper on a specific aspect of the beach environment.

3 units, Win (Ingle)

49N. Stanford Introductory Seminar: Field Trip to Death Valley—Preference to freshmen. California’s Death Valley and Owens Valley are natural laboratories for exploring a billion years of earth history: the sediments of ancient ocean/s, large-scale crustal deformation and mountain building, recent earthquake faulting, and volcanic eruptions. Their desert environments reveal prehistoric climate changes and historic human impacts. Six-day field trip to these areas during Spring Break. Introduction to the basics of geology during the quarter. Individual projects on specific topics are presented during the trip. Camping and moderate hiking required.

3 units, Win (Stebbins, Miller)

50Q. Stanford Introductory Seminar: The Coastal Zone Environment—Preference to sophomores. The oceanographic, geological, and biological character of coastal zone environments, including continental shelves, estuaries, and coastal wetlands, with emphasis on San Francisco Bay. Five required field trips examine the estuarine and coastal environments of the Bay region, and agencies and facilities concerned with monitoring and management of these resources. Original research on a selected aspect of the coastal zone results in a written and oral report. Prerequisite: introductory course in the earth or biological sciences. GER:2a (DR:5)

3 units, Aut (Ingle)

51Q. Stanford Introductory Seminar: Volcanoes of the Eastern Sierra Nevada—Preference to sophomores, and to students who have completed introductory geology. Develop skills in researching primary sources in scientific literature and presenting the results of that research orally and in writing. Topics: young volcanoes, hot springs, earthquake faults, glacial features, and saline lakes of the eastern Sierra Nevada. Four-day field trip over the Memorial Day weekend. Term project is a 5-page paper written as a chapter for a class-produced field trip guidebook. Students give an oral presentation on the outcrop at the field trip stop described in the guidebook chapter. Camping and light hiking. (WIM)

3-4 units (Mahood) alternate years, given 2000-01

52Q. Stanford Introductory Seminar: Geologic Development of California—Preference to sophomores, and to students who have completed introductory geology. Field-based on the crustal evolution of California in post-Paleozoic time and covering the geotectonic development of most of the state. Weekend field trips to the Diablo Range (two days); the central Klamath Mountains (three days); Point Lobos (one day); the White-Inyo Range, Owens Valley, and the eastern Sierra (three days). Camping and hiking.

4 units, Spr (Ernst)

53Q. Stanford Introductory Seminar: In the Beginning—Theories of the Origin of the Earth, Solar System, and Universe—Preference to sophomores. What happened in the first few seconds following the Big Bang? Where did all the elements in the periodic table come from? When and how did the Earth, Moon, and solar system form? When and where did life begin on Earth? Answers to these questions have been sought for centuries, and continues today. The history and evolution of theories of the origin of the Earth, Moon, solar system, and the Universe.

3 units, Win (McWilliams)

54Q. Stanford Introductory Seminar: California Landforms and Plate Tectonics—Preference to sophomores. The forces of plate tectonics at work on the landscape of California. The principles of rock deformation are introduced in hands-on experiments. Landforms resulting from deformation of the earth are analyzed with digital and photographic images. Field trips relate these large-scale structures to what one sees from the human perspective on the ground. Literature research on the tectonics of a region of the student’s choice. GER:2a (DR:5)

3 units, Aut (Miller)

55Q. Stanford Introductory Dialogue: The California Gold Rush—Geologic Background and Environmental Impact—Preference to sophomores, and to students who have completed introductory geology. The geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California. The environmental impact of the Gold Rush population increase and of mining operations, including the effects of placer mining on the landscape, rivers, and fisheries, and the concentration of arsenic and mercury in surface sediments and soils due to hard rock mining and milling operations. Field trip to the Mother Lode region; term paper and oral presentation required.

2 units, Spr (Bird)

56Q. Stanford Introductory Dialogue: Change in the Coastal Ocean—The View from Monterey Bay—Preference to sophomores. The issue of recent changes in the California Current, using Monterey Bay as an example. Current literature is an introduction to several principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay.

1 unit, Spr (Dunbar)

80. Earth Materials—Identification, classification, and interpretation of rock-forming minerals and the igneous, sedimentary, and metamorphic rocks they comprise. Rock cycles are related to earth systems. Lab work emphasizes use of the hand lens in making observations; overnight field trip demonstrates mineral and rock identification in the field, a variety of different pressure and temperature environments where minerals and rocks have formed, and genetic associations. Prerequisite: 1. Recommended: introductory chemistry.

5 units, Aut (Brown, Liou)

81. Petrography Tutorial—Practice and instruction in identifying minerals and rocks using a petrographic microscope. One three-hour lab per week. Prerequisite: 80 or equivalent.

2 units, Spr (Miller, Staff)
Introduction to Geochemistry—Introduction to the chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotopic geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochro-

mistry, biological evolution, and climate. Recommended: introductory chemistry.

3 units, Win (Stebbins)

Introduction to Field Geology—Instruction and practice in the basic methods of geologic investigation in the field. Emphasis is on techniques of systematic observations and the construction of geologic maps and sections from the data obtained with a written geologic report on one of the study areas. Field area sites display a variety of rock types and landforms related to clearly defined geologic structures and events. Conducted from White Mountains Research Station in Bishop, CA for the two weeks preceding the beginning of Autumn Quarter. Contact GES, or see Summer Session Catalogue, 2000 for schedule. Prerequisites: 1, 80.

3 units, Sum (Ruetz)

Geologic and Environmental Problems—Supervised reading, field and/or laboratory work, written paper. Recommended: one quarter (Staff).

1-10 units, any quarter (Staff)

Structural Geology: Introduction to Deformation in the Earth's Crust—The basic theory, principles, and techniques used to interpret and measure structures in naturally deformed rocks. Topics: the properties, rheology, and mechanisms of deformation of rocks and minerals; techniques of data collection in the field; lab and computer analysis of structural data; geometry and development of faults and folds; interpretation of geologic maps and construction of geologic cross-sections; strain measurement and structural analysis of metamorphic tectonites; the evolution of mountain belts, formation of rift-related sedimentary basins and development of strike-slip fault systems. Prerequisites: 1, calculus. Recommended: 80, 102. (WIM)

5 units, Spr (Miller)

Structural Geology and Rock Mechanics—Same as Civil and Environmental Engineering 195.) Observational techniques, analysis methods, and the theoretical foundations of structural geology, engineering geology, and rock mechanics. Computer exercises are integrated with field data to understand the role of geologic structures in the evolution of the earth's crust (folding, faulting, flow, and fracturing of rock) and geologic hazards (earthquakes and volcanoes). Topics: structural quantities and dimensional analysis; use of stress, strain, displacement, and velocity fields in structural analysis; concept and measurement of deformation; mechanical properties of rock (elasticity, viscosity, strength, friction, fracture toughness); case studies of typical geologic structures using continuum mechanics. Computer labs. Prerequisites: 1, calculus, Macintosh skills.

5 units, Aut (Pollard)

Mapping the Geological Environment—Introduction to modern techniques for mapping and measurement of geological features associated with natural resources recovery, geological hazards, and environmental problems. Use of descriptive geometry and stereographic projections to analyze geological field data. Total Positioning System (TPS) and the satellite-based Global Positioning System (GPS) are used for field data acquisition. Compilation, visualization, and presentation of 2D and 3D field data is implemented using computer graphics applications and Geographic Information Systems (GIS). Field trips. (WIM)

4 units, Spr (Einaudi, Pollard)

Engineering Geology Practice—Same as Civil and Environmental Engineering 196.) The application of geologic fundamentals to the planning and design of civil engineering projects. Emphasis is on the development of geologic skills to identify, describe, and map earth materials and geologic structures as a means of determining the impact on site development. Topics: weathering and soil-forming processes, soil and rock mechanics, site investigation techniques, surface and groundwater regimes, stream and coastal processes, quaternary tectonics, deposits and geomorphology, environmental concerns, and geologic and geotechnical hazards. Field/lab exercises and case history studies emphasize the impact of site geology on the safe planning, design, and construction of civil engineering projects such as foundations, transportation facilities, excavations, tunnels and underground storage space, water supply facilities, and marine works. Prerequisite: 111 or consent of instructor.

3 units, Holzer alternate years, given 2000-01

Geosphere—(Same as Earth Systems 110.) Geological processes, from local to global, affect people and civilization. The reverse is also true; civilization is beginning to influence the geosphere. The processes experienced at the earth's surface (catastrophic earthquakes, volcanic eruptions, and longer term atmospheric and climate changes) are linked to what goes on in the earth's deep interior. How geochemical, geophysical, and biological processes interact over time scales ranging from 4.5 billion years to the nearly instantaneous. Topics: the origin and evolution of the atmosphere and oceans, heat flow and global tectonics and how they have changed over time, geochemical cycles, climate change, catastrophic impacts, and the roles played by organisms. Prerequisite: 1 or 2.

3 units, Aut (Stebbins, McWilliams)

Environmental Earth Sciences I—First of three-part sequence on the relationship of environmental earth sciences to land use planning. Project throughout sequence involves preparation of a land-use plan for a selected Bay Area location. Topics: introduction to city and regional planning, legal basis for land use planning and regulation, determinants of land use, land capability systems, geologic hazards, hydrology, use of topographic and geologic maps. Students individually or in groups prepare a reconnaissance report on a selected topic for the project area and present results to class. Field trips to project area and San Mateo county coast. (WIM) GER:2b (DR:6)

5 units, Aut (Loague, Mader)

Environmental Earth Sciences II—Topics: earthquake, landslide, and volcanic hazards, and approaches to mitigation; weather and climate; environmental optimization; environmental transport; environmental impact analysis. Groups prepare and present computer generated land capability maps for the project area. Field trips to observe examples of land use projects adapted to environmental constraints.

5 units, Win (Loague, Mader)

Environmental Earth Sciences III—Topics: procedures for the preparation of general plans, urban design, new town concepts, and site planning. Groups prepare and present a general plan diagram and text along with a proposed implementation program for the project area. Formal presentation to guest critics/city planners from project area. Field trips to examples of good design on the San Francisco Peninsula.

5 units, Spr (Mader)

Introduction to Assessment of Environmental Risk—Interdisciplinary approach to evaluate environmental and natural hazard risks; combines economics with earth-science information. The earth sciences, applied statistics, geographic information systems (GIS) and microeconomics are integrated in a decision framework (cost-benefit analysis) to address site-specific issues such as locating a waste-disposal facility and regional issues such as reducing earthquake-related damage. Techniques developed are applied in an in-class bargaining exercise to evaluate a current land-use issue. Prerequisite: 160 or equivalent, or consent of instructor.

3 units, Win (Bernkopf)
140. Geomorphology—Focus is on the materials and surface/near-surface processes of fluvial landscapes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, sediment transport, flow failures, mass wasting, and conceptual models of landscape evolution. Prerequisite: 1. Recommended: 151. (WIM)

3 units (Logue) alternate years, given 2000-01

147. The Road to Buenos Aires: Controlling Climate Change in the 21st Century—(Enroll in Human Biology 147.)

3 units (Schneider, Rosencranz) given 2000-01

151. Sedimentary Geology and Petrography: Depositional Systems—Topics: weathering, erosion and transportation, deposition, the origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips required. Prerequisites: 1, 2. (WIM)

4 units, Spr (Lowe, Graham)

152. Stratigraphy and Applied Paleontology—The rudiments of interpreting sedimentary sequences. Emphasis is on integration of paleontologic and sedimentologic evidence to reconstruct depositional environments, basin history, and paleogeographic and paleoceanographic settings. The nature of the fossil record, the use of fossils for dating, correlation, and paleoenvironmental and paleoceanographic reconstructions. Characteristic variations of modern and ancient biotas and lithofacies. Biostratigraphy, magnetostratigraphy, and radiometric dating and correlation. Term paper. Lectures supplemented by classic and current scientific literature. Weekly lab; two required field trips. Prerequisites: 1, 2. (WIM)

4 units, Spr (Ingle)

155A. Biogeochemistry of the Southern Ocean—Intensive introduction to the science of southern ocean biogeochemistry and ecology. The principles underlying the research cruise, e.g., Research on Ocean-Atmosphere Variability and Ecosystem Response in the Ross Sea (ROAVERRS).

3 units, Aut (Dunbar)

155B. Directed Research in Biogeochemistry of the Southern Ocean—Undergraduate research experience in Antarctica.

9 units, Aut (Dunbar)

160. Introduction to Statistical Methods for Earth and Environmental Sciences—(Same as Petroleum Engineering 160.) Data summaries, graphical display of data, measures of association, time series and trends, sampling, quantification of uncertainty, statistical models, statistical testing, and prediction. Analysis of spatial information, introduction to geostatistical methods for estimating spatial phenomena. Examples of prediction and uncertainty quantification in geology and environmental monitoring. Issues of statistical computing and software.

4 units, Spr (Caers)

162. Cosmochemistry—Ashes to ashes, dust to dust: building a solar system from the ashes of stellar winds and the remains of exploded stars. Topics: basic nuclear astrophysics, stellar evolution; dust in the cosmos; formation of solar systems; preservation of presolar grains in meteorites.

3 units (Ireland) alternate years, not given 2000-01

163. Introduction to Isotope Geology—Introduces the use of stable and radiogenic isotopes in earth and planetary sciences; intended as a foundation for 164 and/or 165. Basic cosmochemistry and nucleosynthesis; the origin, abundance, and distribution of the elements in the solar system; factors that control elemental abundance and distribution; isotope systematics; nuclear and chemical processes affecting isotope distribution. Mass spectrometry and introduction to isotopic measurements including ion counting, thermal ionization mass spectrometry (TIMS), secondary ion mass spectrometry (SIMS), noble gas mass spectrometry, accelerator mass spectrometry (AMS), and inductively coupled plasma mass spectrometry (ICP-MS). Prerequisites: undergraduate-level physics, chemistry, and differential calculus.

3 units, Aut (McWilliams, Ireland, Dunbar)

164. Stable Isotopes—Light stable isotopes and their application to geological and geophysical problems. Topics: isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and in minerals. Isotopic composition of water in the oceans. Paleothermometry and paleoclimatology. Isotope fractionation in igneous, sedimentary, and metamorphic rocks, and in ore-forming fluids. Prerequisite: 163 or consent of the instructor.

3 units, Win (Dunbar)

165. Geochronology—The principles of geochronology and thermochronology and their application to geological and geophysical problems. Topics: nuclear structure, isotope systematics, decay schemes for the principal nuclides used in earth sciences, equilibrium and disequilibrium, diffusion and transport phenomena, blocking (closure) of isotopic and magnetic systems, creation and annealing of fission tracks, neutron activation, a review of geologic timescales, chronostratigraphy, magnetostratigraphy, and cosmogenic exposure ages. Alpha counting, mass spectrometry by gas source, solid source, ion probe and accelerator methods. Fundamentals of K-Ar, Ar-Ar, Rb-Sr, U-Pb fission track and cosmogenic isotope methods. Recommended: undergraduate training in calculus, chemistry, geology, and physics.

3 units, Spr (McWilliams, Ireland)

170. Environmental Geochemistry—Introduction to the solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and their chemical interactions, emphasizing the contrast between natural sources of hazardous elements and compounds and the types and sources of anthropogenic contaminants and pollutants. Identification of chemical and physical processes that result in weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. Emphasis is on processes that control the release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The scientific basis for evaluation of the impact of contaminants and the design of remediation strategies. Case studies: mercury on the San Francisco Peninsula, heavy metals in the Sierra Nevada and Central Valley of California, and high-level radioactive waste disposal sites in the U.S. Prerequisite: 90 or consent of instructor.

4 units, Win (Brown)

171. Geochemical Thermodynamics—Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: 80.

3 units, Aut (Bird)

175. Science of Soils—The physical, chemical, and biological processes that occur within soil systems. The factors governing nutrient availability, plant growth/production, land-resource management, and pollution within soils.

3 units, Aut (Fendorf)

181. Igneous and Metamorphic Processes—The origin of igneous and metamorphic rocks, emphasizing magmatic differentiation and subduction recrystallization processes and their imposed physiochemical and tectonic conditions. The physical properties of magmas, role of volatile components, applications of trace elements and isotopes to igneous processes, geodynamics, and evolution of the crust-mantle system mod-
eling of crystal fractionation and partial melting, relevant experimental data and phase diagrams, and relations of magma types to tectonic settings. Mineral paragenesis, phase relations, metamorphic reactions, fluid/rock interactions, P-T-time paths and their imposed tectonic settings. Lab hand-specimen and petrographic examinations of suites of igneous and metamorphic rocks. Graduate students may take without lab for 3 units. Prerequisites: 80, 90, or equivalents. 
3 or 5 units, Spr (Liou) alternate years, not given 2000-01

185. Volcanology—For juniors, seniors, and beginning graduate students in all the earth sciences. Eruptive mechanisms, models of emplacement of pyroclastic flows and characteristics of resulting deposits, volcanic landforms and their relation to the composition and physical properties of magmas, calderas, volcanic gases, eruptive histories of volcanic centers, effects of volcanic eruptions on climate and the atmosphere, volcanic hazards and their mitigation, volcanic-hosted geothermal energy and mineral resources. One four-day field trip over Memorial Day weekend required. Prerequisite: 1 or equivalent. (WIM) 
4 units (Mahood) alternate years, given 2000-01

185L. Volcanology Laboratory—Hand sample and petrographic microscope examination of volcanic rocks. Labs key to 185 lectures taken concurrently. Prerequisite: some experience with a petrographic microscope.
1 unit (Mahood) alternate years, given 2000-01

187. Introduction to Ore Deposits—The geology of hydrothermal systems, their products and processes, including: chemical, fluid inclusion, and isotopic characterization of fractures/veins and altered rocks, mineralogical, structural; distribution, geologic settings, and temporal evolution; and general models and interpretation of metasomatic processes. Focus is on understanding active hydrothermal systems in continental and oceanic settings and applications to ancient analogues: hot springs and mercury deposits, geothermal reservoirs and gold-silver deposits, volcanic fumaroles and magmatic-hydrothermal systems, mid-ocean-ridge hot springs and submarine massive sulfide deposits, and sedimentary basin brines and stratabound sulfide deposits. Lab: methods of study and description of veins and altered rocks; introduction to fluid inclusion microthermometry. Field trips required. Prerequisites: 80, 90.
4 units (Einaudi) alternate years, given 2000-01

190. WIM Project—Students in a GES WIM (51Q, 110, 112, 130, 151, 152 or 185), enroll in 190 using the section # of the appropriate faculty member.
1 unit (Staff)

192. Special Projects in Geological and Environmental Sciences— Supervised reading, field, and/or lab research with written reports.
1-10 units, any quarter (Staff)

195. Integrating Remote Sensing and Geographic Information Systems (GIS)—Entry-level survey of remote sensing and GIS; weekly computer-based lab session involving both subjects, stressing the interrelationships of the information from remotely sensed environmental data with the techniques and methodology of GIS. Lab enrollment limited to 20. 
3 units, Aut (Lyon)

196. Introduction to GIS: ARC/Info and Arc-View—(Graduate students enroll in 296; same as Geophysics 196.) Hands-on experience with ESRI’s ARC/INFO or Arc-View commercial GIS packages. Topics: setting up geographic databases and manipulating spatial data, including database query and analysis; hands-on computer-based exercises using sample ARC datasets on workstations. Guest lectures on GIS application in environmental, geological and biological sciences, and town planning. Students unable to register for 196 may sign up, with consent of instructor, for a self-paced computer tutorial version in 197, any quarter.
2 units, Win (Klemperer)

197. Research in the Application of Geographic Information Systems (GIS) —1-5 units, Aut, Win, Spr (Klemperer)

198. Special Problems in Geological and Environmental Sciences— Supervised reading, field, and/or lab research with written reports. Undergraduates must take a minimum of 3 units for a letter grade to meet the WIM requirement. (WIM) 
1-10 units, any quarter (Staff)

199. Honors Program—Research on a topic of special interest. See “Undergraduate Honors Program” above.
3 units, Aut, Win, Spr, Sum (Staff)

GRADUATE

202. Reservoir Geomechanics—(Enroll in Geophysics 202.) 
3 units, Win (Zoback)

205. Advanced Oceanography—For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. The focus is on links between the circulation and physics of the ocean with climate in the North Pacific region, and marine ecologic responses. Lectures/discussion, with participation by marine scientists from various marine research groups and organizations including the Monterey Bay Aquarium Research Institute.
3 units, Aut (Dunbar) alternate years, not given 2000-01

210. Geologic Evolution of the Western U.S. Cordillera—For undergraduates and graduates. Overview of the geology of the western states. The evolution of the mountain belt from its inception in the Precambrian to its contemporary history of extension and strike-slip faulting, based on the description, analysis, and interpretation of the rock record through time. Characteristic structural styles developed during crustal shortening, extension, and strike-slip tectonic regimes; tectonic controls on sedimentary basin formation; plate margin magmatism and metamorphism; and the relation of plate motions to the land geologic record provide insight into the crustal-scale processes and driving mechanisms common to mountain chains.
2-3 units, Win (Miller) alternate years, not given 2000-01

211. Topics in Regional Geology and Tectonics—Seminar.
2 units, Win (Miller)

215. Advanced Structural Geology and Rock Mechanics—(Same as Geophysics 215.) The observational techniques, analysis methods, and theoretical foundations of structural geology, engineering geology, and rock mechanics. Computer exercises are integrated with field data to understand the role of geologic structures in the evolution of the earth’s crust (folding, faulting, flow, and fracturing of rock) and geologic hazards (earthquakes and volcanoes). Topics: structural quantities and dimensional analysis; use of stress, strain, displacement, and velocity fields in structural analysis; concept and measurement of deformation; mechanical properties of rock (elasticity, viscosity, strength, friction, fracture toughness); case studies of typical geologic structures using continuum mechanics. Computer labs.
5 units, Aut (Pollard)

216. Rock Fracture Mechanics—(Same as Geophysics 216.) Theoretical and experimental principles of continuum and fracture mechanics applied to the origin and physical behavior of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, fluid flow, and heat transport in the earth’s crust with applications to crustal deformation and tectonophysics, structural geology, petroleum geology and engineering, and hydrogeology. Prerequisite: 215 or equivalent.
5 units, Spr (Pollard) alternate years, not given 2000-01
217. Characterization and Hydraulics of Rock Fractures—Interdisciplinary survey of natural fractures (faults, joints, veins, and solution seams) and their geological, geophysical, geomechanical, stochastic, and hydraulic properties. Case studies of fracture characterization experiments and problems related to fluid flow in aquifers, oil and gas reservoirs, and waste repository sites in fractured rock. Invited lecturers from various disciplines and one weekend field trip. Prerequisite: equivalent of first-year graduate student in Geological and Environmental Sciences, Geophysics, or Petroleum Engineering.

3 units; (Aydin) alternate years, given 2000-01

220. Biogeochemistry—For upper-division undergraduates and graduate students in the earth and biological sciences. The processes by which components of terrestrial ecosystems interact, drawing on areas of geology, soil science, hydrology, chemistry, biology, and ecology.

3 units; (Matson) alternate years, given 2000-01

221. The Origins of Life in the Solar System—Interdisciplinary seminar for upper-division undergraduates and graduate students in the physical and biological sciences. Current topics in exobiology and the origins of life from a planetary sciences perspective. Definitions of life and the origin of information; water, carbon, and energy; phylogenetic and fossil inferences about early life on Earth; the early terrestrial environment, including asteroid and comet impacts; prebiotic organic syntheses and the RNA world; panspermia; the search for life on Mars; Europa, including prospects for an ocean and speculative ecologies; upcoming spacecraft missions and mission planning; planetary protection, back contamination, and legal and ethical issues; and student-suggested topics. Student presentations, group discussion, and lectures.

3 units; (Chyba)

223. Seminar in Environmental Problem Solving—(Same as Earth Systems 223.) For upper-division undergraduates and graduate students in the earth and biological sciences. Using case studies, evaluates and contrasts the approaches that different natural and social science disciplines bring to environmental problem solving.

3 units; (Matson, Naylor) alternate years, not given 2000-01

230. Physical Hydrogeology—(Same as Civil and Environmental Engineering 260A.) Theory of underground water, analysis of field data and pumping tests, geologic groundwater environments, solution of field problems, groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Prerequisite: elementary calculus.

5 units; (Gorelick)

4 units; (Gorelick)

235. Role of Fluids in Geologic Processes—The principles governing groundwater flow and its interaction with crustal stress, heat flow, and chemical mass transport. Topography-driven flow of groundwater on a regional scale; compaction-driven flow in the sedimentary basin; development of anomalous fluid pressure; the role of fluid in tectonism; migration and entrapment of petroleum; density driven flow and thermal anomaly; formation of mineral deposits. Prerequisite: 230.

3 units; (Hsieh) alternate years, given 2000-01

236. Hydraulic and Tracer Tests for Groundwater Resource Evaluation—Theory and application of hydraulic and tracer tests to determine flow and the transport properties of aquifers. Analysis of well tests in single-layer aquifers and multiple aquifer-aquitard systems; water table conditions; anisotropy; double-porosity; effects due to wellbore storage, wellbore skin, aquifer boundaries, and heterogeneities such as faults and fracture zones; natural and forced gradient tracer tests. Prerequisite: 230.

3 units; Spr (Hsieh) alternate years, not given 2000-01

4 units; Aut (Loague) alternate years, not given 2000-01

238. Soil Physics—Advanced level, focusing on the physical and chemical properties of the soil solid phase, with emphasis on the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Agricultural systems. Field techniques and classic experiments demonstrated and reproduced in the lab. Prerequisite: elementary calculus.

4 units; (Loague) alternate years, given 2000-01

3 units; (Loague) alternate years, not given 2000-01

240. Geostatistics for Spatial Phenomena—(Same as Petroleum Engineering 240.) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and co-kriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, Statistics 116 or equivalent.

3-4 units; Win (Journel, Gómez)

241. Practice of Geostatistics on Exhaustive Data Bases—(Same as Petroleum Engineering 241.) The study of a real data set; examples have been a large N. Sea clastic reservoir with well and seismic data, a lead contamination site, a large polymetallic porphyry deposit in Chile, topographic data in Nevada. Data includes sparse hard data, extensive soft information. Student teams independently perform site characterizations and share results in class. Reservoir study through maps, variograms, kriging, and stochastic models. Extensive use of GSLIB and 3D visualization software. Flow simulations for recovery forecast and placement of additional wells. Engineering design for site remediation. Prerequisites: 240, Fortran/Unix. Recommended: 246.

3-4 units; Spr (Journel, Caers)

242. Topics in Advanced Geostatistics—(Same as Petroleum Engineering 242.) Conditional expectation theory and projections in Hilbert spaces; parametric vs. non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, Fortran/Unix.

3 units; (Journel) alternate years, given 2000-01

245. Computer Simulation in Geology—(Students may participate in 345.) Procedures for developing dynamic geologic process simulation models in geology, stressing numerical solutions of differential equa-
246. Reservoir Characterization and Flow Modeling with Outcrop Data—(Same as Petroleum Engineering 246.) Project provides earth science students with an understanding of how to use outcrop observations in quantitative geological modeling and flow simulation, and addresses a specific reservoir management problem by studying a suitable outcrop analogue (weekend field trip), constructing geostatistical reservoir models, and performing flow simulation. An introduction, through an applied example, to the relationship between the different disciplines. A different reservoir management question and outcrop analogue is studied each year.

3 units (Harbaugh) alternate years, given 2000-01

248. Risk Analysis in Petroleum Exploration—Use of formal procedures to make optimum financial decisions in petroleum exploration and exploitation. The estimation of probabilities attached to exploration actions and their utilization in financial forecasts. Extensive use of PC-based problem sets that include a computerized exploration exercise with competing teams. Concepts are applicable to resource exploration and development in general.

3 units (Harbaugh) alternate years, given 2000-01

249. Application of Biological Markers to Understanding Petroleum Systems—Biological markers (molecular fossils) are introduced and described from fundamentals to their application to understanding and mapping petroleum systems. Biomarkers in rocks and petroleum provide information on the paleoenvironment, geologic age and stratigraphy, thermal maturity, migration, diagenesis, and biodegradation. Biomarker “fingerprints” are useful to monitor and determine the environmental fate of petroleum. Current research topics and a detailed introduction to the petroleum systems used for basin analysis by modern exploration geologists. Global applications of regional studies.

2-4 units, Win (Moldowan)

250. Sedimentation Mechanics—The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

3 units (Lowe) alternate years, not given 2000-01

251. Sedimentary Basins—Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

3 units (Graham) alternate years, given 2000-01

252. Sedimentary Petrology—Examination/interpretation of siliciclastic sediments and sedimentary rocks. Lectures/readings stress research in modern sedimentary mineralogy and petrology and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Class is topical and varies yearly. Prerequisite: 151 or equivalent.

4 units (Lowe) alternate years, given 2000-01

3 units (Graham) alternate years, given 2000-01

254. Paleoceanography—Paleochemistry and paleocirculation of the oceans as deduced from the study of marine sediments.

3 units (Dunbar) alternate years, not given 2000-01

255. Introduction to Micropaleontology—Microscopic marine fossils including diatoms, ostracods, and radiolarians, with emphasis on foraminifera. Principles of classification, evolutionary trends, common genera, ecology, and environmental distribution of foraminifera. Application of planktonic and benthic foraminifera to interpretation of paleoenvironments, paleoceanographic and paleoclimatic analysis, and correlation of marine sequences. Paleoenviornmental and age analysis of an unknown microfossil sample serves as a term research project.

5 units, Aut (Ingle) alternate years, not given 2000-01

256. Advanced Micropaleontology—The use of marine microfossils (mainly benthic and planktonic foraminifera) to solve fundamental geologic and oceanographic problems. Applications to geochronology, correlation, paleoecology, and paleoceanography. Individual analysis of a series of unknown samples provides intensive experience in applying basic concepts of biostratigraphy and paleoenvironmental analysis to interpretation of Paleozoic, Mesozoic, and Cenozoic microfossil assemblages. Lectures on classic and current examples of research in this field. Prerequisite: 255.

3 units, Win (Ingle) alternate years, not given 2000-01

257. Climate Variability and Forcing Mechanisms of the last 2000 Years: Implications for Life in the 21st Century—Open to graduate students and seniors in the earth sciences, earth systems, ecology, and anthropology. Overview of large-scale features of the climate systems that control interannual variability in temperature and rainfall. Recent studies in climate reconstruction and the influence of climate change on man. Lectures/readings and discussions.

3 units, Win (Dunbar) alternate years, not given 2000-01

258. Introduction to Depositional Systems—The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions, morphology, the dynamics of modern systems, and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

3 units (Lowe) given 2000-01

261. Physics and Chemistry of Minerals and Mineral Surfaces—The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

4 units, Spr (Brown) alternate years, not given 2000-01

262. Thermodynamics and Disorder in Minerals and Melts—The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties, e.g., enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as Nuclear Magnetic Resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities, and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

3 units (Siebbins) alternate years, given 2000-01
264. Low Temperature Aqueous Geochemistry—(Same as Civil and Environmental Engineering 273.) Chemical principles and application of those principles to the analysis and solution of problems in aqueous geochemistry (temperatures near 25°C and atmospheric pressure). Emphasis is on the analysis of natural water systems and the understanding and solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: Chemistry 31 and 33, or equivalents.

3 units, Aut (Leckie)

265. Soil Chemical Dynamics—Chemical and biologically mediated chemical processes within soils and surface waters; emphasis is on oxidation-reduction reactions and processes at the solid-water interface. Electron transfer processes, dissimilatory metal reduction. Ion exchange, electrified interfaces, specific adsorption, and dissolution/precipitation.

3 units, Win (Fendorf)

266. Soil Chemistry—Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. The three primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. The special considerations required for acid, saline, and wetland soils.

3 units, Win (Fendorf)

3 units (Bird) alternate years, given 2000-01

4 units (Einaudi) alternate years, given 2000-01

270. Petrologic Phase Equilibria—The principles of phase equilibrium determined by lab experimentation and thermochemical calculation, as applied to igneous and metamorphic petrology. Focus is on the underlying principles of classical thermodynamics which govern mineral equilibria. Introduction to phase relations, element partitioning, chemical kinetics, and order-disorder phenomena in geologic systems.

4 units, Spr (Ernst) alternate years, not given 2000-01

275. Electron Microanalytical Techniques—The practical and theoretical aspects of x-ray generation and detection and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to eight.

3 units, Win (Jones)

285. Isotopes and Trace Elements in Petrogenesis and Crustal Evolution—Radiogenic isotopes (Rb-Sr, Sm-Nd, Re-Os, U-Pb, and U-series disequilibrium systems) and stable isotopes applied to igneous processes; continental growth curves; evidence for the nature of basalt sources and implications for mantle convection; interaction of magmas with mantle and crust; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace-element modeling of igneous processes; trace-element discriminant diagrams in tectonic analysis; sedimentary recycling; sources of ore forming metals. Emphasizes interests of students. Prerequisites: 151, 165, 181, or their equivalents.

3 units (Mahood) alternate years, given 2000-01

289. Ion Microprobe Mass Spectrometry—Basics of mass spectrometry, sputtering and ionization theory, instruments, microanalytical techniques; applications in geochemistry, cosmochemistry, and geochronology including trace elements, stable isotopes, and radiogenic systems. Practical application on the SHRIMP RG.

3 units (Irland) alternate years, given 2000-01

290. Numerical Analysis of Geological Time Series—Seminar for graduate students interested in a variety of statistical tools appropriate for analysis of time series topics. Fourier transform techniques, singular spectrum analysis, evolutionary spectral analysis, and filtering. Some knowledge of UNIX required.

3 units (Dunbar) alternate years, given 2000-01

292. Field Mapping of Mineral Deposits—Seven-day field trip to the Yerington district, Nevada, emphasizing detailed mapping of hydrothermal alteration features in porphyry copper and skarn deposits. Students prepare maps and produce a report. Prerequisite: 187.

3 units, Spr (Einaudi)

295. Integrating Remote Sensing and Geographic Information Systems (GIS)—For graduate students; see 195.

296. Introduction to GIS: ARC/Info and ARC-View—(Same as Geophysics 296.) For graduate students; see 196.

297. Research in the Application of Geographic Information Systems (GIS)—For graduate students; see 197.

310. Advanced Field Mapping—10-14 days mapping in a structurally complex region. Emphasis is on collecting detailed structural, stratigraphic, and sedimentologic data to solve a topical problem in either regional and/or local geology. Prerequisite: consent of instructor.

3 units, any quarter (Miller)

314A,B,C. Research Seminar: Structural Geology and Geomechanics—Selected topics. May be repeated for credit.

1 unit, Aut, Win, Spr (Pollard, Aydin)

322A,B,C. Seminar in Biogeochemistry—Presentations and discussion of current topics in biogeochemistry. May be repeated for credit.

1-2 units, Aut, Win, Spr (Matson)

1-2 units, Aut, Win, Spr (Loague)

330A,B,C. Advanced Topics in Hydrogeology—Critical discussion of modern topics in groundwater hydrology. Topics: questioning classic explanations of physical processes; consideration of coupled physical, chemical, and biological processes affecting heat and solute transport.

1-2 units, Aut, Win, Spr (Gorelick)

332. Seminar in Hydrogeology

1 unit, Aut (Gorelick)

333. CESIR Seminar—The Center for Earth Science Information Research seminars are a multi-disciplinary lecture series. Emphasis is on the utilization of science for policy analysis and decision making. Speakers are from the physical and social sciences.

1-2 units, Spr (Bernknopf)
342A,B,C. Seminar: Geostatistics—Discussion of classic results and current research in geostatistics. Topics selected on basis of interest and timeliness. May be repeated for credit.

1-2 units, Aut, Win, Spr (Journel)

350. Seminar in Sedimentary Geology
1-3 units, Win, Spr (Staff)

360. Topics in Low Temperature Surface and Aqueous Geochemistry—Guided independent study, analysis, and critical oral and written reports on selected topics in environmental, surface, and/or aqueous geochemistry under earth-surface conditions. Prerequisites: 80 and 264; consent of instructor.

2-4 units, one quarter annually (Brown, Parks)

362. Seminar on Silicate Glasses and Liquids
2-3 units, Spr (Stebbins)

373. Seminar in Metamorphic Petrology—Selected topics in metamorphic and tectonic processes, research problems, and methods of study of metamorphic rocks and their tectonometamorphic evolutions. Prerequisite: consent of instructor.

1-2 units, Spr (Liou, Ernst)

375. Seminar and Field Trip: Ore Genesis—Research aimed at understanding the features and processes related to a particular class of mineral deposits. Topics are selected on basis of participant interest and timeliness. Field trip (1-2 wks.) and guidebook preparation. Papers and oral presentations. Pre-or corequisite: 268.

2 units, Win (Einaudi)

385. Practical Experience in the Geosciences—On-the-job training in the geosciences. May include summer internships; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets INS requirements for F-1 Curricular practical training.

1 unit, any quarter (Staff)

Problems in Various Fields of Geological and Environmental Sciences

313. Problems in Structural Geology and Geomechanics

319. Problems in Structural Geology

339. Problems in Hydrogeology

349. Problems in Geomathematics

357. Problems in Sedimentary Geology

358. Problems in Oceanography and Paleoclimatology

363. Problems in Organic Geochemistry

369. Problems in Geochemistry

377. Problems in Ore Deposits and Exploration

379. Problems in Metamorphic Petrology

386. Problems in Volcanology and Igneous Petrology

389. Problems in Geochronology and Isotope Geology

Research in Various Fields of Geological and Environmental Sciences

413. Research in Structural Geology and Geomechanics

419. Research in Structural Geology

422. Research in Biogeochemistry

438. Research Methods in Hydrology

439. Research in Hydrogeology

440. Research in Geostatistics for Natural Resources Management

449. Research in Geomathematics

452. Research in Basin Analysis Petroleum Geology

457. Research in Sedimentary Geology

458. Research in Oceanography and Paleoclimatology

460. Research in Low Temperature Surface and Aqueous Geochemistry

463. Research in Organic Geochemistry

465. Research in Soil Chemistry

469. Research in Geochemistry

477. Research in Ore Deposits and Exploration

479. Research in Metamorphic Petrology

480. Research in Remote Sensing

486. Research in Volcanology and Igneous Petrology

489. Research in Geochronology and Isotope Geology

GEOPHYSICS

Emeritus: George A. Thompson (on active duty)

Chair: Amos M. Nur

Professors: Jon F. Claerbout, Steven Gorelick, Jerry M. Harris, Robert L. Kovach, Marcia McNutt††, Amos M. Nur, Joan Roughgarden*, Paul Segall, Norman H. Sleep, Mark D. Zoback

Associate Professors: Gregory C. Beroza, Simon L. Klemperer, Howard Zeckert**

Assistant Professor: Kevin Arrigo

Professors (Research): Antony Fraser-Smith**, Gerald M. Mavko

Lecturer: Tapan Mukerji

Consulting Professors: James Berryman, William Ellsworth, Rosemary Knight, Walter Mooney, Hagai Ron, David Scholl, Paul Spudich

Consulting Associate Professors: Biondo Biondi, Stewart Levin, David Lumley, Daniel Moos, Zhijing Wang

Visiting Professor: William Symes

Visiting Associate Professor: Goetz Bokelmann

Senior Research Associate: Jack Dvorkin

Research Associates: Mark H. Murray, Manika Prasad

* Joint appointment with Biological Sciences
† Joint appointment with Geological and Environmental Sciences
** Joint appointment with Electrical Engineering
†† Joint appointment with Monterey Bay Aquarium Research Institute

Geophysics is the branch of earth science concerned with exploring and analyzing active processes of the earth through physical measurement. The undergraduate and graduate programs are designed to provide (1) a background of fundamentals in science, and (2) courses in geophysics to coordinate these fundamentals with the principles of geophysics. The program leading to the Bachelor of Science (B.S.) in Geophysics permits many electives and a high degree of flexibility for each individual student. Graduate programs provide specialized training for professional work in exploration, research, and education and lead to the degrees of Master of Science and Doctor of Philosophy.

The Department of Geophysics is housed in the Ruth Wattis Mitchell Earth Sciences Building. It has numerous research facilities, among which are a state-of-the-art broadband seismic recording station, a rock-magnetism laboratory, a geochronology laboratory, many computers, high pressure-and-temperature rock properties and deformation laboratories, various instruments for field measurements including 200 seismic recorders, nine dual frequency GPS receivers, and field equipment for measuring in-situ stress at great depth. Current research activities include behavior of the geomagnetic field, earthquake mechanics, isotopic age dating, paleomagnetic investigations, reflection, refraction and tomographic seismology, rock physics, seismic studies of the continental lithosphere, and studies of crustal deformation (strain) and crustal force (stress).

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Objectives—To provide a solid background in the essentials of math, physics, and geology, while at the same time providing knowledge about the entire spectrum of geophysics ranging from exploration geophysics to earthquake seismology and plate tectonics. Students are prepared for
either an immediate professional career in the resources and environmental sciences industries or future graduate study.

The following courses are required for the B.S. degree in Geophysics, in addition to the University requirements in general studies. A written report on original research or an honor’s thesis is also required. Normally, this is undertaken as part of the student’s participation in three quarters of Research Seminar (the Geophysics 185 series) during the senior year. Seniors in Geophysics who expect to do graduate work are urged to take the Graduate Record Examination as early as is convenient in their final undergraduate year.

CURRICULUM
Course No: and Subject
Chem. 31. Chemical Principles
Chem. 135. Physical Chemical Principles
or Physics 170, 171, Thermodynamics
Elect. Engr. 141. Electromagnetic Fundamentals
or Physics 120. Electricity and Magnetism
Geol. & Envir. Sci. 1. Planet Earth
Geol. & Envir. Sci. 80. Earth Materials
Geol. & Envir. Sci. 102. Introduction to Field Geology
Geol. & Envir. Sci. 110*, 111. Structural Geology
Geophys. 185 series. Research Seminar
Math. through 44 or through 53. Analytical Geometry and Calculus
Math. 130. Ordinary Differential Equations
Physics 41, 43, 45, 46, and 47. Elementary Physics
Physics 110, 111. Mechanics

* Indicates that the course meets the Writing in the Major (WIM) requirements.

The curriculum includes 9 units of Geophysics electives. Particularly recommended to fill the 9-unit requirement are 150, 174, 190. Other suggested Geophysics electives are 102, 180, 182, 183, 190, 195, 200, 262, 285.

Recommended elective courses that do not fill the 9-unit requirement are Comp. Sci. 105 or 106; Geol. and Envir. Sci. 190A and B, and 181; Physics 46, 48, 120, 121, 212, 210, 211, or Elect. Engr. 142; Math. 103, 106, 113, 114, 131, 132; and Chem. Engr. 140, 150.

MINORS
The objective of the Geophysics minor is to provide students with a general knowledge of geophysics in addition to a background in the related fields of physics, mathematics, and geology.

Curriculum—
1. Geophysics 110. Geosphere
2. Geophysics 150. General Geophysics and Physics of the Earth
   or Geophysics 174. Seismology
   or Geophysics 182. Reflection Seismology
4. Math. 44. Vector Calculus
5. Math. 130. Ordinary Differential Equations
6. Physics 41. Mechanics
7. One approved 100-level (or higher) course on either electricity and magnetism, wave propagation, continuum mechanics, or the physics of materials.

HONORS PROGRAM
The department offers a program leading to the B.S. degree in Geophysics with Honors. The guidelines are:
1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.
2. Submit a proposal to the department, which will decide on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of Geophysics 205.
4. The decision as to whether a given independent study project does or does not merit an award of honors shall be made jointly by the department and the student’s adviser. This decision shall be based on the quality of both the honors work and the student’s other work in earth sciences.
5. The work done on the honors program should not be used as a substitute for regularly required courses.

GRADUATE PROGRAMS
University requirements for the M.S. and Ph.D. are described in the “Graduate Degrees” section of this bulletin.

MASTER OF SCIENCE

Objectives—To enhance the student’s training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

Requirements for the Degree—The candidate must:
1. Be registered as a graduate student for at least three quarters at full tuition.
2. Complete 45 units with a grade point average (GPA) of at least ‘B.’ Geophysics 110, 111, 112, 120, 150, 190, and Engineering 102W are required. If appropriate, requirements may be waived and additional electives substituted with consent of the candidate’s faculty adviser and of the Geophysics Graduate Coordinator. Recommended electives are Geophysics 160, 170, 174, 180; Mechanical Engineering 200A; and Electrical Engineering 261. At least 6, but not more than 18, of these units must be independent work on a research problem, resulting in a written report accepted by the candidate’s faculty adviser. Normally, this research is undertaken as part of the candidate’s participation in multiple quarters of Research Seminar (the Geophysics 385 series).
3. Make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units.
4. Submit a Program Proposal for the Master’s Degree in the first quarter of enrollment.
5. Each student must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members. Students who do not meet the standard course requirements (see the undergraduate curriculum), but who have unusual competence in other areas such as earth systems or science or space physics, may petition the Geophysics faculty to arrange individual programs.

M.S. IN EXPLORATION AND DEVELOPMENT

Objectives—To provide the theoretical and practical background needed for a career in petroleum exploration and development geophysics. The program takes a minimum of four quarters (beginning and ending in the Autumn Quarter), but more typically six quarters. A summer internship working in industry or a research or experimental laboratory is an integral part of the program. A written report based on the summer internship is publicly presented and defended. Some MS students also accomplish independent research during their degree program through their participation in one or multiple quarters of Research Seminar (the Geophysics 385 series).

Prerequisites—B.S. degree in engineering, geology, geophysics, mathematics, or physics; a sequence of courses in mathematics at least through ordinary differential equations; and at least one course in introductory geology. The following additional undergraduate courses are recommended: computer science, complex variables, linear algebra, petrography, and structural geology.

Requirements for the Degree—Geophysics 111, 112, 120, 150, 174, 182, 183, 190, 210, 262, 380A, 380B; Geological and Environmental Sciences 110 or 111, 240, 247 or 248, 251, 253; Petroleum Engineering 120, 130; Electrical Engineering 104 or 261; and elective courses in earth sciences, mathematics, physics, and engineering. If appropriate, requirements may be waived and additional electives substituted with consent of the candidate’s faculty adviser and of the Geophysics faculty Graduate Coordinator. Recommended electives include Geophysics 160, 170, 180, 202, 230, 285, 397; Geological and Environmental Sciences 151, 249; and Mechanical Engineering 200A. At least 45 units with a grade point average (GPA) of at least ‘B’ are required for the completion of this degree.
DOCTOR OF PHILOSOPHY

Objectives—The Ph.D. degree is conferred upon evidence of high attainment in Geophysics and ability to conduct an independent investigation and present the results of such research.

Requirements for the Degree—A minimum of three years and the completion of 108 units of graduate study at Stanford must be satisfactorily completed. During their first two years, candidates must complete a core sequence of classes: Geophysics 111, 112, 120, 150, 160; Mechanical Engineering 200A, 238A; Electrical Engineering 261 or Mechanical Engineering 308; and one data analysis course such as Geophysics 180 or 211, Petroleum Engineering 284, Civil and Environmental Engineering 267, Geological and Environmental Sciences 160 or 240, Statistics 110, or equivalent. Candidates must also participate in Research Seminars (the Geophysics 385 series) from their first quarter.

During the course of their studies, Ph.D. candidates are additionally required to complete Geophysics 170, 190; Engineering 102W; Physics 210 or Mathematics 220A or Mechanical Engineering 200B. Students are also encouraged to complete Physics 211 or Mathematics 220B or Mechanical Engineering 200C. Candidates are required to complete lectures outside the core sequence from at least two different Geophysics faculty members; and at least two non-Geophysics lecture classes in Earth Sciences (that is, the Department of Geological and Environmental Sciences and/or the Department of Petroleum Engineering). A minimum equivalent knowledge at the level of Geological and Environmental Sciences 1 is required. Highly recommended non-Geophysics Earth Science courses are Geological and Environmental Sciences 111, 120, 140, 231, and 251; and Petroleum Engineering 120, 130, 221, 224, and 240. Additional advanced courses should be selected from other science and engineering departments. A typical sequence for entering graduate students in their first year is: Autumn—Geophysics 111, 112, 120, 150 and Mechanical Engineering 200A or 238A; Winter—Geophysics 160, 385 and one elective; Spring—Geophysics 180, 385 and Electrical Engineering 261 or other elective. All students prepare a proposed study list for each year by the end of the first quarter of that year.

If appropriate, any class requirement may be waived, or electives substituted, with written consent of both the candidate’s faculty adviser and the Geophysics Graduate Coordinator.

The candidate’s record must indicate outstanding scholarship, and deficiencies in previous training must be improved. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. The student must pass the departmental oral examination by presenting and defending a written research paper or proposal by the end of the second year; prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination. The candidate for the Ph.D. degree must submit the final form of the dissertation within five calendar years from the date of admission to candidacy. The Geophysics faculty monitors student progress by carrying out an annual performance appraisal (at a closed faculty meeting) of all students who have not yet passed their departmental oral examination. Following successful completion of the departmental oral examination, candidates are required to organize an annual meeting of their research committee to review their progress towards the Ph.D. degree.

COURSES

4. Natural Hazards and Human Survival—For non-majors and potential earth scientists. Introduction to understanding natural and other hazards, earthquakes, volcanic eruptions, tsunamis, toxic waste disposal, nuclear power plant siting, their risk assessment, possible mitigation, and protective measures. GER: 2a (DR: 5)

5Q. Stanford Introductory Dialogue: Earthquakes of the Americas—Preference to sophomores. Earthquakes have had an impact on the development of cultures and societies. The early empires of the Maya and the Aztecs undoubtedly experienced earthquakes and volcanic eruptions and we rely on archaeological remains and glyphs from codices to ascertain past occurrences. Evidence from several Mexican and Central American archaeological sites uncovers the societal consequences and possible role of these natural events in the abandonment, migration, and settlement of cultural centers.

3 units, Aut (Kovach)

30Q. Stanford Introductory Dialogue: Earthquake Prediction—Preference to sophomores. Recently, some scientists who believe that earthquake prediction is fundamentally impossible, have stated that the effort should be abandoned. Is this view justified? The history of efforts at earthquake prediction by scientists and others, the state of earthquake science as it relates to the prediction problem, and the prospects for progress in the future.

2 units, Spr (Beroza)

3 units, Spr (Zebker)

50Q. Stanford Introductory Dialogue: Earthquakes and Archaeology in the Eastern Mediterranean—Lectures and Field Trip—Preference to sophomores. Why are there so many archaeological ruins in the eastern Mediterranean? Assumed by many to be the result of time and wars, many of these ruins are due to historic and prehistoric earthquakes. Modern science reveals that some of these earthquakes must have been so destructive, or happened at times of such political and military stress, that they changed history (e.g., the fall of Jericho before Joshua, the catastrophic collapse at the end of the Bronze Age.) Lectures in Winter Quarter, followed during spring break by a 10-day field trip to Israel and a neighboring country (Jordan, Egypt, or Greece). Students complete a term report on a site or event covered in the field trip.

2 units, Win (Nur)

50Q. Stanford Introductory Seminar: Viewing Hazards on Earth from Space—(Same as Electrical Engineering 60Q.) Preference to sophomores. Natural hazards (earthquakes, volcanoes, floods, hurricanes, and fires) affect thousands of people everyday. Twenty years of developments in spaceborne imaging technology monitor and respond to such disasters more rapidly than in the past, saving lives and money. Understanding the physical processes involved allows us to anticipate and plan for mitigation of the consequences. Students consider how these new tools are applied to natural disasters, and how remotely-sensed data are manipulated and analyzed.

3 units, Win (Zebker)

100. Directed Reading—Intensive study of the literature of any special topic. Preparation and presentation of reports. Individual assignments with any faculty member on any topic in Geophysics.

1-2 units, any quarter (Staff)

106. Planetary Exploration—(Enroll in Electrical Engineering 106.)

3 units, Spr (Fraser-Smith)

111. Introduction to Computing in Earth Science—Computing tools for research in earth sciences. How to use existing hardware and software tools. Focuses on: UNIX operating system, computer networking, graphics software, text processing software, and management of programming projects.

1 unit (Farrell) not given 1999-2000

112. Exploring Geosciences with MATLAB—Introduction to efficient use of Matlab as a tool for research in Engineering and Earth Sciences. Hands-on, computer-based exercises explore the 2-D and 3-D visualization.
tion, and applications to earth structure and exploration. Prerequisites: Probing earth structure with seismic waves. Measurements, interpretationary processes in ecology. Prerequisites: first-year calculus (Math.

170. Fluids in the Earth’s Crust—Interdisciplinary problems involving the state and movement of fluids in the earth’s crust: basics of the coupling in porous rocks between chemical transport, fluid flow, deformation and stress, and waves; applications to gas hydrates under the oceans; reservoir geophysics; geophysical recovery monitoring; aquifer geophysics; pore pressure in faulting and aftershocks and in the earth’s crust; permeability from seismic; viscoelastic rebound; pore fluids and subduction; sediment transport to seismic reflection; pressure solution and stylolites. Prerequisite: consent of instructors.

180. Geophysical Inverse Problems—Fundamental concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear pro-

182. Reflection Seismology—The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.

183. Interpretation of Seismic Reflection Profiles—Lectures and workshops on structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lecture only=1 unit. Prerequisite: 182, or consent of instructor.

184. Seismic Data Processing—Workshop experience in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.

185. Research Seminar Series—Limited to Geophysics undergraduates and coterminal master’s candidates. Undergraduates participate directly in an ongoing research project: experimental and computational work, joining in reading and study groups, giving seminar papers, and doing original research for the undergraduate thesis. Prerequisite: consent of instructor.

185A. Reflection Seismology—Department research in reflection seismology and petroleum prospecting.

185D. Topics in Crustal Fluids—Research in interdisciplinary problems involving the state and movement of fluids in the earth’s crust. Content varies each quarter.

185E. Tectonics—Research on the origin, major structures, and tectonic processes of the earth’s crust. Emphasis is on use of deep seismic reflection and refraction data.

185K. Borehole Geophysics—Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ.

185L. Earthquake Seismology, Deformation, and Stress—Current research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism.

185S. Seismic Tomography—Current research in transmission and reflection tomography, including topics on forward modeling, inversion, and data acquisition.

185V. Poroelasticity—Current research topics on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own.

185V. Theoretical Ecology—(Same as Biology 384.) Discussions of recent and classical research papers in ecology, and presentation of work in progress by seminar participants.

185Z. Seminar in Radio Remote Sensing—Radar remote sensing techniques and applications. Emphasis is on current research applications, especially crustal deformation measurements. Recent instrumentation and system advancements.
190. Environmental and Applied Geophysics—Utilization of geophysical techniques, seismic reflection and refraction, gravity, magnetism, electromagnetics, resistivity and ground penetrating radar for problems related to environmental clean-up, civil engineering, and site characterization.

2 units, Spr (Harris, McWilliams)

196. Introduction to GIS: ARC/Info and Arc-View—(Graduate students enroll in 296; same as Geological and Environmental Sciences 196.) Hands-on experience with ESRI's ARC/INFO or Arc-View commercial GIS packages. Topics: setting up geographic databases and manipulating spatial data, including database query and analysis. Hands-on computer-based exercises using sample ARC datasets on workstations. Guest lectures on GIS applications in environmental, geological and biological sciences, and town planning. Students unable to register for 196 may sign up, with consent of instructor, for a self-paced computer tutorial version in 197, any quarter.

2 units, Win (Klemperer)

197. Research in the Application of Geographic Information Systems (GIS)—(Same as Geological and Environmental Sciences 197.)

1-5 units, Aut, Win, Spr (Klemperer)

202. Reservoir Geomechanics—Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize borehole stability, minimization of sand production.

3 units, Win (Zoback)

205. Honors Program—Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: superior work in the earth sciences and approval of the department.

1-3 units, Aut, Win, Spr (Staff)

3-4 units, Spr (Claerbout)

3 units, Win (Claerbout)

215. Advanced Structural Geology and Rock Mechanics—(Same as Geological and Environmental Sciences 215.)

5 units, Aut (Pollard)

216. Rock Fracture Mechanics—(Same as Geological and Environmental Sciences 216.)

5 units, Spr (Pollard) alternate years, not given 2000-01

230. Advanced Topics in Well Logging—(Same as Petroleum Engineering 230.) Designed to follow a course in standard well logging, and assumes knowledge of standard practice and application of geophysical well logs. State-of-the-art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Prerequisite: Petroleum Engineering 130 or equivalent.

3 units (Lindblom) given 2000-01

240. Borehole Seismology—The study and application of seismic-acoustic waves in and around boreholes for application to sonic well logging, crosswell seismic profiling, and vertical seismic profiling. Topics: forward modeling, seismogram interpretation, data processing, imaging, and inversion. Application from reservoir and site characterization studies and reservoir monitoring. Prerequisite: consent of instructor.

3 units, Aut (Harris) alternate years, not given 2000-01

4 units, Aut (Roughgarden)

255. Report on Energy Industry Training—Provides on-the-job training for master’s and doctoral degree students under the guidance of experienced, on-site supervisors. Students must submit a concise report detailing work activities, problems, assignments, and key results. Prerequisite: written consent of adviser.

1-3 units, any quarter (Staff)

262. Rock Physics—Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results.

3 units, Spr (Mavko)

280. 3-D Reflection Seismology—The principles of imaging complex structures in the Earth subsurface by use of 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometries of land and marine 3-D seismic surveys, time vs. depth imaging, prestack Kirchhoff migration, dip moveout, zero-offset downward continuation, full separation and splitting, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming.

1-2 units, Spr (Biondi)

285. Earth Soundings Analysis—Convolution, spectra, discrete Fourier transform, Z-plane, feedback, adjoint operators, model fitting by least squares, time series analysis, missing data restoration, phase, resolution and random signals, signal entropy.

3 units, Spr (Claerbout) alternate years, not given 2000-01

286. Electromagnetic Techniques in Geophysics—The general principles behind the electromagnetic techniques used to study the interior of the earth and to detect ore bodies, oil reservoirs, and underground man-made structures. Topics: the earth’s magnetic and electric fields, electromagnetic wave propagation through the earth (and through earth materials), electric and magnetic properties of earth materials, earth resistivity methods, magnetotellurics, magnetometers and magnetic-field gradiometers, electromagnetic induction, and ground-penetrating radar. Recommended: undergraduate electromagnetism.

4 units (Fraser-Smith) alternate years, given 2000-01

287. Earthquake Seismology—Topics: basic theorems in elastodynamics, Green’s functions, attenuation, wave propagation in layered media, ray theory, seismic moment tensors, finite-source effects, kinematics and dynamics of earthquakes, engineering aspects of seismology.

3 units (Beroza) alternate years, given 2000-01

288. Crustal Deformation—Collection, reduction, and analysis of crustal deformation measurements for the study of relative plate motions, plate boundary deformation, earthquake and volcanic processes, postglacial rebound, and land subsidence. Mechanical models of faulting and
385A. Seismic Tomography
(Harris)

385V. Poroelasticity.
(Mavko)

385Y. Theoretical Ecology—(Same as Biology 384.)
Spr (Roughgarden)

385Z. Radar Remote Sensing
(Zebker)

397. Introduction to Contemporary Geophysics—Attendance expected of all graduate students for credit or as auditors. Seminar or current topics of interest in geophysics emphasizing active research within the department and at other institutions.
1 unit, Win, Spr (Staff)

399. Teaching Experience in Geophysics—On-the-job training in the teaching of geophysics. An opportunity to develop problem sets and lab exercises, grade papers, and give occasional lectures under the supervision of the regular instructor of a geophysics course. Regular conferences with instructor and with students in the class provide the student teacher with feedback about effectiveness in teaching.
2-4 units, any quarter (Staff)

400. Research in Geophysics
any quarter (Staff)

PETROLEUM ENGINEERING

Emeriti: (Professors) William E. Brigham (on active duty), John W. Harbaugh*, Sullivan S. Marsden, Jr., Frank G. Miller; (Consulting Professors) Alvah J. Horn, Marshall B. Standing

Chair: Roland N. Horne
Associate Chair: Thomas A. Hewett
Assistant Professors: Jeff Caers, Anthony R. Kovscek
Associate Professor (Research): Louis J. Durlofsky

Consulting Professors: Warren K. Kourt, Robert G. Lindblom
Consulting Associate Professor: Clayton V. Deutsch
Consulting Assistant Professor: Jane Woodward

* Joint appointment with Geological and Environmental Sciences

Petroleum engineers are concerned with the design of processes for energy recovery from oil and gas reservoirs. Included in the design process are characterizing the spatial distribution of reservoir properties, drilling wells, designing and operating production facilities, selecting and implementing methods for enhancing fluid recovery, predicting recovery process performance, monitoring reservoirs, and examining environmental aspects of petroleum exploration and production. The Department of Petroleum Engineering curriculum provides a sound background in basic sciences and their application to practical problems to address the complex and changing nature of the field. Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover most aspects of petroleum engineering and some related fields like geothermal engineering and geostatistics. The curriculum emphasizes the fundamental aspects of fluid flow in the subsurface. These principles apply equally well to optimizing oil recovery from petroleum reservoirs and remediating contaminated groundwater systems.

Faculty and graduate students in the department conduct research in a variety of areas including: enhanced oil recovery by thermal means, gas injection, and the use of chemicals; flow of fluids in pipes; geostatistical reservoir characterization and mathematical modeling; geothermal en-
ENGINEERING; natural gas engineering; optimization; properties of petroleum fluids; reservoir simulation using computer models; and well test analysis. Undergraduate students are encouraged to participate in research projects. Graduate programs lead to the degrees of Master of Science (M.S.), Engineer, and Doctor of Philosophy (Ph.D.) in Petroleum Engineering.

M.S., Engineer, and Ph.D. degrees may be awarded with field designations for students who follow programs of study in the fields of geostatistics, geothermal, crustal fluids, or environmental specialties.

The department is housed in the Green Earth Sciences Building and it operates laboratories for research in various enhanced oil recovery processes and geothermal engineering. Students have access to a variety of computers for research and course work. Computers available for instruction and research include 13 UNIX workstations and two multiprocessor WinDD servers within the department as well as extensive campus-wide computer clusters. Each graduate student office has one X-terminal per student.

UNDERGRADUATE PROGRAMS
BACHELOR OF SCIENCE

The four-year program leading to the B.S. degree provides a foundation for careers in many facets of the energy industry. The curriculum includes basic science and engineering courses that provide sufficient depth for a wide spectrum of careers in the energy and environmental industries.

One of the goals of the program is to provide experience integrating the skills developed in individual courses to address significant design problems. In Petroleum Engineering 180, taken in the senior year, student teams design facilities for a real petroleum reservoir to meet specific management objectives.

PROGRAM

The requirements for the B.S. degree in Petroleum Engineering are similar to those described in the "School of Engineering" section of this bulletin. Students must satisfy the University general education, writing, and language requirements. The normal Petroleum Engineering undergraduate program automatically satisfies the University General Education Requirements (GERs) in area 2a (Natural Sciences), area 2b (Technology and Applied Sciences), and area 2c (Mathematics). Engineering fundamentals courses and petroleum engineering depth and elective courses must be taken for a letter grade.

In brief, the credit and subject requirements are:

A list of suggested electives and sample course programs are available in the Department of Petroleum Engineering, room 65, Green Earth Sciences Building. It is important to start mathematics courses in the first year and engineering and geology early in the second year. Computers are used extensively in most petroleum engineering courses. Students must develop programming skills through appropriate course work and self-study and are expected to achieve fluency in the use of FORTRAN, C, or C++ by their junior year.

MINORS

To be recommended for a B.S. degree with Petroleum Engineering as a minor subject, a student must take the following courses in addition to those required by the major department or program: Petr. Engr. 120, 121, 130, 175, 180, Geol. & Envir. Sci. 111 and 151. In some programs, Geol. & Envir. Sci. 111 or 151 may also satisfy major requirements.

HONORS PROGRAM

A limited number of undergraduates may be admitted to the honors program at the beginning of their senior year.

To be admitted, the student must have a grade point average (GPA) of at least 3.0 in all course work in the University. In addition to the minimum requirements for the B.S. degree, the student must complete 6 units of advanced petroleum engineering courses and at least 3 units of research (Pet. Engr. 193).

Students who wish to be admitted to the honors program should consult with their adviser before the start of their senior year. Those who do not meet all of the formal requirements may petition the department for admission. Those completing the program receive the B.S. degree in Petroleum Engineering with Honors. An overall 3.5 GPA is required in all petroleum engineering courses for graduation with honors.

COTERMINAL B.S. AND M.S. PROGRAM

The coterminal B.S./M.S. program offers a unique opportunity for Stanford University students to pursue a graduate experience while completing the B.S. degree in any relevant major. Petroleum Engineering graduate students generally come from a variety of backgrounds such as Chemical, Civil, or Mechanical Engineering; Geology or other Earth Sciences; or Physics or Chemistry. Students should have a background
at least through Mathematics 130 and Computer Science 106 before beginning graduate work in this program.

The two types of M.S. degrees, the course-work only degree, and the research degree, as well as the courses required to meet degree requirements are described below in the M.S. section. Both degrees require 45 units and may take from one to two years to complete depending on various circumstances unique to each student.

Requirements to enter the program are two letters of recommendation from faculty members or job supervisors, a statement of purpose, scores from the GRE general test, and a copy of Stanford University transcripts. While the department does not require any specific GPA or GRE score, potential applicants are expected to compete favorably with graduate student applicants.

A Petroleum Engineering master's degree can be used in a variety of ways. It is considered a terminal professional degree which prepares the student to obtain a professional job in the petroleum or geothermal industry, or in any related industry where analyzing flow in porous media or computer simulation skills are required. It can also be a stepping stone to a Ph.D. degree, which usually leads to a professional research job or an academic position.

Students should apply to the program any time after they have completed 105 undergraduate units, and in time to take PE 120, the basic introductory course in Autumn Quarter of the year they wish to begin the program. Please contact the Department of Petroleum Engineering to obtain additional information.

### GRADUATE PROGRAMS

The University's basic requirements for M.S. Engineer, and Ph.D. degrees are discussed in the "Graduate Degrees" section of this bulletin.

The energy industry provides a variety of employment opportunities for petroleum engineers with advanced training. A balanced master's degree program including both engineering course work and research requires a minimum of one maximum tuition academic year beyond the baccalaureate to meet the University residence requirements. Most full-time students spend at least one additional summer to complete the research requirement. An alternative master's degree program based only on course work is available that also requires at least one maximum tuition academic year to meet University residence requirements.

Students who anticipate continuing in the Ph.D. program should follow the research option. M.S. students receiving financial aid normally require two academic years to complete the degree. Such students must take the research option and are limited to a 9-unit course load per quarter.

The degree of Engineer requires a comprehensive maximum tuition two-year program of graduate study. This degree permits more extensive course work than the master's degree, with an emphasis on professional practice. All Engineer's degree students receiving financial aid are also limited to a 9-unit course load per quarter and need at least ten quarters of work to complete the degree.

The Ph.D. degree is awarded primarily on the basis of completion of significant, original research. Extensive course work and a minimum of three maximum tuition years of graduate work beyond the master's degree is required. Doctoral candidates planning theoretical work are encouraged to gain experimental research experience in the M.S. program. Ph.D. students receiving financial assistance are limited to 9 units per quarter and often require more than three years to complete the Ph.D.

In special cases, the M.S., Engineer, and Ph.D. degrees may be awarded with field designations for students who follow programs of study in the particular fields of (1) geostatistics, (2) geothermal, (3) crustal fluids, or (4) environmental. For example, students may be awarded the degree Master of Science in Petroleum Engineering (Geothermal).

### MASTER OF SCIENCE

The objective is to prepare the student for professional work in the energy industry through completion of fundamental courses in the major field and in related sciences as well as independent research.

Students entering the graduate program are expected to have an undergraduate-level petroleum engineering background. Competence in computer programming in a high-level language (Computer Science 106X or the equivalent) and knowledge of petroleum engineering and geological fundamentals (Pet. Engr. 120, 130, 140, and Geol. & Envir. Sci. 151) are prerequisites for taking most graduate courses.

The candidate must fulfill the following requirements:

1. Register as a graduate student for at least three quarters at maximum tuition or the equivalent of partial-tuition quarters.
2. Submit a Program Proposal for the Master's Degree approved by the adviser during the first quarter of enrollment.
3. Complete 45 units with at least a grade point average (GPA) of 3.0. This requirement is satisfied by taking the Core Sequence, selecting one of the seven elective sequences, an appropriate number of additional courses from the list of technical electives, and completing 6 units of master's level research. Students electing the "course work only" M.S. degree are strongly encouraged select an additional elective sequence in place of the research requirement. Students interested in continuing for a Ph.D. are expected to choose the research option and enroll in 6 units of Pet. Engr. 361. All courses must be taken for a letter grade.
4. Students entering without an undergraduate degree in Petroleum Engineering must make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units toward the M.S. degree.

Research subjects include certain groundwater hydrology and environmental problems, energy industry management, flow of non-Newtonian fluids, geothermal energy, natural gas engineering, oil and gas recovery, pipeline transportation, production optimization, reservoir characterization and modeling, reservoir engineering, reservoir simulation, and transient well test analysis.

### RECOMMENDED COURSES AND SEQUENCES

The following list is recommended for most students. With the prior special consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

#### CORE SEQUENCE

<table>
<thead>
<tr>
<th>Course No. and Subject</th>
<th>Units</th>

<td>3</td>
</tr>
</tbody>
</table>

Total: 21

* Optional for students taking the Geostatistics and Reservoir Modeling sequence.

### ELECTIVE SEQUENCE

Choose one of the following:

#### Crustal Fluids:

- Geol. & Envir. Sci. 230. Physical Hydrogeology | 5 |
- Geol. & Envir. Sci. 231. Contaminant Hydrogeology | 4 |
Total: 12

#### Environmental:

- Geol. & Envir. Sci. 231. Contaminant Hydrogeology | 4 |
Plus two out of the following courses:

- Civ. & Envir. Engr. 270. Movement, Fate, and Effect of Contaminants in Surface Water and Groundwater | 3 |
- Civ. & Envir. Engr. 274A. Environmental Microbiology | 3 |
- Geol. & Envir. Sci. 230. Physical Hydrogeology | 3 |
- Geol. & Envir. Sci. 264. Low Temperature Aquifer Geochemistry | 3 |
- Pet. Engr. 240. Geostatistics | 3-4 |
Total: 13-14

#### Enhanced Recovery:

**Geostatistics and Reservoir Modeling:**
- Geophys. 182. Reflection Seismology: 3
- Geophys. 240. Geostatistics for Spatial Phenomena: 3-4
- Pet. Engr. 241. Practice of Geostatistics: 3-4
- Total: 9-11

**Total:**
- Total: 9

**Geothermal:**
- Pet. Engr. 269. Geothermal Reservoir Engineering: 3
- Total: 10

**Reservoir Performance:**
- Geophys. 202. Reservoir Geomechanics: 3
- Pet. Engr. 180. Oil and Gas Production Engineering: 3-4
- Pet. Engr. 223. Reservoir Simulation: 3-4
- Total: 9-11

**Simulation and Optimization:**
- Pet. Engr. 223. Reservoir Simulation: 3-4
- Pet. Engr. 284. Optimization: 3
- Total: 9-10

**RESEARCH SEQUENCE**
- Total units required for M.S. degree: 45

* Students selecting the company sponsored "course work only" for the M.S. degree are strongly encouraged to substitute an additional elective sequence in place of the research.

**TECHNICAL ELECTIVES**

Technical electives from the following list of advanced-level courses usually complete the M.S. program. In unique cases, when justified and approved by the adviser prior to taking the course, courses listed here may be substituted for courses listed above in the elective sequences.

- Geophys. 182. Reflection Seismography: 3
- Geophys. 190. Environmental and Applied Geophysics: 4
- Geophys. 202. Reservoir Geomechanics: 3
- Pet. Engr. 130. Well Log Analysis: 3
- Pet. Engr. 180. Oil & Gas Production Engineering: 3
- Pet. Engr. 211. Computer Applications for Petroleum Engineers: 3
- Pet. Engr. 269. Geothermal Reservoir Engineering: 3
- Pet. Engr. 281. Applied Mathematics in Reservoir Engineering: 3
- Pet. Engr. 284. Optimization: 3

**ENGINEER**

The objective is to broaden training through additional work in engineering and the related sciences and by additional specialization.

Basic requirements include registering for at least six quarters at maximum tuition or the equivalent of partial-tuition quarters; completion of 72 units of course work including 15 units of research (Pet. Engr. 362), and including all course requirements of the department’s master’s degree (39 units, excluding research). If the candidate has received credit for research in the M.S. degree, this credit ordinarily would be transferable to the Engineer degree, in which case a total of 9 additional research units would be required. No more than 10 of the 90 required units can be applied to overcoming deficiencies in undergraduate training.

At least 30 units in engineering and closely allied fields must be taken in advanced work, that is, work beyond the master’s degree requirements and in addition to research (Pet. Engr. 362). These may include courses from the Ph.D. degree list below or advanced-level courses from other departments with prior consent of the adviser. All courses must be taken for a grade letter. The student must have a grade point average (GPA) of at least 3.0 in courses taken for the degree of Engineer. A thesis based on 15 units of research must be submitted and approved by the adviser, another faculty member, and the University Committee on Graduate Studies.

**DOCTOR OF PHILOSOPHY**

The Ph.D. degree is conferred upon demonstration of high achievement in independent research and by presentation of the research results in a written dissertation and oral defense.

Basic requirements include a minimum of nine quarters of registration at maximum tuition or the equivalent in partial-tuition quarters of satisfactorily completed graduate study. Students must take at least 72 units beyond the 45 units required for the master’s degree. The 72 units are composed of 36 units of research and 36 units of course work. The student’s record must indicate outstanding scholarship. The student must pass the department’s qualifying examination, submit an approved research proposal, fulfill the requirements of the minor department if a minor is elected, and pass the University oral examination, which is a defense of the dissertation. The student must prepare a dissertation based on independent research and that makes a significant contribution to the field.

The specification of 36 units of course work is a minimum; in some cases the research adviser may specify additional requirements to strengthen the student’s expertise in particular areas. The 36 units of course work does not include teaching experience (Pet. Engr. 359), which is a requirement for the Ph.D. degree, nor any units in research seminars, which students are required to attend. All courses must be taken for a letter grade, with an average GPA of at least 3.25 in the 36 units of course work. The 36 units of course work may include graduate courses in petroleum engineering (numbered 200 and above) and courses selected from the following list. Other courses may be substituted with prior approval by the adviser. In general, non-technical courses are not approved.

Ph.D. students are required to take the doctoral qualifying examination at the beginning of the second year of study. Students receiving a master’s degree from the Department of Petroleum Engineering and continuing on for a Ph.D. are required to take the qualifying examination at the first opportunity after the completion of the requirements for the master’s degree.

The qualifying examination consists of both a written and an oral section. The written part consists of three or four three-hour examinations on different subjects. The oral part is a three-hour examination in which members of the department faculty question the student. Students are required to apply for candidacy for the Ph.D. degree after passing the department’s qualifying examination.

Within a year of passing the qualifying examination, the student must prepare a short written report that contains a literature review and a research proposal. This proposal must be approved after oral examination by a committee made up of the student’s adviser and two other faculty, one of whom must be from the department.

The dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy by the University Committee on Graduate Studies. Candidates who fail to meet this deadline must submit an Application for Extension of Candidacy for approval by the department chair if they wish to continue in the program.

Ph.D. MINOR

To be recommended for a Ph.D. degree with Petroleum Engineering as a minor subject, a student must take 20 units of selected graduate-level lecture courses in the department. These courses must include Pet. Engr. 221 and 222. The remaining courses should be selected from Pet. Engr. 175, 180, 223, 224, 225, 226, 281, and 284.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

103. Energy Resources—Overview of oil, natural gas, coal, nuclear, hydro, solar, geothermal, biomass, wind, and ocean energy resources in terms of supply, distribution, recovery and conversion, environmental impacts, economics, policy, and technology. The opportunities for energy efficiency, electric power basics, the changing role of electric utilities, transportation basics, and energy use in developing countries. Field trips. Recommended: Civil and Environmental Engineering 170. GER:2b (DR:6)

3 units (Woodward) given 2000-01

104. Seminar: The Coming Energy Revolution—(Same as 204.) The three forces driving an energy revolution: environmental pressures, global social and economic revolution, and technological change. Assesement of evolution vs. revolution, developed vs. developing countries, transportation, electric power, resource development and extraction, end use technologies, deregulation, privatization and globalization, barriers to change, and assessment of the mechanisms to overcome them. Enrollment limited to 15; presentations every class. Prerequisite: 103. GER:2b (DR:6)

3 units, Aut (Woodward)

109Q. Stanford Introductory Seminar: What Determines the Price of Oil?—Preference to sophomores. Historical predictions of oil prices have been very poor. Most models attempt to simply extrapolate the past without considering the political, economic, and technical factors that affect the availability and price of oil. The objective is to build new approaches to mathematical models to predict the future price of oil, looking at the changing role of oil and natural gas in the energy picture of developing countries, and how these factors may influence future prices. Prerequisites: Math. 41 and 42, ability to write simple computer programs. GER:2b (DR:6)

3 units (Aziz) alternate years, given 2000-01

110Q. Stanford Introductory Seminar: Soap Bubbles, Raindrops, and Inkjets—Preference to sophomores. The behavior of bubbles and drops whose shapes are controlled by surface tension. Readings of Newton, Young, Laplace, and Plateau show how thinking about curved surfaces occupied scientists and mathematicians of the 18th and 19th centuries. A mathematical picture of a curved surface permits prediction of the shape of a bubble surface, and the physical effects of surface tension in daily life. Physical manifestations of these curved liquid surfaces are: the distribution of raindrops on a spider web, why sand grains stick together when damp, how the effects of surface tension work in an inkjet printer, why it is hard to remove oil and grease from clothes, and how detergent works. Prerequisite: Math. 42. GER:2b (DR:6)

3 units (Orr) alternate years, given 2000-01

120. Fundamentals of Petroleum Engineering—(Same as Engineering 120.) Lectures, problems, field trip. Basic engineering topics in petroleum discovery and recovery; and the origin, discovery, and development of oil and gas. The chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media.

3 units, Aut (Hewett)

121. Fundamentals of Multiphase Flow—See 221.

3 units, Win (Hewett)

130. Well Log Analysis—For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs using real field examples. Lectures, problems. Methods for evaluating the presence of hydrocarbons in rock formations penetrated in exploratory and development drilling. Concentrates on the fundamentals of all types of logs including electrical and nonelectric logs.

3 units, Aut (Lindblom)

140. Drilling and Completion Technology—The principles applied to the drilling and completion of oil, gas, and geothermal wells for off- and onshore operations. Rig mechanics, drilling fluid technology (drilling hydraulics, clay chemistry, and pressure control), cementing technology, bit mechanics, casing design, and directional drilling.

3 units (Staff) not given 1999-2000

155. Undergraduate Report on Energy Industry Training—Provides on-the-job practical training under the guidance of experienced, on-site supervisors geared to undergraduate level students. A concise report detailing work activities, problems, assignments and key results is required. Prerequisite: written consent of instructor.

1 unit, any quarter (Staff)

160. Introduction to Statistical Methods for Earth and Environmental Sciences—Data summaries, graphical display of data, measures of association, time series and trends, sampling, quantification of uncertainty, statistical models, statistical testing, and prediction. Analysis of spatial information, introduction to geostatistical methods for estimating spatial phenomena. Examples of prediction and uncertainty quantification in geology and environmental monitoring. Issues of statistical computing and software.

4 units, Spr (Caers)

3 units, Spr (Horne)

76
180. Oil and Gas Production Engineering—The design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130. (WIM)

3-4 units (Kovscek, Aziz) alternate years, given 2000-01

192. Undergraduate Teaching Experience—Leading field trips, preparing lecture notes, quizzes under supervision of the instructor.

1-3 units, any quarter (Staff)

193. Undergraduate Research Problems—Original and guided research problems with comprehensive report.

1-3 units, any quarter (Staff)

1-3 units, any quarter (Staff)

202. Reservoir Geomechanics—(Enroll in Geophysics 202.)

3 units, Win (Zoback)

3 units, Aut (Woodward)

211. Computer Applications for Petroleum Engineers—Lectures, seminars, and class projects. Provides "seed" knowledge of the software and hardware available to petroleum engineering students, effective use of computer resources, and some software tools. X-Windows, use of graphics, interlanguage communication, and user interfaces.

1 unit (Horne) not given 1999-2000

3 units, Win (Hewett)

3 units, Spr (Durlofsky)

223. Reservoir Simulation—Lectures, problems, and class project provide a thorough understanding of the fundamentals of petroleum reservoir simulation. Development of equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Various techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Prerequisite: 221 and 246, or consent of instructor. Recommended: Mechanical Engineering 200C.

3-4 units, Win (Durlofsky, Aziz)

3 units (Hewett) alternate years, given 2000-01

3 units, Win (Orr) alternate years, not given 2000-01

3 units (Castanier) alternate years, given 2000-01

227. Enhanced Oil Recovery—Lectures, problems. Introduction to the physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat and mass balances and phase behavior provide requisite building blocks for evaluation.

3 units, Spr (Kovscek) alternate years, not given 2000-01

230. Advanced Topics in Well Logging—(Same as Geophysics 230.) Designed to follow a course in standard well logging, and assumes knowledge of standard practice and application of geophysical well logs. State-of-the-art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Prerequisite: 130 or equivalent.

3 units (Lindblom) given 2000-01

240. Geostatistics for Spatial Phenomena—(Same as Geological and Environmental Sciences 240.) Stochastic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, Statistics 116 or equivalent.

3-4 units, Win (Journel, Gomez)

241. Practice of Geostatistics on Exhaustive Data Bases—(Same as Geological and Environmental Sciences 241.) The study of a real data set; examples have been a large N. Sea clastic reservoir with well and seismic data, a lead contamination site, a large polymetallic porphyry deposit in Chile, topographic data in Nevada. Data includes sparse hard data, extensive soft information. Student teams independently perform site characterizations and share results in class. Reservoir study through maps, variograms, kriging, and stochastic models. Extensive use of GSLIB and 3D visualization software. Flow simulations for recovery forecast and placement of additional wells. Engineering design for site remediation. Prerequisites: 240, Fortran/Unix. Recommended: 246.

3-4 units, Spr (Journel, Caers)

242. Topics in Advanced Geostatistics—(Same as Geological and Environmental Sciences 242A.) Conditional expectation theory and projections in Hilbert spaces; parametric vs. non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, annealing approaches to...
stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, Fortran/Unix.

3 units (Journel) alternate years, given 2000-01

246. Reservoir Characterization and Flow Modeling with Outcrop Data—(Same as Geological and Environmental Sciences 246.) Project provides earth science students with an understanding of how to use outcrop observations in quantitative geological modeling and flow simulation, and addresses a specific reservoir management problem by studying a suitable outcrop analogue (weekend field trip), constructing geostatistical reservoir models, and performing flow simulation. An introduction, through an applied example, to the relationship between the different disciplines. A different reservoir management question and outcrop analogue is studied each year.

3 units, Aut (Aziz, Graham, Journel)

3 units, Aut (Kovscek)

255. Master's Students' Report on Energy Industry Training—Provides on-the-job training for master’s degree students under the guidance of experienced, on-site supervisors. Students must submit a concise report detailing work activities, problems, assignments, and key results. Prerequisite: consent of adviser.

1 unit, Sum (Staff)

3 units, Win (Archer, Schafer)

268. Seminar in Petroleum Engineering

1 unit, any quarter (Staff)

269. Geothermal Reservoir Engineering—Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

3 units (Horne) alternate years, given 2000-01

1-3 units, any quarter (Staff)

3 units, Spr (Archer) alternate years, not given 2000-01

3 units, Aut (Caers)

285A,B,C,D,E,F,G. Research Seminars—Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Prerequisite: consent of instructor.

285A. Research Seminar: Enhanced Oil Recovery—Current research in the SUPRI-A group. Thermal and enhanced oil recovery. (AU)

1 unit, Aut, Win, Spr (Kovscek, Castanier, Brigham)

285B. Reservoir Simulation—Current research in SUPRI-B (Reservoir Simulation) program. (AU)

1 unit, Aut, Win, Spr (Aziz, Durlofsky, Edwards)

285C. Research Seminar: Gas Injection Processes—Current research in the SUPRI-C group. (AU)

1 unit, Aut, Win, Spr (Orr)

285D. Research Seminar: Well-Test Analysis—Current research in the SUPRI-D well test analysis group. (AU)

1 unit, Aut, Win, Spr (Home)

285E. Research Seminar: Geostatistics—Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. (AU)

1 unit, Aut, Win, Spr (Journel, Hewett, Caers)

285F. Research Seminar: Geothermal Reservoir Engineering—Current research in the geothermal energy group. (AU)

1 unit, Aut, Win, Spr (Home)

285G. Research Seminar: Horizontal Well Technology—Current research in SUPRI-HW (productivity and injectivity of horizontal wells) program. (AU)

1 unit, Aut, Win, Spr (Aziz, Durlofsky)

355. Doctoral Report on Energy Industry Training—Provides on-the-job training for doctoral students under the guidance of experienced, on-site supervisors. Students must submit a concise report detailing work activities, problems, assignments, and key results. Prerequisite: consent of adviser.

1 unit, Sum (Staff)

359. Teaching Experience in Petroleum Engineering—On-the-job training in teaching petroleum engineering. Student prepares and presents several lectures, problem sets, grades problems, and prepares lab experiments under the supervision of regular instructor. Performance is evaluated by students and the regular instructor.

1-3 units, any quarter (Staff)

360. Advanced Work in Petroleum Engineering—Graduate-level work in experimental, computational, or theoretical research.

1-9 units, any quarter (Staff)

1-6 units, any quarter (Staff)

362. Engineer's Thesis Research in Petroleum Engineering—Graduate-level work in experimental, computational, or theoretical research. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

1-9 units, any quarter (Staff)
363. Doctoral Dissertation Research in Petroleum Engineering—
Graduate-level work in experimental, computational, or theoretical 
research. Advanced technical report writing. 
1-9 units, any quarter (Staff)

365. Special Research in Petroleum Engineering—Graduate-level 
research work not related to report, thesis or dissertation. 
1-15 units, any quarter (Staff)
School of Education

Dean: Richard J. Shavelson
Associate Dean for Academic Affairs: Denis C. Phillips
Associate Dean for Administration: Vicki Oldberg
Associate Dean for External Relations: Patricia Nicholson

Associate Professors: Arneitha Ball, Patricia J. Gumport, Teresa C. LaFromboise, David Rogosa

Assistant Professors: Anthony L. Antonio, Brigid J. Barron, Joanne T. Boaler, Mike Copland, Susanna Loeb, Karen E. Mundy, Robert Roeser, Joy Williamson

Professor (Teaching): Alan Peshkin
Associate Professor (Teaching): Rachel Lotan

Courtesies: Professor: Paul Brest, Shirley Heath, Herant Katchadourian, Donald Kennedy, Mark Lepper, John Meyer, Brad Osgood, John Rickford

Courtesies Assistant Professor: Robert Reich

Senior Lecturer: Philip Hubbard

Lecturers: Margaret Azevedo, Byron Bland, Beverly Carter, Colin Hayman, Cathy Humphreys, Alexis Kaminisky, Al Levin, Kay Moffett, Kathleen Morrison, Stan Pesick, Ann Porteus, Nicole Ramos-Beban, Susan Schultz, James Steyer, Ann Vocovic, Rochelle Weintraub, Lori White, Rachel Zorman

Acting Assistant Professors: Susan Christopher, Diana Rhoten

Consulting Professors: George Bohrnstedt, Jay Chambers, David Petterman, Thomas Parrish

Visiting Professor: Paul Black

* Recalled to active duty.

The School of Education prepares scholars, teachers, teacher educators, counseling psychologists, policy analysts, evaluators, researchers, administrators, and other educational specialists. Four graduate degrees with specialization in education are granted by the University: Master of Arts, Master of Arts in Teaching (Subject), Doctor of Education, and Doctor of Philosophy. While no undergraduate majors are offered, the school does offer a number of courses for undergraduates, an undergraduate honors program, and a variety of tutoring programs.

The School of Education is organized into three Program Area Committees: Curriculum Studies and Teacher Education (C&TE); Psychological Studies in Education (PSE); and Social Sciences, Policy, and Educational Practice (SSPEP).

In addition, four cross-area programs are sponsored by faculty from more than one area. These programs include the doctoral Symbolic System Program and three master’s level programs: the Stanford Teacher Education Program (STEP), the Prospective Principals Program (PPP) and the Learning, Design and Technology Program (LDT).

These committees and programs function as administrative units that act on admissions, plan course offerings, assign advisers, and determine program requirements. Various subcommittees or concentrations exist within most of these areas and programs. Faculty members are affiliated primarily with one area but may participate in several programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

Detailed information about admission and degree requirements, faculty members, and specializations related to these area committees and programs can be found in the publication School of Education Guide to Graduate Studies and at http://www.stanford.edu/dept/SUSE/.

The School of Education offers an eight-week summer session for admitted students only. The school offers no correspondence or extension courses.

UNDERGRADUATE PROGRAMS

The School of Education focuses on graduate education and research training and does not offer an undergraduate major. However, undergraduate education is of concern to the school, and courses and programs are available to those interested in the field of education. Several courses at the 100 level are especially designed for undergraduates, and some higher-level courses are open to undergraduates. An honors program is available to undergraduates to supplement their regular majors outside the school. In conjunction with the Haas Center and the Undergraduate Advising Center, the school offers a variety of courses for undergraduates interested in developing educationally oriented skills.

HONORS PROGRAM

This program permits interested and able undergraduates at Stanford to build on the training received in their major field of study by pursuing additional courses and a research or practicum project in a related area of education.

Students apply for entry during the junior year. Applications are available at the Dean’s office in Cubberley room 101 or at http://www.stanford.edu/dept/SUSE/navigation/programsnavfrm.html. At least one course must be taken from each of the following areas:

1. Educational policy and history in the U.S.: courses include American Education and Public Policy; History of Education in the United States; Children, Civil Rights, and Public Policy in the U.S.; Introduction to the Study of International Comparative Education; History of Higher Education in the U.S.

2. Contemporary problem areas: courses include Urban Youth and their Institutions: Research and Practice; Theory and Issues in the Study of Bilingualism; Education and the Status of Women: Comparative Perspectives; Contemporary Social Issues in Child and Adolescent Development.

3. Foundational disciplines: courses include Social Sciences and Educational Analysis; Problems in Sociology of Education; Problems of Intelligence, Information, and Learning; Introduction to Philosophy of Education.

A directed reading course as well as directed research courses with a faculty member in Education is also required. Students in the program should enroll in the Undergraduate Honors Seminar, 199A.B.C during their senior year.

Near the end of Spring Quarter, successful candidates for honors orally present brief reports of their work and findings at a mini-conference. All honors students in Education are expected to attend this conference.

COTERMINAL DEGREE PROGRAM

The School of Education admits a small number of students from undergraduate departments within the University into a coterminal A.B. and A.M. program. Not all of the four area committees offer coterminal degrees. Students in such a program receive the bachelor’s degree in their undergraduate major and the master’s degree in Education. Approval of the student’s undergraduate department and of the School of Education is required. Undergraduates may apply when they complete 105 units, but no later than the end of the 11th quarter of undergraduate work. Students study for both the bachelor’s and master’s degrees simultaneously and must complete a total of 15 full-tuition quarters or three full-tuition quarters after completing 180 units toward the undergraduate degree. The number of units required for the A.M. degree depends on the
GRADUATE PROGRAMS

Several advanced degree programs are offered by the School of Education and are described below. Requirements vary somewhat across programs. Both University and School of Education requirements must be met for each degree. The University requirements are detailed in the “Graduate Degrees” section of this bulletin. Students are urged to read this section carefully, noting residency, tuition, and registration requirements. A student who wishes to enroll for graduate work in the School of Education must be qualified and admitted to graduate standing by one of the school’s area committees.

Complete information about admissions procedures and requirements is available by writing Stanford University Graduate Admissions, Old Union, Room 137, Stanford, CA 94305-3005 or at http://www.stanford.edu/dept/SUSE/. The admissions packet includes the publication School of Education Guide to Graduate Studies, which outlines degrees, programs, admission and graduation requirements, and research interests of the faculty. All applicants must submit scores from the Graduate Record Examination General Test (verbal, quantitative, and analytical areas); TOEFL scores are also required from those whose first language is not English.

MASTER OF ARTS

The A.M. degree is conferred by the University upon recommendation of the faculty of the School of Education and the University Committee on Graduate Studies. The University residency requirement is three full-tuition quarters of registration as a graduate student at Stanford. The minimum unit requirement is 36 quarter units earned at Stanford as a graduate student. Some programs require as many as 45 units. At least 12 units must be taken for a grade point average (GPA) of “B” or better, and a minimum of 18 units must be taken in the School of Education. Master’s students should obtain detailed program requirements from the master’s coordinator, located in Academic Services in the School of Education. No thesis is required to earn a master’s degree; however some programs require a final project, paper, or monograph. Additional detailed information regarding entrance and degree requirements is available at http://www.stanford.edu/dept/SUSE/ and in the School of Education Guide to Graduate Studies. Upon admission, each student is assigned a faculty adviser from the appropriate area committee to begin early planning of a coherent program.

Master of Arts degrees are offered for the following specializations (the sponsoring area committee and concentration is listed in parenthesis):

- Art Education (C&TE)
- Bilingual Education (SSPEP-LLP)
- Dance Education (C&TE)
- English as a Second/Foreign Language (SSPEP-LLP)
- English Education (C&TE)
- Evaluation (SSPEP-APA)
- General Curriculum Studies (C&TE)
- International Comparative Education (SSPEP-ICE)
- International Educational Administration and Policy Analysis (SSPEP-ICE)
- Joint Program with Graduate School of Business (SSPEP-APA)
- Learning Design and Technology (Cross-Area)
- Mathematics Education (C&TE)
- Policy Analysis (SSPEP-APA)
- Prospective Principals Program (SSPEP-APA)
- Science Education (C&TE)
- Social Sciences in Education—Gender Studies (SSPEP-SSE)
- Social Sciences in Education—Interdisciplinary (SSPEP-SSE)
- Teacher Education (C&TE)

In addition, an A.M. degree with a teaching or administrative credential is offered in Stanford Teacher Education Program (Cross-Area—STEP).

STANFORD TEACHER EDUCATION PROGRAM (STEP)

STEP offers a Master of Arts program to prepare humanities and sciences college graduates for careers as secondary teachers of English, languages (French, German, Japanese, Spanish), mathematics, science (biology, chemistry, physics), and social studies. To be successful in classrooms with diverse students, STEP helps participants become more aware of their values, more flexible in their teaching and learning styles, and more knowledgeable in their subject matter.

The 12-month STEP year begins in June with a summer quarter of intensive academic preparation and experience in the Stanford Summer Teaching School. During the academic year, students take courses in professional education and academic subjects; they also teach part-time in middle or high schools for the entire public school year. The master’s degree and Single Subject (secondary) Teaching Credential require 45 quarter units, taken during four quarters of continuous residency. Applicants are required to pass the California Basic Educational Test (CBEST), and must demonstrate subject matter competence in one of two ways: (1) by passing the Praxis II and SSAT subject assessment tests in their field, or (2) by completing a California state-approved subject matter preparation program. For further information, contact STEP Academic Services at (650) 723-2110.

STEP also includes the optional California Cultural Language and Academic Development (CLAD) emphasis program. CLAD provides enhanced opportunities for candidates to learn about and work with linguistically and ethnically diverse students. The program focuses on theories of language acquisition, English as a second language methodologies, and development of cross-cultural understanding and appreciation of multicultural diversity. Further information regarding admission requirements, course work, and credential requirements is available at http://www.stanford.edu/dept/SUSE/ and in the School of Education Guide to Graduate Studies.

PROSPECTIVE PRINCIPALS PROGRAM (PPP)

The Prospective Principals Program at Stanford offers the A.M. degree with a specialization in Administration and Policy Analysis, which can be combined with the Preliminary Administrative Services Credential. It enables prospective principals to become leaders and to manage ideas, resources, and themselves to achieve worthwhile educational results for a diverse student population. This is accomplished through three consecutive summers of full-time study and is therefore available to persons working in a school system during the academic year. Teaching experience is a prerequisite for admission to this program. This master’s degree requires 45 quarter units. In order to qualify for the credential, three additional quarter units for a total of 48 quarter units, including internship units, are necessary. Additional information regarding admission requirements, course work, and credential requirements is available in the School of Education Guide to Graduate Studies.

MASTER OF ARTS IN TEACHING (M.A.T.)

The degree of Master of Arts in Teaching (M.A.T.) is reserved for experienced teachers or individuals who have completed a program of teacher preparation; it is offered in conjunction with a variety of academic departments in the School of Humanities and Sciences. Further details are available from the A.M. programs office in the School of Education.

DOCTORAL DEGREES

The School of Education offers two types of doctoral degrees. The Doctor of Philosophy (Ph.D.) degree is offered by all program area committees. The Doctor of Education (Ed.D.) degree is offered only in the concentrations of Policy Analysis and Higher Education Administration within the area of SSPEP. Both degrees are conferred by the University upon recommendation by the faculty of the School of Education and the University Committee on Graduate Studies. University residency requirements (nine full-tuition quarters or the equivalent), amount of trans-
fer credit applicable (no more than three full quarters), and the timetable for the stages of progress are the same for both degrees. Additionally, the School of Education unit requirement for both degrees is a minimum of 72 units of course work and research completed at Stanford beyond the baccalaureate degree. (If more than 72 are needed to meet particular Program Area requirements, students may transfer up to 36 units of graduate course work taken within the past seven years.)

Students should note carefully that admission to graduate standing by the University to work toward a doctoral degree does not in itself constitute admission to candidacy for the degree. Students must qualify and apply for candidacy by the end of their second year of study and should obtain information about procedures and requirements during their first year.

The two doctoral degrees offered in the School of Education differ in emphasis, purpose, and the intended careers of those who pursue them. They are equivalent with respect to the amount of time required and the course work taken within the past seven years.

Program Area requirements, students may transfer up to 36 units of graduate course work within the past seven years.

The two doctoral degrees offered in the School of Education differ in emphasis, purpose, and the intended careers of those who pursue them. They are equivalent with respect to the amount of time required and the rigor and quality of work demanded. In the Ph.D. degree program, there is greater emphasis on theory and research; the emphasis in the Ed.D. program is on informed and critical applications of existing knowledge to educational practice.

The Ph.D. degree is designed for students who are preparing for (1) research work in public school systems or specialized institutions; (2) teaching roles in education in colleges or universities, and research connected with such teaching; or (3) other careers in educational scholarship and research.

The Ed.D. degree is a professional educational degree intended to meet the needs of (1) those who wish a thorough and comprehensive professional understanding of and competence in dealing with educational problems met by administrators, supervisors, and curriculum specialists; and (2) those who wish a scholarly preparation for teaching education in colleges or universities.

Ph.D. students must complete a minor in another discipline taught outside the school, or hold an acceptable master's degree outside the field of education, or complete an approved distributed minor that combines relevant advanced work taken in several disciplines. A minor is not required for the Ed.D.

Upon admission, an adviser assigned from the admitting area committee works with the student to establish an appropriate and individualized course of study, a relevant minor, and project research plans. Other faculty members may also be consulted in this process. Details about the varying administrative and academic requirements for each area committee and the School of Education, along with general time frame expectations, are given at http://www.stanford.edu/dept/SUSE/ and in the School of Education Guide to Graduate Studies. Complete guidelines may be obtained from the specific area committees.

The following doctoral specializations (with their sponsoring area and concentration) are offered:

**Social Sciences in Education—Interdisciplinary (SSPEP-SSE)**

**Social Studies Education (C&TE)**

**Sociology of Education (SSPEP-SSE)**

**Symbolic Systems in Education (Cross-Area)**

**Teacher Education (C&TE)**

**Ph.D. MINOR FOR STUDENTS OUTSIDE EDUCATION**

Candidates for the Ph.D. degree in other departments or schools of the University may elect to minor in Education. Requirements include a minimum of 30 quarter units of graduate course work in Education and a clear field of concentration. Students choosing to minor in education should meet with the relevant area chair to determine a suitable course of study early in their program.

**COURSES**

**OTHER DIVISIONS OF THE UNIVERSITY**

Teachers, administrators, researchers, and specialists are expected to have substantial knowledge of a variety of academic fields outside the areas encompassed by professional education. Graduate students in the School of Education are, therefore, urged to consider the courses offered in other divisions of the University in planning their programs.

The numbering of courses in the School of Education identifies approximately the course level and the audience to which a given course is offered:

**Below 100-level**—For undergraduates

**100-level**—Primarily for undergraduates (graduates may enroll)

**200- and 300-level**—For A.M. and first- and second-year doctoral students

**400-level**—Research seminars or similar courses primarily for third-year doctoral students and beyond

Course descriptions are in numerical order and indexed by professional program areas.

An "X" suffix denotes a new experimental course. With faculty approval, after being taught twice, it can be offered as a regular course in the School of Education.

An "S" suffix denotes a special course, given only once and usually taught by visiting faculty.

**LEARNING SKILLS**

The following courses are offered by the Undergraduate Advising Center (UAC). The UAC provides and coordinates services to help student and adviser work together toward the establishment and accomplishment of the student's academic and personal goals. For detailed description of services and advising resources, see http://uac-server.stanford.edu/.

The UAC is on the first floor of Sweet Hall, and is open Monday through Friday 9:00 a.m. to 12:00 noon and 1:00 to 5:00 p.m., telephone: (650) 723-2426.

**50. Accelerated Learning**—Interactive, providing various methods for approaching difficult concepts which cannot be comprehended even after multiple efforts. The techniques for active learning, making it possible to accelerate the process of conquering difficult concepts while also achieving higher levels of understanding. Learn how to: identify your individual style and channels, practice locating areas of confusion, and formulate workable, individualized approaches.

1 unit, Aut, Spr (Townsend)

**51. Self Coaching: Learning Rapidly from Experience**—Self-coaching offers students a simple model for learning through experience. It emphasizes the value of awareness, observation, experimentation, and evaluation as a self-reinforcing method for development, growth, and change.

1 unit, Spr (Matthies, Worline)

**52. Practices in Critical Thinking**—Critical thinking is one of the most important skill sets we need to be successful in college and in the
workplace across subject areas. It encompasses knowing how to find assumptions, recognize ambiguity, evaluate arguments, and judge the credibility of sources of expert opinion. To think critically in one’s daily life and studies requires being comfortable with questions instead of answers, complexity instead of simplicity, uncertainty instead of certainty. These abilities are developed through practical exercises based on contemporary issues and through practice with texts from a variety of disciplines. Emphasis is on the value of developing a questioning mind and the importance of differentiating between academic and intellectual motivation.

3 units, Sum (Townsend)

53. Working Smarter through Precision Questioning—When life-long reading or classroom work is driven by questions, concentration is better, recall is more complete, motivation improves. Understanding the basic categories of questions and their interrelationships enables us to be more precise, better organized, and more critical. In-class exercises provide incrementally complex question ladders and increase skills in delivering questions and answers.

2 units, Win (Townsend)

54. Reading Faster—Coping with information overload requires speed reading as it traditionally has been defined, and the ability to overview, skim, extract, browse, and navigate through hypertext. To decide what is worth reading, quick and reliable judgments must be made about relevance and credibility. Academic texts, technical manuals, major newspapers, etc.

1 unit, Aut (Townsend)

55. Think On Your Feet—Learn how to be effective in small group discussions; quickly grasp the point being made, the supporting arguments, and the nature of the responses to arguments on the other side of the question. Increase your capacity for effective teamwork through in-depth, collaborative thinking exercises. Practice presenting your ideas to your peers and colleagues so that you are prepared to take advantage of Stanford’s numerous small group courses.

2 units, Win (Townsend)

58. Breakthrough Learning—Drawing on research in cognitive science, human motivation, and developmental psychology, the focus is on a key meta-skill: learning how to learn. Strategies help students construct new learning practices by becoming deeply aware of one’s own learning processes. Topics: the art of unlearning, language structure and change; learning styles and the intelligence trap; meta-cognition; harnessing paradox and intuition; communities of inquiry.

1 unit, Sum (Milojkovic)

EDUCATION

95S. Issues in Leadership—Priority given to undergraduates and master’s degree students. Basic theories and concepts in leadership and group process. Topics: identification of core values, building shared vision, group problem solving, leadership styles, decision-making, power and influence, conflict management, ethical dilemmas, community building, and personal policy development. Interactive and experiential, and for students currently in leadership positions in the University or who have jobs or volunteer roles where they are working in groups. Enrollment limited to 24. (SSPEP)

3-4 units, Win (Porteous)

105. American Education and Public Policy—(Meets with 215; same as History 158B.) Treats policy issues in education, drawing on history and political science. Who influences schooling and how? How have American schools responded to human diversity? What consequences does schooling have? What are the prospects for reform in public education? Lectures and small group discussions. (SSPEP/APA)

4 units (Kirst, Tyack) not given 1999-2000

106. Interactive Media in Education—Introduction to the use of interactive media for education and analyzes/criticizes them. Ideas are used to interpret/understand the experience of learning with interactive media. (CTE)

3-5 units, Sum (Walker)

107. Seminar: The Politics of International Cooperation in Education—For undergraduates and master’s students; see 306B.

3-4 units, Spr (Mundy)

109X. The Politics of Language Education in California Schools—Controversies surrounding language and educational policies pertaining to African Americans and English language learners are explored in the wake of legislation that was formulated to restrain curricula for language minority students throughout California. Interdisciplinary studies of language in schools and society are compared to legislation and educational policies within their historical and political contexts.

3-4 units, Win (Baugh)

120. Symbolic Systems Seminar: Problems in Intelligence, Information, and Learning—(Same as Symbolic Systems 200, Linguistics 137, Philosophy 200.) Interdisciplinary topics in cognitive science, (e.g., modularity, representation, reasoning, situated action, or creativity.) Prerequisites: Computer Science 109, Linguistics 120 or 130, Philosophy 80, Psychology 40, or consent of instructors.

3 units, Win (Greeno, Wasow)

130. Introduction to Counseling—The theories and techniques of counseling, emphasizing the clients’ individual and cultural differences, and construction of one’s own theory of the counseling process and outcome. Two psychotherapeutic theories, cognitive-behavioral and existential-humanistic, are supplemented with a third theory of each student’s choice. Experiential, problem-based focus on how to develop self-awareness and conceptual understandings of the counseling process in culturally diverse contexts. (PSE)

3 units, Win (Staff)

136. World, Societal, and Educational Change: Comparative Perspectives—See 306D. (SSPEP/ICE)

3-5 units, Aut (Ramirez)

137Q. Stanford Introductory Seminar: Conceptualizing Human Motivation—East and West—Preference to sophomores. What motivates behavior? This question is linked to one’s view of human nature and of the relationship between individuals and their social worlds. The multiple perspectives on human motivation, including Western psychological traditions and the contemplative spiritual psychologies of the East. Historical and cross-cultural approaches to understanding how different traditions treat motivation. Readings from personality, clinical, and developmental psychology, and from Eastern psycho-spiritual traditions such as Buddhism and yoga. How world views of human nature and development are related to theories of human motivation. Prerequisite: introductory psychology.

3 units, Win (Reesser)

138Q. Stanford Introductory Seminar: Educational Testing in American Society—Preference to sophomores. Tests are used for college admissions, program evaluation, and educational reform. In the classroom, grades are used to communicate about achievement, and sometimes to reward effort, improvement, or good behavior. Explanations for group and individual differences in test performance have been controversial this century, right up to current debates over affirmative action. The purposes and the logic of various testing programs, including classroom testing, admissions testing, and state and national testing programs. The meanings of reliability, validity, bias, and fairness in testing, developing the notion of validity argument as a conceptual tool for analyzing testing applications. Paper on some educational testing application.

3 units, Win (Haertel)
141. Race, Education and the Media—See 241. (SSPEP/APA)
   5 units, Spr (Carnoy, Stierer)

149. Theory and Issues in the Study of Bilingualism—(Same as Spanish 207.)
     For undergraduates; see 249.
     3-4 units (Valdés) not given 1999-2000

155. Development of Measuring Instruments—For students planning to
develop written or performance tests or questionnaires for research
and evaluation, and for teachers wishing to improve classroom examina-
tions. Planning tests, writing items, item tryout and criticism, qualities
desired in tests, and interview techniques. Lectures, case studies, and
practical exercises. (PSE)
   3 units (Haertel) not given 1999-2000

156X. Understanding Racial and Ethnic Identity—African American,
     Native American, Mexican American, and Asian American racial
     and ethnic identity development is explored to better understand
     the influence of social/political and psychological forces in shaping
     the experience of people of color in the U.S. Issues: the relative salience
     of race in relationship to other social identity variables, including gender,
     class, occupational, generational, and regional identifications. Bi-
     and multiracial identity status, and types of white racial consciousness.
     5 units (LaFromboise) not given 1999-2000

158. Children's Citizenship: Justice across Generations—(Enroll in
     Political Science 158R.)
     5 units, Aut (Reich)

160X. Introduction to Statistical Methods in Education—Master's
     students register for 266X; doctoral students in SSPEP/LLP register for
     216. Introduction to quantitative methods in educational research for
     doctoral students with little or no prior statistics. Organization of data,
     descriptive statistics, elementary methods of inference, hypothesis test-
     ing, and confidence intervals. Computer package used. Students cannot
     also receive credit for Psychology 60, or for Statistics 60 or 160. (All
     Areas)
     4 units, Aut (Hakuta)

161. Statistical Analysis in Educational Research—Primarily for
     doctoral students. Basic statistical methods for experimental and non-
     experimental educational research. Topics: analysis of variance methods
     up to factorial designs; regression methods up to multiple regression;
     basic methods for analysis of categorical data. Integrated with the use of
     statistical computer packages. See http://www.stanford.edu/class/ed 161/
     Prerequisite: 160 or consent of instructor. (All Areas)
     3 units, Win (Rogosa)

165X. History of Higher Education in the U.S.—(Same as 265X.)
     Introduction to historical perspectives on the development of higher
     education. Readings/discussions address the major periods of evolution,
     emphasizing the mid-19th century. Premise: insights into contemporary
     higher education can be obtained by examining its antecedents, particu-
     larly issues of governance, mission, access, curriculum, and the changing
     organization of colleges and universities. (SSPEP/APA)
     3-5 units (Staff) not given 1999-2000

166X. Teaching Reading, Writing, and the Language Arts—For
     STEP students. Focuses on application and psychological principles
     in understanding, assessing, and supporting the reading and writing pro-
     cesses, and the acquisition of literacy, especially in secondary school
     settings. Key concepts include language acquisition, perception, congnit-
     ion, motivation, and individual differences. (STEP)
     3 units, Sum (Rickford)

167X. Educating for Equity and Democracy—Introduction to the
     theories and practices of equity and democracy in education. How to
     think about teaching and schooling in new ways; the individual moral
     and political reasons for becoming a teacher. (STEP)
     3 units, Sum (Moffett)

170. Gender and Education—The concept of gender in educational
     contexts, focusing on formal schooling from elementary to graduate
     education, primarily within the U.S. Lecture/discussion and group activity
     formats consider the relationship between gender and education from
     social science perspectives. The advantages and disadvantages of differ-
     ent kinds of research about gender and education. Data is ethnographic,
     experimental, historical, statistical, and narrative. What gender differ-
     ences exist, what difference gender makes in various educational set-
     tings. (SSPEP)
     4 units, Aut (Christopher)

171X. Peer Health Education—Preference to students who make a
     commitment to serving as a Peer Health Educator. Instruction in peer
     health education leading to a Stanford University Peer Health Education
     certificate. Topics: health promotion program planning, theory and
     practice of behavior change, and an exploration of contemporary college
     Prerequisite: consent of instructor. (PSE)
     3-4 units, Spr (Pertofsky)

177X. Education of Immigrants in Cities—(Same as 277X.) Historical
     and contemporary approaches to educating immigrant students. Case
     study approach focuses on urban centers to demonstrate how stressed
     urban educational agencies serve immigrants and native-born U.S.
     students when confronted with overcrowded classrooms, controversy
     over curriculum, current school reform movements and government
     policies regarding equal educational opportunity. (SSPEP/LLP)
     4 units (Padilla) not given 1999-2000

179X. Urban Youth and their Institutions: Research and Practice—
     (Same as 279X.) The determinants and consequences of urban life for
     youth, emphasizing disciplinary and methodological approaches to the
     study of policies and practices and the growing gap between the perspec-
     tives of state and local organizations and those of youth and their
     communities. The diversity of urban youth experiences with respect to
     ethnicity, gender, and immigration histories: case studies illustrate civic-
     level and grassroots institutions, their structures, networks, and philos-
     ophies; historical and contemporary examination of diverse realities of
     urban youth for policymakers, educators, and researchers. Enrollment
     limited. Prerequisite: consent of instructor. (SSPEP/APA)
     3-4 units, Aut (McLaughlin)

180. Directed Reading in Education—For undergraduates and mas-
     ter's degree students. (All Areas)
     1-15 units, any quarter (Staff)

181X. Mind, Body, and Spirit: Spiritual Health through the Life
     Span—(Same as 281X.) The spiritual components of daily living and
     optimal health are commonly neglected in prevailing educational, med-
     ical, and psychological paradigms. Introduction to the spiritual features
     of everyday life, primarily from a psychosocial perspective with a focus
     on health and well being. Readings and problem-based learning tasks in
     solving spiritually-related problems. Introduction to elementary spiritual
     practices. Topics applicable in one's personal and professional life.
     Enrollment limited. Prerequisite: consent of instructor. (PSE)
     3 units (Thoresen) not given 1999-2000

188B. Bilingual Education—(Same as 388B.) For undergraduates; see
     388. (SSPEP, LLP, STEP).
     3 units, Win (Hakuta)
190. Directed Research in Education—For undergraduates and master's degree students. (All Areas)
1-15 units, any quarter (Staff)

192A. Peer Tutor Training—Readings/discussions of videotapes, and individual and group projects. Topics: problem-solving, study skills, effective listening and feedback, cross-cultural sensitivity, and teaching with questions. Short internship required for new tutors.
1 unit, Aut, Win (Freeman)

192B. Peer Tutoring in Writing—Writing tutors become familiar with the written work of fellow students and learn how to comment on it helpfully. Tutoring skills are developed through listening to experienced tutors, reflecting on our own writing processes, considering sample writing projects, role-playing tutoring situations, and discussing reading, assignments and projects.
2 units, Spr (Freeman)

193A. Peer Counseling: Bridge Community—Instruction in peer counseling. Topics: verbal and non-verbal skills, the use of open and closed questions, paraphrasing, working with feelings, summarization, and integration. Lectures, individual training, group exercises, role-play practice with optional video feedback. Sections on the relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in a variety of settings in the University. (PSE)
2 units, Aut, Win, Spr (Moreno)

193B. Peer Counseling: Chicano Community—Instruction in basic counseling. Topics: verbal and non-verbal attending and communication skills, the use of open and closed questions, working with feelings, summarization and integration. Counseling issues that may be salient when working with Chicanos, including the significance and process of Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and the experience of Chicano students in university settings. Lectures, individual training, group exercises, discussion, role-play, and videotape practice. (PSE)
2 units, Aut (Martinez)

193C. Peer Counseling: The African-American Community—Instruction in peer counseling with Blacks. Topics: the concept of culture, Black cultural attributes and their effect on Blacks' reactions to accepting counseling, verbal and non-verbal attending, the use of open and closed questions, working with feelings, summarization, and integration. Geared toward counseling with Blacks; methods of instruction include reading assignments, lectures, guest speakers, group discussion, role-play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student may choose.
(PSE)
2 units, Aut (Edwards, Reede-Hoskins)

193F. Peer Counseling: The Asian American Community—Topics: the Asian family structure, concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on the development of an appreciation and empathic understanding of Asians in America. Lectures, readings, discussion, and group exercises. (PSE)
2 units, Win (Brown)

193N. Peer Counseling in the Native American Community—Instruction in basic counseling techniques. Topics: verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. Emphasizes how basic elements of counseling apply to Native Americans, including client, counselor, and situational variables in counseling, the significance of non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles and Native Americans, and the experience of Native American Indian students in university settings. Lectures, individual skill development, group exercises, and role practice. (PSE)
2 units, Win (Simms, Martinez)

193P. Peer Counseling Practicum—For those who continue to study counseling methods while counseling students.
1-5 units, Aut, Win, Spr (Staff)

194. Leadership in Academic Advising—Focus is on the skills needed to be an active leader in the academic advising process through the role of Head Advising Associate, taught simultaneously with the HAA selection process through the Undergraduate Advising Center. Students develop the advising process as it applies to the advising process for freshmen and sophomore students. Workshops, focus groups, guest speakers, role playing, and case studies develop listening and counseling skills, ask critical questions, and learn about group facilitation. Corequisite: students must be applying for the position of Head Advising Associate for 2000-01.
2 units, Aut (Freeman)

197. Education and the Status of Women: Comparative Perspective—Theories and perspectives from the social sciences relevant to an understanding of the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of women and its uses to evaluate knowledge claims from varying perspectives. (SSPEP) GER:4c (DR:†)
4-5 units, Win (Ramirez)

199A,B,C. Undergraduate Honors Seminar—Required for all juniors and seniors in the honors program in the School of Education. Supports students' actual involvement and apprenticeships in educational research. Participants are expected to share ongoing work on their honors thesis. Prerequisite: consent of instructor. (All Areas)
1 unit, Aut, Win, Spr (Ramirez)

200. The Work of Art and the Creation of Mind—Collaboration between the Art, Dance, Drama, and Music programs, and the School of Education examines the relationship between the work of art and the creation of mind, i.e., the work of art as a task of making something and as a form that has been made. The ways a conception of art develops and refines the mind. Discussion, readings, and observation of artists at work. The relationship between forms of art and forms of thought. What does either the perception or creation of art in any of its forms do to how we think and know? (CTE)
4 units, Win (Eisner, Chagoya, Rehm, Ross, Sano)

201. History of Education in the United States—(Same as History 158.) Analysis of selected turning points in education in relation to religion, political socialization, race relations, gender, immigration, and urbanization. Limited enrollment. (SSPEP)
3 units, Aut (Tyack, Williamson)

201A. History of African American Education through 1940—A survey of pivotal points in African American educational history, including literacy attempts during slavery, the establishment of historically Black colleges and universities, the debate between liberal and vocational education, and Black student rebellions on campuses. (SSPEP)
3 units, Win (Williamson)

201B. Education for Liberation—Focusing on African Americans, investigates how education has been employed to advance group self-determination and autonomy from the 1954 Brown decision to contemporary Afro-centric/African-centered educational initiatives. (SSPEP)
3 units, Spr (Williamson)
202. Introduction to Comparative and International Education—Introduction to the field of comparative and international education. Contemporary theoretical debates about educational change and development, and the international dimension of several contemporary issues in education. Emphasis is on the development of students' abilities to engage in cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)
4-5 units, Aut (Carnoy)

203X. Education and Inequality in American Culture: Discussion—Overview of the cultural production of inequalities in school performance by class, race, ethnicity, gender, and individual style. Students exploring the same themes in small group discussions enroll in 220Y for additional 2 units.
2 units, Aut (McDermott)

203Y. Discussion: Education and Inequality in American Culture—Overview of the cultural production of inequalities in school performance by class, race, ethnicity, gender, and individual style. Small group discussions of competition and unequal access in notable American texts. Corequisite: 203X.
2 units, Aut (McDermott)

204. Introduction to Philosophy of Education—Introduces current approaches and techniques in the philosophy of education; material has been selected for its general relevance to students of education. Feminist and radical theories of education. Introductory philosophical material is presented in the context of educational issues. (SSPEP)
4 units, Aut (Callan)

205. Group Counseling—Develops the ability to identify and understand the interpersonal processes in a small group. First-hand experiences simulate group processes that can be examined and conceptualized. Prerequisite: consent of instructor.
1-4 units (Staff) not given 1999-2000

206A. Applied Research Methods in International and Comparative Education I: Introduction—Required for all A.M. students in ICE and IEAPA, others by consent of instructor. Orientation to the A.M. program and research project, exploration of resources for study and research. (SSPEP/ICE)
1 unit, Aut (Rhoten)

206B. Applied Research Methods in International and Comparative Education II: The Master's Monograph Proposal—Required for all A.M. students in ICE and IEAPA; others by consent of instructor. Development of research skills through discussion of theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the A.M. monograph. (SSPEP/ICE)
3-5 units, Win (Rhoten)

206C. Applied Research Methods in International and Comparative Education III: Master's Monograph Workshop—The conclusion of the four-quarter A.M. program in ICE and IEAPA, required of all A.M. students. In-depth reviews of students' research in preparation for the completion of their master's monograph. (SSPEP/ICE)
3-5 units, Sum (Rhoten)

208B. Curriculum Construction—The practice of curriculum improvement including planning, policy making, development, implementation, and evaluation. Extensive, in-depth treatment of methods and approaches to curriculum improvement and their strengths and limitations. (CTE)
3 units, Spr (Staff)

208C. Introduction to Curriculum—Restricted to students enrolled in the Prospective Principals Program. Curriculum studies for those concerned primarily with school administration. Topics: curriculum theory, the relation of theory and practice, schools and classrooms as contexts for curriculum, curricular policy mandates, leadership in school curricular issues, curriculum development, curriculum implementation. (CTE)
3 units, Sum (Staff)

209X. The Politics of Language Education in California Schools—(Same as 109X.)
3-4 units, Win (Baugh)

210. Problems in Sociology of Education—(Meets with 310; same as Sociology 223/230.) Introduction to sociological approaches to educational phenomena. Topics: school organization and environment, the relationship of education to adult roles, the impact of social class and ethnicity on classroom learning, and the social structure of the classroom. Read/evaluate social sciences research. Short written assignments and individual feedback. (SSPEP)
4 units, Spr (Ramirez)

211. Master's Seminar in Social Sciences in Education—Limited to master's students in SSE. Directed, hands-on forum for SSE students to critically examine the process of developing and shaping a research program, integrating it with academic and field experiences, and building relationships beyond the program. Students conceptualize their projects and focus on researchable topics: effective revising and editing, job searches, working with your adviser, "what next?", or a celebration of our achievements so far. (SSPEP)
1 unit, Aut, Win, Spr (Christopher)

213. Aesthetic Foundations of Education—What role might the arts play in education? Do the arts contribute to the development of cognitive skills? Do they help humans understand the world in which they live? Are aesthetic considerations central in the way we think about the aims of education? Do they enhance teaching and school organization? (CTE)
4 units (Eisner) not given 1999-2000

214. Popper, Kuhn, and Lakatos—(Same as Philosophy 156.) Popper, Kuhn, and Lakatos are 20th-century philosophers of science who have raised fundamental issues dealing with the nature of scientific progress: the rationality of change of scientific belief: science vs. non-science; the role of induction in science, truth, or verisimilitude as regulative ideals. Their impact in the social sciences and applied areas such as educational research. (SSPEP)
3 units, Spr (Phillips)

215. American Education and Public Policy—(Same as History 158B.) For graduate students. See 105. (SSPEP/APA)
4 units (Kirst, Tyack) not given 1999-2000

216. Survey of Educational Research Methods—For first-year SSPEP/LLP doctoral students and others. The basics of conceptualization, design, instrumentation, and interpretation of empirical research using quantitative and qualitative approaches. Designed around individual student projects. (SSPEP/LLP, CTE)
2 units, Win, Spr (Padilla)

219. Artistic Development of the Child—How can children's and adolescents' development in the arts be described? What roles do the symbolic transformation of experience play in the creation of those images we regard as art? What can teachers do to promote the development of artistic thinking? These and other questions are examined through the study of theory and research conducted within the social sciences. (CTE)
4 units, Aut (Eisner)

220A,B,C,D,Y. The Social Sciences and Educational Analysis—Required of students in APA and open to all. Economics, political science, sociology, and history, and their applications to education in the U.S.
220A. The Social Sciences and Educational Analysis: Introduction to the Economics of Education—Overview of the relationship
between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in micro-economics enroll in 220Y for one additional unit of credit. (SSPEP/APA)

220B. Introduction to the Politics of Educational Analysis—The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform are emphasized. Prerequisite: Political Science or Public Policy major, or student in SSPEP. (SSPEP/APA)

4 units, Win (Loeb)

220C. Education and Society—(Same as Sociology 130.) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. Social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling. (SSPEP/APA) GER:3b (DR:9)

4-5 units, Aut (Staff)

220D. History of School Reform: Origins, Policies, Outcomes, and Explanations—Restricted to graduate students and undergraduates planning to work on honors theses in education or in directly related areas. Focus is on school reform in the U.S. during the last 50 years. Reform and practice in other nations for comparative purposes. Topics: theories of reform; school choice; academic standards and systemic reform; civil rights issues including racial and social integration, and the education of limited English speaking students; governance approaches; and the implementation of reform. Why and how some school reforms persist, why some fail or fade, and why some recur periodically. Students investigate a particular reform: its sources, policy development and implementation, and the consequences, intended and unintended, using one or more of the analytic frameworks presented. (SSPEP/APA)

4 units, Spr (Kirst)

220Y. Introduction to the Economics of Education: Economics Section—Introduction to micro-economics for those taking 220A who have not had micro-economics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)

1-2 units, Win (Loeb)

221A. Issues in Policy Analysis—Major concepts associated with the development, enactment, and execution of social policy. Issues of policy implementation, agenda setting and problem formulation, coalition politics, and intergovernmental relations are examined through case materials and supplementary readings. Objective: identify and understand the factors that affect the ways in which analysts and policymakers learn about the policy system and the ways in which they can influence it. Enrollment limited. Prerequisite: consent of instructor. (SSPEP/APA)

4-5 units, Win (McLaughlin, Darling-Hammond)

221B. Issues in Policy Analysis—Provides doctoral students an opportunity to analyze the macro- and micro-dimensions of policy issues in education. Students use their own research interests to explore the analytical, empirical, and methodological aspects of these two different perspectives on policy and action.

3 units (McLaughlin) not given 1999-2000

222. Resource Allocation in Education—Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions. (SSPEP/APA)

4-5 units, Spr (Loeb)

223. Effective Schools: Research, Policy, and Practice—Recent studies of schools that exceed expectations in producing desired results. Research methodologies, findings of studies, and efforts to implement results. Components of "good" schools analyzed: effective teaching, principal leadership, organizational processes, parent involvement, cultures in schools, the role of the superintendent. Required project studies a school and determines "goodness." (SSPEP/APA; CTE)

3-4 units (Cuban) not given 1999-2000

224. Information Technology in the Classroom—STEP teachers have priority. Use of information technology (computers, interactive video, telecommunications) in secondary school classroom teaching. Basic computer operations and terminology; challenges of planning and teaching with technology; judging the merits of products for educational uses; survey of the types of uses made of technology in schools; and economic, social, and ethical issues, emphasizing equity. Meets fifth-year teacher credential requirement. (CTE, STEP)

3 units, Win (Walker)

226. Classroom Assessment—Research on classroom testing; creating and selecting classroom tests; instructional uses of tests, performance tests, classroom observations, linking testing and instruction, using standardized test results. (PSE)

3 units (Haertel) not given 1999-2000

228. Research on Reading and Reading Acquisition—For doctoral and master's students in SSPEP/LLP, PSE, CTE, and SSPEP. Focus is on the application of psychological principles in understanding the reading and writing process and the acquisition of literacy in school and non-school settings. Key concepts: psycholinguistics, perception and cognition, motivation, and individual differences. (SSPEP/LLP)

3-4 units (Kamil) not given 1999-2000

229A,B,C,D. Seminar in Learning Design and Technology—Four-quarter core of the LDT master's program. Topics: learning, cognition, and development; design principles for technological learning environments; technological literacy and skills; research methods and evaluation; curriculum and content; and organization structure and operation. Students navigate one or more design sequences in learning environments rooted in a practical problem. Topics in learning, design, and technology are examined from a theoretical and a practical application perspective. Readings and hands-on development are a team-collaborative effort. (All Areas)

229A. 3 units, Sum (Walker)

229B. 3 units, Aut (Staff)

229C. 3 units, Win (Kamil)

229D. 3 units, Spr (Barron, Greeno)

230. Ethnographic and Empowerment—The role of ethnography in addressing contemporary and socially significant issues. The value of ethnographic evaluation in educational settings. Successful strategies to effectively communicate qualitative findings with powerful policymaking bodies to improve our world, including testifying on the hill and sharing findings through the media. The role of ethnographic and empowerment evaluation in contributing to organizational transformation. (SSPEP)

5 units, Spr (Fetterman)

232A. Teaching and Teacher Education—First of three core courses in CTE. Theory and the practice of teaching, past and present (K-12 and higher education). (CTE)

4 units, Win (Staff)

232B. Introduction to Curriculum—Second of CTE core. What should American schools teach? How should school programs be organized? How can schools determine whether the goals they have formulated have been achieved? What kind of school organization helps teachers improve their teaching practices? Students secure a historical and contemporary
238B. Counseling and Health Psychology: Supervised Applications—For first-year counseling psychology students. Integration of counseling practice with research findings. Continuing review of training tapes, role-playing, and supervision of counseling experiences. Prerequisite: consent of instructor. (PSE)
3 units, Win (Thoresen)

238C. Counseling and Health Psychology: Supervised Applications—For first-year counseling psychology students. Advanced study of counseling theories, techniques, and assessment methods. Emphasis is on the integration of counseling practice within a research framework. Continuing review of training tapes, role-playing, and supervision of counseling experiences. Prerequisite: consent of instructor. (PSE)
3 units, Spr (Krumholz)

239. Contemporary Social Issues in Child and Adolescent Development—Focuses on critical social and developmental issues that affect children and adolescents. Topics: divorce and single parenting, child care, poverty, sexuality, and mass media, emphasizing the impact of these conditions on normal development, education, and school-related social and cognitive performance. (PSE)
4 units, Spr (Padilla)

240. Adolescent Development and Learning—Two presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands and structure of specific curricula; and that teachers can promote learning and motivation by mediating between the characteristics of students and of the curriculum and the wider social context of the classroom. The strategies and issues involved in this mediational process with secondary students. Prerequisite: STEP student or consent of instructor. (STEP)
3 units, Aut (Roeser, Darling-Hammond, Padilla)

241. Race, Education, and the Media—(Same as 141.) In-depth overview of the critical issues and policies that impact race relations and education in our society. Lectures, readings, discussions on the debates on affirmative action, merit, racial inequality, improving educational quality, and how these issues are shaped by a rapidly changing media industry.
5 units, Spr (Carnoy, Stierer)

242. First-Year Proseminar in Language, Literacy, and Culture—For master’s and first-year doctoral students in SSPEP/LLP. Introduces the basic concepts and pragmatics of the field, providing opportunities to meet faculty, respond to critical readings, and explore professional matters. (SSPEP/LLP)
4 units (Hakuta, Kamil, Valdés) not given 1999-2000

243. Research in Writing and Writing Instruction—Tradition and change in writing research, emphasizing theoretical and pedagogical implications. Topics: formalist, cognitive, and social-contextual approaches; writing and learning; writing/reading connections; writing/speaking connections; the composing process; writing pedagogy; individual research projects. (SSPEP/LLP, CTE)
4 units, not given 1999-2000

245X. Seminar in Teacher Education—For doctoral students interested in preparing to become teacher educators or who have interests in policy issues related to teacher education. Directed reading, discussion, and analysis of teacher education program models; new approaches to support teacher learning in the pre-service and in-service contexts; and changes in policies relevant to teacher education. The theoretical frames include adult learning theory, organizational supports for professional learning, and issues of institutional change.
3 units, Win (Darling-Hammond)

246A,B,C,D. Secondary School Teaching Practicum—Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with
accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP)

246A. 2 units, Sum (Carter)
246B. 1-4 units, Aut (Lotan)
246C. 7-10 units, Win (Lotan)
246D. 3 units, Spr (Lotan)

247. Moral Education—Issues in moral theory and education, including consideration of the Kohlberg-Gilligan debate, character education, and contemporary issues on values and religious education. (SSPEP)
3 units, Win (Damon)

248. Theory and Issues in Literacy—Theoretical issues in writing and literacy, and implications for education. Connections between literacy, thinking, and learning, emphasizing the kinds and definitions of literacy, oral and written language, social construction of literacy, historical perspectives, and the functions of reading and writing. (SSPEP/LLP)
4 units (Staff) not given 1999-2000

249. Theory and Issues in the Study of Bilingualism—For graduate students. Key issues in the study of bilingualism from a sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, the description and measurement of bilingualism, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP/LLP)
3-4 units (Valdés) not given 1999-2000

250B. Statistical Analysis in Educational Research: Analysis of Variance—Sequence, primarily for doctoral students. Analysis of variance models are among the most widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA, factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models), analysis of covariance, multiple comparison procedures. Prerequisite: 160X or equivalent. (All Areas)
4 units (Shavelson) not given 1999-2000

4 units (Okin) not given 1999-2000

252. Introduction to Test Theory—Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: Statistics 190 or equivalent. (PSE)
3-4 units, Spr (Haertel)

253X. The Principalship: Theory and Practice—For those interested in leadership roles in K-12 education, or for those interested in the theory and practice of school administration. Seminar immerses students in a broad study focused on conceptions of the role of the school principal.
3-4 units, Spr (Copland)

257A,B. Statistical Methods for Behavioral and Social Sciences—For students with experience and training in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of Statistics 161.
3 units (Rogosa) not given 1999-2000

259. Seminar in Higher Education—Students learn about different collegiate cultures, are introduced to several common administrative services, discuss and share internship experiences, develop some practical skills needed to work in the collegiate setting, and learn to recognize and evaluate some perennial ethical and governance issues on college and university campuses. (SSPEP/APA)
3 units (Staff) not given 1999-2000

260X. Popular Advanced Statistical Methods—Overview and implementation of some advanced statistical methods currently popular in educational research. Methods for accommodating the nested structure of much educational data (e.g., students within classrooms within schools) which arise as units of analysis problems, ecological regression, or hierarchical linear models. Methods for complex measurement models in regression settings known as structural equation models, causal models, covariance structures. See http://www.stanford.edu/class/ed 260
3 units, Aut (Rogosa)

261X. Critical Reading in the Content Areas—Topics: introduction to models of reading, functions of literacy, components of reading instruction, content reading vs. recreational reading, literacy vs. expository materials, and reading to learn vs. learning to read; text types; testing and assessment; vocabulary and reading instruction; comprehension and background knowledge; study skills and aids; metacognition; strategies; writing and reading instruction; technological applications; affective concerns and motivations. (SSPEP/LLP)
3 units (Kamil) not given 1999-2000

262A,B,C. Curriculum and Instruction in English—Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)
262A. 3 units, Sum (Vosovic)
262B. 2 units, Aut (Vosovic)
262C. 3 units, Win (Vosovic)

263A,B,C. Curriculum and Instruction in Mathematics—The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP)
263A. 3 units, Sum (Boaler)
263B. 2 units, Aut (Boaler)
263C. 3 units, Win (Boaler)

264A,B,C. Curriculum and Instruction in Foreign Languages—Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)
264A. 3 unit, Sum (Azevedo)
264B. 2 unit, Aut (Azevedo)
264C. 3 units, Win (Azevedo)

265X. History of Higher Education in the U.S.—See 165X.
3-5 units (Staff) not given 1999-2000

266X. Social Science Research Methods in Education—Introduction to the social science research methods commonly used in the study of education, primarily for master's students with little or no quantitative background, or who desire an integrated, general introduction to quantitative and qualitative methods in educational research. Objectives: prepare students to be thoughtful consumers of educational research; cultivate skills in critiquing research for its strengths and weaknesses; prepare for further SUSE courses which assume some competence in these areas and/or provide hands-on opportunities to use these research methods. Quantitative and qualitative forms of inquiry are integrated and contrasted, emphasizing correlational and case study research problems
and research questions, issues of design, and issues that commonly arise during data collection and data analysis procedures. (SSPEP)

4 units, Aut (Haertel, Pettekman)

267A, B, C. Curriculum and Instruction in Science—Examination of the possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

267A. 3 unit, Win (Atkin)
267B. 2 unit, Aut (Schultz)
267C. 3 units, Win (Schultz)

268A, B, C. Curriculum and Instruction in Social Studies—Emphasis is on the methodology of social studies instruction: review of curriculum trends, survey of teaching materials, opportunities to develop teaching and resource units. Prerequisite: STEP student.

268A. 3 unit, Sum (Pesick)
268B. 2 unit, Aut (Pesick)
268C. 3 units, Win (Pesick)

269. Principles of Learning for Teaching—Student learning and the epistemology of school subjects as they relate to the planning and implementation of teaching, the analysis of curriculum, and the evaluation of performance and understanding. Readings and activities are coordinated with internship and the student teaching activities of participants. Prerequisite: STEP student or consent of instructor.

3 units, Win (Darling-Hammond, Shulman)

273X. Women in Higher Education—Overview of the historical, theoretical, and ideological issues related to women's lived experiences as students, faculty, and administrators in higher education, and to the inclusion of feminist scholarship in higher education curricula. (SSPEP/APA)

4 units (Christopher) not given 1999-2000

277X. Education of Immigrants in Cities—For graduate students; see 177X.

4 units (Padilla) not given 1999-2000

278. Introduction to Issues in Evaluation—Focus is on the basic literature and major theoretical and practical issues facing the evaluation field. Topics: evaluation as a branch of experimental science, models of evaluation, quantitative and qualitative approaches to evaluation, evaluation as related to decision-making and the political process, and professional standards of evaluation. (SSPEP)

3 units, Win (Staff)

279X. Urban Youth and their Institutions: Research and Practice—For graduate students; see 179X. Enrollment limited, consent of instructor required. (SSPEP/APA)

3-4 units, Aut (McLaughlin)

280. Ethnographic Approaches to Cultural Diversity in Schooling—(Same as Cultural and Social Anthropology 280.) How to learn about culture and to analyze education-relevant situations such as the culturally diverse classroom. The cultural process is approached by acquiring techniques of observation, interview, and interpretation of behavior in context, and soliciting and recording the "native" explanations of their own behavior; developing an internally consistent conceptual structure that orients observation and elicitation productively; and being sensitized to one's own culture and how it influences perception and interpretation of behavior. Techniques of ethnographic research applicable to the study of schooling are demonstrated and applied in field research projects. Research report or proposal for research. (SSPEP)

4 units, Spr (Spindler)

281X. Mind, Body, and Spirit: Spiritual Health through the Life Span—For graduate students; see 181X. (PSE)

3 units (Thoresen) not given 1999-2000

282. Linguistics and the Teaching of English as a Foreign/Second Language—(Enroll in Linguistics 189/289.) (SSPEP/LLP)

4-5 units, Win (Hubbard)

283. Attitudes toward Languages and Language Study—With language viewed as an intergroup phenomenon, examines attitudes people hold toward their own and different languages, the bias toward and against speakers of different languages, how personal and societal attitudes affect the study and learning of a foreign or second language. A socio-psychological perspective is used as a central framework to guide the study of attitudes toward language. (SSPEP/LLP)

3 units (Padilla) not given 1999-2000

284. Teaching in Heterogeneous Classrooms—Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on the ways to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on groupwork, a highly recommended and documented instructional approach, and its cognitive, social, and linguistic benefits for students. How to prepare students for groupwork, equalize participation, design learning tasks that support conceptual understanding, mastery of content and language growth, and assess group products and individual contributions. (STEP)

3-4 units, Aut, Win (Lotan)

285X. Teaching in Higher Education—Preference given to doctoral candidates within two years of completing their dissertation and who are interested in embarking upon a career in university teaching. Course design, teaching, and evaluation of university teachers and of their students, providing an overview of the field of university teaching as an arena for faculty development and research. Enrollment limited. (CTE, PSE)

3 units (Staff) not given 1999-2000

286A. Second Language Acquisition—For students interested in teaching English as second/foreign language. Second language learning and teaching. Serves as basis of second language pedagogy, preparing STEP students for CLAD certification. (SSPEP/LLP, STEP)

3-4 units, Sum (Staff)

286B. Second Language Acquisition Research—Review of major research findings and theories in second language acquisition. Discussion of second language research and theories in formal and informal settings where a second language is learned. (SSPEP/LLP)

4 units (Padilla) not given 1999-2000

287. Culture and Learning—(Same as Cultural and Social Anthropology 158.) Learning in various institutional settings in the U.S. and around the globe. Learning in families, in schools, on the job, and on the streets. Emphasis is on the cultural organization of success and failure in American schools. Tentative consideration of opportunities for making less inequality. (SSPEP, STEP)

3-4 units, Win (McDermott)
289. Introduction to Linguistics for Educational Researchers—For graduate students with interests in educational research, and who plan to concentrate on language or linguistics. Basic linguistic concepts, complementary surveys of educationally oriented studies that explore quantitative linguistic analyses, qualitative ethno-linguistic analyses, discourse analyses, conversation analyses, and studies of bilingualism. Emphasis is on the linguistic analyses of language minority populations and related educational policies.
4 units, Aut (Baugh, Hakata)

290. Leadership in Education: Research and Practice—Conceptions of leadership that include the classroom, school, district office, and state capital. The role of complexity; organizational leaders outside of schools past and present, and how that complexity permitted leadership to arise. Case studies. (SSPEP/APA)
3-4 units (Cuban) not given 1999-2000

295. Psychology of Problem Solving and Reasoning—(Same as Psychology 261.) Introduction to the results and methods of research on the cognitive processes of solving problems and reasoning. Focus is on the accomplishments and limitations of research conducted since 1970, including views of cognition as situated activity. (PSE)
3 units (Greeno) not given 1999-2000

296. Substance Dependence: Assessment, Treatment, and Prevention—Open to graduate students in the social sciences. Survey of prevalence, etiology, and treatment of alcohol and drug-related disorders. Focus is on a developmental perspective and how substance abuse disorders manifest themselves in men and women at different ages from childhood through late adulthood. Various treatment approaches that have been beneficial, such as AA, individual and group work, family treatment, and inpatient vs. outpatient care. Required visit to relevant treatment programs during the quarter. (PSE)
3 units, Win (Gallagher-Thompson, Moffett)

297X. Research in Second Language Classrooms—Introduction to qualitative research methods in applied linguistics. Review of classroom-based research on second language teaching and learning. Discussion and critique of research methods including classroom observation, interaction analysis, classroom ethnography, interviews and questionnaires, and case studies. Individual projects utilize data gathered in second language classrooms. (SSPEP/LLP)
3 units (Valdés) not given 1999-2000

301. Graduate Colloquium: Historiography of American Education—(Same as History 301.) Analysis of the literature of American education history for students doing further work in the field. Weekly colloquium discussions, plus an opportunity to pursue specialized topics in small group tutorial sessions. Limited enrollment. Prerequisite: consent of instructor. (SSPEP)
3-4 units, Aut (Tyack)

302X. The Role of Knowledge and Learning in Teaching—Focuses on current literature relevant to the structure of subject matter of instruction in schools, and to the cognitive processes involved as students try to learn material. The implications of the literature on the role of the teacher. (CTE)
3 units, Win (Shulman, Darling-Hammond)

303. Qualitative Inquiry in Education—The ways in which artistically and humanistically based approaches to the study of teaching, classroom life, and schooling can improve the understanding of education. Introduces qualitative methods of inquiry that emphasize literary and other interpretive forms, and new approaches to inquiry in education. A study using methods. (CTE)
4 units (Eisner) not given 1999-2000

304. The Philosophical and Educational Thought of John Dewey—Analysis of important works of John Dewey. Readings vary each year. Emphasis may be on his social and moral writings. (SSPEP)
4 units, Win (Callan, Phillips)

5 units, Win (Carnoy)

306B. Seminar: The Politics of International Cooperation in Education—(Same as 107.) Analysis of policies and practices in international cooperation, assistance, and exchange. Emphasis is on the role of international organizations (World Bank, UNESCO, OECD) and the politics of multilateral and bilateral assistance programs. (SSPEP/ICE, APA)
3-4 units, Spr (Mundy)

4 units, Spr (McDermott)

306D. World, Societal, and Educational Change: Comparative Perspectives—(Same as Sociology 231.) Analysis of the relations between educational and societal developments from a comparative perspective. Readings on various theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation-building; education, mobility, and equality; education, international organizations, and world culture. (SSPEP/ICE)
3-5 units, Aut (Ramirez)

308. The Analysis of Teaching—Teaching is often considered an art or craft rather than a science. Is this true? Do teachers function as performers? Videotapes of teachers in action serve as a resource for the analysis of teaching. Concepts and methods from the field of criticism provide tools to analyze teaching. Literature in criticism, aesthetics, and qualitative evaluation secures the conceptual tools for the analysis of teaching. (CTE)
4 units (Eisner) not given 1999-2000

309X. Personality and Emotions in Organizations—The connection between personality and emotions with the work and home environments is seldom recognized in organizational theory. Human emotions are highlighted, coupled with selected personality typologies. Their relevance to effective organizations. Students concerned with leadership learn about their own personality/emotional styles and consider how that information might be used to increase their effectiveness as leaders in organizations.
3 units (Thoresen) not given 1999-2000

310. Problems in Sociology of Education—(Same as Sociology 232/330.) For doctoral and master's students. Meets with 210. Emphasis is on conceptualizing and analyzing applied sociological research in education. Short written assignments, individual feedback, and work with actual research data. (SSPEP)
4 units, Spr (Ramirez)
311X. First-Year Doctoral Seminar: Introduction to Research—Introduction to the broad range of methods used in current educational research, focusing on the logical and epistemological, design, and ethical issues. (All Areas)
1-2 units, Aut, Win, Spr (Shavelson, Phillips)

312. Interaction Processes in Education: Design and Evaluation—(Same as Sociology 224.) The educational applications of sociological/social psychological theory and research to classroom processes, staff relations, teams, and task forces. The principles for design and evaluations of group work for students and teamwork for teaching staff. Topics: social processes of influence, role differentiation, and evaluation. Methods for systematic evaluation and observation. Students receive practical experience in using these methods. (SSPEP)
4 units (Staff) not given 1999-2000

313X. Mathematics, Equity, and Situated Learning—The ways in which mathematics intersects with people’s lives, the reasons why it is practiced only by the elite few and the potential of situated perspectives for the attainment of equitable practices. Drawing on theories of learning, curriculum, equity, and schooling, students research these and related issues.
3 units (Boaler) not given 1999-2000

314. Workshop in Economics of Education—Research by students and faculty engaged in problems in the economics of education. Students must have advanced graduate training in economics theory and methodology and be engaged in research on the topic. (SSPEP)
1-2 units, Aut, Win, Spr (Carnoy)

315X. Vouchers and Choice in Education—The theory and empirical data on issues of educational choice and vouchers in the U.S., Europe, and other countries. Recommended: background in economics. (SSPEP)
3 units, Win (Carnoy)

320. Instruction of Heterogeneous Populations—The challenges facing schools having multilingual, multiracial, and multicultural populations, emphasizing the critical evaluation of problem statements and proposed solutions. The role of the principal in promoting innovations designed to address these challenges. Issues related to leadership for staff support and training and program coordination. (SSPEP/APA)
3 units (Staff) not given 1999-2000

321B. Analysis of Social Interaction—Practicum on discourse, interactional, and cultural analysis of videotaped data. Various levels of analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student. (SSPEP/ICE)
4 units, Aut (McDermott)

322X. Discourse Analysis in Educational Research—Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in the context of school. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. (SSPEP/LLP)
5 units (Staff) not given 1999-2000

3 units, Aut (Kirst)

324X. Emerging Business Opportunities in Education and Training—(Same as Business 345G.) For students in the joint degree program with business and education, and others. A combination of changing market mechanisms and emerging technologies is fueling new opportunities for for-profit education and training organizations. The interaction of firms with the public sector presents special challenges for these organizations. The special roles of public administrators, educators, investors, and technology providers in defining opportunities, challenges, and constraints for education and training firms. Approaches to strategy formation, product development, and operations. Visiting managers and other experts. (SSPEP/APA)
2-4 units (Kirst) not given 1999-2000

325X. Approaches to Qualitative Research in Education—Students familiarize themselves with the diverse pertaining to qualitative research in education and think critically about how they frame educational problems and the role that qualitative methods have in understanding them.
3 units, Spr (Staff)

327A,B,C. The Conduct of Qualitative Inquiry—Integrated, three quarters for doctoral students ready to engage in serious pursuit of research that anticipates, is a pilot study for, or in some significant way feeds into their dissertations. It is not necessary that students have written and received approval for their dissertation study. The experience mirrors most of what any research project entails, and is about the actual conduct of research. All students engage in common research processes from September to June including developing interview questions; interviewing; coding/analyzing, interpreting data; theorizing; and writing up results. Participant-observation as needed. Students should consider this a sequence, with the division into quarters as arbitrary. Preference to students who intend to enroll for all three quarters.
327A. 4 units, Aut (Peshkin)
327B. 4 units, Win (Peshkin)
327C. 4 units, Spr (Peshkin)

331A,B. Administration and Policy Analysis Research Seminar—Limited to first-year APA doctoral students. Introduces the rudiments of problem statements, conceptual frameworks, research design, and critical reviews of literature. (SSPEP/APA)
331A. 1-2 units, Win (Copland, Antonio)
331B. 1-2 units, Spr (Copland, Antonio)

333A. Advanced Seminar in LDT: Analyzing Functions and Needs in Learning Environments—Introduction to theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support more effective learning practices.
3 units, Sum (Greene)

333B. Advanced Seminar in Learning Design and Technology: Organizations—How organizational resources, structures, constraints, and possibilities are taken into account in research-based designs for learning in schools and work places. Presentations and discussions by researchers from the Institute for Research on Learning offer an overview of current research and development efforts for improving learning in schools and workplaces.
3 units, Win (Staff)

333C. Advanced Seminar in Learning Design and Technology: Social and Ethical Issues—Readings/discussions, case studies, and internships on the ethical and social issues related to learning and technology. Prerequisite: enrollment in LDT, or consent of instructor.
3 units (Kamil) not given 1999-2000

335X. Language Policy and Planning: National and International Perspectives—For graduate students and undergraduates, with consent of instructor. International study of the social, political, and educational
tensions that shape language policy. Emphasis is on language education that affects immigrants, guest workers, and indigenous linguistic minority populations; policies that determine foreign language instruction, and U.S. language policies in a comparative approach. (SSPEP/LLP)

338A, B, C. Practicum in Counseling and Health Psychology—For Counseling Psychology majors only. Intensive supervised field experience in local schools or social agencies. (PSE)

338A 1-6 units, Aut (Thoresen)
338B 1-6 units, Win (Thoresen)
338C 1-6 units, Spr (Krumholtz)

339X. Family Therapy: Systemic Approach to Assessment and Treatment—Doctoral seminar examines the assumptions underlying the family-systems paradigm, viewed as an expansion of and alternative to the individual model. The development of a conceptual framework for family and couples assessment provides the basis for comparing influential models of family therapy. The conceptual, observational, and technical skills needed for family interviewing, the formulation of therapeutic goals, and clinical intervention. Clinical and research applications in larger systems (education, health care, business). (PSE)

1 unit, Spr (Rait)

340X. Psychology and American Indian Health—Western medicine tends to define health by first defining sickness, disease, or pathology, and then defining health as the absence of these diseases. Native American cultures understood health to mean the balance or beauty of all things physical, spiritual, emotional, and social. Sickness was something out of balance, the absence of harmony. Representative topics in American Indian psychology and health acquaint students with issues that characterize the field, its methods, goals, and findings. Prerequisite: experience working with American Indian communities. (PSE)

3 units (LaFromboise) not given 1999-2000

341. Educational Applications of Sociolinguistics—For students interested in the broad applications of linguistic research in educational contexts. Formal integration of sociolinguistics and applied linguistic research is examined in relation to a range of international case studies among students and teachers in socially stratified speech communities worldwide. Theoretical concepts from linguistics are introduced as they relate to practical educational problems in socially stratified speech communities. Recommended: background in linguistic science for students who seek an introduction to applied linguistic research. (SSPEP/LLP)

3 units (Baugh) not given 1999-2000

343X. Achievement Motivation in School-Aged Children—Surveys developments in the study of achievement motivation in children and adolescents over the past 50 years. The historical and theoretical approaches to understanding the quality, intensity, and direction of children's achievement-related behavior. Clinical life-span theories, cognitive theories, and social-cognitive theories of achievement motivation. Differences among mechanistic, organismic, and developmental-contextual metamodels of motivation, qualitative vs. quantitative conceptualizations of "motivation," and the differential emphasis placed upon organismic needs, cognition, volition, and emotion in theories concerned with understanding achievement behavior. (PSE)

4 units, Win (Roese)

344X. Child Development and Schooling—School represents a major context of development during childhood in the U.S. How the practices and activities of schooling influence the social, emotional, and cognitive development of children. Meta-theoretical approaches (e.g., mechanistic, organismic, developmental contextualist metamodels) and methods of conducting research on schooling and development (experimental, survey, ethnographic, intervention, etc.). Topics: how different teaching practices influence cognitive growth in academic domains, how the organizational structures of schools (grade related transitions, class organizations, etc.) fit (or fail to fit) developmental needs, how friendship groups create contexts for learning and can lead to different trajectories of development, and how grading and other evaluative practices influence motivational orientations. Focuses on the elementary school years (see also 345X). (PSE)

3 units, Spr (Valdés)

345X. Adolescent Development and Schooling—School represents a major context of development during adolescence in the U.S. How the context of school and its relationship to other major contexts development (family, peer group, and neighborhood) influence the social, emotional, and cognitive development of secondary school-aged youths. Meta-theoretical approaches (e.g., mechanistic, organismic, developmental contextualist metamodels) and methods of conducting research on schooling and development (laboratory, survey, ethnographic, intervention, etc.). Topics: school transitions during adolescence, the role of school functioning in broader patterns of competence or distress, and how the organization of academic tasks, classrooms, and school environments as a whole can influence different aspects of adolescent development. Focuses on the middle and high school years (see also 344X).

(PSE)

3 units (Roese) not given 1999-2000

346. Research Seminar in Higher Education—Required for higher education students. Overview of higher education in the U.S. and an introduction to the major issues that have emerged in the research about higher education. The current structural features of the system and the historical context that shaped it, informed by a range of theoretical frameworks. The purposes of higher education in light of different interest groups: students, faculty, administrators, and external constituents. Diversity, stratification, decentralization, and change that cut across each of these groups. (SSPEP/APA)

4 units, Win (Antonio)

350A. Psychological Studies in Education—Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)

1 unit, Aut (Padilla, Thoresen)

350B, C, D. Research Practicum in Psychological Studies in Education—Three-quarter sequence provides students in PSE an opportunity to engage in all facets of the research process. Individual projects in a group context are designed to provide extensive opportunities for training and feedback concerning specific projects and the general enterprise of psychological research in education. 350B and C are required of first-year students in PSE; 350D is required of second-year students in PSE. Others by consent of instructor. (PSE)

350B. 3 units, Win (Greeno, Krumboltz)
350C. 3 units, Spr (Rogosa)
350D. 1 unit, Aut, Win, Spr (Haertel, Roese)

351. Design and Analysis of Longitudinal Research—The analysis of longitudinal data is central to empirical research on learning and development. Topics: growth models, measurement of change, repeated measures design, quasi-experiments, structural regression models, reciprocal effects, analysis of durations including survival analysis. See http://www.stanford.edu/class/ed351/. Prerequisite: statistical training at the level of 257. (PSE)

3 units, Spr (Rogosa)

353A. Problems in Measurement: Item Response Theory—Survey of the alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item response theory
limited to those students. (CTE)

361. The Economics of Gender in Education and Employment—Research project. (CTE)

pants analyze action research reports and engage in a small-scale action—Introduction to the theory and

360X. Action Research in Education—Introduction to the theory and practice of action research. Basic concepts and methods. The historical and ideological influences on this form of inquiry by teachers. Participants analyze action research reports and engage in a small-scale action-research project. (CTE)

3 units, Spr (Atkin)

361. The Economics of Gender in Education and Employment—Policy issues concerning higher education, employment, earnings, discrimination, occupational segregation, housework, childcare, affirmative action, comparable worth, and feminist economics. (SSSEP)

3 units (Staff) not given 1999-2000

364X. Reading in a Second Language—Examination of the theories and research related to learning to read in a second language in child and adult learning contexts. The similarities and differences between first- and second-language theories and research on learning to read. Applications of research findings to pedagogy. (SSPEP/ LLP)

3 units, Spr (Kamil)

366X. Trends and Issues in Reading—Current trends and issues in literacy and literacy instruction, providing a framework for work in reading and literacy. Research, theory, and implications for practice in classroom organization, compensatory instruction, comprehension instruction, reading and writing assessment, second language reading, whole language emergent literacy, adult literacy, and technology. (SSPEP/ LLP)

3 units (Kamil, Padilla) not given 1999-2000

367X. Reading Research Syntheses, Policy and Practice—Examines the national syntheses of reading research beginning with "The Great Debate" (1967) and concluding with the National Reading Panel (2000). These reports are often the basis of recommendations for parents, administrators, and teachers and have been the foundation of policy for curricular reform. Students engage in a critical examination of these reports, interpretations, and commentaries, comparing the conclusions and recommendations with those derived from the original research upon which they were based.

3 units, Aut (Kamil)

372X. Social Processes in Learning and Development—Doctoral seminar on how children’s learning and development are influenced by social interactions with parents, peers, teachers, and the larger cultural context. Emphasis is on research that illuminates social/cognitive processes thought to influence the development of individual thinking. These processes include observation and imitation of models, co-construction of meaning and achievement of intersubjectivity, providing and receiving explanations, and socio-cognitive conflict. How the larger social culture influences the behavior of individuals in interaction and on how forms of school culture influence children’s individual thinking and thinking in collaboration with others. (PSE)

3 units (Barron) not given 1999-2000

373. Education as a Social Science—Enrollment limited to and required of all first-year Ph.D. students in SSPEP. Students meet with faculty on the area committee, oriented to the range of intellectual and research strategies represented by the social sciences faculty, and interview faculty and plan with them the topic of discussion of their course session. Assists students in course planning. Opportunity to develop sessions to meet orientation and adjustment needs, as they arise. (SSPEP)

1 unit, Aut (Staff)

375A. Seminar on Organization theory—(Same as Sociology 363A.) For doctoral-level students or equivalent. Provides a thorough grounding in the social science literature on organizations. Readings are organized historically, and introduce the major theoretical perspectives and debates.

5 units, Win (Powell, Scott)

375B. Seminar on Organizations: Theory and Application—(Same as Sociology 363B.) Continuation of Sociology 363A. Focus is on contemporary applications of organization theory in the examination of political, educational, and business organizations.

5 units, Spr (Powell, Scott)

376. Education and Theories of the State—Examines the relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)

5 units (Carnoy) not given 1999-2000

378X. Topics in Organizational Adaptation—Research seminar focuses on theoretical ideas about decision making and learning in organizations.

2-5 units, Win (March)

380. Supervised Internship

1-15 units, any quarter (Staff)
381. Multicultural Issues in Higher Education—Reviews the primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 1980s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

4 units, Spr (Antonio)

382. Student Development and the Study of College Impact—Introduces the philosophies, theories, and methods that undergird the bulk of the research in higher education: how college affects students. Student development theories and models of college impact; issues surrounding data collection, national databases, and secondary data analysis.

4 units (Antonio) not given 1999-2000

2 units (Antonio) not given 1999-2000

384. Advanced Topics in Higher Education—Preference given to higher education graduate students. In-depth analysis of selected topics in the study of higher education. Topics vary each year among faculty: development, legal issues, curricular change, knowledge production, professional socialization, management of organizational decline, leadership and innovation, authority and power, diversity and equity, interactions with government and industry. Prerequisites: 346, consent of instructor.

4 units (Gumport) given 2000-2001

385. The American College Student: Implications for Research and Practice—Open to juniors and seniors with consent of instructor. The nature, culture, and development of the American college student. The American college student from a contemporary perspective, focusing on the question of: who goes to college, what kinds of experiences do students have in college and how are students affected by their experiences in college?

4 units, Spr (White)

386X. The American College Student: Implications for Research and Practice—For students who wish to gain a greater insight regarding the management of colleges and universities and the issues faced by those who hold major leadership roles within these institutions. Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts useful in understanding institutions of higher education through case study analysis of the problems and challenges facing today’s higher education administrators.

4 units, Win (White)

387A,B,C. Workshop: Comparative Studies of Educational and Political Systems—(Same as Sociology 311A,B,C.) Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. (SSPEP/ICE)

387A. 2-5 units, Aut (Ramirez, Meyer)
387B. 2-5 units, Win (Ramirez, Meyer)
387C. 2-5 units, Spr (Ramirez, Meyer)

388A,B. Bilingual Education—Research issues of policy and practice, particularly in the U.S., in programs for language minority students. Topics: the history of policy and legislation in bilingual education, theories of second language learning and first language maintenance, research on the effectiveness of bilingual education, and comparative experiences in other societal settings. (SSPEP/LLP, STEP)

388A.—Prepares STEP students for CLAD certification.
3-4 units, Spr (Hakata)
388B.—For SSPEP/LLP students.
3 units, Win (Hakata)

390. Advanced Seminar in Bilingual Education—For doctoral students specializing in bilingual education. Topical treatment of current research and policy issues in bilingual education. Prerequisites: 388B or consent of instructor. (SSPEP/LLP)

1-3 units (Hakata) not given 1999-2000

400X. Writing Seminar for Doctoral Students—For doctoral students to improve scholarly writing; an experience in the process of revision. Topics: the power of lead sentences, strong verbs, telling titles, organization, proper conclusions, and as needed, the quotidians of spelling, grammar, and hypenation. Students submit a fully revised version of their paper as a final product.

2 units (Peshkin) not given 1999-2000

401. Mini Courses in Methodology—For doctoral students. Particular issues during designated quarters. Enrollment limited. Prerequisite: consent of instructor.

2 units (Staff)

405. Education and Political Change—Introductory analysis of the relations between education and social and political change from a comparative perspective. Topics: different theoretical approaches to the study of education and politics, questions of legitimacy in educational policy, international factors in educational development, the politics of educational planning and reform, processes and conditions of political learning, and the politics of curriculum and pedagogy. (SSPEP/ICE)

4-5 units (Mundy) not given 1999-2000

406X. Topics in Comparative Educational Research—Primarily for doctoral students. Possible topics: from substantive foci (e.g., gender issues, childhood socialization, numeracy) to a systematic treatment of a major educational theorist (e.g., Bernstein, Bourdieu). (SSPEP/ICE)

1-3 units (Ramirez) not given 1999-2000

407X. Aid and Education: The Africa Case—Advanced seminar on international educational aid, primarily for doctoral students. Focuses primarily on educational aid in sub-Saharan Africa, the region most often considered in contemporary debates about the failure of aid, and the “impasse in development theory.” (SSPEP/ICE)

4 units (Mundy) not given 1999-2000

408. Research Workshop in International and Comparative Education—Limited to advanced doctoral students in ICE and SSPEP. Research workshop for the review of key issues in the methodology and epistemology of social research in education, research proposals, and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalent. (SSPEP/ICE)

2-5 units, Win (Carnoy)

410. Topics in Symbolic Systems in Education—For students in all areas. Topics in the interdisciplinary study of intelligence, information, meaning, and learning, emphasizing research relevant to educational practice. Research perspectives from anthropology, artificial intelligence, linguistics, philosophy, and psychology. (PSE)

1 unit, Aut, Win, Spr (Staff)

416. Seminar on Aptitude—Limited to doctoral students in education and psychology. The study of individual differences in learning, cognitive, connotative, and affective processes related to education. The design and evaluation of instruction with respect to individual differences. Prerequisites: 255 or equivalent, and consent of instructor. (PSE)

3 units (Staff) not given 1999-2000

418. Foundations of Field Research in Higher Education—For higher education/APA graduate students, and appropriate for doctoral students working on qualifying papers or dissertations. Advanced seminar examines the rationales for doing interpretive social science research in higher education settings. Students acquire methodological training in fieldwork through hands-on opportunities to collect, analyze, and critique...
444X. Research in Progress: Curriculum and Teacher Education—Required of first- and second-year doctoral students in CTE. Introduction to current research in the Curriculum and Teacher Education area. Presentations of research planned, under way, or ready to be reported on some aspect of curriculum and teacher education. Weekly presentations by SUSE faculty, SUSE masters’ or doctoral candidates, and faculty from elsewhere in the University or Bay Area. Questions and discussion of conceptual and methodological issues. (CTE)
1 unit, Aut (Shavelson, Boaler)
Win (Eisner, Ross)
Spr (Peshkin, Carter)

453. Doctoral Dissertation—(All Areas)
1-15 units, any quarter (Staff)

460. Advanced Seminar in Evaluation Design—Three quarters; for A.M. Policy Analysis and Evaluation students in the evaluation track. Discussion about evaluation issues, including the significance of multidisciplinary teamwork, design issues, negotiation, interpersonal skills, and ethics. (SSPEP/APA)
1 unit, Aut, Spr (Fetterman)

461X. Schooling and Mental Health Issues—Between 12-30% of all school-aged children experience moderate to severe emotional/behavioral difficulties. Many never receive services either within or outside of school to redress these difficulties. Untreated emotional/behavioral problems often undermine the affected children’s ability to learn, and their teachers’ ability to effectively teach. The theoretical/empirical, practical, and methodological goals.
4 unit, Spr (Roesser)

480. Directed Reading—For advanced graduate students. (All Areas)
1-15 units, any quarter (Staff)

493A. Seminar on Methodological Problems in Educational Research—Discussion of topics of current methodological interest. Practicum in consulting on actual projects being carried out by faculty and students.
1-3 units, Win (Olkin)

493B. Statistical Methods for Meta-Analysis—(Same as Health Research and Policy 206, Statistics 211.) Meta-analysis is a quantitative method for combining the results of independent studies, and enables researchers to synthesize the results of related studies so that the combined weight of evidence can be considered and applied. Examples from the medical, behavioral, and social sciences. Topics: literature search, publication and selection bias, statistical methods (contingency tables, cumulative methods, sensitivity analyses, non-parametric methods). Project. Prerequisite: basic sequence in statistics. (All Areas)
3 units, Win (Olkin)
School of Engineering

Dean: James D. Plummer
Senior Associate Deans: John C. Bravman (Student Affairs), Anthony J. DiPaolo (SCPD), Anne R. Hannigan (Administration), Jeffrey R. Koseff (Faculty Affairs), Laura L. Breyfogle (External Relations)
Associate Dean: Noé P. Lozano (Diversity Programs)
Assistant Deans: Susan Clement (Graduate Student Affairs), Renée Cornejo, John C. Bravman, Mark R. Cutkosky, Joel H. Fierziger, George M. Homsy, James V. Jucker, Thomas R. Kane, Robert E. McGinn, Parviz Moin, R. Fabian W. Pease, James D. Plummer, Channing R. Robertson, Robert Sinclair
Emeriti: (Professor) Gene Franklin
Associate Professors: Fu-Kuo Chang, Per K. Enge, David L. Freyberg, Kosuke Ishii, Sanjiva Lele, Bruce B. Lusignan, Reginald E. Mitchell, Mark G. Mungal, Stephen M. Rock
Assistant Professors: Christopher F. Edwards, Jonathan How, Claire J. Tomlin
Professor (Research): Butrus T. Khuri-Yakub
Professors (Teaching): Gilbert M. Masters, Eric S. Roberts
Associate Professor (Teaching): Thomas H. Byers
Senior Lecturer: David Lougee
Lecturers: Gerald Cain, Patrick Young
Acting Assistant Professor: Justin Wing-Lok Wan
Consulting Professor: Anoop Gupta

The School of Engineering offers undergraduate programs leading to the degree of Bachelor of Science (B.S.), programs leading to both B.S. and Master of Science (M.S.) degrees, other programs leading to a B.S. with a Bachelor of Arts (A.B.) in a field of the humanities or social sciences, dual-degree programs with certain other colleges, and graduate curricula leading to the degrees of M.S., Engineer, and Ph.D.

The school has nine academic departments: Aeronautics and Astronautics, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Engineering-Economic Systems and Operations Research, Industrial Engineering and Engineering Management, Materials Science and Engineering, and Mechanical Engineering. These departments and one interdisciplinary program, Scientific Computing and Computational Mathematics, are responsible for graduate curricula, research activities, and the departmental components of the undergraduate curricula. In research, where faculty interest and competence embrace both engineering and the supporting sciences, there are numerous programs within the school as well as several interschool activities, including the Alliance for Innovative Manufacturing at Stanford, Center for Integrated Systems, Center for Materials Research, Center on Polymer Interfaces and Macromolecular Assemblies, Center for Space Science and Astrophysics, Joint Institute for Aeronautics, Microwave Laboratory, the NIH Biotechnology Graduate Training Grant in Chemical Engineering, a program in Product Design, and the Radio Astronomy Institute. Petroleum Engineering is offered through the School of Earth Sciences.

Instruction in engineering is offered primarily during the Autumn, Winter, and Spring Quarters of the regular academic year. During the Summer Quarter, a small number of undergraduate and graduate courses are offered.

UNDERGRADUATE PROGRAMS

The principal goals of the undergraduate engineering curriculum are to provide opportunities for intellectual growth in the context of an engineering discipline, for the attainment of professional competence, and for the development of a sense of the social context of technology. The curriculum is sufficiently flexible that a number of decisions on individual courses are left to the student and the adviser. For a student with well-defined educational goals, there is often a great deal of latitude.

In addition to the special requirements for engineering majors described below, all undergraduate engineering students are subject to the University general education, writing, and foreign language requirements outlined in the first pages of this bulletin. Depending on the program chosen, students have the equivalent of from one to three quarters of free electives to bring the total number of units to 180.

The School of Engineering's Handbook for Undergraduate Engineering Programs is available online at http://ughb.stanford.edu and provides detailed descriptions of all undergraduate programs in the school, as well as additional information about extracurricular programs and services. A hard copy version is also available from the Office of Student Affairs in Terman Engineering Center, room 208. Because it is published in the summer, and updates are made to the website on a continuing basis, the handbook reflects the most up-to-date information for the academic year and is the definitive reference for all undergraduate engineering programs.

Accreditation—The Accreditation Board for Engineering and Technology (ABET) accredits college engineering programs nationwide using criteria and standards developed and accepted by U.S. engineering communities. At Stanford, the following undergraduate programs are accredited: Chemical Engineering, Civil Engineering, Electrical Engineering, Industrial Engineering, and Mechanical Engineering. In ABET-accredited programs, students must meet specific requirements for engineering science, engineering design, mathematics, and science course work. Students are urged to consult the School of Engineering undergraduate handbook and their adviser.

Accreditation is important in many areas of the engineering profession; students wishing more information about accreditation should consult their department office or the office of the Senior Associate Dean for Student Affairs in Terman 208.

Policy on Satisfactory/No Credit Grading and Minimum Grade Point Average—All courses taken to satisfy major requirements (including the requirements for mathematics, science, engineering fundamentals, Technology in Society, and engineering depth) for all engineering students (including both department and School of Engineering majors) must be taken for a letter grade if the instructor offers that option.

For departmental majors, the minimum GPA (grade point average) for all courses taken in fulfillment of the Engineering Fundamentals requirement and the Engineering Depth requirement is 2.0. For School of Engineering majors, the minimum GPA on all engineering courses taken in fulfillment of the major requirements is 2.0.

ADMISSION

Students admitted to the University may declare a major in the School of Engineering if they elect to do so; no additional courses or examinations are required for admission to the school.

RECOMMENDED PREPARATION

FRESHMEN

Students who plan to enter Stanford as freshmen and intend to major in engineering should take the highest level of mathematics offered in high school. (See the "Mathematics" section of this bulletin for information on advanced placement in mathematics.) High school courses in physics and chemistry are strongly recommended, but not required. Additional elective course work in the humanities and social sciences is also recommended.

TRANSFER STUDENTS

Students who do the early part of their college work elsewhere and then transfer to Stanford to complete their engineering programs should follow an engineering or pre-engineering program at the first school, selecting insofar as possible courses applicable to the requirements of the School of Engineering, that is, courses comparable to those described below under "Undergraduate Programs." In addition, students should
work toward completing the equivalent of Stanford's foreign language requirement and as many of the University's General Education Requirements (GERs) as possible before transferring. Some transfer students may require more than four years (in total) to obtain the B.S. degree. However, Stanford affords great flexibility in planning and scheduling individual programs which makes it possible for transfer students, who have wide variations in preparation, to plan full programs for each quarter and to progress toward graduation without undue delay.

Transfer credit is given for courses taken elsewhere whenever the courses are equivalent or substantially similar to Stanford courses in scope and rigor. The policy of the School of Engineering is to study each transfer student's preparation and make a reasonable evaluation of the courses taken prior to transfer. Inquiries may be addressed to the Senior Associate Dean for Student Affairs in the School of Engineering at Stanford. For more information, please see the transfer credit section of the School of Engineering Undergraduate Handbook website at http://ugb斯坦福.edu.

DEGREE PROGRAM OPTIONS

3/2 DEGREE PROGRAMS

The 3/2 engineering program at Stanford is a special opportunity that allows a student to complete three years at a liberal arts college followed by two years at Stanford. After completing the five-year program, the student is awarded two degrees, a B.S. in Engineering from Stanford and an A.B. from the liberal arts college.

Candidates for this special dual-degree program are considered as regular transfer applicants and are expected to meet the same admissions standards as all other transfer candidates. This distinguishes the Stanford 3/2 program from those of most other institutions that "guarantee" admission to students who meet certain grade and course requirements and are recommended by the 3/2 coordinator of the liberal arts college.

All 3/2 transfer applicants are required to submit the transfer application forms, a final secondary school transcript, official transcripts from each college attended, and the official results of either the College Board Scholastic Aptitude Test (SAT) or the American College Test (ACT). All materials must be submitted by the regular transfer deadline.

In addition to the above mentioned documents, dual-degree candidates are required to have a letter of recommendation sent from the liberal arts college 3/2 program coordinator. Also required is a letter from the appropriate academic dean indicating the intention of the liberal arts college to award the A.B. degree, not the B.S. degree, upon completion of the required number of course credits. Applications are only accepted from students attending a liberal arts college that does not offer a degree in engineering.

In addition to the above mentioned documents, dual-degree candidates are required to have a letter of recommendation sent from the liberal arts college 3/2 program coordinator. Also required is a letter from the appropriate academic dean indicating the intention of the liberal arts college to award the A.B. degree, not the B.S. degree, upon completion of the required number of course credits. Applications are only accepted from students attending a liberal arts college that does not offer a degree in engineering.

In addition to the above mentioned documents, dual-degree candidates are required to have a letter of recommendation sent from the liberal arts college 3/2 program coordinator. Also required is a letter from the appropriate academic dean indicating the intention of the liberal arts college to award the A.B. degree, not the B.S. degree, upon completion of the required number of course credits. Applications are only accepted from students attending a liberal arts college that does not offer a degree in engineering.

BACHELOR OF ARTS AND SCIENCE (B.A.S.)

This degree is available to students who complete both the requirements for a B.A. degree in engineering and the requirements for a major or program ordinarily leading to the A.B. degree. For more information, see the "Graduate Degrees" section of this bulletin.

DUAL AND COTERMINAL DEGREE PROGRAMS

A Stanford undergraduate may work simultaneously toward two bachelor's degrees or toward a bachelor's and a master's degree, that is, A.B. and M.S., B.S. and M.S., or B.S. and A.M. The degrees may be granted simultaneously or at the conclusion of different quarters. Usually five years are needed for a combined program.

Dual A.B. and B.S. Degree Program—To qualify for both degrees, a student must (1) complete the stated University and department requirements for each degree, (2) complete 15 full-time quarters, or three full-time quarters after completing 180 units, and (3) complete a total of 225 units (180 units for the first bachelor's degree plus 45 units for the second bachelor's degree).

Coterminal Bachelor's and Master's Degree Program—A Stanford undergraduate may be admitted to graduate study for the purpose of working simultaneously toward a bachelor's degree and a master's degree. To qualify for both degrees, a student must (1) complete three full-time quarters (or the equivalent) after completing 180 units, (2) complete, in addition to the 180 units required for the bachelor's degree, the number of units required by the graduate department for the master's degree (not fewer than the University minimum of 36 units), (3) complete the requirements for the bachelor's degree (department, school, and University) and apply for the degree at the appropriate time at the Office of the Registrar, and (4) complete the department and University requirements for the master's degree and apply for the degree at Degree Progress in the Registrar's Office.

Admission to the coterminal program requires admission to graduate status by the pertinent department. Admission criteria vary from department to department.

Procedure for Applying for Admission to Coterminal Degree Programs—A Stanford undergraduate may apply (using the University coterminal application form) for admission to the coterminal bachelor's and master's degree program after the beginning of the eighth quarter of undergraduate work and no later than the end of the 11th quarter of undergraduate work, and at least four quarters in advance of the anticipated date of conferment of the master's degree. Students seeking a graduate degree in engineering must apply to the pertinent department.

BACHELOR OF SCIENCE

Departments within the School of Engineering offer programs leading to the B.S. degree in the following fields: Chemical Engineering, Civil Engineering, Computer Science, Electrical Engineering, Industrial Engineering, Materials Science and Engineering, and Mechanical Engineering. The School of Engineering itself offers interdisciplinary programs leading to the B.S. degree in Engineering with specializations in Aeronautics and Astronautics, Computer Systems Engineering, and Product Design. In addition, students may elect an Individually Designed Major leading to the B.S. in Engineering.

Petroleum Engineering—Petroleum Engineering is offered by the School of Earth Sciences. Consult the "Petroleum Engineering" section of this bulletin for requirements.

School of Engineering majors who anticipate summer jobs or career positions associated with the oil industry may wish to consider enrollment in Engineering 120, Fundamentals of Petroleum Engineering.

Programs in Manufacturing—Programs in manufacturing are available at the undergraduate, M.S., and Ph.D. levels. The undergraduate programs of the departments of Civil and Environmental Engineering, Industrial Engineering and Engineering Management, and Mechanical Engineering provide general preparation for any student interested in manufacturing. More specific interests can be accommodated through Individually Designed Majors (IDMs).

SCHOOL OF ENGINEERING MAJORS

The School of Engineering offers the degree of Bachelor of Science in Engineering. School of Engineering programs must be approved by the Undergraduate Council of the school. There are two types of programs: majors that have been proposed by cognizant faculty groups and have been preapproved by the council, and Individually Designed Majors. At present, there are three preapproved majors: Aeronautics and Astronautics, Computer Systems Engineering, and Product Design. Total units required for these majors must be at least 90 and not more than 107. These majors are not accredited by ABET.

AERONAUTICS AND ASTRONAUTICS (AA)

Mathematics: (21 units)
- Math. 53 or 130, or Mech. Engr. 100. Differential Equations 3-5 (See Basic Requirement 1)
- Math electives 9

Science: (18 units)
- Physics 41. Mechanics 3
- Physics 43 or 23. Electricity 3
- One further physics course 3

Science electives (see Basic Requirement 2) 9

Engineering Fundamentals: (five courses)
- Engr. 30. Engineering Thermodynamics 3
- Engr. 70A or 70X. Programming 5
- Engr. 15. Dynamics 5
- Two Fundamental courses (see Basic Requirement 3)

98
Technology in Society: (3-5 units)

Engineering Depth: (39 units)

- AA 100: Introduction to Aeronautics and Astronautics
- AA 190: Directed Research in Aeronautics and Astronautics
- Civil & Envir. Engr. 180A: Introduction to Structural Analysis
- or Mech. Engr. 111: Stress, Strain, and Strength
- Engr. 104: Dynamic Behavior
- or Mech. Engr. 161: Dynamic Systems
- or Phys. 1: Intermediate Mechanics
- Mech. Engr. 33: Introduction to Fluids Engineering
- Depth Area I*
- Depth Area II*
- Electives to be approved by the adviser, and might be from the Depth area lists, or courses such as AA 201A, 210B, 256; Engr. 206, 209; or other upper-division engineering courses.

- Engineering Electives†

Total units: 100-106

Mathematics: (23 units)

- Math. 41, 42, 51: Calculus
- Math. 52 or 53: Multivariable Math
- Math. 103 or 113: Linear Algebra

Science: (13 units)

- Phys. 41: Mechanics
- Phys. 43: Electricity
- Phys. 45: Magnetism
- Phys. 47: Light and Heat

Engineering Fundamentals: (10 units)

- Engr. 40: Electronics
- Engr. 70X: Programming Methodology and Abstractions
- or Comp. Sci. 106A and B

Technology in Society: (3-5 units)

Writing in the Major (one course)

- Comp. Sci. 191W, 194, and 201 fulfill this requirement

Depth: (55 units)

- Comp. Sci. 107: Programming Paradigms
- Comp. Sci. 108: Object-Oriented Systems Design
- Comp. Sci. 109: Introduction to Computer Science
- or Comp. Sci. 103X: Discrete Math for Computer Science
- Comp. Sci. 140: Operating Systems
- or Comp. Sci. 143: Compilers
- Comp. Sci. 150 Introduction to Computer Theory for Non-CS Majors
- Elect. Engr. 101: Circuits
- Elect. Engr. 111, 112: Electronics
- Elect. Engr. 121: Digital Design Laboratory
- Elect. Engr. 182: Computer Organization
- Elect. Engr. 183: Advanced Logic Laboratory
- Elect. Engr. 271: Introduction to VLSI Systems
- Electives
- Senior Project (Comp. Sci. 191, 191W, or 194)†

Total units: 104-106

Mathematics: 20 units minimum

- Recommended: one course in Statistics.

Science: 17 units minimum

- Recommended: one year of Physics
- Psych. 1: Introduction to Psychology (required)
- Psych. 161: Cultural Psychology (required)*

Mathematics and Science: minimum combined total of 45 units

Engineering Fundamentals: 18 units minimum

Engr. 14, 40, 70 required plus remainder of coursework from:
- Engr. 10, 15, 20, 25, 30, 50, 60; Indust. Engr. 100, 133
- Technology in Society: one course (See Basic Requirement 4)
- Mech. Engr. 120: History of Philosophy of Design (required)
- Engineering Depth: 45 units
- Art & Art Hist. 60: Basic Design

PRODUCT DESIGN

Mathematics: 20 units minimum

- Recommended: one course in Statistics.

Science: 17 units minimum

- Recommended: one year of Physics
- Psych. 1: Introduction to Psychology (required)
- Psych. 161: Cultural Psychology (required)*

Mathematics and Science: minimum combined total of 45 units

Engineering Fundamentals: 18 units minimum

Engr. 14, 40, 70 required plus remainder of coursework from:
- Engr. 15, 20, 25, 30, 50, 60; Indust. Engr. 100, 133
- Technology in Society: one course (See Basic Requirement 4)
- Mech. Engr. 120: History of Philosophy of Design (required)
- Engineering Depth: 45 units
- Art & Art Hist. 60: Basic Design

INDIVIDUALLY DESIGNED MAJORS (IDMs)

IDMs are intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the preapproved School of Engineering majors. IDM curricula are designed by students with the assistance of two faculty advisers of their choice and are submitted to the Undergraduate Council’s Subcommittee on Individually Designed Majors. The degree conferred is “Bachelor of Science in Engineering: (approved title).”

Students must submit written proposals to the IDM Subcommittee detailing their course of study. Programs must meet the following requirements: mathematics (21 units minimum, see Basic Requirement 1 below), science (17 units minimum, see Basic Requirement 2 below), Technology in Society (one approved course, see Basic Requirement 4 below), engineering (40 units minimum), and sufficient relevant additional coursework to bring the total number of units to at least 90 and at most 107. (Students may take additional courses pertinent to their IDM major, but the IDM proposal itself may not exceed 107 units.) The student’s curriculum must include at least three “Engineering Fundamentals” courses (Engr. 10, 14, 15, 20, 25, 30, 40, 50, 60, 70A, and 70X). Students are responsible for completing the prerequisites for all courses included in their majors.

Each proposal should begin with a statement describing the proposed major. In the statement, the student should make clear the motivation for and goal of the major, and indicate how it relates to her or his projected career plans. The statement should also specify how the various courses to be taken relate to and move the student toward realizing the major’s goal. A proposed title for the major should be included. The title approved by the IDM Subcommittee will be listed on the student’s official University transcript.

The proposal statement should be followed by a completed Program Sheet listing all the courses comprising the student’s IDM curriculum, organized by the five categories printed on the sheet (mathematics, science, Technology in Society, additional courses, and engineering depth). Normally, the courses selected should comprise a well-coordinated sequence or sequences that provide mastery of important principles and techniques in a well-defined field. In some circumstances, especially if the proposal indicates that the goal of the major is to prepare the student for graduate work outside of engineering, a more general engineering program may be appropriate. A four-year study plan, showing which courses will be taken each quarter should also be included in the student’s IDM proposal.

The proposal must be signed by two faculty members whose signatures certify that they endorse the major as described in the proposal and that they agree to serve as the student’s permanent advisers. One of the faculty members, who must be from the School of Engineering, acts as the student’s primary adviser. The proposal must be accompanied by a statement from that person giving her or his appraisal of the academic value and viability of the proposed major.

Students proposing IDMs must have at least four quarters of undergraduate work remaining at Stanford after the quarter in which their pro-
CHEMICAL ENGINEERING

Course No. and Subject  

Mathematics: 
- Math. 41, 42, 51, 52, Calculus* 20
- Math. 53. Ordinary Differential Equations or Engr. 155A. Mathematical and Computational Methods for Engineers 4-5

Science: 
- Chem. 31. Chemical Principles 4
- Chem. 33. Structure and Reactivity 4
- Chem. 35. Organic Monofunctional Compounds 4
- Chem. 36. Chemical Separations 3
- Chem. 131. Organic Polynuclear Compounds 3
- Chem. 171. Physical Chemistry: Chemical Thermodynamics 3
- Phys. 41. Mechanics 3
- Phys. 43. Electricity 3
- Phys. 45. Magnetism 3
- Bio. 52. Biochemistry, Molecular Biology, and Cell Biology 5

Engineering Fundamentals: 
- Five courses (Engr. 20 excluded) 19-22

Technology in Society (one course):  
(See Basic Requirement 4)

Chemical Engineering Depth 
- Chem. 130. Theory and Practice of Identification 4
- Chem. 175. Physical Chemistry: Kinetics and Statistical Mechanics 3
- Chem. Engr. 100. Chemical Process Modeling, Dynamics, and Control 3
- Chem. Engr. 110. Equilibrium Thermodynamics 3
- Chem. Engr. 120A. Fluid Mechanics 4
- Chem. Engr. 120B. Energy and Mass Transport 4
- Chem. Engr. 130. Separation Processes 3
- Chem. Engr. 140. Microelectronics Processing Technology 3
- Chem. Engr. 150. Biomedical Engineering 3
- Chem. Engr. 160. Polymer Science and Engineering 3

Chem. Engr. 185A,B. Chemical Engineering Laboratory 6
Engr. 20. Introduction to Chemical Engineering 3

Total 51

CIVIL ENGINEERING [CEE]

Mathematics and Science: 
- 45 units minimum* (See Basic Requirements 1 and 2)

Technology in Society (one course):  
(See Basic Requirement 4)

Engineering Fundamentals: 
- Five courses** (see Basic Requirement 3) 17-19

Engineering Depth 
- CEE 70. Environmental Science and Technology 3
- CEE 100. Managing Civil Engineering Projects 4
- CEE 101A. Structural Systems 4
- CEE 101B. Mechanics of Fluids 4
- CEE 101C. Geotechnical Engineering 4
- CEE 101E. Analytical and Numerical Methods for the Environment 4

Specialty courses in either Environmental and Water Studies†, or Structures and Construction** 30-32

Total for Engineering Fundamentals plus Depth 68

* Fundamentals must include Engr. 14 and 60. In addition, students selecting the Environmental and Water Studies option must take Engr. 30; those in Structures and Construction must take Engr. 50.

COMPUTER SCIENCE [CS]

Mathematics: (25 units) 
- CS 105X. Discrete Structures (Accelerated) or CS 109. Introduction to Computer Science 4
- Math. 41, 42. Calculus* 10

Plus any two of the following:
- CS 157. (or Phy. 160A) Logic 4
- CS 205. Math for Robotics and Vision 3
- Math. 51. Calculus 5
- Math. 103 or 113. Linear Algebra 3

Science: (12 units) 
- Phys. 41. Mechanics 3
- Phys. 43. Electricity 3
- Phys. 45. Magnetism 3
- Science Elective† 3

Engineering Fundamentals: (10 units) 
- CS 106X. Programming Methodology and Abstractions (Accelerated) or CS 106A and 106B 5
- Engr. 40. Electronics 5

Technology in Society (one course, 3-5 units):  
See list in the School of Engineering Handbook (http://ughb.stanford.edu)

Writing in the Major (one course) 
- CS 191W, 194, and 201 fulfill this requirement

Computer Science depth: (46 units) 
- Programming (two courses):
  - CS 107. Programming Paradigms 5
  - CS 108. Object-Oriented Systems Design 4
- Theory (two courses):
  - CS 154. Introduction to Automata and Complexity Theory 4
  - CS 161. Design and Analysis of Algorithms 4
- Systems (three courses):
  - Elect. Engr. 182. Computer Organization 4
  - Two systems electives** 7-8

Applications (two courses):
- CS 121 or 221. Introduction to Artificial Intelligence 3

One applications elective† 3-4

Project (one course): 
- CS 191, 191W, or 194*** 3

Restricted Electives (three courses)†† 9-12

* Math. 19, 20, and 21 may be taken instead of Math. 41 and 42 at least as long as 25 math units are taken.
† The science elective may be any course of 3 or more units from the School of Engineering lists plus Psych. 30.
** The two systems courses must be chosen from the following set: CS 140, 143, 242, and 244A. The systems electives must include a course with a large software project, currently satisfied by either CS 140 or 143.
†† The applications elective must be chosen from the following set: CS 145, 147, 148, 223A, 223B, or 248.
*** Independent study projects (CS 191 or 191W) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS program adviser (E. Roberts). A signed approval form, along with a brief description of the proposed project, should be submitted to the Office of the Senior Associate Dean for Student Affairs, Terman 208.

DEPARTMENTAL MAJORS

Curricula for majors offered by the departments of Chemical Engineering, Civil Engineering, Electrical Engineering, Industrial Engineering, and Mechanical Engineering have the following components: 40-47 units of mathematics and science (see Basic Requirements 1 and 2 at the end of this section); engineering fundamentals (five course minimum, see Basic Requirement 3); Technology in Society (TIS) (one course minimum, see Basic Requirement 4); and engineering depth (courses such that the total of units for Engineering Fundamentals and Engineering Depth is between 60 and 75). Included within the courses taken to fulfill the Basic Requirement 3; Technology in Society (TIS) (one course minimum, see Basic Requirement 4); and engineering depth (courses such that the total of units for Engineering Fundamentals and Engineering Depth is between 60 and 75). Included within the courses taken to fulfill the preceding curriculum components is a requirement for a minimum of 8 units of experimentation (see below). Curricular requirements for departmental majors were being revised at the time of publication. Please consult the 1999-2000 Handbook for Undergraduate Engineering Programs online at http://ughb.stanford.edu for the most up-to-date listing of curricular requirements.

The curriculum for the major offered by the Department of Computer Science has separate requirements as described below.

Experimentation—Departmental major programs other than Computer Science must include 8 units of experimentation. Lab courses taken in the sciences as well as experimental work taken in courses within the School of Engineering can be used in fulfillment of this requirement. By careful planning, the experimentation requirement should not necessitate additional course work beyond that required to meet the other components of an engineering major. A list of courses and their experimentation content (in units) can be found online at http://ughb.stanford.edu in the 1999-2000 Handbook for Undergraduate Engineering Programs.

Students must be enrolled in at least 14 units to count as full time. Full time students must take a minimum of 40 units to graduate within four years. The applications elective must be chosen from the following set: CS 145, 147, 148, 223 A, 223 B, or 248. The systems electives must include a course with a large software project, currently satisfied by either CS 140 or 143. The applications elective must be chosen from the following set: CS 145, 147, 148, 223A, 223B, or 248.

**Engineering Fundamentals**

Mathematics: 21 units minimum*(See Basic Requirement 1)

Science: 20 units minimum† (See Basic Requirement 2)

Technology in Society: one course (See Basic Requirement 4)

**Engineering Depth:**

Mathematics: 24 units minimum*

Science: 20 units minimum†

Engineering Fundamentals**: (See Basic Requirement 3)

Technology in Society: one course (See Basic Requirement 4)

---

**Electrical Engineering (EE)**

Total Core Units:

- Circuits and Systems: EE 101, 102, 103
- Electronics: EE 111, 112, 113
- Laboratory: EE 121, 122
- Technical Writing: Engr. 102E
- Fields and Waves: EE 141
- Total Core Units: 33

Specialty courses†

One course in Design***

Electrical Engineering electives

Total: 52

---

**Industrial Engineering (IE)**

Mathematics: 22 units minimum* (See Basic Requirement 1)

---

**Mechanical Engineering (ME)**

Mathematics: 24 units minimum* (See Basic Requirement 1)

Science: 18 units minimum* (See Basic Requirement 2)

Engineering Fundamentals (five courses): (See Basic Requirement 3)

Technology in Society (one course): (See Basic Requirement 4)

Electro-Mechanical Engineering (ME)

Total Specialty Units 9-12 units

---

Basic Requirements

**Basic Requirement 1 (Mathematics)**—Engineering students need a solid foundation in the calculus of continuous functions including differential equations, an introduction to discrete mathematics, and an understanding of statistics and probability theory. The minimum preparation should normally include calculus to the level of Mathematics 43. Knowledge of ordinary differential equations and matrices is important in many areas of engineering, and students are encouraged to select additional courses in these topics. To meet ABET accreditation criteria, a student’s program must include the study of differential equations.

Courses that satisfy the mathematics requirement are listed online at http://uengineer.stanford.edu in the Handbook for Undergraduate Engineering Programs.

**Basic Requirement 2 (Science)**—A strong background in the basic concepts and principles of natural science in such fields as physics, chemistry, geology, and biology is essential for engineering. Most students include the study of physics and chemistry in their programs. To meet ABET accreditation criteria, a student’s program must include study of both chemistry and physics, with at least one year’s study in one of them.

Courses that satisfy the science requirement are listed online at http://uengineer.stanford.edu in the Handbook for Undergraduate Engineering Programs.

**Basic Requirement 3 (Engineering Fundamentals)**—The Engineering Fundamentals requirement is satisfied by a nucleus of technically
rigorous introductory courses chosen from the various engineering disciplines. It is intended to serve several purposes. First, it provides students with a breadth of knowledge concerning the major fields of endeavors or within engineering. Second, it allows the incoming engineering student an opportunity to explore a number of courses before embarking on a specific academic major. Third, the individual classes each offer a reasonably deep insight into a contemporary technological subject for the interested non-engineer.

The requirement is met by taking five courses from the following list:

- Engr. 10. Introduction to Engineering Analysis
- Engr. 20. Introduction to Chemical Engineering
- Engr. 25. Biotechnology
- Engr. 30. Engineering Thermodynamics
- Engr. 40. Introductory Electronics
- Engr. 50. Introductory Science of Materials
- Engr. 60. Engineering Economics
- or Engr. 61. Introduction to Optimization
- Engr. 70A or 70X. Introduction to Software Engineering

* Engr. 40 and 50 may be taken on video at some of Stanford's Overseas Centers.

**Basic Requirement 4 (Technology in Society)** — It is important for the student to obtain a broad understanding of engineering as a social activity. To foster this aspect of intellectual and professional development, all engineering majors must take one course devoted to exploring issues arising from the interplay of engineering, technology, and society. Courses that fulfill this requirement are listed online at [http://ahub.stanford.edu](http://ahub.stanford.edu) in the Handbook for Undergraduate Engineering Programs.

**MINORS**

An undergraduate minor in Engineering may be pursued by interested students in many of the school’s departments; consult with a department’s undergraduate program representative, or the Office of Student Affairs, Terman Engineering Center, room 208. General requirements and policies for a minor in the School of Engineering are: (1) a set of courses totaling not less than 18 and not more than 36 units, with a minimum of six courses of at least 3 units each; (2) the set of courses should be sufficiently coherent as to present a body of knowledge within a discipline or subdiscipline; (3) prerequisite mathematics, statistics, or science courses, such as those normally used to satisfy the school’s requirements for a department major, may not be used to satisfy the requirements of the minor; conversely, engineering courses that serve as prerequisites for subsequent courses must be included in the unit total of the minor; (4) departmentally based minor programs are structured at the discretion of the sponsoring department, subject only to requirements 1, 2, and 3 above. Interdisciplinary minor programs may be submitted to the Undergraduate Council for approval and sponsorship. A “General Engineering” minor is not offered.

**AERONAUTICS AND ASTRONAUTICS (AA)**

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems and their many spinoff technologies. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro advisor can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

<table>
<thead>
<tr>
<th>Course No. and Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>AA 100. Introduction to Aeronautics and Astronautics</td>
<td>3</td>
</tr>
<tr>
<td>Engr. 14. Statics</td>
<td>5</td>
</tr>
<tr>
<td>Engr. 15. Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>Engr. 30. Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>Mech. Engr. 33. Introductory Fluids</td>
<td>4</td>
</tr>
<tr>
<td>Mech. Engr. 131A. Heat Transfer</td>
<td>5</td>
</tr>
<tr>
<td>Core Total</td>
<td>12-25</td>
</tr>
</tbody>
</table>

* Engr. 14, 15, or 30 are waived as minor requirements if already taken as part of the major.

The following courses are upper-division electives:

- Two courses from one of the elective areas below
- One course from a second area
- Program Total

**CHEMICAL ENGINEERING (CHEM. ENGR.)**

The following courses fulfill the minor requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chem. Engr. 100. Chemical Process Modeling, Dynamics, and Control</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 110. Equilibrium Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 120A. Fluid Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>Chem. Engr. 120B. Energy and Mass Transport</td>
<td>4</td>
</tr>
<tr>
<td>Chem. Engr. 140. Microlithography Technology</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 150. Biochemical Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 160. Polymer Science and Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 185A. Chemical Engineering Lab</td>
<td>3</td>
</tr>
<tr>
<td>Chem. Engr. 185B. Chemical Engineering Lab</td>
<td>3</td>
</tr>
<tr>
<td>Chem. 171. Physical Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>Engr. 20. Introduction to Chemical Engineering</td>
<td>3</td>
</tr>
<tr>
<td>Total</td>
<td>35</td>
</tr>
</tbody>
</table>

**CIVIL ENGINEERING (CE)**

The Civil Engineering minor is intended to give students an in-depth introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Environmental Water Studies, Construction Engineering and Management, and Structural Engineering. The necessary prerequisites for a civil and environmental engineering minor are Physics 41 and Mathematics 141, 42, and 43. Students should recognize that a minor in Civil Engineering is not an ABET-accredited degree program.

Since civil engineering is a very broad field and undergraduates having widely varying backgrounds may be interested in obtaining a civil and environmental engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below; this list must be officially approved by the CE undergraduate minor adviser. Additional information on preparing a minor program, including “example” programs focusing on each of the areas of expertise listed above is available in the CEE office (Terman M-42). While each example program focuses on a different area of expertise within the department, other combinations of courses are also possible.

General guidelines are:

1. A CE minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another.
3. Professor Street (Terman M-17; phone: 3-4969; e-mail street@ce) is the CE undergraduate minor adviser, and provides guidance and advice. Students must consult with Professor Street in developing their minor program, and obtain approval of the finalized study list from him.

**COMPUTER SCIENCE (CS)**

The following courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through Math. 51.

**Introductory Programming**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 106A-B. Programming Method/Abstractions</td>
<td>10</td>
</tr>
<tr>
<td>or CS 106X. Programming Method/Abstractions (Accelerated)</td>
<td>5</td>
</tr>
</tbody>
</table>

(AP Credit may be used to fulfill this requirement)
MATERIALS SCIENCE AND ENGINEERING (MSE)

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements.

Fundamentals:
- Engr. 50. Introductory Science of Materials
- MSE 151. Microstructure and Mechanical Properties
- MSE 152. Electronic Materials Engineering

Electives: four courses from the MSE Core (16 units)
- MSE 191. Mathematical and Computational Methods in Materials Science
- MSE 192. Solid State Thermodynamics
- MSE 193. Atomic Arrangements in Solids
- MSE 194. Phase Equilibria
- MSE 195. Waves and Diffraction in Solids
- MSE 196. Imperfections in Crystalline Solids
- MSE 197. Rate Processes in Materials
- MSE 198. Mechanical Properties of Materials
- MSE 199. Electrical and Magnetic Properties of Solids
THE HONORS COOPERATIVE PROGRAM

A number of industrial firms, government laboratories, and other organizations participate in the Honors Cooperative Program (HCP), a program that permits qualified professional employees of member companies to register for Stanford courses and obtain a graduate degree on a part-time basis.

The courses are offered by the School of Engineering on campus or through the Stanford Instructional Television Network (SITN). SITN broadcasts approximately 200 courses a year over a five-channel system to 250 corporate sites in the San Francisco and Silicon Valley area. This program enables students to receive live courses and interact by means of a telephone talkback system from their corporate location. Students outside the local broadcast range may pursue their graduate degree by participating in SITN's Tutored Videotape Instruction (TVI) Program. SITN offers additional programs to member companies such as Non-Credit Option (NCO), Audit Option, several certificate programs, short courses, and course licensing. For a full description of educational services provided by SITN, telephone (650) 725-3000; fax (650) 725-2868; write 401 Durand Bldg., Stanford, CA 94305-4036; or send electronic mail to na.itv@forsythe.stanford.edu.

ENGINEERING BIOLOGY AND MEDICINE

Stanford does not have a formal department of bioengineering; however, there are several faculty in the School of Engineering whose primary research activities are in this general area. There are many opportunities in the medical and biological sciences for collaboration. Individually designed B.S. majors in bioengineering can be arranged. The faculty working in bioengineering are in various departments of the School of Engineering; a list of their names, together with a summary of their research interests, is available from the committee chair.

Students interested in pursuing graduate study in bioengineering apply for admission and financial aid to the appropriate department on the grounds of their previous training and future interests. Their applications are judged on substantially the same ground as other applicants to the department.

In addition to the standard engineering department degrees, the degree of MSE: Biomedical Engineering is offered. Details on this program and subsequent Ph.D. studies can be obtained from the Biomedical Engineering Division, Department of Mechanical Engineering.

The research being conducted in the field of bioengineering within the various departments reflects the technological emphasis of those departments. For instance, research on immobilized microbial cell function and physiology in compact bioreactors, protein absorption from sheared suspensions onto polymer films, protein conformation at fluid/polymer interfaces, and factors that influence growth and product formation in genetically engineered mammalian cells is pursued in the Department of Chemical Engineering. Faculty in Mechanical Engineering are doing research on aids for the disabled, bone mechanics, the mechanics of hearing, neuromuscular dynamics, orthopedic biomechanics, and rehabilitation engineering. Cardiovascular dynamics and hemodynamics are being studied in Computer Science. In Electrical Engineering, advanced analysis techniques are applied to signal processing EKG, EEG, and x-ray image. Many research projects are carried out in collaboration with faculty of the Medical School or members of the local medical community.

Both the master's and the Ph.D. degree are ordinarily awarded by a particular department, and the candidate must meet the degree requirements of that department. The student's adviser assists in constructing a program of study incorporating appropriate courses in biology and medicine that also satisfy the degree requirements of the department in which the student is registered.

A student wishing to earn the M.S. in Engineering while pursuing the M.D. degree must apply separately for admission to the M.D. program and an engineering department. If the student is admitted to both, each school will encourage his or her pursuit of the other degree.

In addition to the financial support available through the departments in the form of fellowships, research assistantships, and teaching assistantships, there are externally administered fellowship programs for the support of graduate study in health-related fields. In particular, both the National Institutes of Health and the National Science Foundation offer such fellowships based on national competition.

MANUFACTURING

Programs in manufacturing are available at the undergraduate, master's, and Ph.D. level. Master's programs are offered by the departments of Civil and Environmental Engineering, Industrial Engineering and Engineering Management (IEEM), and Mechanical Engineering. The Manufacturing Systems Engineering (MSE) program is jointly offered by IEEM and Mechanical Engineering. The M.B.A./MSE Dual Degree program is offered by the School of Engineering and Graduate School of Business in partnership. The Construction Engineering and Management program, offered by the Department of Civil and Environmental Engineering, is also a "manufacturing" program for students interested in facility and public works manufacturing. All of these programs take advantage of modern computer technology.

Doctoral programs related to manufacturing are available in a number of departments and involve research projects ranging from machine tool design to the integration of databases into production software.

The Future Professors of Manufacturing (FPM) program prepares graduates for university faculty careers with an emphasis on manufacturing. Candidates are first admitted to a Ph.D. program in a department of the School of Engineering or the Graduate School of Business, and then interested students may be nominated for the FPM program by the department.

For detailed information about the master's and Ph.D. programs, see the sections of this bulletin pertaining to industrial, mechanical, and civil and environmental engineering. For more information on the MSE program, contact the Design Division of Mechanical Engineering. For information on the M.B.A./MSE Dual Degree program and on the FPM Ph.D. program, contact the Alliance for Innovative Manufacturing at Stanford (AIM). Inquiries by email may be addressed to sima-info@simahai.stanford.edu. For more information on manufacturing research and education in engineering, browse the AIM Web pages at http://www-sima.stanford.edu/ and the Web pages for departments.

CURRICULA

For further details about the following programs, see the department sections in this bulletin.

Related aspects of particular areas of graduate study are commonly covered in the offerings of several departments and divisions. Graduate students are encouraged, with the approval of their department advisers, to select courses in departments other than their own to achieve a broader appreciation of their field of study. For example, most departments in the school offer courses concerned with properties of materials, and a student interested in an aspect of materials engineering can often gain appreciable benefit from the related courses given by departments other than her or his own.

Departments and divisions of the school offer graduate curricula as follows.

AERONAUTICS AND ASTRAONAUTICS

The current research and teaching activities cover a number of advanced fields, with special emphasis on:

- Active Noise Control
- Aerodynamic Noise
- Aerocclusion
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Biomedical Mechanics
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Structures/Materials Systems Optimization
- Direct and Large Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hypersonic and Supersonic Flow
Inertial Instruments
Multidisciplinary Design Optimization
Navigation Systems (especially GPS)
Optical Diagnostics in Fluid Dynamics
Optimal Control, Estimation, System Identification
Physical Gas Dynamics
Robust Control of Flexible Spacecraft
Spacecraft Design and Satellite Engineering
Shock Tube Studies of Vortex Interactions
Turbulent Flow and Combustion

CHEMICAL ENGINEERING
Applied Statistical Mechanics
Biocatalysis
Biochemical Engineering and Biophysics
Computational Materials Science
Colloid Science
Dynamics of Complex Fluids
Hydrodynamic Stability
Kinetics and Catalysis
Newtonian and Non-Newtonian Fluid Mechanics
Polymer Physics
Protein Biotechnology
Semiconductor Processing
Surface and Interface Science

CIVIL AND ENVIRONMENTAL ENGINEERING
Construction Engineering and Management
Design/Construction Integration Design/Construction Integration
Environmental and Water Studies
Environmental Engineering and Science
Environmental Fluid Mechanics and Hydrology
Structural Engineering and Geomechanics
Geomechanics
Structural Engineering

COMPUTER SCIENCE
Analysis of Algorithms
Artificial Intelligence
Automated Deduction
Autonomous Agents
Complexity Theory
Computational Geometry
Computer Architecture
Computer Graphics
Computer Security
Computer Vision
Database Systems
Design Automation
Digital Libraries
Distributed and Parallel Computation
Formal Verifications
Haptic Display of Virtual Environments
Human-Computer Interaction
Image Processing
Knowledge-Based and Expert Systems
Knowledge Representation and Logic
Mathematical Theory of Computation
Multi-Agent Systems
Networks and Distributed Systems
Operating Systems
Programming Systems/Languages
Reasoning under Uncertainty
Robotics
Scientific Computing and Numerical Analysis
Software Engineering

ELECTRICAL ENGINEERING
Computer Hardware
Computer Software Systems
Control and Systems Engineering
Communication Systems
Electronic Circuits
Electronic Devices, Sensors, and Technology
Fields, Waves, and Radioscience
Lasers, Optoelectronics, and Quantum Electronics
Network Systems
Image Systems
Signal Processing
Solid State Materials and Devices
VLSI Design

ENGINEERING
Interdepartmental Programs
Interdisciplinary Programs

ENGINEERING IN BIOLOGY AND MEDICINE
Biostatistics
Design for Medical Applications
Information Processing in and for Biomedical Systems
Mechanics of Hearing
Medical Imaging
Neuromuscular Biomechanics
Orthopedic Biomechanics
Rehabilitation Engineering
Transport Phenomena in Biological Systems

ENGINEERING-ECONOMIC SYSTEMS AND OPERATIONS RESEARCH
Business and Technology
Complementarity Problems and Equilibrium Programming
Decision Analysis
Dynamic Programming
Energy, Natural Resources, and the Environment
Intelligent Systems
Inventory Management
Investment
Lattice Programming
Management of Projects
Medical Policy
National Security Policy
Network Optimization, Design, and Equilibria
Numerical Optimization
Organizational Analysis
Performance Evaluation
Simulation Methodology
Stochastic Optimization
Stochastic Modeling and Queueing Analysis
Systems Economics
Telecommunications and Information Policy
Transportation Systems
Underground Mining

INDUSTRIAL ENGINEERING AND ENGINEERING MANAGEMENT
Financial Decisions
Inventory Control
Manufacturing Systems
Organizational Design and Control
Production and Operating Systems
Quality Assurance
Risk Analysis
Technology Management
The M.S. degree is conferred on graduate students in engineering according to the University regulations stated in the “Graduate Degrees” section of this bulletin, and is described in the various department listings. A minimum of 45 units is usually required in M.S. programs in the School of Engineering. However, the presentation of a thesis is not a requirement.

The M.S. degree is awarded at the completion of a comprehensive two-year program of graduate study. It is intended for students who desire more graduate training than can be obtained in an M.S. program. The program of study must satisfy the student’s department and usually includes 90 units beyond the B.S. degree, of which at least 60 must be devoted to advanced or graduate study in the major subject or closely related subjects. The presentation of a thesis is required. The University regulations for the Engineer degree are stated in the “Graduate Degrees” section of this bulletin, and further information is found in the individual departmental sections of this bulletin.

DOCTOR OF PHILOSOPHY

Programs leading to the Ph.D. degree are offered in each of the departments of the school. Special Ph.D. programs, which may be interdisciplinary in nature (for example, Bioengineering), can be arranged. University regulations for the Ph.D. are given in the “Graduate Degrees” section of this bulletin. Further information is found in departmental listings.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

The following “Engineering” courses deal with subject areas within engineering that are, in their essential nature, broader than the confines of any particular branch of engineering. These courses are taught by professors from several departments of the School of Engineering, under the supervision of those listed below.

Of the courses described in this section, many are of general interest to both engineering and nonengineering students. In addition, certain departmental courses are of general interest and without prerequisites.

Students interested in the interactions between technology and society should also consult the “Science, Technology, and Society” section of this bulletin.

PRIMARILY FOR UNDERGRADUATES

3 units, Aut (Freyberg)

10. Introduction to Engineering Analysis—Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical
solutions of linear algebraic, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses.

4 units, Spr (Staff)

11. Engineering Mechanics Online I—First of a two-part sequence offered on TV. Newton/Euler principles of mechanics and their application to problems of practical interest. Vector operations; introduction to the symbol manipulation computer program AUTOLEV; bound vectors; moments, couples, torques; zero sets of bound vectors; centroids and mass centers; forces and equilibrium; differentiation of vectors in reference frames; kinematics of rigid bodies and particles. Extensive opportunities for one-on-one interaction with the instructor during office hours and by means of e-mail. Prerequisite: Mathematics 23 or 43. 3 units, Win (Kane)

12. Engineering Mechanics Online II—Second two-part sequence offered on TV. Newton/Euler principles of mechanics and their application to problems of practical interest. Kinematics of rigid bodies and particles, dyadics, inertial properties of rigid bodies and sets of particles, inertia forces and inertia torques, Newtonian reference frames, motion of a particle and of a rigid body in the vicinity of an Earth-fixed point, constrained particles and rigid bodies, multidof system. Extensive opportunities for one-on-one interaction with the instructor during office hours and by means of e-mail. Prerequisite: 11. 3 units, Spr (Kane)

14. Applied Mechanics: Statics and Deformables—Introduction to engineering mechanics (freebody diagrams, equilibrium, trusses, frames, cables, internal forces, shear and bending moment, stress and strain, Hooke's law, Mohr's circle, Poisson's ratio, and torsion of circular sections). Alternates between concepts of statics and solid mechanics, explaining where static and elastic assumptions are valid, and emphasizing the modeling of physical systems and design of simple members and structures in two dimensions. Problem sessions. Prerequisite: Physics 41. GER:2b (DR:6) 5 units, Aut (F. Chang) Spr (Staff)

15. Dynamics—Application of Newton's Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Problem sessions. Prerequisites: Mathematics 23 or 43, Physics 41. GER:2b (DR:6) 5 units, Aut (Rock)

20. Introduction to Chemical Engineering—Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, production of chemicals, materials processing, and purification. Prerequisite: Chemistry 31. GER:2b (DR:6) 3 units, Spr (Robertson)

25. Biotechnology—The interplay between applied recombinant DNA technologies and engineering principles in designing, developing, manufacturing, and formulating novel drugs for therapeutic purposes. Emphasis is on understanding the role of engineering in modern biotechnology. Case study perspective. A drug is identified and tracked from the initial phases of drug discovery to sequencing, cloning, scale-up in cell culture, purification and separation, and formulation. Regulatory issues in manufacturing and in clinical trials. Project-oriented. Recommended: some prior exposure to chemistry and biology. GER:2b (DR:6) 3 units, Aut (Robertson)

30. Engineering Thermodynamics—Introduction to the concepts of energy and entropy from elementary considerations of the microscopic nature of matter. Use of basic thermodynamics concepts in the solution of engineering problems. Methods and problems in the socially responsible economic generation and utilization of energy in central power stations, solar systems, gas turbine engines, refrigeration devices, automobile engines, etc. Prerequisites: Mathematics 19, 20, 21 or 41, 42 and Physics 41 or equivalent. GER:2b (DR:6) 3 units, Aut (Mungall) Win (Edwards)

40. Introductory Electronics—Overview of electronic engineering. Electrical quantities, and their measurement, including the operation of the oscilloscope. The basic function of electronic components including ideal diodes and transistors. Digital logic circuits and their functions including the elementary microprocessor. Analog circuits including the operational amplifier and tuned circuits. Lab assignments complement lecture. Enrollment limited to 200. Lab. Prerequisites: 43, 45. GER:2b (DR:6) 5 units, Aut (Pease) Spr (Khuri-Yakub)

50. Introductory Science of Materials—Crystaline structure and the microstructures that determine the important physical properties of engineering materials. Introduction to phase diagrams and their use in predicting phase changes in materials. Elementary treatment of diffusion and of the kinetics of reactions in solids. Discussion of methods for controlling the properties of engineering materials by controlling internal structure. May be taken on video at some of Stanford's Overseas Centers; see "Overseas Studies." GER:2b (DR:6) 4 units, Win (Braverman) Spr (Sinclair)

60. Engineering Economy—May be taken by freshmen, but recommended for second year or higher students Economic analysis for choice among alternatives. Use of compound interest calculations. Selection of appropriate minimum attractive rates of return. Effects of depreciation, sources of funds, and income tax. Analysis of decisions under uncertainty. Prerequisite: Mathematics 41 or equivalent. Recommended: previous knowledge of elementary probability. 3 units, Aut, Win (Jucker) Sum (Bhimjee)

62. Introduction to Optimization—Theory and computation of optimal selection of decisions under certainty. Linear programming, network optimization models, dynamic programming, non-linear programming, integer programming. Applications from a variety of areas, emphasizing high-level problems frequently faced by industrial engineers and management scientists. Prerequisite: Mathematics 43 or consent of instructor. GER:2b (DR:6) 4 units, Aut, Spr (Staff)

63Q. Stanford Introductory Seminar: Engineering Applications in Medicine—Preference to sophomores. Introduction to the application of engineering to problems in medicine and health care. Topics: applications of engineering mathematics, systems analysis, and decision analysis to health policy problems; assessment of medical technologies; risk analysis applications in medicine; computer science applications in medicine (e.g., decision support systems); applications of biochemical engineering; design and engineering for medical instrumentation; mechanical and electrical engineering applications in medicine (e.g., advanced prostheses, mechanical ears, implantable defibrillators, electrical nerve replacements); and aerospace medicine. 3 units (Brandeau, Owens) given 2000-01

70A. Programming Methodology—(Enroll in Computer Science 106A.) 5 units, Aut (Roberts) Win (Zelenkski) Spr (Staff)
100. Teaching Public Speaking—The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor. 5 units, Aut, Win, Spr (Lougee, Staff)

102E. Technical/Professional Writing for Electrical Engineers—Required of Electrical Engineering majors. Examines the process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Pre- or corequisite: Electrical Engineering 121, or consent of instructor. (WIM) 1 unit, Win, Spr (Lougee)

102M. Technical/Professional Writing for Mechanical Engineers—Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Pre- or corequisite: Mechanical Engineering 103, or consent of instructor. (WIM) 1 unit, Aut, Win (Lougee)

102S. Writing: Special Projects—Structured writing instruction for students working on non-course related materials (theses, dissertations, journal articles). Weekly individual conferences. 1-5 units, Aut, Win, Spr (Staff)

102W. Technical and Professional Writing—Explores, systematically, the process of writing technical and professional documents. Lectures/discussions on analyzing audiences; defining purpose; generating and selecting appropriate report materials; structuring and designing clear and convincing reports; drafting effective reports; and editing reports that are clear, concise, emphatic, and mechanically and grammatically "clean." Weekly writing assignments and individual conferences. 3 units, Aut, Win, Spr (Lougee)

103. Public Speaking/Presentation Development—Priority given to Engineering students. Introduction to the full range of speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches for a variety of occasions, analyze audiences, create and use appropriate visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Students become confident speakers through weekly practice in class, rehearsals in one-on-one tutorials, and videotaped feedback. Enrollment limited. 3 units, Aut, Win, Spr (Staff)

105. Feedback Control Design—Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: 104, Electrical Engineering 102, or Mechanical Engineering 161. 3 units, Aut (Enge) Win (Franklin)

120. Fundamentals of Petroleum Engineering—(Same as Petroleum Engineering 120.) Lectures, problems. Basic engineering topics in petroleum discovery and recovery; and the origin, discovery, and development of oil and gas. The chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single- and multiphase flow through porous media. 3 units, Aut (Hewett)

130. Science, Technology, and Contemporary Society—(Same as Science, Technology, and Society 101.) Analysis of the interplay of science, technology, and society in the contemporary U.S. Topics: the key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as socio-technical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology. Optional section for extra unit. GER:3b (DR:9) 4-5 units, Aut (McGinn)

131. Ethical Issues in Engineering—(Same as Science, Technology, and Society 115.) Ethical issues in contemporary engineering practice. Topics: the moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Use of real-life case studies, guest practitioners, and field research. Limited enrollment. 4 units (McGinn) not given 1999-2000

140A. Management of Technology Ventures—First of three-part sequence only for students selected to the Mayfield Fellows Program. Functional management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and building strategies, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, start-up founders, and venture capitalists participate as appropriate. No auditors. Recommended: accounting or finance course (Industrial Engineering 133, Economics 90, or Engineering 60). 4 units, Spr (Byers)

140B. Management of Technology Ventures—Open to Mayfield Fellows only; taken during the summer work tour at a technology startup. Students meet to exchange experiences and continue the formal learning process, and keep a journal of activities. Credit given following quarter. No auditors. 1 unit, Aut (Byers)

140C. Management of Technology Ventures—Open to Mayfield Fellows only. Allows students, faculty, employers, and venture capitalists to share and compare recent co-op experiences and analytical
frameworks. Students develop “living” case studies and integrative project reports. No auditors.

145. Introduction to High Technology Entrepreneurship—Primarily for undergraduates in engineering; preference to seniors. High-level overview of the entrepreneurial process, enterprise, and individual. For those who would like to form or grow a technology company, and those with a general interest in the field. Weekly assignments, case studies, lectures, and projects. No auditors.

3 units, Win (Byers)

151. French Media and Communications—(Enroll in French 127.) Note: the first of the Technological and Scientific French series is French 126. See the “French and Italian” section in this bulletin.

3-4 units, Win (Giraud)

152. Technocritique—(Enroll in French 128.)

3-5 units (Dupuy) not given 1999-2000

4 units, Aut (Fierziger) Spr (Lele)

4 units, Win (Moin)

159Q. Stanford Introductory Seminar: Research in Japanese Companies—Preference to sophomores. The home-campus equivalent of the Kyoto course. Knowledge from this research, and company visits, is evaluated in a seminar/discussion setting. Lecture/discussion on the structure of a Japanese company from the point-of-view of Japanese society. Visiting researchers from Japanese companies, with brief presentations and extensive question and answer periods, explore the Japanese research ethic.

3 units, Spr (Sinclair)

199. Special Studies in Engineering—Special studies, lab work, or reading under the direction of a faculty member. Often research opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. Prerequisite: consent of instructor.

1 or more units, any quarter (Staff)

PRIMARILY FOR GRADUATE STUDENTS

205. Introduction to Control Design Techniques—Review of root-locus and frequency response techniques for control system and analysis, and synthesis. Introduction to: digital control design and the z-transform; state-space techniques modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105; Mathematics 103, 113. Recommended: knowledge of Matlab.

3 units, Aut (Tomlin)

4 units, Win (Tomlin)

207A. Modern Control Design I—Design and analysis of digital controllers using classical and state space techniques. Discretization of continuous systems, z-transforms, and digital design. Pole placement and optimal quadratic regulators for single-input/single-output and multiple-input/multiple-output discrete systems. Discrete observers and optimal estimators. Simple lab experiments on mechanical systems. Prerequisites: 205; Mathematics 103 or Mechanical Engineering 200A.

3 units, Win (Rock)

207B. Modern Control Design II—Design of optimal controllers and estimators for systems with stochastic disturbances. Basic probability theory, identification techniques, recursive filtering, duality, and properties of optimal regulators. Sensitivity, robustness, and design trade-offs. Extensions to other cost functions. Lab experiments on computers connected to mechanical systems. Prerequisite: 207A. Recommended: Electrical Engineering 278 or Statistics 116.

3 units, Spr (Tomlin)

3 units, Win (Tomlin)

3 units, Win (How) alternate years, not given 2000-01

3 units, Aut (How) alternate years, not given 2000-01

220A. 3 units, Aut (T. P. Liu)

220B. 3 units, Win (T. P. Liu)

220C. 3 units, Spr (Chou)
235A.B. Space Systems Engineering—40-50 students, mostly from engineering and science, but also from business and political science, form a team to prepare a preliminary design study of a space system. Recently, international engineers have joined the team to define an initiative to put humans on Mars by 2010. Continued studies with Japan, Russia, and Europe define space vehicles for the missions. About 20 invited speakers from government and industry give the necessary background information. At the end of the second quarter, the class gives a verbal briefing to government and industry representatives and publishes a final report on the system. Prerequisite: senior or graduate standing in Engineering or Physics, or consent of instructor.

235A. 3 units, Win (Lusignan)
235B. 3 units, Spr (Lusignan)

290. Graduate Environment of Support—Discussion by guest faculty, advanced graduate students, specialists from industry and government, and dean’s office. Topics and information related to adapting graduate study to the environment in terms of psychosocial, financial, and career issues. How these relate to diversity, affirmative action and minority services, resources, policies, and procedures. Readings and observation participation sessions. (AU)

1 unit, Aut (Lozano, Mitchell, Mungal)

297A,B,C. Ethics of Development in a Global Environment (EDGE)—(Same as Cultural and Social Anthropology 133A,B,C.) Wednesday evening seminars on world affairs mostly on issues affecting poor nations. Autumn Quarter treats war and peace: the background of current nations. Autumn Quarter treats war and peace: the background of current wars and peace negotiations, the UN peace keeping efforts, war and religion, arms trade. Winter Quarter treats international resources and commerce: the debt crisis, environmental protection, resource depletion, Japan in the world economy, aid and monetary institutions. Spring Quarter treats "poverty and prejudice": development models, comparative national health, AIDS, control of wealth, India-China-Africa-S. America today. Speakers from Stanford and other institutions are experts who directly deal with world policy makers through research and advisory activities. One unit credit for attendance of the speaker series; 3 units additional credit for optional workshops treating selected issues in more depth. (Sequential registration not required.)

1-4 units, Aut, Win, Spr (Lusignan, Gupta)

298. Seminar in Fluid Mechanics—Interdepartmental seminar on problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks.

1 unit, Aut (Homsy)
Win (Jameson)
Spr (Cantwell)

299. Special Studies in Engineering—Special studies, lab work, or reading under the direction of a faculty member. Students enroll in the section number corresponding to the particular faculty member. Prerequisite: consent of the instructor.

1 or more units, any quarter (Staff)

310A. Tools for Team-Based Design—(Same as Mechanical Engineering 310A.) For graduate students; open to limited SITN/global enrollment. Project-based, exposing students to the tools and methodologies useful for forming and managing an effective engineering design team in a business environment, including product development teams that may be spatial across the world. Topics: personality profiles for creating teams with balanced diversity; computational tools for project coordination and management; real time electronic documentation as a critical design process variable; and methods for refining project requirements to ensure that the team addresses the right problem with the right solution. Computer-aided tools are employed for supporting geographically distributed teams. The final project analyzes a set of industry-sponsored design projects for consideration in 310B.C. The investigation includes benchmarking and meetings with industrial clients. The deliverable is a detailed document with specifications for the project and the optimal design team that should work on the project in subsequent quarters. Limited enrollment, consent of instructor for off-campus (global) registrants.

4 units, Aut (Cutkosky)

310B,C. Design Development Experience with Corporate Partners—(Same as Mechanical Engineering 310B,C.) Two-quarter project for graduate students who already have some design experience and want in-depth involvement in an entrepreneurial design team with real world industrial partners. The products developed are part of the student’s portfolio. For some projects, 217 and 218 may be prerequisites or corequisites (see http://me310.stanford.edu for admission guidelines). Each team functions like a small start-up company, working closely with a technical advisory board, consisting of the instructional staff and a coach. Teams use computer-aided tools for project management, communication, and documentation, and are provided a budget for direct expenses including hiring technical assistants and conducting tests. Teams interact with corporate liaisons weekly via site visits, video conferencing, email, fax, and phone. Hardware demonstrations, peer reviews, scheduled documentation releases, and an intense team environment provide the mechanisms and culture for design information sharing. Enrollment by consent of instructor and depends on the results of a pre-enrollment survey in December and the recommendations made by project definition teams in 310A.

4-5 units Win, Spr (Cutkosky)

610. Manufacturing Systems Analysis—(Same as Business T610.) Causal models of material flow in manufacturing systems. Topics: capacity and capacity utilization; functions of inventory; the manufacturing enterprise as a linear economic system; product structure and requirements planning; models of manufacturing response time; product portfolios and manufacturing flexibility. Emphasis is on descriptive modeling.

4 units (Harrison)

611. Understanding Manufacturing Processes—(Same as Business T611.) Provides a framework for understanding the technology of modern manufacturing processes, focusing on the key factors in developing an understanding of any manufacturing process. Topics: underlying microscopic physical and analytical theories; steps that control the performance, quality, and cost of the product; the history of the process; and the potential for improvement through research. Examples of fabrication processes (e.g., semiconductor devices, precision machining).

4 units (Cutkosky, Wood) not given 1999-2000

612. Manufacturing Organization—(Same as Business T612.) Overview of organization theory, research, and research methods relevant to the study of manufacturing systems. Conceptual domains include selection, socialization, promotion systems, reward systems, job design, creativity, innovation, social networks, group problem-solving, and the relationship between technology and social structure. Research focuses on papers that used organizational theory and methods to understand behavior of, and in, manufacturing settings.

4 units (Staff) given 2000-2001

613. Design for Manufacturability—(Same as Business T613.) Structured methodologies of the DFM process, emphasizing the pivotal role of design in manufacturing effectiveness. Topics: the initial stages of the concurrent engineering process including functional analysis, benchmarking, quality function deployment, value analysis, cost drivers, design for assembly and serviceability, design for process, and advanced research issues on these topics. Projects involve independent study of the design and manufacture of a product currently in production leading to a new product definition offering improved competitive advantage.

4 units (Ishii) not given 1999-2000

614. Manufacturing Performance Measurement—(Same as Business T614.) Managerial accounting as a discipline is devoted to modeling
manufacturing processes and representing physical events in economic terms: fundamental issues in measurement theory, cost-volume-profit analysis, activity-based costing, variance analysis, and the costs and benefits of flexibility. Finance functions: capital investment in technology, interactions with the financial markets, capital structure, and taxation. Quality, where modeling of economic effects is a relatively recent phenomenon: statistical process control, cost of quality measures, ISO 9000, the Baldrige Award process, and environmental protection.

615. Manufacturing Information and Coordination—(Same as Business T615.) Systems for sharing information, coordinating activities, and aligning different objectives in a manufacturing organization. Cross-functional coordination, goal conflicts among agents, design of incentives, resource allocation. The information systems that support coordination activities through a value delivery chain (systems for order entry, master scheduling, requirements planning, product scheduling, and material flow control).

4 units (Patell)

616. Proseminar in Manufacturing Education—(Same as Business T616.) Primarily for the Future Professors of Manufacturing, but open to others with consent of the instructor. Students are exposed to manufacturing topics not covered in traditional courses and which are needed to help them prepare for academic careers in manufacturing. Topics are chosen by the students, who develop many of the presentations and lead many of the discussions. Guest speakers from government, industry, and academia.

1 unit, Aut, Win, Spr (Reis)

OVERSEAS STUDIES

These courses are approved for the School of Engineering and taught overseas at the campus indicated. Students should discuss with their major department adviser which courses would best meet individual needs. Descriptions are in the "Overseas Studies" section of this bulletin or at the Overseas Studies office, 126 Sweet Hall. Students overseas are also encouraged to participate in an internship as part of their international experience.

INSTRUCTION AND RESEARCH FACILITIES

The work of the department is centered in the William F. Durand Building for Space Engineering and Science. This 120,000 square foot building houses advanced research and teaching facilities and concentrates in one complex the Department of Aeronautics and Astronautics as well as the activities of other engineering organizations allied in space exploration and aerospace technology.

The Global Positioning System (GPS) Laboratory is engaged in research on precise aircraft, spacecraft, and ground vehicle navigation. The laboratory has extensive equipment including approximately 30 carrier phase receivers and has built approximately 20 pseudolites for centimeter level positioning research both inside and outside buildings. A nationwide network of reference stations has been installed for evaluation of the Wide Area Differential GPS concept. The laboratory has performed extensive flight testing in a twin engine aircraft at local airports.

The ARL computing facilities include a dozen Sun workstations for control system design, analysis, and simulation; for real-time software development; for mechanical and electrical CAD; and for documentation. The workstations are complemented by a collection of real-time control computers networked by the labwide LAN. These microprocessors-based, single-board computers are used in multiprocessor configurations for implementing and testing control algorithms on experimental hardware.

The Guidance and Control Laboratories include a wide spectrum of specialized facilities for making and testing novel instruments of extremely high precision. In addition, students work in laboratories associated with interdepartmental science experiments such as Gravity Probe-B (a gyro test of general relativity), a Space Test of the Equivalence Principle, and an advanced Laser Interferometer Gravity-wave Observatory. Clean facilities, ultra-precision machining, and advanced electronics design and fabrication support the guidance, control, and instrumentation experiments and research in precision machining, for example, quiet hydraulics for actuation and metrology on machines expected to operate with 30 nm precision. Cryogenic gyro test facilities are available in the nearby Varian Physics Building, and Electrical Engineering’s Integrated Circuit Fabrication Facility is adjacent.

The spacecraft design program is a total life-cycle space mission program. The Satellite Systems Development Laboratory (SSDL) provides the opportunity for building, testing, and operating low earth-orbiting microsatellites. Students at the master’s degree level participate in mission planning, project management, spacecraft design, fabrication, testing, launch integration, and mission operations. Students in the engineering and doctoral programs are involved with multyear satellite programs for more complex missions. These programs involve direct interaction with payload customers and industry in both design and operations.

The Aircraft Aerodynamics and Design Group is involved with research in applied aerodynamics and aircraft design. Their work ranges from the development of computational and experimental methods for aerodynamic analysis to studies of unconventional aircraft concepts and new architectures for multidisciplinary design optimization.

The Flows Physics and Computation Division (FPC) is a joint laboratory between the departments of Aeronautics and Astronautics, and Mechanical Engineering. The FPC offers courses in acoustics, aerodynamics, applied mathematics, compressible flow, computational fluid mechanics, numerical analysis, and propulsion.

The goal of the FPC is to carry out basic research leading to the development of improved computational tools and physical models for accurate engineering design, analysis, and control of complex flows. Problems of interest include aerodynamics, electronics cooling, materials processing, planetary entry, power systems, propulsion, and semiconductor manufacturing. Research is conducted in a variety of disciplines including acoustics, chemical reactions, combustion, data display, environmental fluid mechanics, flow control, flow interactions with electromagnetic waves, numerical analysis, plasmas and processing, and scientific computing.

The computational facilities of the FPC include powerful workstations, color displays and reproduction facilities, and direct access to the major national computing facilities of the nearby NASA-Ames Research Center which includes CRAY-C90s and massively parallel supercomputers. The Center for Turbulence Research (CTR), a research consortium between Stanford and NASA, is affiliated with this group. The intellectual atmosphere of the Flow Physics and Computation Division is greatly enhanced from interactions with CTR’s large staff of postdoctoral researchers and distinguished visiting scientists.

Experimental fluid mechanics research is carried out using the facilities of the Aero-Fluid Mechanics Laboratories (AFML). Facilities include several laser sources and flow measuring systems; a high pressure shock tube; a flow visualization water channel; and a temperature stabilized subsonic wind tunnel equipped with a unique free-to-roll, free-to-yaw high angle-of-attack model support system. Collaborative projects with NASA Ames provide Stanford faculty and graduate students access to a variety of large-scale experimental flow facilities. Research is directed at using experimentation to enhance a basic understanding of fluid flow phenomena with application to aeronautical systems including the aerodynamics of high lift systems, new propulsion concepts, and advanced aerodynamic measurement techniques.

The Structures and Composites Laboratories include facilities for studying and testing the behavior of small-scale structures of metal and fiber reinforced composites. Equipment is also available to fabricate structural elements made of composite material using an autoclave, resin transfer molding, and hot press.

The department has over 100 computers in the Durand Building for use in the academic and research programs. Two clusters of Macintoshes and PCs are available for student use, and each research group is equipped with advanced workstations, Macintoshes, and/or PCs. In addition, computer clusters throughout the campus provide access to electronic mail, the WorldWide Web, and time-shared computation via the campus academic computer network. They are available to all students at no cost for their course work or unsponsored research.

The Durand Building also houses faculty and staff offices and several conference rooms. Attached to the building is a modern classroom building equipped for televising lectures; it contains a lecture auditorium.

Through the consortium arrangement between Stanford and the nearby NASA-Ames Research Center, students and faculty have access to one of the best and most extensive collections of experimental aeronautical research facilities in the world, as well as the latest generation of super-computers.

INSTITUTES AND RESEARCH PROGRAMS

At the master’s level, a program in Computational Fluid Dynamics (CFD) is an option within the general structure of the master’s requirements. Students intending to seek a Ph.D. degree with an emphasis on CFD should take the CFD series AA 214A,B,C during their master’s year. Choice of math courses, theoretical and experimental dynamics courses, and electives most suitable for the CFD program should be done in consultation with the student’s advisor. Research topics in CFD are supervised by a number of faculty members in both the Department of Mechanical Engineering and the Department of Aeronautics and Astronautics. Students undertaking theses in CFD generally utilize the large
The Joint Institute for Aeronautics and Acoustics (JIAA) is co-sponsored by Stanford University and NASA-Ames Research Center. The overall purpose of the JIAA is to prepare students for leadership in the nation’s aeronautics enterprise. The institute provides the environment necessary for long-term cooperative research and graduate education in specialized areas of aeronautics and acoustics. Stanford faculty, staff, and students collaborate with center staff on research topics motivated by problems facing the aeronautics industry. Current topics include active flow control, jet noise, aerodynamics and acoustics of high lift systems and application of luminescent paint to aerodynamic measurement.

The Center for Turbulence Research (CTR) is a research consortium for fundamental study of turbulent flows, jointly operated by Stanford and NASA-Ames Research Center. Its principal objective is to stimulate significant advances in the physical understanding of turbulence, leading to improved capabilities for control of turbulence and turbulence modeling for engineering analysis. Emphasis is placed on probing turbulent flow fields, developed by direct numerical simulations and/or laboratory experiments using new diagnostic techniques and mathematical methods, and on concepts for turbulence control and modeling. Although the role of the CTR is to advance the understanding of turbulent flows for aerospace applications, it is an interdisciplinary program; researchers with interest in turbulence are sought from aeronautics, mathematics, meteorology, oceanography, physics, and other areas.

GENERAL INFORMATION

Further information about the facilities and programs of the Department of Aeronautics and Astronautics is available on the World Wide Web (at http://aa.stanford.edu/) or by request from the department’s Student Services Office.

The department has a very active student branch of the American Institute of Aeronautics and Astronautics, which sponsors films covering aerospace topics and monthly socials. It also conducts visits to nearby research, government, and industrial facilities, and sponsors a Young Astronauts Program in the local schools.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Although primarily a graduate-level department, Aeronautics and Astronautics offers an interdisciplinary program in Aeronautics and Astronautics (AA) leading to the B.S. degree in Engineering. For further information, see the “School of Engineering” section of this bulletin and the Undergraduate Handbook, available from the Office of the Dean of Engineering.

Undergraduates interested in aerospace may also elect a minor in Aeronautics and Astronautics. For information about an AA undergraduate minor, see the “School of Engineering” section of this bulletin.

COTERMINAL PROGRAM

This special program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in another field and an M.S. in Aeronautics and Astronautics. General requirements for this program and admissions procedures are described in the “School of Engineering” section of this bulletin. Admission is granted or denied through the departmental faculty Admissions and Awards Committee. A coterminal student must meet the course and scholarship requirements detailed for the M.S. below.

GRADUATE PROGRAMS

Admission—To be eligible to apply for admission to the department, a student must have a bachelor’s degree in engineering, physical science, mathematics, or an acceptable equivalent. Students who have not yet received a master’s degree in a closely allied discipline will be admitted to the master’s program; eligibility for the Ph.D. program is considered after the master’s year (see “Doctor of Philosophy” below). Applications for all degree programs are accepted throughout the year, although applications for fellowship aid must be received and completed by January 15 for the next Autumn Quarter.

Information about admission to the Honors Cooperative Program is included in the “School of Engineering” section of this bulletin.

Further information and application forms may be obtained from Graduate Admissions, the Registrar’s Office (http://www.stanford.edu/dept/registrar/admissions/).

Waivers and Transfer Credits—Students may receive departmental waivers of required courses for the M.S. degree in Aeronautics and Astronautics by virtue of substantially equivalent and satisfactorily performed course work at other institutions. A waiver petition (signed by the course instructor and advisor) should be submitted to the Student Services office indicating (1) the Stanford University course number and title, and (2) the institution, number(s), and title(s) of the course(s) wherein substantially equivalent material was treated. If a waiver is granted, the student may take an additional technical elective in place of the required course. The total 45-unit requirement for the master’s degree is not reduced by course waivers.

A similar procedure should be followed for transfer credits. However, transfer credit is allowed only for courses taken as a graduate student, after receiving a bachelor’s degree, in which equivalence to Stanford courses is established and for which a grade of ‘B’ or better has been awarded. Transfer credits, if approved, will reduce the total number of Stanford units required for a degree. The number of transfer credits accepted for each degree (M.S., Engineer, and Ph.D.) is delineated in the “Graduate Degrees” section of this bulletin.

Fellowships and Assistantships—Fellowships and course or research assistantships are available to qualified graduate students. Fellowships sponsored by Gift Funds, Stanford University, and Industrial Affiliates of Stanford University in Aeronautics and Astronautics provide grants to first-year students for the nine-month academic year to cover tuition and living expenses. Stanford Graduate Fellowships, sponsored by the University, provide grants for three full years of study and research; each year, the department is invited to nominate several outstanding doctoral or predoctoral students for these prestigious awards. Students who have excelled in their master’s-level course work are eligible for course assistantships in the department; those who have demonstrated research capability are eligible for research assistantships from individual faculty members. A half-time course or research assistantship provides a semimonthly living stipend and a 9-unit tuition grant per quarter. Research assistants may be given the opportunity of full-time summer employment at twice the half-time rate. They may use their work as the basis for a dissertation or Engineer’s thesis.

MAJOR OF SCIENCE

The University’s basic requirements for the master’s degree are outlined in the “Graduate Degrees” section of this bulletin. Students with an aeronautical engineering background should be able to qualify for the master’s degree in three quarters of work at Stanford. Students with a bachelor’s degree in physical science, mathematics, or other areas of engineering may find it necessary to take certain prerequisite courses, which would lengthen the time required to obtain the master’s degree. The following are departmental requirements.

SCHOLARSHIP REQUIREMENTS

A minimum grade point average (GPA) of 2.75 is required to fulfill the department’s M.S. degree requirements and a 3.0 is the minimum required for eligibility to attempt the Ph.D. qualifying examination. It is incumbent upon both M.S. and potential Ph.D. candidates to request letter grades in all courses except those that do not offer a letter grade option and those that fall into the categories of colloquia and seminars (for example, AA 293, 297, and 298). Insufficient grade points on which to base the GPA may delay expected degree conferral or result in refusal of permission to take the qualifying examinations. Candidates with GPAs of 3.0 through 3.2 must request the permission of the Candidacy Committee to attempt the qualifying examinations.
The master's program (45 quarter units) in Aeronautics and Astronautics (AA) is designed to provide a solid grounding in the basic disciplines and a foundation for systems engineering. All candidates for this degree are expected to meet the basic course requirements in experimentation in aeronautics and astronautics, fluid mechanics, guidance and control, propulsion, and structural mechanics (Category A below), in addition to work in applied mathematics (Category B) and technical electives (Category C).

A. Basic Courses—Candidates select eight courses as follows:
1. Five courses in the basic areas of Aeronautics and Astronautics (one each):
   a) Experimentation: 236A or 290; or Engr. 205, 206, or 207A
   b) Fluids: 210A or 200A or 200B
   c) Guidance and Control: Engr. 105
   d) Propulsion: 280 or 283
   e) Structures: 240A
2. Three courses, one each from the areas below:
   a) Fluids: 200A or 200B (if 210A was taken or waived in item 1); or 210A (if 200A or 200B was taken or waived in item 1)
   b) Structures: 240B or 256
   c) Guidance and Control: 271A or 279
   d) Aero Astro elective: AA course numbered 200 and above, excluding seminars and independent research.

Candidates who believe they have satisfied a Basic Courses requirement in previous study may request a waiver of one or more courses (see “Waivers and Transfer Credits” above). If a requirement in fluids, guidance and control, or structures in item 1 is waived, it is expected that a course in the same category from item 2 will be substituted.

B. Mathematics Courses—During graduate study, each candidate is expected to develop a competence in the applied mathematics pertinent to his or her major field. This requirement can be met by matriculating in a minimum of 6 units in either (1) applied mathematics (for example, complex variables, linear algebra, partial differential equations, probability), or (2) technical electives that strongly emphasize applied mathematics. A list of courses approved for the mathematics requirement is available in the departmental Student Services office. (Calculus, ordinary differential equations, and vector analysis are fundamental mathematics prerequisites, and will not satisfy the master's mathematics requirement.) Students planning to continue to the Ph.D. should note that 25 percent of the major-field Ph.D. qualifying examination is devoted to pertinent mathematics.

C. Technical Electives—Candidates, in consultation with their advisors, select at least four courses in their major field from among the graduate-level courses offered by the departments of the School of Engineering and related science departments. This requirement increases by one course, taken in either the major or peripheral fields, for each basic course that is waived. Normally, one course (3 units) in this category may be directed research. Courses taken in satisfaction of the other master's requirements (categories A, B, and D) may not also be counted as technical electives.

D. Other Electives—It is recommended that all candidates enroll in at least one humanities or social science course. Language classes qualify in this category, but practicing courses in, for example, art, music, and physical education do not qualify.

When planning their programs, candidates should check course descriptions carefully to ensure that all prerequisites have been satisfied. A course that is taken to satisfy a prerequisite for courses in Category A (Basic Courses) or B (Mathematics) cannot be counted as a technical elective, but can count toward the M.S. degree in Category D (Other Electives).

ENGINEERING
Students whose career objectives require a more interdepartmental or narrowly focused program than is possible in the M.S. program in Aeronautics and Astronautics (AA) may pursue a program for an M.S. degree in Engineering (45 quarter units). This program is described in the School of Engineering “Graduate Programs of Study” section of this bulletin.

Sponsorship by the Department of Aeronautics and Astronautics in this more general program requires that the student file a proposal before completing 18 units of the proposed graduate program. The proposal must be accompanied by a statement explaining the objectives of the program and how the program is coherent, contains depth, and fulfills a well-defined career objective. The proposed program must include at least 12 units of graduate-level work in the department and meet rigorous standards of technical breadth and depth comparable to the regular AA Master of Science program. The grade and unit requirements are the same as for the M.S. degree in Aeronautics and Astronautics.
least 12 units must be from graduate-level courses in mathematics or applied mathematics (a list of approved courses is available from the department Student Services office). University requirements for continuous registration do apply to doctoral students for the duration of the degree, including registration for each quarter in which the student requires department consultation to complete dissertation work.

University Oral and Dissertation—The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four selected faculty members, plus a chair from another department). The University oral normally occurs toward the end of the fourth doctoral year. Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. The dissertation reading committee is selected, in consultation with the adviser and subject to the approval of the department chair, during the second year of doctoral study. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the department Student Services office at least three weeks prior to the date of the oral for departmental review and approval.

Ph.D. MINOR

A student who wishes to obtain a Ph.D. minor in Aeronautics and Astronautics should consult the department office for designation of a minor adviser. A minor in Aeronautics and Astronautics may be obtained by completing 20 units of graduate-level courses in the Department of Aeronautics and Astronautics, following a program (and performance) approved by the department’s candidacy chair.

The student’s Ph.D. reading committee and University oral committee must each include at least one faculty member from Aeronautics and Astronautics.

COURSES

(WIM) indicates that the course meets the undergraduate Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations for undergraduates (8 units maximum).

100. Introduction to Aeronautics and Astronautics—The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including take-off, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. Remarks on the history of aeronautics and astronautics. Prerequisites: Mathematics 41, 42; elementary physics.

3 units, Aut (Alonso)

104. Dynamic Behavior—(Enroll in Engineering 104.)

105. Feedback Control Design—(Enroll in Engineering 105.)

190. Directed Research in Aeronautics and Astronautics—Experimental or theoretical work for undergraduate students, under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. Prerequisite: consent of adviser and instructor. (WIM)

3-5 units, any quarter (Staff)

199. Independent Study in Aeronautics and Astronautics—Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. Prerequisite: consent of instructor.

1-5 units, any quarter (Staff)

200A. Applied Aerodynamics—Review of the fundamental equations of fluid dynamics and the physical assumptions on which they are based; overview of appropriate methods for solving these equations including nonlinear CFD, conformal mapping, linear panel and vortex methods; estimation of pressure distributions and resultant airloads on 2-D airfoils, finite wings, slender bodies, and lifting systems; compressibility effects; boundary layer analysis and prediction of drag, separation, and displacement effects. Application to airfoil and wing design. Prerequisite: undergraduate aeronautics course. Recommended: 210A.

3 units, Win (MacCormack)

200B. Applied Aerodynamics II—Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, similarity rules, aerodynamic stability derivatives. Bi-weekly assignments require MATLAB or a suitable programming language. Prerequisite: 200A or equivalent. Recommended: 210A.

3 units, Spr (Alonso)

201A. Fundamentals of Acoustics—Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchhoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.

3 units (Lele) alternate years, given 2000-01

201B. Topics in Aeroacoustics—Acoustic equations for moving medium, simple sources, Kirchhoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curi, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsive jets, airframe noise and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.

3 units (Lele) not given 1999-2000

3 units (Kroo) alternate years, given 2000-01

210A. Fundamentals of Compressible Flow—Introduction to compressible flow. Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid, differential and integral forms of the equations, constitutive equations for a compressible fluid, the entropy equation, compressible Couette flow, compressible boundary layers, the recovery factor, area-averaged equations for one-dimensional steady flow, shock waves, channel flow with heat addition and friction, flow in nozzles and inlets, oblique shock waves, Prandtl-Meyer expansion, unsteady one-dimensional flow, the shock tube, small disturbance theory, acoustics in one-dimension, steady flow in two-dimensions, potential flow, linearized potential flow, lift and drag of thin airfoils, similarity rules for subsonic
and supersonic flow, conical flow. Prerequisite: Mechanical Engineering 131B or equivalent.
  3 units, Aut (Cantwell)

210B. Fundamentals of Compressible Flow—Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonsentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.
  3 units, Win (Alonso) alternate years, not given 2000-01

211A. Physical Gas Dynamics—(Enroll in Mechanical Engineering 262A.)

213. Atmospheric Entry—High-speed atmospheric entry subjects vehicles to intense heating, decelerations, and structural loads. These are formulated and their intensity determined for a variety of flight paths. Trajectories range from nonlifting (ballistic) to constant lift and variable dynamic testing facilities. Prerequisite: 210A.
  3 units, Spr (Tauber)

214A. Numerical Methods in Fluid Mechanics—The basic principles underlying the Navier-Stokes equations. Relations between time-accurate and relaxation methods. Implicit and explicit methods combined with flux splitting and space factorization. Considerations of accuracy, stability of numerical methods, and programming complexity. Prerequisites: knowledge of linear algebra and Mechanical Engineering 200A, 200B, or equivalent approved by instructor.
  3 units, Aut (Pulliam)

  3 units, Win (MacCormack)

  3 units, Spr (MacCormack)

215A,B. Advanced Computational Fluid Dynamics—High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
  3 units each, Win, Spr (Jameson)

217A,B,C. Mathematical and Computational Methods in Engineering—(Enroll in Mechanical Engineering 200A,B,C.)

218. Introduction to Symmetry Analysis—The methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-plane analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, the relation between symmetries and conservation laws, generalized symmetries, recursion operators, exact solutions of nonlinear PDEs generated from non-local groups, Backlund transformations, group origins of solitary wave solutions. The invariant groups of many of the classical equations of mathematical physics. Examples from boundary layers, nonlinear heat conduction, shallow water waves, viscous jets and vortex rings, similarity rules for turbulent shear flows. Software for finding invariant groups of ODEs and PDEs. Prerequisite: Mechanical Engineering 200A or equivalent.
  3 units, Win (Cantwell)

220. Parallel Methods in Numerical Analysis—(Enroll in Computer Science 238.)

225. Stochastic Processes in Aeronautics—Applications of probability theory to problems in aeronautics, emphasizing random behavior in fluid, thermodynamic, chemical, structural, and control systems of aerospace interest. The random walk model introduces basic concepts and connects the topics. Time evolution of probability distributions, linking problems in chemical kinetics, rarefied gas flows, thermodynamic nonequilibrium, and finite difference methods in fluid mechanics. Statistical variables: power spectra, correlation functions, transform techniques, the response of a linear system to a random forcing function, and the statistical theory of turbulence. Stochastic models on microcomputers.
  3 units (Staff) not given 1999-2000

230. Rotorcraft Aerodynamics—The fundamental aerodynamics of rotorcraft, including general momentum theory, blade-element theory, and physical concepts of blade motions in hover and forward flight. Topics: dynamics stall, blade-vortex interactions, and active blade controls. Prerequisite: undergraduate aerodynamics.
  3 units, Win (Yu)

235A,B. Space Systems Engineering—(Enroll in Engineering 235 A,B.)

236A. Spacecraft Design—The design of unmanned spacecraft and spacecraft subsystems concentrating on identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal system design, attitude control, electric power, command and telemetry, and design integration and operations.
  3 units, Win (Twiggs)

236B,C.D. Spacecraft Design—Continuation of 236A.

240A. Analysis of Structures—Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semi-
monocoque structures. Prerequisite: Engineering 14 or equivalent.

3 units, Win (F. Chang)

241A B. Introduction to Aircraft Design, Synthesis, and Analysis—The total development of new aircraft systems, emphasizing commercial aircraft; the underlying economic and technological factors that create markets for new aircraft from rational and historical viewpoints; determining market demands and system mission performance requirements; optimizing configurations to comply with requirements, emphasizing the interaction of various disciplines (aerodynamics, structures, propulsion, guidance, payload, and ground support; parametric studies); applied aerodynamic and design concepts for use in configuration analysis (airplane layout, wing design, high lift systems, drag, stability and control requirements, and tail sizing). Application to an individually chosen aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance and installation; engine types; environmental problems (noise and smoke); performance estimation (takeoff, climb, cruise, and landing). Direct/indirect operating costs prediction and interpretation. Aircraft functional systems (hydraulic, electrical, environmental control); avionics; importance and achievement of aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

241A 3 units, Win (Kroo)
241B 3 units, Spr (Kroo)

243A B. Dynamics—(Enroll in Mechanical Engineering 231A, B.)

244A. Free and Forced Motion of Structures—Vibrations and forced response of linear systems with a finite number of degrees of freedom. Vibrations and forced response of continuous structures, developed in a framework of analytical dynamics; rods, beams, membranes, and other elastic systems. Approximate methods for analyzing nonuniform and built-up structures. Finite-element methods in a dynamic context. Introduction to random responses and to nonlinear systems, as time permits. Prerequisites: 240A, Engineering 15 or equivalent.

3 units, Win (Ashley)

244B. Structural Dynamics and Aeroelasticity—Continuation of the 244A treatments of finite-element methods and vibration of continuous, two-dimensional structures. Introduction to aeroelasticity from a unified viewpoint applicable to flight vehicles, rotating machinery, and other elastic systems. Aeroelastic operators and unsteady aerodynamics in two dimensions. Forced response, static and dynamic eigenvalues of a simplified system. Aeroelastic analysis of representative one- and two-dimensional systems. Computational problems covering aeroelastic analysis of simple systems. Prerequisites: 244A or equivalent, familiarity with MATLAB or a programming language.

3 units, alternate years, given 2000-01

245A. Continuum Mechanics: An Introduction—(Enroll in Mechanical Engineering 238A.)

245B. Analysis of Continuum Mechanics—(Enroll in Mechanical Engineering 238B.)

246A. Theory of Plates—(Enroll in Mechanical Engineering 241A.)

246B. Theory of Shells—(Enroll in Mechanical Engineering 241B.)

246D. Vibration and Stability of Plates and Shells: Biomechanical Applications—(Enroll in Mechanical Engineering 241D.)

3 units, not given 1999-2000

252. Techniques of Failure Analysis—Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

2 units, Spr (Ross)

3 units, Win (Springer)

3 units, Spr (F. Chang)

261A. Statistical Theory and Modeling for Turbulent Flow—(Enroll in Mechanical Engineering 261A.)

268. Digital Image Processing—(Enroll in Electrical Engineering 368.)

269. Optical Methods in Engineering Science—(Enroll in Electrical Engineering 347.)

270. Introduction to Modern Optics—(Enroll in Electrical Engineering 268.)

271A. Dynamics and Control of Aircraft and Spacecraft—The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal, lateral and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. GPS based navigation and attitude determination. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: 200A or 208; Engineering 15 or equivalent, Engineering 105, and experience with Matlab.

3 units, Spr (How)

272C. Global Positioning System—The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra.

3 units, Win (Engle)
272. Integrated Navigation Systems—Review of navigation satellites (GPS, GLONASS), GPS receivers, principles of inertial navigation for ships, aircraft, and spacecraft. Kalman Filters to integrate GPS and inertial sensors. Radio navigation aids (VOR, DME, LORAN, ILS). Doppler navigation systems. Prerequisites: 272C; Engineering 15, 105. Recommended: Engineering 205. 3 units, Spr (Enge) alternate years, not given 2000-01

273A. Modern Control Design I—(Enroll in Engineering 207A.)

273B. Modern Control Design II—(Enroll in Engineering 207B.)

274A. Robust Control Analysis and Synthesis—(Enroll in Engineering 210A.)

275. Introduction to Control Design Techniques—(Enroll in Engineering 205.)

276. Control System Design and Simulation—(Enroll in Engineering 206.)

277. Analysis and Control of Nonlinear Systems—(Enroll in Engineering 209.)

278A. Optimal Control and Hybrid Systems—Models for continuous-time and discrete-event dynamic systems. Modeling techniques for hybrid systems. Optimization problems for continuous and discrete dynamic systems. Dynamic programming and the Hamilton-Jacobi equation. Differential games. Automatic verification and controller synthesis for hybrid systems. Hybrid systems simulation. Driving examples from flight management system logic, and automated air traffic systems. Prerequisites: Electrical Engineering 263, Engineering 209. 3 units, Spr (Tomlin)

279. Space Mechanics—Orbits of near-earth satellites and interplanetary probes; transfer and rendezvous; decay of satellite orbits; influence of earth’s oblateness; sun and moon effects on earth satellites. Prerequisite: Engineering 15 or equivalent. 3 units, Aut (Staff)

283. Aircraft and Rocket Propulsion—Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance, gaseodynamics of nozzles and inlets, cycle analysis of ramjets, turbojet, turbofans, and turboprops, effect of afterburning, design of supersonic inlets and nozzles, component matching and the compressor map, combustors, introduction to liquid and solid propellant rockets, multistage rockets, heat transfer in nozzles, hybrid rockets, elements of electric propulsion, thrust from light, space sailing. Prerequisite: 210A or equivalent. 3 units, Spr (Cantwell)

291. Practical Training—Educational opportunities in high-technology research and development labs in aerospace and related industries. Students may work in any field of special interest. 1-3 units, any quarter (Staff)

297. Seminar in Guidance, Navigation, and Control—For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional; letter grade given for students who make presentations. May be repeated for credit. (AU) 1 unit, Aut, Win, Spr (Twiggs)

298. Seminar in Fluid Mechanics—(Enroll in Engineering 298.) May be repeated for credit. (AU)

300. Thesis—Thesis for degree of Engineer. 1-15 units, any quarter (Staff)

301. Ph.D. Thesis—Dissertation for degree of Doctor of Philosophy. 1-15 units, any quarter (Staff)

308. Spectral Methods in Computational Physics—(Enroll in Mechanical Engineering 308.)

311. System Identification—(Enroll in Engineering 211.)

351A,B,C. Advanced Fluid Mechanics—(Enroll in Mechanical Engineering 351A,B,C.)

366. Introduction to Fourier Optics—(Enroll in Electrical Engineering 366.)

370. Advanced Modern Optics—(Enroll in Electrical Engineering 349.)

CHEMICAL ENGINEERING

Emeriti: (Professors) Andreas Acrivos, Michel Boudart
Chair: Gerald G. Fuller
Professors: Curtis W. Frank, Gerald G. Fuller, Alice P. Gast, George M. Homsky, Robert J. Madix, Channing R. Robertson, Eric S. G. Shaqfeh, James R. Swartz
Associate Professor: Chaitan Khosla
Assistant Professors: Stacey F. Bent, Christopher A. Klug, Charles B. Musgrave
Courtesy Professors: Franklin M. Orr, Jr., John Ross, Robert M. Waymouth
Lecturers: Kay Kanazawa, Anthony Pavone
Consulting Professors: Jaan Noolandi, Conrad Schadt, Robert Schwaar, John Sinfelt
Visiting Professor: Wolfgang Knoll
Visiting Associate Professor: Jürgen Rühe

UNDERGRADUATE PROGRAM

BACHELOR OF SCIENCE

The Chemical Engineering depth sequence required for the B.S. degree (see the "School of Engineering" section of this bulletin) provides training in applied chemical kinetics, engineering thermodynamics, plant design, process analysis and control, separation processes, biochemical engineering, polymers, electronic materials, and transport phenomena.
The B.S. program in Chemical Engineering additionally requires basic courses in chemistry, engineering, mathematics, biology and physics. There is no set B.S. program for Chemical Engineering students to follow. A sample program is available from the department's advisers; the Dean's Office, School of Engineering; or may be found in the Handbook for Undergraduate Engineering Programs. It is recommended that the student discuss the prospective program with his or her adviser especially if transferring from chemistry, physics, biology, or another field in engineering. With some advanced planning, the student can usually arrange to attend one of the overseas campuses.

For information about a Chemical Engineering minor, see the "School of Engineering" section of this bulletin.

GRADUATE PROGRAMS

The University's requirements for the M.S., Engineer, and Ph.D. degrees are outlined in the "Graduate Degrees" section of this bulletin.

MASTER OF SCIENCE

An M.S. program comprising an academic year of appropriate course work is available to accommodate students wishing to pursue a professional chemical engineering career after receiving the B.S. degree. The M.S. degree is awarded, without requiring a formal thesis, after a minimum of three quarters of broad study subject to the specifications stated below.

Unit and Course Requirements—For students terminating their graduate work with the M.S. degree in Chemical Engineering, a program consisting of 42 units of academic work is required, including at least four lecture courses selected from the Chemical Engineering 200 to 400 lecture series. The remaining courses comprise all science or engineering graduate courses and by petition to the Chair of the Department of Chemical Engineering, upper-division undergraduate courses in science and engineering. Credit toward the M.S. degree is not given for Chemical Engineering Special Topics courses numbered 500 to 511, or for the colloquium, 699. However, students must register for 699 and attend the colloquia.

Students wishing to obtain research experience should choose a research adviser and enroll in Chemical Engineering 600; up to 6 units may count toward the 42-unit requirement. Chemical Engineering 600, however, may not be substituted for any of the required four lecture courses in the Chemical Engineering 200 to 400 lecture series. A written report describing the results of this research must be submitted to and approved by the research adviser.

To ensure that an appropriately balanced program is taken by all M.S. candidates, the student's program must be approved by the graduate adviser, and a program proposal for the M.S. degree should be developed by the student and adviser at their first meeting of the academic year.

Residency Requirement—See General Requirements in the "Graduate Degrees" section of this bulletin.

Minimum Grade Requirement—All courses intended to satisfy the 42-unit M.S. degree requirement must be taken for letter grades, if offered, and a grade point average (GPA) of 3.0 must be maintained.

ENGINEER

The degree of Engineer is awarded after completion of six quarters of study beyond the B.S degree, plus the requirements listed below. This degree is not required to enter the Ph.D. program.

Unit and Course Requirements—A minimum of 72 total units (including research) and 42 units of course work is required for the Engineer degree, including the following Chemical Engineering courses: 300, 310A, 310B, 340, 345, 350, 355, and one quarter of 370. The remaining courses, to total 42 units, may be chosen from the basic sciences and engineering according to the guidelines given in the Master of Science section above and with the consent of the graduate adviser. Students seeking the Engineer degree may apply for the M.S. degree once the requirements for that degree have been fulfilled (see above Master of Science section).

Residency Requirement—See General Requirements in the "Graduate Degrees" section of this bulletin.

Minimum Grade Requirement—All courses intended to satisfy the degree requirements must be taken for letter grades, if offered, and a grade point average (GPA) of 3.0 must be maintained.

DOCTOR OF PHILOSOPHY

The Ph.D. degree is awarded after completion of a minimum of nine quarters of study plus the requirements listed below.

Unit and Course Requirements—A minimum of 72 total units (including research) and 42 units of course work is required for the Ph.D. degree, including the following Chemical Engineering courses: 300, 310A, 310B, 340, 345, 350, 355, and one quarter of 370. In addition, two courses must be taken from one of the areas of concentration in the 440, 450, or 460 series. The remaining courses, to total 42 units, may be chosen from the basic sciences and engineering according to the guidelines given in the above Master of Science section and consent of the graduate adviser. Students seeking the Ph.D. degree may apply for the M.S. degree once the requirements for that degree have been fulfilled (see above Master of Science section).

Residency Requirement—See General Requirements in the Graduate Degrees section of this bulletin.

Minimum Grade Requirement—All courses intended to satisfy the degree requirements must be taken for letter grades, if offered, and a grade point average (GPA) of 3.0 must be maintained.

Teaching Requirement—All Ph.D. candidates, regardless of the source of their financial support, are required to gain teaching experience as an integral part of graduate training in the Department of Chemical Engineering.

Qualifying Examination—To be advanced to candidacy for the Ph.D. degree, the student must pass a preliminary qualifying examination. First-year students are asked to present orally and defend a critical review of a published paper before the faculty at the beginning of the Spring Quarter. This examination is used to decide whether or not these students will be allowed to choose research advisers and begin thesis research in the Spring Quarter of their first year. Failing this examination leads to termination of the student's study towards the Ph.D. degree. It also precludes financial aid beyond that already promised. Under these circumstances, the student may apply for the M.S. degree once the requirements for that degree have been fulfilled (see above Master of Science section). Students passing this preliminary examination take a qualifying examination consisting of an oral defense of their research work before the faculty early in the Autumn Quarter of their second year.

Dissertation Requirement—A dissertation based on a successful investigation of a fundamental problem in chemical engineering is required; the student enrolls in Chemical Engineering 600 during the course of this research. In four to five calendar years after enrolling in the department, the student is expected to have fulfilled all the requirements for the Ph.D. including submission of a completed dissertation that has already been approved by his or her research adviser to the reading committee. No sooner than four weeks after this date, the student's University oral examination is scheduled. This exam, based on the candidate's dissertation research, is in the form of a public seminar followed by private questioning by an examining faculty committee. After satisfactory performance in the examination and submission of the dissertation to the Degree Progress Office of the Registrar's Office, the Ph.D. degree is awarded.
RESEARCH ACTIVITIES

Research investigations are currently being carried out in the following fields: applied statistical mechanics, biocatalysis, bioengineering, colloid science, computational materials science, electronic materials, hydrodynamic stability, kinetics and catalysis, Newtonian and non-Newtonian fluid mechanics, polymer science, rheo-optics of polymeric systems, and surface and interface science. Additional information may be found at the Department of Chemical Engineering website http://chemeng.stanford.edu.

FELLOWSHIPS AND ASSISTANTSHIPS

A number of fellowships and assistantships are awarded each year to incoming students. Application forms may be obtained from the department. The completed application must be received no later than January 15 preceding the start of the academic year for which the award is to be made.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirement.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

PRIMARILY FOR UNDERGRADUATES

20. Introduction to Chemical Engineering—(Enroll in Engineering 20.)

3 units, Spr (Robertson)

50Q. Stanford Introductory Seminar: Drug Delivery in the 21st Century—In the near future, medication will be delivered with highly engineered, controlled delivery systems. Such systems, currently available for motion sickness, heart pain, and high blood pressure, are developed by joining chemistry, biology, medicine, materials science, and engineering to design novel drug delivery devices. Students visit local companies where such devices are made. Guest scientists and engineers describe products on the market and in the pipeline. One of the most sophisticated drug delivery systems, the cigarette, is studied, learning about a technology that has created more harm than good; however, what we learn from it someday might form the basis for a therapeutic delivery system. Recommended: prior exposure to chemistry, physics, biology, mathematics, physiology.

3 units, Aut (Robertson)

25. Biotechnology—(Enroll in Engineering 25.)

3 units, Aut (Robertson)

100. Chemical Process Modeling, Dynamics, and Control—Mathematical methods are applied to engineering problems, using chemical engineering examples. Development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: Math. 53 or 130, or Engineering 155A, or equivalent, Engineering 20

3 units, Aut (Homsy)

110. Equilibrium Thermodynamics—Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: Chemistry 171.

3 units, Win (Madix)

120A. Fluid Mechanics—(Formerly 140.) The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar fields, fluid statics, deformation of continuous media, non-Newtonian fluids, the equations of motion, creeping and potential flow, boundary layer theory, turbulence, free-surface phenomena, porous media flows. Prerequisites: junior standing in chemical engineering or consent of instructor, 100 and Mathematics 53 or Mathematics 130 or Engineering 155A, or equivalent.

4 units, Win (Shagfeh)

120B. Energy and Mass Transport—(Formerly 150.) The transport of energy and mass in solid and fluid continua. Fourier's law, heat transfer in solids, laminar flow, forced and free convection, boundary-layer heat transfer, natural convection with application to geophysical flows, energy transport by radiation, Fick's Law, binary diffusion, the equation of convective diffusion, mass transfer with chemical reaction, transport in turbulent flows, heat and mass transfer analogies. Prerequisite: 120A or equivalent.

4 units, Spr (Fuller)

130. Separation Processes—(Formerly 120.) Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, electrophoresis, centrifugation, chromatography, and reaction-assisted separation processes.

3 units, Spr (Musgrave)

140. Microelectronics Processing Technology—The chemistry and transport of microelectronics device fabrication. Introduction to solid state materials and electronic devices. Chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, metallization, and plasma processing with emphasis on chemical, kinetic and transport considerations.

3 units, Spr (Bent)

150. Biochemical Engineering—(Formerly 175.) The general principles used in the biological production of fine biochemicals, with an emphasis on biopharmaceuticals. Basic and applied principles in: enzyme kinetics, microbial physiology, recombinant DNA technology, metabolic engineering, fermentation media design, fermentor design, aseptic processing, fermentation process control and scale-up, product isolation, protein purification, protein folding, regulatory issues, and biochemical process cost modeling.

3 units, Aut (Swartz)

160. Polymer Science and Engineering—(Formerly 170.) Introduction to polymer science, including free-radical and condensation polymerization, morphology of amorphous and semicrystalline polymers, linear viscoelasticity and rheology. Selected applications of polymers in information technology.

3 units, Win (Frank)

170. Kinetics and Reactor Design—(Formerly 130.) Chemical kinetics, elementary steps, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Multiplicity, ignition, and extinction in stirred tank reactors; limitations of thermodynamic equilibrium. Catalysis and catalytic reaction mechanisms. Chemical reactor models of animal digestion. Prerequisites: 110, 120A, 120B; Chemistry 171, 173.

3 units, Aut (Gast)

180. Chemical Engineering Plant Design—(Formerly 160.) Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.

3 units, Spr (Pavone)

185A,B. Chemical Engineering Laboratory—(Formerly 180A,B.) Investigation of the experimental aspects of chemical engineering science, emphasizing development of communications skills. Experiments
illustrating lecture subjects are conducted by groups of students. Lab.
(WIM)
185A. 3 units, Aut (Frank)
185B. 3 units, Win (Klug)

190. Undergraduate Research in Chemical Engineering—Lab or theoretical work for undergraduate students under the direct supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects. (Staff)

PRIMARILY FOR GRADUATE STUDENTS
240. Microelectronic Processing Technology—See 140.
3 units, Spr (Bent)

250. Biochemical Engineering—See 150.
3 units, Spr (Swartz)

3 units, Win (Frank)

300. Applied Mathematics in Chemical Engineering—(Formerly 220.) Mathematical problems in transport phenomena, fluid mechanics, reactor design, quantum chemistry, and polymer science. Applications of tensor calculus, ordinary differential equations, linear eigenvalue problems, perturbation theory (regular and singular), topics in partial differential equations, Fourier transforms. Prerequisites: Mathematics 53, 113, 130; or Engineering 155A, Mathematics 131 or Engineering 155B, or equivalent.
3 units, Aut (Klug)

310A. Microscale Transport in Chemical Engineering—(Formerly 221.) Introduction to transport on small scales where macroscopic or bulk convective processes are unimportant. The basic equations of mass, momentum, and energy are derived for incompressible fluids. Local analysis based on the flow kinematics. Simplifications of these equations in the Stokes or creeping flow regime; solution techniques for these reduced sets of equations. Topics: Green’s function or boundary integral solution methods, point particle solutions, rigid particulate motion in suspension, drop and bubble flows including thermocapillary motion, lubrication theory and the effective properties of composite media and suspensions; and time permitting, slender body theory and Brownian motion. Prerequisites: 120A, 120B, 300, or equivalent.
3 units, Win (Fuller)

310B. Connective Transport and Reaction Engineering—(Formerly 222.) Continuation of 310A. Macroscale or convective transport of mass, momentum, and energy including chemical reaction from a fundamental perspective. Topics: inviscid flow theory and its coupling to mass, momentum, and energy boundary layers including free jets and wakes; boundary layers adjoining regions of constant circulation (e.g., drop flows) including Prandtl-Batchelor layers; convective mass transport with and without reaction, including Taylor-dispersion and generalized Gruetz problems; the fundamentals for mass, momentum, and energy transport correlations. The concepts are applied to basic reaction engineering. Prerequisite: 310A or consent of the instructor.
3 units, Spr (Homsy)

3 units (Klug) not given 1999-2000

345. Spectroscopy and Applications of Quantum Mechanics—(Formerly 231.) Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Topics: infrared, electron energy loss and Raman vibrational spectroscopies; Auger, x-ray and ultraviolet photoelectron spectroscopies; synchrotron-based spectroscopies including near edge x-ray absorption fine structure; basic nuclear magnetic resonance. Possible topics: solid state and computational methods. Prerequisite: Chemistry 271 or quantum mechanics.
3 units, Win (Bent)

350. Principles of Cellular Systems—Introduction to biological systems for engineering students. Emphasis is on viewing the cell as an integrated network of processes. Topics: what is the genome and how it is interpreted, how are cells organized spatially and energetically, protein catalysis, regulation of protein expression and other cellular processes, and new techniques in functional genomics. Biological Sciences 52 may be substituted.
3 unit, Win (Robertson, Swartz)

355. Advanced Biochemical Engineering—The technological tools for exploiting the power offered by modern biology. How a cell interacts with and influences its environment, how a production organism is optimized, what technology is used for large scale production, how products are isolated and purified, how proteins can be made without living cells, how a biopharmaceutical is formulated and delivered, and what the regulatory requirements are for drug approval and sale. Prerequisite: 350 or Biological Sciences 52, or equivalent
3 units, Spr (Swartz)

370A,B,C,D. Introduction to Chemical Engineering Research—(Formerly 281.) One-quarter research projects (laboratory, library, or theoretical research) under the guidance of a faculty member. Findings are reported in a poster session for the entire department at the end of the quarter, with a written report to adviser.
3 units, Aut, Win, Spr, Sum (Staff)

3 units, Spr (Gast)

442. Structure and Reactivity of Solid Surfaces—The structure of solid surfaces including a description of experimental methods for determining the structures of single crystal surfaces. The adsorption of molecules on these surfaces, e.g., the thermodynamics of adsorption processes, surface diffusion, and the molecular structure of the adsortbates. Surface mediated reactions, i.e., heterogeneous catalysis, including descriptions of catalytic mechanisms and surface kinetics.
3 units, Win (Madix)

444A. Quantum Simulations of Molecules and Materials—Molecules and surfaces: quantum atomic simulations of molecules and surfaces to predict atomic structure, properties, reaction mechanisms, and kinetics. Review of quantum mechanics. Electronic structure calculations: Hartree-Fock, configuration interaction, many body perturbation theory, and density functional theory. Property calculations: energy, forces, structure and electronic and vibrational spectra. Applications to semiconductor processing, surface science, biochemistry, catalysis, polymers, environmental chemistry and combustion. Prerequisite: undergraduate level quantum mechanics.
3 units, Win (Musgrave)
444B. Quantum Simulations: Materials Micro Mechanics—(Enroll in Mechanical Engineering 249B.)
3 units, Spr (Cho)

450. Introduction to Biotechnology—(Formerly 237; same as Biochemistry 237, Civil and Environmental Engineering 237, Developmental Biology 237, Structural Biology 237.) Faculty from the departments of Biochemistry, Biological Sciences, Chemical Engineering, Civil and Environmental Engineering, Developmental Biology, Structural Biology, and invited industrial speakers review the interrelated elements of modern biotechnology. Topics: protein structure and dynamics, protein engineering, biocatalysis, gene expression, cellular metabolism and metabolic engineering, fermentation technology, and purification of biomolecules. Prerequisite: graduate student or upper-division undergraduate in the sciences or engineering.
3 units, Spr (Shaqfeh)

452. Protein Science and Engineering—(Formerly 232; same as Chemistry 232.) The physio-chemical interactions that govern the structure and function of proteins. Topics: protein function and structure, techniques for probing protein structure and function, mechanisms of protein function, design of proteins with novel properties. Examples from the literature on enzymes. Recommended: background in physical and organic chemistry.
3 units, Win (Khosla)

454. Metabolic Engineering Methods and Applications—The optimization of industrial organisms for maximal benefit. In the context of actual applications, metabolic pathways and how they are regulated, metabolic flux analysis, and traditional and rDNA methods for genetic engineering. Examples in the areas of: metabolite production, DNA protein production by bacteria and mammalian cells, petroleum biosulfurization, bioremediation, and cell-free protein synthesis. Prerequisites: 250, 355 or equivalent
3 units (Swartz) alternate years, given 2000-01

459. Frontiers in Interdisciplinary Biosciences—Literature/discussion on how to critically evaluate the cutting edge of current research, held in conjunction with a seminar series, occurring once per month for 1999-2000, and more frequently thereafter. Leading investigators in interdisciplinary research from Stanford and from throughout the world present their work in a particular area. Before the seminar, students and faculty read and critically discuss one or more papers from the primary research literature on a related topic. After the seminar, students meet informally with the speakers to discuss the research and future directions. Emphasis is on how to read papers in the primary research literature, and familiarization with the broad set of techniques and approaches used to study problems in the biosciences. This interdisciplinary course is listed in many departments in the schools of Engineering, Medicine, and Humanities and Sciences. Students should enroll in their affiliated department, if it is offered. If not, students may enroll in any department within their school where the course is listed.
1 unit, Aut, Win, Spr (Staff)

500-511. Special Topics in Chemical Engineering—(Formerly 268, 269, 271, 280.) Discussion of recent developments and current research in specialized fields. Units by arrangement. Prerequisite: consent of instructor.
Aut, Win, Spr

500A,B,C. Protein Biotechnology
(Swartz)

501A,B,C. Semiconductor Processing
(Benti)

502A,B,C. Computational Materials Science
(Musgrave)

503A,B,C. Biocatalysis
(Khosla)

504A,B,C. Bioengineering
(Robertson)

505A,B,C. Microrheology
(Fuller)

506A,B,C. Surface and Interface Science
(Madix)

507A,B,C. Polymer Physics and Molecular Assemblies
(Frank)

508A,B,C. Stability of Fluid Motions
(Homsy)

509A,B,C. Statistical Mechanics of Dispersed Systems
(Gust)

510A,B,C. Transport Mechanics
(Shaqfeh)

511A,B,C. NMR of Solids
(Klug)

560. Graduate Research in Chemical Engineering—(Formerly 290.) Lab and theoretical work for graduate students on chemical engineering problems leading to partial fulfillment of requirements for an advanced degree. Credit is given after the student has satisfied the specific report or dissertation requirement.

569. Colloquium—(Formerly 300.) Students attend the colloquia of the Department of Chemical Engineering. Must be taken every quarter by candidates for advanced degrees in Chemical Engineering. (AU)
1 unit, Aut, Win, Spr (Staff)

CIVIL AND ENVIRONMENTAL ENGINEERING

Chair: Clyde B. Tatsum
Associate Professors: Raimundo I. Borja, Craig S. Criddle, Gregory G. Deierlein, Martin Fischer, David L. Freyberg, Lynn M. Hildemann
Assistant Professors: Mark Z. Jacobson, Laura N. Lowes, Charles A. Menun, Eduardo Miranda, Alfred M. Spormann
The undergraduate curriculum provides a pre-professional program balancing the fundamentals common to many special fields of civil engineering with specialization in Environmental and Water Studies or construction professionals making major contributions to integrated projects, the Department of Civil and Environmental Engineering at Stanford will offer a Master of Science degree field in Design/Construction Integration, beginning in the 1999-2000 academic year.

The field of Design/Construction Integration requires 45 quarter units, which are normally completed in one academic year. This includes core courses in design/construction integration, structural and geotechnical engineering, and construction engineering and management, along with approved electives.
Stanford's Department of Civil and Environmental Engineering offers three programs related to the design and construction of facilities: Structural Engineering and Geomechanics (S/G), Construction Engineering and Management (CEM), and Design/Construction Integration (DCI).

The S/G program prepares students to launch careers as designers, engineering analysts, specialty consultants, tool developers, or engineering risk managers. It encompasses structural analysis and design, dynamics, earthquake engineering, risk and reliability analysis, modern computational methods, and geomechanics.

The CEM program prepares technically qualified students for responsible management roles in all phases of the development of major constructed facilities. It emphasizes management techniques useful in organizing, planning, and controlling the activities of diverse specialists working within the unique project environment of the construction industry. The program also includes the engineering aspects of heavy, industrial, and building construction.

The DCI program prepares students for multidisciplinary collaborative teamwork in an integrated design and construction process. The program extends a student's design or construction background with core courses in each of these areas and develops the background needed to understand the concerns and expertise of the many project stakeholders. It includes a comprehensive project-based learning experience.

Prospective students should use their intended career path as the primary criterion in selecting between these three programs. S/G best fits students planning to focus on designing facilities; CEM is for students planning to emphasize building facilities or managing teams and operations. Both of these degree options provide background for many different types of careers in design and construction, with some emphasis on preparation for working on projects using the traditional form of contracting and organization that characterizes public works. Students planning careers with design or construction firms that emphasize design-build, EPC, or turnkey projects should consider DCI. All three of the degree options include substantial flexibility for students to tailor their program of study to career interests.

ENVIRONMENTAL AND WATER STUDIES

This program covers a broad spectrum of specialties, including environmental engineering and science, environmental fluid mechanics, environmental planning, and hydrology. Course offerings are scheduled to permit either intensive study in a single area or interrelated study between areas. Seminars provide a broad coverage of environmental problems. The programs are kept flexible to foster interaction among students and to encourage the development of individual programs suitable for a broad range of engineering and science backgrounds and career goals. The Stanford laboratories for water quality control and environmental fluid mechanics are well equipped and instrumented for advanced research and instruction.

Students with backgrounds in all areas of engineering and science who are interested in applying their specialized abilities to solving environmental and water problems are welcome. Comprehensive introductory courses in each major area of study are given to provide common understanding among those with dissimilar backgrounds. Courses from many other programs and departments both complement and supplement these course offerings. Some examples include Computer Science (numerical methods), Geological and Environmental Sciences (geostatistics, hydrogeology), Mechanical Engineering (applied math, experimental methods, fluid mechanics, heat transfer), Petroleum Engineering (reservoir engineering, well-test analysis), and Statistics (probability and statistics). The major areas of specialization in the two programs, environmental engineering and science, and environmental fluid mechanics and hydrology, are described below. Admissions to these two programs are handled separately; prospective students should clearly indicate their preference on their application by specifying one or the other area of specialization.

The Environmental Engineering and Science Program emphasizes water quality, but also encompasses other environmental areas and the broader aspects of pollution treatment and control issues. Course offerings include the biological, chemical, and engineering aspects of water supply; the fate and effects of pollutants in surface and groundwater, soil, and the atmosphere; hazardous substance control; and water and air pollution. Companion courses in the Environmental Fluid Mechanics and Hydrology Program include environmental planning and impact assessment, as well as environmental fluid mechanics, hydrology, and transport modeling. Research on hazardous substances is coordinated through the Western Region Hazardous Substance Research Center. The objective of this center, sponsored by the U.S. Environmental Protection Agency, is to promote through fundamental and applied research the development of alternative and advanced physical, chemical, and biological processes for the treatment of hazardous substances in the environment, with emphasis on groundwater contamination.

The Environmental Fluid Mechanics and Hydrology Program focuses on developing an understanding of the physical processes controlling the movement of mass, energy, and momentum in the water environment and the atmosphere. The program also considers environmental and institutional issues involved in planning water resources development projects. Environmental fluid mechanics courses address experimental methods; fluid transport and mixing processes; the fluid mechanics of stratified flows; natural flows in coastal waters, estuaries, lakes, and open channels; and turbulence and its modeling. Hydrology courses consider flow and transport in porous media, stochastic methods in both surface and subsurface hydrology, and watershed hydrology and modeling. Atmosphere-related courses deal with climate, weather, storms and air pollution and the modeling of these. Planning courses emphasize environmental policy implementation and sustainable water resources development.

STRUCTURAL ENGINEERING AND GEOMECHANICS

Structural engineering at Stanford encompasses computational mechanics, computer-aided engineering, risk and reliability analysis, structural analysis and design, and teaching and research programs in earthquake engineering and structural dynamics. The programs are designed to provide a broad knowledge in these fields and to prepare students for industrial or academic careers. Academic programs can be designed to meet the needs of students wishing to launch careers as consultants on large and small projects, designers, and engineering analysts. Students have the opportunity to balance strong engineering fundamentals with modern computational methods.

Course work in earthquake engineering and structural dynamics provides an understanding of the earthquake phenomenon, the resulting ground shaking, and in-depth knowledge on the behavior, analysis, and design of various types of structures under seismic or other dynamic forces. Automated structural control systems and devices, and the utilization of advanced materials for civil infrastructures and seismic retrofits, are part of the ongoing research activities. Advanced analytical and experimental research in earthquake engineering is conducted at the John A. Blume Earthquake Engineering Center, which houses static and dynamic testing equipment including two shaking tables.

Reliability and risk analysis focuses on instruction and research in advanced methods for structural safety evaluation and design, including methods for loss estimation from damage and failures of structures and lifeline systems. Course work combines a strong background in structural analysis and design with probability theory and statistics. Research in this area deals with regional loss and damage evaluation, reliability of marine systems, seismic risk and reliability of large structural systems, and wind hazards.

Courses and research in structural analysis and design focus on the conceptual and detailed design of structural systems and on computational methods for predicting the static and dynamic, linear and non-linear response of structures. Included are courses that emphasize earthquake resistant design and computer-based design concepts. Related course work is available from other departments such as computer science, materials science and engineering, and mechanical engineering. In collaboration with CIFE, issues involving design for constructibility and collaborative engineering are addressed as an integral part of the research.

Computational mechanics emphasizes the application of modern computing methods to structural engineering and geomechanics. It draws
on the disciplines of computer science, mathematics, and mechanics, and encompasses numerical structural and geotechnical analysis, including finite element analysis and boundary element methods. There is collaborative research in bio-engineering with the Medical School and high performance computing with the Scientific Computing and Computational Mathematics Program.

Students with primary interests in the application of the principles of applied mechanics to problems involving geologic materials have the option of enrolling in a degree program in geomechanics. This program focuses on instruction and research in theoretical soil and rock mechanics, computational methods, and analysis and design of foundations and earth structures. In addition to the program’s offerings, related courses are available in construction engineering, earth sciences, structural engineering, and the water resources program.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Students who major in civil engineering must complete the requirements for the B.S. degree listed under Undergraduate Programs in the “School of Engineering” section of this bulletin. Elective units may be used in any way the student desires, including additional studies in civil and environmental engineering. Because the undergraduate engineering curriculum is designed to ensure breadth of study, students who intend to enter the professional practice of civil engineering should plan to obtain their professional education at the graduate level.

For information about a CE minor, see the “School of Engineering” section of this bulletin.

HONORS PROGRAM

This program leads to a B.S. with Honors in Civil Engineering. It is designed to encourage highly qualified students to undertake a more intensive study of civil and environmental engineering than is required for the normal major, with courses and research work of high distinction.

The program involves an in-depth research study in an area proposed to and agreed to by a Department of Civil and Environmental Engineering (CEE) faculty adviser and completion of a thesis of high quality. A written proposal for the research to be undertaken must be submitted and approved in the fourth quarter prior to graduation. At the time of application, the student must have a grade point average (GPA) of at least 3.5 for course work at Stanford and this grade record must be maintained to graduation. The thesis is supervised by a CEE faculty adviser and must involve input from the School of Engineering Writing Program by means of Engineering 102S or its equivalent. Students are encouraged to present their results in a seminar for faculty and other students. Up to 10 units of CEE 199, Undergraduate Research in Civil and Environmental Engineering, may be taken to support the research and writing (not to duplicate Engineering 102S). These units are beyond the normal Civil and Environmental Engineering program requirements.

GRADUATE PROGRAMS

The University requirements governing the M.S., Engineer, and Ph.D. are described in the “Graduate Degrees” section of this bulletin.

Admission—Applications require submission of the application form, statement of purpose, three letters of recommendation, results of the General Section of the Graduate Record Examination, and transcripts of courses taken at colleges and universities. Policies for each of the department’s programs are available from the Department of Civil and Environmental Engineering. Successful applicants are advised as to the degree and program for which they are admitted. If students wish to shift from one program to another after being accepted, an application for transfer must be filed with the department, and they are advised if the transfer is possible. If, after enrollment at Stanford, students wish to continue toward a degree beyond the one for which they were originally admitted, a written application must be made to the Department of Civil and Environmental Engineering.

Financial Assistance—The department maintains a large and continuing program of financial aid for graduate students. Applications for financial aid and assistantships should be filed by January 1; it is important that Graduate Record Examination scores be available at that time.

Teaching assistantships carry stipends for as much as one-half time work to assist with course offerings during the academic year. Research assistantships also are available. Engineer and Ph.D. candidates may be able to use research results as a basis for the thesis or dissertation. Assistantships and other basic support may be supplemented by fellowship and scholarship awards or loans. Continued support is generally provided for further study toward the Engineer or Ph.D. degree based on the student’s performance, the availability of research funds, and requisite staffing of current projects.

MASTER OF SCIENCE

Programs are available leading to the M.S. degree in Civil and Environmental Engineering with the following special field designation on the diploma: Construction Engineering and Management, Design/Construction Integration, Environmental Engineering and Science, Environmental Fluid Mechanics and Hydrology, Geomechanics, and Structural Engineering. Detailed statements of the requirements for all master’s degrees and the specific designation may be secured from the Department of Civil and Environmental Engineering.

Students admitted to graduate study with a B.S. in Civil Engineering (or its equivalent) from an accredited curriculum can satisfy the requirements for the M.S. degree in Civil and Environmental Engineering by completing a minimum of three quarters of full tuition registration and a minimum of 45 units of study beyond the B.S. At least 36 of the units must be taken at Stanford. A minimum 2.75 grade point average (GPA) is required for candidates to be recommended for the M.S. degree. No thesis is required.

The program of study must be approved by the faculty of the department and should include at least 45 units of courses in engineering, mathematics, science, and related fields unless it can be shown that other work is pertinent to the student’s objectives.

Candidates for the M.S. in Civil and Environmental Engineering who do not have a B.S. in Civil Engineering may, in addition to the above, be required to complete those undergraduate courses deemed important to their graduate programs. In such cases, more than three quarters of residence is often required to obtain the degree.

ENGINEER

A student with an M.S. in Civil Engineering may satisfy the requirements of the degree of Engineer in Civil and Environmental Engineering by completing, in residence, 45 or more units of work (three quarters minimum) including an acceptable thesis (12 to 15 units) and maintaining a "B" GPA average (3.0) or higher. The program of study must be approved by a faculty member in the department.

This degree is recommended for those desiring additional graduate education, especially those planning a career in professional practice. The thesis normally should be started in the first quarter of graduate study after the M.S. degree. Programs are offered in the fields of specialization mentioned for the M.S. degree.

DOCTOR OF PHILOSOPHY

The Ph.D. is offered under the general regulations of the University as set forth in the “Graduate Degrees” section of this bulletin. This degree is recommended for those who expect to engage in a professional career in research, teaching, or technical work of an advanced nature. The Ph.D. program is rigorous and should be undertaken only by students with ability for independent work. It requires a minimum of three years (nine quarters) of graduate study, at least two years of which must be at Stanford. Experience has shown that few students complete the Ph.D. within the minimum residence period. Prospective doctoral students should anticipate the possibility of at least one extra year. All candidates for the Ph.D. degree are required to complete the equivalent of one 50 percent time teaching assistantship for one quarter. Further information
about Ph.D. requirements and regulations is found in the department handbook.

The first year of graduate study can be represented by the M.S. program described above. The second year is devoted partly to additional graduate courses and partly to preliminary work toward a dissertation. The third and subsequent years are applied to further course work and to the completion of an acceptable dissertation.

The program of study is arranged by the prospective candidate at the beginning of the second year with the advice of a faculty committee whose members are nearest in the field of interest to that of the student. The chair of the committee serves as the student’s pro tem adviser until such time as a member of the faculty has agreed to direct the dissertation research. Insofar as possible, the program of study is adapted to the interests and needs of the student within the framework of the requirements of the department and the University. In the second year of graduate study, the student is expected to pass the department’s General Qualifying Examination to be admitted to candidacy. After completing their research, students are required to pass the University oral examination, which is a dissertation defense.

**PH.D. MINOR**

A Ph.D. minor is a program outside a major department. A minor is not a requirement for any degree, but is available when agreed upon by the student and the major and minor departments. Requirements for a minor are established by the minor department. Acceptance of the minor as part of the total Ph.D. program is determined by the major department. Application for candidacy must be approved by both the major and the minor department, and the minor department must be represented at the University oral examination.

A student desiring a Ph.D. minor in Civil and Environmental Engineering (CEE) must have a minor program adviser who is a regular CEE faculty member in the program of the designated subfield. This adviser must be a member of the student’s University oral examination committee and the reading committee for the dissertation.

The program must include at least 20 units of graduate-level course work (that is, courses numbered 200 or above, excluding special studies and thesis) in CEE completed at Stanford University. The list of courses must form a coherent program and must be approved by the minor program adviser and the CEE chair. An average GPA of at least 3.0 must be achieved in these courses.

**COURSES**

(WIM) indicates that the course meets the Writing in the Major requirements.

**UNDERGRADUATE**

45Q. Stanford Introductory Seminar: Issues in Affordable Housing—Preference to sophomores. The complex social, economic, and technical issues that have led to affordable housing crises in places like the San Francisco Bay Area. Students become familiar with affordable housing needs, policies, and resources, learn about people most in need of housing, and examine government and private organizations that work in affordable housing. With assistance from professionals working in this field, they target real problems and perform research on related policy, economic, planning, design, or development issues. GER:3b (DR:9)

3 units, Spr (Paulson, Behrman)

46Q. Stanford Introductory Seminar: Fail Your Way to Success—Preference to sophomores. Examples of risk and failure (primarily engineering failures; historical and social failures are considered depending on student interests). The reasons behind these failures and the application to modern societal and student issues; emphasis is on the people involved in each example and the lessons learned regarding risk willingness and problem solving leadership. The Titanic, Challenger Shuttle, Quebec Bridge, and Hyatt Regency, and case studies from the professor’s 30 years as a construction engineer. At least five construction field trips. Prerequisites: creative thinking and problem solving; willingness to visit chaotic construction sites.

3 units, Spr (Clough)

47Q. Stanford Introductory Seminar: Discovering Micro-Organization Theory for Fast-Paced Project Teams—Preference to sophomores. Students discover micro-organization theory by running “virtual experiments” with the Virtual Design Team (VDT) computer model of project organizations. The issues in developing a theory about the performance of project organizations. Introduces the “information-processing” framework for understanding organizations performing knowledge work, upon which VDT is based. Students work in teams of two to design and execute a series of computational experiments to develop and test hypotheses about the micro-organization theory of fast-paced product development teams. Enrollment limited to 12. Prerequisites: application; curiosity about how organizations work.

4 units, Win (Levitt)

60Q. Stanford Introductory Seminar: Waves of Northern California—Preference to sophomores. Introduction to the physical oceanography of northern California, emphasizing the types of wave motions that are important to shaping the environment in this region. Wind-generated surface waves and how they affect nearby beaches. The tidal motions that influence the functioning of coastal ecosystems like San Francisco Bay. Field trips and lab demonstrations.

3 units, Win (Monismith)

61Q. Stanford Introductory Dialogue: Big Dams, the City Hall, and the Sierra Club—Preference to sophomores. Water and environment policy issues: the beneficial and deleterious effects of large hydraulic structures, such as dams and aqueducts; urban infrastructure and the political process; irrigation and its lobby; flood protection; protected species and the environmentalist lobby. How do we balance the conflicting needs of supplying water and protecting from floods with the desire to maintain a livable environment? Changing public perceptions: the glory and shame of big dams. Emphasis is on discussing where we have been and where we are going in the U.S.

2 units, Aut (Kitanidis)

63. Weather and Storms—Survey of daily and severe weather, and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, global circulation, jet streams, high and low pressure systems, inversions, El Niño, La Niña, atmosphere-ocean interactions, fronts, cyclones, thunderstorms, lightning, tornados, hurricanes, pollutant transport, global climate, and atmospheric optics. GER:2a (DR:5)

3 units, Aut (Jacobson)

64. Air Pollution: From Urban Smog to Global Change—Survey of urban through global-scale air pollution. Topics: the evolution of the earth’s atmosphere, indoor air pollution, urban smog formation, effects of exposure to air pollution, visibility, acid rain, global climate change, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of meteorology on air pollution, and the effects of air pollution and stratospheric ozone on human exposure to ultraviolet radiation. GER:2a (DR:5)

3 units, Spr (Jacobson)

70. Environmental Science and Technology—For science and engineering majors. Introduction to the causes, effects, and methods of controlling environmental degradation associated with air and water pollution. Global climate change, stratospheric ozone depletion, energy issues, regional and urban air pollution; water supply and water quality, solid waste management, and the technical basis for policy.

3 units, Aut (Staff)

76N. Stanford Introductory Seminar: Hydrogen—Fuel of the Future—Preference to freshmen. The role of hydrogen as a large-scale energy source of the future to replace fossil fuels for stationary and transportation applications. Topics: energy consumption of conventional fuels; environmental (global and local) impacts of energy consumption; characteristics of alternate (clean) fuels; and evaluation of hydrogen as a replacement fuel. Factors to be evaluated in the development of a
hydrogen fuel industry: production technologies; means for storage and distribution; (safety; economics for large-scale production; and characteristics for stationary power plants and mobile (e.g., fuel-cell engine) applications. Hydrogen as a zero-emission transportation fuel. Individual student projects or studies.

3 units, Win (Kruger)

100. Managing Civil Engineering Projects—Introduction to the facility life cycle and project delivery process and organization. Techniques for planning, organizing, and executing civil engineering projects from conception to completion. Project objectives (scope, quality, cost, time, and safety) from multiple perspectives throughout the facility life cycle. Time and cost planning and control, including scheduling and cost estimating techniques using information technology. Small team projects, exposure to real world projects, and individual paper. (WIM)

4 units, Aut (Fischer)

101A. Structural Systems—Structural loads in design; structural systems; serviceability and strength criteria; deflections of determinate and indeterminate beams; stress and strain in beams under various loading conditions; plane stress; analysis of column buckling. Lab experiments; case studies of noteworthy structures; design project; possible field trip. Prerequisites: 100, Engineering 14.

4 units, Win (Staff)

101B. Mechanics of Fluids—Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, wind turbines, airplane wings, and baseballs. Prerequisites: Physics 41, Mathematics 51.

4 units, Spr (Monismith)

101C. Geotechnical Engineering—Introduction to the basic principles of soil mechanics. Soil classification, shear strength and stress-strain behavior of soils, consolidation theory, analysis and design of earth retaining structures, introduction to shallow and deep foundation design, slope stability. Lab projects. Prerequisites: 101A, Engineering 14.

4 units, Aut (Borja)

101D. Seminar on Mathematical Laboratory Applications in Civil and Environmental Engineering—(Graduate students register for 201D.) Preference to juniors majoring in CE. Use of commercial professional software in the design and analysis of civil and environmental engineering systems. MATLAB 5 is applied to relevant problems and issues that students encounter in subsequent courses and in engineering practice. Limited enrollment.

2 units, Win (Kitanidis)

101E. Analytical and Numerical Methods for the Environment—(Graduate students register for 201E.) Develops a working knowledge of the analytical and numerical techniques needed to solve a range of environmental problems. Application of these techniques to specific environmental problems. Governing equations plus appropriate boundary and/or initial conditions are derived from the physical contexts. Application of ordinary differential equation methods. Introduction to: method of characteristics, partial differential equation models of physical phenomena and solution of the models, solution of sets of linear and nonlinear equations, modeling of systems with uncertain inputs and data, role of probability. Prerequisites: 101B, 101D, Engineering 155A, or equivalents.

4 units, Aut (Street)

102. Legal Context of Civil Engineering—Introduction to the U.S. legal system as it applies to civil engineering and construction. Fundamental concepts of contract and tort law, claims, risk management, business formation and licensing, agency, insurance and bonding, and real property.

3 units, Win (London)

111. 3D and 4D Modeling of Civil Engineering Projects—(For undergraduates; same as 211.) Modeling, visualization, and graphical communication of civil engineering artifacts, 3D CAD, 4D modeling, introduction to underlying computer representations, applications of 3D CAD in design and construction, lab exercises, class project.

3-4 units, Spr (Fischer)

114. Symbolic Modeling in Engineering—(For undergraduates; same as 214.) Prerequisite: Computer Science 106A or equivalent.

4 units, Win (Kunz)

122A. Computer Integrated Architecture/Engineering/Construction (A/E/C)—Undergraduates serve as apprentices in 222A. See 222A. Enrollment limited and based on interviews.

2 units, Win (Fruchter)

122B. Computer Integrated Architecture/Engineering/Construction (A/E/C)—Undergraduates serve as apprentices in 222B. See 222B. Enrollment limited and based on interviews.

3 units, Spr (Fruchter)

140. Construction Surveying—Introduction to basic field surveying methods, emphasizing construction related activities. Use of optical level, theodolite, EDM, total station. Field activities: level loops, traverses, construction layout, and as-built measurements. Introduction to advanced measurement and positioning technologies. Lab.

3 units, Spr (Staff)

141. Design and Construction of Concrete Canoe for ASCE Competition—Design, construction, and testing of canoe; structural and hydrodynamic analysis; selection of materials and construction methods; participation in regional canoe race.

1 unit, Aut, Win, Spr (Jacobson)

4 units, Aut (Levitt)

146. Managing Engineering and Construction Companies—(Graduate students register for 246.) See 246.

3-4 units, Spr (Levitt)

147. Cases in Personality, Leadership, and Negotiation—(Graduate students register for 247.) Case discussions regarding the management of projects. Emphasis is on the understanding of personalities, thinking styles, and negotiation skills. Cases are based on the instructor's 30 years of experience in the construction industry. Field trips to local projects augment the cases. Limited enrollment.

3 units, Spr (Clough)

148. Design and Construction of Affordable Housing—Planning, design, engineering, and construction in the development of affordable housing. Topics: the socio-economic context of affordable housing; stages in property development; issues in design; types of structures, methods, and materials used in housing construction; and property management. Students apply what they learn in assignments and a term project. Prerequisites: junior or senior in Civil and Environmental Engineering, Urban Studies, or related fields.

4 units, Win (Paulson)

153. Construction Equipment and Methods—Methods to build projects planned by engineers and architects. Application of engineering fundamentals to the selection and design of equipment and systems to carry out production operations in construction; analysis of production output and
costs; application of engineering economy to equipment and process decision making. Prerequisites: 100; Engineering 14, 60.

3 units, Spr (Paulson)

154. Construction Cost Estimating—(Graduate students register for 254.) Application of specific construction methods using case studies, cost estimating, and field trips. Emphasis is on the fundamental driving forces in the industry through the practice of estimating infrastructure costs. Cases are based on the instructor’s 30 years in the construction business. Five required field trips. Students are graded on competitive cost estimates and presentations based on the field trips. Limited enrollment.

3 units, Aut (Clough)

156. Buildings Systems Design—(Graduate students register for 256.) Design concepts, integration issues, materials of construction, and installation operations for conventional building systems. Lectures and group projects on heating, ventilation, and air conditioning systems. Student groups analyze selected building systems on active projects, and report on existing design, a redesigned portion of a system, materials of construction, and installation.

3 units, Win (Tatum)

160. Mechanics of Fluids Laboratory—Lab experiments/demonstrations illustrate conservation principles and flows of real fluids. Corequisite: 101B.

2 units, Spr (Monismith)

161. Open Channel and Pipe Flows—Steady and unsteady flows in engineered and natural channels and rivers and pipe systems. Basic equations and theory (mass, momentum, and energy equations). Application of theory to design of flood-control and water supply systems. Lab experiments illustrate concepts developed in class. Prerequisites: 101B, 160. Corequisite: 101E.

4 units, Aut (Koseff)

162. Hydrology and Water Resources—Introduction to the movement of water through natural and constructed environments. Storage and fluxes of water through the natural environment. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Emphasis is on measurement, data analysis, modeling, and the role of hydrologic processes in ecosystems. Technological systems associated with human use of water as a resource. Irrigation, hydroelectric power generation, rural and urban water supply systems, stormwater management, flood damage mitigation, water law and institutions. Emphasis is on engineering design and environmental impacts. Required field trips. Prerequisites: 161, Engineering 60.

4 units, Win (Freyberg)

169. Environmental and Water Studies Design—Seniors in Civil Engineering only. The design of environmental and water resources systems. Design as a process. Application of fluid mechanics, hydrology, water resources, environmental sciences, planning, and engineering economy fundamentals to the design of an engineering system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Previous problems included sediment management in Searsville Lake, improved operation of Lagunita, and a remedial design for the Santa Rosa outfall in San Pablo Bay. Student design teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: 162.

5 units, Spr (Freyberg)

171. Environmental Planning Methods—For juniors and seniors. Use of microeconomics and mathematical optimization theory in the design of environmental regulatory programs; tradeoffs between equity and efficiency in designing regulations; techniques for predicting visual, noise, and traffic impacts in environmental impact assessments. Prerequisites: 70, Math. 51.

3 units, Win (Ortolano)

172. Air Quality Management—Quantitative introduction to engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, Mathematics. 51.

3 units, Win (Hildemann)

5 units, Spr (Staff)

4 units, Win (Masters)

4 units, Spr (Masters)

177. Aquatic Chemistry and Biology—Undergraduate-level introduction to the chemical and biological processes in the aqueous environment. Basic aqueous equilibria and redox reactions; the structure, behavior, and fate of major classes of chemicals that dissolve in water; the biogeochemistry of aquatic microbial life; the chemistry of water disinfection; and biogeochemical processes. Prerequisite: Chemistry 31.

4 units, Aut (Cridle)

177L. Water Chemistry Laboratory—(Same as 273A). For undergraduates. Laboratory application of techniques for the analysis of natural waters and wastewaters, emphasizing instrumental techniques.

2 units, Win (Leckie)

180A. Introduction to Structural Analysis—Analysis of simple and compound trusses; shear and bending in beams and frames; analysis of cables and arches: approximate methods for vertical and lateral loads; deflections by integration, moment-area, virtual work, and energy methods; analysis of beams, trusses, and frames by force method. Field trip. Prerequisites: 101A, Engineering 14.

3 units, Spr (Kiremidjian)

180B. Structural Analysis—Analysis of beams, trusses, frames; method of indeterminate analysis by consistent displacement, least work, superposition equations, moment distribution. Introduction to matrix methods and computer methods of structural analysis. Prerequisite: 180A.

4 units, Aut (Lowes)

181. Design of Steel Structures—Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Comprehensive project on the structural design of an industrial building. Prerequisite: 180A.

4 units, Win (Deierlein)

182. Design of Reinforced Concrete Structures—Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined
actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Comprehensive project on the structural design of a reinforced concrete office building. Prerequisite: 180A.

4 units (Krawinkler) not given 1999-2000

195. Structural Geology and Rock Mechanics—(Same as Geological and Environmental Sciences 110.) Observational techniques, analysis methods, and theoretical foundations of structural geology, engineering geology, and rock mechanics. Computer exercises are integrated with field data to understand the role of geologic structures in the evolution of the earth’s crust (folding, faulting, flow, and fracturing of rock) and geologic hazards (earthquakes, landslides, and volcanoes). Topics: structural quantities and dimensional analysis; use of stress, strain, displacement, and velocity fields in structural analysis; the concept and measurement of deformation; mechanical properties of rock (elasticity, viscosity, strength, friction, fracture toughness); case studies of typical geologic structures using continuum mechanics. Computer labs. Prerequisites: Geological and Environmental Sciences 1, calculus, Macintosh skills.

5 units, Aut (Pollard)

196. Engineering Geology Practice—(Same as Geological and Environmental Sciences 115.) The application of geologic fundamentals to the planning and design of civil engineering projects. Emphasis is on development of geologic skills to identify, describe, and map earth materials and geologic structures as a means of determining the impact on site development. Topics: weathering and soil-forming processes, soil and rock mechanics, site investigation techniques, surface and groundwater regimes, stream and coastal processes, quaternary tectonics, depositional and geomorphology, environmental concerns, and geologic and geotechnical hazards. Field/lab exercises and case history studies emphasize the impact of site geology on the safe planning, design, and construction of civil engineering projects such as foundations, transportation facilities, excavations, tunnels and underground storage space, water supply facilities, and marine works. Prerequisite: 195 or consent of instructor.

3 units (Holzer) alternate years, given 2000-01

199. Undergraduate Research in Civil and Environmental Engineering—Participation in a research project in Civil and Environmental Engineering. Written report or oral presentation required. Students must obtain a faculty sponsor.

2-3 units, any quarter (Staff)

PRIMARILY FOR GRADUATE STUDENTS

200A,B,C. Teaching of Civil and Environmental Engineering—Required of all CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship.

200A. 1 unit, Aut (Staff)
200B. 1 unit, Win (Staff)
200C. 1 unit, Spr (Staff)

201D. Seminar on Mathematical Laboratory Applications in Civil and Environmental Engineering—(Undergraduates register in 101D.) See 101D.

2 units, Win (Kitanidis)

201E. Analytical and Numerical Methods for the Environment—(Undergraduates register for 101E.) See 101E.

4 units, Aut (Street)

202. Applied Measurements—Topics related to research or industrial measurements are applied and related to getting valid experimental data. System and instrument specifications, signal conditioning, noise reduction, digital data acquisition, and specific measurements related to motion and acceleration. Recommended: understanding the concept of frequency response.

1 unit, Aut (Schiff)

203. Statistical Models in Civil Engineering—Introduction to probability modeling and statistical analysis within various areas of civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration from limited data. Recognition of intrinsic randomness and modeling uncertainty. Introduction to probability event and decision trees. Models of independent events; hazard rate models. Computational methods include Monte-Carlo simulation, and second-moment and full-distribution methods derived from structural reliability theory.

4 units, Aut (Kiremidjian)

204. Structural Reliability—Probability models for loads and resistance, definition of failure events of structural components and systems, sources and estimation of uncertainties, first- and second-order reliability methods, simulation methods in reliability analysis, solution techniques for complex systems, application to structural codes. Prerequisite: 203 or equivalent.

4 units, Spr (Staff)

211. 3D and 4D Modeling of Civil Engineering Projects—(Undergraduates register for 111.) See 111.

3-4 units, Spr (Fischer)

214. Symbolic Modeling in Engineering—(Same as 114.) Issues concerning symbolic model-based reasoning systems in engineering. Lab course to study and create symbolic models using Artificial Intelligence representation and reasoning techniques, and engineering principles and heuristics. Prerequisite: Computer Science 106A or equivalent.

4 units, Win (Kunz)

215. Social Entrepreneurship—(Same as Business 335G.) Social entrepreneurship refers to the efforts of private citizens to create innovative responses to social needs, and innovative solutions to social problems. Objectives: introduce the concept and practice of social entrepreneurship as it is emerging in the U.S. and around the world, help students be more effective in their social entrepreneurial pursuits by building their practical knowledge of the strategies for turning good social ideas into effective ventures, and discuss distinctive challenges of entrepreneurship in the social sector in a global setting.

4 units, Spr (Kessler, Dees)

222A. Computer Integrated Architecture/Engineering/Construction (A/E/C)—Study projects focus on the cross-disciplinary aspects. A history of the building industry. Performance-based design, constructibility, construction planning and management issues. Students learn basic communication technologies and are engaged in team building and mini warm-up team projects.

2 units, Win (Fruchter)

222B. Computer Integrated Architecture/Engineering/Construction (A/E/C)—Continuation of 222A. Multi-disciplinary, collaborative, multi-site teamwork project-centered environment. Round table A/E/C panel discussions, lectures, and labs on collaborative technologies provide a global perspective of the A/E/C industry and cutting edge information technologies. Students exercise the acquired theoretical discipline knowledge and the information technologies in a multi-disciplinary, collaborative context, and engage in hands-on case study projects to redesign parts of existing projects and work on the concept development phase of the comprehensive course project.

3 units, Spr (Fruchter)

222C. Computer Integrated Architecture/Engineering/Construction (A/E/C)—Continuation of 222B. Students focus on the comprehensive team project, including project development and documentation, and final presentation of results. Design and construction alternatives are
subject to rigorous examination by rapid computational prototyping, concurrent multi-disciplinary evaluation, and trade-off analysis. Prerequisite: 222B.

2 units, Spr (Fruchter)

237. Introduction to Biotechnology—(Same as Biochemistry 237, Chemical Engineering 450, Developmental Biology 237, Structural Biology 237.) Faculty from the departments of Biochemistry, Biological Sciences, Chemical Engineering, Civil and Environmental Engineering, Developmental Biology, Structural Biology, and invited industrial speakers review the interrelated elements of modern biotechnology. Topics: protein structure and dynamics, protein engineering, bioanalysis, gene expression, cellular metabolism and metabolic engineering, fermentation technology, and purification of biomolecules. Prerequisite: graduate student or upper-division undergraduate in the sciences or engineering.

3 units, Spr (Robertson)

238. Frontiers in Interdisciplinary Biosciences—Literature/discussion on how to critically evaluate the cutting edge of current research, held in conjunction with a seminar series, occurring once per month for 1999–2000, and more frequently thereafter. Leading investigators in interdisciplinary research from Stanford and from throughout the world present their work in a particular area. Before the seminar, students and faculty read and critically discuss one or more papers from the primary research literature on a related topic. After the seminar, students meet informally with the speakers to discuss the research and future directions. Emphasis is on how to read papers in the primary research literature, and familiarization with the broad set of techniques and approaches used to study problems in the biosciences. This interdisciplinary course is listed in many departments in the schools of Engineering, Medicine, and Humanities and Sciences. Students should enroll in their affiliated department, if it is offered. If not, students may enroll in any department within their school where the course is listed.

1 unit, Aut, Win, Spr (Spudich, Robertson, Chu, Mobley)

240. Analysis and Design of Construction Operations—Planning and management of construction work at the field operations level. Data collection, analysis, modeling, and design. Emphasis is on work methods development, productivity, safety, and total quality management. Students prepare studies of and reports about local construction projects.

3 units, Aut (Paulson)

240L. Applications of Operations Analysis and Design—Hands-on experience as a construction volunteer at a Bay Area low-cost housing project. Opportunities to apply planning and analysis skills learned in 240, while working with groups of volunteers performing specific field tasks. Corequisite: 240.

1 unit, Aut (Paulson)

241. Techniques of Project Planning and Control—Fundamental concepts of project planning and control; current and future project information technologies; project planning and control systems at the firm and project level. Topics: cost estimating at conceptual, schematic, detailed, and bid stages, measurement and pricing of work; work breakdown structures; planning and scheduling techniques, including CPM, PERT, LOB; resource allocation; project control; supply chain models; treatment of uncertainty; electronic integration of time and cost planning and control, and 4D modeling. Group term project including technical report and presentation.

3-4 units, Win (Fischer)

242. Organization Design for Projects and Companies—Provides an introduction to organizational behavior. In-depth contingency theory of organizational design for engineering and construction projects and firms. Computer-based organizational analysis tools. Case studies on facility design and construction organizations; concepts are applicable to project-focused teams and companies in other industries. Groups of 12 students practice running problem-focused meetings, one case study per week outside class. Prerequisite: 240 or equivalent.

4 units, Aut (Levitt)

2 units, Aut (Tucker, Meyer)

244B. Advanced Construction Accounting, Financial Issues, and Claims—Continuation of 244A. Emphasis is on advanced construction accounting and economic issues, the recovery of project overruns, and the understanding of construction industry financial disclosures. Construction claims, project cost overrun analysis, and cost recovery methods related to labor, equipment, indirect, overhead, cost of capital, and profit claims. Schedule delay analysis in the context of claims.

2 units, Win (Tucker, Meyer)

246. Managing Engineering and Construction Companies—Administration and management of design and construction companies in the architecture-engineering-construction industry. Focus is on management of risks inherent in the A-E-C industry: developing strategies to cope with cyclical demand, alternative contracting approaches, managing receivables and cash flow, administration of human resources, safety, quality, insurance and bonding.

4 units, Spr (Levitt)

247. Cases in Personality, Leadership, and Negotiation—See 147.

3 units, Spr (Clough)

248. Real Estate Development—Overview of the real estate development process, emphasizing critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public role, steps for project approval, project finance, contracting and construction, property management, and sales. Group term projects focus on actual developments now in the planning stage. Prerequisites: 244A or equivalent, Engineering 60.

3 units, Spr (Staff)

249. Labor and Industrial Relations in Construction—The history, laws, institutions, and social and economic forces affecting labor and industrial relations in construction, covering the union and open-shop sectors. Comparative labor relations (other nations), simulated collective bargaining and arbitration exercises; field trip.

3 units, Win (Clark, Walton)

250. International Construction—Prepares construction professionals for international projects, exploring the differences in: construction systems, technology, management, and culture between advanced industrial countries (AIC), newly industrialized countries (NIC), and less developed countries (LDC); privatization of infrastructure, economic drivers of construction projects, risks, and risk management. Material is from a construction market viewpoint and the viewpoint of a single project and firm. Individual research paper, case studies, and class presentation.

3 units (Fischer) not given 1999–2000

3 units, Aut (Clough)

256. Building Systems Analysis—Undergraduates register for 156; see 156. Design concepts, integration issues, materials of construction, and installation for HVAC systems. Student groups analyze a specialized building system on a project.

3 units, Win (Tatum)
257. Development Strategies for High Tech Facilities—The development of complex facilities for biotech and semiconductor firms to satisfy demanding project objectives. Business aspects of the industry segments, basic technology and production processes, projects and typical plants, and major process equipment and systems. Professionals from firms participating in project teams for high tech facilities. Field trips to biotech labs and production facilities, semiconductor tool suppliers, and wafer fabs. Two papers analyze development strategies through case studies of realistic situations.

3 units, Spr (Tatum)

258A,B,C. Donald R. Watson Seminar in Construction Engineering and Management—Weekly discussions of special topics with speakers from industry and government. Normally taken by construction graduate students each quarter for three quarters. Lecture builds on construction graduate courses. (AU)

258A. 1 unit, Aut (Clough)
258B. 1 unit, Win (Paulson)
258C. 1 unit, Spr (Levitt)

259A,B,C. Construction Problems—Analysis of group-selected problems in construction techniques, equipment, or management, followed by preparation of oral and/or written reports. Students consult specialists from the construction industry and make use of University facilities. See 299 for alternative individual studies. Prerequisites: graduate standing in construction and consent of instructor.

259A. 1-3 units, Aut (Staff)
259B. 1-3 units, Win (Staff)
259C. 1-3 units, Spr (Staff)

260A. Physical Hydrogeology—(Same as Geological and Environmental Sciences 230.) Theory of underground water, analysis of field data and pumping tests, geologic groundwater environments, solution of field problems, groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

5 units, Aut (Gorelick)

4 units, Aut (Loague) alternate years, not given 2000-01

260C. Contaminant Hydrogeology—(Same as Geological and Environmental Sciences 231.) For earth scientists and engineers interested in environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media, including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advection-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation.

Recommended: 260A.

4 units, Spr (Gorelick)

261. Watershed and Wetlands Hydrology—Graduate seminar focusing on the hydrologic processes underlying the functioning, management, and restoration of important ecosystems. Possible topics: the hydrology of tidal salt and freshwater marshes, inland freshwater wetlands, riparian zones, wetland and upland forests, agricultural watersheds, or urban watersheds. Readings from texts and journal literature. Each student prepares a research proposal on the quarter’s topic. Enrollment limited. Prerequisite: consent of instructor. Recommended: 162, 260A, or equivalents.

3 units, Spr (Freyberg)

262A. Environmental Fluid Mechanics—The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor, and some knowledge of vector calculus.

3-4 units, Aut (Monismith)

3-4 units, Win (Staff)

262C. Modeling Environmental Flows—Introduction to turbulence concepts and models, and to basic concepts of numerical simulation and computer modeling of turbulent flows. Application of models to open channel, estuary, and lake/reservoir simulations. Use of computer models for estuarine hydrodynamics, lake/reservoir dynamics, and stream water quality. The effects of rotation and stratification. Prerequisites: 262A and 262B, or consent of instructor.

3-4 units, Spr (Street)

263A. Air Pollution Modeling—Introduction to the numerical modeling of urban, regional, and global air pollution with a focus on gas chemistry, and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the Multistep Implicit-Explicit method, Gear’s method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves the development of a basic chemical ordinary differential equation solver. Prerequisite: Computer Science 106A or equivalent.

3-4 units, Win (Jacobson)

263B. Numerical Weather Prediction—Introduction to numerical weather prediction. The continuity equations for air and water vapor, the thermodynamic energy equation, and the momentum equations are derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic mesoscale model. Prerequisite: Computer Science 106A or equivalent.

3-4 units (Jacobson) not given 1999-2000

263S. Climate Theory, Modeling, Applications, and Implications—(Same as Biological Sciences 217.) The history of the coevolution of climate and life. Theories of climate, external and internal climatic forcings, definitions of climate and the climate system, and rationale for climatic modeling. Hierarchy of climatic models; interactions among atmosphere, biosphere, oceans, hydrosphere, and cryosphere. Climatic predictability; implications of predictions and relevance to current controversies. Prerequisites: math through differential equations, or biology core, or consent of instructor.

3 units, Win (Schneider) alternate years, not given 2000-01
264. Sediment Transport Modeling—The physical processes and modeling of sediment transport in estuaries, rivers, and coastal zones. Modeling in one-, two-, and three-space dimensions and time. Hands-on sessions with actual development, modification, and application of analytical models and numerical codes for transport. Prerequisites: 101D, 262A, or equivalents.

3 units, Win (Street)

265. Sustainable Water Resources Development—Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.

3 units, Win (Ortolano)

266. Environmental Policy Design and Implementation—Regulation, market incentives, the courts, and negotiation as bases for environmental management programs. Case studies involve implementation of air and water pollution control laws, hazardous waste management programs, and environment impact assessment. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies Program or consent of instructor.

4 units, Spr (Ortolano)

266S. Urban Policy Design and Implementation—(Same as Law 287.) Open to graduate students. Examination of the interaction between urban redevelopment policies and environmental laws as applied to local land use decisions. The opportunities and obstacles to promoting “smart growth” in existing communities and discouraging sprawl in undeveloped areas. Paper. Enrollment limited. Recommended: prior course work on environmental law.

2 semester units, Aut semester (Hernandez, Hingerty)

267. Interpolation and Inverse Problems—Understanding complex hydrologic processes by using measurements, mathematical models which describe groundwater flow and solute transport, and stochastic analysis of spatial variability and uncertainty. Topics: exploratory data analysis, generalized linear minimum-variance estimation, parameter estimation (or “model calibration”), model validation, accuracy of model predictions, optimal sampling. Emphasis is on linear “geostatistical” methods of estimation. Prerequisite: background in introductory statistics and linear algebra.

3-4 units, Spr (Kitanidis)

268. Groundwater Flow—Study of flow and mass transport in porous media through analytical techniques. Applications of potential field theory to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing. Flow-net construction and conformal mapping. Capture zones of wells. Prerequisites: 101B or equivalent, 260A; Mathematics 41, 42, 51, or equivalents.

3-4 units (Kitanidis) not given 1999-2000

269. Water Resources Seminar—Problems in all branches of water resources, with talks by visitors, faculty, and students. (AU)

1 unit, Spr (Kitanidis)

270. Movement, Fate, and Effects of Contaminants in Surface Waters and Groundwater—Transport of chemical constituents in surface and groundwater, including advection, dispersion, sorption, interphase mass transfer, and transformation; water quality requirements for various beneficial uses. Emphasis is on the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.

3 units, Aut (Cunningham)

3 units, Win (Staff)

271B. Biological Processes—Biological processes for the transformation of environmental contaminants. Unit processes for biological treatment including dispersed growth and fixed-film systems. Aerobic and anaerobic process, microbial ecology, and kinetics, with applications to the treatment of municipal and industrial wastewaters, hazardous chemicals, and groundwater. Recommended: 270, 274A.

3 units, Win (Criddle)

271C. Treatment Process Design—Analysis of specialized water pollution control processes such as adsorption, oxidation, and air stripping. Emphasis is on physical and chemical processes in the treatment of hazardous wastes, especially contaminated groundwater. Definitions of problems and objectives, evaluation of alternatives for example cases, preliminary process design, and cost evaluations. Design-oriented class project and field trips. Prerequisites: 270, 271A.

3 units (Staff) given 2000-01

273. Aquatic Chemistry—(Same as Geological and Environmental Sciences 264.) Chemical principles and application of those principles to the analysis and solution of problems in aqueous geochemistry (temperatures near 25°C and atmospheric pressure). Emphasis is on the analysis of natural water systems and the understanding and solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: Chemistry 31 and 33, or equivalent.

3 units, Aut (Leckie)

273A. Water Chemistry Laboratory—Laboratory application of techniques for the analysis of natural waters and wastewaters, emphasizing instrumental techniques.

2 units, Win (Leckie)

3 units, Aut (Spormann)

3 units, Win (Spormann)

274C. Environmental Microbiology Laboratory—Microbiological, biochemical, and molecular techniques for characterizing microbes: enrichment and isolation of microorganisms, metabolic and phylogenet-
ic characterization of isolates, determination of growth parameters (growth rate, growth yield, fermentation balance), enrichment and isolation of microorganisms degrading pollutants, detection of microorganisms in the environment, water quality parameters. Horizontal gene transfer. Prerequisites: 274A, 274B.

3 units (Spornmann) not given 1999-2000

275A. Water Quality Control Processes I—Lab and pilot plant studies of the physical and chemical processes for the treatment of water and wastewaters. Prerequisites: 271A, 273, 273A.

3 units, Spr (Leckie) alternate years, not given 2000-01

3 units, Cr (Criddle) alternate years, given 2000-01

3 units, Aut (Hildemann)

3 units, Spr (Hildemann)

279. Environmental Engineering Seminar—Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, and may be accrued throughout the school year. See instructor.

1 unit, Spr (Hildemann)

280. Advanced Structural Analysis—Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques. Introduction to nonlinear analysis concepts. Computer lab. Prerequisites: elementary structural analysis and matrix algebra.

4 units, Aut (Deierlein)

281. Finite Element Structural Analysis—Introduction to the finite element method for analysis of structural systems. Formulation and implementation of frame, plane stress, plane strain, axisymmetric, torsional, solid, plate, and shell elements. Topics: strong and weak forms of the problem, variational principles and the principle of minimum potential energy, the finite element method as an extension of the Rayleigh-Ritz method, shape functions, isoparametric mapping, numerical integration, convergence requirements and error estimation. Techniques for application to modeling structural systems. Prerequisite: 280 or equivalent.

4 units, Win (Lowes)

282. Earthquake Hazard and Risk Analysis—Earthquake phenomena, faulting, ground motion, study of past major earthquakes, effects of earthquakes on man-made structures, response spectra, Fourier spectra, power spectra, random vibration analysis of single and multi-degree of freedom systems, soil effects on ground motion and structural damage, methods for structural damage evaluation, current research in earthquake engineering. Prerequisites: 203, 296A.

3 units, Win (Kiremidjian)

283. Nonlinear Structural Analysis—Introduction to methods of geometric and material nonlinear analysis, emphasizing techniques for modeling framed structures. Applications to stability problems and performance based design. Assignments emphasize computer implementation and use of nonlinear analysis. Prerequisites: 280, 286.

3 units, Spr (Deierlein)

284. Earthquake Resistant Design—Earthquake motions and their engineering interpretations, strong ground motion studies, design spectrum and design earthquake, importance of dynamic analysis of structures, geologic and soil engineering problems, design of structures to minimize earthquake damage, risk analysis, earthquake codes. Prerequisite: 282A or consent of instructor.

3 units, Spr (Lowes)

285. Behavior of Structural Systems for Buildings—Basic design concepts, performance criteria, loading, methods of design, types of structural systems behavior of structural systems under gravity and lateral loads, approximate methods of analysis, preliminary design concepts and implementation, performance assessment, behavior of structural elements. Prerequisites: basic courses in design of steel and reinforced concrete structures.

4 units, Aut (Krawinkler)

286. Advanced Structural Design—Strength, stiffness, and ductility considerations in the design of structural elements and systems made of steel, reinforced concrete, and other materials. Concepts of redistribution (element vs. system behavior). Introduction to performance-based design. Prerequisites: basic courses in design of steel and reinforced concrete structures, 285 or equivalent.

4 units, Win (Krawinkler)

287. Structural Performance and Failures—Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.

2 units, Spr (Monecarz)

288. Computer Methods in Structural Engineering—Introduction to basic techniques for the development of structural engineering analysis and design software. Topics: basic data structure; computer representation of engineering systems; implementation of advanced numerical methods and engineering software; automated conformance checking of design codes and standards. Prerequisites: Computer Science 106A or equivalent.

3 units (Law) not given 1999-2000

289. Computational Geomechanics—Steady-state and transient fluid conduction problems in geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; soil-structure interaction; wave propagation and radiation damping; coupled finite element-boundary element solutions in elastodynamics; computational techniques for solving systems of nonlinear equations. Computing assignments. Prerequisites: 101C, 281, or equivalents.

3 units, Spr (Borja) alternate years, not given 2000-01
290. Advanced Geomechanics—Theory of particulate media; micromechanics of granular materials; constitutive laws in geomechanics; plasticity; return-mapping algorithms; classical yield models: Mises, Mohr-Coulomb, Drucker-Prager; critical state theory and Cam-clay type models; multi-surface and bounding surface type models; drained and undrained conditions; numerical simulations. Prerequisites: 101C, Mechanical Engineering 238A, or equivalents.
3 units (Borja) alternate years, given 2000-01

291. Foundation Engineering—Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Special seminars by guest speakers; computer assignment. Prerequisite: 101C or equivalent.
3 units, Win (Borja)

293. Experimental Soil Mechanics—Lab determination of stress-strain parameters for soils under drained and undrained loading conditions. Six lab experiments. Prerequisite: 101C or equivalent.
2 units, Win (Borja)

294. Issues in Geotechnical and Environmental Failures—Causes and consequences of the failure of buildings, earth structures, waste storage, and high hazard facilities in contact with the environment; technical, ethical, economic, legal, and business aspects; failure analysis and forensic problems; prevention, liability, and dispute management. Case history approach based on the instructor’s files including earthquake, flood, and hazardous waste facilities. Student observation, participation in active lawsuits where possible.
3 units, Spr (Meehan)

296A. Structural Dynamics I—Vibrations and dynamic response of simple structures under time dependent loads, dynamic analysis of single and multiple degrees of freedom systems, support motion, response spectra.
4 units, Aut (Law)

296B. Structural Dynamics II—Methods of structural dynamics for discretized and continuous systems in free and forced vibration, modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 296A.
4 units, Win (Law)

298. Structural Engineering and Geomechanics Seminar—Recommended for all graduate students. Lectures on topics of current interest in professional practice and research. (AU)
1 unit, Win (Staff)

299. Independent Study in Civil Engineering—Directed study for graduate students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.
1-3 units, any quarter (Staff)

300. Thesis—Investigation of an engineering problem; required of candidates for degree of Engineer.
Aut, Win, Spr (Staff)

310. Post-Master’s Seminar—For post-master's students to serve as orientation to the selection of a research topic.
1 unit, Aut, Win, Spr (Staff)

320A,B,C. Integrated Facility Engineering—Individual and group presentations on goals, research, and state-of-practice of integrated facility engineering, including objectives for integrated computer systems. (AU)
1 unit, Aut, Win, Spr (Fischer, Kunz, Levitt)

342. Computational Modeling of Organizations—For post-M.S. students interested in formal techniques for organization design. Computer simulation of organizations are used to conduct “virtual experiments” for developing organization theory or to analyze the performance of “virtual organizations” with different structures and decision support/communication technologies. Goals: introduce research on computational modeling and design of real-world organizations. Paper serves as a research proposal. Prerequisite: 242 or equivalent introductory organization design class.
4-5 units, Win (Levitt)

362. Advanced Topics in Subsurface Transport—Mathematical analysis of flow and transport in porous and fractured media. Topics vary each year, including: solution of flow and transport equations, stochastic analysis, homogenization, and estimation methods. Prerequisite: consent of instructor.
3 units, Aut (Cirpka)

3 units, Aut (Fong) alternate years, not given 2000-01

364. Geophysical Fluid Dynamics—Focus is on fluid dynamics in natural systems where the influence of the earth’s rotation is important. The basic processes such as geostrophic and quasi-geostrophic flows, planetary waves, and potential vorticity. Student-led lectures and discussions of current physical oceanographic research problems. Prerequisites: 262A, 363.
2 units, Win (Monismith, Fong)

370A,B,C. Environmental Research—Introductory research experience for first-year graduate students in the Environmental Engineering and Science program pursuing the Ph.D. 15-18 hrs/week on research over a 3-qtr. period. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
5-6 units, Aut, Win, Spr (Staff)

373. Special Topics in Aquatic Surface Chemistry—Special topics seminar series reviews current research covering significant chemical interactions and reactions in the environment taking place at the solution/solid interface. Mineral surfaces are responsible for the attenuation of contaminant transport in groundwater, have catalytic properties, and can control the bioavailability of contaminants, trace elements, and organic molecules. Similarly, solid organic matter, organic colloids, organic coatings, and even surfaces of microorganisms are involved in reactions with solutes. These surface phenomena are examined from the perspective of understanding the chemical interactions at surfaces extensively employed (explicitly and implicitly) in water/wastewater treatment and environmental remediation strategies. Student presentations on specific topics. Prerequisites: 270, 273, 275A, and post-M.S. status.
2 units (Leckie) alternate years, given 2000-01

379. Environmental Management and Policy Analysis—(Same as Business 312E) Priority given to Environmental and Water Studies graduate students. Environmental considerations are increasingly central to business activity and present business opportunities. Managers need to effectively incorporate these considerations into their decision-making processes. Speakers from industry and nonprofits cover the basics of environmental science and economics, and show how companies are addressing environmental management. Selected public policy issues identify effective policy and show how managers can affect or
anticipate policy changes. Group project (research paper or working with a company or environmental organization). Enrollment limited.
4 units (Bulow) given 2000-01

398. Report on Civil Engineering Training—On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: written consent of adviser.
1 unit, any quarter (Staff)

399. Advanced Engineering Problems—Individual projects on selected topics. Independent graduate work under the direction of a faculty member on a subject of mutual interest. Student must obtain faculty sponsor. Written report usually required.
1-5 units, any quarter (Staff)

Aut, Win, Spr (Staff)

**COMPUTER SCIENCE**

Chair: Jean-Claude Latombe
Associate Chair for Education: Eric S. Roberts

Associate Professors: David Dill, Michael Genesereth, Oussama Khatib, Monica Lam, Marc Levoy, Rajeev Motwani, Serge A. Plotkin, Mendel Rosenblum, Yoav Shoham, Jennifer Widom

Assistant Professors: Mary G. Baker, Dan Boneh, Christoph Bregler, Dawson Engler, Armando Fox, Daphne Koller, Christopher Manning, Nick McKeown, Balaji Prabhakar, Carlo Tomasi

Professors (Research): Thomas Binford, Richard Fikes, Gio Wiederhold

Professor (Teaching): Eric S. Roberts

Courtesy Professors: Giovanni DeMicheli, Martin Kay, Grigori Mints, Edward A. Shortliffe, Fouad A. Tobagi

Associate Professor: Russell Altman, John T. Gill, III, David Heeger, Teresa Meng, Mark A. Musen

Assistant Professor: Russell B. Altman, David Heeger, Oyekunle Olukotun, Benjamin Van Roy

Assistant Professor (Research): Yuval Shahar

Senior Lecturer: Margaret Johnson

Lecturers: Gerald Cain, Nicholas J. Parlante, Robert Plummer, Patrick Young, Julie Zelenski

Acting Professor: John K. Salisbury

Acting Assistant Professor: Justin Wan

Consulting Professors: William Coughran, Cynthia Dwork, Richard Gabriel, Anoop Gupta, Kurt Konolige, David Liddle, Pandurang Nayak, Susan Owicki, Prabhakar Ragabhan

Consulting Associate Professors: Craig Partridge, Ted Selker

Consulting Assistant Professors: Peyman Milanfar, Craig Partridge

Visiting Professor: Moni Naor

Visiting Associate Professor: Moshe Tennenholtz

The Department of Computer Science (CS) operates and supports computing facilities for departmental education, research, and administrative needs. These CS systems are connected to SUNet, the campuswide Ethernet/FDDI backbone network, and SUNet is connected to the Internet through GTE/BARNET. All CS students have access to a departmental student machine, a Multi-CPU SUN Enterprise3000, as well as a cluster of public workstations in the Gates Building. In addition, most students have access to systems associated with their research areas. Each research group in CS has systems specific to its research needs. These systems range from PC clones/Macs to high-end Multi-CPU SGI and SUNs. Servers and workstations manufactured by DEC, SUN, HP, SGI, Intel, Apple, and IBM are also in place.

Support for course work and instruction is provided on systems available through Information Technology Systems and Services (ITSS).

**UNDERGRADUATE PROGRAMS**

The department offers both a major and a minor in Computer Science. The requirements for these programs are outlined in the "School of Engineering" section of this bulletin and described in more detail in the Handbook for Undergraduate Engineering Programs published by the School of Engineering. The department has an honors program, which is described in the following section.

In addition to Computer Science itself, Stanford offers several interdisciplinary degrees with a substantial computer science component. The Computer Systems Engineering major (also in Engineering) allows the study of issues of both computer hardware and software, bridging the gap between traditional CS and Electrical Engineering majors. The Symbolic Systems major (in the School of Humanities and Sciences) offers a chance to explore computer science and its relation to linguistics, philosophy, and psychology. Finally, the Mathematical and Computational Sciences major (also Humanities and Sciences) allows students to explore computer science along with more mathematics, statistics, and operations research.

**HONORS**

The Department of Computer Science offers an honors program for selected undergraduates whose academic records and personal initiative indicate that they have the necessary skills to undertake high-quality research in computer science. Admission to the program is by application only. To apply for the honors program, students must be majoring in Computer Science, must have a grade point average (GPA) of at least 3.5 in courses that count toward the major, and must achieve senior standing (135 or more units) by the end of the academic year in which they apply. Coterminus master's students are eligible to apply as long as they have not already received their undergraduate degree. Beyond these requirements, students who apply for the honors program must also find a faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford's Academic Council.

Students who meet the eligibility requirements and wish to be considered for the honors program must submit a written application to the undergraduate program office by May 1 of the year preceding the honors year. The application must include a letter describing the research project, a letter of endorsement from the faculty sponsor, and a transcript of courses taken at Stanford. Each year, a faculty review committee will select the successful candidates for honors from the pool of qualified applicants.

In order to receive departmental honors, students admitted to the honors program must, in addition to satisfying the standard requirements for the undergraduate degree, do the following:

1. Complete at least 9 units of CS 191 or 191W under the direction of their project sponsor.
2. Enroll in a research seminar, which allows students to share their experience with other students working on research projects.
3. Complete an honors thesis deemed acceptable by a committee consisting of the thesis adviser and at least one additional faculty member.
4. Present the thesis at a public colloquium sponsored by the department.
5. Maintain the 3.5 GPA required for admission to the honors program.

**GRADUATE PROGRAMS**

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees" section of this bulletin.
MASTER OF SCIENCE

In general, the M.S. degree in Computer Science is intended as a terminal professional degree and does not lead to the Ph.D. degree. Most students planning to obtain the Ph.D. degree should apply directly for admission to the Ph.D. program. Some students, however, may wish to complete the master's program before deciding whether to pursue the Ph.D. To give such students a greater opportunity to become familiar with research, the department has instituted a new program leading to a master's degree with distinction in research. This degree is described in more detail in a subsequent section.

Applications for admission to the M.S. program, and all of the required supporting documents, must be received before December 15, 1999. Exceptions are made for applicants who are either Honors Co-op applicants or who are already students at Stanford (including oterrnal applicants). Information on these deadlines is available from the department.

REQUIREMENTS

A candidate is required to complete a program of 45 units. At least 36 of these must be graded units, passed with an average 3.0 (B) grade point average (GPA) or better. The 45 units may include no more than 21 units of courses from those listed below in Requirements 1 and 2. Thus, students need to take more than seven of the courses listed in Requirements 1 and 2 actually complete more than 45 units of course work in this program. Only extremely well-prepared students may expect to finish the program in one year; most complete the program in six quarters. Students hoping to complete the program with 45 units should already have a substantial background in computer science, including course work or experience equivalent to all of Requirement 1 and some of the courses in Requirement 2.

Requirement 1 —The following courses may be needed as prerequisites for other courses in the program: CS 107, 108; 103X or 109; 193L (for specialization 5 only); Electrical Engineering 182; Mathematics 109 or 120.

Requirement 2 —Students must demonstrate breadth of knowledge in the field by completing the following courses:

1. Area A: Mathematical and Theoretical Foundations:
   a) Required:
      1) Statistics (Statistics 116 or Engineering-Economic Systems and Operations Research 120)
      2) Algorithms (CS 161)
      3) Automata (CS 154)
   b) Choose one of:
      1) Numerical Analysis (CS 137 or 237A)
      2) Logic (CS 157, 257, 258, or Philosophy 160A)

2. Area B: Computer Systems:
   a) Required: Architecture (Electrical Engineering 182 or 282)
   b) Choose two of:
      1) Operating Systems (CS 140)
      2) Compilers (CS 143)
      3) Introduction to Computer Networks (CS 244A or Electrical Engineering 284)

3. Area C: AI and Applications:
   a) Choose two of the following, with at least one 200-level course:
      1) AI (CS 121 or 221)
      2) Databases (CS 145 or 245)
      3) Graphics (CS 148 or 248)

   Individual specializations are free to narrow the set of choices in specific areas of the breadth requirement; see the individual specialization sheets in the department office for details. Breadth courses are waived only if evidence is provided that similar or more advanced course has been taken, either at Stanford or another institution. Courses that are waived rather than taken may not be counted toward the M.S. degree. Breadth courses may be taken on a Satisfactory/No Credit basis provided that a minimum of 36 graded units is presented within the 45-unit program.

Requirement 3 —At least 1 but no more than 3 units of 500-level seminars must be taken.

Requirement 4 —A program of 21 units in an area of specialization must be completed. All courses in this area must be taken for letter grades. Eight approved programs are listed below. Students may propose to the M.S. program committee other coherent programs that meet their goals and satisfy the basic requirements. Students who want to include a substantial research project as part of their degree program can arrange with their adviser to replace units in their specialization with a CS 393 (Computer Laboratory) project.

1. Numerical Analysis/Scientific Computation
   a) CS 237A, 237B, 237C

2. Systems
   a) CS 240, 242
   b) At least three of: CS 243, 244A, 245, 248, 348B; Elect. Engr. 271, 275, 382
   c) At least 6 more units selected from '2b' and from the following:

3. Software Theory
   a) CS 242, 243, 256, 258
   b) At least one of: CS 244A, 245, 342, 343, 345
   c) At least one course from the following: CS 255, 261, 351, 355, 356, 361A, 361B, 365, 368
   d) At least one additional course selected from '3b,' '3c,' CS 346

4. Theoretical Computer Science
   a) CS 256, 258, 261 (361A, 361B, or 365 may be used as substitutes for 261)

5. Artificial Intelligence
   a) At least four of: CS 222, 223A, 223B, 224M, 224N, 227, 228, 229, 326A
   b) A total of 21 units from the above and from the following: CS 205, 206, 224, 225A, 225B, 226, 256, 257, 270A, 271, 274, 323, 327A, 328, 329, 354, 377, 379, 426

6. Database
   a) CS 245
   b) Two of: CS 345, 346, 347
   c) Four additional courses selected from '6b' and from the following: CS 222, 240, 242, 243, 244A, 244B, 244C, 249, 255, 270A, 270B, 271, 272, 315A, 315B, 341, 344, 395, 446; Elect. Engr. 489

7. Human-Computer Interaction
   a) CS 147, 247A, 247B
   b) At least 6 units from: CS 148 or 248, 377 (may be taken repeatedly), 378, 447
   c) A total of 21 units from the above and from the following: Commun. 269, 272; CS 249, 270A, 270B, 272, 320, 348A, 348B, 448; Engr. 145; Indust. Engr. 203, 223, 273, 275; Linguistics 238; Mech. Engr. 101, 115A, 215, 313; Psych. 200, 203, 221, 266, 267

8. Real-World Computing
   a) At least two of: CS 223A, 223B, 248
   c) A total of 21 units from the above and from the following: CS 225A, 225B, 247A, 274, 327A, 328, 336, 399, 448; Psych. 267

* With consent of Specialization chair.
**MASTER OF SCIENCE WITH DISTINCTION IN RESEARCH**

A student who wishes to pursue the M.S./CS with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Computer Science. The student and principal adviser must also identify another faculty member, who need not be in the Department of Computer Science, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S./CS degree:

1. **Research Experience:** the program must include significant research experience, at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by a 50 percent appointment to a departmentally supported research assistantship, 6 units of independent study (CS 393, 395, or 399), or a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study). This research must be carried out under the direction of the primary or secondary adviser.

2. **Supervised Writing and Research:** in addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (CS 393, 395, or 399) under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. Note that these units must be taken in addition to the 21 units required for the specialization, although they do not count toward the 45 units required for the degree.

3. **Research Report:** students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. Three copies of the research report must be submitted to the Student Services office in the department three weeks before the beginning of the examination period in the student’s final quarter. Both the primary and secondary adviser must approve the research report before the “distinction in research” designation can be conferred.

**DOCTOR OF PHILOSOPHY**

Applications to the Ph.D. program and all supporting documents must be received before December 15, 1999. The following are department requirements (see the Computer Science graduate programs administrator for further details, or visit www-cs.stanford.edu/admissions):

1. A student should plan and successfully complete a coherent program of study covering the basic areas of computer science and related disciplines. The student’s adviser has primary responsibility for the adequacy of the program, which is subject to review by the Ph.D. program committee.

2. Each student, to remain in the Ph.D. program, must satisfy the breadth requirement covering introductory level graduate material in major areas of computer science. Once a student fulfills six of eight whole areas of the breadth requirement, he or she may apply for admission to candidacy for the Ph.D. This is typically done by the end of the second year in the program. The student must completely satisfy the breadth requirement by the end of nine quarters (excluding summers), and must pass a qualifying exam in the general area of the expected dissertation.

3. As part of the training for the Ph.D., the student is required to complete at least 4 units (a unit is 10 hours per week for one quarter) as a teaching assistant or instructor for courses in Computer Science numbered 100 or above.

4. The most important requirement is the dissertation. After passing the qualifying examination, each student must secure the agreement of a member of the department faculty to act as the dissertation adviser. (In some cases, the dissertation adviser may be in another department.)

5. The student must pass a University oral examination in the form of a presentation of the dissertation. It is usually held after all or a substantial portion of the dissertation research has been completed.

6. The student is expected to demonstrate the ability to present scholarly material orally, both in the dissertation defense and by a lecture in a department seminar.

7. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a second member from within the department, and a third member chosen from within the University. The principal adviser and at least one of the other committee members must be Academic Council members.

**Ph.D. MINOR**

For a minor in Computer Science, a candidate must complete 20 units of computer science course work, including at least three of the master’s core courses to provide breadth, and one course numbered 300 to provide depth. The remaining courses must be numbered 200 or above. One of the courses taken must include a significant programming project to demonstrate programming proficiency. A grade point average (GPA) of 3.0 or better must be maintained.

**TEACHING AND RESEARCH ASSISTANTSHIPS**

Graduate student assistantships are available. Half-time assistants receive a tuition scholarship for 9 units per quarter during the academic year, and in addition receive a monthly stipend.

Duties for half-time assistants during the academic year involve approximately 20 hours of work per week. Teaching assistants (TAs) help an instructor teach a course by conducting discussion sections, consulting with students, grading examinations, and so on. Research assistants (RAs) help faculty and senior staff members with research in computer science. Most teaching and research assistantships are held by Ph.D. students in the Department of Computer Science. If there is an insufficient number of Ph.D. students to staff teaching and research assistantships, then these positions are open to a limited number of master’s students in the department. However, master’s students should not plan on being appointed to an assistantship.

Students with fellowships may have the opportunity to supplement their stipends by serving as graduate student assistants.

**COURSES**

(WIM) indicates that the course meets the Writing in the Major requirement.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

**GUIDE TO SELECTING INTRODUCTORY COURSES**

Students arriving at Stanford have widely differing backgrounds and goals, but most find that the ability to use computers effectively is beneficial to their education. The department offers many introductory courses to meet the needs of these students.

For students whose principal interest is an exposure to the fundamental ideas behind computer science and programming, CS 105 is the most appropriate course. It is intended for students in nontechnical disciplines who expect to make some use of computers, but who do not expect to go on to more advanced courses. CS 105 meets the Area 2b General Education Requirement and includes an introduction to programming, and the use of modern Internet-based technologies. Students interested in learning to use the computer should consider CS 11C (Introduction to Computing at Stanford) or 1U (Introduction to Unix).

Students who intend to pursue a serious course of study in computer science may enter the program at a variety of levels, depending on their background. Students with little prior experience or those who wish to take more time to study the fundamentals of programming should take...
106A followed by 106B. Students in 106A need not have prior programming experience. Students with significant prior exposure to programming or those who want an intensive introduction to the field should take 106X, which covers most of the material in 106A and B in a single quarter. All instruction in CS 106 uses ANSI C, although the prior programming experience required for 106X may be in any language. In all cases, students are encouraged to discuss their background with the instructor responsible for these courses.

After the introductory sequence, Computer Science majors and those who need a significant background in computer science for related majors in engineering should take 103 (or 109), 107 and 108. CS 103 offers 400-499 experimental Software Systems For significant use—106A.B or 106X, along with 103, 107, and 108 For a technical introduction—106A For nontechnical use—105. For exposure— 1C or 1U paradigms that illustrate critical strategies used in systems development; the computer science. CS 107 exposes students to a variety of programming paradigms that use different approaches to solving problems, including functional programming, object-oriented programming, and constraint-based programming.

In summary:

For exposure—1C or 1U
For nontechnical use—105.
For scientific use—106A
For a technical introduction—106A
For significant use—106A,B or 106X, along with 103, 107, and 108

NUMBERING SYSTEM

The first digit of a CS course number indicates its general level of sophistication:

0-99 service courses for nontechnical majors
100-199 other service courses, basic undergraduate
200-299 advanced undergraduate/ beginning graduate
300-399 advanced graduate
400-499 experimental
500-599 graduate seminars

The tens digit indicates the area of Computer Science it addresses:

00-09 Introductory, miscellaneous
10-19 Hardware Systems
20-29 Artificial Intelligence
30-39 Numerical Analysis
40-49 Software Systems
50-59 Mathematical Foundations of Computing
60-69 Analysis of Algorithms
70-79 Typography and Computational Models of Language
90-99 Independent Study and Practicum

NONMAJOR

1C. Introduction to Computing at Stanford—for those with limited experience on computers. Introduction to the basics of computing, and a variety of programs, encouraging individual exploration of the programs covered. Topics: word processing, spread sheets, using the WWW and the Internet, and computing resources at Stanford. Macintosh and PC systems. One-hour lecture/demonstration in dormitory clusters. Weekly short assignments and final project. Not a programming course.

1 unit, Aut (Roberts, Shimizu)

II. The Internet—for a computer-literate but not technical audience. What is the Internet and what is it good for? The foundations, resources, and uses of the Internet, emphasizing practical skills for finding, reading, and authoring Internet material. Topics: HTML, FTP, HTTP, web publishing and searching; evolution and future directions; security and privacy issues. Programming-oriented course is 193I. Prerequisites: basic computer skills at level of 1C, e.g., file editing, and access to a computer on the Internet.

1 unit, Win (Staff)

1U. Introduction to Unix—Tutorial on using the Unix operating system. Topics: text editors, the file system, the C shell, standard Unix utilities, PERL. Includes simple shell programming, but is not a programming course and assumes no prior exposure to programming.

1 unit, Spr (Staff)

9. Undergraduate Journal Club—Weekly discussion led by students; encourage juniors and seniors to read and discuss research papers in small, informal format. Topics are selected by participants with advice from faculty sponsor.

1 unit, Aut (Caspi)

50. Problem Solving with Mathematica—For engineers, physicists, mathematicians, and others who need to solve mathematical or quantitative problems. Comprehensive introduction to Mathematica, an interactive mathematical software package that includes a high-level programming language. Symbolic, numerical, graphical, animation, and programming capabilities, including use of Mathematica to manipulate expressions, find roots, solve differential equations, visualize functions and data, import and export data in arbitrary formats, work with expressions in standard mathematical notation, and perform statistical analyses.

2 units (Williams) alternate years, given 2000-01

51. Introduction to Quantum Computing and Quantum Information Theory—For computer scientists, physicists, mathematicians, engineers, and others who want to learn the capabilities of quantum computers and the necessary quantum mechanics and complexity theory. Topics: quantum algorithms (including Shor’s polynomial time algorithm for integer factorization, Grover’s database search algorithm, quantum tree search, quantum wavelets), quantum information theory, quantum cryptography, breaking the RSA cryptosystem, quantum teleportation, circuit design, quantum error correction, and examples of prototype quantum computers. Prerequisites: familiarity with elementary matrix algebra and complex numbers.

2 units, Win (Williams)

99A. Stanford Introductory Seminar: The Downside of Computing Systems—Preference to freshmen. Computers are critical components of our world in such tasks as surgery, air traffic control, and international banking. How computing systems fail, how such failures may affect our society in the future, and how to build and maintain systems to avoid failures. Case studies of computer-related disasters, including the Therac-25 accidents, the Internet worm, and the Ariane 5 crash. Topics: computer security, robust distributed systems, fault-tolerant architectures, organizational behavior.

3 units, Aut (Baker)

99C. Stanford Introductory Seminar: Computers—Fact and Fiction—Preference to freshmen. The question of what computers can and cannot do. Popular culture and the media represent the capabilities of computers in an unscientific way that tends to obscure the promise and the limitations of the technology. Scientists have disagreed about the range of tasks that computers can deal with, and that computers cannot learn to do what they were not explicitly programmed to do (e.g., play championship chess, or create art or music). Conversely, extremely optimistic forecasts and claims have also been made. Students evaluate the relationship between these claims and the current and future state of technology. Prerequisite: 106A.

3 units, Koller (not given 1999-2000)

99D. Stanford Introductory Seminar: The Science of Science—Preference to freshmen. The interwoven histories of science and Western art from the Renaissance to the 19th century. Emphasis is on the revolutions in science and mathematics that have inspired parallel revolutions in the visual arts (e.g., Brunelleschi’s invention of linear perspective, Newton’s discoveries in geometric optics, and the theories of color vision proposed by Goethe, Young, Helmholtz, etc.). The scientific principles behind image making, including a survey of digital image synthesis (a.k.a. computer graphics). Using graphics workstations and commercial software packages, experiments are performed in image making. GER:2b (DR:6)

3 units, Win (Levoy)

99E. Stanford Introductory Seminar: Great Ideas in Computer Science—Preference to freshmen. The power and limitations of comput-
ers; concrete strategies for solving problems using computers. What can a computer do efficiently? Why are programs hard to test? How can we make computers appear clairvoyant? How do you keep secrets in computers? Should tables be sorted? When is it a good idea to be greedy? These questions involve ideas whose impact ranges from the philosophical foundations of computation to concrete applications in everyday life. Prerequisite: mathematical maturity (e.g., AP Math) and exposure to computer programming.

3 units, Win (Motwani, Raghavan)

3 units (Prat) not given 1999-2000

99G. Stanford Introductory Seminar: The Two Cultures—Bridging the Gap—Preference to freshmen. In 1959, the British physicist and novelist C.P. Snow delivered a lecture at Cambridge University in which he argued that "the intellectual life of the whole of western society is increasingly being split into two polar groups." In Snow's view, these groups, which can be characterized roughly as humanists and scientists, exist as separate cultures that have "almost ceased to communicate at all." Professors in Computer Science and English collaborate to examine the nature of this split, reflected at Stanford by the tendency to divide the campus community into "techies" and "fuzzies," and explore ways to bridge this cultural gap.

3 units (Roberts, Saldivar) not given 1999-2000

99H. Stanford Introductory Seminar: Programming and Problem Solving Seminar—Preference to freshmen. Students are given five problems to solve. Each involves programming, but programming is not sufficient to solve the problem (i.e., the approach to the problem is at least as important). Students experiment individually and as a group with techniques, and write a working program as a solution. Group discussions include general problem-solving approaches and concepts relevant to the problem at hand. Prerequisite: 106B or 106X.

3 units (Ullman) not given 1999-2000

99I. Stanford Introductory Seminar: Business on the Information Highways—Preference to freshmen. Understanding the capabilities of the Internet and its services. The effect on commerce, education, and healthcare. Technical and business alternatives. Who will be hurt and who will benefit from the changes occurring? The central project develops a Web publication.

3 units, Win (Wiederhold) alternate years, not given 2000-01

99J. Stanford Introductory Seminar: Computer Security in the Electronic Age—Preference to sophomores. Based on readings and discussions of current issues in computer security. Topics: the history of codes and ciphers and a summary of basic mathematics used in current cryptography; causes of computer vulnerabilities, including program errors, design flaws, and inherent network and browser limitations; policies and practices that restrict or monitor access to information.

3 units, Win (Mitchell)

99K. Stanford Introductory Seminar: Digital Actors—Preference to sophomores. Digital actors are an emerging field, with applications to video games, movies, simulation and training, manufacturing, and animated web pages. Introduces the computational techniques used to create and animate robotics, geometric computing, computer vision, and graphics. The problem of creating/animating digital actors, technical sub-problems. Prerequisite: knowledge of elementary geometry. Recommended: some programming experience.

2 units, Spr (Latombe)

99L. Stanford Introductory Seminar: How Are We to Know?—Preference to sophomores. The scientific method is a set of cultural practices that helps scientists construct, criticize, and refine theories about the universe in which we live. The question of whether analogous methods might be useful in helping construct, criticize, and refine everyday, non-scientific beliefs. Selections from the late philosopher of science, Sir Karl Popper, who counsels scientists to devote as much, if not more, effort to disproving their pet scientific hypotheses as they do trying to buttress them. The ways in which evidence for and against beliefs can be adduced. Discussions, presentations, and a term essay.

3 units, Win (Nilsson)

3 units, Aut (Boneh)

99N. Stanford Introductory Seminar: Ruler, Compass, and Computer—Computational Representations of Geometry—Preference to sophomores. Representations of geometry play an important role in computer science. Models of physical objects and processes, as used in computer graphics, computer vision, and robotics, use geometry as an essential component of representing shape, motion, and other physical modalities. The mathematical ideas behind commonly used representations and algorithms for geometric objects, focusing on intuitive understanding as opposed to formal development. Prerequisite: introductory computer science such as 106A, B or X. Recommended: general background knowledge in mathematics and physics.

2 units, Spr (Guibas)

99P. Stanford Introductory Seminar: Smart Computers and other Technological Opportunities—Preference to freshmen. How smart are computers now? How smart can we make them, and how soon, and what good will they be? Of the current "smart" things, how smart are they and what genuine benefits are offered? Outside of computers, what are the technological opportunities for humanity? To what extent is humanity in difficulty with natural resources? What significant threats are there to humanity?

3 units, Spr (McCarthy)

UNDERGRADUATE

103A. Discrete Mathematics for Computer Science—The fundamental mathematical foundations required for computer science. Topics: logic, relations, functions, basic set theory, proof techniques, combinatorics, recursion, and recurrence relations.

3 units, not given 1999-2000

103B. Discrete Structures—Continuation of 103A. Topics: analysis of algorithms, mathematical formulations of basic data models (linear models, trees, graphs, and sets), regular expressions, grammars. Corequisite: 106B or 106X.

3 units, not given 1999-2000

103X. Discrete Structures (Accelerated)—Covers the material in 103A and B in a single quarter. Students who take 103X feel comfortable with mathematical formalism.

4 units, Spr (Mitchell, Dill, Staff)

105. Introduction to Computers—For non-technical majors. Develops an understanding of what computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics
of computer hardware. No previous knowledge of computer science is assumed. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Prerequisite: minimal math skills. GER:2b (DR:6)

*5 units, Aut (Roberts)
Win (Zelenski)
Spr (Staff)

106A. Programming Methodology—For students in technical disciplines; no prior experience is assumed. Broad introduction to the engineering of computer applications, emphasizing software engineering principles: design, decomposition, information hiding, procedural abstraction, testing, and reusable software components. Uses the programming language C and concentrates on the development of good programming style and on understanding the basic facilities provided by the language. Alternatives: 105, 106X. GER:2b (DR:6)

*5 units, Aut (Staff)
Win (Zelenski)
Spr (Staff)

106B. Programming Abstractions—Abstraction and its relation to programming. The software engineering principles of data abstraction, modules, certain fundamental data structures (e.g., stacks and queues), and data-directed design. Recursion and recursive data structures (linked lists and binary trees). Brief introduction to time and space complexity analysis. Prerequisite: 106A or consent of the instructor, based on prior exposure to ANSI C. GER:2b (DR:6)

*5 units, Aut (Plummer)
Win (Young)
Spr (Zelenski)

106X. Programming Methodology and Abstractions (Accelerated)—Covers most of the material in 106A,B. Students are expected to have previous programming experience at a level that allows them to understand the concepts presented in 106A, usually in a language other than C. First three weeks focus on understanding how the concepts are expressed in ANSI C. 106B material is covered for the balance. Students who complete 106A should enroll in 106B. 106X can be taken after 106A only with consent of instructor. GER:2b (DR:6)

*5 units, Aut (Plummer)
Win (Young)
Spr (Zelenski)

107. Programming Paradigms—Introduces a variety of programming language paradigms and their implementations. Topics: structure and implementation of compiled languages, basic concurrent programming, the functional paradigm, and the object-oriented paradigm. Substantial programming projects. Prerequisite: 106B or 106X.

*5 units, Aut, Spr (Cain)

108. Object-Oriented Systems Design—Software design and construction in the context of large OO libraries. May be taught in C++ or Java. Topics: review of OOP, the structure of Graphical User Interface (GUI) OOP libraries, GUI application design and construction, OOP software engineering strategies, approaches to programming in teams. Prerequisite: 107.

*4 units, Aut, Win (Parlante)

109. Introduction to Computer Science—The mathematical and theoretical foundations of computer science. Topics: logic, proof techniques, recursion and recurrence relations, analysis of algorithms, combinatorics, basic data models (sets, relations, linear models, trees and graphs), and introductory computer theory. Prerequisite: 106B or 106X. GER:2b (DR:6)

*4 units, Aut (Staff)
Win (Johnson)

110. Introduction to Computer Systems and Assembly Language Programming—Organization of digital computers, buses, registers, processors, I/O, memory systems, and paged memory. Data representation, data structures, and computer arithmetic. Instruction sets and execution; addressing modes. Assembly language programming, including subroutines, co-routines, interrupts, and traps. Operating systems issues and principles of storage management; combines general principles and practice in implementations. Prerequisite: 106B or 106X.

*4 units, Spr (Engler)

112. Computer Organization and Design—(Enroll in Electrical Engineering 182.)

4 units, Aut, Spr

121. Introduction to Artificial Intelligence—Students intending further work in AI should take 221. Introduction to the history, literature, and fundamental concepts of artificial intelligence (AI), from elementary reactive systems to increasingly complex artificial "agents." Topics: production systems, neural networks, genetic programming, computer vision, heuristic search, logic, knowledge representation and reasoning, Bayes networks, automatic planning, and multi-agent communication. Focuses on ideas rather than applications. Prerequisite: fundamental knowledge of computer science as covered in 109. Recommended: facility with differential calculus, vector algebra and probability theory. Only one of 121 or 221 counts towards CS degree requirements.

3 units, Aut (Nilsson)

137. Introduction to Scientific Computing—The fundamental issues of numerical computation for the mathematical, computational, and physical sciences, and engineering. Emphasis is from the perspective of the computer scientist. Use of numerical algorithms in engineering practice. Problems of accurately computing solutions in the presence of rounding errors and of computing discrete approximations of solutions which are defined on the continuum. The taxonomy of problem classes with methods for their solution and principles useful for analysis of performance and algorithmic development. Topics: error analysis, the solution of linear and nonlinear equations, interpolation and numerical differentiation, the approximation of integrals, and the solution of differential equations. Prerequisites: 106A; Mathematics 103 or 113 or equivalents.

*4 units, Win (Oiler)
Spr (Golub)

138. Matlab and Maple for Science and Engineering Applications—Introduction to use of Matlab and Maple in engineering applications. Emphasis is on the use of software to solve real problems. How the algorithms work, primarily so user may understand their possible limitations. How to use packages to solve a variety of introductory but important problems in: linear systems, eigenvalue problems, ordinary differential equations, elementary statistics, elementary signal processing (Fourier transforms, wavelets), computer algebra, graphical interfaces. Applications for the engineering and physical sciences. Prerequisites: undergraduate linear algebra and a willingness to program.

*4 units, Win (Moler)

140. Operating Systems and Systems Programming—The fundamentals of operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: 108. Recommended: Electrical Engineering 182.

*4 units, Aut, Win (Engler)

143. Compilers—Principles and practices in the design of programming language compilers. Topics: lexical analysis; parsing theory (LL, LR, and LALR parsing); symbol tables; type checking; common representations for records, arrays, and pointers; runtime conventions for procedure calls; storage allocation for variables; and generation of unoptimized
Prerequisites: 107, 109.

Students construct simple compiler as programming project.

145. Introduction to Databases—Object-oriented, entity-relationship, relational data models, and approaches to database design. Relational, object-relational, and object-oriented query languages. SQL and ODMG standards. Algebraic query languages and some database theory. Integrity constraints and triggers; functional dependencies and normal forms. Database transactions and security from the application perspective. Designing a database for an application. Interactive and programmatic interfaces to database systems. Individual database application programming project with extensive use of SQL. Prerequisites: 107, 109.

147. Introduction to Human-Computer Interaction Design—Introduction to the concepts underlying the design of human-computer interaction: usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, design languages and genres, human cognitive and physical ergonomics, information and interactivity structures, design tools and environments. Structured around a set of case studies in which notable interface designs and/or projects are analyzed as illustrative of underlying principles. Students participate in discussions of cases and do weekly interface analysis and design exercises which do not require programming. 3-4 units, Aut (Johnson)

148. Introductory Computer Graphics—For undergraduates: M.S. students or students with a strong interest in continuing in graphics should take 248. Introduction to two- and three-dimensional computer graphics. Topics: fundamentals of input and display devices, scan conversion of geometric primitives, two- and three-dimensional transformations and clipping, windowing techniques, curves and curved surfaces, three-dimensional viewing and perspective, hidden surface removal, illumination and color models, OpenGL, VRML, and 3-D modeling tools. Emphasis is on the development of practical skills in using graphics libraries and tools. Programming on Macintosh using C, OpenGL, and VRML, with demos in SoftImage. Only one of 148 or 248 counts towards CS degree requirements. Prerequisites: 107, Mathematics 103.

157. Logic and Automated Reasoning Laboratory

1 unit

191. Senior Project—Restricted to Computer Science students. Group or individual projects under faculty direction. Register using the section number associated with the instructor. 1-6 units, any quarter (Staff)

191W. Writing Intensive Senior Project—Restricted to Computer Science students. Group or individual projects under faculty direction. Register using the section number of an Academic Council member. (WIM) 1-6 units, any quarter (Staff)

192. Programming Service Project—Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value. 1-3 units, any quarter (Staff)

193. C++ and Object-Oriented Programming—C++ programming language and object-oriented programming paradigm. The major features of C++ 3.0 and the object design principles which apply generally in Object Oriented Languages. Intensive programming assignments. Prerequisites: knowledge of C and basic programming methodology as developed in 106B or 106X.

193D. C++ and Object-Oriented Programming—C++ programming language and object-oriented programming paradigm. The major features of C++ 3.0 and the object design principles which apply generally in Object Oriented Languages. Intensive programming assignments. Prerequisites: knowledge of C and basic programming methodology as developed in 106B or 106X.

193I. Internet Technologies—Survey of contemporary Internet technologies. Programmer-oriented survey of the authoring, distributing, and browsing technologies. The role, use, and implementation of current Internet tools. Topics: TCP/IP; namespace, connections, and protocols. Client/server structures. World Wide Web/HTTP/HTML techniques for text, images, links, and forms. Server side programming, CGI scripts. Dynamic content with Java. Security and privacy issues. Programming projects on client- and server-side projects. Some projects in C, but the emphasis is on Perl and Java. Understanding, exploiting, and extending Internet technologies. Prerequisites: programming fundamentals at the level of 106B or 106X, and UNIX at the level of 1U.

* May be taken for 3 units by graduate students
193J. Programming in Java—Hands-on experience. Topics: object-oriented
programming (classes, objects, messaging, inheritance), Java
language features (interfaces, exceptions, packages, concurrency, gar-
bage collection), use of the built-in packages (lang, util, io, networking,
awt), understanding applications and applets, security and verification,
Java implementation and the virtual machine. Intensive programming
assignments. Prerequisite: knowledge of C language and programming
experience at the level of 106B/X.
3 units, Aut (Zelenski)

193K. Advanced Java Applications—Tour of the advanced applica-
tions possible in Java. Possible topics: portable GUIs in Swing and
distributed applications with RMI, and the various supporting technolo-
gies (concurrency, reflection, and serialization). Prerequisite: mastery of
Java and/or 193J.
2 units, Spr (Parlante)

193L. Programming in LISP—Introduction to problem solving in the
LISP language, focusing on the functional programming paradigm.
Topics: recursion, list manipulation, mapping, functional arguments,
destructive processing, macros, I/O, Lisp implementation, environ-
ments, packages, efficiency, object-oriented programming, classes, and
methods. Term project. Prerequisite: 106B or 106X, or equivalent.
3 units, Win (Staff)

193U. Software Engineering in C—C programming language and the
UNIX/C programming environment. C programming language issues:
data types, control structures, pointers, dynamic memory allocation,
libraries, performance, bit operations, and the interface to the UNIX
shell. UNIX system programming issues: file system, processes, sig-
als, interprocess communication, and C interfaces to these capabilities.
Includes a significant programming project. Prerequisite: knowledge of
programming at the level of 106B, experience in a high-level language
other than BASIC and as a UNIX user.
3 units, Win (Staff)

193W. Microsoft Windows Programming—The fundamentals of pro-
gramming on the Microsoft Windows platform, focusing on the use of
Microsoft Foundation Class (MFC) framework. Other aspects of Win-
dows programming including Microsoft's COM and OLE object models
and the ODBC database interface. Requires a significant amount of
programming. Prerequisites: knowledge of C++ at the level of 108 or
193D.
3 units, Spr (Young)

194. Software Project—Student teams complete a significant program-
ming project through the phases of specification, coding, and testing
under faculty supervision. Lectures on software engineering methodol-
gies. Students provide written design specifications and user documen-
tation; and must demonstrate a prototype design and the final product.
Prerequisite: 108. (WIM)
3 units, Win, Spr (Plummer)

196. Microcomputer Consulting—Overview of computer consulting,
focusing on Macintosh and IBM-compatible systems. Topics: operating
systems, networks, troubleshooting, and consulting methodology. Bi-
weekly lectures emphasize on-campus computing environments. Stu-
dents work as consultants in campus computer clusters and in residences.
Prerequisite: 1C.
2 units, Aut (Brown)
Spr (Staff)

197. Mainframe and Workstation Computer Consulting—Computer
consulting in a workstation and server environment, focusing on the
UNIX operating system under the SUN, HP, and SGI hardware systems.
Topics: UNIX fundamentals, consulting tips, networking, and systems
administration. Students work as on-duty consultants at the Sweet Hall
and Terman computer clusters. Pre- or corequisite: 1U.
3 units, Win, Spr (Staff)

198. Teaching of Computer Science—Teach a small discussion section
of 106A while learning the fundamentals of teaching a programming
language at the introductory level. Two workshops/meeting weekly
on introductory material in general, 106 specifically, and teaching
techniques. Application and interview required; see the 198 coordinator
in CS for information. Prerequisite: 106B or 106X.
4 units, Aut, Win, Spr (Roberts, Ranganath, Chong)

199. Independent Work—Special study under faculty direction, usually
by leading to a written report. Letter grade given; if this is not appropri-
tate, enroll in 199P. Register using the section number associated with
the instructor.
any quarter (Staff)

199P. Independent Work—Like 199, but graded Satisfactory/No Credit.
any quarter (Staff)

UNDERGRADUATE AND GRADUATE

200. Undergraduate Colloquium—Strongly recommended for junior-
year CS majors as a way to build contacts with faculty. Weekly presen-
tations by faculty and people from industry informally describing their
views of computer science as a field and their experience as computer
scientists. (AU)
1 unit, Aut (Roberts)
Win (Staff)

201. Computers, Ethics, and Social Responsibility—Primarily for
majors entering computer-related fields. Analysis of the ethical and
social issues related to the development and use of computer technology.
Introduction to the relevant background in ethical theory, and the social,
political, and legal considerations. Analysis of scenarios in specific
problem areas: privacy, reliability and risks of complex systems, and the
responsibility of professionals for the applications and consequences of
their work. Prerequisite: 106B or 106X. (WIM)
*4 units, Spr (Johnson)

202. Law for Computer Science Professionals—Equips computer
science professionals with the information and framework to make law-
related decisions affecting their work, while remaining full participants
in design or development decision-making when these legal issues arise.
Problem-oriented. Topics: signing invention assignment and nondisclo-
sure agreements, protecting intellectual property, distinguishing be-
tween independent contractors and employees, and negotiating software
development and publishing agreements.
1 unit, Win (Heckman)

205. Mathematical Methods for Robotics and Vision—Overview of
some of the mathematical background necessary for research in robotics
and vision. Possible topics: geometric meaning of linear algebra con-
cepts; Singular Value Decomposition; Schur Decomposition; differen-
tial equations; dynamic systems and stochastic estimation (Kalman
filtering); vector and tensor calculus; calculus of variations. Prerequi-
sites: 106B or X; Mathematics 51 and 113; or equivalents.
3 units, Aut (Tomasi)

206. Applied Electronic Commerce—As the internet and wide-area
networks are increasingly used to conduct commerce, computer scien-
tists need to understand the nature of economic mechanisms, e.g.,
auctions, and devise the ways to implement them efficiently. Relevant
economic theories. Lab to design and implement a substantial applica-
tion in small groups. Prerequisites: sufficient mathematical maturity to
follow basic combinatorial and probabilistic arguments, and ability to
code in either C++ or Java.
3 units, Win (Shoham)
211. Logic Design—(Enroll in Electrical Engineering 275.)
3 units, Aut, Win

3 units, Aut, Win

221. Artificial Intelligence: Principles and Techniques—Broad technical introduction to core concepts and techniques in artificial intelligence. Topics: search, planning, knowledge representation, managing uncertainty, machine learning, neural networks, vision, robotics, natural language understanding, and intelligent architectures. Only one of 121 or 221 counts towards CS degree requirements. Prerequisites: 109, 157 or Philosophy 160A, and exposure to basic concepts in probability.

222. Knowledge Representation—Declarative knowledge representation methods in artificial intelligence. Topics: time and action, nonmonotonic logics, causality, inheritance and description logics, ontologies, contexts, knowledge reformulation, multiple views, abstraction, deduction vs. abduction, knowledge and other mental attitudes. Prerequisite: basic familiarity with logic. Recommended: prior exposure to artificial intelligence as in 121/221.

223A. Introduction to Robotics—Topics: manipulator kinematics and inverse kinematics; manipulator dynamics, motion, and force control; motion planning and robot programming. Recommended: knowledge of matrix algebra.
3 units, Win (Khatib)

223B. Introduction to Computer Vision—Fundamental issues and techniques of computer vision. Image formation, edge detection and image segmentation, stereo, motion, shape representation, recognition. Project or final. Prerequisite: 205 or equivalent.
3 units, Win (Tomasi)

224M. Multi-Agent Systems—Aimed at advanced undergraduate, master’s levels, and interested Ph.D. students. Various aspects of extending AI theories and techniques from the single-agent case to the multi-agent (MA) case. Topics: MA knowledge representation, planning, reasoning under uncertainty, learning, coordination mechanisms, and automated negotiation. Emphasis is on representation techniques and algorithms, the former drawn from logic, decision theory, and game theory. There are no programming assignments or textbooks on the topic. Prerequisites: knowledge of basic probability theory, first-order logic, and algorithms.
3 units, Spr (Shoham)

224N. Natural Language Processing—Develops in-depth understanding of the algorithms available for the processing of linguistic information and the underlying computational properties of natural languages. Morphological, syntactic, and semantic processing from a linguistic and an algorithmic perspective. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, disambiguation, and parsing. Examination and construction of representative systems. Prerequisites: 121/221 or Linguistics 138/238, and programming experience. Recommended: basic familiarity with logic and probability.
3 units, Spr (Manning)

225A. Experimental Robotics—(Formerly 225.) Hands-on experience with robotic manipulation and navigation systems. Topics: kinematic and dynamic control of motion, compliant motion and force control, sensor-based collision avoidance, motion planning, assembly planning, task specifications, and robot-human interfaces. Limited enrollment. Prerequisite: 223A.
3 units, Spr (Khatib)

225B. Robot Programming Laboratory—(Formerly 224.) Hands-on introduction to the techniques of robot programming for robotics and non-robotics students. Series of guided exercises in which students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, planning and map building, communication and cooperation). Topics: basics of motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (fuzzy control and potential fields); active perception; reactive planning architectures; various topics in sensor-based control, including vision-guided navigation. Student programmed robot contest. Programming is in C on Unix or Windows machines, done in teams. Prerequisites: 205 or equivalent, C programming ability.

226. Knowledge-Based Systems and Applications—Knowledge-based (expert) system technology is the most widely-used application technology to emerge from AI. Topics: basics of KBS and ES; tech transfer from research to industry; knowledge engineering, KB programming, knowledge acquisition methodology; evolution of the technology as applied to business and government problems, current and future impact. Case studies, readings. System building project possible. Some guest lectures.
3 units, Aut (Konolige)

227. Reasoning Methods in AI—Technical presentation of algorithmic techniques for problem solving in AI. Combines formal algorithmic analysis with description of recent applications. Topics: search and real-time search, constraint satisfaction, planning, robot motion planning, logical deduction, abstraction and approximation. Focus is on recent results. Prerequisites: familiarity with the basic notions in data structures and design and with techniques in design and analysis of algorithms. Recommended: previous or concurrent course in AI.
3 units, Spr (Nayak)

228. Reasoning under Uncertainty—Modeling (knowledge representation) languages suitable for dealing with an uncertain world, algorithms for reasoning and decision making using these representations, and learning these representations from data. Focus is on graphical modeling languages such as Bayesian belief networks, extensions to temporal modeling using hidden Markov models and dynamic Bayesian networks, and extensions to decision making using influence diagrams and Markov decision processes. Recent applications to domains (speech recognition, medical diagnosis, data mining, statistical text modeling, and robot motion planning). Prerequisites: understanding of basic concepts in probability theory and in design and analysis.
3 units, Win (Koller)

229. Machine Learning—Survey of major research areas in pattern recognition and machine learning. Topics: the foundations of statistical pattern recognition, parametric and non-parametric learning, decision trees, Bayesian and neural networks, reinforcement learning, genetic algorithms, computational learning theory. Focus is on the underlying concepts and the role of machine learning in AI and other disciplines. Representative systems. Prerequisites: 221 or consent of instructor, and ability to write computer programs in one or more commonly used languages.
3 units, Spr (Bregler)

237. Advanced Numerical Analysis—Three-quarter graduate sequence designed to acquaint students in mathematical and physical sciences and engineering with the fundamental theory of numerical analysis. Examples from applications.
3 units, Aut (Golub)

* May be taken for 3 units by graduate students.

3 units, Win (Oliger)

3 units, Spr (Wan)

238. Parallel Methods in Numerical Analysis—Recent developments in parallel computer technology have made it necessary to reformulate numerical algorithms to exploit the full potential of this technology. Emphasis is on the different techniques for obtaining maximum parallelism in various numerical algorithms, especially those occurring when solving matrix problems and partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models, matrix computations, FFT, fast multiple methods, domain decomposition, graph partitioning. Prerequisite: 237A or Mechanical Engineering 200A, or consent of instructor. Recommended: familiarity with differential equations, and experience in advanced programming language such as F90, C, C++.

3 units, Win (Alonso, Wan)

240. Advanced Topics in Operating Systems—Advanced study in OS topics and exposure to recent developments in OS research. Readings/lectures on classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

3 units, Win, Spr (Baker)

242. Programming Languages—The basic elements of programming languages and programming paradigms: functional, imperative, and object-oriented. Introduction to formal semantic methods. Modern type systems, higher-order functions and closure, exceptions and continuations. Runtime support for different language features. Emphasis is on separating the different elements of programming languages and styles. First half uses Lisp and ML to illustrate concepts; second half a selection of object-oriented languages. Prerequisite: 107, or experience with Lisp, C and some object-oriented language.

3 units, Aut (Mitchell)

243. Advanced Compiling Techniques—The theoretical and practical aspects of building modern compilers. Topics: intermediate representations, basic blocks and flow-graphs, dataflow analysis, register allocation, global code optimizations, and interprocedural analysis. Prerequisite: 143 or equivalent.

*4 units, Win (Lam)

244A. Introduction to Computer Networks—The structure and components of computer networks; functions and services; packet switching; layered architectures; ISO’s Open Systems Interconnections (OSI) reference model; physical layer; data link layer; error checking; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, IP); transport layer (UDP, TCP); session layer; applications.

3 units, Aut (enroll in Electrical Engineering 284)

Win (McKeown)

244B. Distributed Systems—Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, file access, process scheduling, process migration and remote procedure call focusing on distribution, scale, robustness in the face of failure, and security. Prerequisites: 240, 244A.

3 units, Spr (Cheriton)

244C. Distributed Systems Project—Companion project option for students taking 244B. Corequisite: 244B.

3-6 units, Spr (Cheriton)

3 units, Win (Garcia-Molina)

247A. Human-Computer Interaction: Interaction Design Studio—Intended as preparation for project-based courses, such as 377 and 447/ Mechanical Engineering 293. Systematic presentation and experience with the methods used in interaction design, including needs analysis, user observation, idea sketching, concept generation, scenario-building, storyboards, user character stereotypes, usability analysis, and market strategies. Prerequisite: 147 or Mechanical Engineering 101.

3-4 units, Win (Winograd)

247B. Contextual and Organizational Issues in Human-Computer Interaction—(For 1999-2000 only, enroll in Industrial Engineering 205.)

4 units, Spr (Hinds)

248. Introduction to Computer Graphics—The fundamentals of input, display, and hardcopy devices, scan conversion of geometric primitives, 2D and 3D geometric transformations, clipping and windowing, scene modeling and animation, algorithms for visible surface determination, introduction to local and global shading models, color, and photorealistic image synthesis. Written assignments and programming projects. Only one of 148 or 248 counts towards CS degree requirements. Prerequisites: 108, Mathematics 103.

*4 units, Aut (Levoy)

249. Object-Oriented Programming from a Modeling and Simulation Perspective—Object-oriented programming techniques and issues, emphasizing programming as modeling and simulation. Topics: large-scale software development approaches, encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, design patterns, minimizing dependencies and value-oriented programming. The role of programming conventions/style/restrictions in surviving object-oriented programming for class libraries, frameworks, and programming-in-the-large; general techniques for object-oriented programming. Prerequisites: knowledge of C and basic programming methodology as developed in 106B or 106X; 107; basic knowledge of C++ (may be taken concurrently). Recommended: 193D.

3-5 units, Win (Cheriton)

255. Introduction to Cryptography and Computer Security—Intended for advanced undergraduates and graduate students. Introduction to the basic theory and practice of cryptographic techniques used in computer security. Topics: encryption (single and double-key), digital signatures, pseudo-random bit generation, authentication, electronic commerce (anonymous cash, micropayments), key management, zero-knowledge protocols. Prerequisite: basic understanding of probability theory.

3 units, Win (Boneh)

3 units, Win (Manna)

256L. Formal Methods for Concurrent and Reactive Systems Laboratory
2 units, Win (Manna)

257. Automated Deduction and its Applications—Proving theorems and extracting information from proofs. Uses in software engineering (program specification, synthesis, and verification) and artificial intelligence (commonsense and robotic planning, natural-language understanding). The foundations of logic programming. Deductive tableaux, nonclausal resolution, skolemization, building theories into unification and inference rules, term rewriting, inductive theorem proving. The design of theorem provers. Prerequisite: 157.

3 units (Staff) not given 1999-2000

258. Introduction to Programming Language Theory—Syntactic, operational, and semantic issues in the mathematical analysis of programming languages. Type systems and non-context-free syntax. Universal algebra and algebraic data types. Operational semantics given by rewrite rules; confluence and termination. Scott-semantics for languages with higher-type functions and recursion. Treatment of side-effects. Prerequisites: 154, 157 or Philosophy 160A.

3 units, Win (Mitchell)

3 units (Staff)

3 units, Win (Plotkin)

270A. Introduction to Medical Informatics: Fundamental Methods—(Same as Medical Information Sciences 210A.) Issues in the modeling, design, and implementation of computational systems for use in biomedicine. Topics: controlled terminologies in medicine and biological science, ontologies, fundamental algorithms, basic knowledge representation, information dissemination and retrieval. Emphasis is on the principles of modeling data and knowledge in biomedicine and on the translation of resulting models into useful automated systems.

3 units, Aut (Mussen, Altman)

270B. Introduction to Medical Informatics: Systems and Requirements—(Same as Medical Information Sciences 210B.) Survey of the major application areas in medical informatics, including clinical information systems, imaging systems, bioinformatics, public policy, decision support, and signal processing. Emphasis is on the system requirements, relevant data, algorithms, and implementation issues in each area. Prerequisite: 270A.

3 units, Win (Shortliffe, Shahar, Dev)

271. Decision-Making Methods for Biomedicine—(Same as Medical Information Sciences 211.) For undergraduates or graduate students, building on concepts introduced in 270B. Intermediate biomedical decision making and survey of the methods for the implementation of such concepts in computer-based decision-support tools. Emphasis is on Bayesian statistics, decision analysis, cost-benefit analysis, neural networks, artificial intelligence/expert systems, belief networks, influence diagrams, and the synergies among such approaches. Prerequisites: 270B and at least one programming course.

3 units, Spr (Higgins, Garber, Owens, Sanders, Shortliffe)

272. Medical Informatics Project Course—(Same as Medical Information Sciences 212.) For students who have completed 270A, 270B, 271 or 274, and who wish to implement those ideas in a computer program. Students may take 274 concurrently and complete a project that is coordinated between the two courses. Prerequisites: programming experience, 270B.

3 units, Spr (Koza, Shahar)

274. Representations and Algorithms for Computational Molecular Biology—(Same as Medical Information Sciences 214.) Introduction to basic computational issues and methods used in bioinformatics, including access and use of biological data sources on the Internet. Topics: basic algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, computing with networks of genes, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of diverse data sources, knowledge representation and controlled terminologies for molecular biology, graphical display of biological data, genetic algorithms and genetic programming applied to biological problems. See instructor for unit options. Prerequisites: programming skills and understanding of matrix algebra.

1-4 units, Spr (Alman, Koza)

275A. Musical Information: An Introduction—(Enroll in Music 253.)

1-4 units, Win (Selfridge-Field)

275B. Seminar: Music Representation and Computer Analysis—(Enroll in Music 254.)

1-4 units, Spr (Selfridge-Field)

298. Seminar on Teaching Introductory Computer Science—Opportunity for faculty and undergraduate and graduate students who are interested in teaching to discuss specific topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

1-3 units, Aut (Roberts)

PRIMARILY FOR GRADUATE STUDENTS

300. Departmental Lecture Series—For first-year Computer Science Ph.D. students. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole. (AU)

1 unit, Aut (Staff)

309. Industrial Lectureships in Computer Science—The department invites an outstanding computer scientist to give a course in his/her specialty. Lecturers and topics change yearly; courses may be taken repeatedly. See Time Schedule for offerings.

3 units

312. Processor Design—(Enroll in Electrical Engineering 382.)

3 units, not given 1999-2000

315A. Parallel Computer Architecture and Programming—The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel ma-
chines. Case studies on shared-memory, message-passing, dataflow, and data-parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: Electrical Engineering 282, and reasonable programming experience.

3 units, Spr (Hamdi)

315B. Parallel Programming Project—Continuation of 315A. A significant parallel programming project is required using shared-memory, message-passing, or data-parallel machines. Lectures on parallel programming languages and their implementation, performance debugging of parallel programs, parallel data structures and algorithms. Prerequisite: 315A or consent of instructor.

3 units (Staff) not given 1999-2000

316A. Logic Synthesis of VLSI Circuits—(Enroll in Electrical Engineering 318.)

3 units, Win

316B. Computer-Aided System Design Laboratory—(Enroll in Electrical Engineering 319.)

3 units, Spr

3 units, alternate years, given 2000-01

318. Testing Aspects of Computer Systems—(Enroll in Electrical Engineering 488.)

3 units, Spr

319. Topics in Digital Systems—Advanced material is often taught for the first time as a “topics” course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for topics currently being offered.

by arrangement

320. Interactivity, Narrative, and Artificial Intelligence—Theory of and approaches to interactive narrative systems, especially those that incorporate artificial intelligence techniques. Invited lecturers, discussion readings, critical review of CD ROM titles and other implemented systems. Students create prototypes of AI-based interactive story systems.

2 units (Hayes-Roth, Friedlander) not given 1999-2000

323. Common Sense Reasoning in Logic—Formalizing common sense knowledge and reasoning using situation calculus with nonmonotonic logics, especially circumscription. Variations of situation calculus. Formalizing context. Formalizing facts about knowledge. Prerequisite: basic knowledge of logic such as 157, or Philosophy 160A.

3 units, Aut (McCarthy)

326A. Motion Planning—For students interested in computer graphics, geometrical computing, robotics, and/or artificial intelligence. Computing object motions is central to many application domains (e.g., design, manufacturing, robotics, animated graphics, medical surgery, drug design). Basic path planning methods generate collision-free paths among static obstacles. Extensions include uncertainty, mobile obstacles, manipulating movable objects, and maneuvering with kinematic constraints. Configuration space is a unifying concept, geometric arrangements are a basic combinatorial structure. Theoretical methods with applications in various domains: assembly planning, radiosurgery, graphic animation of human figures.

3 units, Win (Latombe)

327A. Numerical Linear Algebra—First in a three-quarter graduate sequence designed to acquaint students in mathematical and physical sciences and engineering with the fundamental theory of numerical analysis. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: 106A, 137, Mathematics 103 or 113.

3 units, Aut (Golub)

328. Topics in Computer Vision—Fundamental issues of, and mathematical models for, computer vision. Sample topics: camera calibration, texture, stereo, motion, shape representation, image retrieval, experimental techniques. Student papers and project. Prerequisites: 205, 223B, or equivalents.

3 units (Tomasi) alternate years, given 2000-01

329. Topics in Artificial Intelligence—(For 1999-2000, enroll in Psychology 224.) Advanced material is often taught for the first time as a “topics” course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number.

1-3 units, Spr

3 units (Golub) not given 1999-2000

337. Numerical Methods for Initial Boundary Value Problems—Initial boundary value problems are solved in different areas of engineering and science modeling phenomena, e.g., wave propagation and vibration, fluid flow, etc. Numerical techniques for such simulations are discussed in the context of applications. Emphasis is on stability and convergence theory for methods for hyperbolic and parabolic initial boundary value problems, and the development of efficient methods for these problems.

3 units, Spr (Oliger)

339. Topics in Numerical Analysis—Advanced material is often taught for the first time as a “topics” course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for current topics.

3 units, alternate years, given 2000-01

341. Advanced Topics in Data Communication—Readings/discussion are combined with topical lectures to familiarize students with a core of classic and new papers in the field of data networking. Emphasis is on understanding and applying existing work to new problems in the field, especially high-speed networking. Topics: network theory (the end-to-end argument), transport protocol performance (header prediction, checksum efficiency), cell relay (e.g., ATM and SONET), congestion control (Parekh’s thesis, leaky bucket, fair queuing) and high-speed switching (input vs. output queuing, crossbars and banyans). Prerequisite: 244A.

3 units (Partridge) not given 1999-2000

342. Programming Language Design—Problems of programming language design and comparison of traditional solutions. Possible topics: formal semantics, implementation considerations, extensibility, very high level languages, evaluation of language designs, the innovative features of a variety of modern programming languages. Prerequisites: 242, 243.

3 units (Mitchell) not given 1999-2000

343. Topics in Compilers—Advanced topics in compilers. Topics change every quarter; course may be taken repeatedly for credit. Prerequisite: 243.

3 units, Spr (Lam)

344. Projects in Computer Networks—For students with a strong interest in computer networks from novel applications to physical layer coding schemes; software to hardware; theory to design-and-build.
345. Advanced Topics in Database System—Advanced topics in the area of database and information systems. Content differs in each offering; may be taken multiple times for credit. Prerequisite: 145.
3 units, Spr (Ullman)

346. Database System Implementation—A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245. Recommended: programming experience in C++.
*5 units, Win (Widom)

347. Transaction Processing and Distributed Databases—The principles and system organization of distributed databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Distributed algorithms for data management: clocks, deadlock detection, and mutual exclusion. Heterogeneous and federated distributed database systems. Overview of commercial systems and research prototypes. Prerequisites: 145, 245.
3 units, Spr (Garcia-Molina)

*4 units, Staff

348B. Computer Graphics: Image Synthesis Techniques—Intermediate level, emphasizing sampling, shading, and display aspects of computer graphics. Topics: local and global illumination methods including radiosity and distributed ray tracing, texture generation and rendering, volume rendering, strategies for anti-aliasing and photo-realism, human vision and color science as they relate to computer displays, and high-performance architectures for graphics. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: exposure to Fourier analysis or digital signal processing.
*4 units, Win (Harrarahan)

348D. Vision and Image Processing—(Enroll in Psychology 267.)
1-3 units (Heeger) alternate years, given 2000-01

349. Topics in Programming Systems—(Enroll in Electrical Engineering 392N.) Advanced material is often taught for the first time as a "topics" course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for topics currently being offered.
3 units, Spr (Prabhakar)

* May be taken for 3 units by graduate students.

351. Topics in Complexity Theory and Lower Bounds—Focus is on one of: basic machine models and complexity measures—their properties and relationships, complexity classes and their properties, reductions and complete problems, concrete representative problems from important complexity classes. Techniques for establishing limits on the possible efficiency of algorithms, and concrete lower bounds based on the following models of computation: decision trees, straight line programs, communication games, branching programs, PRAMs, boolean circuits. Approximation algorithms and the complexity of approximations. Pseudo-randomness and cryptography. Prerequisite: 154, or equivalent.
3 units (Motwani) alternate years, given 2000-01

3 units (Pratt) not given 1999-2000

3 units, Aut (Pratt)

354. Probabilistic Reasoning in Computing—The basics of (Bayesian) probability theory as applied to computing and intelligence systems. Emphasis is on working through applications and understanding relevant theory. Relevant probability theory and techniques: interpretations, graphical and network models, information theory, decision theory, inference, and “alternative” approaches. Probabilistic aspects of computational problems in learning, search, data analysis, neural, and dynamic systems. Some topics by guest lecturers. Prerequisites: 106B or X, 221, a knowledge of basic statistical measures as in Psychology 60, and basic math.
3 units, Staff

355. Advanced Topics in Cryptography—For graduate students. Topics: pseudo-random generation, zero knowledge protocols, elliptic curve systems, threshold cryptography, security analysis using random oracles, lower and upper bounds on factoring and discrete log. Prerequisite: 255.
3 units, Spr (Boneh)

3 units, Win (Dill)

357. Topics in Formal Methods—Formal methods for the specification, verification, analysis, and systematic development of real-time and

3-5 units, Spr (Manna)

358. Topics in Programming Language Theory—Possible topics of current research interest in the mathematical analysis of programming languages: structured operational semantics, domain theory, semantics of concurrency, rich type disciplines, problems of representation independence, and full abstraction. May be repeated for credit. Prerequisites: 154, 157, 258, or equivalents.

3 units (Mitchell) not given 1999-2000

359. Topics in Theory of Computation—Advanced material is often taught for the first time as a "topics" course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for topics currently being offered.

361A. Advanced Algorithms—Advanced data structures: union-find, self-adjusting data structures and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, on-line algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. Prerequisite: 161 or 261, or equivalents.

3 units, Aut (Motwani) alternate years, not given 2000-01

3 units (Plotkin) alternate years, given 2000-01

365. Randomized Algorithms—Design and analysis of algorithms that use randomness to guide their computations. Basic tools, from probabilistic theory and probabilistic analysis, that are recurrent in algorithmic applications. Randomized complexity theory and game-theoretic techniques. Algorithms techniques. Probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, parallel and distributed algorithms, on-line algorithms, number-theoretic algorithms. Prerequisites: 161 or 261, Statistics 116, or equivalents.

3 units (Motwani) alternate years, given 2000-01

367A. Parallel Computation—Introduction to theoretical issues in parallel computation. Properties of parallel computation models and algorithm design techniques specific to each model, including systolic arrays, mesh-connected computers, hypercube-related networks, and PRAM. Topics: algorithms for sorting, connected components, shortest paths, and other basic problems. Upper and lower bounds for randomized and deterministic routing on hypercube and related networks. Techniques for reducing the processor-time product for PRAM algorithms.

3 units (Plotkin)

3 units (Plotkin)

368. Geometric Algorithms—Graduate-level introduction to the basic techniques used in the design and analysis of efficient geometric algorithms including: convexity, triangulation, sweeping, partitioning, and point location. Voronoi and Delaunay diagrams. Intersection and visibility problems. Recent developments using random sampling methods. Emphasizes data structures of general usefulness in geometric computing and the conceptual primitives appropriate for manipulating them. Impact of numerical issues in geometric computation. Applications to motion planning, visibility preprocessing, model-based recognition, and GIS. Prerequisite: 161.

3 units, Spr (Guibas)

369. Topics in Analysis of Algorithms—Advanced material is often taught for the first time as a "topics" course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for topics currently being offered.

3 units (Plotkin)

377. Topics in Human-Computer Interaction—Topics of current research interest in human-computer interaction. Contents change each quarter. May be repeated for credit.

3-4 units

3-4 units, Win (Winograd)

379. Interdisciplinary Topics—Advanced material that relates computer science to other disciplines is often taught for the first time as a "topics" course, perhaps by a faculty member visiting from another institution. Students may therefore enroll repeatedly in a course with this number. See Time Schedule for topics being currently offered.

by arrangement

390A, B, C. Curricular Practical Training—Provides educational opportunities in high-technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Meets the requirements for Curricular Practical Training for students on F-1 visas. 390 A, B and C may each be taken only once.

1 unit, any quarter (Motwani)

393. Computer Laboratory—For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

any quarter (Staff)

394. Business Management for Computer Scientists and Electrical Engineers—Focus is on the functional areas necessary for making successful business decisions. Topics: corporate strategy, new product development, marketing, sales, distribution, customer service, and financial accounting. How to identify and analyze issues in each of these
area in a rapidly changing world. A framework and tool set is developed for formulating, evaluating, and recommending action from the general manager point of view and for communicating and defending ideas in a team environment. Required study groups. Written case assignments. Enrollment limited to 60. See http://www-leland.stanford.edu/class/cs394/. Prerequisite: graduate student in Computer Science or Electrical Engineering.

3-4 units (Gibbons, Liddle) not given 1999-2000

395. Independent Database Project—For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

any quarter (Staff)

399. Independent Project

1-9 units, any quarter (Staff)

399P. Independent Project—Graded satisfactory/no credit.

1-9 units any quarter (Staff)

EXPERIMENTAL

409. Category Theory and Formal Software Development—Introduction to category theory in the context of formal methods of software engineering. Focus is on construction via the composition of large formal specifications, and refinement of specifications into efficient code. The foundations for specification composition and refinement are provided by categorical concepts, e.g., colimits and sheaves. Topics: application-specific domain theories, formal requirement specifications, representation and use of programming knowledge, software architectures, algorithm and data structure design, program optimization techniques, datatype refinement, code generation, and system support.

3 units, Spr (Smith, Green) alternate years, not given 2000-01

426. Genetic Algorithms and Genetic Programming—The genetic algorithm is a domain-independent algorithm for search, optimization, and machine learning patterned after Darwinian natural selection and naturally occurring genetic operators such as recombination, mutation, gene duplication, gene deletion, gene regulation, and embryonic development. Genetic programming is a domain-independent automatic programming technique that extends the genetic algorithm to the breeding of populations of computer programs. Topics: introduction to genetic algorithms and genetic programming; mathematical basis for genetic algorithms; implementation on parallel computers and field-programmable gate arrays; evolution of machine language programs; applications to problems of system identification, control, classification, analysis of genome and protein sequences, and automatic synthesis of the design of topology, sizing, placement, and routing of analog electrical circuits.

3 units, Win (Koza)

444A. Software Development for Critical Applications—Introduction to current methods for developing safety-critical software (e.g., fly-by-wire avionics); and mission-critical software (e.g., Internet commerce). Topics: basic terminology, failure and fault taxonomies, hazard analysis techniques, failure mode analysis, fault tree analysis, software standards, formal methods, testing requirements, fault tolerance, probabilistic models, and engineering techniques for critical systems from embedded systems to large-scale Internet applications. Students apply analysis techniques to example systems, use tools for specification, and implement example algorithms and applications.

3 units, Aut (Dill, Fox)

446. Tools and Processes for Software—The fundamental concepts of software engineering: life-cycle models (waterfall, spiral, etc.), project and software metrics, quality assurance, software reuse. The development process: business process modeling, requirements engineering, analysis, design, implementation, testing, maintenance. Introduction to modeling techniques (UML and design patterns). Research challenges, with reviews of ongoing research by faculty and outside speakers on such topics as specification validation and software composition. Readings and modeling exercises. Focus throughout is on large-scale software development as seen in industry. Part of class (UML, software development process) may be taken for one unit. Prerequisites: prior software experience; graduate standing or consent of instructor.

1-3 units, Aut (Wiederhold, Beringer)

447. Interdisciplinary Interaction Design—(Same as Mechanical Engineering 293.) Small teams develop innovative technology prototypes that combine product and interaction design. Focus is on software and hardware interfaces, interaction, design aesthetics, and some underpinnings of successful design: a reflective, interactive design process, group dynamics of effective interdisciplinary teamwork, and working with users. Prerequisite: 247A.

3-4 units, Spr (Winograd, Kelley)

448. Topics in Computer Graphics—In-depth study of an active research topic in computer graphics. Topic changes each quarter. Previous topics: exotic input and display technologies, modeling of natural phenomena, digital film making, media technologies for graphics and graphics architectures. Readings from literature and a project. May be taken repeated for credit. Prerequisite: 248 or consent of instructor.

3 units, Win (Guibas)

Spr (Hanrahan)

448A. Interactive Workplaces

3 units, Aut (Hanrahan)

448B. Motion Study: An Introduction to Animation, Cartoon Physics, and Funny Walks—Preference to CS students with a graphics or animation specialization, and Art students from the Digital Arts program. Hands-on animation, providing a foundation for future work in computer graphics, animation, and robotics. The techniques, tools and methods used by traditional animators. Animation techniques, timing, spacing, weight, lip-synch, and visual design. The differences between physics and cartoon physics. Walks and what makes a walk believable; looking at walks, analyzing them, and creating an effective and expressive animated walk. Enrollment limited to 15.

3 units, Aut (Loeb)

468. Topics in Geometric Algorithms—Advanced seminar covering different topics related to geometric computing. Recent offerings: shape matching, proximity and nearest-neighbor problems, visibility and motion planning, and collision detection. Readings from the literature and a presentation or a project required. May be taken multiple times for credit. Prerequisite: 368, or consent of instructor.

2 units, Aut (Guibas)

Win, Spr (Staff)

499. Advanced Reading and Research—For CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

any quarter (Staff)

GRADUATE SEMINARS

510. Digital Systems Reliability Seminar—(Enroll in Electrical Engineering 385A.)

1-4 units, Aut, Win, Spr, Sum

523. Readings in Artificial Intelligence—Primarily for students planning to take the AI qualifying exam. A series of lectures and discussions on readings in all areas of artificial intelligence research. Prerequisite: 221.

3 units, Win (Staff)

525. Seminar on Knowledge Acquisition for Expert Systems—(Enroll in Medical Information Sciences 230.)

2 units, given 2000-01
528. Graphics/Geometry/Vision/Robotics Seminar—Weekly series of informal research talks on topics related to perceiving, modeling, manipulating, and displaying the physical world. The computational models and numerical methods underlying these topics. Brings together faculty and students in these five closely related areas. (AU)
1 unit, Aut, Win, Spr (Staff)

530. Applied Mathematics/Scientific Computing Seminar
1 unit, Aut, Win, Spr (Staff)

I unit, Aut, Win, Spr (Golub)

540. Seminar on Computer Systems—(Enroll in Electrical Engineering 380.)
1 unit, Aut, Win, Spr

544. Mobile Computing Seminar—Weekly readings, discussions, and presentations on current research in mobile and wireless computing. Invited speakers from Stanford and elsewhere lecture on topics of current interest. Prerequisites: 240, 244B. (AU)
1-2 units (Baker)

545. Database Research Seminar—Presentations of current research and industrial innovation in information systems, sponsored by Infolab faculty. Topics: fundamental database technology, knowledge-based processing and advanced applications. Interaction with speakers. (AU)
1 unit, Aut, Spr (Staff)

5451. Advanced Image Databases Seminar—Reading/demonstrations/analysis devoted to image and video databases as created by photographic, medical, and commercial sources. Emphasis is on combining image-derived and textual descriptors to retrieve on-line images. Issues: data structures and indexing schemes for real-time interaction, high-dimensional feature vectors for fast retrieval, metrics of closeness between query and stored vectors. Presentations by commercial and research image retrieval organizations illustrate the strengths and weaknesses of specific techniques. May be combined with a 395 project. (AU)
1 unit, Win (Firschein, Wiederhold)

547. Human-Computer Interaction Seminar—Weekly speakers on topics related to human-computer interaction design. (AU)
1 unit, Aut, Win, Spr (Winograd)

548. Distributed Systems Research Seminar—Recent research in distributed systems, computer communications, parallel machines, parallel programming, and distributed applications. Invited speakers from Stanford and elsewhere present topics and results of current interest. (AU)
1 unit, Spr (Cheriton)

559. Seminar on Mathematical Theory of Computation—Possible topics (vary each year): logic and its relation to computation, programming language analysis and design, specification and verification of software and hardware systems, theories of concurrency, approaches to static analysis and program state. Emphasizes presentation of recent results and summaries of articles from the current literature. (AU)
1 unit, by arrangement (Mitchell)

579. Frontiers in Interdisciplinary Biosciences—Literature/discussion on how to critically evaluate the cutting edge of current research, held in conjunction with a seminar series, occurring once per month for 1999-2000, and more frequently thereafter. Leading investigators in interdisciplinary research from Stanford and from throughout the world present their work in a particular area. Before the seminar, students and faculty read and critically discuss one or more papers from the primary research literature on a related topic. After the seminar, students meet informally with the speakers to discuss the research and future directions.

Emphasis is on how to read papers in the primary research literature, and familiarization with the broad set of techniques and approaches used to study problems in the biosciences. This interdisciplinary course is listed in many departments in the schools of Engineering, Medicine, and Humanities and Sciences. Students should enroll in their affiliated department, if it is offered. If not, students may enroll in any department within their school where the course is listed.
1 unit, Aut, Win, Spr (Spudich, Robertson, Chu, Mobley)

ELECTRICAL ENGINEERING

Chair: James D. Plummer
Vice Chair: Robert M. Gray
Associate Chair (Admissions): Antony Fraser-Smith
Assistant Chair: Sharon A. Gerlach
Associate Professors: John T. Gill III, Gregory T. A. Kovacs, Marc S. Levoy, Bruce B. Lusignan, Teresa H. Y. Meng, Dwight G. Nishimura, Jennifer Widom*, Howard A. Zebker
Assistant Professors: Mary G. Baker, Dan Bonch, Dawson Engler, Andrea J. Goldsmith, Thomas H. Lee, Nicholas McKeown, Yoku Kunima J. Paulraj, Piero A. Pianetta, Calvin F. Quate
Associate Professors: Nicholas Bambos, David L. Dill, Per Enge, David Heeger, Monica Lam, Sandy Napei, Norbert Pelle, Zhi-Xun Shen, Julius Smith
Assistant Professors: Stacey Bent, Peter Fitzgerald, Armando Fox, Mendel Rosenblum, Daniel Spielman, Claire Tomlin, Benjamin Van Roy
Professor (Teaching): Gilbert Masters
Lecturers: Tamarah Ahrens, Dennis Allison, Dieter Scherzer, Howard Swain, John Wharton
Acting Assistant Professor: Glen Solomon
Acting Assistant Professor (Research): David Bloom
Consulting Professors: Carl Berglund, Elizabeth Cohen, Abbas Emami-Naeini, Timothy Groves, Dale Harris, Masahiro Kawahata, Else Kooi, John Koza, David Leeson, Mark McCord, Dan Meisburger, Roger D. Melen, Madhulika Narasimha, Yoshio Nishi, Kurt Petersen, Donald Scharfetter, Arden Sher, David Stork, John Wakerly, Martin Wainwright
Consulting Associate Professors: Richard Dasher, Yi-Ching Pao, David Stork, Noel P. Thompson
Consulting Assistant Professors: Yucei Altunbasak, David Burns, Isaac Chuang, Syad Ma, Nadim Maluf, Steven Minne, Mehrdad Moslehi, M. Allen Northrup, Stuart Oberman, David Su, Vivek Subramanian, Andrew Wolfe
UNDERGRADUATE PROGRAMS

To specialize in Electrical Engineering (EE), undergraduate students should follow the depth sequence given in the discussion of undergraduate programs in the “School of Engineering” section of this bulletin. Majors must receive at least a 2.0 grade point average (GPA) in courses taken for the EE depth requirement.

For information about an EE minor, see the “School of Engineering” section of this bulletin.

A Stanford undergraduate may work simultaneously toward the B.S. and M.S. degrees. See the “School of Engineering” coterminal section of this bulletin.

GRADUATE PROGRAMS

University regulations governing the M.S., Engineer, and Ph.D. degrees are described in the “Graduate Degrees” section of this bulletin.

The profession of electrical engineering demands a strong foundation in physical science and mathematics, a broad knowledge of engineering techniques, and an understanding of the relation between technology and man. Curricula at Stanford are planned to offer the breadth of education and depth of training necessary for leadership in the profession. To engage in this profession with competence, four years of undergraduate study and at least one year of postgraduate study are recommended. For those who plan to work in highly technical development or fundamental research, additional graduate study is desirable.

A one-year program of graduate study in electrical engineering may lead to the degree of Master of Science. A two-year program, offering a wider selection of engineering course work, more opportunity for study in the related fields of engineering, mathematics, and physics, and in particular, more independent work and individual guidance, may lead to the degree of Engineer.

The degree of Doctor of Philosophy is offered under the general regulations of the University. The doctoral program, requiring a minimum of three years (nine quarters) of graduate study, should be considered by those with the ability and desire to make a life work of research or teaching.

Application for Admission—Applications for admission with graduate standing in Electrical Engineering (EE) can be completed electronically at http://www.stanford.edu/dept/registrar/admissions/applyinfo.html#electronic, or printed application may be obtained by writing to Graduate Admissions, the Registrar’s Office, Old Union, Stanford, CA 94305 or by calling (650) 723-4291. Applications are submitted to and reviewed by the Department of Electrical Engineering, Graduate Admissions Office, 350 Serra Mall, Stanford University, Stanford, CA 94305-9505. Applications for full time study are considered for the Autumn Quarter only. The application deadline is December 15.

Applicants who have not yet earned the equivalent of an M.S. degree should apply for admission to study first toward the master’s degree, indicating any intention of later working toward a more advanced degree. Admission for either the Engineer or Ph.D. degree is normally approved: to students who have completed a master’s degree. In addition, can- didates to the Ph.D. or Engineer degree also require that the department's Committee on Graduate Admissions identify a tentative faculty research supervisor.

MASTER OF SCIENCE

Modern electrical engineering is a broad and diverse field, and graduate education in this department may satisfy a variety of objectives. Students with undergraduate degrees in physics, mathematics, or related sciences, as well as in various branches of engineering, are invited to apply for admission. They will ordinarily be able to complete the master’s degree in one calendar year. Students with undergraduate degrees in other fields may also be admitted for graduate study (see below). The master’s degree program may provide advanced education in electrical engineering, technology, and an understanding of the relation between technology and man. The faculty does not prescribe specific courses to be taken. Each student, with the help of a program adviser, prepares an individual program and submits it to the faculty for approval. The master’s program proposal must be submitted to the department office during the first quarter of study; modifications may be made later. Detailed requirements and instructions are in the Handbook for Graduate Students in Electrical Engineering at Stanford University. (http://ee.stanford.edu/ee/GradHandbook/html/GradHandbook.html).

Programs of at least 45 quarter units that meet the following guidelines are normally approved:

1. A sequence of three or more graded electrical engineering courses numbered above 200, to provide breadth in one area. The student must maintain an average 3.0 grade point average (GPA) or better in both the depth area and overall.

2. At least one EE course numbered above 200 in each of three additional course areas, outside of the area selected under item 1 to provide breadth.

3. Enough additional units of electrical engineering courses so that items 1 through 3 total at least 21 units of graded EE courses numbered above 200, including at least 9 units of such courses numbered in the 300s or 400s. Some 600- or 700-level summer courses may also be considered for inclusion in the M.S. program.

4. Additional course work to bring the total to 45 or more quarter units, including:
   a) at least 36 graded units
   b) at least 36 units at or above the 100 level
   c) at least 30 units in technical areas such as engineering, mathematics, and science; thesis and Special Studies units cannot be included among these 30 units

5. At least three quarters of EE seminars, including 201 in Autumn Quarter. In case of time conflicts, tapes of these classes can be viewed in the Terman Library.

Students must have completed the prerequisites for advanced courses. For the most recent information, see http://ee.stanford.edu/ee/GradHandbook/html/ms.html.
M.S. PROGRAM IN ELECTRICAL ENGINEERING (EE) AND INDUSTRIAL ENGINEERING AND ENGINEERING MANAGEMENT (IEEM)

Admission of Students—For the dual degree, admission to both departments is required, but is coordinated by designated members of both admissions committees who make recommendations to the committees of their respective departments.

Student Advising—Every student in the dual degree program has one adviser in EE, and one in IEEM. In addition, a committee consisting of designated faculty from both departments serves as a review committee on performance and as an overseeing body of ongoing and graduating students of the program. The committee, consisting of designated members of both admissions committees as described in the previous section, may initially serve as this overseeing body.

THE DUAL DEGREE PROGRAM

This dual-degree program enables a small, selective set of graduate students to obtain both the IEEM M.S. degree and the EE M.S. degree simultaneously. The total number of units required to complete the degree is 72 (versus 90 if the two degrees were pursued separately) and the total number of full-time quarters required to complete the dual degree is six (students with a 50 percent Teaching or Research Assistantship, who average 9 units per quarter, earn 62 of a full quarter of residence).

The units and time to complete requirements are based on the student having the relevant background, such as students with work experience. Most students may need to take some of the background courses.

Background Courses (10 units)—

<table>
<thead>
<tr>
<th>Course No. and Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comp. Sci. 106A. Programming Methodology</td>
<td>5</td>
</tr>
<tr>
<td>Stat. 190. Introduction to Statistical Methods</td>
<td>3-5</td>
</tr>
</tbody>
</table>

Common Foundation Requirements (12 units)—

1. A course on statistical process control and design of experiments at the graduate level. Currently, this can be satisfied by Industrial Engineering (IE) 221, Quality Operations and Management (4 units).
2. A course on basic manufacturing processes as specified by the EE adviser. Currently, this can be satisfied by EE 212 (3 units).
4. EE 203, Entrepreneurial Engineer Seminar; or IE 292, Technology Management Seminar (1 unit).

Electrical Engineering Core Requirements (21 units)—At least 21 units that satisfy the M.S. in Electrical Engineering degree requirements as outlined below:

1. At least three graded EE courses numbered above 200 in one area to provide depth.
2. Three graded EE courses numbered above 200 in an area outside of requirement '1' to provide breadth.
3. Additional units in EE numbered above 200, of which at least nine are above 300, so that the total of requirements 1, 2, and 3 amounts to at least 21 units.

Part of the 21 units above can be satisfied with up to 3 units of seminars, for example EE 201.

Industrial Engineering and Engineering Management Core Requirements (21 to 23 units)—

<table>
<thead>
<tr>

<tr>
<td>IE 270. Strategy in Technology-Based Firms</td>
<td>4</td>
</tr>
<tr>
<td>One additional 200-level course offered by IEEM</td>
<td></td>
</tr>
</tbody>
</table>

Electives (6 units or more)—Additional units in EE and IEEM and other departments to meet the total requirement of 72 units.

ENGINEER

The degree of Engineer requires a minimum of two academic years (90 quarter units) of study beyond the B.S. degree (three academic quarters beyond the M.S.) including six full-time quarters of approved work as a graduate student, of which a minimum of three quarters and 36 quarter units must be in residence at Stanford.

Work toward the degree of Engineer in Electrical Engineering normally includes the requirements for work toward the master's degree in Electrical Engineering, including qualifications for admission.

An additional year allows time for a broader program, or a more concentrated program, or whatever arrangement may seem suitable to the candidate, his adviser, and the department. Advanced study at other universities, or in other departments at Stanford, may be allowed within the foregoing consideration. The equivalent of approximately one quarter is devoted to independent study and thesis work with faculty guidance. The thesis is often of the nature of a professional report on the solution of a design problem. The degree of Engineer differs from the Ph.D. in that it prepares for professional engineering work rather than theoretical research. The candidate may select courses that are suitable for either the degree of Engineer or the Ph.D. degree and decide later which program to pursue.

The best procedure for the applicant to follow is (1) if now working toward the Stanford M.S. degree in Electrical Engineering, request permission to continue graduate studies beyond the master’s degree, using the Graduate Program Authorization Petition form obtained from the Department of Electrical Engineering office, or (2) if not planning to receive the Stanford M.S. degree in Electrical Engineering, apply for admission to the Department of Electrical Engineering as a candidate for the degree of Engineer.

During the first quarter of work beyond the M.S. degree, formal application for admission to candidacy for the degree of Engineer is made on a form that can be obtained from the department office. The program of study is prepared by the student with the help of the thesis adviser and submitted to the academic secretary for approval. The form should contain a list of all graduate courses completed at Stanford and elsewhere and all courses yet to be completed. For the most recent information, see http://ee.stanford.edu/ee/GradHandbook/html/doctor.html.

DOCTOR OF PHILOSOPHY

Admission to a graduate program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement, satisfactory performance on a qualifying examination, and sponsorship by two faculty members. Enrollment in Electrical Engineering 391, Special Studies, is recommended as a means for getting acquainted with a faculty member who might be willing to serve as a supervisor.

Not later than the first Autumn Quarter after receiving the M.S. degree, the applicant should submit an application to the department qualifying examination (given each Winter Quarter). Upon successful completion of the qualifying examination and after securing agreement by two faculty members to serve as dissertation advisers, the student should file an Application for Doctoral Candidacy. Only after receiving department approval to that application does the student become a candidate for the Ph.D. degree.

Requirements may be summarized as follows. The student must complete successfully (1) a minimum of three years of residence with graduate standing, two years of which must be in residence at Stanford; (2) one or more qualifying examinations given by the faculty of the Department of Electrical Engineering; (3) an approved program of courses in electrical engineering and allied subjects; (4) an approved topic of research and a dissertation, based on research, which must be a contribution to knowledge; (5) an oral examination that is a defense of thesis work. The equivalent of approximately one quarter is devoted to independent study and thesis work. The dissertation is devoted to independent study and thesis work with faculty guidance.
AREAS OF RESEARCH

Candidates for advanced degrees participate in the research activities of the department as paid research assistants or as students of individual faculty members. At any one time, certain areas of research have more openings than others. A new applicant should express a second choice of research interest in the event that there are no vacancies in the primary area of interest. At present, faculty members and students are actively engaged in research in the areas listed below.

COMPUTER SYSTEMS

Asynchronous Circuits
Compilers
Computer-Aided Design
Computer Architecture
Computer Graphics
Computer Networks
Computer Organization
Computer Reliability
 Concurrent Languages
Concurrent Processes and Processors

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

Electrical engineering courses are numbered according to the year in which the courses are normally taken.

20-99 first or second year
100-199 third or fourth year
200-299 mezzanine course for advanced undergraduates or graduates
300-399 first graduate year
400-499 second or third graduate year

600-799 special summer courses

The Department of Electrical Engineering (EE) offers courses in the following areas:

Communication Systems
Computer Hardware
Computer Software Systems
Control and Systems Engineering
Electronic Circuits
Electronic Devices, Sensors, and Technology
Fields, Waves, and Radioscience
Image Systems
Lasers, Optoelectronics, and Quantum Electronics
Network Systems
Signal Processing
Solid State Materials and Devices
VLSI Design

UNDERGRADUATE

17Q. Stanford Introductory Seminar: From Chips to Genes—Engineering the MicroWorld—Preference to sophomores. Lectures by instructor on the basic material followed by guest speakers from microelectronics, MEMS, and biotechnology. Reading assignments and student reports. Prerequisites: high school physics, knowing how a light microscope works, and the length of scales (meter, millimeter, micrometer, nanometer).

3-3 units, Win (Pease, Quate)

33Q. Stanford Introductory Seminar: Fun Electrical Engineering Stuff (and how it works)—Preference to sophomores. Prospective electrical engineering students are exposed to the capabilities and possibilities in their field, examining the functions and mechanisms of practical systems (toys, home appliances, computers, industrial and medical equipment), and breaking a problem into manageable pieces, recognizing patterns, and thinking beyond what is first seen. Combined lecture and lab; students disassemble and reassemble basic minimal electronics.

3 units, Aut (Dutton, Ahrens)

44Q. Stanford Introductory Seminar: Physics, History, and Mystique of Lightning—Preference to sophomores. The physical properties and phenomenology of lightning discharges, The history and mystique of lightning, emphasizing the role of this phenomena in religions and various age-old mythologies. Benjamin Franklin’s experiments and writings on lightning. The societal impacts of lightning in modem times and in the historical past. Different types of lightning, including discharges, which occur at high altitudes above thunderclouds, lightning on other planets, lightning in volcanoes, and mysterious forms such as “ball” lightning. The physical properties of lightning and techniques for their measurement.

3 units, Win (Inan)

47Q. Stanford Introductory Seminar: Telecommunications and Networks—From Telegraphy to the Internet—Preference to sophomores. Modern communications technology and networking, including the Internet. How the global communications infrastructure evolved from the “plain old telephone service” of 1900 to today’s multimedia “information super-highway.” A historical perspective of the evolution of communications technology, including advancements in communications theory and practical inventions over 200 years. Relevant public policy decisions in the U.S., (the Mann-Elkins Act of 1910 to the Telecommunications Reform Act of 1996). The political goals of these policies, their interplay with market forces, and their impact on the development and deployment of technology.

3 units, Aut (D. Harris)

60Q. Stanford Introductory Seminar: Viewing Hazards on Earth from Space—(Same as Geophysics 60Q.) Preference to sophomores. Natural hazards (earthquakes, volcanoes, floods, hurricanes, and fires)
affect thousands of people everyday. Twenty years of developments in spaceborne imaging technology help monitor and respond to such disasters more rapidly than in the past, saving lives and money. Understanding the physical processes involved allows us to anticipate and plan for mitigation of the consequences of the disasters. Students consider how these new tools are applied to natural disasters, and how remotely-sensed data are manipulated and analyzed.

3 units, Win (Zebker)

93Q. Stanford Introductory Seminar: Energy Processes—Preference to sophomores. Serves as preparation for 293A.B. Topics in non-traditional energy processes. Students groups of 2 or 3 each select one topic for further investigations. Progress reports, final report. Discussions on the physics and chemistry of the processes, concentrating on a journalistic description of what is being accomplished in each area and the near term prospects. Prerequisite: interest in science and engineering in the energy area.

3 units, Aut (da Rosa)

100. The Electrical Engineering Profession—Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management. (Extensive reports for 2 units.) (AU)

1-2 units, Aut (Gray)

3 units, Win (Gray)

3 units, Spr (Nishimura)

3 units, Aut (Prabakhar)

104. Signal Processing and Communication—Introduction to communication systems, Fourier series and Fourier transforms, filtering and signal distortion, time domain and frequency domain analysis, communication channel modulation (FM), digital modulation, noise in communication systems, overview of cellular telephones, satellite systems. Prerequisite: 103.

3 units, Win (Goldsmith)

105. Feedback Control Design—(Enroll in Engineering 105.)

106. Planetary Exploration—The other worlds of our solar system as revealed by recent space missions. Comparative properties of the terrestrial and Jovian planets; planetary atmospheres, surfaces, interiors, and rings; planetary and satellite orbits and spacecraft trajectories, orbital perturbations; properties of the interplanetary gas, dust, comets, and meteors. What the planets can tell us about potential terrestrial catastrophes (acid rain, ozone depletion, nuclear winter, runaway greenhouse, collision with an asteroid or large comet). Origin and evolution of planetary systems. Remote sensing from spacecraft at radio, infrared, light, and ultraviolet wavelengths. U.S. and Russian space programs and their comparative engineering and scientific aspects. Prerequisite: one year of college engineering, mathematics, or physics.

3 units, Spr (Fraser-Smith)

111. Electronics I—The fundamental operation of semiconductor devices and their circuit applications. The physical principles of fabrication and electrical behavior of microelectronic semiconductors, emphasizing silicon technology; operating principles and device equations for PN diodes, and junction field-effect transistors; biasing, small-signal models, and elementary circuit applications of semiconductor devices. Prerequisite: Engineering 40. Corequisite: 101.

4 units, Aut (Dutton)

112. Electronics II—Basic operating principles and device equations for MOS capacitors and transistors, and bipolar junction transistors. The basics of transistor amplifier and logic circuit design using MOS and bipolar transistors. Weekly one-hour recitation session. Prerequisites: 101, 111.

4 units, Win (Wong)

113. Electronic Circuits—Bipolar and MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, feedback. Design and use of operational amplifiers. Prerequisites: 102, 112.

3 units, Aut (Staff) Spr (Dutton)

121. Digital Design Laboratory—Introduction to digital circuits and logic design. Topics: Boolean algebra, logic circuit electrical characteristics, combinational and sequential logic building blocks, state machines, programmable logic devices, hierarchical logic design, computer-aided design and logic simulation. Lab. Prerequisite: 101. (WIM)

4 units, Aut (Wakerly) Spr (Staff)

122. Analog Laboratory—Introduces the practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Goals: lab experience, basic design skills, experience with computer-aided design, and basic circuit fabrication/debugging knowledge. Prerequisite: Engineering 40 or equivalent.

3 units, Aut (Kovacs) Spr (Staff)

133. Analog Communications Design Laboratory—The design and testing of analog communications circuits, including applications. Amplitude modulation (AM) using discrete multiplier circuits and fully integrated implementations. Phase and Frequency Modulation (FM) based on discrete and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phase-Locked Loop (PLL) techniques, characterization of key parameters and their applications. Lectures on the practical aspects of circuit implementations. Labs involve the systematic building and characterization of AM, FM, and PLL circuits and subsystems. Enrollment limited to 40 undergraduate and coterminous EE students. Prerequisite: 122.

3 units, Win (Dutton)

137. Laboratory Electronics—(Enroll in Applied Physics 207.)

138. Laboratory Electronics—(Enroll in Applied Physics 208.)

140. The Earth from Space: Introduction to Remote Sensing—(Enroll in Geophysics 40.)

141. Engineering Electromagnetics—Transmission lines. Reflection, transmission, attenuation, and dispersion. Standing wave ratio, impedance matching, pulses and transients. Electrostatics, Gauss’ Law, capaci-
itance, divergence, and currents. The static magnetic field, magnetic forces, Ampère’s Law, curl and Faraday’s Law. Magnetic materials and devices, inductance, electromechanics, and skin effect. Maxwell’s equations. Uniform plane waves, power and energy relations. Prerequisites: Mathematics 44, 102.

4 units, Aut (Inan)

3 units, Win (Inan)

144. Wireless Electromagnetic Design Laboratory—Required for undergraduate Fields and Waves specialty area. Lecture, lab, and design project. Hands-on experiments and projects with antennas, transmission lines and propagation for wireless communications and remote sensing. Using spectrum analysers, swept frequency generators, frequency counters, couplers, detectors and slotted lines, develop measurement and design capability in the 1-20 GHz range in support of chosen design projects. Two- to three-person team projects from antenna, guided wave distributed circuits, remote sensing, or related topics. Working model constructed and demonstrated; some funding available for project costs. Prizes for best projects. Lab. Enrollment limited to 30. Prerequisites: 122, 142, or consent of instructor.

3 units, Spr (Fox)

181. Introduction to Computer Systems and Assembly Language Programming—(Enroll in Computer Science 110.)

4 units, Aut (Staff)

Spr (Fox)

183. Advanced Logic Design Laboratory—Experiments in digital logic design using TTL integrated circuits, MSI and LSI registers and ALUs, Programmable Gate Arrays, and PLAs. Choice of projects: various sequential machines, D/A converters and CRT displays, integrators, arithmetic processors, stored-program processors, game-playing machines. Lab. Enrollment limited to 25; preference to graduating seniors in Spring Quarter. Co- or prerequisite: 121.

3 units, Win (Staff)

Spr (Briem)

184. Programming Paradigms—(Enroll in Computer Science 107.)

189A. Object-Oriented Systems Design—(Enroll in Computer Science 108.)

189B. Software Project—(Enroll in Computer Science 194.)

190. Special Studies or Projects in Electrical Engineering—Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading.

by arrangement

191. Special Studies and Reports in Electrical Engineering—Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, student should enroll in 190.

by arrangement

192. Special Seminars—Special seminars and experimental courses are given on topics of current interest by specialists in the field. Announcements are made one or two quarters prior to presentation. See Time Schedule and bulletins in the department office for current listing.

by arrangement

UNDERGRADUATE AND GRADUATE

201A. Seminar—Weekly discussions of special topics of current interest in electrical engineering. Orientation to Stanford and to the EE department. Students with a conflict may view via videotape in the library.

(AU)

I unit, Aut (Reis)

201B. Seminar—Looks at “Life after Stanford” through a series of presentations primarily directed at MS/EE students. The activities of graduates in industry (large, medium, and small), start-up companies, government laboratories, and community colleges.

(AU)

1 unit, Win (Reis)

202. Medical Electronics—Primarily biological in nature. Introduces electrical engineers to the physiological and anatomic aspects of medical monitoring and imaging. Biological content, transducers, electronic systems, the socio-economic impact, and the constraints unique to medicine. Recommended: some familiarity with circuits and electrical instrumentation techniques (e.g., 113).

3 units, Spr (Kovacs, Thompson)

203. The Entrepreneurial Engineer—Seminar furthers the knowledge base of prospective entrepreneurs with an engineering background. The contributions made to the business world by engineering graduates. Speakers include Stanford (and other) engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty members and other departments (law, business, and industrial engineering).

(AU)

1 unit, Win (Melen)

205. Introduction to Control Design Techniques—(Enroll in Engineering 205.)

206. Control System Design and Simulation—(Enroll in Engineering 206.)

209. Analysis and Control of Nonlinear Systems—(Enroll in Engineering 209.)

212. Integrated Circuit Fabrication Processes—For students interested in IC design and the influence of fabrication processes, or intending to pursue doctoral research involving use of Stanford’s IC laboratory. Process simulators are used to illustrate concepts and provide a “virtual” lab experience. Topics: the fundamental principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and backend processing. Required for 410. Prerequisite: 112 or equivalent.

3 units, Aut (Plummer)

213. Heat Transfer in Microdevices—(Enroll in Mechanical Engineering 258.)

216. Principles and Models of Semiconductor Devices—The fundamentals of carrier generation, transport, recombination, and storage in semiconductors. The physical principles of operation of the p-n junction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related devices such as CCDs and solar cells. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisites: 111, 112, or equivalent. 3 units, Aut (J. Harris)

217. Electron and Ion Beams for Semiconductor Processing—Focused and flood beams of electrons and ions are employed for processing semiconductor devices. The generation of such beams including thermionic emission, field-induced emission, first-order focusing and glow discharge processes. The interactions of such beams with the target, including scattering in solids, the distribution of energy, heating, sputtering, beam-induced etching (including reactive-ion etching) and beam-induced deposition. Introduction to computer modeling of etching and deposition. Prerequisite: 212 or equivalent. 3 units, alternate years given 2000-01

222. Applied Quantum Mechanics I—Enroll in Applied Physics 222.)

223. Applied Quantum Mechanics II—Enroll in Applied Physics 223.)

228. Basic Physics for Solid State Electronics—Advanced undergraduate/graduate, introducing the physics underlying solid state materials and devices. Topics: the energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, equilibrium and non-equilibrium semiconductor statistics. Prerequisite: 112. 3 units, Aut (Miller)

229B. Thin Film and Interface Microanalysis—Enroll in Materials Science and Engineering 323.)

229D. Introduction to Magnetism and Magnetic Materials—Enroll in Materials Science and Engineering 347.)

231. Lasers I—Introduction to lasers and how they work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherent optical oscillation, laser resonators, and optical beams. Limited primarily to steady-state behavior; uses classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to a level of at least 142, preferably 241, and some knowledge of atomic or modern physics such as Physics 57, 130-131. 3 units, Aut (Solgaard)

232. Lasers II—Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231. 3 units, Spr (Siegman)

238. Electrical and Magnetic Properties of Solids—Enroll in Materials Science and Engineering 209.)

239C. Photoelectronic and Photovoltaic Materials and Devices—Enroll in Materials Science and Engineering 332.)

241. Waves I—Introduction to waves and wave phenomena as they appear in different natural, lab, and application settings. Electromagnetic, acoustic, seismic, atmospheric, plasma, and water waves and their mathematical and physical correspondence in terms of Hamilton's principle. Propagation, attenuation, reflection, refraction, surface and laminar guiding, and intrinsic and structural dispersion; energy density, power flow, and phase and group velocities. Geometric and structural complexities are minimized to stress basic wave concepts common to diverse fields of application. Analysis in terms of transmission line and impedance concepts using exponential notation and vector phasors. Treatment limited to plane harmonic waves in isotropic media. Nonhomogeneous cases limited to plane interfaces and exponentially stratified media. Prerequisite: 142 or equivalent, or other wave course. 3 units, Aut (Tyler)

242. Waves II—Continuation of 241, emphasizing fundamental topics in EM theory for further study and application of microwave, optical, or plasma phenomena. Plane, cylindrical, and spherical waves and boundary value problems; radiation and reciprocity; wave guides, fiber optics, and cavity resonators. Uniaxial and gyrotrropic anisotropic media with magnetoionic plasma, and ferrite applications. Resonators. Perturbation theories, attenuation, and energy conservation. Prerequisite: 142 or 241. 3 units (Staff) not given 1999-2000

243. Semiconductor Optoelectronic Devices—Introduction to semiconductor optoelectronic devices for communications and other applications, covering operating principles and practical device features. Review of relevant semiconductor physics, and optical processes in semiconductors. Semiconductor heterostructures. Semiconductor optical detectors (including p-i-n, avalanche, and MSM), light emitting diodes, electroabsorptive modulators (Franz-Keldysh, QCSE), electorefraction (directional couplers, Mach-Zehnder), switches (SEEDs), and lasers (waveguide and vertical cavity). Prerequisites: basic quantum mechanics, solid state physics, lasers (e.g., 222, 228, 231, or equivalents). 3 units, Win (Miller)

244. Communication Engineering Transmission Systems—Design of transmission systems for TV, telephone, and data-using satellites, microwave repeaters, mobile radio, and broadcast transmitters. Performance of FM, AM, SSB common digital schemes and spread-spectrum modulation, time, frequency, and code multiplexing. Emphasis is on link performance, capacity, total system design, and cost optimization. Current industry design problems and research results. Examples illustrate modern technologies providing service to rural populations. Prerequisite: senior or graduate standing in Electrical Engineering, or consent of instructor. 3 units, Aut (Lusignan)

245. Wireless Electromagnetic Design Laboratory—See 144. 3 units, Spr (Leeson)

246. Microwave Engineering—Coherent development of the concepts and applications of distributed circuits. Emphasis is on MIC structures (microstrip, coplanar waveguide, slotline, finline, and imageline) capable of transmitting millimeter wave analogue signals and picosecond pulses. Modal properties (TEM, quasi-TEM, TE, TM) of general guidelines. Higher order mode excitation effects at discontinuities (steps, bends, etc.) and junctions are modeled by lumped equivalent circuits, using Z- Y- and S-matrix representations. Dispersion, attenuation, and distributed source excitation in distributed circuits. Analysis of circuit components (impedance transformers, directional couplers, hybrids, circulators, filters, solid state amplifiers). Illustrations of IC circuit structures. Computer-aided design principles. Recommended: 142 or equivalent. 3 units, Aut (Leeson) alternate years, not given 2000-01
3 units, Aut (Kazovsky)

3 units, Aut (Yamamoto)

249. Introduction to the Space Environment—Experimentation in the near-earth space environment using radio and other electromagnetic waves and electric and magnetic instrumentation on space probes. Tools used: transmitters, antennas, receivers, sensors, radars, and displays. The earth's ionosphere, magnetosphere, and interplanetary space. The role of the sun, and the effects produced by changes in solar activity. Geoelectrical and geomagnetic fields. Charged particle motion, trapped particles (Van Allen radiation), and the aurora. Applications to current experimental programs. Planning and execution of experiments. Prerequisites: familiarity with electromagnetics at the level of 142 and senior or graduate standing.
3 units, Aut (Fraser-Smith) alternate years, not given 2000-01

250. Telecommunications Seminar—Offered on-line and aimed at those seeking a high-level overview of telecommunications activities in industry and at Stanford. Topics in the areas of high-speed networks, optical communications, mobile networks, wireless systems, distributed systems, network control and telecommunications applications, products, and services. (AU)
1 unit, Aut, Spr (D. Harris)

3 units, alternate years, given 2000-01

254. Principles of Radar Systems—Analysis and design, emphasizing radars as systems. Radar equation and systems parameters, components of radar systems, radar cross-section and target characteristics, signal detection in noise, ambiguity function (with applications to measurement precision, resolution, clutter rejection, and waveform design); pulse compression waveforms, synthetic aperture radar, tracking and scanning radars, HF (OTH) radar, radar environmental and remote sensing, radar astronomy. Prerequisite: senior undergraduate or graduate standing.
3 units, Win (Tyler) alternate years, not given 2000-01

3 units, alternate years, given 2000-01

261. The Fourier Transform and its Applications—The Fourier transform as a tool for solving physical problems. Fourier transform of discrete and continuous time signals, generalized transforms, and Fourier series. Convolutions and correlations, the Dirac delta function, Fourier transform theorems, measures of time duration and bandwidth, analysis of linear systems, sampling theorems, the discrete Fourier transform, and two-dimensional Fourier analysis. Prerequisite: previous exposure to Fourier series at the level of 102.
3 units, Aut (Osgood)
Win (Hesselink)

262. Two-Dimensional Imaging—Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Prerequisites: 261. Recommended: 278, 279.
3 units, Aut (Zebker)

263. Introduction to Linear Dynamical Systems—Introduction to applied algebra and linear dynamical systems, with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer. Least-norm inputs and associated Gramians. Observability and least-squares state estimation. Prerequisites: exposure to basic linear algebra and matrices (as in Mathematics 103); differential equations and Laplace transforms (as in 102).
3 units, Aut (Lobo)

3 units, Aut (Winrod)
Spr (Meng, Dzwonczyk)

268. Introduction to Modern Optics—Geometrical optics: raymatries, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell’s equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.
3 units, Aut (Hesselink) alternate years, not given 2000-01

271. Introduction to VLSI Systems—Large-scale MOS design. Topics: MOS transistors, static and dynamic MOS gates, MOS circuit fabrication, design rules, resistance and capacitance extraction, power...
and delay estimation, scaling, MOS combinational and sequential logic design, registers and clocking schemes, memory, data-path, and control-unit design. Elements of computer-aided circuit analysis, synthesis, and layout techniques. Prerequisites: 112; familiarity with circuits, logic design, and digital system organization.

3 units, Aut (Staff)
Spr (DeMicheli)

272. Design Projects in VLSI Systems—For students with research and applications interest in VLSI systems. Teams of two complete modest-sized CMOS chip of their own design, including writing a functional model (in Verilog), using synthesis tools, custom layout, and simulation. Overview of the issues involved in VLSI design. Topics: design tools and techniques, complexity management, clocking issues, layout and floor-planning, design of large array structures, testing and testability issues. Lab. Prerequisites: 271, experience with digital design.

4 units, Win (Horowitz)

273. Digital Systems Engineering—Fundamental electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its affect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its affect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: 113, 121, or equivalents.

3 units, Win (Daily)

274. Introduction to Cryptography and Computer Security—(Enroll in Computer Science 255.)

275. Logic Design— (Formerly 381.) Principles and techniques of logic design. Combinational circuit analysis (hazard detection); combinatorial circuit design including PLA, VLSI, and MSI techniques and testing techniques; IC logic families, flipflop properties, sequential circuit analysis and synthesis for fundamental and pulse mode circuits, design for testability techniques. Prerequisite: 121 or equivalent.

3 units, Aut, Win (McCluskey)

3 units, Spr (Cox)

278. Introduction to Statistical Signal Processing—Random variables, vectors, and processes; time averages, expectations, and laws of large numbers; stationarity, autocorrelation and spectral analysis; mean square error estimation, detection, and linear filtering; independent increment, Gaussian, and Poisson random processes. Prerequisite: 177, and linear systems and Fourier transforms at the level of 102 or 261.

3 units, Aut (Cover)
Win (Probhakar)

279. Introduction to Communication Systems—Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis, error ratios in digital systems. Prerequisites: 102 or 261, 278.

3 units, Win (Cox)

281. Embedded System Design Laboratory—Lectures on the architecture and design of microprocessor-based systems. Lab experiments use MicroChip PIC16C74 microcontroller evaluation board. Five-week individual design project. Lab. Prerequisites: 121, and 181 or 182 or equivalent experience in assembly language programming.

3 units, not given 1999-2000

282. Computer Architecture and Organization—The structure of systems using processors, memories, input/output (I/O) devices, and I/O interfaces as building blocks. Computer system instruction set design and implementation, including memory hierarchies and pipelining. Issues and tradeoffs involved in the design of computer system architectures with respect to the design of instruction sets. Prerequisite: 182.

3 units, Aut (Daily)
Win (Staff)

283. Compilers— (Enroll in Computer Science 143.)

284. Introduction to Computer Networks—Structure and components of computer networks; functions and services; packet switching; layered architectures; ISO's Open Systems Interconnections (OSI) reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, IP); transport layer (UDP, TCP).

3 units, Aut (Tobagi)
Win (enroll in Computer Science 244A)

285. Programming Languages—(Enroll in Computer Science 242.)

286A. Operating Systems and Systems Programming—(Enroll in Computer Science 140.)

286B. Advanced Topics in Operating Systems—(Enroll in Computer Science 240.)

287. Introduction to Computer Graphics—(Enroll in Computer Science 248.)

289. Introduction to Computer Vision—(Enroll in Computer Science 223B.)

290A,B,C. Curricular Practical Training for Electrical Engineers—For EE majors who need relevant work experience as part of their program of study. Final report required. Prerequisite for 290B,C: Electrical Engineering Ph.D. candidate.

I unit, Aut, Win, Spr (Gray)

292. Special Seminars—Special seminars and experimental courses are given on topics of current interest by specialists in the field. Announcements are made one or two quarters prior to presentation. See Time Schedule and bulletins in the department office for current listing.

by arrangement

3 units, Aut (da Rosa)

310. Integrated Circuits Technology and Design Seminar—In-depth treatment of device structures, fabrication technologies, and circuit design issues in integrated circuits. Introduces current research topics in these areas. (AU)

1 unit, Aut (Kovacs, Lee)
Win (Saraswat, Wooley)

311. Advanced Integrated Circuit Fabrication—What are the practical and fundamental limits to the evolution of the technology of modern MOS and bipolar devices? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of device and back-end (interconnect and contact) processing. Use of SUPREM, PISCES, and SPEEDIE for process modeling. MOS and bipolar process integration. Prerequisites: 212, 216.

3 units, Spr (Saraswat)

312. Solid-State Sensors and Actuators—Surveys solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators are biological, chemical, mechanical, optical, thermal, etc. Basic mechanisms of transduction, fabrication techniques, and relative merits of the different technologies. Micromachining techniques for monolithic integration of active circuits with sensors or actuators and directions for future research. Prerequisite: 212.

3 units (Kovacs)

3 units, Win (Wooley)

314. RF Circuit Design—Design of RF integrated circuits for communications systems. Topics: the design of low-noise amplifiers at RF, passive and active filters, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Prerequisite: 214.

3 units, Win (Lee)

315. VLSI Data Conversion Circuits—Design of mixed-signal integrated circuits for implementing the interfaces between analog and digital signals in CMOS VLSI systems. Fundamental circuit elements such as sample-and-hold circuits, comparators, voltage references, operational amplifiers, gain blocks, and analog integrators. The design of the constituent circuits for Nyquist-rate and oversampling analog-to-digital and digital-to-analog converters, sampled-data and continuous-time analog filters, and digital decimation and interpolation filters. Prerequisite: 214.

3 units, Spr (Wooley)

316. Advanced VLSI Devices—In modern VLSI technologies, MOS and bipolar device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are VLSI devices and circuits fabricated and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for submicron structures, control of electrical characteristics (threshold voltage, breakdown voltage, current gain) in small structures, and alternative device structures for VLSI. Prerequisites: 212, 216, or equivalent.

3 units, not given 1999-2000

317. Micropatterning for Integrated Circuits—The fundamentals of generating submicron patterns in integrated circuit manufacturing. Technologies include the formation of submicron images of ultraviolet light, the resulting exposure of polymeric resists, the subsequent development of resist patterns and their transfer into functional circuit material patterns through plasma etching and other techniques. The use of phase-shifting masks and other wavefront-engineering approaches. Extensive hands on use of computer simulations of each of the above steps. Prerequisites: 141 or equivalent, 212 or equivalent, basic competence in computing.

3 units, Spr (Pease) alternate years, not given 2000-01

318. Logic Synthesis of VLSI Circuits—Solving logic design problems with CAD tools for VLSI circuits. Analysis and design of exact and heuristic algorithms for logic synthesis. Topics: representation and optimization of combinational logic functions (encoding problems, binary decision diagrams), representation and optimization of multiple-level networks (algebraic and Boolean methods, “don’t care” set computation, timing verification, and optimization), modeling and optimization of sequential functions and networks (reduction, semicustom libraries and library binding). Prerequisites: familiarity with logic design, algorithm development, and programming.

3 units, Spr (DeMicheli)

319. Computer-Aided System Design Laboratory—Computer-aided design of VLSI systems: theory and practice. Topics: modeling languages (e.g., Verilog), high-level synthesis and optimization methods (scheduling, binding, data-path, and control synthesis), design of systems with low-power consumption, and hardware/software co-design. Individual/group projects involve the use of CAD tools. Prerequisite: 318.

3 units, Spr (DeMicheli)

325. Principles of Magnetic Recording—(Enroll in Materials Science and Engineering 348.)

327. Properties of Semiconductor Materials—Modern semiconductor devices and integrated circuits are based on the unique energy band, carrier transport, and optical properties of semiconductor materials. How these physical properties can be chosen and optimized for operation of semiconductor devices. Emphasis is on the quantum mechanical foundations of the properties of solids, energy bandgap engineering, semiclassical transport theory, semiconductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination. Prerequisites: 216, 228.

3 units, Win (J. Harris)

328. Physics of Advanced Semiconductor Devices—The principles governing the operation of modern semiconductor devices. Underlying assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices (e.g., heterojunctions, HJ-bipolar transistors, HJ-FETs, nano structures, tunneling, single electron transistor and photonic devices). Use of ATLAS and MEDICI 2-D Poisson solvers for simulation of ultra-small devices. Examples are related to up-to-date device research.

3 units, Spr (J. Harris)
329. The Electronic Structure of Surfaces and Interfaces—Basic physical concepts and phenomena for surface science techniques probing the electronic structure of surfaces and interfaces. Microscopic and atomic models in understanding microstructures have technologically important applications, e.g., within semiconductor device technology and catalysis. The basic physical processes of low energy electron diffraction, Auger electron spectroscopy, UV and x-ray photoemission spectroscopy, electron/phonon stimulated ion desorption, inelastic tunneling spectroscopy, ion scattering, surface EXAFS, and energy loss spectroscopy; and experimental aspects of these surface science techniques. Prerequisites: Physics 70 or equivalent; 238 or consent of instructor.

3 units, alternate years, given 2000-01

3 units, Win (Wang)

338A. Quantum Optics and Measurements—(Enroll in Applied Physics 387.)

338B. Mesoscopic Physics and Nanostructures—(Enroll in Applied Physics 388.)

343. Advanced Optoelectronic Devices—Semiconductor quantum well structures; superlattices and coupled quantum wells; optical properties of quantum wells; valence band structure; effects of strain; quantum well lasers; intersubband detectors; excitons in quantum wells; absorption saturation; electroabsorption; quantum well modulators and switches. Prerequisites: 222 or equivalent quantum mechanics, 243.

3 units, Spr (Miller)

344. High Frequency Laboratory—Combination lecture/lab emphasizing the lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. Basic high frequency measurement techniques including s-parameter measurements, Amplifier Noise Figure; and oscillator phase noise. Lectures by the professor and experts from Hewlett-Packard. (Two lectures, one lab weekly.) Enrollment limited to 20. Prerequisites: good understanding of transmission lines, Smith charts.

3 units, Aut (Cox)

3 units, Spr (Harris)

347. Optical Methods in Engineering Science—The design and understanding of modern optical systems. Topics: geometrical optics, aberration theory, systems layout, applications such as microscopes, telescopes, optical processors. Computer ray tracing program is used for class demonstrations and as a design tool. Prerequisite: 268 or 366, or equivalent.

3 units, alternate years, not given 2000-01

348. Advanced Optical Fiber Communications—Components: couplers, laser linewidth and phase noise, acousto-optical filters, fiber gratings, fiber Fabry-Perot filters, surface-normal Fabry-Perot filters, isolators. Systems: coherent systems (homodyning and heterodyning, balanced receivers, phase-locked and non-synchronous demodulation, linewidth requirements, polarization fluctuations and techniques to handle them, multichannel systems); optical amplifiers (semiconductor optical amplifiers—impact of facet reflectivity, antireflection coating, angled and buried facets, polarization sensitivity and intermodulation, gain saturation, rate equation model, noise characteristics, optical fiber amplifiers, erbium-doped fibers, pumping at 532, 807, 980 and 1547 nm, gain and gain saturation, noise and noise figure; applications—in-line power amplifiers and receiver preamplifiers); solitons (all-optical vs. electric regenerators, the nonlinear Schrodinger equation, solitons and lumped amplifiers, amplifier spacing and amplified spontaneous emission, ASE-induced timing jitter, error rates in solution transmission, WDM with solutions, sources of solution pulses). Networks: SONET ATM, WDM; signaling and synchronization; routing, scalability, and wavelength conversion; analog systems (dynamic range and noise figure, CATV, and cellular applications). Prerequisite: 247.

3 units, Win (Kazovsky)

349. Advanced Modern Optics—Holography (basic principles, Bragg holography); photorefractive effect (physical principles and applications); wave matter interactions (polarization effects); rigorous coupled wave analysis. Prerequisite: 268 or 366, or equivalent.

3 units, alternate years, given 2000-01

350. Radioscience Seminar—Seminars by university and industrial researchers on topics from space physics, planetary exploration, ionospheric and magnetospheric physics, radar and remote sensing of the environment, applied electromagnetics, waves in optical fibers and information systems with space applications. Student-faculty discussions. (AU)

1 unit, Aut (Zebker)
Win (Inan)
Spr (Fraser-Smith)

351. Digital Switching in Telecommunications—Switching fundamentals; space and time division switching; blocking probability analysis; rearrangeable networks; self-routing networks; ATM switching architectures; performance evaluation of ATM switches; network synchronization and signaling methods. Prerequisite: 374 or basic knowledge of telecom systems.

3 units, Spr (Narasimha)

352. Electromagnetic Waves in the Ionosphere and Magnetosphere—Magneto-ionic theory in multi-component media, signal dispersion, group ray velocity, wave polarization, refractive index surfaces, ray tracing, absorption, boundary effects, interpretation of natural phenomena (whistlers, VLF emissions), remote sensing in plasmas, communication, theory of wave-particle interactions in the magnetosphere. Prerequisite: 142 or equivalent.

3 units, alternate years, given 2000-01

354. Introduction to Radio Wave Scattering—Integral and differential equations of radio wave scattering; exact, approximate, and numerical solutions of single particle scattering for spheres, edges, points, and cylinders. Scattering from rough surfaces with large and small roughness scales, as time permits. Multiple scattering; formulation and solution techniques for equation of transfer in discrete media and scattering by continuous media in weak and strong regimes. Applications to radar, radar astronomy, remote sensing, and biological media. Prerequisites: 241 or equivalent, and partial differential equations, or consent of instructor.

3 units, alternate years, given 2000-01

355. Imaging Radar and Applications—Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: polarimetry and target
3 units, alternate years, given 2000-01

3 units, alternate years given 2000-01

356B. Signal Processing Methods in Musical Acoustics—(Enroll in Music 420.)

356C. Perceptual Audio Coding—(Enroll in Music 422.)

357. Microstructures Fabrication Laboratory—Enrollment preference to students pursuing doctoral research programs requiring the use of the Ginzbrot fabrication facility. Projects on the application of microfabrication technologies to exploratory devices. Planar fabrication techniques including contact lithography, vacuum deposition, and chemical etching. Use of analytical instruments including the scanning electron microscope, surface profilometer, and wafer probe station. Prerequisites: 212 or 333, consent of instructor.
3 units, Spr (Inan) alternate years, not given 2000-01

358A. Lasers Laboratory—(Enroll in Applied Physics 304.)

358B. Nonlinear Optics Laboratory—(Enroll in Applied Physics 305.)

359. Wireless Communication—Performance of digital modulation in fading and intersymbol interference; flat fading countermeasures: diversity, coding and interleaving, adaptive modulation; intersymbol interference countermeasures; equalization, multancarrier modulation, spread spectrum and RAKE receivers; multiple access—FDMA, TDMA, CDMA; cellular mobility issues, capacity and area spectral efficiency. Prerequisite: 276.
3 units, Aut (Goldsmith)

360A. Modern Control Design I—(Enroll in Engineering 207A.)

360B. Modern Control Design II—(Enroll in Engineering 207B.)

361. Applied Vision and Image Systems—(Enroll in Psychology 221.)

362. Linear Dynamic Systems—Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. More on Lyapunov theory and methods. Time-varying and periodic systems. Realization theory. Linear estimation and the Kalman filter. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent, basic probability as in Statistics 116 or 278.
3 units, not given 1999-2000

364. Convex Optimization with Engineering Applications—Recognizing and solving convex optimization problems that arise in engineering. Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, geometric programming, extremal volume, and other problems. Numerical algorithms for smooth unconstrained problems; interior-point and ellipsoid methods for constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics and mechanical engineering. Prerequisites: working knowledge of linear algebra (e.g., from 263), background in applications, and willingness to program in Matlab.
3 units, alternate years given 2000-01

365. Vision and Image Processing—(Enroll in Psychology 267.)

3 units, Win (Widrow)

3 units, Spr (Widrow)

3 units, Win (Narasimha)

375. Advanced Analysis of Feedback—For advanced students. The required mathematics and basic results in the analysis of linear and nonlinear feedback systems. Nonlinear ODEs, local and global stability, Lyapunov theory. Gains of operators, small gain theorems, loop transformations, circle criteria, Popov theorem. Passive and contractive operators, Kalman-Yacubovich theorem. Robustness of multivariable linear systems, stability of feedback systems, linear systems with nonlinear actuators and sensors, overflow and quantizer induced limit cycles in digital filters. Prerequisite: 263.

3 units, alternate years, given 2000-01

376A. Information Theory—Information theory and statistics. The extreme points of communication theory: data compression to the entropy limit, and communication at the channel capacity limit. Kolmogorov complexity, Shannon entropy, Rate distortion theory. Huffman coding and random coding. Unified treatment based on the asymptotic equipartition theorem. Prerequisite: 278 or Statistics 116, or equivalent.

3 units, Win (Gill)

3 units, alternate years, given 2000-01

3 units, Win (Kailath)

379A. Digital Communication I—Maximum-likelihood data detection, modulation methods and bandwidth requirements, handpass systems and analysis, intersymbol interference and equalization methods, phase-locking, and synchronization. Prerequisites: 103, 278.

3 units, Win (Cioffi)

3 units, alternate years, given 2000-01

379C. Advanced Digital Communication—Topics: transmit optimization for channels with intersymbol interference, combined equalization and coding, line coding design and analysis, discrete multitone (DMT), vector modulation, generalized DFE, spread spectrum.

3 units, Spr (Cioffi) alternate years, not given 2000-01

380. Seminar on Computer Systems—Discussion of current research in the design, implementation, analysis, and use of computer systems ranging from integrated circuits to operating systems and programming languages. (AU)

1 unit, Aut, Win, Spr (Allison, Wharton)

382. Processor Design—Cycle time, area tradeoffs, AT measures of arithmetic units, multiple issue processors, vector and multimedia extensions, shared memory multiprocessors, I/O systems. Design using queueing analysis. Prerequisite: 282 or equivalent.

3 units (Flynn) not given 1999-2000

383. Advanced Compiling Techniques—(Enroll in Computer Science 243.)

384A. Network Protocols and Standards—Local area networks protocol standards: MAC Addressing; IEEE 802.1 bridging protocols (transparent bridging, source routing, virtual LANs). Internet protocol standards: the Internet Protocol (IPv4, IPv6, ICMP); routing protocols for interior gateways (RIP, OSPF, IGRP) and exterior gateways (EGP, BGP, Policy routing); IP multicast (IGMP, DVMRP, CBT, MOSPF, PIM), resource reservation (ST2+, RSVP). Asynchronous Transfer Mode (ATM): (physical layer sonet), ATM layer, ATM adaptation layer, ATM signaling, congestion control, PNNI; interworking with ATM: LAN emulation, IP over ATM. Prerequisite: 284.

3 units, Win (Tobagi)

384B. Multimedia Networking and Communications—Multimedia applications and requirements. Multimedia traffic generation and characterization: audio compression, image and video compression standards (JPEG, H.261, MPEG-2 and H.263). Advances in networking technologies and protocols for multimedia applications: LAN technologies; broadband services to the home including ADSL, cable modems, and hybrid fiber-coax (HFC); Internet protocols including IP multicast, resource reservation protocols (ST2+, RSVP). Integrated services in the Internet: integrated services over specific link layers (ISSLL). Real-time transport protocol (RTP), RTP profiles and payloads. Audio-video conferencing standards: the Internet architecture (SDP, SAP, SIP); ITU recommendations H.320 and H.323. Data conferencing standards; ITU recommendation T.120. Real-time streaming protocol (RTSP). Prerequisites: 284 or Computer Science 244A; 384A.

3 units, Spr (Tobagi)

3 units, not given 1999-2000

384D. Projects in Computer Networks—(Enroll in Computer Science 344.)
385. Special Seminars in Computer Systems—Seminars on current research topics in computer systems are given occasionally and are usually announced one or two quarters in advance. See the Time Schedule and bulletins in department office.

385A. Digital Systems Reliability Seminar—Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, and system reliability. Emphasis is on student presentations and Ph.D. thesis research.
   1-4 units, Aut, Win, Spr, Sum (McCluskey)

386A. Parallel Computer Architecture and Programming—(Enroll in Computer Science 315A.)

386B. Parallel Programming Project—(Enroll in Computer Science 315B.)

387. Error-Correcting Codes—Theory and implementation of codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, Fire codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: some familiarity with discrete mathematics and linear algebra.
   3 units, Spr (Gill)

388. Programming Language Design—(Enroll in Computer Science 342.)

389. Topics in Programming Systems—(Enroll in Computer Science 349.)

390. Special Studies or Projects in Electrical Engineering—Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading.
   by arrangement

391. Special Studies and Reports in Electrical Engineering—Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390.
   by arrangement

392. Special Seminars—Special seminars and experimental courses are given on topics of current interest by specialists in the field. Announcements are made one or two quarters prior to presentation. See Time Schedule and bulletins in department office for current listing.
   by arrangement

392A Database System Principles—(Enroll in Computer Science 245.)

392B. Introduction to Image Sensors and Digital Cameras—Introduction to the design and analysis of image sensors and digital cameras. Analysis of the signal path in a digital camera starting from the optics, through the sensor, the A/D converter, to the different color processing steps. Topics: photodetectors; CCD and CMOS passive and active sensor operation; noise and FPN analysis; spatial resolution and MTF; SNR and dynamic range; A/D conversion approaches; color interpolation, correction, and balance; and autofocus. A MATLAB camera simulator is used to explore various tradeoffs in camera design. Prerequisites: undergraduate level device, circuit, and system background, e.g., equivalent to 102, 111, 112, and 113, and some familiarity with noise analysis.
   3 units, Spr (El Gamal)

392F. Advanced Topics in Wireless Communications—Topics from current research areas in wireless communications, including new theoretical developments, system design issues, and implementation constraints. Modulation and coding for fading channels; adaptive modulation and coding; mitigation technologies for ISI channels; equalization, OFDM, and spread spectrum; multicarrier spread spectrum; smart antennas; multiuser detection; cellular system design; dynamic resource allocation, handoff and mobility management, access and channel assignment, power rate control, system capacity. Prerequisites: 142, 278 or equivalent, 279 or equivalent, 276 or equivalent (may be taken concurrently).
   3 units, Spr (Goldsmith) alternate years, not given 2000-01

392J. Digital Video Processing—The principles of digital video and multimedia signal processing, including leading algorithms for various applications. The fundamentals of image and video compression and the emerging world standards for various video and image communication applications, including ADTV/HDTV, multimedia indexing/browsing, and videoconferencing (H series ITU standards). The industrial aspects; imaging appliances such as scanners, digital cameras, graphics cards, DVDs, camcorders and TVs, and software architectures (e.g., DirectShow).
   3 units, Win (Altunbasak)

392K. Genetic Algorithms and Genetic Programming—The genetic algorithm is a domain-independent algorithm for search, optimization, and machine learning patterned after Darwinian natural selection and naturally occurring genetic operators such as recombination, mutation, gene duplication, gene deletion, gene regulation, and embryonic development. Genetic programming is a domain-independent automatic programming technique that extends the genetic algorithm to the breeding of populations of computer programs. Prerequisite: computer programming ability in some language.
   3 units, Win (Koza)

392L. Optical Fiber Communications Laboratory—Experimental techniques in optical fiber communications. Students investigate, experimentally, properties of key optical communications components: fibers, lasers, modulators, photodiodes, optical amplifiers, WDM multiplexers and demultiplexers, etc. Key optical communications systems techniques: eye diagrams and BER measurements. Prerequisites: 247, 348.
   3 units, Spr (Kazovsky)

   3 units, Spr (Prabhakar)

395. Electrical Engineering Instruction: Practice Teaching—Open to limited number of advanced graduate students in Electrical Engineering who plan to make teaching their career. Qualified students conduct a small section of an established course taught in parallel by an experienced instructor.
   1-15 units, Aut, Win, Spr (Gray)

399. Topics in Computer Vision—(Enroll in Computer Science 328.)

400. Thesis and Thesis Research—Limited to students who have established candidacy for the degree of Engineer or Ph.D. A grade of 'S' indicates satisfactory work; no letter grade is assigned.
   by arrangement

402A. Seminar: Topics in International Technology Management—The transformation of R&D in Japan and Asia. The changing role of
government support, high-tech entrepreneurism, new university-industry relationships, and the transition from "catching up" to "leadership."

"strategic" technologies, technology transfer and partnership opportunities, and the implications for the U.S. research community. Distinguished guest speakers from industry and government. (AU)

1 unit, Aut (Dasher)

1 unit, Spr (Dasher)

410. Integrated Circuit Fabrication Laboratory—Preference to students pursuing doctoral research programs in which the facilities of the IC lab are used. Laboratory fabrication of silicon gate NMOS or CMOS integrated circuits. Emphasis is on the practical aspects of IC fabrication, including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering and wafer testing. Prerequisites: 212, 216, consent of instructor.

3-4 units, Win (Saraswat)

414. Design of RF Integrated Circuits for Communications Systems—Topics: the design of low-noise amplifiers at RF, passive and active filters, mixers, modulators and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of high-efficiency (e.g., class E, F) RF power amplifiers, and coupling networks. Behavior and modeling of passive and active components at RF. Prerequisite: 214.

3 units, Spr (Lee)

Prerequisite: 142.

3 units, alternate years, not given 2000-01

478. Blind Multichannel Identification and Equalization—Theory and algorithms for blind system identification and channel equalization. Applications to array signal processing, wireless communication, and medical and seismic signal processing.

3 units, Spr (Kailath) alternate years, not given 2000-01

479. Multiuser Digital Transmission Systems—Fundamental theoretical multiuser communications concepts (multiple access, broadcast, multiuser detection, cross talk), matrix channel descriptions and optimized multiuser transmission, code-division multiple access concepts and implementations.

3 units, Aut (Cioffi)

3 units, Spr (Dally) alternate years, not given 2000-01

3 units, alternate years, given 2000-01

483. Topics in Compilers—(Enroll in Computer Science 343.)

484. Topics in Computer Graphics—(Enroll in Computer Science 448.)

486. Advanced Computer Arithmetic—Number systems, floating point representation, state of the art in arithmetic algorithms, problems in the design of high speed arithmetic units. Prerequisite: 282.

3 units, alternate years, given 2000-01

487. Digital Signal Processing Architectures and Systems—The design and implementation of signal processing systems. Survey of a variety of architectures and the tools available to automate this task. Case studies in data communications and image processing. Topics: behavioral specification and hardware simulation of signal processing systems, hardware generation using silicon compilers, dedicated architectures, programmable architectures, real-time operating systems, array processors, architecture design tools, video compression, wireless communication and low-power implementation. Prerequisites: 271, basic DSP concepts, C programming language, and UNIX.

3 units, Win (Meng)

3 units, Spr (McCluskey) alternate years, not given 2000-01

3 units, alternate years, given 2000-01

492. Special Seminars—Special seminars and experimental courses are given on topics of current interest by specialists in the field. Announcements are made one or two quarters prior to presentation. See the Time Schedule and bulletins in department office.

by arrangement

ENGINEERING-ECONOMIC SYSTEMS AND OPERATIONS RESEARCH

Emeriti (Professors): Kenneth J. Arrow, George B. Dantzig, Donald A. Dunn, Frederick S. Hillier, Donald L. Iglehart, Alan S. Manne, Michael M. May

Chair: James L. Sweeney

Associate Professors: Nicholas Bambos, Samuel S. Chiu, Ross D. Shachtier, Edison T. S. Tse
The Department of Engineering-Economic Systems and Operations Research (EES&OR) was founded in 1996 by a merger of the Department of Operations Research and the Department of Engineering-Economic Systems. EES&OR develops, applies, and disseminates principles and engineering methods for improving decision-making in operations, strategy, and policy. The department offers degree programs leading to a Master of Science, Engineer, and Doctor of Philosophy; it also participates in a program leading to a Bachelor of Science in Mathematical and Computational Science.

The department has special strength in theory and application within the following areas: continuous, discrete, and numerical optimization; probability and stochastic processes; dynamic systems and simulation; economics, finance, and investment; decision making, including decision analysis, dynamic programming, and planning under uncertainty; operations and services; corporate and individual strategy; and private and public policy issues.

Each year most faculty members are engaged in one or more projects, some with local industry or government, others in a national or international setting. Many of the projects provide opportunities for student participation, either working directly with the external organizations or through Stanford-based courses and research activities. Technical challenges encountered in such projects provide motivation and opportunity for methodological innovation. Data collection, processing, and presentation issues can be integral to future research efforts. Challenges encountered in these projects can provide invaluable experience for a student’s subsequent professional practice.

CAREERS IN EES&OR

EES&OR helps students prepare for a variety of professional careers in universities, business, industry, and government. Graduates have pursued successful careers in consulting, enterprise management, financial analysis, government policy analysis, industrial research, line management, product development, project management, strategic planning, and university teaching and research. Some have founded companies specializing in financial services, high-technology products, management and systems consulting, or software. Other graduates have helped establish new analytical capabilities in existing firms or government agencies.

Many graduates have become leaders in technology-based businesses, which have an increasing need for well-educated, analytically oriented people who understand both business and technology. The EES&OR program is attractive to people with engineering, physical science, and mathematical science backgrounds as it complements their technical abilities with the conceptual frameworks needed to analyze problems of investment, management, marketing, operations, production, and strategic planning in a technical environment.

UNDERGRADUATE PROGRAMS

The department does not yet have an undergraduate degree program, although one is planned. However, EES&OR participates with the departments of Computer Science, Mathematics, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the “Mathematical and Computational Science” section of this bulletin.

GRADUATE PROGRAMS

Three primary programs of study lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy in EES&OR. The department also offers a coterminal B.S./M.S. program.

Students admitted for graduate study in EES &OR must have a background of undergraduate work that indicates a level of mathematical problem solving sufficient to be found in an undergraduate mathematics, engineering, or physical science program. At a minimum, mathematical preparation would include at least one year of college-level calculus; a background in linear algebra, plus the capability to apply mathematical thinking to problem solving.

Knowledge of computer programming and some familiarity with formal proofs is strongly recommended. Undergraduate course work in economics is not required. Those newly admitted EES&OR students needing a review of linear algebra or calculus are advised to attend the two-week intensive math workshop offered by the department just prior to Autumn Quarter.

CERTIFICATE PROGRAM

The department offers a Certificate Program within the framework of the Non-Registered Option (NDO) program through the Stanford Center for Professional Development. A certificate in one of several specialties can be obtained by completing three core courses, plus one EES&OR elective course for the total of four courses. For further information, see: http://scpd.stanford.edu/ce/ndp/certificate.html.

Applicants apply through the Stanford Center for Professional Development as a NDO program participant. For additional information about the NDO application process, contact the center at (650) 723-3000.

All certificate applicants must meet department final approval for admission.

MASTER OF SCIENCE

University requirements for the master’s degree are described in the “Graduate Degrees” section of this bulletin.

The M.S. program in EES&OR prepares individuals with a solid foundation for a life-long professional career addressing important problems in industry, government, or individual decision making. Department requirements for the M.S. degree provide flexibility for meeting individual objectives consistent with developing depth in some particular area of concentration. The master’s degree may be a terminal degree program with a professional focus, or an exploratory vehicle to formulate and select a more advanced graduate program. The M.S. degree normally can be earned in one academic year (three academic quarters) of full-time work, although many students choose to enrich their education with up to an additional year’s work. The Honors Cooperative Program (HCP) provides opportunities for employees of some local companies to earn a M.S. degree over a longer period, by taking one or two courses per academic quarter. Some required EES&OR courses are only offered on campus; HCP students must plan to attend those courses at Stanford to meet the degree requirements.

In addition to the University’s basic requirements for the master’s degree discussed in the “Graduate Degrees” section of this bulletin, a candidate must complete a pre-designed program, organized to provide coherent depth through a set of courses that mesh both on content and schedule. Each program must include 45 units of course work, 39 units of which must be completed with a grade point average (GPA) of at least 2.75 and the remaining course units may be taken for satisfactory/no credit. Each program requires at least 32 units of graduate (200 level or higher) lecture and project courses in EES&OR. A project course is required and must be taken for a letter grade. Each M.S. program incorporates six or more of the ten 200-level core courses. It must include courses from four or more of the five core areas: Optimization; Probability and Stochastic Processes; Systems and Simulation; Economics, Finance, and Investment; and Decisions. For students with more advanced backgrounds, a 300-level course from the same core area may be substituted for a 200-level core. Core courses used to meet these requirements must be taken for letter grades. (See “Courses” below for a list of core and project courses.)

In addition, each program requires an additional 13 units of course work, designed to give breadth and depth appropriate for individual academic goals. Some of these courses are offered by EES&OR and some
by other departments relevant to the student’s academic goals. The department does not have a thesis requirement for the M.S. degree.

ENGINEER

University requirements for the Engineer degree are described in the “Graduate Degrees” section of this bulletin.

The EES&OR Engineer degree is for students desiring additional academic preparation beyond the master’s degree for a career of professional practice. The degree requires a minimum of one academic year of study beyond the M.S. degree. University regulations governing the Engineer degree are described in the “Graduate Degrees” section of this bulletin.

Students are not admitted directly into the Engineer program. Admission must be obtained from the department while the student is pursuing an M.S. degree in the department. The admissions decision is based on the department’s evaluation of the applicant’s academic record, performance in independent work, potential for advanced study, plus the faculty ability to support and supervise such study. Before acceptance to the Engineer degree program, the student must have personally arranged for a faculty sponsor for thesis supervision and any requisite financial support. However, availability of thesis supervisors and of financial support for the Engineer degree is very limited. The Engineer degree is considered to be a terminal degree.

The department requires the student to complete successfully: (1) an approved M.S. program with at least a 3.0 grade point average (GPA); (2) an additional 45 units beyond the M.S. degree, spanning all five core areas and including, at the 300-level, six or more core courses covering four core areas, with at least a GPA of 3.3 on core courses; (3) approval of a thesis proposal by the thesis supervisor; (4) satisfactory oral presentation of the thesis to the thesis supervisor and one other departmental- appointed faculty; and (5) completion of the Engineer thesis and approval by the thesis supervisor.

DOCTOR OF PHILOSOPHY

University requirements for the Ph.D. degree are described in the “Graduate Degrees” section of this bulletin.

The program leading to a Ph.D. in EES&OR is for students primarily interested in a career of research, teaching, or high-level technical work in universities, business, industry, or government. Therefore, the Ph.D. program emphasizes scientific and analytical foundations as well as more applied concepts useful for practice at the highest professional levels.

The Ph.D. degree requires a minimum of three academic years of study beyond the B.S. degree. Admission to the doctoral program does not imply that the student is a candidate for the Ph.D. degree. Only after his or her application for doctoral candidacy has received official department and University approval does the student become a candidate. Not later than the Autumn Quarter of the second year in the department, the student should submit an application to participate in the department qualifying procedure.

In addition to University requirements, the student must successfully complete: (1) the department qualifying procedure; (2) a set of courses approved by his or her academic and dissertation advisers; (3) a dissertation, based on original research, which must be a contribution to knowledge; and (4) an oral examination near completion of the dissertation. All Ph.D. students must satisfy requirements for an M.S. in EES&OR by the end of their second year and all who have not already earned a master’s degree must apply for a Stanford M.S. prior to receiving the Ph.D.

The Ph.D. program is based on a requirement that successful candidates develop breadth, depth, and experience within the field. In order to receive approval, each student’s program must lead to sufficient breadth, depth, and experience, as outlined below.

All Ph.D. programs must include at least one course in each of the five core areas, including, at the 300-level, six or more core courses covering four core areas. Because most 300-level core courses have prerequisite 200-level core courses, most Ph.D. candidates first take these prerequisites. Core courses all must be taken for letter grades and each student must earn at least a 3.5 grade point average (GPA) on the core courses. Each program must include at least 39 units of courses from EES&OR.

Each Ph.D. candidate acquires additional depth in primary and secondary fields consistent with the student’s objectives. The student is responsible for working with his or her advisers to define a suitable program. This program must include, at minimum, 18 units of graduate courses, in addition to the core course requirement.

Each Ph.D. program must include a project course taken for a letter grade and may include additional non-academic professional experiences, such as an internship. The EES&OR project course used to satisfy requirements for an M.S. degree can also satisfy this requirement. (See “Courses” below for a list of core courses and project courses.)

Ph.D. MINOR

Doctoral students throughout the University may complete a minor in EES&OR by taking 21 units of EES&OR courses. These must include four or more of the 300-level core courses, covering at least three of the five core areas, with at least a 3.0 GPA.

FINANCIAL ASSISTANCE AND ADMISSION

Financial support is available on a competitive basis for qualified doctoral candidates. This includes a very limited number of course assistantships as well as research assistantships supported by faculty research grants and contracts. However, assistantships are, in most cases, awarded to students who have completed the Ph.D. qualifying procedure.

Supplementary financial support can sometimes be obtained by grading, assisting in special projects, or from University loans.

Most students in the EES&OR doctoral program will, after completing the qualifying procedure, be able to obtain financial support through a combination of research assistantships, course assistantships, and internships, all of which contribute directly to their educational programs. For most students, the critical period is the first two years of graduate work, when sufficient finances are needed to cover tuition and expenses.

Information about loan programs and need-based aid can be obtained from the Graduate Financial Support section of the Financial Aid Office. The application forms for admission may be obtained from Graduate Admissions, the Registrar’s Office. Applications for the Ph.D. degree program, with consideration for merit-based financial awards, must be made by February 1 of the preceding academic year, and must be accompanied by a completed application for admission. Merit-based financial awards for first-year Ph.D. candidates may take the form of fellowships, combination fellowships/assistantships, or assistantships. Applications for the master’s degree program and the Ph.D. degree program (without consideration for merit-based financial awards), are accepted until March 31, 2000. Research assistantships, however, are awarded by the individual faculty research supervisors, not by the department, and have no such deadline.

Except in unusual circumstances, admission is limited to the Autumn Quarter because courses are arranged sequentially with basic courses and prerequisites offered early in the academic year.

INTERNSHIPS

Since most complex system problems cannot be realistically duplicated within a university, some internships are available to help Ph.D. students develop the ability to solve system problems by working on real problems.

Internships may be found in large industrial firms; in companies and research groups concerned with the design, operation, and planning of complex projects and systems; and in government agencies. The duration of an internship ranges from six to twelve months depending on the time required to successfully complete the project. Internships for international students must conform to visa restrictions. Internships are not required, but are strongly encouraged as integral parts of a Ph.D. program.
RESEARCH AREAS

Students should gain experience in applying EES&OR concepts in at least one specific problem area. This experience can be gained through an internship, research projects, and special courses that concentrate on applying EES&OR concepts to specific areas. The current major research programs of the department are listed below. Faculty active in these programs are indicated.

OPTIMIZATION

Numerical Optimization—(Professors Infanger, Murray, Saunders.) The Systems Optimization Laboratory (SOL) provides opportunities for students to gain firsthand experience with computational methods, to participate in research on new algorithms, and to learn about modeling complex systems. Within SOL, there is a long-standing research program on algorithms for constrained optimization. This involves fundamental research on mathematical methods for linear and nonlinear programming, as well as techniques for implementing the methods as efficient and reliable computer software. There is a special interest in algorithms for large-scale problems. General-purpose packages developed at SOL (for example, MINOS and NPSOL) have been distributed to thousands of sites worldwide. Feedback from users brings about many fruitful collaborative efforts with industry, government, and academia.

Recent applications include: design of both yachts in the 1995 America’s Cup final; online control of transmission networks for electricity and gas; prediction of oil prices by the Federal Reserve; climate modeling for the greenhouse debate; determination of forces on the thigh bone prior to prosthesis insertion; optimal control of the DC-X experimental single-stage VTOL rocket.

Stochastic Optimization—(Professors Infanger, Van Roy.) This research program concerns techniques for solving mathematical models of decision problems whose parameters (coefficients, right-hand sides) are not known with certainty but are assumed known from their distributions. Although such problems are large, new breakthrough methods now make them solvable. Recent applications include: planning, scheduling, and control of electric power systems; design and operation of production lines; portfolio optimization and asset/liability management; pattern recognition; vehicle placement and scheduling in transportation; and optimal design of communication systems.

Complementarity Problems and Equilibrium Programming—(Professors Cottle, Eaves.) The research program is concerned with the mathematical study of properties of complementarity problems, the development of efficient algorithms for their solution, and the expansion of their use in practical problems. A central and unifying theme in the analysis of optimization and equilibrium problems, complementarity problems are special systems of equations and inequalities. Such systems arise in a wide range of theoretical and applied settings. Because of their pervasive and essential occurrence, it is efficient to isolate and study them. Complementarity conditions are central to the study of nonlinear programming, fixed points, variational inequalities, duality theory, control problems, and generalized equations. Path-following, homotopy methods and/or deformations are used in the study and solution of complementarity and general equilibrium problems. Examples arise in financial optimization, curve-fitting, economic and market equilibria, equilibria in games of conflict, contact mechanics, structural engineering, network optimization, traffic flow, and electronic circuits.

Network Optimization, Design, and Equilibria—(Professors Bambos, Chiu, Eaves, Infanger, Shachter, Veinott.) Network models are widely used in engineering, government, and industry for communication, construction, distribution, investment, manufacturing, mining, reliability, routing, scheduling, sequencing, supply, and transportation. Networks and graphs also serve as fundamental tools to study the structure of matrices, Markov chains, probabilistic dependence, optimization problems, and so on. The research in this area focuses on single-commodity, multi-commodity, dynamic, equilibrium, and stochastic network flow and design problems. The costs typically exhibit economies, diseconomies, or constant returns to scale. The emphasis is on the identification and/or development of the relevant structural properties of such systems; efficient methods of finding optimal or near-optimal flows, designs, and equilibria; and on applications to a wide variety of industrial, public, and engineering problems.

Lattice Programming—(Professor Veinott.) This area is concerned with predicting the direction of change in global optima and equilibria resulting from changing conditions based on problem structure alone without data gathering or computation. Rooted in the theory of lattices, this work is also useful for characterizing the form of optimal and equilibrium policies, improving the efficiency of computation and suggesting desirable properties of heuristics. The theory can be applied to cooperative and non-cooperative games, dynamic programming, economics, Leontief substitution systems, marketing, network flows, production and inventory management, project planning, reliability and maintenance, scheduling, statistical decisions, and so on. Recent specific applications include price and warranty setting in the automotive industry, and optimally stepping up pressure in gas pipelines.

PROBABILITY AND STOCHASTIC PROCESSES

Stochastic Modeling and Queueing Analysis—(Professors Bambos, Glynn, Iglehart, Shachter.) This research program focuses on the modeling and analysis of systems with essentially random operational parameters, using established techniques of probability and stochastic processes as well as developing novel ones. Such systems arise in various areas of engineering, business organization, production management, and so on. A key issue is the modeling of queueing processes in these systems in order to understand the dynamics of delay and the emergence of performance bottlenecks limiting the system throughout. Closely related research in stochastic scheduling and resource allocation aims at controlling such systems efficiently, in order to optimize their performance (maximize output, minimize delays, and so on.) Key application areas include communication networks, computer systems, flexible manufacturing systems, parallel and distributed processing networks, business organization, service systems, production management, and so on.

SYSTEMS AND SIMULATION

Simulation Methodology—(Professors Glynn, Iglehart.) Performance evaluation of large, complex stochastic systems relies extensively on computer simulation, as simulation is often the only feasible numerical approach to analyzing such systems. Research has, as a goal, the development of computational and statistical techniques that improve the efficiency of simulation methods and extend their applicability to a wide class of stochastic systems. Recent work has applied importance sampling to rare event simulations with applications to ATM communication switches and fault tolerant computer systems. Another recent application has been to polling systems in a manufacturing context. Contributions have also been made to the simulation of stochastic differential equations, which arise in financial engineering.

ECONOMICS, FINANCE, AND INVESTMENT

Investment—(Professors de Villiers, Johnson, Luenberger, Van Roy.) This program is devoted to building a rigorous foundation for the analysis of investment opportunities and the management of investment portfolios. As such, the program incorporates areas of: (1) corporate finance (the study of how corporations select and manage investment projects and how they choose their financial structure), (2) financial economics (the equilibrium analysis of financial markets), (3) financial engineering (the study of derivative securities, such as options and futures, and the design of new securities), (4) financial risk management (the study of hedging strategies), (5) portfolio theory (the design and management of investment portfolios), (6) fundamental analysis (the study of how economic factors influence investment value), and (7) technical analysis (the estimation of future asset prices based on their past values). Current research focuses on several important areas. One is the analysis and management of investment projects whose cash flow streams are uncertain and whose payoffs span several years. A new methodology, which combines the theory and the mathematics of derivative securities, optimal portfolio choice, and asset pricing, is being developed. A second area is the development of portfolio design methods which capitalize on the tools and resources made available by recent advances in.
information technology. A third area is the combination of simulation and optimization methods to solve large investment problems. The general goal of all research in the program is to develop effective and implementable methods for addressing complex practical problems in investment.

Energy, Natural Resources, and the Environment—(Professors Chao, North, Sweeney, Weynant.) Research activities center around the Energy Modeling Forum (EMF) and the International Energy Workshop (IEW). Based in EES & OR, the EMF provides a world-wide forum for improving the use and usefulness of models of energy and of the environment. Current EMF studies focus on an integrated assessment of global climate change, restructuring electricity markets, and energy policy in Japan. Theoretical and empirical research projects focus on both depletable and renewable natural resources, including energy, biological, mineral, and environmental resources, although greatest attention is focused on energy and associated environmental impacts. Current research efforts include economic responses to global greenhouse gas accumulation and quantification of externalities associated with energy and non-energy commodities.

Organizational Analysis—(Professors Sweeney, Tse.) The program studies incentives and information in organizations and inter-organizational systems. Incentives include those created by rules governing activities such as information sharing, cost allocation, and transfer pricing within an organization.

DECISIONS

Decision Analysis—(Professors de Villiers, Howard, Shachter.) Decision analysis is a philosophy, a body of knowledge, and a professional practice for the logical illumination of decision problems; it simultaneously considers the uncertain, dynamic, and complex consequences of a decision, as well as the assignment of value to its consequences. EES & OR research is dedicated to extending the theoretical foundations, increasing the effectiveness of practice, and expanding the field of application of decision analysis. The research program maintains a close relationship with professional decision analysts working on major decision problems. Internships are available at several local consulting firms. Much of the research is conducted through the Decisions and Ethics Center. The center studies how to make decisions both effectively and ethically. Current research areas include (1) designing of agreements to govern actions of several participants to a venture, (2) developing procedures for clarifying unstructured areas of concern as a first step in formulating decision problems, (3) analyzing decisions involving risks of injury or death, (4) developing efficient procedures that allow the benefits of decision analysis to be applied to a broad spectrum of applications at low cost in time, money, and effort, (5) expanding the power of decision analysis by technological improvements, such as incorporating sensitivity to relevance into professional analyses, (6) reconciling the viewpoints of decision analysis and finance theory in making project investment decisions, (7) designing incentive systems that control decision distortion and decision isolation effects, (8) exploring the human side of decision making to assure that decision makers not only know the best action, but will take it, and (9) investigating the short and long run effects of taxation on people's lives, liberty, property, and pursuit of happiness.

Dynamic Programming—(Professors Van Roy, Veinott.) This area currently focuses on the optimal management of populations over time, for example, systems, firms, inventories, jobs, customers, labor force, vehicles, books, passengers, securities, fish, trees, patients. Interest centers on the effective and efficient choice of decisions in the presence of risk, sequential acquisition of information, and possible growth or decline of rewards and/or the population over time. The emphasis is on the development of optimality concepts and system properties; on the existence, characterization, and computation of optimal policies; on the development of useful heuristics with assured performance; and on identifying and exploiting the structure of specific applications to gain insight about them.
STRAteGY

Business and Technology—(Professors Howard, Luenberger, Tse.) This area focuses on the successful creation and management of high technology companies and on the use of advanced technology to change and improve the practices and decision making processes of business enterprises so as to secure new competitive positions in the changing global environment. Research combines analytical thinking with case studies to develop fundamental principles applicable to high technology business and to the use of advanced technology in business decisions and enterprise management. Research topics include strategic allocation of capital, a normative theory of entrepreneurship, product and process innovation, marketing high technology products, business creation, and business re-engineering.

POLICY

National Security Policy—(Professors May, Perry.) Government policy research focuses on issues which involve political, economic, and technological factors in an essential way and which are likely to have long-term impact. Examples include policies with respect to the management and control of weapons of mass destruction and other modern weaponry, exports control, security aspects of energy supply questions, policies with regards to the utilization of space, and policies with regards to the diffusion of information technologies. Research is carried out in collaboration with the Center for International Security and Arms Control.

Energy and Environment Policy—(Professors Chao, North, Sweeney, Weyant.) This area analyzes policies at the state and national levels concerned with the management of depletable and renewable natural resources and the environment. Current research projects focus on the regulation of public utilities providing natural gas and electric power. The policy work is integrated with the research within the Energy, Natural Resources, and Environment area described above.

Medical Policy—(Professors Howard, Shachter.) This area analyzes medical decision making and the insights decision analysis brings to medical policy at the level of the individual patient, the provider, or through practice guidelines established by government, insurers, or professional societies. The department has close ties with the School of Medicine, especially the departments of Medical Informatics, and Health Research and Policy, and students are working on projects with both EES&OR and medical school faculty members.

Telecommunications and Information Policy—(Professors Bambos, Chiu.) This area analyzes policies concerned with the creation, distribution, and utilization of information and communication products, with emphasis on the new and evolving science-based information technologies. These activities are closely linked to the Center for Telecommunications.

Transportation Systems—(Professor Chiu.) This research views transportation systems as economic enterprises, focusing on integrated congestion management. Research topics include supply and demand equilibrium analysis, congestion pricing strategies, economics of congestion, policy evaluation, and analysis. The impact of technology on transportation planning and the role of telecommunications technology in transportation is also examined.

COURSES

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

Core Courses:

- Optimization: 211, 212, 311, 313, 318
- Probability and Stochastic Processes: 221, 222, 321, 322
- Systems and Simulation: 231, 232, 331, 332
- Economics, Finance, and Investment: 241, 242, 341, 342
- Decisions: 251, 252, 351, 352

Project Courses:

401, 402, 434, 441, 442, 444, 452, 453, 455, 478, 483, 495

Course descriptions, organized by area, are listed below. Most core course numbers end with 1 or 2.

GENERAL

208. Practical Training—Students obtain employment in a relevant industrial or research activity, chosen to enhance their professional experience, consistent with the degree program they are pursuing. Report on the experience and faculty overview agreement required. Faculty overview agreement must be confirmed through Student Services office prior to beginning employment.

1 unit, Aut, Win, Spr, Sum (Staff)

400. Ph.D. Qualifying Tutorial—Restricted to Ph.D. students assigned tutorials as part of the EES&OR Ph.D. qualifying process.

1-3 units, Aut, Win, Spr, Sum (Staff)

401. Cases and Projects in Decision Engineering—The development of communication, organization, and modeling skills as they relate to decision making in operations, strategy, and policy. Student teams compete in cases and projects. Emphasis is on problem identification, yield consideration, teamwork, project scheduling, task definition, task allocation, task amalgamation, group behavior, technical writing, public speaking, critique and defense, and the use of software, literature, principals, and experts. Enrollment limited. Prerequisites: three courses in EES&OR or equivalent. Corequisites: three more courses in EES&OR or equivalent.

4 units (Eaves) not given 1999-2000

402. Sponsored Projects in Decision Engineering—Each student team addresses a project in operations, strategy, or policy as sponsored by a business, medical, or government client. Emphasis is on: team interaction with the sponsor, model construction and analysis, data collection, use of literature and experts, formulation of recommendations, and communication. Enrollment limited. Prerequisites: 401, six courses in EES&OR or equivalent, consent of instructor. Corequisites: three more courses in EES&OR or equivalent.

4 units (Eaves) not given 1999-2000

405. Introduction to Engineering-Economic Systems and Operations Research—Introductory lectures by faculty and research staff describing department research programs. (AU)

1 unit, Aut (Staff)

1 unit, Win, Spr (Staff)

407. Teaching Assistants Workshop—Methods of effective pedagogy and course management issues. Designed for students who have been or will soon be teaching/course assistants. Topics depend on the interests of the students, especially problems they are currently encountering.

1 unit (Shachter) alternate years, given 2000-01

408. Directed Reading and Research in Engineering-Economic Systems and Operations Research—Directed study and research on a subject of mutual interest to the student and faculty member.

1 or more units, any quarter (Staff)

409. Thesis and Thesis Research—Limited to students who have established candidacy for the degree of Engineer or Ph.D.

1-15 units, any quarter (Staff)

OPTIMIZATION

111. Introduction to Optimization—(Enroll in Engineering 62.)

4 units, Aut, Spr (Staff)

211. Linear and Nonlinear Optimization—The fundamental concepts of linear and nonlinear optimization theory and modeling. The role of

4 units, Aut (Shachter)

3 units, Win (Eaves)

311. Optimization—Applications, theory, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, linearly constrained optimization problems (including linear and quadratic programs), and nonlinearly constrained problems. Prerequisites: Mathematics 113, 115.

3 units, Win (Cottle)

3 units, Aut (Shachter)

311. Optimization—Applications, theory, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, linearly constrained optimization problems (including linear and quadratic programs), and nonlinearly constrained problems. Prerequisites: Mathematics 113, 115.

3 units, Win (Cottle)

313. Vector Space Optimization—Optimization theory from the unified framework of vector space theory, i.e., treating together problems of mathematical programming, calculus of variations, optimal control, estimation, and other optimization problems. Emphasizes geometric interpretation. Duality theory. Examples. Topics: vector spaces, including function spaces; Hilbert space and the projection theorem; dual spaces and the separating hyperplane theorem; linear operators and adjoints; optimization of functionals, including theory of necessary conditions in general spaces, and convex optimization theory; constrained optimization, including Fenchel duality theory. Prerequisite: Mathematics 115.

3 units (Luenberger) alternate years, given 2000-01

3 units, Aut (Murray)

316. Linear Complementarity—Theory of the linear complementarity problem, its applications, and algorithms for its solution. Elements of quadratic programming theory. Pivotal algebra, Schur complements, and matrix classes. Analytic existence theorems. Lemke's algorithm, the principal pivoting method and degeneracy resolution techniques. Indirect algorithms. Prerequisite: 311 or consent of instructor.

3 units (Cottle) not given 1999-2000

3 units (Veinott) alternate years, given 2000-01

318. Linear Programming—Basic theory plus lab for learning about the numerical, software, and application aspects of the field. Formulation of standard linear programming models. Alternative techniques for solving linear programs. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method, dual simplex method, product form of the inverse. Upper bounding, sensitivity analysis, economic interpretations. Large-scale linear programming, decomposition principle. Prerequisite: Mathematics 113 or consent of instructor.

3 units, Aut (Cottle)

3 units, Win (Van Roy)

PROBABILITY AND STOCHASTIC PROCESSES

120. Probabilistic Analysis—Probabilistic concepts important to rigorous problem solving, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Probabilistic information using axiomatic principles. Life examples provide motivation and illustration of modeling techniques for probabilistic situations. Standard spreadsheets use provides probabilistic insights (and solution capability) to complement analytical closed form solutions. Topics: introductory probability (tools and concepts, e.g., the axioms of probability theory, random variables, distributions, the concept of conditioning, expectation and limit theorems, etc.). Materials from legal, social, medical, physical, and daily encountered problems. Prerequisites: multi-variable integration. Recommended: knowledge of spreadsheets.

5 units, Aut (Chiu)

4 units, Spr (Glynn)

221. Probabilistic Analysis I—Applied probability with a unique perspective: probabilistic analysis viewed as the structuring, processing, and presentation of probabilistic information. Introduction of Axioms of Probability Measures, the concepts of sample space, conditioning, random variables, distribution functions, and various expectation, etc., as the means to achieve probabilistic analysis. Concepts, tools, and modeling. Problem solving alone and beyond those achievable with only an analytical closed-form approach. Examples from social, legal, medical, and engineering systems. Prerequisite: working knowledge of calculus. Recommended: elementary knowledge of working with a spreadsheet.

4 units, Aut (Chiu)

222. Probabilistic Analysis II—Continuation of 221. Topics: limit theorems, discrete and continuous time Markov chains, renewal processes, queuing theory, and transform analysis. Emphasis is on building a framework to formulate and analyze probabilistic systems. Prerequisite: 221.

3 units, Win (Bamboz)

321. Stochastic Systems—Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queuing theory, storage theory, reliability, and finance. Prerequisites: 222 or Statistics 217; Mathematics 113 and 115.

3 units, Spr (Glynn)
ECONOMICS, FINANCE, AND INVESTMENT

241. Economic Analysis—Principal methods of the economic analysis of the production activities of firms (production technologies, cost and profit; perfect and imperfect competition); individual choice (preferences and demand); and the market-based system (price formation, efficiency, welfare.) Emphasis is on the analytical foundations and the practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211.

4 units, Win (Sweeney)

242. Investment Science—Introduction to modern quantitative investment analysis: theory and practical application. How modern investment concepts can be used to evaluate and manage opportunities, structure portfolios, and use sophisticated investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (time-value of money, present value, internal rate of return, term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); dynamic and uncertain cash flows. Emphasis is on translating theory into actual procedures. Examples of applications for every major topic. Group project devoted to application of the theory. See 342 for continuation of 242.

3 units, Aut (Luenberger)

243. International Investments—Introduction to international financial markets, their comparative behavior, and their inter-relations. Focus is on assets traded in liquid markets: currencies, equities, bonds, swaps, and derivatives. Institutional arrangements, taxation, and regulation; international arbitrage and parity conditions—valuation of target firms for cross-border acquisitions; international diversification and portfolio management; derivative instruments and dynamic investment strategies; international performance analysis; miscellaneous topics of current relevance and importance. Corequisite: basic finance theory (equivalent of 242 or Industrial Engineering 235).

3 units, Sum (Feinstein)

245. Risk Analysis: Theoretical, Legal, and Economic Perspectives—The theoretical aspects of risk analysis and applications in law, finance, and economics. Economic applications: problems related to arbitrage in financial markets, estimating corporate bond default risk, analysis of catastrophic economic events such as stock price crashes, investment portfolio rebalancing, and financial risk management. Legal applications focus on areas of law in which the concept of risk plays a crucial role, e.g., law and finance, and the law of product liability. The background "black letter law" relevant to a legal problem or doctrine is contrasted to alternative analytical approaches based on, e.g., traditional law and economics, probabilistic analysis, fuzzy logic, etc.

3 units, Spr (de Villiers)

246. Economics of Natural Resources—Intertemporal economic analysis of natural resource use, particularly energy, and including air, water, and other depletable mineral and biological resources. Emphasis is on an integrating theory for depletable and renewable resources. Stock-flow relationships; optimal choices over time; short- and long-run equilibrium conditions; depletion/extinction conditions; market failure mechanisms (common-property, public goods, discount rate distortions, rule-of-capture); policy options. Prerequisite: 241 or Economics 51.

4 units, Win (Sweeney)

249. Growth and Development—How to assess new investment opportunities in the countries of the Pacific Rim and other fast growing economies. Useful for investors and those guiding their country's development choices. Topics: the mechanism of economic growth, the equation of interest, optimal growth, economic interpretation of the calculation of growth.
of variations and optimal control theory results, uncertainty, tools for evaluating long-term growth rate, geometric moments, and exponormal distribution. Investment incentives, country risk indices. The long view: rule of law vs. rule of people. Practical cases from Ireland, E. European countries, China, and other E. Asian countries.

341. Economic Analysis—Builds on 241 concepts. Market structure and industrial organization (oligopoly, strategic behavior of firms, game theoretic models); economics of uncertainty; general equilibrium theory and economic efficiency (formulation, Walras’ Law, existence, uniqueness, duality between efficiency and general equilibrium; trade); intertemporal equilibrium and asset markets; macroeconomic analysis and economic growth (accounting identities, general equilibrium perspective); public goods, externalities. Background for advanced advanced economics. Prerequisite: 241.

3 units, Sum (de La Grandville)

342. Advanced Investment Science—Advanced topics and research in the theory and application of investment concepts. Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion. Ito’s lemma, basic options theory. Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on independent projects that apply the principles. Prerequisite: 242.

3 units, Win (de Villiers)

344. Equilibrium Programming—Mathematical models of equilibria in economics and in conflict. Price equilibria. Extensive form games, general and partial equilibrium economic models, Nash equilibria. Solution of equilibrium models by the homotopy principle: deform the system to an easily and uniquely solved one, and follow the solution of the system as it is deformed, with retrogressions, back to the original system. Piecewise linear and differential homotopies and curve following. Subdivisions, atlases, regularity, degree, fixed points, stationary points, general and special case algorithms. Prerequisite: 211.

3 units (Eaves) not given 1999-2000

346. Economic Analysis of Market Organizations—For second-year or more advanced graduate students. Applies theories of microeconomics and operations research to decision behavior and mechanism design in market organizations, emphasizing asymmetric information structures. Topics: game theory, economics of information, and nonlinear pricing. Applications: priority pricing of congested services, emission trading of pollutants, design of competitive markets for electric power, competitive product pricing, etc. Prerequisites: basic knowledge of microeconomics, optimization, probability theory, and decision theory. Recommended: familiarity with mathematical modeling and skills in computer programming.

3 units, Aut (Chao)

347. Capital Investment and Financing Decisions—Optimal capital investment and financing decisions for firms operating in a dynamic and uncertain environment. Forecasting and valuing project cash flows. Designing and managing projects to create and capitalize on operating and follow-on investment opportunities. Financing alternatives and the relationship between investment type and optimal financial structure. Prerequisites: basic finance theory (equivalent of 242 or Industrial Engineering 225).

3-4 units (Johnson) not given 1999-2000

349. Investment Science Frontiers—Restricted to EES&OR Ph.D. students. Advanced concepts of investment science with emphasis on theories and methods for solving practical problems: valuing and structuring projects, mergers, acquisition, and contracts; designing portfolios for optimal growth; and managing risk and enhancing value within a complex business enterprise. Combination lecture, seminar, and project. No auditors. Prerequisites: 242, 313, 342.

3 units, Aut (Luenberger) alternate years, not given 2000-01

442. Investment Projects—Students work in teams to address a practical problem in investment. Faculty assist in identifying appropriate projects and in developing students’ understanding of relevant analytical tools. Students assume full responsibility for project analysis and presentation to the decision maker.

4 units (Johnson) not given 1999-2000

444. Investment Practice—Project course is designed to enhance student’s abilities to formulate and design superior solutions to financial issues in industry and the financial services sector. Short projects illustrate the basic application and implementation of investment principles. Students complete a new project from industry. Enrollment limited to 30 EES&OR students. Prerequisites: 242, 342.

4 units, Spr (Luenberger)

446. Transportation, Energy, and Environment Research Roundtable (TEERR)—Presentation and discussions of research in progress or contemplated, focused on the interplay of transportation, energy, and environmental economics and policy issues. Students present either their own research or, subject to approval, recent research by others.

1 unit, Aut, Win, Spr (Sweeney)

447. Investment Research Seminar—Presentation/discussion of recent research on investment. Topics vary with the current research interests of participants. Students should be actively involved in research on investment. Prerequisite: consent of instructor.

1-3 units (Johnson) not given 1999-2000

DECISIONS

152. Introduction to Decision Analysis—How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. GER:2b (DR:6)

3 units, Spr (Shachter)

251. Stochastic Decision Models—Efficient formulation and computational solution of sequential decision problems under uncertainty. Markov decision chains and stochastic programming. Maximum expected present value and rate of return. Optimality of simple policies: myopic, linear, index, acceptance limit, and (s,S). Optimal stationary and periodic infinite-horizon policies. Applications to investment, options, overbooking, inventory, production, purchasing, selling, quality, repair, sequencing, queues, capacity, transportation. MATLAB is used. Prerequisites: probability, linear programming.

3 units, Win (Van Roy)

252. Decision Analysis I—Coherent approach to decision making, using the metaphor of developing a structured conversation having desirable properties, and producing actional thought that leads to clarity of action. Instruction is Socratic, with computational issues covered in problem sessions. Emphasis is on creation of distinctions, representation of uncertainty by probability, development of alternatives, specification of preference, and role of these elements in creating a normative approach to decisions. Evaluates information gathering opportunities in terms of a value measure. Relevance and decision diagrams represent and clarify inference and decision. Principles are applied to decisions in business, technology, law, and medicine. See 352 for continuation of 252.

4 units, Aut (Howard)

254. The Ethical Analyst—The professional analyst who uses technical knowledge in support of any individual, organization, or government is ethically responsible for the consequences. Material sensitizes the indi-
individual to ethical issues, providing the means to form ethical judgments, and questions the desirability of physical coercion and deception as a means to reach any end. Exploration of human action and relation in society is conducted in the light of previous thought, and is used to provoke additional research on the desired form of social interactions. Attitudes toward ethical dilemmas are explored by creating an explicit personal code. Issues from the range of human affairs test the student’s framework for ethical judgment.

1-4 units, Spr (Howard)

3 units, Spr (Van Roy)

352. Decision Analysis II—The extension of decision making from a system of thought about decisions to the considerations necessary for aiding other people and organizations in decision making: decision engineering. Topics: how to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating decision diagrams that are spare and effective, understanding and overcoming biases in assessment, developing and using evocative and assessed knowledge maps, dealing with “uncertainty about probability.” Interpretation of various forms of sensitivity analysis, use of approximations, value of revelation, value of joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and treating decisions involving health and safety. See 353 for continuation of 352. Prerequisite: 252.

4 units, Win (Howard)

353. Decision Analysis III—The extension of decision analysis beyond the basic paradigm. Emphasis is on determining and extending the boundaries of systematic analysis of decisions. Topics: the concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood principle and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; examination of alternative decision-aiding practices like analytic hierarchy and fuzzy approaches. Presentations on current research. Object is to prepare doctoral students for research and to enable all to understand the discipline at the most fundamental levels. Prerequisite: 352.

3 units, Spr (Howard)

3 units, Win (Shachter)

358. Optimization under Uncertainty and Applications in Finance—How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and selected applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation; large-scale systems, Bend-
3 units, Aut (Bambos) alternate years, not given 2000-01

3 units (Staff) alternate years, given 2000-01

3 units (Veinott) alternate years, given 2000-01

378. Competitiveness in High Tech and Semiconductors: Operations and Strategy—The development of new analytical models and techniques for improving high tech and semiconductor enterprise performance by modeling the electronic food-chain from semiconductors to computers, telecom, and software. Strategic and operational enterprise performance and management issues including financial investment aspects, market structures, design process capacity management, manufacturing and supply chain management, and quality emphasizing yield learning together with fab and enterprise economics. Prerequisites: basic optimization, probability and statistics or consent of instructor to participate in tutorial option.
4 units, Win(Akella, Tse)

478. Competitiveness in High Tech and Semiconductors: Projects and Strategy—Projects with companies in high tech and semiconductor, guest industry speakers, and advanced optional lectures. Enterprise analysis and senior management presentations cover product and process design, costing, financial decisions, demand and market structures, enterprise economics, facility design, manufacturing, supply chain management, yield and learning, business models for enterprises, information technology and organizational design, strategic management. Recommended: 378.
4 units, Spr(Akella, Tse)

479. Management of Technological Enterprises Seminar—Speakers from industry on leading edge technologies and their management. Seminar series focus is on the electronic foodchain in the Internet age, primarily semiconductor, computer, telecom, and software industry experts and executives. Objective: provide insights into industry dynamics and economics, and the development of strategies to succeed in a volatile marketplace crowded with mature and emerging technologies, and to help synthesize the variety of systems approaches learned in “solving” key strategic issues faced by the high tech industry.
1 unit, Spr(Akella, Tse)

284. Building Dynamic Entrepreneurial Organizations—Focus is on the dynamic development of corporate skills, knowledge, and infrastructure to compete in a changing global competitive environment due to rapid technology advancement, global economic development, changes in consumer’s preference, and government regulations. Model analysis and case studies are used to develop a methodology in building dynamic entrepreneurial organizations in response to dynamic competitive requirements. Links between EES&OR core and the notion of managing change as a basis for a normative theory on entrepreneurial activities in new business creation and corporate expansion.
3 units, Spr(Tse)

286. Pricing Next Generation Telecommunications Products and Services—Telecommunication products and services pricing as the key to success in a rapidly changing and highly competitive market. Interdisciplinary approach to position, price, and distribution of traditional/innovative telecommunication services. Topics: the telecommunication industry as driven by technological advances, policy choices, and explo- sive business opportunities; the pricing revolution and arbitrage opportuni- ties in international voice created by data-voice convergence and liberalization; competitive aspects of service delivery channels; commoditizing of bandwidth and basic services; clearinghouses; financial risk hedging through futures/derivatives trading; the need to develop intelligent pricing and provisioning agents for product bundling; grade of service differentiation; positioning and revenue optimization by captur- ing consumer preferences. Group project in industrial participation.
3 units, Sum (Chiu)

483. Strategy Models—The design and application of formal models in the study of strategic planning problems. Problems involving issues of technology development, resource management, and uncertainty in a corporate setting. Emphasis is on the integrated utilization of modeling tools drawn from diverse methodologies and the requirements for success- ful application in a policy-making or corporate strategy context. Links between art, theory, and practice are emphasized. Prerequisites: 211, 241, and 252 or equivalent. Recommended: some background in finance and marketing.
4 units, Spr(Weyant)

489. Interdisciplinary Seminar on Conflict Resolution—(Same as Economics 386, Law 611, Psychology 283.) Addresses problems of conflict resolution and negotiation from an interdisciplinary perspective. Presentations by faculty and by scholars from other universities.
1-2 units, Win(Arrow, Ross, Wilson, Alexander)

POLICY
193/293. The Role of Technology in National Security—(Graduate students register for 293.) Examines critical decisions made by the U.S. in selected security and space programs, emphasizing current issues. Case studies illustrate the process by which technical, political, and econom- ic issues are brought into the policy process; particularly, the way in which technical organizations in government, government committees, and science advisory boards interact to bring advice to senior policy makers. Examination of some case decisions in other countries.
3 units, Aut(Perry)

194/294. The Role of Analysis in Environmental Policy Decisions—(Graduate students register for 294.) Examines major past and current public policy decisions on issues such as air pollution, toxic chemicals, nuclear waste, and global climate alteration. Case studies from the instructor’s personal experience illustrate the process by which technical, political, and economic factors are brought into the policy process. Emphasis is on the role of analysis in summarizing technical information and uncertainties and on the reconciliation of differing points of view among government experts, scientific advisory boards, and interested/affected parties among the public. Recommended: background in quan-
titative analysis (i.e., basic undergraduate courses in engineering, science, or economics).

3-5 units, Spr (North, Sweeney)

195. International Security in a Changing World—(Same as Political Science 138.) Surveys the major international and regional security problems in the modern world. Interdisciplinary faculty lecture on the political and technical issues involved in arms control, the military legacy of the Cold War, regional security conflicts, proliferation of advanced weapons capabilities, ethnic conflicts, and peacekeeping efforts. GER:3B (DR:9)

5 units, Win (Blacker, Perry, May, Sagan)

196. Transportation Systems and Urban Development—Introduction to transportation systems and planning, and their roles in society. Analytical tools introduced at a conceptual level examine issues and evaluate alternatives. Policy implications and system effectiveness analysis of transportation in an urban context. Topics: economic analysis of transportation, supply and demand equilibrium analysis, urban transportation networks, congestion management, short and long term transportation planning, the impact of technology on transportation systems, land use and transportation, case studies and analysis of current transportation news items. Prerequisite: Mathematics 21.

3 units, Win (Chiu)

297. Progress in Worldwide Telecommunications—Interdisciplinary study of topics in current worldwide developments and economic trends with the participation of prominent guest speakers from international, regional, national, and corporate organizations and agencies. Topics: telecommunications services, technology, standardization, (de)regulation, market-driven competition, and the needs of the underserved parts of the world. Individual or team case study and a verbal presentation. May be repeated for credit.

3 units, Sum (Ivanek, Chiu)

299. Voluntary Social Systems—Exploration of ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment; guardian-ward theory for incompetency; the state and interventionism, hypothesis of reverse results; applications help for the needy, victimless crimes, and environmental protection; transition strategies to a voluntary society.

1-3 units, Win (Howard)

493. Decision Making and National Security Problems—Seminar for graduate students with an interest in government decision making in areas which involve a technological component, e.g., defense, energy, and environment, and high-technology trade and policy. Follows 193 or 194.

3 units, Spr (Perry)

495. Quantitative Analysis of Public Policy Decisions—A current public policy problem is addressed as a single project team, completing the major phases of analysis during the quarter: framing, modeling, data gathering, evaluation, and communication. Instructor coaches the team and provides guidance on gaps in the team’s knowledge. Past topics: environmental, health, technology, and transportation issues. Enrollment limited. Prerequisites: 211, 231, 241, 252 equivalent, or consent of instructor.

3 units, Spr (Borison)

INDUSTRIAL ENGINEERING AND ENGINEERING MANAGEMENT

Emeriti: (Professors) James L. Adams, Robert V. Oakford, Henry E. Riggs, David A. Thompson
Chair: M. Elisabeth Paté-Cornell
Assistant Professors: Diane E. Bailey, Pamela J. Hinds, Ulrich W. Thomann
Professor (Teaching): Robert E. McGinn
Associate Professor (Teaching): Thomas H. Byers
Consulting Professors: Naushad Forbes, Thomas Kosnik
Consulting Associate Professors: Laura Kopczak, Behnam Tabrizi
Affiliated Faculty: David Beach, Peter W. Glynn, J. Michael Harrison, Charles A. Holloway, Kosuke Ishii, James G. March, David B. Montgomery, Evan L. Porteus, Krishna Saraswat

The Department of Industrial Engineering and Engineering Management (IEEM) focuses on the understanding, operation, and design of industrial and technological systems involved in the production of goods and services. Activities include the management of resources, the design of processes, and the coordination of the people, organizations, and technology necessary to produce and distribute goods and services. Depending on the degree level, students are prepared to design, manage, perform research on, or teach about productive systems that may be in private industry; in federal, state, or local government; or in public, quasi-public, or nonprofit institutions.

Engineering management is concerned with the knowledge and processes required to manage technically-based enterprises.

UNDERGRADUATE PROGRAM

BACHELOR OF SCIENCE

The program leading to the B.S. degree in Industrial Engineering (IE) is stated earlier under the “School of Engineering” section of this bulletin. This curriculum serves those students whose long-run objective is the planning, design, and implementation of complex economic and technological management systems where a scientific and engineering background is necessary or desirable. The fundamentals of engineering are stressed. The Industrial Engineering program is designed to introduce the student to computers and information systems, economic analysis and modeling, facilities planning and design, management, measurement and control theory, and organization theory and behavior. The objective is to provide the student with systems concepts, an introduction to the role and function of management, methods of analysis, and the human and economic factors that bridge the gap between engineering design and management. To achieve the objective, the student will take several courses in which a group project represents an important part of the course. In these projects, the student has the opportunity to formulate and solve problems and implement solutions for firms and organizations in the surrounding community.

Many students completing the bachelor’s program pursue graduate study in industrial engineering, in other professional schools (law, medicine, or business) or in fields related to industrial engineering such as economics, statistics, or operations research.

For information about an IE minor, see the “School of Engineering” section of this bulletin.
GRADUATE PROGRAMS

The University requirements governing the M.S. and Ph.D. degrees are described in the "Graduate Degrees" section of this bulletin. IEEM, in collaboration with other departments of the University, offers programs leading to the degrees of Master of Science and Doctor of Philosophy. The department also offers a master’s degree in Manufacturing Systems Engineering in cooperation with the Department of Mechanical Engineering and a dual IEEM/EE master’s degree in cooperation with the Department of Electrical Engineering.

Applicants for admission as graduate students in IEEM must submit the results of the verbal, quantitative, and analytical parts of the Graduate Record Examination. The deadline for application is February 1.

Assistantships and Fellowships—A limited number of fellowship and assistantships are awarded each year. Written requests to be considered for fellowships and assistantships should be made by February 1.

MASTER OF SCIENCE

The M.S. degree programs require a minimum of 45 units beyond the equivalent of a B.S. degree at Stanford. All programs represent substantial progress in the major field beyond the bachelor’s degree.

INDUSTRIAL ENGINEERING AND ENGINEERING MANAGEMENT

The M.S. program is designed to prepare students for a professional career and to address the critical technical and managerial needs of the companies that are employing graduates. It provides knowledge of production and distribution systems and the processing of management as applied to technically-based enterprises, as well as additional skills in the student’s chosen concentration.

Background requirements, taken in addition to degree requirements, include engineering economy, probability, and statistical methods. Industrial Engineering course requirements include:

<table>
<thead>
<tr>
<th>Course No. and Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>133. Industrial Accounting</td>
<td>3-4</td>
</tr>
<tr>
<td>203. Organizational Behavior</td>
<td>4</td>
</tr>
<tr>
<td>221. Quality and Operations Management</td>
<td>4</td>
</tr>
<tr>
<td>269. Marketing for Technology-Based Companies</td>
<td>3</td>
</tr>
<tr>
<td>270. Strategy in Technology-Based Companies</td>
<td>4</td>
</tr>
</tbody>
</table>

Additional requirements are three courses within a specified concentration and graduate technical and management electives.

Any student admitted to graduate standing on the basis of a bachelor’s degree in a field other than engineering or science must complete the 45 units of work as outlined above, and the equivalent of 45 units of mathematics, science, and engineering breadth. In addition, the student must comply with the prerequisites for the courses listed on the program for the M.S. degree.

The detailed requirements for the M.S. degree are available from the IEEM office.

ENGINEERING: MANUFACTURING SYSTEMS ENGINEERING

The M.S. in Engineering with a concentration in Manufacturing Systems Engineering addresses the need for engineers who combine management and design skills focused on manufacturing. There is a critical need for individuals who can deal directly with product design for manufacturability; design of integrated manufacturing systems; financial, organizational, and strategic management issues; and elements of automation technology such as computer-aided design, computer-aided manufacturing, robotics, and microprocessor control.

Manufacturing Systems Engineering is a joint effort of the departments of Mechanical Engineering, and Industrial Engineering and Engineering Management. The program seeks highly qualified students with strong educational backgrounds in engineering and provides a demanding curriculum that is strong in both hardware and engineering management. Successful applicants should have a minimum of one year of full-time industrial experience.

The hardware and engineering-design aspects of the program include:
- Ambidextrous Thinking
- Design for Manufacturability
- Integrated Design for Marketability and Manufacturing
- Mechatronic Systems Design
- Microprocessor Applications
- Robotics and Manipulation

The engineering management subjects include:
- Engineering Economy
- Industrial Accounting
- Inventory Control and Production Systems
- Manufacturing Strategy
- Manufacturing Systems Design
- Organizational Behavior and Management
- Quality Assurance and Control

The hardware and engineering design courses provide hands-on training of these functions and the trade-offs that must be made in selecting alternative systems configurations.

The engineering management subjects provide a suitable perspective so that alternative system choices can be appropriately evaluated for their financial, organizational, and production impacts, as well as their impact on the firm’s manufacturing policy.

Beyond the required core, the curriculum allows for elective courses chosen from a broad set of relevant electives providing additional training in engineering management, engineering-design hardware, and aspects of computer science. A student may follow individual interests and tailor the program to meet individual needs.

Students interested in a career focused on manufacturing management and product development may apply for the Dual Manufacturing Systems Engineering and M.B.A. Program. Minimum requirements can be met through six to seven quarters of study if the candidate matriculates in both programs simultaneously.

The detailed requirements for the M.S. in Manufacturing Systems Engineering are available from the IEEM office.

INDUSTRIAL ENGINEERING AND ENGINEERING MANAGEMENT (IEEM) AND ELECTRICAL ENGINEERING (EE)

Admission—For the dual degree, admission to both departments is required, but is coordinated by designated members of both Admissions Committees who make recommendations to the committees of their respective departments.

Advising—Every student in the dual degree program has one adviser in EE, and one in IEEM. In addition, a committee consisting of designated faculty from both departments serves as a review committee on performance and as an overseeing body of ongoing and graduating students of the program. The committee, consisting of designated members of both Admissions Committees as described in the previous section, may initially serve as this overseeing body.

The Dual Degree Program—This dual-degree program enables a small, selective set of graduate students to obtain both the IEEM master’s degree and the EE master’s degree simultaneously. The total number of units required to complete the dual-degree is 72 (versus 90 if the two degrees were pursued separately), and the total number of full-time quarter residency equivalents required to complete the dual degree is six (students with a 50 percent teaching or research assistantship, who average 9 units per quarter, earn .62 of a full quarter of residence).

The units and time to complete requirements are based on the student having the relevant background such as students with work experience. Most students may need to take some of the background courses.

Background Requirements (do not count toward degree units)—

<table>
<thead>
<tr>
<th>Course No. and Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comp. Sci. 106A. Programming Methodology</td>
<td>5</td>
</tr>
<tr>
<td>Stat. 190. Introduction to Statistical Methods (Post Calculus)</td>
<td>5</td>
</tr>
</tbody>
</table>

Common Foundation Requirements (8 units)—

1. A course on statistical process control and design of experiments at the graduate level. Currently, this can be satisfied by Industrial Engineering (IE) 221 Quality and Operations Management (4 units).
2. A course on basic manufacturing processes as specified by the EE adviser. Currently, this can be satisfied by EE 212 (3 units).
3. EE 203, Entrepreneurial Engineer Seminar or IE 292, Technology Management Seminar (1 unit).

**Electrical Engineering Core Requirements** (21 units)—At least 21 units that satisfy the M.S. in Electrical Engineering degree requirements as outlined below:

1. At least three graded EE courses numbered above 200 in one area to provide depth.
2. Three graded EE courses numbered above 200 in an area outside of requirement '1' to provide breadth.
3. Additional units in EE numbered above 200, of which at least 9 are above 300, so that the total of requirements 1, 2, and 3 amounts to at least 21 units.

Part of the 21 units above can be satisfied with up to 3 units of seminars, for example EE 201.

**Industrial Engineering and Engineering Management Core Requirements** (21 to 23 units)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>IB 133. Industrial Accounting</td>
<td>3-4</td>

<td>3</td>
</tr>
<tr>
<td>IE 269. Marketing in Technology-Based Firms</td>
<td>4</td>
</tr>
<tr>
<td>IE 270. Strategy in Technology-Based Firms</td>
<td>4</td>
</tr>
<tr>
<td>One additional 200-level IEEM course</td>
<td>3-4</td>
</tr>
</tbody>
</table>

**Electives** (21 units or more)—Additional units in EE and IEEM and other related departments to meet the total requirement of 72 units.

**DOCTOR OF PHILOSOPHY**

The Ph.D. degree is intended for students who desire careers in teaching and research. The program requires a minimum of three years (nine quarters) of full-time graduate study, at least two years of which must be at Stanford. However, the typical student takes four years after entering the doctoral program to complete all Ph.D. requirements. The Ph.D. degree must include a minimum of 90 quarter units of approved course work beyond the bachelor's degree, not including units for dissertation research. Frequently, a Ph.D. applicant has already completed a master's degree and would therefore be required to complete a minimum of 45 additional units. The Ph.D. program is organized along three lines of research: production systems, organizational behavior, and engineering risk analysis. Doctoral students are required to take a number of courses and to pass a qualifying exam in one of these three fields. Detailed requirements for the Ph.D. program are available from the IEEM office.

Responding to the dramatic changes occurring in manufacturing today, the School of Engineering and the Graduate School of Business have created the Future Professors of Manufacturing (FPM) program. This joint program is designed to train exceptional professors of manufacturing, who will lead U.S. education and research in manufacturing into the next century. More information on this program can be obtained from the IEEM office or the Stanford Integrated Manufacturing Association (SIMA).

**COURSES**

(WIM) indicates that the course meets the Writing in the Major requirements.

**UNDERGRADUATE**

60. Engineering Economy—(Enroll in Engineering 60.)

100. Organizations: Theory and Management—for undergraduates only, with preference to IEEM majors. Survey of classical and modern organization theory, covering the behavior of the individual, the work group, and the organization.

4 units, Au (Eisenhardt) Spr (Hinds)

101. Issues in Technology and Work for a Post-Industrial Economy—Introduces undergraduates in industrial engineering and other engineering disciplines to the study of technology and work, exploring topics of contemporary concern and identifying challenges posed by a post-industrial workplace. Objectives: explore how changes in technology and organization are altering the way we work and live our lives; become acquainted with approaches to studying and designing work; and examine how a more grounded understanding of work and work practices can assist engineers in designing better technologies and better organizations. Representative topics: job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations.

3 units, Spr (Barley)

4 units, Win (Kopczak)

125. Manufacturing Systems Design—(Graduate students see 225) The concepts and techniques of designing and improving productive systems. Emphasis is on the physical and organizational design of high-performance manufacturing systems. Multidisciplinary approach with the use of digital simulation as a tool for evaluating design alternatives. Prerequisites: 100, 121; Engineering-Economic Systems and Operations Research 121. (WIM)

5 units, Spr (Bailey)

133. Industrial Accounting—Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Designed for the user of accounting information and not as an introduction to a professional accounting career. Interpretation and use of accounting information for decision making is stressed.

3-4 units, Au, Sun (Bhimjee)

170. Work, Technology, and Society—(Fulfills the School of Engineering's Technology in Society requirement.) Seminar on work in contemporary society as influenced by rapid technological change. The causes and consequences of the current revolution in work and policies for grappling with resultant problems. Focus is on the U.S., with attention to key trends in selected foreign countries. Topics: new technology in the workplace and its bearing on occupational and organizational changes, industrial relations, worker health and safety, economic competitiveness, women workers, workplace ethics, and innovative public and private policies on work. Limited enrollment. GER: 3B (DR: 9)

4 units, Spr (McGinn)

175. Information Systems—Introduction to the design and use of computer-based information systems. Topics: software and hardware used in information systems, information requirements, database design, information system design, organizational aspects of information systems, and applications of information systems in different industries. Prerequisites: 100; Computer Science 106A, 106B.

4 units, Win (Thonemann)

180. Senior Project—Restricted to IE majors in their senior year. Students participate in a major project in groups of four. Attention to problem identification and definition, emphasizing data collection, synthesizing feasible solutions to real problems, and presentation of results. Prerequisites: 100, 121, 125, 133, 235, 260; Computer Science 106B or X; Engineering 40, 62; Engineering-Economic Systems and Operations Research 121.

5 units, Win (Staff)
191. Directed Study—Directed study on a subject of mutual interest to the student and faculty member. Student must find a faculty sponsor and submit a one-page description of plan.

1 or more units (Staff)

PRIMARILY FOR GRADUATE STUDENTS

203. Organizational Behavior and Management—Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis on the role and related discussion. Enrollment limited to 65 graduate students per section; priority given to IEEM majors.

4 units, Aut (Sutton)

205. Contextual and Organizational Issues in Human-Computer Interaction—Focus is on the contextual issues associated with designing and using computer interfaces and technology, providing insights into, experience with, and ways of understanding issues in work and consumer settings that influence the design of computer interfaces. Team student projects develop skills in: observing individuals and groups of people in context, using models of work and other activity to extend their design capabilities, identifying constraints and tradeoffs on designs within the context of use, and observing and working with people in interdisciplinary design groups. Enrollment limited. Prerequisite: 203 or Computer Science 147, or consent of instructor.

4 units, Spr (Hinds)

220. Management and Organization of Research and Development—The organization of R&D in industry and the problems of the technical labor force. Relevant theoretical perspectives from sociology, anthropology, and management theory on the social and pragmatic issues that surround technical innovation and the employment of scientists and engineers. Possible topics: organization of scientific and technical communities, industrialization of research, nature of scientific and technical work, strategies for fostering innovation, careers of scientists and engineers, and managerial problems characteristic of R&D settings.

4 units, Aut (Barley)

4 units, Win (Kane)

223. Technology and Work—Theory and research on the social implications of technology and technological change for workers at all levels. Alternate conceptions of technology as social phenomenon, approaches to the study of technology in the workplace, reactions of individuals and groups to technological change, the construction of a technology’s social meaning, and the management of technological change. Emphasis is on automation, electronic data processing, and sophisticated microelectronics, including CAD-CAM systems, telecommunication networks, medical imaging technologies, artificial intelligence, and personal computers.

4 units (Barley) given 2000-01

225. Manufacturing Systems Design—(Undergraduates see 125.) The concepts and techniques useful in the initial design and redesign of modern, high-performance manufacturing systems. Multidisciplinary approach considers the design of the physical and organizational aspects of manufacturing systems. Emphasis is on the use of simulation as a tool for design evaluation. Prerequisite: graduate standing in engineering.

4 units, Aut (Jucker)

227. Innovations in Manufacturing—Major trends in innovations in manufacturing as they have evolved over time. Emphasis is on understanding why changes occur in addition to what they entail. Topics: changes in the mode of production, performance objectives, sources of inspiration, factory set-up, work organization, arenas of competition, and information technology. Implications for future design.

4 units (Bailey) given 2000-01

234. Managing to IPO: Control Systems—(Same as Business 319A.) How firms evolve and adapt their control/information systems when changes occur in their markets, technology, competition, and in their own internal capabilities. Emphasis is on the challenges faced by start-up and pre-IPO ventures when designing their control/information systems. Topics: target costing, activity-based management, quality and customer satisfaction, balanced scorecards, competitor cost/pricing analysis, and incentive-system design.

4 units, Spr (Foster)

4 units, Aut (Turki)

236. Introduction to Finance—(Same as Business F221.) The foundations of finance, with applications in corporate finance and investment management. The process of valuation, which is central to many of the major financial decisions made by corporate managers and investors. Topics: criteria for making investment decisions, relationships between risk and return, market efficiency, and the valuation of derivative securities (e.g., options). The major financial instruments issued by corporations including short and long term debt, equity, and convertible securities. Conceptually rigorous; cases illustrate applications of the main concepts. Prerequisites: 133, Engineering 60, and Engineering-Economic Systems and Operations Research 120 or Statistics 116. Recommended: Engineering 62; Statistics 110 or 190.

4 units, Win (Admati)

237. International Investment and Financing—Builds on the concepts in 235, e.g., NPV, capital structure, and cost of capital estimation, and extends these concepts to an international setting, where foreign exchange plays a key role. Topics: exchange rate determination theories, the performance of exchange forecasting models, exchange rate exposure and hedging, international borrowing and capital structure, and international project evaluation. Practical standpoint; however, an understanding of the theory is a necessity in “real world” applications. Prerequisite: 235.

3-4 units, Spr (Turki)

240. Engineering Risk Analysis—The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Four parts: elements of decision analysis; probabilistic risk analysis (fault trees, event trees, etc.); economic analysis of failure consequences (issues of human safety and long-term economic discounting); and case studies (e.g., space, systems, nuclear power plants, liquefied natural gas terminals, and dams). Emphasis is on risk management issues in the public and private sectors. Prerequisites: Statistics 116, Engineering 60, or equivalents.

3 units, Win (Paté-Cornell)

241. Project Course in Engineering Risk Analysis—Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, risk communication, and risk management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Enrollment limited and at discretion of instructor. Prerequisite: 240.

3 units, Spr (Paté-Cornell)
260. Analysis of Production and Operating Systems—Introduction to the design, operation, and control of production systems using mathematical, computational, and modern analytical techniques. Topics: determination of optimal facility location, determination of production lot sizes, optimal timing and sizing of production capacity expansion, and introduction to inventory control. Prerequisites: Engineering 62, Statistics 116.
3 units, Aut (Thonemann)

261. Inventory Control and Production Systems—Topics in the planning and control of manufacturing systems. The functions of inventory, determination of order quantities and safety stocks, alternative inventory replenishment systems, item forecasting, production-inventory systems, materials requirements planning (MRP), Just-in-Time systems, master and operations scheduling, supply chain management, and service operations. Enrollment limited. Prerequisite: Statistics 116 or equivalent.
3 units, Win (Hausman)

262. Supply Chain Management—Definition of a supply chain, coordination difficulties, pitfalls and opportunities in supply chain management, inventory-service tradeoffs, performance measurement and incentives. Supply chain network design, global supply chain management, the manufacturing/distribution interface, supplier management. Design and redesign of products and processes for supply chain management, tools for design, industrial applications, strategic alliances, current industry initiatives. Enrollment limited to IEEM majors. Prerequisite: 260 or 261.
3 units, Spr (Hausman)

263. Service Operations Management—Operations management in the service industries (e.g., banking, transportation, travel and tourism, health, government) and within service functions of manufacturing (e.g., financing, customer service). Topics: design and delivery of services, the measurement of productivity and quality, managing capacity and demand, quality management, reengineering of service delivery processes, management of technology in services, and managing human resources. Prerequisite: Statistics 116. Recommended: Engineering 62.
3 units (Brandeau) given 2000-01

264. Global Project Coordination—Students engage in projects that are global in nature, and which are related to the planning and design of supply chains and product development. Project teams from Stanford and an overseas university work on common projects using telephones, faxes, emails, internet, video-conferencing, face-to-face meetings, etc. As part of the project, students travel to Hong Kong, the Netherlands, or Sweden and Singapore.
3 units, Win (Tabrizi, Kopczak)
Spr (Kosnik)

265. Reengineering the Manufacturing Function—Preference given to undergraduates. Student teams of four to six redesign the manufacturing and distribution system of a medium-sized manufacturer, focusing on the transportation system, inventory policies for a regional warehouse, design of a national distribution system, operational improvements of work flow, layout of the manufacturing plant and redesign of the planning and control system. Redesign is at an operational level consistent with a strategy of integrating the functions of manufacturing and distribution. Modular approach, with each module requiring analytical or game software. Data is provided. Groups meet twice per module with faculty; written report required. Topics: production planning, inventory theory, linear/integer programming, simulation, economic analysis, and applied probability. Modules are integrated via the focus on the customer; group learning is emphasized. Enrollment limited. Prerequisite: senior or graduate standing.
4 units, Spr (Carlson)

266. Management of New Product Development—Techniques of managing or leading the process of new product development that have been found effective. Emphasis is placed on how much control is desirable and how that control can be exercised in a setting where creativity has traditionally played a larger role than discipline. Topics: design for manufacturability, assessing the market, imposing discipline of the new product development process, creating effective development organization, and developing products to hit cost targets.
4 units, Win (Carlson)

267. Information Technology and Supply Chain Management—(Same as Business T372.) Advancements in information technology have enabled major innovations in the re-engineering of industry supply chains, redefining the ways companies operate their supply chains. New ventures have emerged to create values for business partners and the consumers in supply chain integration. How information technologies have advanced supply chain integration and coordination. The dimensions of business and process improvements. New opportunities using supply chain management concepts and emerging technologies. Enrollment limited.
4 units, Spr (Lee)

268. Manufacturing Strategy—For graduate students only; priority given to Manufacturing Systems Engineering. The development and implementation of the manufacturing functional strategy. Emphasis is on the integration of manufacturing strategy with the business and corporate strategies of a manufacturing-based firm. Topics: types of manufacturing technologies and their characteristics, quality management, capacity planning and facilities choice, the organization and control of operations, and determining manufacturing’s role in corporate strategy. Prerequisite: 261 or 260.
3 units, Spr (Carlson)

269. Marketing for Technology-Based Companies—Priority given to IEEM graduate students. Introduction to marketing strategy and execution for technology-based companies in imagination-intensive industries. Topics: market segmentation and selection, positioning, product management, pricing, channels of distribution, marketing communication. Using case studies based on real companies, students learn to diagnose problems and opportunities, make decisions, analyze customers, competitors, channels, economic and ethical issues that affect their decisions, and reality test their recommended approach. Prerequisites: 133, Engineering 60. Recommended: 235.
4 units, Win (Kosnik)

270. Strategy in Technology-Based Companies—For graduate students; priority given to IEEM. Introduction to the basic concepts of strategy, with emphasis on high technology firms. Topics: strategic alliances, standards setting, vertical integration, strategic choice, generic and hypercompetitive approaches, organizational capabilities, and complexity/evolutionary perspectives. Enrollment limited.
4 units, Aut (Eisenhardt)

271. Global Entrepreneurial Marketing—Designed to equip an engineer with the marketing skills needed to launch and lead a high-growth, high-tech venture, cultivating the skills needed to market new products to new customers, using new technology, sometimes in a new company. The marketing challenges facing entrepreneurs who expand internationally early in the life of the company. Learning is by case method, working in teams, and with a field-based entrepreneurial project. Each student writes a strategic thinking paper. Team performance cultivates entrepreneurial leadership and teamwork skills. Prerequisites: 133, Engineering 60. Recommended: 235, 273.
4 units, Spr (Kosnik)

272. Entrepreneurial Finance—Primarily for graduate engineering students. Introduction to the concepts in and around the financing of entrepreneurial companies. Focus is on teaching future general managers how to use financial perspective to make better decisions in entrepreneurial settings, including selecting financial partners, evaluating financing vehicles, and financing companies through all growth stages.
from start-up through initial public offering. Prerequisites: 133, Engineering 60. Recommended: 235.

3 units, Win (Mackenzie)

273. Technology Venture Formation—Open to graduate students interested in high technology entrepreneurship. Emphasis is on how technology ventures are created. Topics: opportunity identification, market assessment, product plans, selling strategies, financing options, and team development. Student teams write and present a business plan. Enrollment limited. Recommended: 133 or equivalent.

4 units, Aut, Spr (Lyons, MacLean)

275. Organizations and Information Systems—For graduate students interested in how information systems impact organizations and how organizations take control of information technology (IT) to gain a competitive edge. Topics: IT strategy, the fit between IT and corporate culture, IT architectural alternatives, changing technologies and organizational learning, the effect of IT on competition, and outsourcing as an offensive strategy. Student teams perform field studies based on situations in which information technology is creating a significant management problem or business opportunity. Case based. Enrollment limited, consent instructor. Prerequisite: 100 or 203.

2-4 units, Aut (Forbes)

279. Technology, Policy, and Management in Newly-Industrializing Countries—(Same as Science, Technology, and Society 279.) Technology is seen as the key to development and prosperity in most parts of the world. Building technological capability in newly-industrializing countries at the national and firm level. What makes technology special, government intervention that affects technology, the concept of technology leader and technology follower environments, the transfer of technology from "leader" countries, indigenous technological capability, human capital, culture and innovation, the role of small firms and new enterprises in technological capability. Managing innovation in firms: how innovation is different in technology-followers, organizing for shop-floor innovation, building an innovation culture, the special role of R&D in followers, the role of design, technology strategy for followers. Cases from Korea, India, Brazil, Singapore, and other NICs.

1 or more units (Staff)

291. Directed Study—Directed study on a subject of mutual interest to student and faculty member. Prerequisite: find a faculty sponsor.

1 or more units (Staff)

1 unit, Aut (Eisenhardt)

Win (Kosnik)

Spr (Byers)

Aut, Win, Spr (Staff)

302. Doctoral Research Seminar in Organizations—Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

3 units, Spr (Bailey)

321. Doctoral Research Seminar in Work, Technology, and Organizations—Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

3 units (Barley) given 2000-01

322. Organizations as Social Networks—Social structures can be investigated as social networks. Organizational and inter-organizational structures may be analyzed as patterned relationships among individuals, groups, and other organizations. Such networks appear as predictors of a variety of social dynamics (attitude similarity, the diffusion of innovation, turnover, and the allocation of organizational resources). Methods for collecting and analyzing network data include graph theory, sociometry, clique detection, centrality analysis, blockmodeling, and the quadratic assignment procedure. Readings of recent published research, actual data sets, and relevant computer programs. Prerequisites: one or more courses in organizational behavior, sociology, psychology, anthropology, or political science. Recommended: course in statistics or research methods.

3 units (Barley) given 2000-01

323. Doctoral Seminar on Ethnographic Research—Designed for graduate students; upper-level undergraduates with consent of instructor. Ethnographic interviewing and participant observation is emphasized. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside of class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor.

8 units (Barley) given 2000-01

324. Creativity in Organizations—Draws on organizational behavior, psychology, sociology, engineering, history, economics, and anthropology to explore the meaning, determinants, and effects of creativity in organizations. Theory and research on individual creativity; creativity as a social process. Focus is on understanding, building, and testing scholarly theory about creativity. Enrollment limited to 12. Prerequisites: doctoral standing and completion of Psychology 212 and Sociology 360.

3 units, Win (Sutton)

325. Remote and Distributed Work—Prerequisite: consent of instructor.

3 units (Hinds) given 2000-01

326. Strategy and Organization Doctoral Research Seminar—Review of current research at the interface between strategy/business policy and organization theory. Topics: top management teams and strategic decision making processes; strategic boundary issues (e.g., strategic alliances, vertical integration, and diversification); reward structure and board relationships; evolution of strategies, technology, and populations of organizations. Enrollment limited and at the discretion of instructor. Prerequisite: Sociology 260 or equivalent.

4 units, Win (Eisenhardt)

340. Doctoral Seminar in Risk Analysis—Limited to doctoral students. Doctoral study including reading/review of the literature in the fields of engineering risk assessment and risk management. New methods and topics, emphasizing probabilistic methods and decision analysis. Applications to risk management problems involving the technical, economic, and organizational aspects of engineering system safety. Possible topics: treatment of uncertainties, learning from near misses, and use of expert opinions.

3 units, Spr (Paté-Cornell)

3 units (Carlson) alternate years, given 2000-01

363. Advanced Models in Management Science—Primarily for doctoral students. Theoretical treatment of advanced models for procurement, transportation, storage, and distribution problems in production systems. Topics: logistics models for global supply chain management, distribution network design, routing and routing/scheduling models,
network models, and logistics management. Prerequisites: 260 or equivalent, Engineering-Economic Systems and Operations Research 121 or equivalent.

3 units (Thoneman) alternate years, given 2000-01

364. Single and Multi-Location Inventory Models—Theoretical treatment of the management and control problems of inventory systems in production and distribution, with models for single and multi-location systems. Emphasis is on operating characteristics, performance measures, and optimal operating and control policies. Prerequisite: Statistics 217 or equivalent.

3 units (Spr, Hausman) alternate years, not given 2000-01

3 units (Brandeau) given 2000-01

367. Advances in Integrated Supply Chain Management—The integration and coordination of material, information, and financial flows in a supply chain that spans suppliers, manufacturers, distributors, logistics providers, and customers. Recent advances prepare students for research. Topics: information distortion, postponement, centralized vs. decentralized control, vendor managed inventory, logistic restructuring, incentive issues, manufacturer and retailer interface, replenishment coordination, and value of information.

3 units, Spr (Lee)

390. IEEM Doctoral Research Seminar—Presentations of current research papers by speakers from inside and outside the department. Ph.D. students must attend during every quarter in residence. No letter grades or units given.

Aut, Win, Spr (Staff)

MATERIALS SCIENCE AND ENGINEERING

Chair: John C. Bravman
Associate Chair: Bruce M. Clemens
Associate Professor: Reinhold H. Dauskardt
Assistant Professors: Paul C. McIntyre, Charles B. Musgrave, Shan X. Wang
Professor (Research): Robert S. Feigelson
Curtesy Professors: Curtis W. Frank, James S. Harris, James D. Plummer, Jonathan F. Stebbins
Curtesy Associate Professor: Huajian Gao
Acting Assistant Professor: Jonathan Dean

The Department of Materials Science and Engineering is concerned with the relation between the structure and properties of materials, factors that control the internal structure of solids, and processes for altering the structure and properties of solids. It brings together in a unified discipline the developments in physical metallurgy, ceramics, and the physics and chemistry of solids. The undergraduate program, described under the “School of Engineering” section of this bulletin, provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable students are encouraged to take at least one year of graduate study to extend their course work. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines. Graduate programs lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy.

FACILITIES

The department is based in the Thomas F. Peterson Engineering Laboratory (Building 550). Offices for the chair and most of the faculty, for the administrative and technical staff, and for most graduate students are located there, as are a number of lecture and seminar rooms. Facilities for teaching and research are also available within the Peterson Lab, including equipment for electrical measurements; mechanical testing of bulk and thin film materials; fracture and fatigue of advanced materials; metallurgy: optical, scanning, transmission electron microscopy and atomic force microscopy; UHV sputter deposition; vacuum annealing treatments; wet chemistry; and x-ray diffraction. The Peterson Lab is also the home for the Center for Research on Information Storage Materials (CRISM) with corresponding facilities for magnetic measurements. The Rapid Prototyping Laboratory (RFL), housing material deposition and removal stations, is a joint facility with Mechanical Engineering, and is housed next to the Peterson Labs in Building 530. The department maintains two microcomputer clusters for its students, one with a number of Macintosh computers, and the other with five HP and DEC workstations. Both clusters are linked with the world-wide Internet network.

Depending on the needs of their program, students and faculty also conduct research in a number of other departments and independent laboratories. Chief among these are the Center for Integrated Systems (CIS), the Center for Materials Research (CMR), and the Stanford Synchrotron Radiation Laboratory (SSRL).

The Center for Integrated Systems (CIS) is a laboratory joining government and industrially funded research on microelectronic materials, devices, and systems. It houses a 10,000 square foot, class 100 cleanroom for Si and GaAs integrated circuit fabrication; a large number of electronic test, materials analysis, and computer facilities; and office space for faculty, staff, and students. In addition, CIS provides start-up research funds and maintains a “Fellow-Mentor” program with industry.

For information on CMR and SSRL, see the “Center for Materials Research” and “Stanford Synchrotron Radiation Laboratory” sections of this bulletin.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

The undergraduate program provides training in solid state fundamentals and in physical metallurgy. Students desiring to specialize in this field during their undergraduate period may do so by following the curriculum outlined in the “School of Engineering” section of this bulletin as well as the School of Engineering Undergraduate Handbook. The University’s basic requirements for the bachelor’s degree are discussed in the “Undergraduate Degrees” section of this bulletin. Electives are available so that students with broad interests can combine materials science and engineering with work in another science or engineering department.

For information about an MSB minor, see the “School of Engineering” section of this bulletin.

COTERMINAL B.S./M.S. PROGRAM

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminial program should apply for entrance after the beginning of the eighth quarter of undergraduate work and before the end of the eleventh quarter. The application must give evidence that the student possesses the potential for strong academic performance at the graduate level. Each application is evaluated by the department’s Admissions Committee. Scores from the Graduate Record Exam (GRE) General Test must be reported before action can be taken.
on an application. Materials science is a highly integrated and interdiscipli- 
disciplinary subject, and so applications from students of any engineering 
course undergraduate major are encouraged. Information forms per-
taining to the coterminal program may be obtained from the department’s 
Student Resource Center, room 550B, or from Degree Progress in the 
Registrar’s Office, Old Union. Students entering the coterminal program 
and receiving both their B.S. and M.S. degree in Materials Science and 
Engineering should also see the “Master of Science for MS&E Cotermi-
nal Students” section below.

GRADUATE PROGRAMS

Graduate students can specialize in any of the areas of materials sci-
ence and engineering. In collaboration with other departments of the 
University, additional special programs are available.

MASTER OF SCIENCE

The University’s basic requirements for the M.S. degree are discussed in the “Graduate Degrees” section of this bulletin. The following are specific departmental requirements.

The Department of Materials Science and Engineering (MSE) re-
quires a minimum of 45 units for a master’s degree. Up to 9 units of work 
done as a graduate student at another institution may sometimes be trans-
ferred to give unit credit toward the electives used in acquiring a Stanford 
degree. Substitution of courses taken for specific Stanford courses is 
approved on the Master’s Program Proposal. Master’s Program Propo-
sals should be filled out, signed by the student’s academic adviser, 
and submitted to the department’s Student Services Coordinator by the 
end of the first week of the students’ second quarter of study. (Gener-
ally, this means by the end of the first week of Winter Quarter.) Final chang-
es to the master’s program must be submitted no later than one academic 
quarter prior to degree conferral.

Degree requirements (for students entering after September 1, 1997) 
are as follows:

1. A minimum of 33 units of MSE course work, including cross-listed courses, taken for a letter grade. The following are limitations:
   a) A maximum of 9 units of cross-listed courses may be used in fulfilling this requirement.
   b) One-unit seminars and research units cannot be used to fulfill this requirement.

2. Lab courses MSE 171, 172, 173 (which count toward the required 33 
   units of MSE course work).

Note: students who have had equivalent lab courses at other uni-
versities, equivalent practical experience, or have a materials related 
degree or background are expected to file a petition with the depart-
ment’s Student Services Coordinator to have this requirement waived.

3. Six courses selected from MSE 152, 215, and 201 through 209. These 
   “core” courses count towards the required 33 units of MSE course work, 
   however:
   a) MSE 152 is not an option for students with materials science 
       undergraduate degrees.
   b) MSE 251 may not be used to fulfill this “core” requirement if 
       the student has a materials science undergraduate degree, 
       although it may be applied towards the required 33 units of 
       MSE course work.

4. Approved course electives to bring total units to 45. Of the 12 units 
   of elective courses:
   a) Nine of the 12 units must be taken for a letter grade.
   b) A maximum of 3 units may be seminars.
   c) If writing a Master’s Research Report, a minimum of 6 and a 
      maximum of 9 units of MSE Research units may be used.
   d) A maximum of 3 units may be undergraduate units (offered at 
      Stanford University).
   e) A maximum of 5 units may be used for a foreign language 
      course (not including any remedial English courses).
   f) The combination of seminar, undergraduate, and language units may not exceed 6 units total.

5. A minimum grade point average (GPA) of 2.75 for course work at 
   Stanford.

All proposed degree programs are subject to approval by the depart-
ment’s Academic Degree Committee which has responsibility for assur-
ing that each proposal is a technically coherent program.

PETITION PROCESS FOR TRANSFER FROM M.S. TO Ph.D. 
DEGREE PROGRAM

When a student is admitted to the graduate program, he or she is ad-
mitted specifically into either the M.S. or the Ph.D. program. Admission 
to the Ph.D. program is required for the student to be eligible to work 
towards the Ph.D. degree. A student in the M.S. program can petition to 
be admitted to the Ph.D. program by filing an M.S. to Ph.D. Transfer 
Petition.

This petition must be accompanied by a one-page statement of pur-
pose stating the reasons why the student wishes to transfer to the Ph.D. 
program, and two letters of recommendation from members of the 
Stanford faculty, including one from the student’s prospective adviser 
and at least one from an MSE faculty member belonging to the Academ-
ic Council.

The M.S. to Ph.D. Transfer Petition is due to the Student Services 
Coordinator by the end of the second week of Spring Quarter during the 
student’s first year in the M.S. program. Only students enrolled in the 200 
series core-course sequence are eligible to petition, and a grade point 
average (GPA) of 3.25 or better in the first two quarters of the core-course 
sequence is required.

Transferring to the Ph.D. program is a competitive process and only 
fully qualified M.S. students are admitted. The Admissions Committee 
and the department chair consider the student’s original application to 
the graduate program as well as the material provided with the transfer 
petition. Decisions regarding these petitions are normally available by 
the fourth week of Spring Quarter.

MASTER’S RESEARCH REPORT

Students wishing to take this option must submit a program of study, 
including not more than 9 and no less than 6 MSE research units, to the 
department for approval at least two quarters before the degree is grant-
ed. The total combined units of MSE research units, seminars, language 
courses, and undergraduate courses cannot exceed 12. If a master’s re-
search report is not to be submitted, units of MSE 200 cannot be applied 
to the department’s requirement of 45 units for the master’s degree.

The report must be approved by two faculty members. One faculty 
member is the student’s research adviser. The other faculty member is 
assigned by the department. Three copies of the report (one copy for each 
approving faculty member and the department library), in final form and 
signed by two faculty members, must be in the hands of the department’s 
Student Services Coordinator one week prior to the beginning of the fi-
nal examination period of the final quarter of the program. The report is 
not an “official” University thesis but rather is intended to demonstrate 
to the department faculty an ability to conduct and report directed re-
search. The Master’s Report is not appropriate for students wishing to 
petition for the Ph.D. program. Refer to the Materials Science and En-
gineering Student Handbook for more information and further clarifica-
tion concerning this report.

M.S. FOR MSE COTERMINAL STUDENTS

The University’s basic requirements for the M.S. degree are discussed in the “Graduate Degrees” section of this bulletin. The following are specific departmental requirements.

The Department of Materials Science and Engineering (MSE) re-
quires a minimum of 45 units for a master’s degree. Students who have 
received or are currently working towards a B.S. degree in Materials 
Science and Engineering from Stanford and are pursuing a M.S. in Ma-
terials Science and Engineering should follow the requirements below 
in lieu of those stated in the “Master of Science” section listed above.

183
Master’s Program Proposal forms should be filled out, signed by the students’ academic adviser, and submitted to the department’s Student Services Coordinator by the end of the first week of the students’ second quarter of study. (Generally, this means by the end of the first week of Winter Quarter.) Final changes to the master’s program must be submitted no later than one academic quarter prior to degree conferral.

Degree requirements (for students who entered after September 1, 1997) are as follows:

1. A minimum of 21 units of MSE course work taken for a letter grade. Crosslisted courses, 1-unit seminars, research units and/or MSE 400 cannot be used to fulfill this requirement. These 21 units of MSE courses must include:
   a) The three remaining core classes (MSE 191/201-199/209) not taken for the B.S. degree in MSE.
   b) Twelve units of non-crosslisted MSE 300 level courses (not including 300).
2. Approved course electives to bring the total units to 45. Of the 24 units of elective courses:
   a) Twenty-one of the 24 units must be taken for a letter grade.
   b) A maximum of 3 units may be seminars.
   c) If writing a Master’s Research Report, a minimum of 6 and a maximum of 9 units of M.S. research units (MSE 200) may be used.
   d) A maximum of 6 units may be undergraduate units.
   e) A maximum of 5 units may be used for a foreign language course (not including any remedial English courses).
   f) The combination of seminar, undergraduate, and language units may not exceed 9 units total.
   g) The combination of research*, seminar, undergraduate, and language units may not exceed 15 units total.
3. A minimum grade point average (GPA) of 2.75 for course work at Stanford.

* Research units are only allowed when writing a Master’s Research Report.

See the Master’s Research Report section listed above, noting the additional unit privileges allotted to coterminal students. See the department’s Student Services Coordinator for more information and/or clarification on what constitutes an approved course.

ENGINEER

The University’s basic requirements for the degree of Engineer are outlined in the “Graduate Degrees” section of this bulletin.

A student wishing to enter the Engineer program must have completed the substantial equivalent requirements of the M.S. in Materials Science and Engineering, and must file with the department’s Student Services Coordinator a petition requesting admission to the program as well as stating the type of research to be done and the professor who will be supervising. Once approved, the Application for Candidacy must be submitted to the department’s Student Services Coordinator by the end of the students’ second quarter of study. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

A program should include 9 units of graduate non-crosslisted courses in materials science (exclusive of research units, seminars, colloquia, MSE 400—Participation in Teaching, and so on) beyond the requirements for the M.S. degree, and additional research or other units to meet the 36-unit University minimum requirement. A grade point average (GPA) of 3.0 must be maintained for all course work taken at Stanford.

Completion of an acceptable thesis is required. The Engineer thesis must be approved by two Academic Council faculty members, one of whom must be a member of the department, and submitted in triplicate. A petition is required for non-Academic Council members.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees” section of this bulletin.

Degree requirements (for students entering after September 1, 1996) are as follows:

1. Complete the requirements for the M.S. in Materials Science and Engineering (MSE) unless receiving residency credit for completing a master’s degree elsewhere*.
2. Pass a departmental oral qualifying examination the second year after admission. A GPA of 3.25 from the nine core classes (201-209) is required for admission to the Ph.D. qualifying exam. Students whose GPA is between 3.00 and 3.25 may petition for possible admission to the exam. Students who have passed the departmental oral examination are required to complete the Application for Candidacy for the Ph.D. degree by the end of the quarter in which they pass the exam. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.
3. Submit a program consisting of at least 72 units, which contains minimum of 12 technical non-crosslisted MSE course units beyond the minimum requirement of MSE courses for the M.S. degree (exclusive of research units, seminars, colloquia, MSE 400—Participation in Teaching, and so on). These MSE courses must be taken for a letter grade. The remaining units may consist of research, seminar, language classes, and so on. The program for the M.S.* and Ph.D. combined must include the following:
   a) MSE 201 through 209 (27 units), except for students who have had equivalent courses at other universities and have successfully petitioned out.
   b) A minimum of 12 units of 300-level courses from the MSE faculty (not including MSE 300).
   c) A minimum of 12 units of courses taken from one of the following lists of Advanced Specialty Courses (see below). Some and/or all of these courses can be the same as the courses used to meet requirement ‘3b’ above; however, the units may not be counted twice.
4. Maintain a GPA of 3.0 for all course work taken as a graduate student at Stanford.
5. Present the result of the dissertation at a department seminar immediately preceding the University Oral examination.

ADVANCED SPECIALTY COURSES

Materials Characterization: Elect. Engr. 329, 331; MSE 320, 321, 322, 323, 324, 325

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AN) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

PRIMARILY FOR UNDERGRADUATES

50. Introductory Science of Materials—(Enroll in Engineering 50)
   4 units, Win (Brauman)
   Spr (Sinclair)

100. Undergraduate Independent Study—Independent study in materials science under supervision of a faculty member.
   1-3 units, any quarter (Staff)

150. Undergraduate Research—Participation in a research project.
   3-6 units, any quarter (Staff)
151. Microstructure and Mechanical Properties—For undergraduates; see 251. Prerequisite: Engineering 50 or equivalent.
3 units, Aut (Dauskardt)

3 units, Spr (McIntyre)

159Q. Stanford Introductory Seminar: Research in Japanese Companies—Preference to sophomores. The home-campus equivalent of the course taught at Kyoto. Knowledge from this research and company visits is evaluated in a seminar/discussion setting. Lecture/discussion on the structure of a Japanese company from the point-of-view of Japanese society. Visiting researchers from Japanese companies, with brief presentations and extensive question and answer periods, explore the Japanese research ethic.
3 units, Spr (Sinclair)

3 units, Aut (Doan)

2 units, Win (Doan)

163. Materials Science Lab III—For undergraduates. Lab on experimental techniques for the study of the mechanical properties of materials, including fracture toughness testing of metallic materials, ductile-to-brittle transition curves, fracture of ceramics using indentation techniques, and effects of grain size on yielding and strain hardening. Prerequisites: 198/208, 151/251, or equivalent.
2 units, Spr (Nix)

169Q. Stanford Introductory Seminar: Issues in Science and Christianity—Preference to sophomores. Insights as provided by modern science and the Christian perspective, and ways to integrate them. Seven patterns that have been used in the effort to describe the interaction between them. Consideration of contemporary issues such as creationism vs. evolution, determinism vs. free will, issues at the beginning and ending of life, and responsibility for the environment.
3 units, Win (Bube)

170. Materials Selection in Design—For undergraduates; see 270. Prerequisites: Engineering 14 and 50 or Mechanical Engineering 111.
3 units, Win (Prinz)

171. Materials Science Lab I—For graduates; see 161. Prerequisite: Engineering 50 or equivalent.
2 units, Aut (Doan)

172. Materials Science Lab II—For graduates; see 162. Prerequisite: 193/203.
2 units, Win (Doan)

173. Materials Science Lab III—For graduates; see 163. Prerequisites: 198/208, 151/251, or equivalent.
2 units, Spr (Nix)

179Q. Stanford Introductory Seminar: Materials in Sports—Preference to sophomores. Introduction to materials science using sporting equipment as a vehicle to highlight material properties, performance, and selection criteria. The classes of material, and the properties relevant to sporting equipment performance. Examples from modern sporting equipment (golf clubs, tennis rackets, skis, and bicycles) highlight the relationship between material properties and product performance.
3 units, Spr (Clemens)

191. Mathematical and Computational Methods in Materials Science—For undergraduates; see 201. Prerequisite: familiarity with ordinary differential equations.
4 units, Aut (Staff)

192. Solid State Thermodynamics—For undergraduates; see 202. Prerequisite: physical chemistry or introductory thermodynamics.
4 units, Aut (Musgrave)

193. Atomic Arrangements in Solids—For undergraduates; see 203.
4 units, Aut (Sinclair)

194. Phase Equilibria—For undergraduates; see 204. Prerequisite: 192/202.
4 units, Win (McIntyre)

195. Waves and Diffraction in Solids—For undergraduates; see 205. Prerequisite: 193/203 or consent of instructor.
4 units, Win (Clemens)

196. Imperfections in Crystalline Solids—For undergraduates; see 206. Prerequisite: 193/203.
4 units, Win (Nix)

197. Rate Processes in Materials—For undergraduates; see 207. Prerequisites: 191/201, 192/202, 194/204.
4 units, Spr (Clemens)

198. Mechanical Properties of Materials—For undergraduates; see 208. Prerequisites: 193/203, 196/206.
4 units, Spr (Dauskardt)

199. Electrical and Magnetic Properties of Solids—For undergraduates; see 209. Prerequisite: 193/205 or equivalent.
4 units, Spr (Wang)

PRIMARILY FOR GRADUATES

200. Master’s Research—Participation in a research project.
1-15 units, any quarter (Staff)

3 units, Aut (Staff)

3 units, Aut (Musgrave)
203. Atomic Arrangements in Solids—Atomic arrangements in perfect and imperfect crystalline solids, defect chemistry, and elements of formal crystallography, including development of point groups and space groups.

3 units, Aut (Sinclair)

3 units, Win (McIntyre)

205. Waves and Diffraction in Solids—The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell’s equations. Diffraction intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor.

3 units, Win (McIntyre)

3 units, Win (Nix)

3 units, Spr (Clemens)

3 units, Spr (Dauskardt)

209. Electrical and Magnetic Properties of Solids—Introduction to the electronic, magnetic, optical, and ferroelectric properties of solids. Emphasis is on concepts and models of phonons and electronic energy bands as applied to metals, semiconductors, magnetic materials, and insulators. Elementary quantum and statistical mechanics concepts are utilized. Prerequisite: 195/205 or equivalent.

3 units, Spr (Wang)

1-15 units, any quarter (Staff)

227. Scattering Physics—(Enroll in Applied Physics 196/218.)

3-4 units, Spr (Greven)
313. Principles of Ceramics Processing—Fundamental description of the unit process operations used to fabricate polycrystalline ceramic components. Topics: grain growth, solid state and liquid phase sintering, drying, ceramic forming processes, beneficiation, introductory rheology, particle packing, size/shape effects, influence of processing additives, powder synthesis through solid state reactions and wet chemical methods. Prerequisites: 204 and 207, or their equivalents.

3 units (McIntyre) alternate years, given 2000-01

315. Polymer Physics—(Enroll in Chemical Engineering 460.)
3 units (Frank) alternate years, given 2000-01

317. Advanced Integrated Circuit Fabrication—(Enroll in Electrical Engineering 311.)
3 units, Spr (Saraswat)

318. Integrated Circuit Fabrication Laboratory—(Enroll in Electrical Engineering 410.)
3-4 units, Win (Saraswat)

319. Electron and Ion Beams for Semiconductor Processing—(Enroll in Electrical Engineering 217.)
3 units, alternate years, given 2000-01

3 units (Sinclair) alternate years, given 2000-01

321. Transmission Electron Microscopy—Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Prerequisite: 193/203, 195/205, or equivalent.
3 units (Sinclair) alternate years, given 2000-01

323. Thin Film and Interface Microanalysis—The science and technology of a variety of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids.
3 units, Spr (Kelly)

324. Selected Topics in Thin Film Microcharacterization—Case study characterizing materials, defining problems in characterizing surfaces or thin films, carrying out analyses of relevant samples, and reporting the results. Students operate modern electron, ion, and x-ray probe instruments to study samples. Methodology for approaching characterization problems; experience in interpreting and presenting experimental results. Emphasis is on the application of theoretical measurement capabilities to practical problems, and the capabilities and limitations of modern techniques. Topics: choosing the appropriate techniques, analytical pitfalls, quantitative analysis, effects of noise and other uncertainties on analytical precision. Enrollment limited. Prerequisite: 323 or consent of instructor.
3 units (Kelly) alternate years, given 2000-01

325. X-Ray Diffraction—Diffraction theory and its relationship to structural determination in solids. Focus is on applications of x-rays; concepts can be applied to neutron and electron diffraction. Topics: Fourier analysis, kinematic theory, Patterson functions, diffraction from layered and amorphous materials, single crystal diffraction, dynamic theory, defect determination, surface diffraction, techniques for data analysis, and determination of particle size and strain. Prerequisites: 193/203, 195/205.
3 units (Clemens) alternate years, given 2000-01

327. Scattering Physics—(Enroll in Applied Physics 218.)
3 units, Spr (Greven)

3 units, Aut (McIntyre)

332. Photoelectronic and Photovoltaic Materials and Devices—Phenomena involving the interaction between light and electrons in semiconductors. Photoconductivity, recombination, defect analysis, grain boundary effects, amorphous semiconductors, photovoltaic effects and current photovoltaic research, and photoeffects in quantum wells and superlattices. Prerequisite: 209 or equivalent.
3 units (Bube) alternate years, given 2000-01

334. Basic Physics for Solid State Electronics—(Enroll in Electrical Engineering 228.)
3 units, Aut (Miller)

335. Properties of Semiconductor Materials—(Enroll in Electrical Engineering 327.)
3 units, Win (J. Harris)

336. Physics of Advanced Semiconductor Devices—(Enroll in Electrical Engineering 328.)
3 units, Spr (J. Harris)

341. Principles and Models of Semiconductor Devices—(Enroll in Electrical Engineering 216.)
3 units, Aut (J. Harris)

342. The Electronic Structure of Surfaces and Interfaces—(Enroll in Electrical Engineering 329.)
3 units, alternate years, given 2000-01

344. Solid-State Sensors and Actuators—(Enroll in Electrical Engineering 312.)
3 units (Kovacs)

345. Advanced VLSI Devices—(Enroll in Electrical Engineering 316.)
3 units, not given 1999-2000

3 units, Spr (White)

348. Principles of Magnetic Recording—Fundamental understanding and applications of magnetic recording. Read and write processes, inductive and MR and GMR heads, thin film and particulate media, medium and head noise, head-media interface. Technology trends and recording system issues introduced. Prerequisite: 347 or equivalent or consent of instructor.
3 units, Aut (Wang)
349. Introduction to Information Storage Systems—(Enroll in Electrical Engineering 335.)
3 units, Win (Wang)

350. Micromechanics—Use of the theory of elasticity to discuss fields of dislocations, inclusions, inhomogeneities, and their interactions in deformable solids. Applications to the microscopic foundations of macroscopic plasticity, the effects of strain energy on morphologies associated with phase transformations, and the determination of "effective" properties of composite media. Prerequisite: any brief introduction to the theory of elasticity, or consent of instructor.
3 units (Barnett) not given 1999-2000

351. Microstructural Design of Advanced Materials and Composites—Strategies for the control of mechanical properties through microstructural design in a range of engineering materials and their composites. Emphasis is on a fracture mechanics description of strengthening and toughening methods in advanced ceramics and various composites. The structural reliability of brittle materials systems and their relationship to microstructure and processing in terms of fracture statistics, and long-term properties in terms of subcritical crack-growth processes with examples and applications, including cyclic fatigue and high-temperature creep of metals and ceramics. Prerequisites: basic understanding of materials microstructure, mechanical properties, and fracture mechanics; 251 and 358, or equivalents.
3 units, Spr (Dauskardt)

352. Stress Analysis of Thin Films and Layered Composite Media—Introduction to methods of stress analysis of layered dissimilar media, including thin films deposited on substrates, composite laminates, and stratified anisotropic elastic materials based on techniques pioneered by Stroh. Stress states generated by thermal and elastic mismatch and local stress concentrations at interfacial cracks or corners with applications to integrated circuit devices, aircraft materials, and geophysical media. Prerequisites: introductory course in strength of materials or the theory of elasticity, some familiarity with matrix algebra.
3 units (Barnett) alternate years, given 2000-01

3 units, Spr (Nix) alternate years, not given 2000-01

354A. Theory and Applications of Elasticity—(Enroll in Mechanical Engineering 240A.)
3 units, Win (Gao)

354B. Introduction to Fracture Mechanics—(Enroll in Mechanical Engineering 240B.)
3 units, Spr (Gao)

355. Time-Dependent Plasticity—Theories and mechanisms of creep. Temperature and strain rate effects on the plastic flow of solids. The relation of high temperature strength and ductility of materials to structure. Prerequisite: 198/208.
3 units (Nix) alternate years, given 2000-01

356. Fatigue Design and Analysis—(Enroll in Mechanical Engineering 245.)
3 units, Win (Nelson)

3 units, Win (Dauskardt)

359. Crystalline Anisotropy—Introductory matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetostriction, and thermodynamics, following a treatment at the level of Nye's text. Homework sets use Mathematica™.
3 units (Staff) alternate years, given 2000-01

360. Techniques of Failure Analysis—(Enroll in Aeronautics and Astronautics 252.)
2 units, Spr (Ross)

361. Mechanics of Composites—(Enroll in Aeronautics and Astronautics 256.)
3 units, Win (Springer)

400. Participation in Materials Science Teaching—Can be repeated for credit.
1-3 units, Aut, Win, Spr (Staff)

403. Frontiers in Interdisciplinary Biosciences—(Same as Chemical Engineering 459.)
1 unit, Aut, Win, Spr (Spudich, Robertson, Chu, Mobley)

405. Seminar in Applications of Transmission Electron Microscopy—Can be repeated for credit. (AU)
1 unit, Aut, Win, Spr (Sinclair)

MECHANICAL ENGINEERING

Chair: Ronald K. Hanson
Associate Chair of Student Services: M. Godfrey Mungal
Associate Chair for Design and Manufacturing: Mark R. Cutkosky
Division Chairs: Thomas P. Andriacchi, Dennis R. Carter (co-chairs; Biomechanical Engineering), Thomas Hughes (Mechanics and Computation); (the Design Division, and the Flow Physics and Computation Division operate without a chair), Mark Cappelli, Thermosciences Division
Laboratory Directors: David W. Beach (Program Director, Manufacturing Systems Engineering and Product Realization Laboratory), J. Edward Carrery (Smart Product Design Laboratory), Mark Cutkosky (Manufacturing Sciences Lab and Manufacturing Models Laboratory), John K. Eaton (Heat Transfer and Turbulence Mechanics), Larry J. Leifer (Center for Design Research and Stanford Learning Lab), Reginald E. Mitchell (High Temperature Gasdynamics), Parviz Moin (Center for Turbulence Research), Friedrich B. Prinz (Rapid Prototyping Laboratory), William C. Reynolds (Center for Integrated Turbulence Simulations)

The programs in the Department of Mechanical Engineering (ME) are designed to provide background for a wide variety of careers. The discipline is very broad, but is generally understood to emphasize an appropriate mix of applied mechanics, biomechanical engineering, computer simulations, design, and energy science and technology. Graduates at all degree levels have traditionally entered into energy industries, product manufacturing industries, transportation, government laboratories and agencies dealing with these problems, and a variety of academic positions.

Since mechanical engineering is a broad discipline, the undergraduate program can be a springboard for graduate study in business, law, medicine, political science, and other professions where a good understanding of technology is often important. Both undergraduate and graduate programs provide excellent technical background for work in biomechanical engineering, environmental pollution control, ocean engineering, transportation, and on other multidisciplinary problems that concern our society. Throughout the various programs, considerable emphasis is placed on developing systematic procedures for analysis, effective communication of one’s work and ideas, practical and aesthetic aspects in design, and responsible use of technology. This can provide a student with an approach and a philosophy of great utility, irrespective of an ultimate career.

The department has five divisions: Biomechanical Engineering, Design, Flow Physics and Computation Division (jointly with the Department of Aerospace and Astronautics), Mechanics and Computation, and Thermosciences. Each maintains its own labs, shops, and offices.

The Biomechanical Engineering (BME) Division has teaching and research activities which focus primarily on musculoskeletal biomechanics, cardiovascular biomechanics, and rehabilitation engineering. Research in other areas including hearing, ocean, plant, and vision biomechanics exist in collaboration with associated faculty in biology, engineering, and medicine. The Biomechanical Engineering Division has particularly strong research interactions with the Mechanics and Computation Division, the Design Division, and the departments of Functional Restoration, Surgery, and Radiology in the School of Medicine.

The Design Division emphasizes cognitive skill development for creative R&D in the design process and is specifically concerned with automatic control, computer-aided design, creativity, design aesthetics, design research, experimental stress analysis, fatigue and fracture mechanics, finite element analysis, human factors, kinematics, manufacturing systems, microcomputers in design, micro-electromechanical systems (MEMS), optimization, and robotics. The Design Division offers undergraduate and graduate programs in Product Design (jointly with the Department of Art and Art History). The division offers a master’s pro-
Computational and experimental work is also conducted in various facilities throughout the School of Engineering and the School of Medicine, particularly the Advanced Biomaterials Testing Laboratory of the Department of Materials Science and Engineering, the Orthopedic Research Laboratory in the Department of Functional Restoration, and the Vascular Research Laboratory in the Department of Surgery. In collaboration with the School of Medicine, biologically and clinically oriented work is conducted in various facilities throughout the Stanford Medical Center and the Veterans Administration Palo Alto Health Care System.

The Design Division has facilities for lab work in experimental mechanics and experimental stress analysis. Additional facilities, including MTL's electrohydraulic materials test systems, are available in the Solid Mechanics Research Laboratory. Design Division students also have access to Center for Integrated Systems (CIS) and Ginzton Lab microfabrication facilities.

The division also maintains the Product Realization Laboratory, a teaching facility offering students integrated experiences in market definition, product design and prototype manufacturing. The PR Lab provides coaching, design and manufacturing tools, and networking opportunities to students interested in product development. The ME 210/310 Design Project Laboratory has facilities for CAD, assembly, and testing of student designs by master's and student engineers. These design projects are part of the CDR Manufacturing Sciences Lab. The Manufacturing Modeling Laboratory (MML) addresses various models and methods that lead to competitive manufacturing. MML links design for manufacturing (DFM) research at the Department of Mechanical Engineering with supply chain management activities at the Department of Industrial Engineering and Engineering Management. The Rapid Prototyping Laboratory consists of seven processing stations including cleaning, CNC milling, grit blasting, laser deposition, low temperature deposition, plasma deposition, and shot peening. Students gain experience by using ACIS and Pro Engineer on Hewlett Packard workstations for process software development. The Design Division also has a unique "Product Design Loft," in which students in the joint program in Design develop graduate thesis projects.

The Flow Physics and Computation Division (FPC) is a joint laboratory of the departments of Aeronautics and Astronautics and Mechanical Engineering. FPC is contributing new theories, models and computational tools for accurate engineering design analysis and control of complex flows (including acoustics, chemical reactions, interactions with electromagnetic waves, plasmas, and other phenomena) of interest in aerodynamics, electronics cooling, environmental engineering, materials processing, planetary entry, propulsion and power systems, and other areas. A significant emphasis of FPC research is on physical modeling and analysis of physical phenomena in engineering systems. FPC students and research staff are developing new methods and tools for generation, access, display, interpretation and post-processing of large databases resulting from numerical simulations of physical systems. Research in FPC ranges from advanced simulation of complex turbulent flows to active flow control. The FPC faculty teach graduate and undergraduate courses in acoustics, aerodynamics, computational fluid mechanics, combustion and thermodynamics, computational mathematics, fluid mechanics, and propulsion.

The Mechanics and Computation Division has a Computational Mechanics Laboratory that provides an integrated computational environment for research and research-related education in computational mechanics and scientific computing. The laboratory houses Silicon Graphics, Sun, and HP workstations and servers, including a 4-processor SGI Origin2000 and a 16-processor networked cluster of Intel architec-
departmental major (math; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if the instructor offers the option.

A Product Design program is offered by the Design Division and leads to the B.S. Engineering (Product Design). An individually designed major in Biomechanical Engineering (B.S.E.: Biomechanical Engineering), offered by the Biomechanical Engineering Division, may be appropriate for some students preparing for medical school or graduate bioengineering studies.

Grade Requirements—To be recommended by the department for a B.S. in Mechanical Engineering, a student must achieve the minimum grade point average (GPA) set by the School of Engineering (2.0 in engineering fundamentals and engineering depth).

For information about an ME minor, see the “School of Engineering” section of this bulletin.

COTerminal B.S./M.S. PROGRAM

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminous program should apply for entrance after the beginning of the eighth quarter of undergraduate work and before the end of the 11th quarter. The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted on by the graduate admissions committee of the department. Typically, a GPA of at least 3.25 in engineering, science, and math is expected. Applicants must have completed two of 111, 112, 113, 131A, 131B, 131C, and must take the Graduate Record Examination (GRE) before action is taken on the application. Product designers must have completed 116A to be considered, and are required to work at least one year before rejoining the program. Ceterminal information and forms can be obtained from the ME Student Services office.

GRADUATE PROGRAMS

ADMISSION AND FINANCIAL ASSISTANCE

To be eligible for admission to the department, a student must have a B.S. degree in engineering (the Ph.D. degree requires the completion of the M.S.), physics, or a comparable science program. Applications for all degree programs are accepted throughout the year, although applications for fellowship aid must be received by January 14. The department annually awards, on a competitive basis, a limited number of fellowships, teaching assistantships, and research assistantships to incoming graduate students. Research assistantships are used primarily for post-master's degree students and are awarded by individual faculty research supervisors, not by the department. Preference for teaching assistantships is generally given to students who obtain the bachelor’s or master’s degrees at Stanford.

Mechanical engineering is a varied profession, ranging from primarily aesthetic aspects of design to highly technical scientific research. Discipline areas of interest to mechanical engineers include biomechanics, energy conversion, fluid mechanics, materials, nuclear reactor engineering, propulsion, rigid and elastic body mechanics, systems engineering, scientific computing, and thermodynamics, to name a few. No mechanical engineer is expected to have a mastery of the entire spectrum. M.S. degree programs are offered in Mechanical Engineering (M.S.: ME), Engineering (Manufacturing Systems Engineering, M.S.E.: MSE), Engineering (Biomechanical Engineering, M.S.E.: BME), Engineering (Product Design, M.S.E.: PD), and Engineering (M.S.E.).

The following sections list specific requirements for the master’s degree listed above.

MASTER OF SCIENCE

The basic University requirements for the M.S. degree are discussed in the “Graduate Degrees” section of this bulletin.

The master’s program normally consists of three quarters of full-time course work. No thesis is required, although many students become involved in research projects during the master’s year, particularly to explore their interests in working for the Ph.D. degree. Students whose undergraduate backgrounds are entirely devoid of some of the major subject disciplines of engineering (for example, applied mechanics, applied thermodynamics, fluid mechanics, ordinary differential equations) may need to take some undergraduate courses to fill in obvious gaps and prepare themselves to take graduate courses in these areas. Such students may require more than three quarters to fulfill the master’s degree requirements, as the make-up courses may not be used for other than the unrestricted electives (see item ‘4’ below) in the M.S. degree program. However, it is not the policy to require fulfillment of mechanical engineering B.S. degree requirements in order to obtain an M.S. degree; furthermore, students who have already fulfilled certain categories of the M.S. degree requirements as a result of undergraduate work may find they have sufficient time (see item ‘3’ below) to obtain the M.S. degree in the normal three quarters.

MECHANICAL ENGINEERING

The master’s degree program requires 45 units of course work taken as a graduate student. At least 36 of the units must be taken at Stanford; any units transferred from other universities (up to 9 are allowed) must be in graduate-level courses taken while registered as a graduate student and may not be applied toward fulfillment of item ‘2’ below. No thesis is required. However, students who desire some research experience during the master’s year may participate in research through ME 290, 291, and 292.

The department’s requirements for the M.S. in Mechanical Engineering are:

1. Mathematical Competence in Two of the Following Areas: partial differential equations, linear algebra, complex variables, numerical analysis, modern algebra, vector and tensor analysis, or statistics, as demonstrated by completion of two courses from ME 200-208; Mathematics 106, 109, 113, 131, 132; Computer Science 137, 205, 237A, B, C; Statistics 110, 161. Requirement: 6 units.

Students who completed comparable graduate-level courses as undergraduates and who can demonstrate their competence to instructors may be exempted from this requirement by their advisers and the ME Student Services office and place the units in the approved elective area.

2. Eighteen units of graduate-level courses in ME consisting of:
   a) A Specialty in Mechanical Engineering: a set of graduate-level courses in mechanical engineering to provide depth in one area. These sets have been approved by the faculty as providing depth in specific areas as well as a significant component of application of the material in the context of engineering synthesis. These courses are listed in the Mechanical Engineering Graduate Handbook.
   b) Breadth in Mechanical Engineering: at least two additional graduate-level courses outside the depth area to bring the total number to at least 18 ME units in courses numbered 207 and above, excluding 290-301 and math courses. Courses 200-206, 288-301, and 311 may not be counted in these categories.

3. Approved Electives (to bring the total number of units to 39): all these units must have adviser approval. Graduate engineering, math, and science courses are normally approved, and upper-level undergraduate courses may be approved if consistent with the student’s objectives. Of the 39 units, no more than 6 may come from ME 291 and 292, and no more than 3 may come from the other courses numbered 290-299 or other seminars. Students planning a Ph.D. degree should discuss with their adviser the desirability of taking 291 or 292 during the master’s year.

4. Unrestricted Electives (to bring the total number of units submitted for the M.S. degree to 45): students are encouraged to use these units outside of engineering, mathematics, or the sciences. Students should consult their advisers on course loads and on ways to use the unrestricted electives to make a manageable program.

5. Within the courses satisfying the requirements above, there must be at least one graduate-level course dealing with lab studies. Courses which satisfy this requirement are 207A, B, 217B, 218A, 224, 225A, 226B, 248, 254, 267, 282A, 282B, 303, 310A.B.C.
Candidates for the M.S. in Mechanical Engineering are expected to have the approval of the faculty, and a minimum grade point average (GPA) of 2.75 in the 45 units presented in fulfillment of degree requirements. All courses used to fulfill requirements 1, 2, 3, and 5 above must be graded (excluding seminars and courses for which a Satisfactory/No Credit grade is given to all students).

Students falling below a GPA of 2.5 at the end of 20 units may be disqualified from further registration. Students failing to meet the complete degree requirements at the end of 60 units of graduate registration are disqualified from further registration. Courses used to fulfill deficiencies arising from inadequate undergraduate preparation for mechanical engineering graduate work may not be applied to the 60 units required for graduate registration.

PRODUCT DESIGN

The focus of the Joint Program in Design is the intersection of technology with human needs and aspirations. This program is a joint offering of the Department of Mechanical Engineering and the Department of Art and Art History. The resulting two-year degree of MS in Engineering (Product Design) is considered a terminal degree for the practice of design.

* Taken jointly each quarter.  
† These electives allow a student to pursue studies suited to personal needs. A list of pre-approved product design electives is outlined in the Mechanical Engineering Graduate Handbook.

BIOMECHANICAL ENGINEERING

Students interested in graduate studies in biomechanical engineering can choose one of the programs below.

1. M.S. in Mechanical Engineering: students who apply and are admitted to the M.S. - ME program can elect to take biomechanical engineering courses as part of their M.S. - ME requirements. These courses are usually applied towards the student's engineering breadth or technical electives.

2. M.S. in Engineering: Biomechanical Engineering (M.S.E.: BME): this degree program allows students more flexibility in taking courses in the life sciences and generally emphasizes a more interdisciplinary curriculum. Minimum grade point average (GPA) requirements are the same as for the M.S. in Mechanical Engineering.

A Ph.D. in Biomechanical Engineering is not offered. Students from either master's degree path (Mechanical Engineering or Biomechanical Engineering) receive their Ph.D. degrees in Mechanical Engineering. The Ph.D. qualifying examinations are flexible enough to accommodate students with either master's degree preparation.

MANUFACTURING SYSTEMS ENGINEERING

The M.S. in Engineering (Manufacturing Systems Engineering) addresses the need for engineers who combine management and design skills focused on manufacturing. There is a critical need for individuals who can deal directly with product design for manufacturability; design of manufacturing tools; financial, organizational, and strategic management issues; and elements of automation technology such as computer-aided design, computer-aided manufacturing robotics, and microprocessor control.

Manufacturing Systems Engineering (MSE) is offered jointly by two departments: Mechanical Engineering, and Industrial Engineering and En-gineering Management. The program seeks high-quality students with strong educational backgrounds in engineering and provides a demanding curriculum strong in both hardware aspects and engineering management. Students must apply directly to the MSE program by submitting an application to the Department of Mechanical Engineering.

The hardware and engineering-design aspects of the program include:

- ME 207 A B, Integrated Design in Marketing and Manufacturing
- ME 310 A, Tools for Team Based Design
- ME 218 A B C, Smart Product Design
- ME 310 B C, Design Project Experience with Corporate Partners
- ME 313, Ambidextrous Thinking
- ME 319, Robotics and Vision Lab

The engineering management subjects include:

- Ind. Engr. 203, Organization Behavior and Management
- Ind. Engr. 221, Quality Assurance and Control
- Ind. Engr. 225, Manufacturing Systems Design
- Ind. Engr. 261, Inventory Control and Production Systems
- Ind. Engr. 262, Supply Chain Management
- Ind. Engr. 268, Manufacturing Strategy

Hardware and engineering design courses provide hands-on knowledge of these functions and the trade-offs that must be made to take advantage of the relationships between design and manufacturing.

Engineering management subjects provide a suitable perspective for evaluating alternative financial, organizational, and production systems as well as a firm's manufacturing policy.

Beyond the required core, the curriculum allows for choice from a broad set of relevant electives to provide additional training in engineering management, engineering design hardware, and aspects of computer science. Here a student may tailor the program to meet individual interests and needs.

Students in the MSE program must have faculty approval and a minimum GPA of 3.0 in the 45 units presented in fulfillment of the degree requirements.

BIOMECHANICAL ENGINEERING

Students interested in graduate studies in biomechanical engineering can choose one of the programs below.

1. M.S. in Mechanical Engineering: students who apply and are admitted to the M.S. - ME program can elect to take biomechanical engineering courses as part of their M.S. - ME requirements. These courses are usually applied towards the student's engineering breadth or technical electives.

2. M.S. in Engineering: Biomechanical Engineering (M.S.E.: BME): this degree program allows students more flexibility in taking courses in the life sciences and generally emphasizes a more interdisciplinary curriculum. Minimum grade point average (GPA) requirements are the same as for the M.S. in Mechanical Engineering.

A Ph.D. in Biomechanical Engineering is not offered. Students from either master's degree path (Mechanical Engineering or Biomechanical Engineering) receive their Ph.D. degrees in Mechanical Engineering. The Ph.D. qualifying examinations are flexible enough to accommodate students with either master's degree preparation.

ENGINEERING

As described in the "School of Engineering" section of this bulletin, each department in the school may sponsor students in a more general degree, the M.S. in Engineering. Sponsorship by the Department of Mechanical Engineering (ME) requires (1) filing a petition for admission to this program on the day before instruction begins, and (2) that the center of gravity of the proposed program lies in ME; no more than 18 units used for the proposed program can have been previously completed. The program must include at least 9 units of graduate-level work in the department other than ME 200-206 and 288, 290-297, 301, 311. The petition must be accompanied by a statement explaining the program objectives and how it is coherent, contains depth, and fulfills a well-defined career objective. The grade requirements are the same as for the M.S. in Mechanical Engineering.

POST-MASTER'S DEGREE PROGRAMS

The department offers two post-master's degrees: Engineer and Doctor of Philosophy. Post-master's research generally requires some evidence that a student has research potential before a faculty member agrees...
to supervision and a research assistantship. It is most efficient to carry out this preliminary research effort during the M.S. degree year.

ENGINEER

The basic University requirements for the degree of Engineer are discussed in the "Graduate Degrees" section of this bulletin. This degree represents an additional year of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master's degree alone.

Admission standards are substantially the same as indicated under the master's degree. However, since thesis supervision is required and the availability of thesis supervisors is limited, admission is not granted until the student has personally engaged a faculty member to supervise a research project. This frequently involves a paid research assistantship awarded by individual faculty members (usually from the funds of sponsored research projects under their direction) and not by the department.

Thus, personal arrangement is necessary. Students studying for the M.S. degree at Stanford and desiring to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree year. Students holding master's degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include an acceptable thesis; up to 18 units of credit are allowed for thesis work. In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Thus, personal arrangement is necessary. Students studying for the M.S. degree at Stanford and desiring to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree year. Students holding master's degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include an acceptable thesis; up to 18 units of credit are allowed for thesis work. In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Students who have not fulfilled the Stanford M.S. degree requirements are required to do so (with allowance for approximate equivalence of courses taken elsewhere).

Candidates for the degree must have faculty approval and have a minimum grade point average (GPA) of 3.0 for all courses (exclusive of thesis credit) taken beyond those required for the master's degree.

DOCTOR OF PHILOSOPHY

The basic University requirements for the Ph.D. degree are discussed in the "Graduate Degrees" section of this bulletin. The Ph.D. degree is intended primarily for students who desire a career in research, advanced development, or teaching; for this type of work, a broad background in math and the engineering sciences, together with intensive study and research experience in a specialized area, are the necessary requisites. The department allows a minor field but does not require one. However, if a minor is waived, the candidate must show breadth of training by taking a group of courses in one or more related fields or departments as noted below.

A student studying for the Ph.D. degree ordinarily will not take an Engineer degree, although this is not precluded. However, the student must have a master's degree, and must fulfill in essence the requirements for the Stanford M.S. degree in Mechanical Engineering.

In special situations dictated by compelling academic reasons, Academic Council members who are not members of the department's faculty may serve as the principal dissertation adviser when approved by the department. In such cases, a member of the department faculty must serve as program adviser and as a member of the reading committee, and agree to accept responsibility that department procedures are followed and standards maintained.

Admission involves much the same consideration described under the Engineer degree. Since thesis supervision is required, admission is not granted until the student has personally engaged a member of the faculty to supervise a research project. Once a student has obtained a research supervisor, this supervisor becomes thereafter the student's academic adviser. Research supervisors may require that the student pass the departmental oral examination before starting research and before receiving a paid research assistantship. Note that research assistantships are awarded by faculty research supervisors and not by the department.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of engineering fundamentals by passing a qualifying oral examination. The academic level and subject matter of the examination correspond approximately to the M.S. program described above. The form and timing of the examination differs for the five divisions of the department. Information may be obtained from the division or Student Services office.

Normally, the qualifying examination is taken during the first post-master's year. A student must have the written approval of a tentative dissertation supervisor (sponsor) in order to take the examination. Sponsorship carries no implication of financial support. To apply for the examination, a student must have a Stanford graduate grade point average (GPA) equivalent of at least 3.25. Courses used in the GPA evaluation are the same as those that would be used to meet the M.S. GPA requirement. Students entering Stanford with an M.S. from another school must have a 3.25 GPA in that school's M.S. program to take the examination in their first quarter at Stanford. After the first quarter at Stanford, such a student must meet the GPA of 3.25 for courses taken at Stanford.

Ph.D. candidates must complete a minimum of 36 units of approved formal course work (excluding research, directed study, and seminars) in advanced study beyond the M.S. degree. The courses should consist primarily of graduate courses in engineering and sciences, although the candidate's reading committee may approve a limited number of upper-division undergraduate courses and courses outside of engineering and sciences, as long as such courses contribute to a strong and coherent program. In addition to this 36-unit requirement, all Ph.D. candidates must participate each quarter in one of the following (or equivalent) seminars: ME 290, 294, 288, 289, 295, 296, 297, 298, 311; Aeronautics and Astronautics 296 or 297.

The Ph.D. thesis normally represents at least one full year of research work and must be a substantial contribution to knowledge. Students may register for course credit for thesis work (ME 301) to help fulfill University residence requirements, but there is no minimum limit on registered dissertation units. Candidates should note that University residence requirements (see the "Graduate Degrees" section of this bulletin) are expressed in terms of equivalent full-time registration and not in terms of units per se; questions on this should be addressed to the manager of Student Services.

The department has a breadth requirement for the Ph.D. degree. This may be satisfied either by a formal minor in another department or by course work that is approved by the dissertation reading committee.

The final University oral examination is conducted by a committee consisting of a chair from another department and four faculty members of the department or departments with related interests. Usually, the committee includes the candidate's adviser and two faculty members chosen to read and sign the candidate's dissertation. The examination consists of two parts. The first is open to the public and is scheduled as a seminar talk, usually for one of the regular meetings of a seminar series. The second is conducted in private and covers subjects closely related to the dissertation topic.

A student wishing to complete the Ph.D. requirements in four years should ordinarily complete the M.S. by the Spring Quarter of the first year, pass the qualifying examination by the Autumn Quarter of the second year and complete the course work, demonstrate feasibility of research methods, and obtain approval of the dissertation proposal by the end of the third year.

COMBINED PH.D./M.D. DEGREE PROGRAM

Students interested in a career oriented towards biomechanical research and clinical medicine can pursue the combined Ph.D./M.D. degree program.

The Ph.D. degree is administered by the Department of Mechanical Engineering of the School of Engineering. To be formally admitted as a Ph.D. degree candidate in this combined degree program, the student must apply through normal department channels and must have earned an M.S. in Mechanical Engineering, an M.S. in Biomechanical Engineering, or a comparable master's degree. Students must pass the Department of
Mechanical Engineering Ph.D. qualifying examination and pursue a doctoral thesis in a biomechanical engineering area.

The M.D. degree is administered by the School of Medicine. Students must apply separately through regular channels for admission to the M.D. program and satisfactorily complete 204 units in courses and clerkships approved for credit toward the M.D. degree. Of these, 72 quarter units must be in clerkships. For further information on the M.D. program, consult the School of Medicine Catalog.

For students fulfilling the full M.D. requirements who earned their master's level engineering degree at Stanford, the Department of Mechanical Engineering may waive its normal department requirement that the 36 units applied towards the Ph.D. degree (beyond the master's degree level) be formal course work. Consistent with the University Ph.D. requirements, the department may instead accept 36 units consisting of courses, research, or seminars that are approved by the student's Ph.D. thesis reading committee and the department chair. For further information, consult the manager of Student Services.

Ph.D. MINOR

Students who wish a Ph.D. minor in ME should consult the ME Student Services office. The minor in ME may be obtained by completing 20 units of approved graduate-level ME courses or by completing 9 units of graduate-level courses and passing the departmental qualifying oral examination in two appropriate areas identified by the minor adviser.

Courses approved for the minor must form a coherent program and must be selected from those satisfying requirement '2' for the M.S. in Mechanical Engineering.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

PRIMARILY FOR UNDERGRADUATES

Note 1.—The following are especially suitable for freshmen.

10. Introduction to Engineering Analysis—The foundation and tools for subsequent engineering courses. Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, and production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic and laboratory experiences.

4 units, Spr (Staff)

30. Engineering Thermodynamics—(Enroll in Engineering 30.)

Limited enrollment Spring Quarter. When possible, register for Winter Quarter. Prerequisites: 10, Engineering 14 and 30.

4 units, Win (Cappelli)

Spr (Santiago)

70N. Stanford Introductory Seminar: The Aerodynamics of Sports Balls—Preference to freshmen. The aerodynamics of the ball play a major role in many sports, e.g., the curve and knuckle ball in baseball, the spiral of a correctly thrown football, the effect of top spin in tennis, and the effect of dimples on a golf ball. The complex aerodynamics can be understood by application of basic concepts and experimental techniques. Simple, intuitive application of the basic principles precede lab and field experiments to verify their intuition. Lab experiments involve flow visualization in a wind tunnel; field experiments may involve tests in throwing, hitting, or kicking various balls and interacting with local teams. Teams of two to three prepare a written report discussing the importance of aerodynamics in a particular sport.

3 units, Spr (Mungal)

71Q. Stanford Introductory Seminar: The Burning of Fossil Fuels, Global Warming, and the Environment—Preference to sophomores. Combustion has been humankind's primary energy source. The role it plays as a future energy source and the environmental and economic consequences of this. Issues: projections of energy utilization and energy sources into the future (and the associated uncertainties), the environmental effects of combustion (including air quality and global warming), strategies to reduce the environmental effects of combustion, and the role of regulations in driving combustion technology and the use of fossil fuels. Structured presentations, open discussion, directed readings. Outside speakers; visit to the campus combustion laboratory. Project with oral/written reports.

3 units (Bowman) not given 1999-2000

72N. Stanford Introductory Seminar: The Jet Engine—Preference to freshmen. The basics of how a jet engine works and the technologies and analytical techniques required to understand them. Brief coverage of dynamics, thermodynamics, turbomachinery, combustion and pollution formation, advanced materials, cooling technologies, and control systems. Field trips. Prerequisites: high school physics and an interest in how mechanical things work.

3 units, Aut (Eaton)

99. Mechanical Dissection—Series of mechanical dissection labs to resolve common questions of everyday products and provide confidence in "hands-on" skills. Students choose a current product, track its history, obtain samples (current and "antique"), disassemble, and explore functions. Formal and informal presentations. Lab. Enrollment limited to 20. Prerequisite: keen sense of curiosity.

3 units (Sheppard) not given 1999-2000

100A-B. Mathematical and Computational Methods for Engineers—(Enroll Engineering 155A-B.)

101. Visual Thinking—Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind's eye. Quickly executed diagrammatic, orthographic, perspective, and three-dimensional sketching with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Enrollment limited to 60.

3 units, Aut, Win, Spr (Staff)

102. Integration, Prototyping, Design, and Evaluation—The integration of human values, technology, and manufacturing towards engineering solutions to design problems. Emphasis is on the development and timely evaluation of potential candidates through the use of methodology, computers, and rapid prototyping techniques. Lecture and lab enrollment limited to 30.

3 units, Aut (Milroy)
103. Manufacturing and Design—(Graduate students register for 303.) Emphasis is on prototype development techniques as an intrinsic part of the design process. The fundamentals of machining, welding, and casting, introduced in lecture and supported by lab experience. Manufacturing processes through lecture, films, and field trips. Design aspects are developed in an individual term project chosen, designed, and fabricated by students. Limited enrollment with consent of instructor. Corequisite, unless student has prior drafting experience: 103D. Corequisite for Mechanical Engineering and Product Design undergraduate majors for WIM: Engineering 102M. (WIM)

4 units, Aut (Beach)
Win (Milroy)

103D. Engineering Drawing and Design—The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, and assembly drawings. Designed to accompany 103. Homework drawings are of parts fabricated by the student in the shop. Major assignments in 103 are supported by material in 103D and assignment dates are sequenced on the assumption that the student is enrolled in both courses simultaneously. No prior knowledge of drafting required.

1 unit, Aut, Win (Milroy)

104. Dynamic Behavior—(Enroll in Engineering 104.)

105. Feedback Control Design—(Enroll in Engineering 105.)

106. Vehicle Dynamics and Control—(Graduate students register for 227.) The application of the principles of dynamics, kinematics, and control theory to the design and analysis of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and their limitations in engineering design. Suspension design fundamentals. Multibody dynamics approaches to vehicle modeling. Performance and safety enhancement through automatic control systems such as anti-lock braking, active suspensions, and stability control. Prerequisite: 161 or Engineering 104.

3 units, Spr (Gerdes)

106D. Vehicle Dynamics and Control Laboratory—(Graduate students register for 227D.) Demonstration of handling fundamentals, suspension set-up, and controller design using scale cars.

1 unit, Spr (Gerdes)

109. Computer Aided Design of Model Yachts—(Graduate students register for 209.) Hands-on introduction to the art and science of engineering and manufacturing. Students design and construct free sailing model yachts to a high standard of craftsmanship using Computer Aided Design and Manufacturing (CAD/CAM). Includes: sailing theory (aerodynamics and hydrodynamics of sail boats); model yacht design (nomenclature, scaling issues, lofting, history of rating rules, yacht aesthetics, tradeoffs between speed and control); the use of design and manufacturing systems (MaxSurf, Vellum, and laser-cuter); necessary construction techniques (hull fixture, planking, fiberglassing, casting ballast, sewing sails, finishing, and rigging); and sailing technique (tuning for performance). Field trips. Enrollment limited to 33.

4 units, Spr (Faste) alternate years, not given 2000-01

110. Design Sketching—Freehand sketching, rendering, and design development. Work is guided by instructors. Concurrent assignments in 115 and 116B,C provide subject matter, but the class is open to anyone wishing to improve freehand drawing skills. (AU)

1 unit, Win, Spr (Staff)

110B. Advanced Design Sketching—Freehand sketching, rendering, design development, and some computer use. Work is guided by instructors. Concurrent assignments in 116A provide subject matter. Prerequisite: 110A or consent of instructor based on drawing skill. (AU)

1 unit, Aut (Staff)

3 units, Aut (Pinsky)

112. Mechanical Systems Design—Objectives: provide students familiarity with the function of basic machine elements (e.g., gears, bearings), the trade-offs between various classes of machine elements, performance characteristics of various machine elements, and systems level design; and to provide experience in working in teams, selecting machine classes in synthesis-type problems, iterative design including prototyping, communicating ideas in graphical, textual, and oral forms, and design critiquing. Lecturers, labs. Prerequisites: 111, 103.

4 units, Win (Gerdes)

113. Mechanical Engineering Design—Objective: create designs and models of new mechanical devices. Design is studied as an activity and experienced by students as they work on a team design project obtained from industry and other sponsoring organizations. Prerequisites: 101, 103, 111, 112.

3 units, Spr (Staff)

115. Human Values in Design—Active encounters with human values in design. Lectures survey the central philosophy of the product design program, emphasizing the relation between technical and human values, the innovation process, and design methodology. Lab exercises include development of simple product concepts visualized in rapidly executed three-dimensional mockups. Prerequisite: 101.

3 units, Win (Kelley)

116A. Advanced Product Design: Formgiving—(Graduate students register for 316A.) Small- and medium-scale design projects are carried to a high degree of aesthetic refinement. Emphasis is on generating the appropriate forms to the task and setting. Prerequisites: 115, Art and Art History 160.

3 units, Spr (Kelley)

116B. Advanced Product Design: Conceptualization—(Graduate students register for 316B.) Exploration of the human needs that leads to conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social issues; and need-finding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future.

3 units, Win (Faste)

116C. Advanced Product Design: Implementation—(Graduate students register for 316C.) Summary project utilizing the knowledge, methodology, and skills obtained in 115A,B, and 116A,B. Students implement design concept and present it to a professional jury. Prerequisite: 116B.

3 units, Spr (Staff)

117. Introduction to Sensors—(Graduate students register for 220.) Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.

3-4 units, Spr (Kenny)
118. Introduction to Mechatronics—(Graduate students register for 318.) Open to undergraduate and graduate students. Introduces the technologies involved in mechatronics (Intelligent Electro-Mechanical Systems) and the techniques necessary to apply this technology to mechatronic system design. Topics: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Lab component of structural assignments. Large and open-ended team project. Limited enrollment. Prerequisites: Engineering 40, Computer Science 106, or equivalent.
4 units, Win (Kenny, Ohline)

120. History and Philosophy of Design—Major schools of 19th- and 20th-century design (Arts-and-Crafts Movement, Bauhaus, Industrial Design, and post-modernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 40.
3-4 units, Aut (Adams)

121N. Stanford Introductory Seminar: Problem Solving and Creativity—Preference to freshmen. The nature of problem-solving and creativity, and various modes of thinking. The similarities and differences between different academic disciplines and different professions.
3 units, Aut (Adams)

122N. Stanford Introductory Seminar: Designing the Human Experience—An Exploration into the Theory and Practice of Design Thinking—Preference to freshmen. Readings, discussion, and projects explore the proposition that design education is for everyone.
3 units, Win (Leifer)

123N. Stanford Introductory Seminar: Stuff—Preference to freshmen. The advancement of human society largely depends on the "stuff" available for housing, transportation systems, industrial products, defense systems, etc. Frequently, "human made stuff" gets exposed to unfriendly environments such as high temperatures, corrosive liquids, and gases. The most extreme conditions occur in aircraft engines. A trip to an airline maintenance facility provides insight to what environmental conditions advanced turbine blades are required to suffer. How engineers prevent the premature "death" of turbine blades to avoid major catastrophes.
3 units, Aut (Prinz)

128. Design for Appropriate Technology—(Graduate students register for 328.) Lecture/lab. Design products for developing countries and markets, with emphasis on culturally sensitive need determination; local material, process, and maintenance limitation; and information transfer. Weekly labs reinforce lecture topics. Team design projects explore solutions to real-world needs.
3 units, Spr (Milroy, Spivack)

130. Internal Combustion Engines—Internal combustion engines including conventional and turbocharged spark ignition, and diesel engines. Lectures: basic engine cycles, engine components, methods of analysis, transmission technology, efficiency, performance, and methods of engine testing. Lab involves hands-on experience with engines and test hardware. Limited enrollment. Prerequisites: Engineering 30, 33, 131A (or concurrent enrollment in 131A), or equivalent.
3 units, Aut (Edwards)

131A. Heat Transfer—(Graduate students register for 250.) First of three-quarter sequence on the basic thermal sciences. The principles of heat transfer by conduction, convection, and radiation are introduced with specific examples from the engineering of practical devices and systems. Topics: transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: sites: 33, Engineering 30. Recommended: intermediate calculus, ordinary differential equations.
5 units, Aut (Goodson)

131B. Fluid Mechanics: Compressible Flow and Turbomachinery—Introduction to engineering applications involving compressible flow; aircraft propulsion, rocket propulsion, power generation; application of mass, momentum, energy and entropy balance to compressible flows; variable area isentropic flow, normal shock waves, adiabatic flow with friction, flow with heat addition, Operation of flow systems: the propulsion system. Introduction to turbomachinery: pumps, compressors, turbines. Angular momentum analysis of turbomachine performance, centrifugal and axial flow machines, effect of blade geometry, dimensionless performance of turbomachines; hydraulic turbines; steam turbines; wind turbines. Compressible flow turbomachinery: the aircraft engine. Prerequisite: 131A.
3 units, Win (Squires)

131C. Thermodynamics—Continuation of 131B. The basic principles and laws of thermodynamics as applied to systems consisting of pure substances and to systems consisting of gas mixtures. Non-reacting and chemically reacting mixtures. The application of thermodynamic principles to energy conversion systems illustrates procedures for thermodynamic analysis and performance optimization. Prerequisite: Engineering 30 or equivalent.
3 units, Spr (Mitchell)

132. Thermosciences Laboratory—The utility of experimentation in thermosciences, introducing modern lab techniques, e.g., A/D converters for digital data acquisition. Two major experiments are performed, drawn from all areas of thermosciences. Experimental design project spans course. Emphasis is on communication of results through written and oral reports and in evaluation of data using formal methods of uncertainty analysis. Enrollment limited to 30 preregistered students. Lab. Students may alternatively enroll in 254. Prerequisites: 33, 131A, and Engineering 30.
3 units, Win (Stall)

133Q. Stanford Introductory Seminar: Experimental Fluid Mechanics—Preference to sophomores. Group research project using a wind tunnel to investigate a problem of current interest. Students design and fabricate the test model then acquire data using flow visualization and quantitative instrumentation systems. Computerized data acquisition techniques are introduced and used on the project. Lab.
3 units (Eaton) not given 1999-2000

142A. Introduction to Computational Mechanics I—See 232A.
142B. Introduction to Computational Mechanics II—See 232B.
142C. Introduction of Computational Mechanics III—See 232C.

161. Dynamic Systems—Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, and frequency analysis. Demonstrations and laboratory examples. Prerequisites: background in dynamics and calculus, e.g., Engineering 15 and Mathematics 43; and familiarity with differential equations, linear algebra, and basic electronics.
4 units, Aut (Mitiguy, Richard)

180. Skeletal Development and Evolution—(Graduate students register for 280.) The development, adaptation, repair, and aging of the vertebrate skeleton is considered from an evolutionary perspective. Emphasis is on the interacting influences of mechanobiology and molecular genetics.
3 units, Spr (Carter)
Biomechanics of Movement—(Graduate students register for 381.) Review of experimental techniques used to study human and animal movement, including motion capture systems, EMG, force plates, medical imaging, and animation. Mechanical properties of muscle and tendon and quantitative analysis musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

3 units, Aut (Delp)

Biomineralization—The process of formation and adaptation of mineralized structures formed by organisms, principally animal skeletons. Emphasis is on the interacting influences of phylogenetic history, material constraints, mechanical factors, and other ecological and physiological considerations. Skeletal formation processes and the skeletal microstructure and ultrastructure of every animal phylum. Evolutionary aspects of body plan design among the major animal phyla with skeletons.

2 units, Spr (Constantz)

Cardiovascular Biomechanics—(Graduate students register for 284.) Biomechanical principles are developed and applied to the cardiovascular system. The relevance of mechanics in the study of cardiovascular function is examined from a historical perspective. Cardiovascular system anatomy, tissue mechanics, and blood rheology. Lumped parameter models, pulse wave propagation models. Womersley theory, finite element methods of blood flow, pulsatile flow in deformable vessels, and cardiac fluid dynamics. Problems in modeling blood within the context of predictive methods in surgical simulation and planning.

3 units, Spr (Taylor)

Engineering Problems and Experimental Investigation—Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of the adviser.

1-5 units, any quarter (Staff)

1-3 units, Spr (Milroy)

UNDERGRADUATE AND GRADUATE

The following are especially suitable for advanced undergraduates and graduates and may be used to satisfy the M.S. requirement, item '3' above, approved electives.

Hardware and Design
103. Manufacturing and Design
105. Feedback Control Design—(Enroll in Engineering 105)
113. Engineering Design
161. Dynamic Systems
250. Heat Transfer

PRIMARILY FOR GRADUATES
ENGINEERING MATHEMATICS AND COMPUTATION

200A,B,C are intended for students in the master’s program with some proficiency in undergraduate engineering mathematics and computing. Students enrolling in this sequence should have had some exposure to elementary linear algebra (for example, elementary operations with matrices), ordinary differential equations (for example, Mathematics 130), partial differential equations, and computer programming. Students who do not meet these guidelines should be prepared to devote additional remedial time to these courses or consider satisfying their requirements through Mathematics 113 and 131, and Computer Science 137.

200A. Mathematical and Computational Methods in Engineering—The theory of linear algebra; basis, linear independence, column space, null space, rank. Emphasis is on computer solutions of the linear system of algebraic and differential equations. Roundoff errors, pivoting, and ill-conditioned matrices. Quadratic forms, norm and condition numbers, projection and least-squares, operation counts, eigenvalues, eigenvectors, and their computation. The canonical diagonal form, functions of a matrix. Unitary, Hermitian, and normal matrices. Principal stresses and axes. Recommended: familiarity with computer programming; Mathematics 103, 130, or equivalent.

3 units, Aut (Gao)

200B. Mathematical Methods in Engineering—Geometric interpretation of partial differential equations (PDEs), characteristics, solution of first-order equations, characteristics and classification of second-order PDEs, separation of variables, special functions, eigenfunction expansions, Fourier integrals and transforms, Laplace transforms, method of characteristics, analytic and numerical techniques, self-similarity. Prerequisite: 200A.

3 units, Win (Staff)

3 units, Spr (Ferziger)

206. Introduction to Symmetry Analysis—(Enroll in Aeronautics and Astronautics 218.)

DESIGN AND CONTROLS

207A,B. Integrated Design for Marketability and Manufacturing (IDMM)—Integrated market research, product design, prototype manufacture, pricing, and product management. New product launching, with emphasis on compressed development cycle time and cross functional staffing. Teams of MBAs and engineers compete for simulated sales and profitability. Innovative use of market research as a design tool, immersion in hands-on manufacturing process, product definition communication, and sales. Instructors specify the product market in which all teams compete. IDMM aims to graduate leaders in product development. Limited enrollment. Enroll both quarters.

4 units, Aut, Win (Beach, Srinivasan)

3 units, Spr (Milroy)

215. The Designer in Society—Open to all graduate students. Participants' career objectives and psychological orientation are compared with existing social values and conditions. Emphasis is on assisting individuals in assessing their roles in society. Readings on political, social, and humanistic thought related to technology and design. Term project. Attendance mandatory. Enrollment limited to 24.

3 units, Win (Roth)

216. Introduction to Aircraft Design, Synthesis, and Analysis—(Enroll in Aeronautics and Astronautics 241A.)

217A. Design for Manufacturability: Product Definition—Systematic methodologies to define, develop, and produce competitive products. Methods cover characterization of user values, design for manufacturability, and environmental compatibility. 217A addresses the key issues for product competitiveness. Students teams identify opportunities for improvement and develop a comprehensive product definition. Topics: design for value, functional analysis, quality function deployment, value engineering, design for assembly, product line structuring, process and material selection, design for productability, failure modes and effects analysis (FMEA), design for serviceability, environmental product design, and organization issues for simultaneous engineering. Enrollment limited to 40. No maximum enrollment for Stanford Instructional Television Network (SITN) students. Minimum enrollment of two per viewing site; single student site by prior consent of instructor.

4 units, Win (Ishii, Martin)

217B. Design for Manufacturability: Quality by Design—Building on the product definition process covered in 217A, focuses on the implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for its manufacture, testing, and service. The project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh's Method), FMEA applied to manufacturing process, design for robustness, Taguchi Method, SPC and six sigma process, tolerance analysis, flexible manufacturing, product testing, rapid prototyping. Enrollment limited to 40, not including SITN students. Minimum enrollment of two per SITN viewing site; single student site by prior consent of instructor. Prerequisite: 217A.

4 units, Spr (Ishii, Martin)

217C. Manufacturing Systems Design—(Enroll in Industrial Engineering 225.)

218A. Smart Product Design Fundamentals—Introduction. Lecture, lab, and design project based series on programmable electromechanical systems design. Topics: transistors as switches, basic digital and analog circuits, boolean algebra, combinational and sequential logic, operational amplifiers, comparators, software design, programming in FORTH and "C." Team project. Enrollment in 218B,C is contingent on completing 218A or passing a Smart Product Design Fundamentals proficiency examination given at the start of Autumn Quarter. Lab fee. Limited enrollment.

5 units, Aut (Carreyer)

218B. Smart Product Design Applications—Intermediate level in the series of programmable electromechanical systems design, introduced in the context of lab assignments and integrated into a team project. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, sensors, actuators, noise, and power supplies. Team project. Lab fee. Limited enrollment. Prerequisite: completion of 218A or passing of the Smart Product Design Fundamentals proficiency examination.

5 units, Win (Carreyer)

218C. Smart Product Design Practice—Advanced level in the series on programmable electromechanical systems design. Topics: interprocessor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, design with programmable logic, understanding and controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Lab fee. Limited enrollment. Team project. Prerequisite: completion of 218B.

5 units, Spr (Carreyer)

218D. Smart Product Design Projects—Industrially sponsored project course is the culmination of the Smart Product Design sequence. Students take an industrial project that requires the application and extension of the knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures extend the students' knowledge of electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real-time operating systems, alternate microprocessor architectures, PCB layout and fabrication.

4 units, Aut (Carreyer)

219. Introduction to Robotics—(Enroll in Computer Science 223A.)

220. Introduction to Sensors—See 117.

221. Materials Selection in Design—(Enroll in Material Science and Engineering 270.)

222. Kinematic Synthesis of Mechanisms—The rational design of linkages. The problem of determining linkage proportions to fulfill various design requirements, treated analytically. Path-curvature analysis, and circle and center-point theory.

3 units, Win (Roth)

224. Precision Engineering—Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience is gained through the design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Lectures, structured labs, and field trips Undergraduate prerequisite: consent of instructors.

4 units (Beach, DeBra) not given 1999-2000

225A. Control System Design and Simulation—(Enroll in Engineering 206.)

225B. Analysis and Control of Nonlinear Systems—(Enroll in Engineering 209.)

226A. Modern Control Design I—(Enroll in Engineering 207A.)

226B. Modern Control Design II—(Enroll in Engineering 207B.)

227. Vehicle Dynamics and Control—See 106.

227D. Vehicle Dynamics and Control Laboratory—See 106D.

228. Introduction to Control Design Techniques—(Enroll in Engineering 205.)
MECHANICS OF SOLIDS

229. Physical Solid Mechanics—Introduces the theoretical foundation for the solid state materials including crystalline, amorphous, and alloy materials from the atomic structural viewpoint. Topics: crystal structures of materials, dynamics (phonons) of crystals, electro-optical structures of crystals; amorphous materials (structure, dynamics, and electro-optical properties); mechanical properties of defect-free crystals; role of effects in materials strength; electromechanical and electro-opto-mechanical couplings in materials.
3 units (Cho) not given 1999-2000

230. Advanced Kinematics—Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.
3 units, Aut (Roth)

3 units, Aut (Heegaard)

3 units, Win (Heegaard)

232A. Introduction to Computational Mechanics I—(Undergraduate register for 142A.) Overview of modern computational methods for solving problems primarily arising in the mechanics of solids. Basic concepts of the finite element method (FEM) and boundary element method (BEM). Basic equations of linear solid mechanics including variational formulations. Elastic bars (elasticity in one-dimension), steady heat conduction (diffusion), and plane elasticity (plane stress, plane strain, axisymmetric elasticity). Students develop a finite element code in Matlab using the PDE Toolbox pre- and post-processor, solve problems, and visualize results at every stage. Introduction to simulation-based design methodologies.
4 units, Win (Pinsky)

4 units, Spr (Pinsky)

232C. Introduction to Computational Mechanics III—(Undergraduate register for 142C.) Introduction to: nonlinear analysis, the constitutive modeling for nonlinear and time-dependent materials and finite element implementation, contact mechanics and the basics of finite element implementation. Use of and experiments with commercial codes as part of computer-aided design. Selected special topics.
4 units, Spr (Pinsky)

3 units (Hughes) alternate years, given 2000-01

234B. Finite Element Methods in Fluid Mechanics—Continuation of 234A.
3 units (Hughes) alternate years, given 2000-01

234C. Finite Element Methods in Fluid Mechanics—Continuation of 234B.
3 units (Hughes) alternate years, given 2000-01

3 units (Hughes) alternate years, not given 2000-01

3 units, Win (Hughes) alternate years, not given 2000-01

3 units, Spr (Hughes) alternate years, not given 2000-01

237. Free and Forced Motion of Structures—(Enroll in Aeronautics and Astronautics 244A.)

3 units, Aut (Cho)

238B. Analysis of Continuum Mechanics—Quantum mechanics and interatomic potentials; crystal lattices; hyperelasticity; Cauchy-Born Elasticity; the Virial Theorem and statistical mechanics of elasticity; continuum analysis of atomistic simulations; atomic J-integral concept.
3 units (Cho, Gao) not given 1999-2000

3 units, Win (Gao)

3 units, Spr (Gao)

3 units (Gao) given 2000-01

241A. Theory of Plates—Analysis of stress, deformation in plates bent by transverse loads. Application to circular, rectangular, other shapes. Vibrations, buckling. Prerequisite: 111 or Civil Engineering 114.

3 units (Steele) not given 1999-2000

241B. Theory of Shells—Axisymmetric deformation of shells of revolution. Asymptotic expansions, direct and bending stress. Application to design of domes, pressure vessels, expansion joints and pressure sensing devices. Use of asymptotic solutions for "very large finite element computation." Prerequisite: 111 or Civil and Environmental Engineering 114.

3 units (Steele) not given 1999-2000

3 units, Spr (Steele)

243. Micromechanics—(Enroll in Material Science and Engineering 350.)

3 units, Win (Gao)

244. Atomistic Simulations of Materials—Fundamental concepts and the practical techniques of atomistic simulations for engineering and science graduate students. The fundamental concepts of molecular dynamics (MD) and Monte Carlo (MC) simulations are introduced based on the finite difference method. Practical computational techniques of MD and MC simulations. The strength and weakness of atomistic simulations under the light of the accuracy of interatomic potentials. Standard methods of simulation analysis in connection with numerical data analysis and statistical mechanics. Advanced simulation techniques (generalized MD and smart MC simulations, etc.).

3 units, Win (Cho)

3 units, Win (Nelson)

246. Techniques of Failure Analysis—Enroll in Aeronautics and Astronautics 252.)

247A. Microstructure and Mechanical Properties—(Enroll in Materials Science and Engineering 251.)

3 units, Spr (Nelson)

249A. Quantum Simulations—Molecules and Surfaces—Quantum atomistic simulations of molecules and surfaces to predict atomic structure, properties, reactions mechanisms and kinetics. Review of quantum mechanics. Electronic structure calculations: Hartree Fock, configuration interaction, many body perturbation theory, and density functional theory wave functions, property calculations: energy, forces, structure, electronic and vibrational spectra. Applications to semiconductor processing, surface science, biochemistry, catalysis, polymers, environmental chemistry and combustion.

3 units, Win (Musrave)

3 units, Spr (Cho)

HEAT TRANSFER, FLUID MECHANICS, AND HIGH TEMPERATURE GAS DYNAMICS

250. Heat Transfer—For graduate students; see 131A.

3 units, Aut

251A. Fluid Mechanics—Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conversation. Forces and stresses in fluids, Euler's equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

3 units, Aut (Lele)

251B. Fluid Mechanics—Laminar viscous fluid flow. Brief review of governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence. Prerequisite: 251A.

3 units, Win (Lele)

252A. Radiative Heat Transfer—The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 252B.C for depth in heat transfer.
Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

3 units, Aut (Mitchell)

3 units, Spr (Eaton)

3 units (Edwards) not given 1999-2000

**254. Computers and Instrumentation in the Fluid Mechanics Laboratory**—Use of computers including interfacing of analog and digital instruments, experimental control, sampling strategies, and data reduction techniques. Instrumentation including hot-wire, laser-Doppler and particle imaging anemometers. Lab. Prerequisite: previous experience with computer programming.

3 or 4 units, Win (Santiago)

**255. Compressible Flow**—Recommended for students with little experience in compressible flow. Introduction to compressible flow. Sound waves and normal shock-waves. Quasi-one-dimensional steady flows in variable area ducts with friction, heating, and cooling; unsteady one-dimensional flow, two-dimensional supersonic flow; oblique shock waves, Prandtl-Meyer expansions, detonation waves. Method of characteristics.

3 units, Win (Bowman)

**256. Turbomachinery, Fluid Dynamics, and Design**—Theory, performance, and design of turbomachines (turbines, pumps, compressors, wind turbines, etc.). Turbomachines function as the result of the dynamic interaction of a moving fluid with a bladed rotor. Problems sets, and a final design project such as the specification of blading for a compressor or a turbine stage to meet prescribed performance criteria. Prerequisites: 251A or equivalent, plus one-dimensional flow of a perfect gas as presented in 131B or equivalent.

3 units (Staff) not given 1999-2000

**257. Fluid Flow in Microdevices**—Introduction to the effects of physics-chemical forces on the fluid flow of micron-scale flow devices. Basic descriptions of creeping flow, charge double-layers, and electrochemical transport (e.g., Nernst-Planck equations) lead to a study of the hydrodynamics of solutions of charged and uncharged particles. Device applications of interest include microsystems that perform capillary electrophoresis, drug dispersion, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and Brownian motion effects are important. Prerequisite: consent of instructor.

3 units, Aut (Santiago)

**258. Heat Transfer in Microdevices**—Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. Impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis on Si and GaAs semiconduc-
tor devices and layers of unusual, technically-promising materials, e.g., chemical-vapor-deposited (CVD) diamond. Final project can be based on student research interests. Prerequisite: consent of instructor.

3 units, Spr (Goodson)

**259A. Numerical Methods in Fluid Mechanics**—(Enroll in Aeronautics and Astronautics 214A.)

**259B. Numerical Computation of Compressible Flow**—(Enroll in Aeronautics and Astronautics 214B.)

**259C. Numerical Computation of Viscous Flow**—(Enroll in Aeronautics and Astronautics 214C.)

**261A. Statistical Theory and Modeling for Turbulent Flow**—Averaging and correlations, vorticity and vortex stretching, and the energy cascade. Reynolds stresses; introduction to transport equations. Length scales and spectra; "universal" scaling of small eddies. Law of the wall, local equilibrium, and eddy viscosity. Properties of boundary layers and other "thin" shear layers; complex flows. Introduction to prediction methods; local equilibrium, stress-transport, and eddy-viscosity transport models. Prerequisite: 251B.

3 units (Staff) not given 1999-2000

**261B. Advanced Topics in Turbulence**—Topics vary each year and may include: spectral representation, rapid distortion theory, Cayley-Hamilton theorem and constitutive modeling of turbulence, turbulent dispersion, stochastic differential equations, Reynolds average and modeling for reacting flows, vortical structures (topology), intermittency, proper orthogonal characteristic eddy decomposition, chaos, Lyapunoff exponents, fractals, large eddy simulations, subgrid closure, and geophysical turbulence.

3 units (Staff) not given 1999-2000

**262A. Physical Gas Dynamics**—Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest, e.g., combustion and materials processing.

3 units, Aut (Cappelli)

**262B. Nonequilibrium Processes in High-Temperature Gases**—Introduction to chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Vibration-translation energy transfer. Prerequisite: 262A.

3 units, not given 1999-2000

**263. Partially Ionized Plasmas and Gas Discharges**—Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applica-
240. Optics—Introduction to classical and modern physics of light. Prerequisites: 271 or consent of instructor.
3 units, Win (Sivaraman)

241. Advanced Experimental Methods—Advanced laboratory methods for photonics, nonlinear optics, and wave phenomena. Prerequisite: 240 or consent of instructor.
3 units, Spr (Goykhman)

301. Medical Device Forum—Invited speakers discuss engineering, medical, legal, and business issues associated with the development of medical devices. (AU)
1 unit, Win (Delp, Andriacchi)

4 units, Win (Delp, Andriacchi)

3 units, Spr (Heegard)

304. Cardiovascular Biomechanics—See 184.

305. Tissue Engineering—Tissue engineering is an expanding discipline that applies biological and engineering principles to create substitutes or replacements for defective tissues or organs. The principles of cell biology provide a foundation for using engineering approaches to generate tissue structure and function. Emphasis is on how scaffolds, smart polymers, and mechanical forces can be used to reproduce the physical environment that acts, at the whole organ system level, to maintain specialized cellular function through molecular and genetic mechanisms.
3 units, Win (Theocharis)

306. Neuromuscular Biomechanics—The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with physical disabilities.
3 units, Spr (Delp)

307. Biomechanics and Ecological Physiology of Intertidal Communities—(Enroll in Biological Sciences 277H.)
3 units, Win (Carter, Taylor)

291. Advanced Applied Mechanics—Advanced topics in the mechanics of fluids, solids, and structures. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Win (Bowman)

292. Computational Fluid Dynamics—Advanced methods in computational fluid dynamics. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Spr (Heegaard)

293. Advanced Fluid Dynamics—Advanced topics in fluid dynamics. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Win (Ferziger)

294. Advanced Materials Mechanics—Advanced topics in the mechanics of materials. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Aut (Ferziger)

295. Advanced Continuum Mechanics—Advanced topics in continuum mechanics. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Win (Hanson)

296. Advanced Tensor Analysis—Advanced topics in tensor analysis. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Aut (Hanson)

297. Advanced Solid Mechanics—Advanced topics in solid mechanics. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Spr (Valero-Cuevas)

298. Advanced Fluid and Heat Transfer—Advanced topics in fluid and heat transfer. Prerequisites: 262A and/or 264. Recommended: 269A.
3 units, Win (Hanson)

THERMODYNAMICS AND ENERGY CONVERSION

270. Engineering Thermodynamics—Thermodynamic analysis of engineering systems emphasizing systematic methodology for application of basic principles. Introduction to availability analysis. Thermodynamics of gas mixtures and reacting systems. Modern computational equations of state. Thermodynamics of condensed phases, including solutions. Prerequisites: undergraduate background in engineering thermodynamics and computer skills.
3 units, Aut (Bowman)

271. Combustion Fundamentals—Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 262A or 270, or consent of instructor.
3 units, Win (Mitchell)

272. Combustion Applications—The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 271.
3 units, Spr (Bowman)

BIOMECHANICAL ENGINEERING

281. Orthopaedic/Cardiovascular Bioengineering and Medicine—Engineering approaches are applied to the musculoskeletal and cardiovascular system within the context of surgical and medical care. Introduction to fundamental anatomy and physiology. The material and structural characteristics of hard and soft connective tissues and organ systems and the role of mechanics in normal development and pathogenesis. Engineering methods are used in the evaluation and planning of medical procedures, surgery, and devices.
3 units, Aut (Carter, Taylor)

282A. Biomechanical Engineering R&D I—Interdisciplinary approaches are used in formulating research and development project proposals associated with patient care. Possible topics: fracture plate and fixation, neuromuscular coordination, artificial joint replacement, rehabilitation devices, cardiovascular devices. Attendance at orthopaedic and rehabilitation grand rounds. Lab. Limited enrollment.
4 units, Win (Delp, Andriacchi)

282B. Biomechanical Engineering R&D II—Research and development projects are executed with the guidance of project coaches. Oral presentations and written proposals, papers, and reports. Attendance at orthopaedic and rehabilitation grand rounds. Prerequisite: consent of instructor.
4 units, Spr (Andriacchi)

3 units, Spr (Heegard)

284. Cardiovascular Biomechanics—See 184.

285. Tissue Engineering—Tissue engineering is an expanding discipline that applies biological and engineering principles to create substitutes or replacements for defective tissues or organs. The principles of cell biology provide a foundation for using engineering approaches to generate tissue structure and function. Emphasis is on how scaffolds, smart polymers, and mechanical forces can be used to reproduce the physical environment that acts, at the whole organ system level, to maintain specialized cellular function through molecular and genetic mechanisms.
3 units, Win (Theocharis)

286. Neuromuscular Biomechanics—The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with physical disabilities.
3 units, Spr (Delp)

287. Biomechanics and Ecological Physiology of Intertidal Communities—(Enroll in Biological Sciences 277H.)
3 units, Win (Carter, Taylor)

DIRECTED STUDY AND SEMINARS

288. Biomechanical Engineering Seminar—Invited speakers present research topics at the interfaces of biology, medicine, physics, and engineering. (AU)
1 unit, Win (Alexander)
Spr (Valero-Cuevas)

289. Medical Device Forum—Invited speakers discuss engineering, medical, legal, and business issues associated with the development of medical devices. (AU)
1 unit, Win (Taylor)
290. Thermosciences Research Project Seminar—Review of work in a particular research program and presentations of other related work. (AU)
   1 unit, Aut, Win, Spr (Staff)

291. Engineering Problems—Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under (AU)
   1-5 units, any quarter (Staff)

291X. Teaching Participation—Credit is given for assisting a professor in the teaching of a mechanical engineering course. Consent of supervising instructor required.
   1-3 units, Aut, Win, Spr (Staff)

292. Experimental Investigation of Engineering Problems—Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 291 may be required to provide background for experimental program. Faculty sponsor required.
   1-5 units, any quarter (Staff)

293. Interdisciplinary Interaction Design—(Same as Computer Science 447.) Small teams develop innovative technology prototypes that combine product and interaction design. Focus is on software and hardware interfaces, interaction, design aesthetics, and some underpinnings of successful design: a reflective, interactive design process, group dynamics of effective interdisciplinary teamwork, and working with users. Prerequisite: 247A.
   3-4 units, Spr (Kelley, Winograd)

293X. Human-Computer Interaction: Interaction Design Studio—(Enroll in Computer Science 247A.)

294. Design Forum—Invited speakers address issues of interest to designers. Brief presentation followed by open discussion. Spring Quarter emphasis on manufacturing and design. (AU)
   1 unit, Aut, Win (Gerdes)
   Spr (Beach)

295. Seminar in Solid Mechanics—Problems in all branches of solid mechanics. All Ph.D. candidates in solid mechanics are normally expected to attend. (AU)
   1 unit, Aut, Win, Spr (Staff)

296. Manufacturing Systems Engineering Forum—Invited speakers address issues of interest to design and manufacturing engineers. Brief presentations are followed by open discussion. Sponsored by Stanford Engineering Club for Automation and Manufacturing. (SECAM) (AU)
   1 unit, Aut, Win, Spr (Beach)

297. Design Theory and Methodology Forum—A mixture of research reports, literature reviews, and designer interviews promote rigorous examinations of the cognitive basis for designer behavior and design tool development. (AU)
   1 unit, Aut, Win, Spr (Leifer, Mabogunje)

298. Seminar in Fluid Mechanics—(Enroll in Engineering 298.)

299. Practical Training—Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following internship, work students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Meets the requirements for Curricular Practical Training for Students on F-1 visas. Student is responsible for arranging own employment. Register under adviser’s section number.
   1 unit (Staff)

   2-15 units, any quarter (Staff)

301. Thesis—Dissertation for the degree of Ph.D.
   2-15 units, any quarter (Staff)

303. Manufacturing and Design—(Same as 103.)

ADVANCED MATHEMATICS AND COMPUTATION ANALYSIS

   3 units (Durbin) not given 1999-2000

   3 units, Aut (Moin)

DESIGN

309. Finite Element Analysis in Mechanical Design—Part I: basic concepts of finite elements, with applications to problems confront the mechanical design. Linear static, modal, and thermal formulations are emphasized; nonlinear and dynamic formulations are introduced. Students implement simple element formulations to obtain a deeper understanding of the essential features of this numerical technique. Part II: application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques features of various commercial codes, code problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisite: ability to program, Mathematics 103, or equivalent. Recommended: 111, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.
   3 units, Spr (Sheppard)

310A. Tools for Team-Based Design—(Same as Engineering 310A.)
   For graduate students; open to limited SITN/global enrollment. Project-based, exposing students to the tools and methodologies useful for forming and managing an effective engineering design team in a business environment, including product development teams that may be spread around the world. Topics: personality profiles for creating teams with balanced diversity; computational tools for project coordination and management; real time electronic documentation as a critical design process variable; and methods for refining project requirements to ensure that the team addresses the right problem with the right solution. Computer-aided tools are employed for supporting geographically distributed teams. The final project analyzes a set of industry-sponsored design projects for consideration in 310B,C. The investigation includes benchmarking and meetings with industrial clients. The deliverable is a detailed document with specifications for the project and the optimal design team that should work on the project in subsequent quarters.
Limited enrollment, consent of instructor for off-campus (global) registrants.

4 units, Aut (Cutkosky)

310B, C. Design Project Experience with Corporate Partners—(Same as Engineering 310B, C.) Two-quarter project for graduate students who already have some design experience and want in-depth involvement in an entrepreneurial design team with real world industrial partners. The products developed are part of the student's portfolio. For some projects, 217 and 218 may be prerequisites or co-requisites (see http://me310.stanford.edu for admission guidelines). Each team functions like a small start-up company, working closely with a technical advisory board, consisting of the instructional staff and a coach. Teams use computer-aided tools for project management, communication, and documentation, and are provided a budget for direct expenses including hiring technical assistants and conducting tests. Teams interact with corporate liaisons weekly via site visits, video conferencing, email, fax, and phone. Hardware demonstrations, peer reviews, scheduled documentation releases, and an intense team environment provide the mechanisms and culture for design information sharing. Enrollment by consent of instructor and depends on the results of a pre-enrollment survey in December and the recommendations made by project definition teams in 310A.

4-5 units, Win, Spr (Cutkosky)

311. Engineering: Women's Perspective—Master's and Ph.D.-level seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Graduate students share experiences and examine scientific research in these areas. Guests speakers from academia and industry, student presentations with an emphasis on group discussion. (AU)

1 unit, Win, Spr (Sheppard)

313. Ambidextrous Thinking—Visual and kinesthetic skills are developed and exercised in solving design problems. Quickly executed perspective, orthographic, diagrammatic, and three-dimensional sketches are emphasized in conjunction with fluent and flexible idea production. Exercises to appreciate and develop the entire body's role in creative thinking. Enrollment limited to 60.

3 units, Aut (Faste)

314. Solid State Physics for Mechanical Engineering—Introductory overview of the principles of statistical mechanics, quantum mechanics, and solid-state physics. Provides graduate mechanical engineering students with the understanding needed to work on devices or technologies which rely on solid-state physics.

3 units (Kenny) alternate years, given 2000-01

316A. Advanced Product Design: Formgiving—See 116A. Prerequisites: 313, 303; art.

3 units, Win (Burnett)

316B. Advanced Product Design: Conceptualization—See 116B. Prerequisite: consent of instructor.

316C. Advanced Product Design: Implementation—Prerequisite: 316B.

317. Total Product Integration Engineering—Advanced version of 217A B. Enrollment limited 12. Prerequisites: 217A B and at least two years of full-time industry experience or consent of instructor.

318. Introduction to Mechatronics—See 118.

319. Robotics and Vision Lab—For graduate students with some familiarity in robotics who want project experience with robotic and vision systems. Current topics in robotics and machine vision with applications to flexible, automated manufacturing; emphasis is on integrated problems and techniques for fine motion control, calibration, acquisition of sensory data, and programming. Cell level topics: architectures and strategies for cell control. Research issues: dextrous manipulation and languages for high-level task specification. Typical projects: robotic deburring, assembly using force feedback and/or vision, part inspection, and cell control. Short assignments provide practical experience with various equipment. Enrollment limited to 30. Prerequisites: 219 or equivalent, some familiarity with programming.

3 units, Spr (Milroy)

327B. Introduction to Computer Vision—(Enroll in Computer Science 223B.)

328. Design for Appropriate Technology—See 128.

ADVANCED MECHANICS OF SOLIDS

349. Engineering Quantum Mechanics—Basic quantum mechanics topics necessary for engineering graduate students to understand the atomic, electronic, and, optical properties of diverse material systems and to fundamental underlying principles of microscopic measurement processes (e.g., STM, MFM, TEM, SNOM, etc.). Topics: electronic bound state, collision theory, symmetry in quantum mechanics, approximation methods, identical particles and spin, electromagnetic field, and relativistic wave equations.

3 units, Sum (Cho)

ADVANCED FLUID MECHANICS

351A. Advanced Fluid Mechanics—For advanced students specializing in fluid mechanics. Topics: kinematics (analysis of deformation, critical points and flow topology, Helmholtz decomposition); constitutive relations (viscous and visco-elastic flows, non-inertial frames); vortex dynamics; circulation theorems, vortex line stretching and rotation, vorticity generation mechanisms, vortex filaments and Biot-Savart formula, local induction approximation, impulse and kinetic energy of vortex systems, vorticity in rotating frame. Prerequisite: graduate-level courses in compressible and viscous flow.

3 units (Staff) not given 1999-2000

351B. Advanced Fluid Mechanics—Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Stability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Benard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor. Focus is on flow instabilities. Prerequisites: graduate-level courses in compressible and viscous flow.

3 units (Lele) not given 1999-2000

3 units (Staff) not given 1999-2000

OTHER

381. Biomechanics of Movement—See 181.

396. Product Realization Lab: Special Project—Material varies each year, emphasizing design and technique in either foundry work, machining projects, or wood construction.

1 unit, Spr (Milroy)
459. Frontiers in Interdisciplinary Biosciences Literature—(Same as Chemical Engineering 459.) Literature/discussion on how to critically evaluate the cutting edge of current research, held in conjunction with a seminar series, occurring once per month for 1999-2000, and more frequently thereafter. Leading investigators in interdisciplinary research from Stanford and from throughout the world present their work in a particular area. Before the seminar, students and faculty read and critically discuss one or more papers from the primary research literature on a related topic. After the seminar, students meet informally with the speakers to discuss the research and future directions. Emphasis is on how to read papers in the primary research literature, and familiarization with the broad set of techniques and approaches used to study problems in the biosciences. This interdisciplinary course is listed in many departments in the schools of Engineering, Medicine, and Humanities and Sciences. Students should enroll in their affiliated department, if it is offered. If not, students may enroll in any department within their school where the course is listed.

SCIENTIFIC COMPUTING AND COMPUTATIONAL MATHEMATICS PROGRAM

Director: Gene H. Golub
Associate Director: Walter Murray
Core Faculty: Gene Golub (Computer Science), Robert Dutton (Electrical Engineering), Joseph B. Keller (Mathematics, emeritus), Walter Murray (Engineering-Economic Systems and Operations Research), Joseph Oliger (Computer Science), George Papanicolaou (Mathematics)
Affiliated Faculty: Khalid Aziz (Petroleum Engineering), Joel Ferziger (Mechanical Engineering), George M. Hornsby (Chemical Engineering), Thomas J. Hughes (Mechanical Engineering), Thomas Kailath (Electrical Engineering), T. P. Liu (Mathematics)

The Scientific Computing and Computational Mathematics Program (SC/CM) is interdisciplinary and leads to the M.S. and Ph.D. degrees. It is designed for students interested in studying and developing computational tools in those aspects of applied mathematics central to modeling in the physical and engineering sciences. Graduates of this program are expected to be able to deal with a scientific problem from its formulation, moving through its mathematical analysis to algorithm development and implementation. The symbiosis of applied mathematics and numerical computing is stressed.

The program prepares students for research in the rapidly expanding field of supercomputing.

GRADUATE PROGRAMS

MASTER OF SCIENCE

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees" section of this bulletin. A candidate must complete a program of 46 units of courses numbered 100 or greater. In addition, a number of courses at the 200 level or above are required. At least 36 of these units must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. The core curriculum is common to all degrees offered by the program, but is adapted according to the interests and prior education of the student. Deviations from the core curriculum must be justified in writing and approved by the student's adviser and the SC/CM Committee. Courses that are waived rather than taken may not be counted towards the master's degree. The student must fulfill credit requirements in each of the categories listed below.

CORE CURRICULUM

1. Mathematics (18 units): students are required to take Mathematics 220A,B, C. Nine additional units in math are required with at least 6 units at the 200 level. Suggested courses are Mathematics 173, 205A,B,C, 224, 230, 236, 237, 256A,B,C, 274, 276A,B; Statistics 300A,B,C, 305, 306A,B, 310A,B,C. Other courses can be substituted with consent of the adviser and the SC/CM Committee. Students should take those courses most suitable to their areas of specialization.

2. Numerical Analysis (12 units): students are required to take Computer Science (CS) 237A,B,C and 3 units of one of the advanced courses in numerical analysis: CS 335, 336, 337, 339; Mechanical Engineering (ME) 233B, 235A,B,C; Statistics 327.

3. Computer Science (6-9 units): students can take a selection of courses from CS 109A,B, 212, 248, 260. This must include a course at the 200 level.

4. Application Area (9 units): students must take a focused program in an applications area such as fluid mechanics, operations research, or statistics. Courses must be at the 200 level or higher, and the program of concentration must be approved by the adviser and committee. The following courses meet the requirements: Aeronautics and Astronautics 210A,B, 214A,B,C; Civil and Environmental Engineering 212; Electrical Engineering 363, 364, 365, 378A,B; ME 238A,B, 251A,B, 269.

5. Seminar (1 unit): students are required to regularly attend the Scientific Computing/Computational Mathematics seminar for one quarter. The seminar is held weekly during the academic year.

DOCTOR OF PHILOSOPHY

The University's basic requirements for the Ph.D. degree (residence, dissertation, examination, and so on.) are discussed in the "Graduate Degrees" section of this bulletin. The following are the program's requirements:

1. Plan and successfully complete a coherent program of study covering the basic areas of Scientific Computing and Computational Mathematics. It must at least satisfy the requirements for the M.S. degree in SC/CM. It is important that the student be able to exhibit depth in some area of application. The student's adviser has the primary responsibility for the adequacy of the program, which must meet the approval of the SC/CM Committee.

2. To be admitted to candidacy for the Ph.D. degree, a student must have successfully completed 27 units of graduate courses (200 level and above) with at least a GPA of 3.0. In addition, a student must pass a qualifying examination and give a presentation on his or her chosen research area. The qualifying examination must be taken within one year of admission into the Ph.D. program, and the research presentation must be completed within one year of successfully passing the Ph.D. qualifying examination. Detailed information about the scope of the Ph.D. qualifying examination may be obtained from the program.

3. Beyond the requirements for candidacy, the student must complete a focused course of study of at least 48 units. The program should be
designed to develop a deep, focused background in the research area to be pursued in the dissertation. Approval of the program must be obtained from the SC/CM Committee.

4. In addition, the student must have an adequate knowledge of a coherent area of application and must complete at least 12 units in that area.

5. The most important requirement for the Ph.D. is the dissertation. Within a reasonable period after passing the qualifying examination, the student must obtain the agreement of a faculty member to be the dissertation adviser. A reading committee must be selected before the student is admitted to Terminal Graduate Registration (TGR), and this committee should be frequently consulted by the student before the University oral examination. Upon completion of a draft of the dissertation, the student must pass a University oral examination in defense of the dissertation.

Ph.D. MINOR

Students wishing to obtain a Ph.D. minor in the Scientific Computing and Computational Mathematics Program should consult the department office for designation of a minor adviser. A minor in SC/CM may be obtained by completing 20 units of course work, including the sequences Mathematics 220A,B,C and Computer Science 237A,B,C; a GPA of 3.0 (B) or better must be maintained in these courses.

The student’s Ph.D. reading committee and University oral committee must include one faculty member who is associated with the SC/CM program.

COURSES

137. Introduction to Scientific Computing—(Enroll in Computer Science 137.) Prerequisites: Computer Science 106A; Mathematics 103 or 113 or equivalents.
   4 units, Aut (Oliger)
   Spr (Golub)

138. Matlab and Maple for Science and Engineering Applications—
   (Enroll in Computer Science 138.)
   4 units, Win (Moler)

220A,B,C. Partial Differential Equations of Applied Mathematics—
   (Enroll in Mathematics 220A,B,C.) Prerequisite: some familiarity with differential equations and functions of a complex variable.
   220A. 3 units, Aut (Liu)
   220B. 3 units, Win (Liu)
   220C. 3 units, Spr (Chou)

237A,B,C. Advanced Numerical Analysis—(Enroll in Computer Science 237A,B,C.)

237A. Numerical Linear Algebra—Prerequisites: Computer Science 106A, 137; Mathematics 103 or 113.
   3 units, Aut (Golub)

237B. Numerical Solution of Initial Value Problems—Prerequisites: Mathematics 130, 131.
   3 units, Win (Oliger)

237C. Numerical Solution of Boundary Value Problems—Prerequisites: Mathematics 130, 131.
   3 units, Spr (Wan)

238. Parallel Methods in Numerical Analysis—(Enroll in Computer Science 238.) Prerequisite: Mechanical Engineering 200A or Computer Science 237A, or consent of instructor.
   3 units, Win (Alonso, Wan)

336. Advanced Methods in Matrix Computation—(Enroll in Computer Science 336.)
   3 units (Golub) not given 1999-2000

337. Numerical Methods for Initial Boundary Value Problems—
   (Enroll in Computer Science 337.)
   3 units, Spr (Oliger)

339. Topics in Numerical Analysis—(Enroll in Computer Science 339.)
   3 units (Staff) alternate years, given 2000-01

340. SCCM Consulting Workshop
   1-3 units, any quarter (Wan)

398. Curricular Practical Training—Provides students with on-the-job training under the guidance of experienced, on-site supervisors. Students must register the quarter after their training. Students receive credit and a grade after submitting a concise report detailing work activities, problems worked on, and key results. Prerequisite: written consent of adviser.
   1 unit, any quarter (Staff)

399. Independent Project
   any quarter (Staff)

499. Advanced Reading and Research—Prerequisites: majoring in Scientific Computing and Computational Mathematics; consent of instructor.
   any quarter (Staff)

530. Applied Mathematics/Scientific Computing Seminar—(Enroll in Computer Science 530.)
   1 unit, Aut, Win, Spr (Staff)

   1 unit, Aut, Win, Spr (Golub)
The School of Humanities and Sciences includes the departments of Anthropological Sciences, Applied Physics, Art and Art History, Asian Languages, Biological Sciences (and the Hopkins Marine Station), Chemistry, Classics, Communication, Comparative Literature, Cultural and Social Anthropology, Drama, Economics, English, Food Research, French and Italian, German Studies, History, Linguistics, Mathematics, Music, Philosophy, Physics, Political Science, Psychology, Religious Studies, Slavic Languages and Literatures, Sociology, Spanish and Portuguese, and Statistics.

The school also includes 16 interdepartmental degree programs: African and Afro-American Studies; American Studies; Comparative Studies in Race and Ethnicity; East Asian Studies; Human Biology; Feminist Studies; Interdisciplinary Studies in Humanities; International Policy Studies; International Relations; Latin American Studies; Mathematical and Computational Science; Modern Thought and Literature; Public Policy; Russian and East European Studies; Science, Technology, and Society; Symbolic Systems; and Urban Studies.

In addition, the school sponsors programs that do not currently grant degrees: African Studies, Astronomy, Black Performing Arts, Ethics in Society, History and Philosophy of Science, Jewish Studies, Medieval Studies, Overseas Studies, the Social Science History Institute, and Undergraduate Research Opportunities.

Faculty and academic staff of the School of Humanities and Sciences are listed under the respective departments or programs.

**DEGREES OFFERED**

Candidates for the degree of Bachelor of Arts, Bachelor of Science, Bachelor of Arts and Sciences, Master of Arts, Master of Fine Arts, Master of Science, Doctor of Musical Arts, or Doctor of Philosophy should consult appropriate sections of the announcements following. They should consult also the department or program in which they intend to specialize.

**PROGRAM IN AFRICAN AND AFRO-AMERICAN STUDIES**

*Director:* John R. Rickford  
*Associate Director:* Diann W. McCants  
*Advisory Committee:* David Abernethy (Political Science), Clay Carson (History), Sally Dickson (Multicultural Development Office, African and Afro-American Studies Committee Chair), Sandra Drake (English), Paulla Ebron (Cultural and Social Anthropology), Christina Erwin (African and Afro-American Studies), Morris Graves (Associate Dean of Students), Elaine C. Ray (Assistant Director, University Communications), Michael Thompson (History)

**UNDERGRADUATE PROGRAMS**

**BACHELOR OF ARTS**

The African and Afro-American Studies (AAAS) program covers a vast and varied field, including: (I) the history, literature, culture and social science of African Americans as a central component of American culture; and (II) the history, literature, culture, and social science of the peoples of Africa and the Black Diaspora. AAAS is an indispensable subject for those interested in the cultural, economic, historical, political, or social study of the United States.

To investigate the rich and varied human tapestry which AAAS spans, students are encouraged to use interdisciplinary methods drawn from anthropology, art, art history, economics, languages, linguistics and literature, music, philosophy, political science, psychology, religion, and sociology, among others. A degree in AAAS prepares students for the many work positions requiring a broad liberal arts perspective as well as those requiring the specialized knowledge which AAAS offers. Students in AAAS receive training that is especially valuable for graduate study and/or careers in such fields as business, comparative literature, creative writing, education, journalism, law, linguistics, medicine, performing arts, politics, social sciences, social work, and urban studies. The program emphasizes creative scholarship and research through various means, as follows.

*The AAAS Major—All majors and double majors are expected to complete a total of 60 units, of which 25 units must be selected from the...*
A BAR core courses (AAAS 105 is mandatory). Students must also enroll in two Comparative Studies in Race and Ethnicity (CSRE) core introductory courses and complete a CSRE senior seminar (a writing intensive course of 5 units) before graduating. Additionally, 20 units are to be selected from areas I (Afro-American Studies) or II (Africa and the Black Diaspora) or a special program, area III, devised by the student. No more than two courses of a general nature (for example, Sociology 145, which deals with race and ethnicity, but without a primary African or African American focus) may be counted towards the major. Honors students should choose option III. All majors must include at least one course from area I and II. Each of these options consolidates as well as broadens the work of the core. Students who choose option III may devise a program with a special theme. This choice allows the student to focus 20 units on developing previous work in the major or exploring new areas. In organizing this plan, the student works with an adviser on the chosen theme and must have prior written approval from the director of the program.

Directed Reading—AAAS 190A, B, C allows students to focus up to 15 units of work on a special topic of interest. In organizing this plan, the student consults with the program director and one more faculty member specializing in the area or discipline.

CORE COURSES

SOCIAL SCIENCES

Area I minors must choose at least two courses below.

Anthropological Sciences:
105. Race, Gender, and Biology

Economics:
116. American Economic History

Education:
141. Race, Education, and the Media
150X. Understanding Racial and Ethnic Identity
179X. Urban Youth and their Institutions
193C. Peer Counseling: The American Community
201A. History of African American Education through 1940
201B. Education for Liberation
203X. Education and Inequality in American Culture
381. Multicultural Issues in Higher Education

Cultural and Social Anthropology:
10. From the Age of Exploration to the Present: Europe and the U.S.
15. Africa and the Diaspora
88. Theories of Race and Ethnicity: A Comparative Perspective
150. Comparative Cultural Studies
156. Youth Cultural Formations: Race, Class, Gender
225. Navigating Diaspora

Linguistics:
64. Development of Englishes Around the World
73. African American Vernacular English

Political Science:
180. Courts, Color, and the Constitution
181. Seminar: African Americans and the Political System
196. Issues of Race in American Politics
197P. Seminar: Political Beliefs and Values of Black Americans
296. Seminar: Racial and Ethnic Politics in the U.S.

Psychology:
174. African American Psychology
175. Seminar on Topics in Identity Development
180. Social Psychological Perspectives on Stereotyping and Prejudice

Sociology:
145. Race and Ethnic Relations
149. The Urban Underclass

HUMANITIES
20B. Advanced Jazz Theory
20C. Jazz Arranging and Composition
161B. Jazz Ensemble

Philosophy:
77. The Ethics of Social Decisions: Racism, Poverty, and Environmental Justice
77. Philosophical Issues Concerning Race and Racism

Religious Studies:
2N. Stanford Introductory Seminar: Prophecy and Politics in America—The Religious Thought of Abraham Joshua Heschel and Martin Luther King, Jr.
163. Religion and Ethnicity

Area II majors choose 20 units.

AFRICAN AND AFRO-AMERICAN STUDIES

Area II majors choose 20 units.

SOCIAL SCIENCES

Area II majors choose 20 units.

AFRICAN AND AFRO-AMERICAN STUDIES

105. Introduction to African and Afro-American Studies (required)

HUMANITIES

Area II minors must choose at least two courses below.

Comparative Literature:
103. Egyptian East/Egyptian West
170E. Introduction to African Systems of Thought

Drama (Dance):
43. Afro-Brazilian and Afro-Peruvian Dance
143. Afro-American Roots of American Concert Dance

English:
161E. Modern African Writing in English
197T. Literature of South Africa

French and Italian:
133. Literature and Society in Africa and the Caribbean

History:
48Q. Stanford Introductory Seminar: South Africa—Contested Transitions
50N. Stanford Introductory Seminar: The Black Atlantic
61. The Constitution and Race
64. Introduction to Race and Ethnicity in the American Experience
147A. African History in Novels and Film
147B. The Idea of Africa among African Americans
148. Introduction to African History
144C. Africa in the 20th Century
150. African-American History to the 20th Century
246B. Undergraduate Colloquium: Mau Mau Uprising in 1950s Kenya
246S. Undergraduate Colloquium: Popular Culture in Africa
247/547. Greater East Africa and its Historical Writing
247A. Undergraduate Colloquium: African Identity in a Changing World
247B. Undergraduate Colloquium: Health and Society in Africa
247C. Undergraduate Colloquium: Africa and African Americans since World War II
247S. Undergraduate Research Seminar: The Great Mau Mau Rebellion in 1950s Kenya
248A. Undergraduate Colloquium: The End of Slavery in Africa and the Americas
248D. Law and Colonialism in Africa
248S. Undergraduate Research Seminar: Colonial States and Societies in Africa
249. Undergraduate Colloquium: Religions, Cultures, and History in West Africa and the African Americas
249A. Undergraduate Colloquium: The Issue of Greatness in Black History
249B. Undergraduate Colloquium: Black Visual Arts and Black History
255A. Culture and Ideologies of Race
259. Undergraduate Colloquium: Race and Ethnicity in the United States and South Africa

Language Center:
102A,B,C. Beginning Hausa
103A,B,C. Beginning Hausa
106A,B,C. Beginning Swahili
107A,B,C. Intermediate Swahili
108A,B,C. Advanced Swahili
111A,B,C. Beginning Chichewa
133A,B,C. The African Evening Forum

Overseas Studies—Parts:
131X. France, Africa, and Global Politics

Religious Studies
110. Islam in the Modern World

Spanish and Portuguese
135. Caribbean Cultural Perspectives
210E. Anglophone Caribbean Literature
275. Market and Culture in the Caribbean
277. Race and Nation in Cuba

SENIOR SEMINAR

All AAAS majors must take at least two quarters of the CSRE Senior Seminar (see complete description of the seminar in the "Comparative Studies in Race and Ethnicity" section of this bulletin).

MINORS

Students who minor in AAAS must complete either (1) a total of six courses of 3 or more graded units, or (2) a minimum of 25 graded units from the list of AAAS core courses listed above. The courses must include AAAS 105 and at least one course from the social sciences and one from the humanities. Students should develop a coherent theme in their course selections, in consultation with the program director or associate director.

AAAS stresses academic advising. The director or associate director advises all AAAS students, including majors, minors, and double majors. Additionally, majors and double majors have the opportunity to participate in individual and group mentoring activities offered by CSSE. The program prides itself on its responsiveness to student concerns, and its guiding Advisory Committee includes both faculty and student representation.

HONORS

Majors who have maintained a cumulative 3.3 grade point average (GPA) or higher may apply for the honors program. The honors essay or project is intended to enable students to synthesize several of the skills they have acquired and to produce a document or project demonstrating some measure of competence in their specialty. The honors project essay must be discussed with and approved by the major adviser and the program director. A student may receive 5-15 units for the honors project. All students completing an honors project must participate in at least two quarters of the CSRE Senior Seminar.
runaways from slavery still live. Journal of notes and reflections on the
expedition required for credit. Prerequisite: 103B for 4 units.

1 unit, Spr (Rickford, McCants)

5 units, Spr (McCants)

190A,B,C. Directed Reading
5-15 units, Aut, Win, Spr (Staff)

199A,B,C. Honors Project
5-15 units, Aut, Win, Spr (Staff)

AFFILIATED DEPARTMENT OFFERINGS
See the respective department listings for course descriptions and General Education Requirements (GER) information.

CLASSICS
105. The History and Culture of Egypt
4-5 units, Spr (Manning)

DRAMA
156. Contemporary Ethnic Drama
4 units (Elam) alternate years, given 2000-01

163. Performance and America
4 units, Aut (Elam)

DANCE
43. Afro-Brazilian and Afro-Peruvian Dance
1 unit, Aut (Cashion)

44. Jazz Dance I
1 unit, Aut, Win, Spr (Kramer)

143. Afro-American Roots of American Concert Dance
2 units, Win (Moses)

144. Jazz Dance II
1 unit, Aut, Spr (Moses)

ENGLISH
159. 19th- and 20th-Century African-American Poets
not given 1999-2000

161E. Modern African Writing in English
not given 1999-2000

168B. Introduction to Afro-American Literature
5 units, Spr (Rampersad)

HISTORY
48Q. Stanford Introductory Seminar: South Africa—Contested Transitions
3 units, Win (Samoff)

50S. Sources and Methods Seminar: Race and Popular Culture (in Black and White)
5 units (M. Thompson) not given 1999-2000

61. The Constitution and Race
5 units (Rakove) not given 1999-2000

64. Introduction to Race and Ethnicity in the American Experience
5 units, Win (Castillo)

147A. African History in Novels and Film
5 units, Aut (Jackson)

147B. The Idea of Africa among African Americans
5 units (Jackson) not given 1999-2000

148. Introduction to African History
5 units (Jackson) not given 1999-2000

148C. Africa in the 20th Century
5 units, Spr (Lane)

150A. African-American History to the 20th Century
5 units, Aut (M. Thompson)

150B. Introduction to African-American History: The Modern Black Freedom Struggle
5 units, Spr (Carson)

200M. Undergraduate Directed Research: Martin Luther King, Jr. Papers Project
units by arrangement (Carson)

246S. Undergraduate Research Seminar: Popular Culture in Africa
5 units (Jackson) not given 1999-2000

247. Undergraduate Colloquium: Greater East Africa and its Historical Writing—(Same as 347.)
5 units, Spr (Jackson)

247C. Undergraduate Colloquium: Africa and African Americans since World War II
5 units, Aut (Jackson)

247S. Undergraduate Research Seminar: The Great Mau Mau Rebellion in 1950s Kenya—(Same as 447.)
5 units, Win (Jackson)

248A. Undergraduate Colloquium: The End of Slavery in Africa and the Americas
5 units (R. Roberts) not given 1999-2000

248S. Undergraduate Research Seminar: Colonial States and Societies in Africa
5 units (R. Roberts) not given 1999-2000

253. Undergraduate Colloquium: Topics in African American History—The Great Migration
5 units (M. Thompson) not given 1999-2000

255A. Undergraduate Colloquium: Culture and Ideologies of Race
5 units, Win (M. Thompson)

LINGUISTICS
73. African American Vernacular English
4-5 units, Win (Rickford)

MUSIC
18. Jazz History
18B. Bebop to Present (1940-)
3 units, Spr (Staff)
African Studies

Emeriti: Paul F. Basch (Medicine), James L. Gibbs, Jr., Raymond D. Giraud, Joseph H. Greenberg, Bruce F. Johnston, Hans M. Weiler, Sylvia Wynter

Chair: Richard Roberts

Professors: David B. Abernethy (Political Science), Jean-Marie Apostolidis (French and Italian), Russell Berman (Comparative Literature, German Studies), Joan Bresnan (Linguistics), Martin Carnoy (Education), Walter P. Falcon (Institute for International Studies), George M. Fredrickson (History), William B. Gould (Law), William R. Leben (Linguistics), Valentin Mudimbe (French and Italian, Comparative Literature), Scott R. Pearson (Food Research Institute), Richard Rendell (Art and Art History), John Rickford (Linguistics, African and Afro-American Studies), Richard Roberts (History), Pan A. Yotopoulos (Food Research Institute)

Associate Professors: Sandra E. Drake (English), Akhil Gupta (Cultural and Social Anthropology), Kennell A. Jackson, Jr. (History), David Katzenstein (School of Medicine), Bruce Luigignan (Electrical Engineering), Elisabeth Mudimbe-Boyoi (French and Italian, Comparative Literature)

Assistant Professors: Paulla A. Ebron (Cultural and Social Anthropology), Karen Mundy (School of Education)

Senior Lecturer: Khalil Barthoun (Linguistics)

Lecturer: John Mugane (Special Language Program)

Consulting Professor: Joel Samoff (Center for African Studies)

Curators: Peter Duignan (Senior Fellow, emeritus, Hoover Institution), Karen Fung (Deputy Curator, Hoover Institution), Thomas Seligman (Director, Stanford Museum of Art and Lecturer, Department of Art and Art History)

Senior Research Fellows: Larry Diamond (Hoover Institution), Stephen Sedman (CISAC)

The Committee on African Studies coordinates an interdisciplinary program in African Studies for undergraduate and graduate students from various departments. Under special arrangement with the Stanford/Berkeley Joint Center for African Studies, it is possible to incorporate courses from both institutions into one's program. Contact the center at (650) 723-0295 for a listing of courses offered at University of California at Berkeley.

Courses in African Studies are offered by departments and programs throughout the University. A sampling of these is listed at the end of this section. Each year the committee sponsors a seminar to demonstrate to advanced undergraduate and graduate students how topics of current interest in African Studies are approached from different disciplinary perspectives. Each week's presentation is conducted by a different professor in African Studies; the first hour is a lecture, followed by a one-hour seminar discussion.

Course offerings in African languages are also coordinated by the Committee on African Studies. Along with regular courses in several levels of Swahili and Arabic, the committee arranges with the Special Language Program in the Stanford Language Center to offer instruction in other African languages. In recent years, the Special Language Program has offered courses in Fulani, Hausa, Maninka, Northern Sotho, Shona, Swahili, and Wolof.

The Committee on African Studies does not sponsor degree programs, but undergraduates and graduate students can specialize in African Studies under a number of arrangements listed below.

UNDERGRADUATE PROGRAMS

Undergraduates may choose an African Studies focus among several alternatives:

1. A major in a traditionally defined academic department (for example, Anthropological Sciences, Cultural and Social Anthropology, History, Political Science, and so on). These departments afford ample opportunity to enroll in courses outside the major, leaving the student free to pursue the interdisciplinary study of Africa.

2. Interdepartmental majors, such as African and Afro-American Studies or International Relations, which offer coordinated and comprehensive interdisciplinary course sequences, permitting a concentration in African Studies.

3. An individually designed major in African Studies. Under the supervision of a faculty adviser and two other faculty members, the student can plan a program of study focused on Africa that draws courses from any department or school in the University. If approved by the Dean's Advisory Committee on Individually Designed Majors, the program becomes the curriculum for the A.B. degree.

Undergraduates can study for a year in Africa. In recent years, students have been able to enroll at the University of Cape Town, South Africa; University of Ghana at Legon; University of Nairobi, Kenya; and at Université du Benin, Togo. Students should check with the Overseas Studies office to see what arrangements are currently available.

MINORS

The Committee on African Studies awards a minor in African Studies. Students majoring in any field qualify for this minor by meeting the following requirements:

1. Taking a minimum of 25 units of African-related courses.

2. Having at least one quarter exposure to an African language. Africa is a linguistically heterogeneous region and most Africans are multilingual. Learning an African language is an excellent way to learn about African cultures, and the Center for African Studies and the Special Languages Program may arrange instruction in any of several dozen languages spoken in West, East, Central, and Southern Africa.

3. Completing one introductory course that deals with more than one region of Africa.

4. Writing a 25-35 page research paper. This paper may be an extension of a previous paper written for an African Studies course.

5. Designate a focus of study (either disciplinary or regional) through a three course concentration.

Upon satisfactory completion of all requirements, final certification of the minor is made by the Center for African Studies and appears on the student’s transcript. For more information, call the Center for African Studies at (650) 723-0295 or see the center’s website, http://www-leland.stanford.edu/dept/AFR/.
GRADUATE STUDY

For those who wish to become specialists in African Studies at the graduate level, African Studies can be designated a field of concentration within the regular master's and doctoral programs of some academic departments. Students in the departments of Anthropological Sciences, Cultural and Social Anthropology, History, Political Science, and Sociology, and in the School of Education, may declare African Studies as the area of specialization for their master's and Ph.D. thesis work. Some other departments, programs, and institutes such as International Policy Studies and the International Comparative Education Program also permit students to specialize in African Studies. Stanford enrolled graduate students who are U.S. citizens and permanent residents interested in area language studies in Africa may request a Foreign Language and Area Studies (FLAS) Fellowship application from the FLAS Fellowships coordinator at (650) 723-0295. The academic year FLAS application deadline is mid-January. For summer FLAS applications, the deadline is mid-April, and students need not be enrolled at Stanford to apply.

COURSES

5 units (R. Roberts) not given 1999-2000

249B. Everyday Life in Contemporary Africa—Often, our understanding of today's Africa is in an outdated framework. What is the experience of lived history in contemporary Africa? Themes: the culture of communication (language, film, radio, TV, records); the citizen and the state; women and men; the culture of money, success, and poverty; and today's rural and urban life. Aim is to locate the ordinary people on a grid of choices and outcomes.

5 units (Jackson, Leben)

AFFILIATED DEPARTMENT OFFERINGS

See the respective department listings for course descriptions and General Education Requirements (GER) information.

AFRICAN AND AFRO-AMERICAN STUDIES

103. African and Afro-American Studies Lecture Series

1-3 units, Aut, Win, Spr (Staff)

105. Introduction to African and Afro-American Studies

5 units, Spr (McCants)

ANTHROPOLOGICAL SCIENCES

6. Human Origins—(Same as Human Biology 6.)

5 units, Win (Klein)

20N. Stanford Introductory Seminar: Modern Human Origins

3 units (Klein) not given 1999-2000

CULTURAL AND SOCIAL ANTHROPOLOGY

1. Social and Cultural Anthropology

5 units, Win (Mankekar)

89B. Comparative Race and Inequality

5 units, Win (Tunstall)

90. Theory in Cultural and Social Anthropology

5 units, Win (Ebron)

AMERICAN STUDIES

Administrative Committee: (Chair) Barton J. Bernstein (History); Rudy Busto (Religious Studies, on leave), Albert Camarillo (History), Gordon Chang (History), Joseph Corn (American Studies Program Coordinator), Wanda Corn (Art and Art History), Jay Fliegelman (English), George Fredrickson (History), Richard Gillam (American Studies Program Coordinator), Judith Goldstein (Political Science), Alexander Nemerov (Art and Art History), Horace A. Porter (En-
The American Studies program is administered through the office of Interdisciplinary Studies in Humanities; see http://www.stanford.edu/group/HSP/AmStud/.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The purpose of the American Studies program is to provide students with a comprehensive and critical interdisciplinary understanding of the American experience. The program builds on a series of core courses emphasizing intellectual and cultural as well as historical and legal analysis. American Studies is also a broadly multicultural major that gives serious curricular attention to issues of diversity, especially as raised by distinctions of race, class, ethnicity, and gender. All majors take an intensive seminar, "Perspectives on American Identity," that explores the tension between commonality and difference, and society and group, from a variety of disciplinary perspectives. The program stresses the study of multiculturalism in depth as well as breadth by requiring students to take at least two approved classes focusing specifically on race and ethnicity. Majors who take five or more such courses have the option of graduating with a race and ethnicity specialization in American Studies.

All American Studies majors work closely with a faculty coordinator to develop an independent study plan consisting of 14 (or more) courses totaling at least 60 units. All are to be taken for a letter grade. Study plans must emphasize one of four general concentrations or areas of interest: (1) History and Society; (2) Literature and Thought; (3) Visual and Material Culture; and (4) Politics, Policy, and Economics.

Concentration Requirements—All majors must take a total of 11 courses in four areas of concentration: (1) History and Society; (2) Literature and Thought; (3) Visual and Material Culture; and (4) Politics, Policy, and Economics. These 11 courses, in all cases, include American Studies 150, and History 165A and 165B, plus courses to satisfy the race and ethnicity requirement (described in the section below). In addition, majors must meet the following minimum distribution requirements: five courses sufficient to provide a solid grounding in a chosen area of concentration; six courses in the other three areas; and at least one course in each area.

Seminar Requirements—All majors must take American Studies 200, Perspectives on American Identity, plus a second seminar (or colloquium) requiring a substantial paper. Neither American Studies 200 nor the second seminar count towards the 11-course concentration requirement described above. However, students who complete more than these two required seminars may count such additional seminars towards their 11-course concentration requirement. Most courses that fulfill the second seminar requirement are so noted in the updated list available at the program office. There may be other courses that fulfill this requirement; students should consult the chair or one of the program coordinators in such cases. Seminars taken under the aegis of the Stanford-in-Washington program may also fulfill the second seminar requirement.

Race and Ethnicity Component—This requirement may be fulfilled in one of the following two ways:

1. Normally, students take American Studies 164, Race and Ethnicity in the American Experience, and a second race and ethnicity course approved by the program. In this case, the second race and ethnicity course counts towards the 11-course concentration requirement described above. However, students who complete more than these two required seminars may count such additional seminars towards their 11-course concentration requirement. Most courses that fulfill the second seminar requirement are so noted in the updated list available at the program office. There may be other courses that fulfill this requirement; students should consult the chair or one of the program coordinators in such cases. Seminars taken under the aegis of the Stanford-in-Washington program may also fulfill the second seminar requirement.

2. Alternatively, students may take three approved race and ethnicity classes dealing with at least two different racial/ethnic groups. In this option, two of these three courses count towards the 11-course concentration requirement.

A list of courses satisfying the race and ethnicity component in American Studies may be obtained from the program administrator.

Optional Specialization in Race and Ethnicity—Students who take at least five approved race and ethnicity courses graduate with an American Studies specialization in race and ethnicity. This is noted on the final undergraduate transcript.

Students wishing to earn an undergraduate minor in American Studies must complete seven courses for a minimum of 27 units.

All students take the pre/core course, American Studies 130, English 121, American Literature and Culture to 1855 (5 units), as an introduction to the critical study of American literature and culture.

Students also complete two of the following five courses in American history (10 units) to provide a historical foundation:

American Studies 164/History 64, Race and Ethnicity in the American Experience

History 165A, Colonial and Revolutionary America

History 165B, 19th-Century America

History 165C, The United States in the 20th Century

History 172A, America since 1945

In addition, students choose four elective courses appropriate to their particular interests from courses listed under American Studies (12-20 units). These courses should be selected with one of two goals in mind:

(a) to give the student a breadth of exposure to various issues in American Studies; and to give the student an opportunity to study an area of American Studies in depth (for example, technology in America, race and ethnicity in America, American art and material culture).

(b) to give the student an opportunity to study an area of American Studies in depth (for example, technology in America, race and ethnicity in America, American art and material culture).

All courses counted toward the minor in American Studies must be taken for a letter grade. No course counted toward the minor can also count toward a student's major.

HONORS PROGRAM

Preferably during the junior year and no later than the third quarter before graduation, majors with demonstrated interest and ability in American Studies may apply to seek honors by writing a senior thesis for 10 to 15 units of credit. This application is to include the topic and a proposed outline of the senior thesis and should be signed by a Stanford faculty member who is willing to direct the student's thesis during the ensuing year. The program may approve the application or request resubmission with revisions. The finished essay must be submitted six weeks before the date of graduation. Units for the honors program must be in addition to the 60-unit major. The final grade for the essay is assigned by the chair based on the evaluations of both the primary thesis adviser and a second reader appointed by the program.

AMERICAN STUDIES HOUSE

This undergraduate residence in Governor's Corner offers educational opportunities in American Studies to majors whether they are residents or not. Residents are assigned through the draw for undergraduate housing.

COURSES

See departmental listings for complete descriptions and University General Education Requirements (GER) notations. Some courses may require prerequisites that do not apply toward the major. See the Time Schedule each quarter for changes in listings. An up-to-date list is available in the program office.

CORE

AMERICAN STUDIES

105. American Literature and Culture to 1855—(Same as English 121.) Reading texts from Cotton Mather to Melville, examines the major issues in early American cultural and literary history. Developments in the fine and domestic arts, methodological issues associated with the enterprise called 'American Studies.' (Literature and Thought) GER 3a (DR: 7)

5 units, Win (Fliegelman)

151. The Transformation of American Thought and Culture, 1865 to the Present—Persistent strains and tensions in American intellectual life and culture over the past 125 years. Readings include autobiographies, novels, documentary works, and historical and theoretical analy-
ses that bear on issues of technology and culture, consumerism, mass society, gender, sexuality, violence, political extremism, and power. (History and Society, or Literature and Thought) GER:3a (DR:8)

5 units, Win (Gillam)

152. American Spaces: An Introduction to Material Culture and the Built Environment—(Same as History 152.) American history through the evidence of things, e.g., spaces, buildings, and landscapes of the "built environment." How to "read" such artifacts using methods and theories from anthropology, cultural geography, history, and other disciplines. (Visual and Material Culture) GER:3b (DR:9)

"built environment." How to "read" such artifacts using methods and the evidence of things, e.g., spaces, buildings, and landscapes of the nation's major minority populations. Focus is on the past two centuries. (Fulfills Race and Ethnicity Requirement; does not count toward concentration.) GER:3b,4b (DR:3 or 9)

5 units, Aut (Friedman)

RACE AND ETHNICITY

Note—Students must take a second course in Race and Ethnicity besides 164, selected from the list available in the program office. This second course counts in one of the concentrations.

164. Introduction to Race and Ethnicity in the American Experience—(Same as History 64.) How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries. (Purpills Race and Ethnicity Requirement; does not count toward concentration.) GER:3b,4b (DR:3 or 9)

5 units, Win (Castillo)

SEMINAR ON AMERICAN IDENTITY

5 units, Aut (J. Corn)

Spr (Gillam)

HISTORY AND SOCIETY

114. Visions of the 1960s—Preference to sophomores. Introduction to the ideas, sensibility, and (to a lesser degree) the politics of the American 1960s. Topics: the early '60s vision of a "Beloved Community," varieties of racial, generational, and feminist dissent, the meaning of the "counterculture," and current interpretive perspectives on the 1960s. Attention to film, music, and articles and books. GER:3a (DR:7 or 8)

5 units, Aut (Gillam)

151. The Transformation of American Thought and Culture, 1865 to the Present—See "Core Lectures."

179. Introduction to American Law—(Same as Law 106, Political Science 182F.) American law for undergraduates. The structure of the American legal system, including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; the relationship between the American legal system and American society in general. (History and Society; or Politics, Policy, and Economics) GER:3b (DR:9)

5 units, Aut (J. Corn)

141B. History of Film: The Second 50 Years

142. Broadcasting in America

160. The Press and the Political Process

CULTURAL AND SOCIAL ANTHROPOLOGY

33. Inventing the Savage

EDUCATION

201. History of Education in the United States

HISTORY

115. Technology and Culture in 19th-Century America

150A. African-American History to the 20th Century

150B. Introduction to African-American History: The Modern Black Freedom Struggle

165A. Colonial and Revolutionary America—Required for the American Studies major.

165B. 19th-Century America—Required for the American Studies major.

165C. The United States in the 20th Century

172A. The United States since 1945

173C. Introduction to Feminist Studies

247C. Undergraduate Colloquium: Africa and African Americans since World War II

250C. Undergraduate Colloquium: Thomas Jefferson and His World

252. Undergraduate Colloquium: Decision-Making in International Crises—The A-Bomb, the Korean War, and the Cuban Missile Crisis

255A. Undergraduate Colloquium: Culture and Ideologies of Race

265. Undergraduate Colloquium: Topics in Mexican American History

262S. Undergraduate Research Seminar: Science and High Technology in Silicon Valley, 1930-1980

272A. Undergraduate Colloquium: War and Society, 1941-1968

274A. Undergraduate Colloquium: Body Works—Medicine, Technology, and the Body in late 20th-Century America

283A. Undergraduate Colloquium: Slavery and Race Relations in the Americas
LINGUISTICS
146. Language and Gender

PSYCHOLOGY
174. African American Psychology

SOCIOMETRY
118. Social Movements and Collective Action

138/238. American Indians in Comparative Historical Perspective
139/239. American Indians in Contemporary Society
145. Race and Ethnic Relations
149. The Urban Underclass
150. The Family

SCIENCE, TECHNOLOGY, AND SOCIETY
101. Science, Technology, and Contemporary Society

LITERATURE AND THOUGHT
114. Visions of the 1960s—See description under “History and Society.”

150. American Literature and Culture to 1855—(Same as English 121.) See “Core Lectures.”

151. The Transformation of American Thought and Culture, 1865 to the Present—See “Core Lectures.”

214. The American 1960s: Thought, Protest, and Culture

AFRICAN AND AFRO-AMERICAN STUDIES
105. Introduction to African and Afro-American Studies

COMPARATIVE LITERATURE
168. Introduction to Asian American Culture

CULTURAL AND SOCIAL ANTHROPOLOGY
104. Race and Language in the U.S.

DRAMA

156. Contemporary Ethnic Drama
163. Performance and America

179B. Teatro America Workshop: The Theater of Native/Chicano America

180Q. Stanford Introductory Seminar: Noam Chomsky—The Drama of Resistance

ENGLISH
103B. The Literary History of American English

112. Masterpieces of American Literature

123D. The Multicultural Moment: American Literature from the Civil War to World War I

162G. Writing by 20th-Century Women of Color

164G. California Literary Imagination: The 19th Century

168B. Introduction to Afro-American Literature

175. Henry James

179H. Mark Twain and the Gilded Age

186B. Seminar: Melville

186P. Seminar: Representing Poverty in America, 1840-1940

186S. Seminar: Poe

LINGUISTICS
73. African American Vernacular English

MUSIC
18A. Ragtime to Bebop (1900-1940)
18B. Bebop to Present (1940-)

PHILOSOPHY
177. Philosophical Issues Concerning Race and Racism

SPANISH
132. Mexican and Chicano Cultural Perspectives

285E. Chicana Cultural Studies

VISUAL AND MATERIAL CULTURE
152. American Spaces: Introduction to Material Culture and the Built Environment—(Same as History 152.) See “Core Lectures.”

ART AND ART HISTORY
121. Abstract Expressionism

130A. American Art in the Gilded Age

130D/230D. American Art since 1945

134. History of Photography

140. Introduction to Film Studies

143. The Hollywood Musical

278. Seminar: The American College Campus

COMMUNICATION
1. Mass Communication and Society: Media Technologies, People, and Society

141B. History of Film: The Second 50 Years

DRAMA
65. American Musical Theater

156. Contemporary Ethnic Drama

163. Performance and America

179B. Teatro America Workshop: The Theater of Native/Chicano America

HISTORY
56S. Sources and Methods Seminar: Advertising and Consumer Culture in the United States

POLITICS, POLICY, AND ECONOMICS
179. Introduction to American Law—(Same as Law 106, Political Science 182F.) See “Core Lectures.”
COMMUNICATION
1. Mass Communication and Society: Media Technologies, People, and Society
125. Perspectives on American Journalism
137. U.S. Communication Policy
142. Broadcasting in America
160. The Press and the Political Process

ECONOMICS
116. American Economic History
157. Imperfect Competition
158. Antitrust and Regulation

EDUCATION
220B. Introduction to the Politics of Educational Analysis

HUMAN BIOLOGY
102B. Children, Youth, and the Law
125. Environmental Policy and Law
131. Natural Resources Policy

POLITICAL SCIENCE
1. Introduction to Political Science
10. American National Government and Politics
60. The American Dream
90N. Stanford Introductory Seminar: The Evolution of Voting Rights in the U.S.
101P. Politics and Public Policy—(Same as Public Policy 101.)
104. Seminar: Urban Policy
134B. America and the World Economy
158R. Children’s Citizenship: Justice across Generations
162. Seminar: Capitalism and Democracy
171. Judicial Politics and Constitutional Law: Civil Liberties
173M. Critical Overview of American Political History
174M. Seminar: The American Dream
176. Seminar: The Supreme Court
184W. Issues of Representation in American Politics
185. Seminar: Asian Americans in Politics
186. Urban Politics
196. Issues of Race in American Politics
197P. Seminar: Political Beliefs and Values of Black Americans

SCIENCE, TECHNOLOGY, AND SOCIETY
101. Science, Technology, and Contemporary Society
171. The Role of Technology in National Security

INDIVIDUAL WORK
195. Directed Research
1-5 units (Staff)
199. Directed Reading
1-5 units (Staff)

220. Student Initiated Course—American Studies majors have the opportunity to develop student-initiated courses and earn credit for their development, organization, and presentation. Such courses must have a faculty sponsor to assign grades, and must be approved by the chair or one of the program coordinators. See the program administrator for guidelines. Credit is assigned by the chair or one of the program coordinators on the recommendation of the faculty sponsor.
1-5 units, any quarter (Staff)

250. Senior Research Project—Research and writing of senior honors thesis under the supervision of a faculty member. The final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.
1-15 units, any quarter (Bernstein)

ANTHROPOLOGICAL SCIENCES
Chair: William H. Durham
Associate Professors: James A. Fox, John W. Rick
Assistant Professor: Joanna L. Mountain
Lecturers: Hill Gates, Marie Jurecki-Tiller, Anne Maggioncalda, Peter Rosset
Acting Assistant Professor: Susan Charnley
Consulting Assistant Professor: Dominique Irvine
Visiting Professors: Ramachandra Guha, Christopher Wilson
Affiliated Faculty: Carol Boggs, L. Luca Cavalli-Sforza, David Cox, Marcus W. Feldman, Henry Orserly, Barbara Kenig, Ellen Porzig, Robert Sapolsky, Richard White

The Department of Anthropological Sciences (ANSI) takes as its subject matter the nature and evolution of our species. The department offers students training in archaeology, cultural anthropology, demography, ecology, environmental anthropology, evolutionary theory, genetics, linguistic anthropology, medical anthropology, paleoanthropology, and primatology. Specialties and interests of individual faculty members include applied anthropology, curing systems in western and non-western societies, ethics, gender, genetic and cultural evolution, historical linguistics and linguistic anthropology, human environments and adaptations, human origins, hunters and gatherers, materialism, molecular anthropology, social and psychological anthropology, and tools and technology. The department is united by a common interest in the interrelations of biology, culture, and environment, and by a commitment to a four-field, scientific approach to anthropology.

The departmental curriculum includes courses at three levels. These courses are designed to: (1) expose undergraduates to the theories, methods, and subsistence of the anthropological sciences; (2) provide undergraduate majors and minors with a program of work leading to the Bach-
The department offers an undergraduate Bachelor of Arts degree. Undergraduates may elect to specialize in any one of four concentration tracks: (1) Culture, Social Relations, and Language; (2) Archaeology and Evolutionary Studies; (3) Population and Environment; and (4) Medical Anthropology and Genetics. Within each of these concentration tracks, students work with their faculty advisor to design a course of study that includes at least one course from each of five areas of "Human Evolution Framework" (described in detail below): human nature and variation; human history and prehistory; human evolutionary processes and their interactions; cultural systems and cultural transmission; and laboratory and field methods. The framework is designed to ensure that students of all specializations receive a solid grounding in evolutionary thinking and analysis.

The department offers three graduate degrees: Master of Science, Master of Arts, and the Doctorate of Philosophy. The graduate curriculum encourages students to pursue individual interests and projects under the supervision of a faculty committee. The backbone of the graduate program is a department-wide Core Seminar devoted to ongoing discussion of issues and approaches in the anthropological sciences. An active Teaching Assistant Training Program, normally for students in the second year of the Ph.D. program, is an integral part of graduate training. The graduate program offers students a wide range of opportunities for training in theoretical and practical skills, including model-building, ethnographic methods, archaeological and osteological techniques, data analysis, computer imaging, laboratory methods in genetics, and a variety of field training options. At both the undergraduate and graduate levels, the curriculum emphasizes the use of scientific methodology.

The department also offers a variety of hands-on research and training opportunities, including research assistantships, internships on- and off-campus, an active undergraduate Honors program, and a series of Field Seminars with scholarships in the Amazon, the Andes, the African Southwest, Middle America, and Galapagos. Undergraduate and graduate students are encouraged to work with various faculty at their field sites each summer. The department maintains teaching and research collections in the Iris & B. Gerald Cantor Center for Visual Arts at Stanford University, featuring materials from the Americas, the Pacific Rim, and Africa. Each year, the department also awards a number of summer grants to undergraduates who are planning specialized study leading to Honors research in Anthropological Sciences. Awarded in Winter Quarter, these grants may be used for travel, language training, stipend, certain kinds of equipment and field assistance, and summer earnings offset. In addition, students have the opportunity to participate in ongoing historical archaeology conducted on campus.

Note—The degree programs in the Department of Anthropological Sciences became available in the Autumn Quarter of 1999-2000. Current students who enrolled in 1998-99 or in any previous year have the option of finishing their degrees under the guidelines and requirements of the former Department of Anthropology (see, for example, Stanford Bulletin 1998-99), or they may opt for the new guidelines and requirements outlined here. The choice of these options should be made in writing, with the faculty adviser’s approval, and filed with the Academic and Student Services Coordinator in the Anthropological Sciences office.

UNDERGRADUATE PROGRAMS

The Department of Anthropological Sciences offers a Bachelor of Arts degree together with an Honors program and a minor. The Anthropological Sciences programs include active undergraduate advising (described below).

BACHELOR OF ARTS

The A.B. degree program in Anthropological Sciences gives students an understanding of the breadth and depth of anthropological knowledge, as well as a series of intellectual and practical tools. Majors choose from one of four concentration tracks: Language, Culture, and Social Relations; Archaeology and Evolutionary Studies; Population and Environment; and Medical Anthropology and Genetics. The A.B. in Anthropological Sciences provides solid preparation for careers in anthropology, business, economic development, education, foreign service, health professions, international relations, law, or public policy.

With the addition of courses from the natural, physical, and mathematical sciences, the A.B. degree also provides preparation for further study in a broad variety of scientific areas, including earth sciences, ecology and evolutionary biology, environmental sciences, human genetics, medicine, and psychology. The department is developing a Bachelor of Science degree; and, currently provides guidance for undergraduate students who want to ensure a strong background in the natural and quantitative sciences, as they earn an undergraduate Anthropological Sciences degree (see the department Academic and Student Services Coordinator for details).

REQUIREMENTS

The department offers considerable flexibility in structuring an Anthropological Sciences major. In consultation with a faculty adviser, students develop a program that reflects their individual interests and needs. Majors in anthropological sciences meet with their advisers at least once every quarter. Each student’s progress toward fulfilling the major requirements is recorded in a departmental file. It is the student’s responsibility to see that this file is kept up to date.

All A.B. majors in the Department of Anthropological Sciences (ANSI) must fulfill the following requirements:

1. Course work equivalent to 65 units, with at least 45 units in Anthropological Sciences. The remaining 20 units may be taken in any of the related humanities, social science, and science departments and programs, including the Department of Cultural and Social Anthropology. Outside courses must form a coherent program of study and must be approved by the student’s adviser. Up to 10 of the 65 units may be in Directed Individual Study.
2. Complete ANSI 2A and 2B (Human Biology 2A and 2B), or three other "Introductory Courses" as listed below.
3. Complete at least one course in each of the four traditional subfields of anthropology: archeological, biological anthropology, linguistic, and sociocultural.
4. A letter grade of ‘B’ or better in the theory course, History of Theory in Anthropological Sciences (ANSI 190). This course fulfills the University’s Writing in the Major Requirement (WIM) and should be taken no later than the junior year.
5. Declare a concentration track and complete at least 30 units in that track. These 30 units should include at least one course from each of the five Human Evolution Framework (HEF) areas below, including lab and field methods. Note that some courses satisfy multiple areas of the HEF.
6. Complete at least one foreign language course at the second-year level with a letter grade of ‘B’ or better. This requirement may also be met by special examination, presentation of superior foreign language placement scores, or certification in writing from an appropriate department.
7. Complete at least one course in statistics (ANSI 192, Biological Sciences 141, Statistics 60, Psychology 60, or equivalent).

CONCENTRATION TRACKS

Concentration tracks, are designed to encourage students to acquire in-depth knowledge and training. Undergraduates in the major program may elect to specialize in one of the four tracks described below. Alternatively, students may design their own specialization(s) with the guidance of a faculty adviser. Each student is required to complete 30 units within the chosen track. With consent of their faculty adviser, students may replace one course with a relevant course offered by another department. The 30 units count towards the total of 65 units required for the major.

Culture, Social Relations, and Language (Track 1) – Emphasizes the unity and diversity of contemporary social, cultural, and linguistic systems. Course offerings include culture and social theory, family, gender...
kinship, linguistic anthropology, and political economy. Ethnographic
area studies are strongly encouraged for students who choose this track.

Archaeology and Evolutionary Studies (Track 2)—Features primate
evolution, human origins and prehistory, and the development of human
societies from early hunter-gatherers through complex civilizations.
Students choose from courses in anthropological genetics, archaeology,
evolutionary theory, historical linguistics, palaeoanthropology, and pri-
matology.

Population and Environment (Track 3)—Explores mutual relation-
ships between human populations and their environments. Biocultural
adaptations of human societies to diverse environments are examined,
as are the causes and consequences of human impact upon local and
global environments. Students choose from courses in behavioral ecology,
demography, ecological and environmental anthropology, and selected
area studies.

Medical Anthropology and Genetics (Track 4)—Examines human
biological and cultural variation from a variety of perspectives. Within
medical anthropology, the focus is on the social, cultural, and genetic
correlates of physical and mental health, as well as disease. In anthro-
ological genetics, students explore the extent, origins, and impact of vari-
ation among human genomes. Students choose from courses in epide-
miology, genetics, and medical anthropology.

HUMAN EVOLUTION FRAMEWORK (HEF)

Crossing-cutting these concentration tracks is an evolutionary frame-
work designed to familiarize students with the tools of analysis in anthro-
pological sciences. The department divides this framework into five
elemental components (HEF I-V) as outlined below. Regardless of the
concentration track, students are required to take at least one course in
each of these component areas. Many courses offered by the department
satisfy one or more of these requirements as shown by the HEF designa-
tions under “Courses” below.

Human Nature and Variation: Past and Present (HEF I)—
Biological nature and variation
Cultural nature and variation
Language capability and linguistic variation

Human universals, human differences

Human History and Prehistory: Inferring Events of the Past (HEF II)—
Population events: movements, splits, admixture, extinctions
Environmental events: changes in climate, resources, disease
Species events: adaptation, speciation, species extinction
Social and cultural events: changes in technology, settlement, language,
and social organization

Evolutionary Processes and their Interactions (HEF III)—
Molecular evolution, population genetics, and speciation
Cultural and linguistic evolution, ethnogenesis, social evolution
Causes and consequences of environmental change
Interactions of genetic, cultural, and social evolution

Cultural Systems and Cultural Transmission (HEF IV)—
Systemic properties of culture and language
Transmission of culture in space and time
Cultural ontology and socialization
Relationship between individual, society, and culture

Lab and Field Methods: Tools for the Anthropological Sciences (HEF V)—
Laboratory and field methods
Ethnographic methods
Data analysis
Computational models and methods

Declaring a Major—To declare an Anthropological Sciences major,
students should first discuss their ideas and plans with one or more de-
partment faculty, and with at least one peer adviser. When they have a
good working plan on paper (forms are available from the Academic and
Student Affairs Coordinator) for their course of study, they must then fill
out the Declaration of Major form in the Registrar’s Office, obtain the
signature of their student and faculty advisers, and contact the depart-
ment’s Academic and Student Services Coordinator who will review the
degree requirements and give general guidance. It may be helpful for
students to meet with the chair of the department’s Student Affairs Com-
mittee for initial academic advising and assistance in choosing an appro-
 priate adviser in the department. Students must complete the declaration
process (including the signature of their Anthropological Sciences ad-
viser) no later than the last day of the quarter, two quarters prior to de-
gree conferral (Autumn Quarter if Spring graduation is planned).

Undergraduates are actively encouraged to take advantage of fund-
 ing opportunities to carry out independent research. Funding for under-
graduate research is available from Undergraduate Research Opportu-
nities (URO) grants, affiliated area studies programs (for example,
Latin-American Studies), and the department’s own Undergraduate
Summer Research awards. Information and applications for the latter are
available from the Academic and Student Services Coordinator in the
department office.

Advising Program—The department puts high priority on under-
graduate advising. Each student works with one or more peer advisers, as
well as a faculty adviser, to design and carry out their Anthropological Sci-
ences major or minor. The advising program is built on a faculty men-
toring approach, and to help students develop a good working relation-
ship with at least one faculty member. Students are expected to meet
regularly, and for at least two hours per quarter, with their faculty advis-
er to discuss their progress and to review course selection, research op-
portunities, graduate or professional schools, and career planning. Peer
advisers are often the first step in seeking advice; they keep regular hours
in the peer advising office in the department.

MINORS

Declaring a Minor—The department offers flexibility in structuring
an Anthropological Sciences minor. In consultation with both peer and
faculty advisers, students develop a minor that reflects their individual
interests and needs. Prospective Anthropological Sciences minors should
request an Anthropological Sciences Minor Planning Form and Check-
list from the department’s Academic and Student Services Coordinator.
All minors in the Department of Anthropological Sciences must fulfill
the following four requirements:

1. Selection of an Anthropological Sciences faculty adviser and approval
   of the minor courses by both peer and faculty advisers.
2. Completion of 30 units of course work in Anthropological Sciences
   with a grade point average (GPA) of ‘B-’ or better. With the advis-
er’s approval, up to 10 of the required 30 units may be taken in Cul-
tural and Social Anthropology or other social science departments
   at Stanford. No more than 10 of the 30 units may be taken for an instruc-
tor-elect-satisfactory/No Credit grade. Student-elected Satisfactory/
   No Credit units are not allowed.
3. Completion of ANSI 2A and 2B (Human Biology 2A and 2B) or three
   courses from introductory offerings.
4. Completion of at least one course at the 100 level or higher.

HONORS

The Honors Program in Anthropological Sciences provides students
the opportunity to conduct original research under the guidance of a facul-
ty adviser. Candidates of sophomore and junior standing should sub-
mit an application to the student program coordinator no later than the
end of the fourth week of the Spring Quarter. It must include a brief state-
ment of a proposed honors project, a complete course of study within
Anthropological Sciences, a transcript, and written approval of a facul-
ty sponsor. The Student Affairs Committee reviews applications and
notifies accepted students.

Candidates whose applications to the honors program has been ap-
proved by the Student Affairs Committee must complete all of the require-
ments for their major and submit an honors thesis no later than three weeks
prior to the end of the quarter in which graduation is anticipated. The thesis
is read by the candidate’s adviser and a second reader.

Students interested in honors are especially encouraged to apply for
summer research funding through the department, through the office of
Undergraduate Research Opportunities (URO), and through various of
the area studies centers on campus (for example, Latin American Studies, African and Afro-American Studies, and so on). In most cases, honors students apply for such funding no later than Spring Quarter of their junior year.

COTERMINAL DEGREES

The Department of Anthropological Sciences accepts applications from Stanford undergraduate students to work toward coterminal A.M. or M.S. degrees. Undergraduate students with a grade point average (GPA) of 3.0 or higher may apply between their seventh and eleventh quarters, by submitting with their application a statement of purpose, at least one writing sample (preferably a research paper), and three letters of reference. The GRE is not required. Requirements for coterminal degrees are described under "Graduate Programs" below.

GRADUATE PROGRAMS

University requirements for the degrees of Master of Arts, Master of Science, and Doctor of Philosophy are described in the "Graduate Degrees" section of this bulletin.

The department offers three graduate degrees: Master of Science, Master of Arts, and Doctorate of Philosophy. The graduate curriculum encourages students to pursue individual interests and projects under the supervision of a faculty committee. Specific details of the graduate programs in Anthropological Sciences are outlined in the departmental Graduate Handbooks (available in the department office).

MASTER OF ARTS

The Department of Anthropological Sciences offers the A.M. degree to four groups of students: Stanford undergraduates who enroll in the coterminal program; Stanford graduate students taking advanced degrees in other departments or schools at Stanford; Ph.D. students in Anthropological Sciences who fulfill the A.M. requirements in the course of their work toward the Ph.D. degree, and students who apply from outside of Stanford for entry into the terminal A.M. program.

REQUIREMENTS

1. Graduate enrollment at Stanford for at least three quarters of full tuition.
2. At least 45 units of course work for a letter grade (in addition to any pertinent undergraduate courses), with at least 30 units in Anthropological Sciences. The remaining 15 units may be taken from related humanities, social science, and science departments and programs, including the Department of Cultural and Social Anthropology. Outside courses must be approved by the student's adviser and must form a coherent program of study. No more than 10 of the 45 units may be in Directed Individual Study. Students must maintain a grade point average (GPA) of 'B' or better.
3. At least four graduate-level courses, other than "Special Courses," in Anthropological Sciences, all for a letter grade. The remaining units may be made up of courses selected in consultation with the student's faculty adviser.
4. Enroll in the departmental Core Seminar (ANSI 290) each quarter while in residence.
5. Students must submit a professional-quality field or library research paper to be read and approved by at least two department faculty members.

MASTER OF SCIENCE

The Department of Anthropological Sciences offers the M.S. degree to four groups of students: Stanford undergraduate science majors who enroll in the coterminal program; Stanford graduate students taking advanced degrees in other departments or schools at Stanford; Ph.D. students in Anthropological Sciences who fulfill the M.S. requirements in the course of their work toward the Ph.D. degree, and students who apply from outside of Stanford for entry into the terminal M.S. program. Students applying to the M.S. program must have a B.S. degree.

REQUIREMENTS

1. Graduate enrollment at Stanford for at least three quarters of full tuition.
2. At least 45 units of course work for a letter grade (in addition to any pertinent undergraduate courses), with at least 30 units in Anthropological Sciences. The remaining 15 units must be taken from earth science, natural science, statistics, computer science, chemistry, engineering, math, or physics. Outside courses must be approved by the student's adviser and must form a coherent program of study. No more than 10 of the 45 units may be in Directed Individual Study. Students must maintain a GPA in master's work of 'B' or better.
3. The Scientific Process in Anthropology (ANSI 291), and Data Analysis in the Anthropological Sciences (ANSI 292), both for a letter grade. Units earned in these courses count toward the 45-unit M.S. requirement.
4. Students must take at least four graduate-level courses, other than "Special Courses," in Anthropological Sciences, all for a letter grade. The remaining units may be made up of courses selected in consultation with the student's faculty adviser.
5. Enroll in the departmental Core Seminar (ANSI 290) each quarter while in residence.
6. Students must submit a professional-quality field or library research paper to be read and approved by at least two department faculty members.

DOCTOR OF PHILOSOPHY

Prospective graduate students should request application materials from Graduate Admissions in the Registrar's office. The deadline for applications is January 1. The Graduate Record Exam (GRE) is required. Successful applicants for the Ph.D. program may enter only in Autumn Quarter.

REQUIREMENTS

Requirements 1-9 must be completed within the first two years:
1. Within the first two years, complete 67 units of course work for a letter grade, while maintaining a grade point average (GPA) of 'B+' or better. Of these 67 units, at least 40 units must come from graduate-level courses within the department. The remaining 27 units may include advanced undergraduate courses as well as courses from related humanities, social science, and science departments and programs, including the Department of Cultural and Social Anthropology. Outside courses must form a coherent program of study and be approved by the student's adviser.
2. Enroll in the departmental Core Seminar (ANSI 290) each quarter while in residence (except for students in the second year of the program, who are working as TAs or RAs and thus have a 9-unit course limit). Units for ANSI 290 count toward the unit requirements for the Ph.D.
4. Complete ANSI 291, The Scientific Process in Anthropology, and 292, Data Analysis in the Anthropological Sciences, both for a letter grade; on petition to the Student Affairs Committee, one or both of these requirements can be fulfilled by equivalent undergraduate or master's course work.
5. Submit an acceptable, substantial, professional-quality, research paper in the Spring Quarter of the first year.
6. Serve as a teaching assistant for three undergraduate courses. In preparation for this responsibility, students are expected to take part in the departmental Teaching Assistant Training Program organized each year. (Students can petition to substitute an internship or research assistantship for one quarter as a TA).
7. For those whose native language is English, pass an examination in a language other than English that will either serve as a field or research language. For those whose native language is not English, satisfac-
tory command of English must be demonstrated by successful completion of the course and research requirements of the first two years of graduate study.

8. Recruit the special examination committee and schedule examinations by the end of the second year.

9. Petition for and advance to candidacy by the end of the second year. After successful completion of the first two years of the program, and after an accepted petition for doctoral candidacy, advanced graduate students are required to complete the following:

1. Pass a special examination (written and oral). This examination fulfills the requirement of the University oral examination and may be scheduled at any time during the third year that is directly following admission to candidacy.

2. Submit the Doctoral Dissertation Reading Committee form before approval of TGR status or before scheduling a University oral examination that is in defense of a dissertation. The reading committee is to be recruited no later than the end of the third year.

3. Take at least one quarter of Proposal Writing (ANSI 294) and prepare a dissertation proposal to be approved by the dissertation reading committee before the end of the Spring Quarter of the third year. If necessary, obtain Human Subjects clearance.

4. Take at least one quarter of Dissertation Writing (ANSI 298) and complete an approved dissertation based on independent research.

5. Give a public presentation of the dissertation in the department.

Financial Support—The department endeavors to provide needed financial support (through fellowships, teaching and research assistant-\(\)ship, and tuition grants) to all students admitted to the Ph.D. program who maintain satisfactory progress. First-year students in the Ph.D. program who have not entered with outside funding are required to apply for such funding during their first quarter. See Guide to the Ph.D. Program in Anthropological Sciences and the department website (http://www.stanford.edu/dept/anthsci) for details.

## COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

Undergraduate Anthropological Sciences courses 130 and above are organized by concentration tracks, 1 to 4 (see above). (HEF) designations indicate the given course satisfies requirement I, II, III, IV, or V of the Human Evolution Framework, also described above. A course may satisfy more than one HEF requirement.

### NUMBERING SYSTEM

Anthropological Sciences courses are numbered according to the following scheme:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Course Title</th>
<th>Units</th>
<th>Delivery</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>01-99</td>
<td>Introductory Courses</td>

### INTRODUCTORY

Intended to serve as an introduction to the methods, theories, and substance of Anthropological Sciences, introductory courses are for both majors and non-majors. ANSI 2A and 2B (Human Biology 2A and 2B) provide a good introduction to the major; alternatively, a student may take three other Introductory Courses numbered from 3 to 40.

2A. Genetics, Evolution, and Ecology—(Enroll in Human Biology 2A.)

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Aut (Durham, Boggs)</td>
</tr>
</tbody>
</table>

2B. Culture, Evolution, and Society—(Enroll in Human Biology 2B.)

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Aut (Klein, Wolf)</td>
</tr>
</tbody>
</table>

3. Introduction to Prehistoric Archaeology—Aims, methods, and data in the study of human society’s development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development are examined for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. GER:3b,4a (DR: 2 or 9)

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>3-5</td>
<td>Aut (Rick)</td>
</tr>
</tbody>
</table>

4. Language and Culture—Language variants (dialects, registers, jargons, writing, and non-verbal systems) and their use. Language classification and human prehistory. Linguistic determinism, relativism, encodability, and the cultural origins of vocabulary and grammar. The structure of discourse, including conversation, narrative, and poetry. Language, gender, and power. Style, style, theory, and ideology in language use. Emphasis is on the comparative reading of monographic studies of language and culture in particular societies.

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>4-5</td>
<td>Aut (Fox)</td>
</tr>
</tbody>
</table>

6. Human Origins—The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C. Emphasis is on broad evolutionary trends and on the natural selective forces behind them. GER:2a (DR:5)

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Win (Klein)</td>
</tr>
</tbody>
</table>

7. Marriage and Kinship—Surveys the variation in human kinship systems, asking whether or not they can be understood as evolutionary products, and considers the contribution to be made by a Marxist perspective. Eurasia and Africa are contrasted with Europe and E. Asia.

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>

<td>Win (Wolf)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Units</th>
<th>Delivery</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Win (Mountain)</td>
</tr>
</tbody>
</table>

9. Human Environments and Adaptations—Analyzes the relationship between diverse human populations and their environments. Theo-
ries for how environments influence human behavior and culture, and for how human populations shape their environments. Emphasis is on present-day environmental problems and the human dimensions. How the social and cultural processes can cause environmental problems (e.g. deforestation, soil erosion, habitat degradation), and help to serve them.

3-5 units (Staff) not given 1999-2000

10. Plagues and Peoples—Introduction to the principles of medical anthropology through an examination of major human infectious diseases. Focus is on the cultural constructions of health, cultural contexts of disease, and the social implications of medical intervention.

5 units (Staff) not given 1999-2000

STANFORD INTRODUCTORY SEMINARS (SIS)

The SIS program within the Department of Anthropological Sciences provides opportunities for first- (N) and second-year (Q) students to work closely with faculty. Units for these courses count towards the Anthropological Sciences major requirements.

20N. Stanford Introductory Seminar: Modern Human Origins—Preference to freshmen. Analysis of the data and theories bearing on the origins of anatomically modern humans between 100,000 and 50,000 years ago. Emphasis is on the two major contending theories: that modern humans originated recently or less simultaneously from non-modern humans in many regions of Africa and Eurasia; or that modern humans originated exclusively in Africa and spread from there. How paleoanthropologists test these theories against the empirical data of genetics and the fossil record. GER:2a (DR:5)

3 units (Klein) not given 1999-2000

21N. Stanford Introductory Seminar: The Use of Knowledge—Case Studies in Applied Anthropology—Preference to freshmen. Using anthropological case studies, asks the question, “Knowledge for What?” The relationship between the academic and the “real” world. Are we producing knowledge for its own sake, or with a use in mind? What basic research questions may lie behind starting with “real” world problems or possible applications of knowledge? Case studies involve anthropology and medicine, public health, cultural survival and identity, law and industry.

3 units (Barnett) not given 1999-2000

22N. Stanford Introductory Seminar: Genes, Peoples, and Diversity—Preference to freshmen. The impact of genetic information on: the understanding of human history, the practice of medicine, and on human society and culture. Patterns of genetic variation and how these patterns correlate with other dimensions of human diversity. The ethical issues associated with genetic information and medical genetics. Attempts to predict future patterns of genetic variation. GER:2a (DR:5)

3 units (Mountain) not given 1999-2000

23N. Stanford Introductory Seminar: Maya Mythology Multimedia Project—Preference to freshmen. Lectures, discussions, and hands-on work in the development of an ongoing world-wide-web project. The mythology, calendars, and astronomy of the ancient and modern Maya, emphasizing the relationships between the Quiché mythological text, Popul Vuh, and Maya hieroglyphic texts, art, colonial documents, and modern ethnography. Optional field seminar to the Maya heartland (limited capacity, at extra expense).

3 units (Fox) not given 1999-2000

24N. Stanford Introductory Seminar: Chinese Women and Girls—Preference to freshmen. Chinese girls and women inhabit a strongly patriarchal culture in which, paradoxically, women wield substantial power. This paradox is explored as it appears to feminists from the West, Taiwan, and China. Readings from ethnographies of China and Taiwan, and theoretical explorations of gender and gender relations. GER:3b (DR:9)

3 units (Gates) not given 1999-2000

27N. Stanford Introductory Seminar: Archaeology and Computers—Preference to freshmen. The increasing role that computers play in anthropological sciences, with emphasis on archaeology. The use of computer technology in fieldwork for mapping, site location, and remote detection, including hands-on work with archaeological data and images.

3 units (Rick) not given 1999-2000

31Q. Stanford Introductory Seminar: Earthquakes and Archaeology—(Enroll in Geophysics 50Q.)

3 units. Win (Nur)

CULTURE, SOCIAL RELATIONS, AND LANGUAGE

In addition to the courses listed directly below, ANSI courses 165 and 170, listed in other concentration tracks, also count towards the Track concentration.

CULTURE AND SOCIAL RELATIONS

102. Women, Fertility and Work—Is gender culturally or biologically determined or both? The arguments for sociobiological and cultural determinist explanations of the differences between women and men are compared, emphasizing their intersection in work. Case studies: gatherer/hunter, horticultural (Melanesian), southern Chinese, and Anglo-American societies. (HEF I, IV) GER:4c (DR:*)

5 units (Gates) not given 1999-2000

103. Theory and Method in Cultural Evolution—(Graduate student register for 203.) The concept of culture as used in anthropology, and the ways in which culture is socially conveyed and manipulated. The capacity for “descent with modification” in cultural systems. Critical examination of transmission forces, direct and indirect bias, epigenetic theory, cultural selection, gene-culture coevolution, and ethnogenesis. (HEF III, IV)

5 units (Durham) not given 1999-2000

105. Race, Gender, and Biology—Critically evaluates the biological arguments for the explanation of race and gender inequality in human societies. The history of the issues, examining the arguments of proponents (to the effect that race and sex role differences are rooted in evolutionary biology) and the arguments of their critics. Recent arguments, including those of sociobiology and its critics, because of their influence on contemporary social thought. (HEF I)

5 units (Durham) not given 1999-2000

106. Human Origins in Science and Myth—A comparison of peoples’ accounts of their own and others origins, with inferences made from comparative biological, linguistic, and cultural data. Functional, psychological, historical, folkloristic, and literary interpretations of myths and other narratives of origin. The scientific account as narrative. The intellectual accomplishments of supposedly primitive and advanced cultures, asking whether their cognitive models of space, time, and the cosmos justify such differentiation. (HEF IV)

5 units, Win (Fox)

LANGUAGE

110. Introduction to Language Change—Variation and change as the natural state of language. Differentiation of languages and dialects over time. Determination and classification of historical relationships among languages, and reconstruction of ancestral stages. Types, rates, and explanations of change. Parallels with cultural and genetic evolutionary theory; and, implications for the description and explanation of language in general. Language as a window on prehistory: contact, migrations, and the vocabulary of ancient institutions. (HEF II, III)

5 units (Fox) not given 1999-2000

111. Language and Prehistory—Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparisons for...
of linguistic and biological classifications. Semantic reconstruction, proto-vocabularies, and culture. (HEF II, III)
3 units, Spr (Fox)

112. Human Diversity: A Linguistic Perspective—(Enroll in Human Biology 118.) HEF I, II
3 units, Spr (Ruhlen)

119. Linguistic Field Methods—Practical training in the collection and analysis of linguistic data from native speakers. Research goals, ethics, working in the community, technical equipment, and analytical strategies. Emphasis is on the use of computers in the collection, analysis, and preparation of materials useful to the subject community. Prerequisite: introductory linguistics. (HEF V)
5 units (Fox) not given 1999-2000

AREA STUDIES: THE AMERICAS

120. Native American Cultures of North America—Introduction to the diverse cultures of indigenous peoples in N. America before the European conquest. Lectures, readings, and films on the precontact situation, postcontact changes (including government policies), influences of Indian culture on American society and culture, and the contemporary situation of native peoples. An antidote to TV and Western movie stereotypes. (HEF IV) GER:4b (DR:3)
5 units (Barnett) not given 1999-2000

121. Native Peoples and Cultures of the Southwest—The development of the rich, varied cultures of the American southwest from the earliest prehistory to postmodern times. Emphasis is on the interaction of cultures and their responses to changes in social and natural environments. Recommended: background in Native American cultures, literature, and archaeology. (HEF IV)
5 units (Barnett, Rick) not given 1999-2000

122. The Maya—Introduction to the archaeology and culture of the ancient and modern Maya. Archaeological and historical data and classification of periods and variation in Maya culture. The natural world of the Maya: environmental, food, agriculture, technology, and medicine. The life cycle and daily life, power and social structure, language and writing, mythology, time, astronomy, religion, and art. The Spanish conquest and the colonial Maya. The Maya in the modern world system. (HEF II, IV)
5 units, Win (Fox)

123. Environmental Issues in the Americas—Focus is on the local impacts of major environmental problems in the Americas. Case studies: deforestation of tropical rainforest in the Amazon; co-management of marine fauna in the Arctic; forestry management in Mexico and N. America; and pollution, toxic waste, and environmental justice in the U.S. (HEF III)
5 units (Staff) not given 1999-2000

124. Perspectives on Sustainable Development in Latin America—(Same as Latin American Studies 195.) Cross-disciplinary examination of perspectives for “sustainable development” in rural areas of Latin America. Interactions between poverty, development, environmental degradation, and approaches to growth and stability in agroecology, agroforestry, small farm development, and conservation biology. Limited enrollment. HEF III
5 units, Win (Rosset)

AREA STUDIES: ASIA

125A. 20th-Century Chinese Societies—Nationalist China, the Peoples’ Republic of China, Taiwan, and the loosely-knit networks of the overseas Chinese are examined through the anthropological methods used in exploring complex societies. Emphasis is on political-economic, demographic, social organizational, gender/kinship, ideological, and transformative aspects of Chinese populations after the 1949 revolution. (HEF IV) GER:4a (DR:2)
5 units (Gates) not given 1999-2000

125B. Late Imperial China—Chinese civilization in the late imperial era (960-1911) in its spatial, temporal, structural, institutional, and ideational complexity. Thematic foci: frontiers and empire building, the making of Han Chinese and “barbarians,” migrations, colonization, urban and rural living, imperial state and local government, commerce and petty capitalism, kinship and family, gender and marriage, food, money, population, and popular religion. (HEF IV) GER:4a (DR:2)
5 units, Aut (Chau)

ARCHEOLOGY AND EVOLUTIONARY STUDIES

In addition to the courses listed directly below, ANSI courses 111, 112, 122A, 180, and 181, listed in other concentration tracks, also count towards the Track 2 concentration.

EVOLUTIONARY STUDIES

130. Modern Human Origins—Analysis of the data and theories bearing on the origins of anatomically modern humans between 100,000 and 50,000 years ago. Emphasis is on the two major competing theories: that modern humans originated more or less simultaneously from non-modern humans in many regions of Africa and Eurasia, or that modern humans originated exclusively in Africa and spread from there, largely replacing non-modern humans elsewhere. (HEF I, II)
5 units (Klein) not given 1999-2000

131A. Primate Evolution—The fossil, molecular, and anatomical data on primate origins, from their mammalian ancestors to the origin of the hominids. The adaptive radiations of lemurs, lorises, tarsiers, New World Monkeys, Old World Monkeys, lesser apes, and great apes. The functional anatomy of primates in relation to habitat and social ecology. (HEF II, II)
5 units, Win (Maggioncalda)

131B. Primate Societies—Introduction to primatology. Survey of the living primates, primate evolution, distribution, and taxonomy. Life history patterns, dominance hierarchies, reproductive strategies, and social structures. Focus is on cultural behaviors, including tool manufacture and use, language and communication, hunting and warfare, and political behavior. Analysis of current conservation issues. (HEF II) GER:2a (DR:5)
5 units, Spr (Maggioncalda)

131C. Methods in Primatology—Individually-directed work with non-human primates on campus and at the California Regional Primate Research Center (CRPCC). Introduction to observation methods, data collection, and data analysis, including laboratory hormone assay techniques. (HEF V)
3-5 units (Maggioncalda) not given 1999-2000

132. Hormones and Behavior—(Same as Human Biology 112.) Seminar on primate socioendocrinology. The endocrine correlates of behavior and the behavioral correlates of changes in hormone levels. In-depth analysis of pheromones and other socioendocrine signals and their role in suppression of growth, development and/or reproduction. Investigation of the relationship between social rank and endocrine physiology. The evolutionary significance of interactions between social behavior and hormones. Prerequisites: 2A, 2B, 102, or Biological Sciences 150. (HEF I)
5 units, Aut (Maggioncalda)

133A. Beginning Osteology—(Same as Human Biology 180.) Graduate students register for 233A.) Introduction to the study of the human skeletal system. The biology of the bone: growth and development, structure, and function. Identification of the different bones in the human skeletal system. Methods for assessing age, sex, and the biological
affinity of bones from archaeological and paleontological contexts. (HEF I, V) GER:2A (DR:5)
5 units, Aut (Maggioncalda)

133B. Advanced Osteology—(Graduate students register for 233B.) Analysis of human bone remains from archaeological and paleontological sites. In-depth analysis of fragmentary skeletal remains from an archaeological site prior to their reburial. Morphometric measurements and observations of various skeletal elements, and assessment of age, sex, and pathological condition of individual specimens. Cultural influences on skeletal variability, and the assessment of prehistoric population dynamics. (HEF II, V)
5 units, Win (Jurecki-Tiller)

134. Human Behavioral Biology—(Enroll in Biological Sciences 150/250.)
6 units, Spr (Sapolsky) alternate years, not given 2000-01

135. Human Nature in Evolutionary Perspective—Examines selected examples of human behavior (incest avoidance, aggression, attachment, color symbolism, interpretation of facial expressions, etc.), considering the extent to which they are products of our evolutionary heritage. Prerequisites: 2A, 2B, upper-division standing. (HEF I)
5 units (Wolf) not given 1999-2000

136. The Human Hand: Evolution, Ontogeny, and Influence—(Enroll in Human Biology 101.)
3 units (Porzig)

137. Darwin, Evolution, and Galapagos—(Same as Human Biology 161.) Seminar on Darwinian theory as applied to the evolution of flora and fauna on the Galapagos Islands. Darwin’s observations in Galapagos, and their role in the formulation of his theory of evolution; recent research in Galapagos and its implications for our understanding of evolution today. The impact of human activity in Galapagos and emerging conservation issues. Lectures, discussions, and optional field trip to Galapagos (at extra expense, limited capacity). Enrollment limited to 40. (HEF III)
5 units, Win (Durham)

139A. An Undergraduate Course in Anatomy—(Enroll in Surgery 101.)
7 units, Win (Dolph, Glasgow)

139B. An Undergraduate Course in Anatomy—(Enroll in Surgery 101A.)
5 units, Spr (Dolph)

ARCHEOLOGY

140. Stone Tools in Prehistory—(Graduate students register for 240.) Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts. Prerequisites: 3 or 6 or other instructor-approved, previous archaeology course work. (HEF II)
5 units, Spr (Rick)

141. Hunter-Gatherers in Archaeological Perspective—The organization and subsistence of band-level hunter-gatherers as approached through archaeological investigations. Modern hunter-gatherers provide background for prehistoric groups. The archaeological record of Africa, Europe, and the New World provides examples of how archaeological data reconstructs the cultural systems of extinct hunter-gatherers. (HEF II)
5 units (Rick) not given 1999-2000

142. Incas and their Ancestors: Peruvian Archaeology—The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C. The domestication of indigenous societies, which provided the economic foundation for monumental cities and beautiful ceramics and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III) GER:4a (DR:2)
5 units, Spr (Rick)

149. Archaeological Field Methods—Hands-on archaeological field research in the local area. The practical working methodology of the archaeologist through excavation and site survey, with training in registration, preservation, and analysis of archaeological data. (HEF V)
5 units (Rick) not given 1999-2000

POPULATION AND ENVIRONMENT

In addition to the courses listed directly below, ANSI courses 123, 124, 133B, and 141, listed in other concentration tracks, also count towards the Track 3 concentration.

POPULATION/DEMOGRAPHY

150. Population and Society—The relationship between social structure (marriage, kinship, and political organization) and population dynamics (fertility, mortality, and migration) in a range of societies. The differences between hunter/gatherers and agriculturalists, and between peoples of Europe and Asia. (HEF II, IV)
5 units (Wolf) not given 1999-2000

151. Demography in Anthropology—The study of vital rates in human populations and their social and cultural contexts. Analysis of population dynamics in small, non-state societies as contrasted with population dynamics in large industrial states. Emphasis is on the cause of high rates of fertility, mortality, and migration. Introduces demographic methods. (HEF II, V)
5 units (Staff) not given 1999-2000

153. The Population Question: From Malthus to Rio—The relationship between the vital rates of human populations (fertility, mortality, and migration) and the social and ecological problems of poverty, hunger, and environmental degradation. To what extent is population growth (and attendant vital rates) the cause of these social ills? To what extent is population growth their consequence? What are the main interactions among social, cultural, ecological, and demographic variables? (HEF II)
3-5 units (Durham) not given 1999-2000

154. The Limits to Growth—The past, present, and future of human population growth. Critically evaluates estimates of global and regional carrying capacity and their assumptions, including estimates based upon food, water, energy, and security considerations. Issues raised by inequality, over-consumption, and the role of culture in the history of human populations. The major choices humanity faces in the decades ahead. (HEF II)
3-5 units (Staff) not given 1999-2000

156. Colloquium on Population Studies—(Enroll in Biological Sciences 146.)
1 unit, Win (Feldman)

157. The Role of Population in Developing Countries—(Enroll in Human Biology 137.)
4 units, Win (Wilson)

160. Development and Environment—The cultural and environmental impacts of development projects, focusing on the local level impact of government initiatives to encourage economic development. The role of NGOs in negotiating development priorities and environmental protections. (HEF II)
5 units (Staff) not given 1999-2000

161. Conservation and Development Issues in the Amazon—The prospects for achieving the dual goals of biodiversity conservation and community development in Amazonia. Case studies of recent efforts at biodiversity conservation, including national parks, biosphere reserves, pharmaceutical prospecting, ecotourism, extractive reserves, and agroforestry projects. The costs and benefits of conservation. To whom do these costs and benefits accrue? Critically evaluates Integrated Conservation-Development Projects (ICDPs) in the Amazon today. Optional field trip over Spring Break (at added expense, limited capacity) to selected ICDPs in the Peruvian Amazon. (HEF II)
5 units (Durham) not given 1999-2000

162. Indigenous Peoples and Environmental Problems—The social and cultural consequences of contemporary environmental problems. The impact of market economies, “development” efforts, and conservation projects on indigenous peoples, emphasizing the Amazon, E. Africa, Alaska, and Central America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. (HEF II, IV)
3-5 units (Durham, Charnley) not given 1999-2000

163. Community-Based Conservation—Community-based participatory models for conservation that represent alternatives to conventional top-down approaches. Case studies: pollution control in the U.S., wildlife conservation in Africa, and protection of tropical rainforests in Latin America. The strengths and weaknesses of alternative approaches to conservation, and the potential for community-based models to make a difference. (HEF II)
5 units (Charnley) not given 1999-2000

164. Ecological Anthropology—(Same as Human Biology 134.) The relationships between human social systems and their environments. How do environments influence the nature and form of human social systems found within them? How do human social systems influence the properties and dynamics of their environments? How can we best conceptualize and understand human social systems, environment, and the links between them? Case studies of human societies in the Arctic, Amazon, E. Africa, the Alps, and Papua New Guinea. (HEF III)
5 units, Spr (Durham, Charnley)

165. Human Ecology of the Amazon—Introduces the various ecosystems of the Amazon and their human inhabitants. The biotic and antibiotic factors shaping human adaptation to the region. Ethnographic literature is used to explore subsistence patterns and the resource use of Native Amazonians. Current changes in these economies and life-ways due to acculturation and market forces, and the implications for conservation. (HEF IV)
5 units, Win (Lu)

166. Indigenous Forest Management—(Enroll in Human Biology 172.) (HEF IV)
5 units (Irvine) not given 1999-2000

167. Social Policy for Sustainable Resource Use—(Graduate students register for 267.) Explores the social elements of sustainable resource use by examining the case of forest product certification, a voluntary policy tool intended to provide incentives for sustainable forest use. How social standards are being developed, drawing on the literature about tenure and the institutional aspects of sustaining forests over the long term. Case studies of local participation in policy development, and the effectiveness of certification as an incentive. Prerequisite: consent of the instructor.
5 units, Win (Irvine)

168. Ecology and Equity—Comparative, cross cultural perspective on the global environmental debate. The origins, articulations, and resolutions of environmental conflicts, drawing on cases and movements from a wide variety of societies. Strategies and limits of deep ecology, ecofeminism, alternative technology, Gandhism, and other approaches. (HEF II)
5 units, Win (Guha)

MEDICAL ANTHROPOLOGY AND GENETICS

In addition to the courses listed directly below, ANSI courses 133B and 151, listed in other concentration tracks, also count towards the Track 4 concentration.

MEDICAL ANTHROPOLOGY

170. Medical Anthropology—(Graduate students register for 270.) For students with interests in health care. Introduction to curing systems in Western and in non-Western cultures; problems of adapting modern medicine to diverse cultures; explication of the social and cultural correlates of physical and mental health and disease (social epidemiology). (HEF IV) GER:3b (DR:9)
5 units, Aut (Barnett)

171. Aging: From Biology to Social Policy—What can we expect when we join the ranks of the elderly? What are the biological processes that contribute to aging and are they the same across all populations and cultures? What are the cultural, social, and economic consequences of a large portion of the elderly? What implications do they have for social policy? Readings, lectures, and films. Students are assisted in research and working with the elderly. (HEF I) GER:3b (DR:9)
5 units, Spr (Barnett)

172. Evolutionary Medicine—(Graduate students register for 272.) Seminar on understanding human health and disease from an evolutionary perspective. Topics: Darwinian medicine, genes and disease, aging, infectious diseases, mental illness, and cancer. Prerequisites: 2A, 2B, upper division standing; or consent of the instructor. (HEF III)
5 units, Spr (Cronin)

173. Disease, Health, and Culture Change—Humans buffer themselves against the consequences of ill health through their capacities for storing and transmitting knowledge, and for dividing the labor of subsistence in flexible ways. Class, ethnic, and sex/gender differences are examined to access the significance of disease and health as factors in cultural evolution. Prerequisites: 2A, 2B; or consent of the instructor. (HEF III)
5 units (Gates) not given 1999-2000

175. The Anthropology of Death and Dying—(Enroll in Cultural and Social Anthropology 143.)
5 units, Spr (Koenig)

ANTHROPOLOGICAL GENETICS

180. Human Evolutionary Genetics—(Graduate students register for 280.) The evolution of modern humans as inferred from available genetic data. Quantitative methods used to analyze mitochondrial DNA and allele frequencies. Inference of human migrations and expansion. Genetic support for models of the evolution of modern humans. Comparison of genetic data with archaeological and linguistic data. Emphasis is on critical reading of the literature. Prerequisite: 2A, 2B; or equivalents. Recommended: introductory statistics. (HEF II, III)
4-5 units (Mountain) not given 1999-2000
181. Genes and Culture through Time and Space—Exploration, through the use of computer modeling, of the parallels and interactions between human history, genes, and culture. When do we observe similarities between genetic and cultural patterns? What are the uses of models? Does greater complexity always improve a model? What are the advantages and disadvantages of simulation? Is it easier to predict genetic or cultural patterns? When do they influence one another? Students generate hypotheses, run simulations necessary to test these hypotheses, and analyze the output of the simulations. Prerequisites: 2A, 2B; or consent of instructor. (HEF III, V) 5 units (Mountain) not given 1999-2000

189. Research Methods in Anthropological Genetics—(Graduate students register for 289.) Practical training and experience in the molecular biology and data analysis techniques currently applied in anthropological genetics. Collection of samples; DNA extractions; polymerase chain reaction (PCR); gel electrophoresis; DNA sequencing. Basic techniques in the analysis of population genetic data. Prerequisites: 2A, 2B; or consent of instructor. (HEF V) GER:2a (DR:5) 5 units, Win (Klein)

SPECIAL COURSES

190. History of Theory in the Anthropological Sciences—Required of all majors. Seminar on foundational texts in anthropology, from Darwin and Marx to Geertz and Sahlin. Emphasis is on the materialist and evolutionary theories of culture. Presentations by members of the faculty. GER:3b (DR:9) (WIM) 5 units, Aut (Gates)

192. Data Analysis in the Anthropological Sciences—(Graduate students register for 292.) The univariate, multivariate, and graphical methods used for analyzing data in anthropology. Statistical techniques applied to the analysis of both cross-cultural data and data from field research. Emphasis on the use of microcomputer software and the interpretation of output. Prerequisites: 2A, 2B; or consent of instructor. (HEF V) GER:2a (DR:5) 5 units, Spr (Klein)

193. Prefield Research Seminar—Prepares for field or laboratory research. Students develop testable hypotheses and realistic data collection procedures, reviewing common data collection techniques including participant-observation, interviewing, surveys, and sampling procedures as appropriate. Emphasizes theory-guided empirical work. Prerequisites: 2A, 2B; or equivalents; and declared concentration track. (HEF V) 5 units, Spr (Staff)

194. Postfield Research Seminar—Undergraduates analyze and write about material gathered during summer fieldwork. Emphasizes writing and revising as key steps in analysis and composition. Students critique classmates’ work and revise their own writing in light of others’ comments. (HEF V) 5 units, Aut (Staff)

195. Research Project—Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of an honors project. May be taken for more than one quarter for credit. Prerequisite: completed application to the honors program. 1-10 units, any quarter (Staff)

196. Honors/Masters Writing Workshop—For students in the process of writing honor’s or master’s papers. Techniques for interpreting data, organizing bibliographic material, writing, editing, and revising. Preparation of papers for conferences and publications in anthropology. 2-6 units, any quarter (Staff)

197. Internship in Anthropological Sciences—Provides undergraduates with the opportunity to pursue the area of specialization in an institutional setting (e.g., a laboratory, a clinic, a research institute, or a government agency, etc.). 4-5 units, any quarter (Staff)

198. Museum Methods—Individually directed work on anthropology collections. Introduction to the computerized storage and retrieval system, cataloging, exhibit techniques. Can be taken for one or two quarters by arrangement with instructors. (HEF V) 1-4 units, any quarter (Rick)

199. Directed Individual Study—(Graduate students register for 299) Opportunity for advanced students to explore special areas of interest. 1-10 units, any quarter (Staff)

GRADUATE

These courses are intended for graduate students. However, advanced undergraduates may be admitted with consent of the instructor.

201A. History of Anthropological Theory, 18th and 19th Centuries—Comparative analysis of the major 18th- and 19th-century social theorists (Boas, Darwin, Freud, Marx, Morgan, Tylor, Weber) and a historical examination of their contributions to the rise of anthropology. 5 units, Aut (Wolf)

201B. History of Anthropological Theory, 20th Century—Continuation of 201A, focusing on institutionalization of the discipline and the emergence of the four field boundaries. Comparison of the development of anthropology in N. America, Germany, England, and France. 5 units, Win (Wolf)

202. Political Economy and Gender Theory—Evolutionary theory as it relates to the emergence of varied political economies. Readings: Marx, Sahlin, Geertz, and Bloch. Recommended: working knowledge of Darwinian theory. 5 units (Gates) not given 1999-2000

203. Theory and Method in Cultural Evolution—Graduate section; see 103. 5 units (Durham) not given 1999-2000

204. Culture and Politics in South Asia—Seminar on the ethnographies of S. Asia, a region unparalleled in its ecological and cultural diversity, in its range and intensity of social conflict, and in its cultural expressions. Themes: nationalism, religious violence, class conflict, and the fate of indigenous peoples. A close look at S. Asian ethnographies and exemplary models, to guide future student research. 5 units, Win (Guha)

205. Applied Anthropology—Anthropologists apply their knowledge and skills to a variety of problems: developing and evaluating medical care delivery systems and educational programs at home and abroad, assisting in the transfer of technological innovations and predicting and measuring their impact; serving as planners, administrators, and advisers for developing programs. The substance of such programs, the utility of anthropological theory and research approaches in solving contemporary problems, and the ethics of professional practice. 5 units (Barnett) not given 1999-2000

208. Models and Imaging in Anthropological Computing—Develop skills in working with digital imagery relevant to anthropology, using ANSI microcomputers. Hands-on seminar in which some specific background information and methodology is made available, and a sharing of skills goes on between participants and instructor. 3 units, any quarter (Rick)

209. Research Methods in Cultural Anthropology—Introduction to basic cultural field methods: interviewing; observation; taking notes; linguistic elicitation; mapping; film, video, digital and tape recording; archival documents and historical materials; questionnaires, surveys, and statistics. The ethnica field research (prefield, field, and postfield); the relationship of methods to research problems and data

226
212. Linguistic Anthropology—Seminar on language in its cultural contexts. Topics similar to those in ANSI 4, but reading emphasis is on journal articles rather than monographs.
5 units (Fox) not given 1999-2000

213. Topics in Linguistic Anthropology—Seminar on key issues in the relationships between language and culture. Possible topics: the study of terminological systems (ethnoscience); society, culture, and cognition as reflected in vocabulary; semantic analysis and universals of terminological systems; vocabulary size, abstraction, and the issue of primitiveness in culture; and variation, tropes, and strategy in the use of terminology, with attention to systemic change. Emphasis is on the terminologies of identity (kinship, names, body-parts) and environment (ethnobotany, ethnozoology, ethnomedicine, color).
5 units (Fox) not given 1999-2000

214. Readings in Linguistic Anthropology—Readings and discussion of one or two major (and related) works on language in its cultural context.
1-2 units, Spr (Fox)

219. Linguistic Field Methods—Graduate section; see 119.
5 units, by arrangement (Fox)

220. China for Social Analysts—The analytic constructs for the holistic study of 19th- and 20th-century China. See instructor for reading list.
5 units (Gates) not given 1999-2000

230. Genetics and Modern Human Origins—Graduate seminar focusing on when and where modern humans originated. Did the most recent common ancestors of modern humans exist 1 million or 50,000 years ago? Where did they live, and what other hominid groups existed? Does the available genetic data enable us to distinguish between the competing theories of the origin of modern humans? What kinds of data are necessary for testing these hypotheses? How much can genetic data tell us about our origins? What is the impact of conclusions regarding our origins? Emphasis is on critical reading and discussion of recent literature.
5 units, Aut (Mountain)

232. Human Evolutionary Anatomy—Focus is on the basis for reconstructing the form, adaptation, and life style of prehistoric humans; the interpretation of their skeletal remains. Integrating features: musculature, body size, stance, brain size, organization, activity patterns, sexual dimorphism, and speech potentiality. GER:2a
5 units (Staff) not given 1999-2000

238. Human Evolutionary Systematics—Recent development and debates in the application of evolutionary systematics specifically to the human fossil record; the utility of cladistic vs. phenetic methods, especially at the species and subspecies level; trait definition and conceptualization; and the utility of heterochronic and functional information in phylogenetic reconstruction.
4-5 units (Staff) not given 1999-2000

239. Evolutionary Anthropology: Theory and Methods—The history of evolutionary theory from the 19th century to present, emphasizing anthropological applications. The theory and methods behind classical evolutionary anthropology, unilinear and multilinear evolution, functionalism and neoevolutionism, sociobiology, evolutionary psychology, and dual inheritance theory. Prerequisite: graduate standing or consent of the instructor.
5 units (Durham) not given 1999-2000

240. Stone Tools in Prehistory—Graduate section; see 140. GER:2B
5 units, Spr (Rick)

242. Beginnings of Social Complexity—Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America.
5 units, Win (Rick)

247. Animal Bones for the Archaeologist (Faunal Analysis)—Seminar focuses on the vertebrate skeleton and methods for reconstructing past environments and ecology from assemblages of fossil bones. Emphasis is on how bones from ancient archaeological sites are used to reconstruct their human environments and ecology. Enrollment limited.
5 units (Klein) not given 1999-2000

248. Dating Methods in Archeology and Paleoanthropology—Seminar on the primary geochronological methods used to date archeological and human fossil sites and to calibrate major transitions in human evolution. The fundamental principles of radiometric, paleomagnetic, and thermoluminesence techniques; extensive use of real archaeological samples. Field trips to U.S. Geological Survey and Lawrence Livermore Laboratory. Prerequisite: knowledge of algebra. Recommended: basic chemistry.
5 units (Klein, Bischoff) not given 1999-2000

250. Advanced Ecological Anthropology—Seminar on the role of ecological models in the analysis of culture and social systems. Early efforts linking environments and social systems, such as cultural ecology, multilinear evolution, neo-functionalism, systems ecology. Current theory and research trends, including evolutionary ecology, indigenous resource management, and historical ecology. Case studies: agricultural involution in Java, ritual regulation in New Guinea, demographic change in the Swiss Alps, peasant ecology in Central America, and indigenous resource management in Amazonia.
5 units (Staff) not given 1999-2000

251. Anthropological Solutions to Environmental Problems—The actual and potential role of anthropology in helping solve major environmental problems. Case studies: anthropologists and human rights in Central America; anthropologists and indigenous peoples in Brazilian rainforests; anthropologists and development interests in Indonesia, Australia, and sub-Saharan Africa. Emphasis is on the role of culture and social variables in the design of successful solutions to environmental problems.
5 units (Staff) not given 1999-2000

252. Political Ecology—Seminar on the causes and consequences of environmental degradation in diverse social and ecological settings. Emphasis is on the role of political and economic forces in ecological change, including forces that promote differential access to resources
within and between local populations. Case studies: tropical deforestation, rangeland degradation, soil erosion, drought, and famine.

5 units (Durham) not given 1999-2000

266. Human Evolutionary Ecology—How theories and models from evolutionary ecology can elucidate patterns of human adaptation and behavior. Review of various models from optimal foraging theory; analysis of prey and patch choice, mobility, group size, and subsistence risk. Case studies on human populations living in arctic, tropical, and arid environments.

5 units, Spr (Lu)

267. Social Policy for Sustainable Resource Use—Graduate section; see 167.

5 units, Win (Irvine)

269. Research Methods in Ecological Anthropology—The methods utilized in ecological and environmental anthropology. Topics: survey techniques for agricultural and demographic data, mapping and field measurement, energy flow, time allocation, and transect and quadrant sampling.

5 units (Staff) not given 1999-2000

270. Advanced Medical Anthropology—Students work on a predetermined research problem of their choice in medical anthropology and as it progresses, present their work for supportive discussion and assistance. Prerequisite: 140 or consent of instructor. GER: 3b (DR: 9)

5 units, Win (Barnett)

272. Evolutionary Medicine—Graduate section; see 172.

5 units, Spr (Cronin)

275. The Anthropology of Death and Dying—(Graduate section see 175.)

5 units, Spr (Koenig)

280. Human Evolutionary Genetics—Graduate section; see 180.

4-5 units (Mountain) not given 1999-2000

281. Genes and Human Behavior—Graduate seminar focusing on the extent to which genes have been linked to human behavior. The methods used for inferring a genetic basis of human behavior: primate studies; twin studies; medical research. Emphasis is on critical evaluation of research in this area.

5 units (Mountain) not given 1999-2000

2 term units (Greely, Cox) not given 1999-2000

289. Research Methods in Anthropological Genetics—Graduate section; see 189.

5 units, Spr (Mountain)

290. Graduate Core Seminar—Required of all graduates in residence. Year-long seminar on topics and issues in anthropological sciences. First quarter emphasis is on the current and future research efforts of departmental faculty. Topics for subsequent quarters include: aggression; race, gender, and inequality; anthropology and evolutionary theory; disease; and demography.

1-5 units, Aut, Win, Spr (Staff)

291. The Scientific Process in Anthropology—Graduate seminar on the use of the scientific method in anthropological research. Published papers from various subfields illustrate effective research design, the formulation and testing of hypotheses, and the comparative methods. Field exercises in interviewing, observation, and the taking and use of field notes. The ethics of field research and procedures for maintaining physical and mental health in the field.

5 units, Win (Barnett, Staff)

292. Data Analysis in the Anthropological Sciences—Graduate section; see 192.

5 units, Spr (Klein)

2-3 units, Win, Spr (Mountain)

294. Proposal Writing Seminar—Required of all ANSI Ph.D. students. Hands-on practical training in grant writing methods. Students draft research prospectus based on their own interests and proposed project, and work closely with their advisers and other faculty.

5 units, any quarter (Staff)

295. Research in Anthropological Sciences—Supervised work with an individual faculty member on the student research project. May be taken for more than one quarter.

5 units, any quarter (Staff)

296. Graduate Internship—Provides graduates with the opportunity to pursue their area of specialization in an institutional setting (e.g., laboratory, clinic, research institute, government agency, etc.).

4-5 units, any quarter (Staff)

297. Teaching Assistantship—Supervised experience as assistant in one undergraduate course.

5 units, any quarter (Staff)

298. Dissertation Writing Seminar—Required of all ANSI Ph.D. students. Students work closely with their advisers and committee members to write a draft of their dissertation.

5 units, any quarter (Staff)

299. Directed Individual Study—(Graduate section; see 199.) Opportunity for advanced students to explore special areas of interest.

5 units, any quarter (Staff)

APPLIED PHYSICS

Emeriti: (Professors) Marvin Chodorow, C. Chapin Cutler, Theodore H. Geballe, W. Conyers Herrig, Peter A. Sturrock; (Professors Research) Bertram A. Auld, H. John Shaw, Herman Winick; (Courtesy) Gordon S. Kino, William E. Spicer

Chair: Aharon Kapitulnik (Autumn); Robert L. Byer (Winter, Spring)

Associate Professors: Charles M. Marcus, Zhi-Xun Shen

Assistant Professors: Martin Greven, Kathryn A. Moier

Professor (Research): Helmut Wiedemann

Associate Professor (Research): Martin M. Fejer

Courtesy Professors: Bruce M. Clemens, James S. Harris, Lambertus Hesselink, David A. B. Miller, Douglas D. Osheroff, Shoucheng Zhang

228
and natural phenomena. These areas include condensed matter physics, materials physics, biophysics, solid state and quantum electronics, atomic physics and lasers, accelerator physics and synchrotron radiation, and space science and astrophysics. Student research is supervised by the faculty members listed above and also by various members of other departments such as Electrical Engineering, Materials Science and Engineering, Physics and occasionally Biological Sciences, Chemistry, and faculty of the Medical School who are engaged in related research fields. Research activities are carried out in research laboratories and centers on campus and at the Stanford Linear Accelerator Center.

The number of graduate students admitted to Applied Physics is limited. Applications should be received by January 1, 2000. Graduate students normally enter the department only in Autumn Quarter.

UNDERGRADUATE PROGRAM

MINORS

Applied Physics currently does not offer an undergraduate major. The following minor program is intended for undergraduate non-physics science and engineering majors seeking to broaden and deepen their knowledge of modern physics, with an applied flavor. The minor consists of three required 4-unit courses, covering quantum mechanics and statistical physics, and a minimum of three breadth courses. The total number of units required for the minor is not less than 21 units and not more than 36 units.

Required Applied Physics courses are:

<table>
<thead>
<tr>
<th>Course No. &amp; Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>150. Applied Quantum Mechanics I</td>
<td>4</td>
</tr>
<tr>
<td>151. Applied Quantum Mechanics II</td>
<td>4</td>
</tr>
<tr>
<td>152. Applied Statistical Mechanics</td>
<td>4</td>
</tr>
</tbody>
</table>

Breadth Applied Physics courses (choose a minimum of three) are:

<table>
<thead>
<tr>
<th>Course No. &amp; Subject</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>138. Matlab and Maple for Science and Engineering Applications (Enroll in Computer Science 138)</td>
<td>3</td>
</tr>
<tr>
<td>172. Physics of Solids I (Enroll in Physics 172)</td>
<td>3</td>
</tr>
<tr>
<td>192. Introductory Biophysics</td>
<td>3</td>
</tr>
<tr>
<td>195. Waves and Diffraction in Materials (Enroll in Mat. Sci. &amp; Engr. 195)</td>
<td>4</td>
</tr>
<tr>
<td>196. Scattering Physics</td>
<td>4</td>
</tr>
<tr>
<td>231A. Lasers I (Enroll in Elect. Engr. 231)</td>
<td>3</td>
</tr>
<tr>
<td>231B. Lasers II (Enroll in Elect. Engr. 232)</td>
<td>3</td>
</tr>
</tbody>
</table>

Prerequisites for the minor include the Physics 40 series (or equivalent), the Mathematics 40 series and Mathematics 130 (or equivalents), and preferably Mathematics 103 and 132. Applied Physics 150, 151, and 152 provide an extra one-hour section each week for students who need to develop the necessary mathematical and physical background.

All courses fulfilling the minor must be taken for a letter grade, except when letter grades are not offered. The minor declaration deadline is no later than the last day of the quarter two quarters before the quarter of degree conferral. For example, a student graduating Spring Quarter must declare the minor no later than the last day of Autumn Quarter of the senior year.

GRADUATE PROGRAMS

Admission requirements for graduate work in Applied Physics include a bachelor's degree in physics or an equivalent engineering degree. Students entering the program from an engineering curriculum should normally enter the department only in Autumn Quarter.

MASTER OF SCIENCE

The University’s basic requirements for the master’s degree are discussed in the “Graduate Degrees” section of this bulletin. The minimum requirements for the degree are 36 units, of which at least 30 units must be graduate-level courses in applied physics, engineering, mathematics, and physics. The required program consists of the following:

1. Courses in physics and mathematics to overcome deficiencies, if any, in undergraduate preparation.
2. Basic graduate courses:
   a) Advanced Mechanics—one quarter, 3 units: Physics 210
   b) Electrodynamics—two quarters, 6 units: Physics 220, 221; Electrical Engineering 241, 242
   c) Quantum Mechanics—two quarters, 6 units: Physics 230, 231
3. Additional advanced courses in science and/or engineering, not including Directed Study (Applied Physics 290) or 1-unit seminar courses, to complete the requirement of 36 units.
4. A final overall grade point average (GPA) of 'B' is required for courses used to fulfill degree requirements.

There are no department or University examinations, and a thesis is not required. If a student is admitted to the M.S. program only, but later wishes to change to the Ph.D. program, the student must apply to the department’s Admissions Committee.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. (residency, dissertation, examination, and so on) are discussed in the “Graduate Degrees” section of this bulletin. The program leading to a Ph.D. in Applied Physics consists of course work, research, qualifying for Ph.D. candidacy, a research progress report, a University oral examination, and a dissertation as follows:

1. Course Work
   a) Courses in physics and mathematics to overcome deficiencies, if any, in undergraduate preparation.
   b) Basic graduate courses*:
      1) Advanced Mechanics—one quarter: Physics 210
      2) Statistical Physics—one quarter: Physics 212
      3) Electrodynamics—two quarters: Physics 220, 221; Electrical Engineering 241, 242
      4) Quantum Mechanics—two quarters: Physics 230, 231
      5) Laboratory—one quarter: Applied Physics 207, 208, 304, 305; Electrical Engineering 357, 410; Physics 201, 202, 203, 301; Materials Science and Engineering 171, 171, 172, 173
   c) 18 units of additional advanced courses in science and/or engineering, not including Directed Study (Applied Physics 290), Dissertation Research (Applied Physics 390), and 1-unit seminar courses.
   d) A final average overall GPA of 'B' is required for courses used to fulfill degree requirements.
   e) Students are normally expected to complete the specified course requirements by the end of their third year of graduate study.

2. Research: may be conducted under the supervision of a member of the Applied Physics faculty or an appropriate faculty from other departments.

3. Ph.D. Candidacy: satisfactory progress in academic and research work, together with passing the Ph.D. Candidacy Qualifying Examination, qualifies the student to apply for Ph.D. candidacy which must be completed before the third year of graduate registration. The examination consists of a seminar on a suitable subject delivered by the student before the faculty academic adviser (or an approved substitute) and two other members of the faculty selected by the department.

4. Research Progress Report: normally before the end of the Winter Quarter of the fourth year inclusive of pertinent graduate study prior to Stanford, the student arranges to give an oral research progress report of approximately 30 minutes, of which a minimum of 10 minutes should be devoted to questions from the Ph.D. reading committee.

5. University Ph.D. Oral Examination: consists of a public seminar in defense of the dissertation, followed by private questioning of the candidate by the University examining committee.

6. Dissertation: must be approved and signed by the Ph.D. reading committee.

* Requirements for item 1b may be totally or partly satisfied with equivalent courses taken elsewhere, pending the approval of the Graduate Study Committee.

ASSISTANTSHIPS

Research assistantships are available for Ph.D. candidates. Information on applying for financial aid is included in the admission packet received from Graduate Admissions, the Registrar’s Office.
COURSES

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

79Q. Stanford Introductory Dialogue: Science-based Energy Technologies—The Pros and Cons—Preference to sophomores. The tradeoffs involved in various scenarios being considered for meeting energy and transportation needs in the next century; the underlying scientific principles; possibilities for reducing the present day less-than-optimum use of energy and materials considering, e.g., automotive transport, electrical power technology, and urban ecology; what we know and don’t know about global warming.

2 units, Aut (Geballe)

138. Matlab and Maple for Science and Engineering Applications—(Enroll in Computer Science 138.)

4 units, Win (Moler)

150. Applied Quantum Mechanics I—For undergraduates; see 222. Prerequisites: Physics 45 and 47, or Physics 65, or equivalents.

4 units, Aut (Harrison)

151. Applied Quantum Mechanics II—For undergraduates; see 223. Prerequisite: 150.

4 units, Win (Harrison)

152. Applied Statistical Mechanics—For undergraduates; see 224.

4 units, Spr (Yamamoto)

172. Physics of Solids I—(Enroll in Physics 172.)

3 units, Spr (Shen)

3 units, Spr (Doniach)

195. Waves and Diffraction in Solids—(Enroll in Materials Science and Engineering 195.)

4 units, Win (Clemens)

196. Scattering Physics—For undergraduates; see 218. Prerequisites: 150, 151, and Physics 172 or equivalent.

4 units, Spr (Greven)

198. Introduction to Synchrotron Radiation—For students using such radiation for basic and applied research and students in accelerator physics concentrating on source developments and the study of particle beam characteristics and stability. Electromagnetic radiation from relativistic electron beams, derived from first principles. Coherent and incoherent synchrotron radiation, free electron lasers; undulator and wiggler radiation with linear and elliptical polarization. Recommended: electromagnetism, optics, and special relativity.

3 units, alternate years, given 2000-01

207. 3 units, Win (Fox)

208. 3 units, alternate years, given 2000-01

210. Advanced Particle Mechanics—(Enroll in Physics 210.)

3 units, Aut (Fetter)

212. Statistical Mechanics—(Enroll in Physics 212.)

3 units, Spr (Willick)

215. Numerical Methods for Physicists and Engineers—Review of basic numerical techniques with additional advanced material: derivatives and integrals; linear algebra; linear least squares fitting, FFT and wavelets, singular value decomposition, linear prediction; optimization, nonlinear least squares, maximum entropy methods; deterministic and stochastic differential equations, Monte Carlo methods.

3 units, Win (Doniach) alternate years, not given 2000-01

3 units

217. Waves and Diffraction in Solids—(Enroll in Materials Science and Engineering 205.)

3 units, Win (Clemens)

218. Scattering Physics—Introduction to scattering techniques, including neutron, x-ray, and light scattering. Probing of phase transitions and excitations in condensed matter. Emphasis is on magnetic scattering from experimental model systems and from novel materials. Topics: low-dimensional magnets, e.g., Heisenberg chains and planes; and magnetic fluctuations in high-temperature superconductors. "Global" scattering probes are contrasted with "local" probes, e.g., nuclear magnetic resonance (NMR) and muon spin resonance (muSR). Prerequisites: 150, 151, and Physics 172 or equivalent.

3 units, Spr (Greven)

3 units, Aut (Chu)

220,221. Classical Electrodynamics—(Enroll in Physics 220, 221.)

220. 3 units, Win (Whittum)

221. 3 units, Spr (Whittum)

222. Applied Quantum Mechanics I—Two-quarter sequence provides a foundation in quantum mechanics for condensed matter physics, solid state electronics, and quantum optics. Basic theory; electronic structure of atoms, molecules, and solids; quantum transitions and the Golden...
Rule; tunneling; statistical physics, transport, and noise. Prerequisites: Physics 45 and 47, or Physics 65, or equivalents.

3 units, Aut (Harrison)

232. Applied Quantum Mechanics II—Energy bands and carrier dynamics, vibrations and the electron-phonon interaction; annihilation and creation operators, phonons, photons and lasers; coherent states, Coulomb effects, angular momentum and spin, shake-off excitations, mesoscopic systems. Prerequisite: 222.

3 units, Win (Yamamoto)

3 units, Spr (Yamamoto)

230A, B. Quantum Mechanics—(Enroll in Physics 230, 231.)
230A. 3 units, Aut (Shenker)
230B. 3 units, Win (Shenker)

231A, B. Lasers I and II—(Enroll in Electrical Engineering 231, 232.)
231A. 3 units, Aut (Solgaard)
231B. 3 units, Spr (Siegmam)

3 units, Aut (Yamamoto)

268. Introduction to Modern Optics—(Enroll in Electrical Engineering 268.)
3 units, Aut (Hesselink) alternate years, not given 2000-01

272, 273, 274. Solid State Physics—Topics to be announced.
3 units (Staff) alternate years, given 2000-01

290. Directed Studies in Applied Physics—Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.
Any quarter (Staff)

291. Practical Training—Opportunity for practical training in industrial labs. Arranged by student with the research adviser’s approval. A brief summary of activities is required, approved by the research adviser.
3 units, Sum (Staff)

301. Astrophysics Laboratory—(Enroll in Physics 301.)
3 units, Sum (Walker)

304. Lasers Laboratory—Laser theory and practice. Lectures on the theoretical and descriptive background for lab experiments, detectors and noise, lasers (helium neon, beams and resonators, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth, and tuning, Q-switching and modelocking. Limited enrollment. Prerequisites: Electrical Engineering 231 and 232, or consent of instructor.
3 units (Byer) given 2000-01

305. Nonlinear Optics Laboratory—Emphasis is on laser interaction with matter. The laser devices provide the radiation required to explore the linear and nonlinear properties of matter. Experiments on modulation, harmonic generation, parametric oscillators, modelocking, stimulated Raman and Brillouin scattering, Coherent Anti-Stokes scattering, other four wave mixing interactions such as wavefront conjugation and optical bistability. Optical pumping and spectroscopy of atomic and molecular species. Limited enrollment. Prerequisites: 304, Electrical Engineering 231 and 232, or consent of instructor.
3 units (Byer) given 2000-01

320. Quantum Optics and Selected Topics in Atomic Physics—(Enroll in Physics 320.)
3 units

321. Laser Spectroscopy—(Enroll in Physics 321.)
3 units

324. Introduction to Accelerator Physics—Introduction to basic accelerator physics in linear and circular accelerators. Topics: acceleration, phase stability, transfer matrices, beam envelopes, emittance, and the effects of synchrotron radiation. Topics of current research, including nonlinearities and instabilities.
3 units, Aut (Siemann) alternate years, not given 2000-01

346. Introduction to Nonlinear Optics—(Enroll in Electrical Engineering 346.)
3 units, Spr (S. Harris)

366. Introduction to Fourier Optics—(Enroll in Electrical Engineering 366.)
3 units, alternate years, given 2000-01

370. Theory of Many-Particle Systems—(Enroll in Physics 370.)
3 units

3 units, Aut (Zhang) alternate years, not given 2000-01

3 units, Win (Zhang) alternate years, not given 2000-2001

374. Condensed Matter Theory III—Special topics to be announced. Prerequisites: 372, 373.
3 units (Staff) alternate years, given 2000-01

376. Superfluidity and Superconductivity—(Enroll in Physics 376.)
3 units

3 units, Aut (Harris) alternate years, not given 2000-01

3 units, Win (Yamamoto) alternate years, not given 2000-01
Discussions of current topics in condensed matter physics. Content varies each quarter, depending on the interests of staff and students. Course may be repeated. Offered occasionally.

**470. Condensed Matter Seminar**
Weekly presentations and discussions of current research topics in condensed matter physics, critique each seminar for success in oral communication, and present a one-hour seminar on a contemporary topic for critique by the class. Corequisite: 470.
1 unit, Aut (Kapitulnik)

**473A. Electronic Structure**
Bond orbitals and the electronic structure of covalent solids. Universal tight-binding parameters and the prediction of the bonding and dielectric properties of semiconductors. Ionic solids and the bonding and dielectric properties of insulators. Theory of silicon dioxide and related compounds and their properties. Transition metals and their compounds. Prerequisites: elementary quantum theory and preferably undergraduate solid state physics.
3 units, Spr (Harrison)

**ART AND ART HISTORY**
Emeriti: (Professors) Keith Boyle, Lorenz Eltner, John LaPlante, Frank Lobdell, Dwight C. Miller, Nathan Oliveira, Michael Sullivan
Interim Chair: Wanda M. Corn
Director of Studio Art Program: Kristina Branch
Principal Adviser to Undergraduate Studio Majors: Kristina Branch
Principal Adviser to Undergraduate Art History Majors: Jody Maxmin
Director of Graduate Studies in Studio Art: David Hannah
 Directors of Graduate Studies in Art History: Leah Dickerman, Pamela Lee
Professors: Wanda M. Corn (American Art), Elliot Eisner (Art Education), David Hannah (Painting), Matthew S. Kahn (Design, on leave Spring) Suzanne Lewis (Medieval Art, on leave Autumn), Richard Randell (Sculpture), Paul V. Turner (Architectural History)
Associate Professors: Kristina Branch (Painting/Drawing), Michael Martinian (18th-19th century European Art), Jody Maxmin (Ancient Art), Melinda Takeuchi (Japanese Art), Richard Vinograd (Chinese Art, on leave 1999-2000)
Assistant Professors: Paolo Berdini (Renaissance Art), Scott Bukatman (Film Studies), Enrique Chagoya (Painting/Drawing, on leave Autumn), Leah Dickerman (Modern Art), Pamela Lee (Contemporary Art), Alexander Nemirov (American Art, on leave Autumn)
Acting Assistant Professor: Mark B. N. Hansen
Affiliated Professor: John H. Merryman (Art and Art History, Law)
Senior Lecturer: Joel Leivick (Photography)
Lecturers: Kevin Bean, Jason Francisco, Carolyn Kastner, Ellen H. Spitz

The department offers courses of study in: (1) the history of art, and (2) the practice of art (studio), with major concentrations in painting and drawing, sculpture, design, and photography. The undergraduate program of the department is designed to introduce students to the humanistic study of the visual arts. The courses are intended to increase an understanding of the meaning and purpose of the arts, their historical development, their role in society, and their relationship to other humanistic disciplines such as literature, music, and philosophy. The work in classroom and studio is designed to intensify visual perception of the formal and expressive means of art and to encourage insight into a variety of technical processes.

The Iris and B. Gerald Cantor Center for Visual Arts at Stanford University (opening January 1999) is a major resource for the department. The center offers a 22,000 object collection on view in rotating installations in 18 galleries and the Rodin Sculpture Garden, and a diverse schedule of special exhibitions, educational programs, and events. Through collaborations with the teaching program, student internships, and a range of student activities, the center provides a rich resource for Stanford students.
PROGRAMS OF STUDY

Undergraduates may major in History of Art or the Practice of Art (Studio). A freshman or sophomore intending to major in one of these areas must consult with an adviser appointed by the department to plan his or her course of study.

Graduate programs are offered in History of Art and Practice of Art Studio, including Product Design.

HISTORY OF ART

BACHELOR OF ARTS

The major program in the History of Art must include the following:

1. Two courses from Art and Art History 1, 2, 3.
2. Forty units in art history courses, of which at least 32 must be at or above the 100 level, including one seminar and one other seminar or colloquium. To ensure that majors have a broad foundation in art history, they are required to take 40 units in at least five of the eight following areas: ancient, medieval, renaissance/baroque, early modern, modern/contemporary, American, architecture, and Asian. This distribution still permits the student to take several courses in an area of particular interest.
3. Total units: 50. All required course work, including collateral requirements, must be taken for a grade; they may not be taken satisfactory/ no credit. University units earned by placement tests or advanced placement work in secondary school are not counted within the 50 units. 
4. Collateral Requirements:
   a) Each undergraduate major in the History of Art takes at least one university year of a foreign language or presents proof of reading ability in a foreign language. Students who intend to apply to graduate school in art history should become proficient in a German and either French or Italian because these are required by most major schools in art history. Students who intend to apply to graduate school in Asian art should take the appropriate Asian language.
   b) Each undergraduate major takes two upper-division courses in other departments that relate to his or her work in art history. Students should discuss the choice of these courses with their advisers as early as possible. The adviser must approve the collateral courses before the student registers for them.
   c) Each undergraduate major shall attend an Art library orientation session. Majors are to consult with the Art library staff for scheduling information.
5. Undergraduate majors planning to take courses at an overseas campus must have each course approved by their adviser prior to leaving for the overseas campus.
6. Art majors are required to meet with both their adviser and the undergraduate curriculum adviser during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements.
7. Recommended courses (but which do not count towards the major): Art and Art History 40, 50, or 53 and 70.

MINORS

A student declaring a minor in Art History must complete 25 units of course work in one of the following four tracks: Open, Modern, Asian, or Architecture. Upon declaring the minor, students are assigned to an adviser with whom they plan their course of study and electives. A proposed course of study must be approved by the adviser and placed in the student’s departmental file. Only one class may be taken for credit outside of the Stanford campus (this includes the Stanford Overseas Programs).

Requirements for the Open Track: Art and Art History 1 plus five lecture courses, colloquia, or seminars in any field.

Requirements for the Modern Track: Art and Art History 1 plus five upper-level lecture courses, colloquia, or seminars in any aspect of 19th– and 20th-century art.

Requirements for the Asian Track: Art and Art History 2 plus five lecture courses, colloquia, or seminars in Asian art. (Art and Art History 1 may be one of the five courses.)

Requirements for the Architecture Track: Art and Art History 3 plus five lecture courses, colloquia, or seminars in architectural history. (Art and Art History 1 may be one of the five courses.)

HONORS PROGRAM

Art History majors wishing to undertake an individually supervised study in addition to the regular requirements of the major may apply for admission to the honors program. Candidates must have a 3.5 grade-point average (GPA) both in the major and overall.

Once a faculty member in Art History agrees to serve as thesis adviser, the candidate submits to the entire Art History faculty a thesis proposal of approximately five pages and a completed paper demonstrating the candidate’s writing ability and intellectual capacity. Submissions must be made no later than the third week of the Spring Quarter of the junior year. A majority of the faculty must approve the admission of the candidate to the honors program. The student must find two faculty members willing to serve, along with the adviser, as readers of the thesis; at least one of these additional readers must be a member of the Art History faculty. The thesis adviser must be in residence at Stanford during the student’s senior year. While working on the honors thesis, the student may register for up to 8 units of Art and Art History 240 (Individual Work: Art History); these are in addition to the units required for the major.

The completed thesis must be submitted to the three readers no later than the second week of the student’s final quarter of course work. The thesis adviser assigns a grade to the work. The approval of all three readers is required for the thesis to qualify for honors.

MASTER OF ARTS

The Department of Art and Art History offers A.M. and Ph.D. degrees. The A.M. is granted as a step toward fulfilling requirements for the Ph.D. The department does not admit students who wish to work only toward the A.M. degree.

The University’s basic requirements for the master’s degree are set forth in the "Graduate Degrees" section of this bulletin.

Completing the University’s requirements for an A.B. degree in the History of Art, or equivalent training, is required of students entering a program of study for the A.M. The required curriculum for entering students is determined by the Director of Graduate Studies through an evaluation of transcripts and records during an individual meeting scheduled with each student prior to the opening of Autumn Quarter to discuss course deficiencies.

Requirements for the Degree—The requirements for the A.M. degree in the History of Art are:
1. Residence: completing a minimum of three full-tuition quarters or the equivalent in partial-tuition quarters of graduate registration.
2. Units: completing a total of at least 36 units of graduate work in the history of art in courses at the 200 level, including a seminar in art historiography/visual theory.
3. Languages: reading knowledge of two foreign languages, preferably German and French or Italian. Students in Chinese and Japanese art are ordinarily expected to demonstrate reading competence in modern and classical Chinese or Japanese depending on the student’s area of focus. Final determination is made in consultation with the student’s primary adviser.
4. Papers: submission for consideration by the faculty of two term papers from among those written during the year.
5. Area Coverage: demonstration to the faculty, by course work and/or examination, that the student has adequate knowledge of the major areas of the history of art.

DOCTOR OF PHILOSOPHY

The University’s basic requirements for the Ph.D. degree are set forth in the "Graduate Degrees" section of this bulletin. The following are departmental requirements:
**Residence**—To be eligible for the doctoral degree, the student must complete three years of full-time graduate work in the history of art, at least two years of which must be in residence at Stanford.

**Unit Requirements**—The student must complete at least 99 units of course work with a minimum of 63 units in Art History.

**Collateral Studies**—The student is required to take at least three courses in supporting fields of study (such as anthropology, classics, history, literature, or philosophy), determined in consultation with the department advisers.

**Graduate Student Teaching**—As a required part of their training, all graduate students in Art History, regardless of their source of funding, must participate in the department’s teaching program. At least two one-quarter assignments in Art and Art History 1, 2, or 3 are required. Teaching students must register for the Seminar in Teaching Praxis (Art and Art History 295). Students receiving financial aid are required to serve as a teaching assistant for four quarters. Further opportunities for teaching may be available.

**Admission to Candidacy**—A graduate student’s progress is formally reviewed during Spring Quarter of the second year. The applicant for candidacy must complete the requirements governing the A.M. program in the History of Art (see above), and at least an additional 18-24 units by the end of Winter Quarter of the second year. The graduate student does not become a formal candidate for the Ph.D. degree until he or she has fully satisfied these requirements and has been accepted as a candidate by the department.

**Dissertation Proposal**—By the end of the third year, dissertation subjects should be chosen and the proposal written in consultation with the candidate’s adviser. The student forms a Reading Committee consisting of the principal adviser and two other readers. The proposal is submitted to the art history faculty for comments. The student then meets with the Reading Committee to discuss the proposal and faculty comments no later than 30 days after the submission of the proposal, at which time necessary revisions are determined. The proposal is submitted to the adviser for final approval.

**Area Core Requirements**—Every graduate student must participate in at least one 4-unit graded directed reading course or colloquium to acquire and demonstrate a command of current issues in a field. The course results in an examination or an appropriate paper. The student and the student’s adviser, or other suitable faculty member(s), agree on a format. If the number of students in a given field permits, this course may be offered as a colloquium.

**Dissertation**—A member of the faculty acts as the student’s dissertation adviser and as chair of the Reading Committee. The final draft of the dissertation must be in the adviser’s hands at least four weeks before the University deadline in the quarter during which the candidate expects to receive the degree. The dissertation must be completed within five years from the date of the student’s admission to the candidacy for the Ph.D. degree. A candidate taking more than five years must apply for an extension of candidacy.

**Oral Examination**—The student forms an Oral Defense Committee (see University guidelines). The oral examination consists mainly of a defense of the dissertation but may range, at the committee’s discretion, over a wider field. The student is required to discuss research methods and findings at some length and to answer all questions and criticisms put by members of the examining committee. Changes, resulting from the committee’s criticism of the manuscript and subsequent examination of the student’s research during the orals, must be incorporated by the student into the final draft of the dissertation for submission to the department as the final requirement for the granting of the Ph.D. degree in History of Art.

**Ph.D. MINOR**

For a minor in History of Art, a candidate is required to complete 24 units of graduate-level art history courses (200 level or above), in consultation with a department adviser.

**JOINT PH.D. IN ART HISTORY AND HUMANITIES**

The department participates in the Graduate Program in Humanities, leading to the joint Ph.D. in Art History and Humanities. For a description of this program, see the "Interdisciplinary Studies in Humanities" section of this bulletin.

**PRACTICE OF ART (STUDIO)**

**BACHELOR OF ARTS**

The studio program is designed to develop in-depth skills in more than one area. It emphasizes the expressive potential of an integration of media, often via a cross-disciplinary, interactive path. Through collaboration and connections with scientists, engineers, and humanities scholars, the program addresses a breadth of topical and artistic concerns central to a vital undergraduate education.

Medium-based courses in drawing, sculpture, painting, photography, and digital art, along with a basic design course, introduce students to visual fundamentals. The student is required to take courses at Level 1 before moving to the intermediate Level 2 where investigations of content are emphasized. At this level, the student focuses on a range of subject matter from historical motifs (figure, still life, landscape) to contemporary ideas in design. After fulfilling Level 2 requirements, the student selects courses at Level 3, which feature combined practices. Level 3 courses are designed to stretch the student’s understanding of materials and techniques. Experimental and challenging in nature, these courses cross area boundaries. Level 4 courses comprise a senior capstone experience. The Advanced Undergraduate Seminar emphasizes the investigation of visual concepts interpreted by a single medium, by cross-practices, or by collaboration among students working in a variety of materials. This seminar gives the student an opportunity to be exposed to the work of other majors in a critique-based forum directed by a visiting artist or critic. Advanced courses with a particular focus such as design, photography, or painting are offered on a rotational basis. Independent study supervised by a member of the permanent faculty is also available to the advanced student.

Students are encouraged to move through the requirements for the major in the sequence outlined. Levels 1, 2, 3, and 4 describe a sequence of course choices, not to be confused with the years freshman, sophomore, junior, and senior. Students are exposed to a range of practices early in their development in order to have a good basis of comparison if they choose to concentrate on a particular medium. This sequence of courses also broadens the students’ skills and enables them to combine materials and methods. The major program in the Practice of Art (Studio) must total 65 units.

The major program in the Practice of Art (Studio) must include the following:

1. Four Level 1 course from Art and Art History 50, 60, 70, 140, 145, 173 (12-13 units). Two courses to be completed before moving to Level 2.
2. Two Level 2 courses from Art and Art History 141, 146, 160, 170, 175 (6 units). To be completed before taking Level 3 courses.
3. Two to three Level 3 courses from Art and Art History 148, 149, 152, 169, 172, 174, 175A, 176, 271 (6-9 units). To be completed before taking Level 4 courses.
4. Two to three Level 4 courses from Art and Art History 142, 147, 153, 175B, 248, 249, 266, 269, 270 (6-9 units).
5. Five art history courses (21 units). Art and Art History 1, to be taken as the basic course, followed by four additional courses. At least one of the courses must be in the modern art series (Art and Art History 120A through 123A).
6. Electives, any level (7-11 units). As many as 6 elective units may be earned from workshops, internships, and independent study projects, supervised by a member of the permanent faculty. All units must be approved by the adviser prior to taking the workshop, internship, or independent study.
7. Total units: 65. All required course work must be taken for a letter grade; courses may not be taken satisfactory/no credit. University units earned by placement tests or advanced placement work in secondary school are not counted within the 65 units.
8. Majors are required to spend one quarter or summer pursuing studio interests at a site off campus. This requirement may be fulfilled in a number of ways including, but not limited to, Overseas Studies Programs, independent study sponsored by URO grants, the Haas Center, and so on. Students must meet with the Director of the Studio Art Program to discuss how the requirement will be met.

9. Each undergraduate major is required to attend an Art Library orientation session. Majors are to consult with the Art Library staff for scheduling information.

10. Studio majors are required to meet with both their adviser and the department’s undergraduate curriculum adviser during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements. The adviser’s role is important both in regard to guiding the student’s decisions within the program as well as in discussing plans for summer study and graduate work. An adviser is chosen by the student or assigned by the department.

Transfer Credit Evaluation—Upon declaring a Studio Art major, a student transferring from another school must have his or her work evaluated by a Department of Art and Art History adviser. A maximum of 13 transfer units are applied toward the 65 total units required for the Studio Art major. A student wishing to have more than 13 units applied toward the major must submit a petition to the adviser and then have his or her work reviewed by a studio committee.

MINORS

The minor program in the Practice of Art (Studio) must include the following:

1. Two Level 1 courses from Art and Art History 50, 60, 70, 140, 145, 173 (6-7 units) before taking Level 2 courses.

2. Two Level 2 courses from Art and Art History 141, 146, 160, 170, 175 (6 units) before taking Level 3 courses.

3. Two Level 3 and/or Level 4 courses from Art and Art History 142, 147, 148, 149, 152, 153, 169, 172, 174, 175A, 175B, 176, 248, 249, 268, 269, 270, 271 (6 units).

4. Four art history courses, including Art and Art History 1 and one course from the modern art series, Art and Art History 120A through 123B (13 units).

5. Total units: 31. All required course work must be taken for a letter grade; courses may not be taken satisfactory/no credit. University units earned by placement tests or advanced placement work in secondary school are not counted within the 31 units.

6. Each undergraduate minor is required to attend an Art Library orientation session. Minors are to consult with the Art Library staff for scheduling information.

7. Minors are required to meet with both their adviser and the department’s undergraduate curriculum adviser during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements.

OVERSEAS CAMPUS CREDIT FOR STUDIO ART COURSES

A minimum of 52 of the 65 units required for the studio art major and a minimum of 21 of the 31 units required for the studio art minor must be taken at the Stanford campus. In all cases, a student should meet with his or her adviser before planning an overseas campus program.

MASTER OF FINE ARTS

Programs for the M.F.A. degree are offered in painting, sculpture, new genres, photography, and product or graphic design.

Graduate Program in Painting, Sculpture, New Genres, and Photography—The program provides a rigorous and demanding course of study designed to challenge and encourage advanced students. Participants are chosen for the program on the basis of work that indicates artistic individuality, achievement, and promise. Candidates should embody the intellectual curiosity and broad interests appropriate to, and best served by, work and study within a university context.
either an undergraduate degree or at least three years of independent studio practice.

2. Portfolio Specifications: twelve slides or photographs of creative work. All slides must be labeled with the applicant’s name. If a carousel is sent, an accompanying slide list must be included indicating the size, date, and medium of each work; otherwise, slides should be labeled with the same information and sent in the standard cardboard box received from processing. If applicants want portfolios returned, a stamped, self-addressed container must be included.

Requirements for the Degree—The requirements for the M.F.A. degree with a specialization in design are:

1. Completing a minimum of two years (six quarters) of graduate work in residence or its equivalent at Stanford.
2. Completing in the first year 54 units of course work chosen in consultation with an adviser. At least 18 of the 54 units must be in Art and Art History 360A,B,C and Mechanical Engineering 211A,B,C.
3. Participating in a weekly seminar in which their work is criticized and discussed in detail.
4. As a part of their training for the M.F.A. degree, all students, regardless of their source of funding, are required to assist with the department’s teaching program for a minimum of eight hours per week over the period of six quarters; the percentage of work assigned in a given quarter is at the department’s convenience.

Graduate students must remain in residence at Stanford for the duration of the program.

ART EDUCATION

Information concerning the A.M. in Teaching, Doctor of Education, Ph.D. in Education, and Teaching Credential (Single Subject-Secondary) degrees and programs may be secured from the Office of the Dean of the School of Education.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

HISTORY OF ART

BASIC

1. Introduction to the Visual Arts—Introduction to the critical problems of understanding, analyzing, and writing about the visual arts. Approach is multicultural and topical rather than historical. Discussion sections. GER:3a (DR:7) (WIM)
   5 units, Aut (Marrinan)
   Spr (Nemerov)

2. Ideas and Forms in Asian Art—The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in the architecture, painting, woodblock prints and sculpture, and in such forms as garden design and urban planning. Discussion sections. GER:3a, 4a (DR:2 or 7) (WIM)
   5 units, Win (Takeuchi)

3. Introduction to the History of Architecture—Selective survey of architecture from antiquity to the 20th century; mostly Western with some non-Western topics. For each period, specific buildings and general principles relevant to the study of architecture are examined. Discussion sections. GER:3a (DR:7) (WIM)
   5 units, Win (Turner)

11. Introduction to Ancient Art—Survey of the arts of Greece and Rome, emphasizing architecture, sculpture, and painting, and the broader cultural context in which they flourished.
   4 units (Maxmin) not given 1999-2000

12. Theme and Style in Japanese Art—Selected monuments of traditional Japanese architecture, sculpture, garden design, painting, and pots are presented in a chronological framework representing the intersection of art and society from protohistoric times through the early 19th century.
   4 units (Takeuchi) not given 1999-2000

13. Introduction to Chinese Art—Topics in Chinese art from the Neolithic to the 20th century. Emphasis is on recent archaeological discoveries, newly published material, and current issues of understanding and interpretation.
   4 units (Vinograd) not given 1999-2000

INTERMEDIATE

100A/200A. Archaic Greek Art—(Same as Classics 100A.) The development of Greek art from Protogeometric beginnings to the decade preceding the age of Pericles. GER:3a (DR:7)
   4 units, Aut (Maxmin)

100B/200B. Classical and Hellenistic Greek Art—The formation in 5th-century Athens, of the classical ideal and its development and diffusion in the centuries that followed. GER:3a (DR:7)
   4 units, Win (Maxmin)

100C/200C. Roman Art—(Same as Classics 100C.) Introduction to the rich and varied art and architecture of Rome from the Etruscans to the Late Empire. GER:3a (DR:7)
   4 units (Maxmin) not given 1999-2000

102/202. Greek Painting—Introduction to the study and appreciation of Greek vases and their painters, especially the masters of Athenian black- and red-figure who flourished in the culturally rich and volatile era of the tyrant Peisistratos and his sons.
   4 units (Maxmin) not given 1999-2000

105/205. Sites and Images of Power in 12th-Century Europe—Romanesque art and architecture in Western Europe from c. 1095 to 1200. Structuring a new visual discourse to shape and respond to experiences of political, spiritual, and intellectual expansion—Crusade, pilgrimage, and new learning in the schools. How spatial environments were built and systems of visual discourse were designed within the ideological contexts generated by monastic and feudal institutions in centers such as Cluny, Citeaux, Moissac, Mont Saint-Michel, Vézelay, Winchester, Canterbury, Durham, Santiago de Compostela, and Montreale. GER:3a (DR:7)
   4 units, Spr (Lewis)

107/207. Age of Cathedrals—Gothic art and architecture in Western Europe from c. 1150 to 1300. Structuring a "modern" visual discourse within the ideological framework of a new monarchical Church and State, emerging towns and universities, the rise of literacy, the cultivation of the self, and the consequent shifts in patterns of art patronage, practices, and reception in Chartres, Paris, Bourges, Strasbourg, Canterbury, London, Oxford, and Cambridge.
   4 units (Lewis) not given 1999-2000

108/208. Late Medieval "Realism": 15th-Century French and Netherlandish Painting—Restructuring representation and reception in the art of the Limbourg brothers, Van Eyck, Van der Weyden, Van der Goes, Fouquet, and Bosch. The shift from court patronage to entreprenuerial art markets; the new status of the image, artist, viewer, and self; and the problematical premodern context of the end of the Middle Ages.
   4 units (Lewis) not given 1999-2000

109/209. Apocalypse: Reading Medieval Images—Focus is on the multilayered relationships between textual images and their readers in medieval illuminated Apocalypse manuscripts, and how their production and dissemination provided critical cultural mechanisms for the creation of new technologies of the self. Within this framework of subjectivity, medieval theories of vision invested images with the power to articulate and activate dominant ideological positions regarding the self, society, and the "other." The medieval Apocalypse became a
powerful paradigm for the definition of such problematic medieval experiences as the Crusades, anti-Judaism, and expectations of the world's end.

4 units (Lewis) not given 1999-2000

110A/210A. Early Renaissance Painting, 1400-1490—Survey of 15th-century painting in light of the artistic practices and cultural attitudes that characterized the visual culture of Florence. The circumstances of patronage, secular and religious, offers the framework through which artistic episodes of Renaissance imagery, from the revivial of antiquity to Christian neo-Platonism, find historical explanation. Works by Masaccio, Masolino, Beato Angelico, Filippo Lippi, Paolo Uccello, Ghirlandaio, Piero di Soximo, Mantegna, Piero della Francesca, Botticelli, and Leonardo.

4 units (Berdini) not given 1999-2000

110B/210B. High Renaissance Painting, 1490-1570—Survey of 16th-century painting in light of notions of classicism as practiced in Rome, Tuscany, and Emilia. A visual ideology is aimed at producing a "mutual supplementation between viewing nature and forming ideas." Renaissance classicism was a novel attitude towards art, and identified the world of ideas with a world of heightened realities. Works by Leonardo; Michelangelo; Raphael and his school, Andrea del Sarto, Pontormo, Rosso, Bronzino, Correggio, and Parmigianino.

4 units (Berdini) not given 1999-2000

110C/210C. Renaissance Architecture, 1420-1580—Established first in Florence with Brunelleschi's buildings and Alberti's theory, Renaissance architecture produced a variety of typological and decorative innovations throughout Italy. Circumstances of patronage and context, physical or cultural, are examined to address the formal and iconographical novelties of a highly theoretical architecture. Context and theory are the privileged criteria according to which works by Brunelleschi, Michelozzo, Francesco di Giorgio, Bramante, Peruzzi, Raphael, Sangallo, Giulio Romano, Michelangelo, Alessi, Sansmicheli, Sansovino, Palladio and Vignola are studied.

4 units (Berdini) not given 1999-2000

110D/210D. The Venetian Renaissance—Venetian painting of the Renaissance in light of the exchange between center and periphery that characterizes Venice's visual culture. After the acquisition of land dominions, the terraferma, in the first half of the 15th century, Venice, the center, promoted forms of interaction (social, political, and cultural) among the diverse regions of the periphery. By renewing, absorbing, and valorizing the characteristics of the local schools of painting, Venice realized its own Renaissance. The pictorial genre of the pastoral is a typical reception between the urban center and the agrarian periphery. Focus is on the works of Carpaccio, Bellini, Giorgione, Savoldo, Lotto, Titian, Veronese, Bassano, and Tintoretto. GER: 3a (DR-7)

4 units, Win (Berdini)

110E/210E. The Bauhaus—The Bauhaus was an artistic idea, a school, and a social project. Its original curriculum was conceived by architect Walter Gropius in Weimar, Germany, at a time when architecture, painting, sculpture, and the applied arts were theorized and practiced under a common aesthetic and social agenda. Throughout its brief, intense life (1919-1933), the Bauhaus promoted a variety of artistic experiences that explored in different media the relationship between form and technique. Avant-garde and institutional, the Bauhaus constructed a unique visual culture of modernity grounded in experiment and rationality. The pedagogic principles, artistic theory, and practical activity of the school's individual laboratories (architecture, design, photography, graphics, tapestry).

4 units (Berdini) not given 1999-2000

111/211. Baroque Painting—The visual culture of Italy, France, and Spain, 1590 to 1660, focusing on the works and legacies of Carracci, Caravaggio, Guercino, Guido Reni, Poussin, and Velasquez. Theoretical issues (e.g., Naturalism). Emphasis is on what constitutes a Baroque image and what are the conditions of its beholding.

4 units (Berdini) not given 1999-2000

111A/211A. Renaissance Women—The ways in which models of feminine beauty were constructed and processed in the literary and visual culture of the Renaissance. Whether, in the guise of goddesses, courtiers, or others, the feminine image partook of a discursive arena in which its social, mythological, and erotic valencies required readers and beholders to evolve new forms of response. Reception theory and gender studies offer the theoretical framework for discussing artistic forms from Titian's paintings to Petrarchan poetry.

4 units (Berdini) not given 1999-2000

120A/220A. 18th-Century Art in Europe, ca. 1660-1780—The major developments in painting across Europe from the High Baroque illusionism of Bemini (Rome) and the founding of the French Academy (Paris) to the international revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Lectures situate shifts in themes and styles amidst the emergence of new viewing publics. Artists: Tiepolo, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional hour discussion each week for graduate students.

4 units, Spr (Marrinan)

120B/220B. Painting in the Age of Revolution—Survey of painting in Europe within the context of the French Revolution and its aftermath. Lectures align ruptures in the traditions of representation with respect to shifting social formations and political events. Artists: David and his students; Gros and the painters of Napoleon; Gericault; Blake, Fuseli, and Goya; Turner and Constable; Friedrich, Runge, and the Nazarenes; Ingres and Delacroix. Additional hour discussion each week for graduate students.

4 units (Marrinan) not given 1999-2000

120C/220C. The Age of Naturalism, ca. 1830-1874—The origins, development, and triumph of naturalist painting in Europe. Lectures underscore the creative tensions between the traditional ambitions of painting and the challenge of new "modern" subjects and the emerging practice of working in the open air. Artists: Corot, Rousseau, and the painters of Barbizon; Courbet, Millet, and Daumier; the pre-Raphaelites; Manet and his circle; the early works of Monet, Renoir, Degas, and friends. Additional hour discussion each week for graduate students.

4 units (Marrinan) not given 1999-2000

120D/220D. Post-Naturalist Painting—How conceptual models from language, literature, new technologies, and scientific theory affected picture-making following the collapse of the radical naturalism that characterized European painting of the 1860s and early '70s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, and Austria. Artists: the Impressionists and Cézanne; Moreau, Redon, and Rops; Van Gogh and the Pauvres; Gauguin, Les XX, and Munch; Seurat and Signac; Puvis de Chavannes, Burne-Jones, Whistler and Klimt; Horta, van de Velde and Guimard; Beardsley, Vallotton, and Toulouse-Lautrec. Additional hour discussion each week for graduate students. Recommended: some prior experience with 19th-century art.

4 units (Marrinan) not given 1999-2000

4 units (Lee) not given 1999-2000

121/221. Abstract Expressionism—The painting and sculpture of the major Abstract Expressionist artists 1935-59 (Jackson Pollock, Willem de Kooning, Franz Kline, Mark Rothko, and Adolph Gottlieb) and artists reacting to Abstract Expressionism (Ad Reinhardt, Jasper Johns, and Robert Rauschenberg). Emphasis is on works of art, and the cultural and political context in which these works were made.

4 units, Win (Nemerov)

121A/221A. Rebellion, Revolution, and Reaction: European Art between the Wars (1918-1939)—Historical avant-garde movements (Dada, Russian Constructivism, and Surrealism) are examined in conjunction with important anti-modernist tendencies such as Socialist Realism and Nazi Art. Issues: artistic responses to wartime trauma; attempts to develop the progressive potential of technology and the political utility of art; and attempts to reorder relations between the body and the machine, the art object and the commodity, and private and public life. Artists: Richter, Heartfield, Höch, Tzara, Rodchenko, Tatlin, Bellmer, Man Ray, and Ernst. Readings: the modern subject, mass culture, the modernism/anti-modernism debates of the 1930s, and the uses of art in totalitarian regimes.

4 units, Win (Dickerman)

121B/221B. Modernism and Abstraction—The various histories, ideologies, and meanings of abstraction in 20th-century art Cubism, German Expressionism, Suprematism, Constructivism, Neo-Plasticism, Abstract Expressionism, Brutalism, hard-edge abstraction, Minimalism, and process art.

4 units (Dickerman, Lee) not given 1999-2000

122/222. Art under Hitler and Stalin—The role of the visual arts (architecture, exhibition design, painting, sculpture, photography) in Nazi Germany and Stalinist Russia. The relationship between art and totalitarianism, the uses of new systems of mass media, the similarities and distinctions between the two regimes, and the possibilities for critical resistance in the visual arts. GER:3a (DR:7)

4 units (Dickerman) not given 1999-2000

123/223. Art and Technology—Introduction to the thematic of technology as it has been treated through modern art. The relationship between technology, industrialization, mass culture, communication, and social engineering and control from the invention of photography to recent visual practices. Emphasis is placed less on "machine aesthetics" than the issue of technological rationality, e.g., the art of the last 30 years (kinetic art, video, digital photography, etc.). Recommended: some familiarity with modern art.

4 units (Lee) not given 1999-2000

123A/223A. Object after Minimalism—Object-based art from the 1960s to the present. Minimalism, process art, earth and land art, installation and site-specific work, body art. Work that comments upon the museum and gallery, new media sculpture and environments (e.g., video, digital technologies). GER:3a (DR:7)

4 units, Aut (Lee)

123B/223B. The Feminist Legacy in Contemporary Art—The impact of Second Wave feminism on art making and art historical practice in the 1970s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the '70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, Bad Girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of “performativity.” GER:3a (DR:7)

4 units, Win (Lee)

126A/226A. Introduction to the Study of Chinese Painting—Issues and approaches to the study of Chinese painting and related pictorial art. Introduction to major genres, styles, and techniques; problems of subject matter and significance; the social and institutional contexts of painting; painting theory and critical standards; and painters’ lives and cultural roles. Critical readings and discussions of representative studies.

4 units (Vinograd) not given 1999-2000

126B/226B. Early Chinese Pictorial Art—Major developments in the pictorial art of early Imperial China, Han through Sung dynasty. Emphasis is on recent archaeological discoveries, the appearance of the theoretical and critical literature for painting, and the diversity of functions and conceptions of painting in the Sung period.

4 units (Vinograd) not given 1999-2000

126C/226C. Artists and Systems in Later Chinese Painting—Survey of major Chinese artists, A.D. 1300-1900, in the context of changing systems of patronage, art theory, and image production. The literat, individualists, court artists, and urban painters of later Imperial China.

4 units (Vinograd) not given 1999-2000

126D/226D. Landscapes, Geographies, and Ideologies: Intercultural Perspectives—Comparative issues in the understanding of landscape arts, focusing on E. Asian and European/American traditions. Paintings, gardens, site-specific art, and literature utilize approaches drawn from art history, cultural geography, and literary studies. Topics: conceptions of landscape and nature, the social and economic contexts of landscape production, ideological and textual constructions of landscape.

4 units (Vinograd) not given 1999-2000

126E/226E. Across Cultures: Encounters of Eastern and Western Art—Crosscultural interactions and appropriations between the art of E. Asia, Europe, and America from the 16th century to the present. Artistic interchange in the context of culturally based attitudes toward visual representation, imagery, and the idea of the foreign.

4 units (Vinograd) not given 1999-2000

129/229. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868—Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty are viewed through the visual culture during the change of epistememe from medieval to premodern, i.e., the 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tension between the old and the new leading to the modernization of Japan.

4 units (Takeuchi) not given 1999-2000

129A/229A. Painting in Late Medieval and Early Modern Japan, 1500-1868—Questions of subject and subjectivity, the role of tradition/ideology vs. innovation/resistance, responses to the Other, developing art discourse, and transformation in notions of artist, art-making, and viewer response at different levels of Japanese society.

4 units (Takeuchi) not given 1999-2000

130/230. Art in America and Britain, 1670-1825: Culture and Politics—Interdisciplinary study of major themes and genres of British and early American art. Focus is on art in relation to the French and Indian Wars, the American Revolution and the invention of American national identity, and the art of indigenous peoples, particularly the Iroquois. Close readings of works of art. Artists: Copley, West, Trumbull, Allston, Hogarth, Wright of Derby.

4 units (Nemerov) not given 1999-2000

130A/230A. American Art and Culture in the Gilded Age, 1865-1910—Interdisciplinary study of art, literature, patronage, and cultural institutions of the late 19th century. Aestheticism, conspicuous consumption, the grand tour, and the expatriate experience. The period's great collectors, taste makers, and artists: Thomas Eakins, Winslow
Charles Demuth, Georgia O'Keeffe, Gerald Murphy, the Harlem Renaissance, Duchamp, Francis Picabia, Futurism, Fernand Léger, Alfred Stieglitz, who interacted with artists (Gertrude Stein, William Carlos Williams, creative alliances. Painters and sculptors are the focus; the literary figures Early 20th Century—Modernism in the American arts at home and abroad, emphasizing transatlantic expatriation, cultural politics, and creative alliances. Painters and sculptors are the focus; the literary figures

130B/230B. Transatlantic Modernism: Paris and New York in the Early 20th Century—Modernism in the American arts at home and abroad, emphasizing transatlantic expatriation, cultural politics, and creative alliances. Painters and sculptors are the focus; the literary figures

130D/230D. American Art since 1945—Introduces the major figures, movements, and concepts of American art (with examples from Europe) from WW II to the present. Topics: the ideology and aesthetics of high modernism, the relationship between art and popular culture, the “death of painting,” the question of postmodernism. Artists: Pollock, Newman, Stella, Johns, Warhol, Andre, Rainer, Smithson, Hesse, Serra, Kruger, Sherman.

130E/230E. Regionalism—Comparative study of four cultural regionalisms of the 1920s and ’30s: New York City (especially Harlem), the South, the Midwest, and the West (particularly the Southwest). The openings artists attached to place, the invention of rhetoric and sign systems that stand for geographic districts, and the cultural politics of regional rivalry. Topics: Harlem Renaissance; Southern Agrarians; Midwestern Triumvirate (Thomas Benton, Grant Wood, and John Curry); artists colonies of Taos and Santa Fe. The representations of California as “region” in “Pacific Arcadia,” a spring exhibition at the Stanford Museum.

134A/234A. Photography in America—A history of photography surveys photography from its invention in the 19th century to the present. Working from images in the collection of the Stanford Museum, the San Francisco Museum of Modern Art, and important primary and critical texts, focuses on the nature of photographic representation and the changing status of photography as an artistic and social practice. GER: 3a (DR: 7)

135/235. A History of Photography—Surveys photography from its invention in the 19th century to the present. Working from images in the collection of the Stanford Museum, the San Francisco Museum of Modern Art, and important primary and critical texts, focuses on the nature of photographic representation and the changing status of photography as an artistic and social practice. GER: 3a (DR: 7)

137A/237A. The ’60s: America and Europe—Focus is on the major figures, movements, and critical issues in the U.S. and Europe, with forays into Japan and S. America. Topics: the viability of abstraction after Abstract Expressionism (Hardedge abstraction, Minimalism, and Process Art); the role of commodity and popular culture in artistic production (Warhol and Pop Art in America, the Independent Group in Great Britain, the Situationist International in France); the emergence of performance art and other new art forms (fluxus, the Happenings, Earth Art, Video, Kinetic Art); the function of language and the nature of art-as-idea in Conceptual Art; and the relationship between art and political activism in regards to the anti-war movement, feminism, and civil rights. Recommended: some knowledge of 20th-century art history.

140/240. Introduction to Film Study—The formal, historical, and cultural issues associated with the study of film. Familiar models of classical narrative cinema are juxtaposed with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic “language,” visual perception, and representations of gender, ethnicity, and sexuality. Develops basic relevant aesthetic and conceptual analytical skills. Weekly screenings. GER: 3a (DR: 7)

141/241. Cinema and the City—Changing understandings of urban space over time are illustrated by reviewing a range of films from the past century. The cinematic city is an arena of social control, social liberation, collective memory, and complex experience. Cinematic effects (montage, movement, and subjective camerawork) are integral to understanding the city as a lived environment. The rise and decline of the utopian precepts of architectural modernism and the representation of the city into the realm of cyberspace, where it still functions as a site of navigation, perception, and self-redéfinition. Weekly screenings. Recommended: 140 or its equivalent.

142/242. Comedy—(Same as Comparative Literature 167.) Introductory survey of comic traditions from Ancient Greek drama to contemporary film. Literary texts are dovetailed with comparative media experiences. Readings of Aristophanes, Plautus, Shakespeare, Sheridan, Wilde, and Coward are in conjunction with such cultural phenomena as mime, masque, and puppetry; the Commedia dell’Arte; and the films of the Marx Brothers, Jacques Tati, Jerry Lewis, and others. The possibilities of cross-cultural comic form; the representations of gender, race, and power in performance; the archetypal approaches to the genre, and the nature of stand-up. GER: 3a (DR: 7)

143/243. The Hollywood Musical—Explore the liberation that arises in the film musical, a liberation that is reality and illusion and which can be physical, emotional, aesthetic, and social, all at once. Performance is central to the genre. Musicals connect cinema to other arts. The interplay among song, stage, and screen; and the interplay of cultural identities (regional, racial, gendered, and sexual). Musicals provide a place for the staging of issues of identity: sexuality and ethnicity are emphasized onscreen and off. The impact of African-American and Jewish culture on the genre, issues of gay reception and interpretation. The history of the American stage musical. GER: 3a (DR: 7)

144/244. Science Fiction Cinema—Science fiction film’s sense of wonder depends upon the development and revelation of new ways of seeing. If cinema is a privileged site of technological representation, then science fiction, the genre most obsessively concerned with technology and its deployment, takes on new relevance. The American SF film’s emphasis on the fundamental activity of human perception and its exploration of other worlds, new cities, and other modes of being. Science fiction as the Hollywood genre most directly concerned with the essence of cinema itself, and such new technological spaces as the cyberspaces of the information age.

145/245. Subjectivity and Gender in Contemporary European Film—Cinematic reflexivity, gendering film authorship, self-imaging masculinity as feminine, modernism/postmodernism, narrative/anti-narrative, sexuality and difference, and allegories of spectatorship and voyeurism.
National Identity—The question, "What is American about American..."
214C. Seminar: The Pastoral Vision in the Renaissance—Whether secular or profane, nostalgic or premonitory, the encounter with the other offered by the voluntary retreat into the countryside fostered an artistic genre that only could be accomplished by the combined representational naturalism and classical revival of letters pursued during the Renaissance. A multidisciplinary discursive field, the pastoral offered a hermeneutic experience that exposed (and continues to expose) the social, gender, and ideological prerogatives of readers and beholders. The cultural and phenomenological implications of images like Giorgione's Tempest. Critical and art-historical models of interpretation are tested from iconology to semiotics.

4 units (Berdini) not given 1999-2000

215. Seminar: Michelangelo and the Aesthetics of the Unfinished—Michelangelo's sculptures were often left in a state prior to completion, so as to reveal the process and the results of their making. It was left to the beholders to complete these works in their imagination, and in this regard the artist's sonnets, letters, and Neoplatonic conceptions offered critical instruction. For the reader-beholder, Michelangelo's poetry, sculpture, and related drawings constitute a complex aesthetic unity. Readings from Michelangelo's sonnets and letters, art theory, and Platonic and Neoplatonic works.

4 units (Berdini, Harrison) not given 1999-2000

215S. Undergraduate Major Seminar: Renaissance Rome—Art and Ideology in the Age of Julius II (1503-13)—The role played by Bernante's, Michelangelo's, and Raphael's art in shaping Julius Roman. The papal attempt to revive the dual foundation of Rome, i.e., classical antiquity and Early Christianity. Architecture, painting, and sculpture contributed toward construction of a new visual culture for a New Rome, a city destined to be the center of Christianity and the capital of an absolutist state. Antiquarian studies, monarchical ideologies, humanistic discourses, and the new artistic practices were experimented with throughout Italy in the previous century, and shaped a pontifical project which succeeded artistically but failed ideologically, as the subsequent divisions within Christendom demonstrated.

4 units (Berdini) not given 1999-2000

221C. Seminar: Aspects of Realism in 19th-Century Painting

4 units (Marrinan)

221D. Undergraduate Seminar: Eugène Delacroix—Born in 1798, scorned by the art establishment in his early years, heralded by the critical "avant garde" (Baudelaire) in mid-life, Delacroix died in 1863 as one of the "old masters" of the French tradition, important to young painters (Manet and Degas) as a role model for their own work. Delacroix painted in every format (small casel pictures, large-scale architectural ensembles, lithographic works, drawings and illustrated notebooks), and left a body of critical writings in the form of letters and journals. Delacroix's life and art as the means for understanding the historical person and the culture of 19th-century France. Student group reports on general topics and individual presentations on specific works by Delacroix. Enrollment limited to 16. Prerequisite: consent of instructor. Recommended: reading knowledge of French.

4 units, Spr (Marrinan)

221H. Undergraduate Seminar: Paul Cezanne

4 units (Marrinan)

223D. Seminar: Site Specific and Installation Art—Drawing on precedents in early 20th-century art (De Stijl, the Bauhaus, the Russian and Soviet Avant-Garde, Schwitters), considers the thematic of place in the production and reception of site-specific work, art made for, and bound to, a particular place. Topics: the legacy of the Gesamtkunstwerk, the notion of community and the public sphere, the viewer of art as phenomenological body, the body as site, the politics of liminal space, and the critique of the museum and gallery as institutions. Artists: Smithson, Heizer, Morris, Serra, Situationist International, Antin, Piper, Asher, Buren, Matta-Clark, Broodthaers, Haacke, Wilke, Gonzalez-Torres, Holzer, Green, Wodiczko, the Border Arts Collective, Wilson, Luna, Mendiesta.

4 units (Lee) not given 1999-2000

224A. Seminar: Collage/Montage—Case studies in collage and montage practice (including Cubist collage, the films of Dziga Vertov and Sergei Eisenstein, the photomontages of Hannah Höch and John Heartfield, and the early work of Robert Rauschenberg) and the historiographical problems that this work engenders. Important 20th-century theories of fragmentation and recombination including Walter Benjamin's conception of allegory; Claude Levi-Strauss on bricolage and Jacques Derrida's reworking of this term; and Frederic Jameson and Rosalind Krauss on pastiche.

4 units (Dickerman) not given 1999-2000

227B. Undergraduate Seminar: Contemporary Chinese Arts—Critical issues in contemporary Chinese visual arts are examined through concurrent exhibitions at the San Francisco Museum of Modern Art and the Asian Art Museum, selected readings, and discussion. The problems of globalization and cultural identity, manipulations of language and the burdens of memory and historical trauma. Embodiment and gender, urban dislocations, postmodern strategies, and the role of electronic and mass media.

4 units (Vinograd) not given 1999-2000

227C. Colloquium: New Studies in Chinese Art—Critical readings of current studies of Chinese art, focusing on the Ming and Qing period pictorial arts. Emphasis is on issues of political and cultural authority; systems of production, exchange, and possession; and gender-implicated imagery.

4 units (Vinograd) not given 1999-2000

227F. Colloquium: New Studies in Chinese Art—Critical readings of current studies of Chinese art, focusing on the Ming and Qing period pictorial arts. Emphasis is on issues of political and cultural authority; systems of production, exchange, and possession; and gender-implicated imagery.

4 units (Vinograd) not given 1999-2000

228A. Seminar: Pictorial Art and Cultural Spaces in Late Ming China—Studies of late 16th- through mid-17th century Chinese painting and printmaking in the context of emerging cultural and media spaces. Topics: narrative spaces and staging of drama and fiction; sites of urban entertainment, psychological spaces of subjectivity and desire, spaces of historical representation; and the proliferation of image spaces.

4 units (Vinograd) not given 1999-2000

228B. Seminar: Warrior Culture of Japan—The ethos and cultural legacy of the Japanese warrior: how those in power stay in power; the "tools of the trade;" how the image of the warrior was constructed in...
literature and in the visual arts; and the relationship between visual ideology and codes of legitimacy.

4 units (Takeuchi) not given 1999-2000

229C. Seminar: Nostalgia in Japanese Art—Revivals, Reformations, Representations—The foundations of classical court culture in Japan as a sphere discourse, and its various afterlives: major themes, interpretations, text-image relationships, and the ideological uses to which the classical past was put throughout traditional Japanese culture.

4 units (Takeuchi) not given 1999-2000

229D. Seminar: Japanese Discourse on Painting and Its Chinese Antecedents—Primarily for graduate students in Asian art and Asian languages. The “information explosion” of the 17th century, brought about by advanced technologies of printing, made accessible to the Japanese the vast body of Chinese literature on painting theory. The major texts and their influence in Japan. Material is in English; some texts are read in the original to understand key aesthetic terms.

4 units (Takeuchi) not given 1999-2000

229E. Colloquium: “Pictures of the Floating World”—Images from Japanese Popular Culture—Examines printed objects produced during the Edo period (1600-1868), including the famous Ukiyo-e (“pictures of the floating world”) and lesser-studied genres like printed books (ehon), and popular broadsheets (kawaraban). How a society constructs itself through images; questions concerning the borders of the acceptable/censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 12, 129 or 129A.

4 units (Takeuchi) not given 1999-2000

229F. Seminar: Conformity and Rebellion in 18th-Century Japanese Painting—The rise of new styles and artistic revivals, the extraordinary number of “eccentric” painters, influences from China and the West, the proliferation of art-historical treatises, and the redefinition of the role of the artist in Japanese society. Prerequisites: 2, 12, 129 or 129A.

4 units (Takeuchi) not given 1999-2000

229G. Colloquium: Arts of Zen Buddhism—Primarily for seniors. Since its introduction to Japan in the medieval period, Zen and its attendant arts have produced reams of discourse, despite the well-publicized Zen distrust of the intellect. The arts produced in the Zen milieu in the context of this literature, and the myths perpetrated about Zen art in the modern era. Prerequisite: familiarity with Japanese art and culture.

4 units, Aut (Takeuchi)

231. Seminar: The Art Museum—History and Practices—Workshop on contemporary museum culture, with emphasis on the collecting and exhibiting practices of art museums. Selected readings, field trips, and discussions with museum professionals. Each student creates a detailed proposal for a museum exhibition and presents it to a panel of faculty and curators.

4 units, Aut (Corn)

4 units (W. Corn) not given 1999-2000

231N. Stanford Introductory Seminar: Hollywood and New York—The 1940s—Preference to freshmen. Works of the major painters, photographers, and filmmakers of the 1940s: Edward Hopper, Jackson Pollock, Willem de Kooning and Weegee (painters and photographers); and John Ford, Preston Sturges, and Billy Wilder (film directors). Topics: war-time and Cold War propaganda, the popularization of psychoanalysis, period-specific constructions of the city, and other cultural and political practices and discourses. Paintings and films are examined in terms of the internal histories of modernist painting and the American film industry.

4 units (Nemerov) not given 1999-2000

232A. Seminar: The Art of the Old West—Major painters and sculptors of the American West 1880-1920, including Frederic Remington, Charles Russell, and Charles Schreyvogel. Cowboys and Indians in the context of evolutionary theory, ethnographic documentation, national symbolism, immigration and the urban world, the advent of movies, other turn-of-the-century nostalgias (e.g., New England and the Middle Ages), and questions about the recoverability of the past.

4 units (Nemerov) not given 1999-2000

232E. Seminar: Interpretation and History—The Art of Benjamin West—Study of Benjamin West (1738-1820), the American artist who spent most of his career in England as court painter to George III. The “new historical” emphasis on the “West” in terms of the various discourses (British colonial expansion) embodied in his art. Close readings of individual works by West and his contemporaries.

4 units (Corn) not given 1999-2000

233. Colloquium on the History of Photography—Readings on the history and criticism of photography are combined with a close study of works in Bay Area collections. Enrollment limited.

4 units (W. Corn) not given 1999-2000

2 units (Leivick) not given 1999-2000

236. Art History Bibliography and Library Methods—Primarily for art history graduate students; upper-class undergraduate majors who plan to continue in art history on the graduate level may enroll with the consent of the instructor. Introduction to reference works and library techniques essential to the study of architectural and art history. Sources of artistic, historical, and cultural information in their printed and automated forms.

3 units (Ross) not given 1999-2000

247. Theories of the Moving Image I—Cinema and Models of Perception—Film theory emphasizes cinema’s relation to human perception in the context of industrial, modern life. What are the implications of a medium similar to, but distinct from, human perception? As a medium insufficiently real or too immediate and palpable; as concrete perception or phantasmagoric diversion, cinema’s role in how we perceive, understand, and circulate through the world is open to debate. The medium’s real-time aspects bring issues of performance into play. Theorists: Benjamin, Kraeauer, Epstein, Vertov, Eisenstein, Bazin, Custodber, Derr, Krakhage, Baudry, Mulvey, Deleuze. Screenings from narrative and non-narrative models. Enrollment limited to 20. Recommended: 140 or equivalent.

4 units (Bukatman) not given 1999-2000

249. Seminar: French New Wave Film (1958-68)—Theory and Practice—Exploration of a radical paradigmatic shift in cinematic modernism in the works of Godard, Resnais, Truffaut, Varda, etc. New visual narratives of existentialist freedom, eroticism, and reflexivity.

4 units, Spr (Lewis)

249A. Seminar: Beyond the New Wave—French Film in 1970s, ‘80s, and ‘90s—Postmodernism, narrative/anti-narrative, spectatorship and
voyeurism, auterism and cinematic reflexivity. America as problematic intertext, social and sexual politics, crises in gendered identity, and the "New History." The later works of Godard, Chabrol, Renais, Tanner, Truffaut, and Varda, and younger filmmakers, such as Beineix and Kieslowski.

4 units (Lewis) not given 1999-2000

263. Psychoanalytic Perspectives on Art and Literature—Experiments with and critiques psychoanalytic perspectives on a broad spectrum of visual images and literary texts. Book illustration, advertising, and the cartoon strip; and conventional media such as theater, novel, painting, and sculpture. Topics: symbolism, play, dreams, madness, the biography of the artist, fetishism, trauma. Texts: Freud, Lacan, Melanie Klein, and Winnicott.

4 units, Aut (Spitz)

267. Undergraduate Seminar: Buildings and Society in Europe, 1500-1800—Architecture from a sociological perspective, looking at how it responds to and shapes human needs and activities: governance, worship, work, education, entertainment, commerce, pleasure, justice, welfare, warfare, health, punishment, etc. How buildings serve as instruments of social justice and control in times of societal stress (famine, plague, and political and religious discord). Buildings in the context of the current political debate over the legitimacy of the "welfare" state.

4 units, Win (Scott)

277. Seminar: Le Corbusier—A study of this controversial figure in modern architecture and city planning, whose designs and writings shaped much of the contemporary environment throughout the world. Students conduct research on selected aspects of Le Corbusier’s work, theory, influence, or connection with related subjects. Prerequisites: 175, consent of instructor.

4 units (Turner) not given 1999-2000

278. Seminar: The American College Campus—The college and university campus is a distinctively American type of environmental planning. The historical development of the campus, its spaces, and architecture. Focus is on issues relating to Stanford and other Bay Area campuses. Prerequisites: 175 or 176, and consent of instructor.

4 units, Aut (Turner)

278N. Stanford Introductory Seminar: The Stanford Campus, Architectural History in Microcosm—Preference to freshmen. The buildings and grounds of Stanford provide examples of architectural traditions and developments of the 19th and 20th centuries. The campus is used as a laboratory for the examination of these subjects and of basic architectural concepts and principles.

4 units (Turner) not given 1999-2000

279. Seminar: Frank Lloyd Wright—Examination of this most influential American architect, whose work transformed domestic architecture in particular. Students choose research subjects dealing with specific designs or aspects of Wright’s career. Field trips to Wright’s buildings in the Bay Area. Prerequisites: 175 or 176, and consent of instructor.

4 units (Turner) not given 1999-2000

280. Seminar: Utopia and Reality in Modern Urban Planning—Primarily for Urban Studies majors, but others may be admitted. Utopian urbanist thinkers (Ebenezer Howard, Le Corbusier, Frank Lloyd Wright, etc.) who established the conceptual groundwork of contemporary urban planning practice. Student participation and research-oriented term paper required.

4 units, Win, Spr (Stout, Turner)

285. Undergraduate Major Seminar: Methods of Art Historical Research—The historiography and methodology of the discipline of art history.

4 units (Lee) not given 1999-2000

298. Individual Work: Art History

any quarter (Staff)

299. Research Project: Art History

any quarter (Staff)

GRADUATE

300. Graduate Proseminar: Graduate Studies in Art History—For first-year art history graduate students only. Introduction to fields, issues, and practices in art history.

2 units, Aut (Dickerman, Lee)

301. Graduate Seminar: Political Iconography—Study of 6th-century painters and the extent to which their work can be seen to reflect the history and political shenanigans of their age. Prerequisite: 100A or 102.

4 units (Maxmin) not given 1999-2000

302. Graduate Seminar: Greek Vase Painting

4 units (Maxmin) not given 1999-2000

310. Graduate Seminar: Scopophilia—On Visual Pleasure—What kind of images give pleasure and why? The modalities of attention and expectation in the visual experience that resolve in what psychologists call scopophilia are analyzed within a historical horizon which moves from the neo-Platonic legitimation of aesthetic pleasure during the Renaissance (including its reconciliation with Christian faith) to the modernist emancipation of visual pleasure from mimetic representation. Readings focus on the structure and modifications of the language of appreciation as it relates to understanding, from the early theories of Leonardo, to the criticism of Diderot, modern connoisseurship, the psychoanalytic theories of Freud and Lacan, and contemporary forms of reception such as Derrida’s notion of the Gift.

4 units (Berdini) not given 1999-2000

322. Graduate Seminar: Crossroads of the Enlightenment—The Artistic Culture of Rome in the mid-18th Century—Rome, as a long-privileged site for training young artists, acquired new importance following the discovery of ruins at Herculaneum and Pompeii (1730-1780). Roman artistic culture, as the arena where international artists and critics, dealers, and dilettantes met and were visited by wealthy young people making the Grand Tour, became the center of the contemporary art in Europe. Students research topics and presentations on any relevant aspect of artistic life in Rome at this time: patronage and patterns of collecting, monographs on artists or writers working in the city, art practices characteristic to Rome (e.g., copying antiquities), or constructions of the "mythic" Rome in visual renderings or written accounts. Prerequisite: working knowledge of at least one non-English language.

4 units (Marrinan) not given 1999-2000

323. Graduate Seminar: Conceptual Art—Issues surrounding conceptual art from the ’60s to the mid-’70s. Topics: the end of the work of art and the notion of “art as idea” or philosophical proposition; the relationship between art, language, and the document; ephemerality and “dematerialization;” body art performativity and the public sphere. Artists: Sol Lewitt, Joseph Kosuth, Hans Haacke, Adrian Piper, Vito Acconci. Art and language: Joan Jonas, Chris Burden, Dan Graham, Bruce Nauman, Lawrence Weiner, Hannah Darboven, Daniël Buren.

4 units (Lee) not given 1999-2000

323A. Graduate Seminar: Methods and Historiography of Art History—Close analysis of key art historical and methodological texts, providing a graduate-level introduction to the writing, history and interpretative approaches of the discipline of art history. Authors: Berenson, Mirelli, Wölfflin, Riegl, Panofsky, Fry, Greenberg, Schapiro, Clark, Krauss, Bois.

4 units (Dickerman) not given 1999-2000

323B. Graduate Seminar: Dada—Case studies in the various Dadaist movements based in Zürich, Cologne, Hannover, Paris, and New York.

4 units (Dickerman) not given 1999-2000

325. Graduate Seminar: Photography and Visuality—Using various case studies in 19th- and 20th-century photographic practice, explores the intersection of issues of social context, technology, and vision in the definition of historical modes of perception. Weekly meetings at San Francisco Museum of Modern Art or other collections.

4 units (Dickerman) not given 1999-2000

329. Graduate Seminar: Chinese and Japanese Painting Discourse—The relationship between the large body of Chinese painting treatises and their rearticulated roles in Japan: subjectivity and ideology, realism/idealism; legitimacy; visuality; social formations. Prerequisite: knowledge of Chinese or Japanese.

4 units (Takeuchi) not given 1999-2000

329A. Graduate Seminar: Methods and Historiography in Japanese Art—Introduces graduate students in Asian art and other disciplines to issues of historiography, research techniques, dictionaries for deciphering script styles, and other tools for advanced work in Japanese art.

4 units (Takeuchi) not given 1999-2000

329B. Graduate Seminar: Problematizing the Japanese Landscape of Travel—The cultural construction of landscape in medieval and premodern Japan. The representation of landscapes, seen and imagined, in painting, literature, religion, and social practice. Topics: religious visions and ritual fields (mandalas, sacred mountains), sites of cult and cult of sight (Fuji, Kumano), narratives of itinerary (travel diaries, illustrated hand scrolls), and topographic taxonomies (Meisho, Shinkeizu, guidebooks).

4 units (Takeuchi) not given 1999-2000

330. Graduate Seminar: Gertrude Stein—Stein’s life and work, emphasizing her role in the formation of innovative art in the 20th century. Stein as writer of biography, fiction, poetry, drama, criticism, operas, and genres of her own making; and Stein as art collector, salon hostess, expatriate, and lesbian Portraiture by painters, sculptors, and writers.

4 units, Spr (Corn, Dunn)

331D. Graduate Seminar: The Visual and Literary Art of Edwardian England—Interdisciplinary study focusing on England 1895-1918. The works of major painters (John Singer Sargent); writings of Thomas Hardy, Henry James, Arthur Conan Doyle, Kenneth Grahame, and Beatrix Potter; the relation to contemporary American art and literature; and the English visual art and poetry of WW I and later 20th-century constructions of the Edwardian period.

4 units (Corn, Dunn) not given 1999-2000

4 units (Nemerov) not given 1999-2000

333B. Graduate Seminar: Darkness and Light: American Illustration, 1895-1915—The turn of the century, the so-called “golden age” of American illustration, produced three well-known American artists, Maxfield Parrish, Howard Pyle, and N.C. Wyeth, and many talented, now largely forgotten artists whose images fill the pages of Scribner’s, Century, and other illustrated periodicals and books. Yet early 20th-century illustration is still regarded as a “low” art form not worth serious visual analysis and critical study. American illustration in historical and theoretical frameworks, emphasizing the oddness (if not the outright darkness) of this ostensibly good-natured art.

4 units, Win (Nemerov)

334. Graduate Seminar: Gender, Modernism, and Art History—Revisionist scholarship of gender and sexuality in Impressionism, Dada and Surrealism, abstraction, and pop art. Students elect their own topic for research and interpretation.

4 units (Nemerov) not given 1999-2000

335. Graduate Seminar: Visual Theory—Introduction to some major theoretical approaches in the contemporary praxis of art history and file studies. Readings/discussion are centered on the problematics of poststructuralism, semiotics, narratology, phenomenology, reception theory, issues of gender, context, and the new Marxism.

4 units (Lewis) not given 1999-2000

335B. Graduate Seminar: Notions of “The Public” in Art Historical Discourse

4 units (Marrinan) not given 1999-2000

335C. Graduate Seminar: The Vision of Art History

4 units (Marrinan) not given 1999-2000

335D. Graduate Seminar: Narrative Theory and Visual Forms

4 units (Marrinan) not given 1999-2000

335J. Graduate Seminar: Looking at Violence—Violence in the media and its effect upon viewers, especially the young, is an issue of national concern that has produced legislation for the ratings of movies, television shows, and computer and video games. “V-chips” can be programmed to censor electronically what TV programs they play. These are political and legal fixes. Why do we watch violence in the first place? Why are images of violence compelling? Texts of aesthetics, psychology, and moral philosophy are read, developing detailed analyses for specific examples of visual media (painting and sculpture, film, and video). Preliminary ideas about a history of our desire to look at images of violence.

4 units (Marrinan) not given 1999-2000

335K. Graduate Seminar: Theories of the Sublime and Art—For graduate students and advanced art history majors only. The notion of the sublime through the terms of art and art history. Readings in philosophy and literary criticism (Kant, Burke, De Man, Lacoue-Labarte, Lyotard, Nancy, Weiskel, etc.) and art historical “case studies” (European Romanticism, American landscape, modernist abstraction, earth work, and recent video).

4 units (Lee) not given 1999-2000

335Q. Graduate Seminar: The Time of the Object—How artists, art historians, philosophers, and critics have theorized the temporality of the art object. Topics: the origin of the work of art, duration, repetition, entropy, kineticism, the monument, the end of death of art, “schizophrenia.” Writers: Bergson, Deleuze, Focillon, Fried, Hegel, Heidegger, Jameson, Kubler, Krauss, Riegl.

4 units, Aut (Lee)

345. Graduate Seminar: World Fairs and Theme Parks—World Fairs and theme parks as communications media and social discourse. From the 1851 Crystal Palace Exhibition in London, to expositions in Paris, Philadelphia, Chicago, New York, etc., fairs have been a fascinating and conflicted site of meaning. Technological and ideological utopianism were supported by nationalist discourse, capitalist enterprise, anthropological exhibition, and varied modes of popular address. The issues that recur across the history of the fairs: display culture; utopian space; sensory immersion; technological trauma; the place of nature, art, and design; urban planning; and virtual realities. The importance of fairs in understanding the contradictory foundations of American self-defini-
tion (e.g., moral uplift vs. popular entertainment). Amusement parks, contemporary themed entertainment sites, and the 1996 Internet World’s Fair.

347. Phenomenology of Film—Film and phenomenology are 20th-century developments historically and conceptually interdependent. Phenomenology investigates consciously experienced phenomena, apart from causality or presupposition. Embodied subjectivity is central to the intensely experiential medium of cinema. The ways that film foregrounds, distills, and recasts aspects of phenomenological process. The analysis of the embodiment of vision replaces the “decoding” of narrative or symbolic systems, and the easy link between cinematic illusion and ideological duplicity is replaced by an exploration of visual knowledge and subjective development. Writers and filmmakers shared the task of mapping a phenomenology of film. Authors: Bazin, Cavell, Michelson, Deleuze, Sobchack, Gunning. Filmmakers: Brakhage, Warhol, Snow, Kubrick, Gehr. Screenings emphasize experimental cinema, often an interrogation of these very issues. The historical movement away from, and the return to, phenomenology in film analysis.

4 units, Win (Bukatman)

395. Teaching Praxis
1-5 units, Aut, Win, Spr (Staff)

397. Area Core—For art history Ph.D. candidates. Prerequisite: consent of instructor.
4 units, Aut, Win, Spr (Staff)

398. Individual Work: Art History—For graduate students.
Any quarter (Staff)

399. Research Project: Art History—For graduate students.
Any quarter (Staff)

400. Dissertation: Art History
Any quarter (Staff)

PRACTICE OF ART

14. Drawing for Nonmajors
2 units, Aut, Win, Spr (Staff)

16. Sculpture for Nonmajors
2 units, Win (Staff)

17. Photography for Nonmajors
2 units, Spr (Staff)

50. Clay Modeling—Entry level. The representational ideas and techniques of Rodin, Picasso, Medardo Rosso, Segal, and Duane Hanson, and the irrational approach of Jean Arp, Dubuffet, and Giacometti. Students work from the life model: library readings and slide lectures.
3 units, Aut, Win, Spr (Randell)

60. Design I: Fundamental Visual Language—Formal elements of visual expression (color, composition, space, and process) are experienced analytically and intuitively through hands-on projects. Mediums vary and are two- and three-dimensional. Originality and inventiveness are emphasized within the constraints of each assignment. Content is realized abstractly. Centered in design, but relevant to all visual art study and meaningful to the general university student who seeks to develop visual perception.
3 units, Aut (Kahn)

70. Photography I—The critical, theoretical, and practical aspects of creative photography are addressed through basic camera and lab techniques. Lecture/discussion, viewing of slides, and field work. Stanford Museum and Art Gallery viewing are scheduled according to current exhibitions. 35mm camera required.
4 units, Aut, Win, Spr (Leivick, Staff)

950. Stanford Introductory Seminar: Visual Art—Concept, Production, Critique—Preference to sophomores. Artists inherit the history of their medium, form an agenda in relation to the culture, and face the implications in practice. How are art objects, situations, and events negotiated and understood by the viewer? How do works of art model a course of action within the everyday world of practical life? How is critique developed? How does visual art affect the formation of personal and cultural values? What is the reciprocation between consciousness and the artifactual world in which works of art form a special category? Reading, discussion, short papers, and student presentations. Visits to artists’ studios, and the Cantor Center for Visual Arts at Stanford.
3 units, Win (Hannah)

117. History and Philosophy of Design—(Enroll in Mechanical Engineering 120.)
3-4 units, Spr (Katz)

140. Drawing I—Introduction to functional anatomy and perspective as these apply to problems of drawing the form in space. Individual and group instruction as student’s work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work in the investigation of drawing fundamentals.
3 units, Aut, Win, Spr (Staff)

141. Drawing II—Intermediate/advanced drawing. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 40 or 140, or consent of instructor.
3 units, Aut, Win, Spr (Staff)

142. Drawing III—Advanced drawing. Emphasis is on student initiative with respect to composition, color, and use of a variety of drawing materials. Work from imagination, still life, and model. May be repeated for credit. Prerequisite: 40 or 140, or consent of instructor.
3 or more units, Aut, Win, Spr (Staff)

145. Painting I—Introduction to techniques, materials, and vocabulary in oil painting. Still-life, landscape, and figure are used as subject matter. Painting and drawing directly from life is emphasized.
3 units, Aut, Win, Spr (Staff)

146. Painting II: The Self-Portrait in Painting—Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Durer, Rembrandt, Cezanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. Prerequisites: 140, 145, or consent of instructor.
3 units, Aut, Win, Spr (Staff)

147. Painting III—Advanced painting with emphasis on the individual point of view. May be repeated for credit. Prerequisites: three quarters of 145, 146, or equivalent, or consent of instructor.
3 or more units, Aut, Win, Spr (Staff)

148. Printmaking—Introduction to print-making using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, Pendergast, etc. May be repeated for credit. Prerequisite: 40 or 140.
3 units, Win, Spr (Chagoya)

149. Collage—The generative principles of this most characteristic 20th-century art form. Along with assemblage (its three-dimensional equivalent) and montage (its counterpart in photography, film, and
video), collage has introduced many of the crucial aesthetic issues of the modern and postmodern eras. Typically, collage creates an expressive visual language through juxtaposition and displacement, and through sheer materiality, difference, and event. Issues of location (where it happens), object (what it is), process (how it is realized) and purpose (why it is). Prerequisites: 140, 145, or consent of the instructor.

3 units, Spr (Hannah)

152. Constructed Art—The non-objective inventions of the Russian Constructivists are the departure point which parallels the development of non-representational sculpture beginning in the early 20th century. Found Art, welded sculpture, Assemblage, and Kinetic Art projects direct the students' attention to the continuing evolution of art ideas. Lectures, readings, and projects culminate in sculptures concerning art of the 1960s and '70s: Minimalism, Earth Works, and Process Art.

3 units, Aut (Randell)

153. Recent Sculpture Concepts and Projects—Study and practice of the art of recent decades, emphasizing current post-abstract procedures. Various materials and nonmaterials. Prerequisite: any one of 50, 60, or 70.

3 units, Win, Spr (Randell)

160. Design II: The Bridge—The historical spectrum of design, from practical to ritual, while maintaining contact with the basic values and the conceptual orientation of visual fundamentals. Two- and three-dimensional projects are sequentially grouped to relate design theory to application, balancing imaginative and responsible thinking. Prerequisite: 60.

3 or more units, Win (Kahn)

168A. Introduction to Urban Design—(Enroll in Urban Studies 170.)

5 units, Win (Gast)

169. Professional Design Exploration—Six to eight mature projects are stimulated by weekly field trips into significant areas of design activity or need.

3 or more units (Kahn)

170. Photography II—Students individually pursue a topic of their own definition. Class sessions meet for individual and group critiques, lab demonstration, discussions, and slide lectures.

3 units, Win, Spr (Staff)

172. Alternative Processes—Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 70, 170, 270, or consent of instructor.

3 units, Aut (Leivick)

173. Digital Narratives—Focus is on developing visual narrative skills based on digital production and distribution media. Topics: digital imagemaking, storyboarding, dramatic structure, image manipulation, image sequencing, manipulation of virtual time and space, quicktime movie production and interactive web authoring. Prerequisite: working knowledge of Macintosh and hypertext.

3 units, Aut (Niemeyer)

174. Digital Art in Public Spaces—The relationship between digital art, public policy, and community action. Large-scale works are produced for installation in Bay Area public spaces using digital art media. Final project is a collaborative effort between student artists, community administrators, and the public involving issues of public concern, communication strategies, fundraising, and interacting with the press. For pre-enrollment, see http://www-leland.stanford.edu/dept/SUDAC. Prerequisites: 70, 145 or 60, plus working knowledge of Photoshop and Illustrator.

3 units, Spr (Niemeyer)

175. Motion Studies: An Introduction to Animation, Cartoon Physics, and Funny Walks—Hands-on animation, providing a foundation for future work in computer graphics, digital art, and animation. The techniques, tools, principles, and methods of traditional animation. Through lectures, hands-on exercises, motion analysis, and screenings, students learn a variety of animation techniques and gain a background of timing, spacing, weight, and expressive motion.

3 units, Aut (Loeb)

175A. The Virtual Object—Introduction to modeling, shading, and lighting in Maya, a high-end 3D modeling and animation application. Prerequisite: 173 and/or 175.

3 units, Win (Niemeyer)

175B. Digital Narrative Production—Third in a year-long sequence to produce full screen, multiple character, short animation.

3 units, Spr (Niemeyer)

176. The Illusion of Life—The analysis of visual and temporal perceptions of reality provides the basis for advanced modeling, shading, and lighting exercises for virtual 3D environments. For pre-enrollment, see http://www-leland.stanford.edu/dept/SUDAC.

3 units, Win (Dym)

200. The Work of Art and the Creation of Mind—(Enroll in Education 200X.)

4 units, Win (Eisner, Chagoya, Rehm, Ross, Sano)

246. Individual Work: Drawing and Painting—Prerequisites: at least two quarters of painting or drawing and consent of instructor.

Aut, Win, Spr (Staff)

248. Advanced Monotype—Continuation of monotype, dealing with advanced technical and aesthetic problems in the medium. Prerequisite: 148.

3 or more units (Chagoya)

249. Advanced Undergraduate Seminar—Interdisciplinary concepts, engaging in collaborative projects using a variety of materials and techniques. This capstone experience for the major and minor in Art involves an exhibition open to the public or a final project review to which visiting critics may be invited. Taught by visiting artists.

3 units, Win, Spr (Staff)

250. Individual Work: Sculpture any quarter (Randell)

260. Individual Work: Design

any quarter (Kahn)

268. Design Synthesis—Mature semi-elective problems in composite and multi-media design areas. Prerequisites: any two design courses above 160.

4 or more units, Spr (Kahn)

269. Advanced Creative Studies—Seminar based on elective design projects in areas of individual specialization. Prerequisite: consent of instructor.

3 or more units, Aut (Kahn)

270. Photography III—Student continues with own work, showing it in weekly seminar critiques.

Aut, Win, Spr (Leivick Staff)

271. The View Camera, its Uses and Techniques—Designed for serious students of photography who wish to gain greater control and refine skills in image-making. 4 x 5 view cameras are provided. Enrollment limited to 8.

3 units, Aut, Win, Spr (Leivick, Staff)
310A,B,C. Directed Reading: Studio
any quarter (Niemeyer)

342. Master's Project—Two weekly seminars and studio practice

360A,B,C. Master's Project (Seminar): Design
any quarter (Staff)

AFFILIATED DEPARTMENT OFFERINGS

CLASSES

303. Graduate Seminar: Art in the Roman Empire—Ideology, Place, and the Individual

SLAVIC LANGUAGES AND LITERATURES

148/248. The Factory of the Eccentric Actor (1921-1929): Between Theater and Film, Avant-Garde and Trivial Genres, East and West

168/268. Documentary Film and Fiction in Russian and Western Cinema, 1920 to the Present

MECHANICAL ENGINEERING

101. Visual Thinking

SPANISH AND PORTUGUESE

286. Chicanos/a Muralism

OVERSEAS STUDIES

The following courses are approved for the Art and Art History major and taught overseas at the campus indicated below. Students should discuss with their major advisers on campus which courses would best meet their educational needs. Course descriptions can be found in the "Overseas Section" section of this bulletin or in the Overseas Studies Program office, 126 Sweet Hall.

BERLIN

173Y. The Industrial Revolution and its Impact on Art, Architecture, and Theory—(Same as Overseas Studies 117V.)
5 units, Aut (Neckenig)

174Y. Architecture and the City, 1871-1990: Berlin as Nucleus of Modernity—(Same as Overseas Studies 143U.)
4 units, Spr (Neckenig)

FLORENCE

111Y. From Giotto to Michelangelo: Introduction to the Renaissance in Florence
4 units, Win (Verdon)

112Y. The Duomo and Palazzo della Signora: Symbols of a Civilization
4 units, Aut (Verdon)

OXFORD

176Y. Architecture in Britain and Europe, 1800 to the 1900s
5 units, Aut (Tyack)

221Y. Art and Society in 19th- and 20th-Century Britain
5 units, Win (Tyack)

PARIS

132Y. The Memory of a Nation: The Birth of Museums in France
4 units, Aut (Georgel)

120X. French Painting from 1780-1900
4 units, Win (Halevi)

ASIAN LANGUAGES

Emeriti: (Professors) Albert E. Dien, David S. Nivison, Makoto Ueda
Chair: Haun Saussy
Professor: John C. Y. Wang
Associate Professors: Thomas W. Hare (Asian Languages, Comparative Literature), William A. Lyell, Susan K. Matisoff (on leave), Haun Saussy (Asian Languages, Comparative Literature), Chaofen Sun
Assistant Professors: Wan Liu, Yoshiko Matsumoto, James Reichert, Deborah Tze-lan Sang
Courtesy Associate Professor: Melinda Takeuchi
Senior Lecturers: Kazuko M. Busbin, Kimie N. Nebrig
Lecturers: Fumiko Arao, Shelley Chan, Sungdai Cho, Marina Chung, Keiko Fukuma, Grace Li, Hisayo O. Lipton, Momoyo K. Lowdermilk, Aki Morì, Yu-hua Rozelle, Xiao Yu (on leave), Hong Zeng
Acting Instructor: Howard Choy

Chinese-Japanese Language and Area Studies Faculty:
Professors: Masahiko Aoki (Economics), Peter Duus (History), Harold L. Kahn (History), Lawrence Lau (Economics), John W. Lewis (Political Science), Jeffrey Mass (History), Daniel I. Okimoto (Political Science), Jean Oi (Political Science), Thomas P. Rohlen (Education), Andrew Walder (Sociology), John C. Y. Wang (Asian Languages), Arthur P. Wolf (Anthropological Sciences), Lee H. Yearley (Religious Studies)
Associate Professors: Carl W. Bielefeldt (Religious Studies), Bernard Faure (Religious Studies), Thomas W. Hare (Asian Languages, Comparative Literature), William A. Lyell (Asian Languages), Susan K. Matisoff (Asian Languages), David Palumbo-Liu (Comparative Literature), Haun Saussy (Asian Languages, Comparative Literature), Peter Sells (Linguistics), Chaofen Sun (Asian Languages) Melinda Takeuchi (Art and Art History), Richard Vinograd (Art and Art History)
Assistant Professors: Wan Liu (Asian Languages), Yoshiko Matsumoto (Asian Languages), Ellen Neskar (History), James Reichert (Asian Languages)
Senior Lecturers (Asian Languages): Kazuko M. Busbin, Kimie Nishimura Nebrig
Lecturers: Charles Egan, Hill Gates (Anthropological Sciences)
Acting Assistant Professors: Atsuko Ueda, John Wallace

The Department of Asian Languages offers courses in the languages, linguistics, cultures, and literatures of China, Japan, and Korea. The department accepts candidates for the degrees of Bachelor of Arts, Master of Arts, and Doctor of Philosophy in Chinese or Japanese. It also offers an undergraduate and a Ph.D. minor in Chinese or Japanese language and literature.

For information concerning other opportunities for study in the Asian field, see listings under the following departments and programs: Anthropological Sciences, Art and Art History, Business, Comparative Literature, East Asian Studies, Economics, History, Interdisciplinary Studies in Humanities, Law, Linguistics, Philosophy, Political Science, Religious Studies, and Sociology. Students interested in Asian languages not listed should contact the Special Language Program, Language Center.
UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The A.B. degree is granted both in Chinese and in Japanese. The following courses and their prerequisites must be completed with a grade point average (GPA) of 'C' or better:

1. Concentrations in Chinese: Asian Languages 91 and 92, Chinese 207, Asian Languages 131, 132, 133, and four other content courses dealing with China primarily at the 100 level, as approved by the undergraduate adviser. Asian Languages 133 is the required Writing in the Major (WIM) course.

2. Concentrations in Japanese: Asian Languages 91 and 92, Japanese 103, and seven other content courses dealing primarily with Japan at the 100 level, as approved by the undergraduate adviser. At least two of these courses must be selected from the sequence 135, 136, 137, 138. Asian Languages 138 is the required WIM course. Asian Languages 51/151 and Japanese 30/130 are not counted toward the major.

These requirements are in addition to the University's basic requirement for the bachelor's degree. Letter grades are mandatory for all required courses.

MINORS

The undergraduate minor in Asian Languages has been designed to give students majoring in other departments an opportunity to gain a substantial introduction to Chinese (Mandarin) or Japanese language, as well as an introduction to the culture and civilization of East Asia. The minor consists of:

1. Completion of one year of language study at the second-year level (that is, Chinese 21, 22, 23 or Japanese 21, 22, 23) for students with no previous training in Chinese or Japanese. Students who already have first-year competence in Chinese or Japanese must complete the third-year course (Chinese 101, 102, 103 or Japanese 101, 102, 103) before undertaking any training in the Department of Asian Languages. Students who already have a competence at the second-year level may fulfill the language component of the minor by taking three courses in the department using materials in either Chinese or Japanese. These courses may be language courses such as the third-year sequence mentioned above, or they may be advanced literature and linguistics courses, depending on the capabilities and interests of the student in question.

2. The core courses, Asian Languages 91 (Traditional East Asian Civilization: China), and Asian Languages 92 (Traditional East Asian Civilization: Japan).

3. Two courses selected from among the department's other offerings in literature, linguistics, and civilization. All courses for the minor must be completed with an GPA of 'C' or better.

HONORS PROGRAM

Majors with an overall GPA of 3.5 may apply for the honors program by submitting a senior thesis proposal to the honors committee during Winter or Spring Quarter of the junior year. The proposal must include a thesis outline, a list of all relevant courses the student has taken or plans to take, a skeleton reading list including a work or works in Chinese or Japanese, and the name of a faculty member who has agreed to act as honors supervisor.

If the proposal is approved, research and writing begins in the Spring Quarter of the junior year, and for the first two quarters takes the form of directed reading with the chosen supervisor; the finished essay (normally about 15,000 words) is submitted to the committee no later than the end of the Winter Quarter in the senior year. From 10 to 15 units of credit are granted for the finished thesis.

COTERMINAL PROGRAMS

With department approval, students may be able to combine programs for the A.B. and A.M. degrees in Chinese or Japanese. For details, see the "Graduate Degrees" section of this bulletin.

EAST ASIAN STUDIES THEME HOUSE

EAST House, located at Governor's Corner on campus, is an undergraduate residence that houses 60 students and offers them a wide variety of opportunities to expand their knowledge, understanding, and appreciation of East Asia. Assignment is made through the regular undergraduate housing draw.

SUMMER PROGRAM

A nine-week summer program of intensive instruction is offered, in three different levels, in both Chinese and Japanese. The intensive course provide the equivalent in instruction to regular academic-year courses. (See courses Chinese 5, 25, 105 and Japanese 5, 25, 105, and 114 as described below.) For detailed information about these and other aspects of the summer program, inquire at the Department of Asian Languages.

GRADUATE PROGRAMS

Admission—All students contemplating application for admission to graduate study must have a creditable undergraduate record. The applicant need not have majored in Chinese or Japanese as an undergraduate, but must have had the equivalent of at least three years of training in the language in which he or she intends to specialize, and must also demonstrate a command of English adequate for the pursuit of graduate study. Applicants should not wish merely to acquire or improve language skills, but to pursue study in one of the following fields: Chinese history (pre-modern), Chinese linguistics, Chinese literature, Chinese philosophy, Japanese cultural history, Japanese literature, and Japanese linguistics.

MAJOR OF ARTS

The A.M. is granted in Chinese and in Japanese. The normal length of study for the degree is two years.

Applicants who wish to obtain only the A.M. and who do not intend to proceed to the Ph.D. are considered only if no financial aid is requested.

Students who wish to spend the first year of graduate study at the Taipei or Yokohama centers must obtain department approval first.

Candidates for the degree must be in residence at Stanford in California during the final quarter of registration.

A thesis or an annotated translation of a text of suitable literary or historical worth is required for the A.M. degree. Under special circumstances, a paper approved by the graduate adviser may be substituted.

The University's basic requirements for the master's degree, including a 36-unit minimum requirement, are given in the "Graduate Degrees" section of this bulletin. Department requirements are set forth below.

CHINESE

The candidate must:

1. Meet the department's requirements for the A.B. in Chinese or their equivalent.

2. Complete the following course work: 103, 201, 221, 222, 223, 299; four courses in Chinese numbered between 230 and 292; and two upper-division or graduate-level courses in fields such as Chinese anthropology, art, history, philosophy, and politics as approved by the graduate adviser in consultation with the student's individual adviser. Students may be exempted from 101, 102, 103, and 221, 222, 223 by passing examinations to demonstrate that they have attained equivalent language competence. Letter grades are mandatory for all required courses and their prerequisites.

JAPANESE

The candidate must:

1. Meet the department's requirements for the A.B. in Japanese or their equivalent.

2. Complete the following course work: 201, 211-213, 246, 247, 248, 299; four courses in Japanese numbered between 256 and 298; one course in literary theory or methodology at the 100 level or higher; and two courses in such fields as Japanese anthropology, art, history,
politics, and religion, as approved by the graduate adviser in consultation with the student’s individual adviser. Students may be exempted from 211, 212, 213, and 246 by passing examinations to demonstrate that they have attained equivalent language competence. Letter grades are mandatory for all required courses and their prerequisites.

DOCTOR OF PHILOSOPHY

The Ph.D. degree is granted in Chinese and Japanese. Candidates for the degree are expected to acquire a thorough familiarity with Chinese or Japanese literature, an adequate command of both languages, and a comprehensive knowledge of East Asian history, social institutions, and thought. The University’s basic requirements for the Ph.D. are given in the “Graduate Degrees” section of this bulletin. Department requirements are set forth below.

ADMISSION TO CANDIDACY

Students admitted with an A.B. only are evaluated by the graduate faculty during the Autumn Quarter of their second year at Stanford. The evaluation is based on written work and at least a portion of the A.M. thesis or translation. If the faculty has serious doubts about a student’s ability to work for the Ph.D., they will convey this to the student. During the subsequent Spring Quarter, the faculty formally decides whether a student should be admitted to candidacy for the Ph.D. or be terminated. In the case of a student who already has an A.M. in Chinese or Japanese when admitted to the department, the evaluation takes place in the Spring Quarter of the student’s first year. If a student goes to the Taipei or Yokohama centers during his or her first two years, the department will consider an extension for admission to candidacy. The timing of the evaluation of a student admitted with an A.M. in East Asian Studies is decided on an individual basis.

Admission to candidacy does not mean that the student has fulfilled all requirements for the degree except the dissertation, but that the department faculty consider the student qualified to pursue a program of study leading to the Ph.D. and that, subject to continued satisfactory progress, the student’s status in this department is secure.

REQUIREMENTS

A candidate must fulfill the following requirements:

1. Demonstrate a reading knowledge of French, German, or another European language approved by the graduate adviser.
2. Complete two seminars at the 300 level. These seminars must be in different subjects.
3. Pass an examination in the supporting Asian language. A candidate whose field is Chinese is examined on his or her ability to read modern Japanese works relevant to his or her field of study. This requirement may be met by taking Japanese 101, 102, and 103 or 104 for letter grades. A candidate whose field is Japanese is examined on the ability to read classical Chinese works relevant to his or her field of study. This requirement may be met either by taking Chinese 205, 206, and 207 for letter grades.
4. Pass a set of four comprehensive written examinations, one of which tests the candidate’s methodological competence in a discipline. The remaining three fields are chosen, with the approval of the graduate adviser in consultation with the student’s individual adviser, from the following: anthropology, art, Chinese literature, history, Japanese literature, linguistics, philosophy, and religion.
5. Demonstrate pedagogical proficiency by serving as a teaching assistant for a minimum of one quarter, and taking Chinese, Japanese, or Korean 208 (Teaching Asian Languages).

University Oral Examination—General regulations governing the oral examination are found in the “Graduate Degrees” section of this bulletin. The candidate is examined on questions related to the dissertation, after acceptable parts of it have been completed in draft form.

Dissertation—The candidate must write a dissertation demonstrating ability to undertake original research based on primary materials in Chinese or Japanese.

Ph.D. MINOR

A student taking a minor in Asian Languages must complete at least 30 units of work within the department at the 200 and 300 level, chosen in consultation with a department adviser. The student must elect either Chinese or Japanese 201 unless the department is satisfied that work done elsewhere has provided similar training. The student must also pass a written examination in the Chinese or Japanese language.

STUDYING ABROAD

Students interested in a serious study of Japanese language, history, culture, and social organization are encouraged to apply to the Kyoto Center for Japanese Studies (KCJS), a September-to-April program managed by Stanford and including students from other American universities. Students with two years of Japanese may attend the full academic year, or Autumn or Spring semester only. In Spring Quarter, the Stanford Center for Technology and Innovation (SCTI), also in Kyoto, focuses on Japanese organizations and the political economy of research, development, and production of high technology and advanced industries, followed by a two-to-three month internship in an agency, firm, or laboratory in Japan. For students in a technical major, two quarters of Modern Japanese or Japanese Language, Culture, and Communication B (5 units), or five quarters of Japanese Language, Culture and Communication A (3 units) fulfill the SCTI language requirement; for students in a non-technical major, five quarters of Japanese Language, Culture, and Communication B (5 units) fulfill the SCTI language requirement. For information about other programs in Kyoto, students should contact the Overseas Studies office in Sweet Hall.

Students should take note of the programs of the Inter-University Board for Chinese Language Studies and the Inter-University Center for Japanese Studies located in Yokohama. Stanford is a member of these consortia programs. See “The Institute for International Studies” section in this bulletin.

Attention is also called to the exchange program established with the Department of Chinese at Peking University in Beijing. Those interested in the program should consult the chair of the department early in the academic year.

COURSES

(WSM) indicates that the course meets the Writing in the Major requirements.

Since unavoidable changes occasionally have to be made in course offerings after the Stanford Bulletin has gone to print, students are advised to consult the department each quarter.

GENERAL

These courses are open to all undergraduate and graduate students, are taught in English, and do not require a knowledge of an Asian language.

46. Introduction to Chinese Religions—(Enroll in Religious Studies 55.)
4 units, Win (Cedzich)
3 units (Staff) not given 1999-2000
71N. Stanford Introductory Seminar: Language and Gender in Japan—Myths and Reality—Preference to freshmen. The social position of women in Japan is believed to be reflected in a characteristically feminine form of the language. The past and present speech styles of women, linguistic ideology, class, generation differences, and identity in Japan. How belief and reality are refracted through mass media and fictional representations. Comparisons with male speech styles and with similar phenomena in other cultures. GER:3b,4c (DR:9+)
3 units, Spr (Matsumoto)

249
73/173. Chinese Language, Culture, and Society—Introduction to important functions of the language serve in Chinese culture and society. Topics: the origin of the language, developments of dialects, emergence of the standard, evolution of Chinese writing, language policies in Greater China, language and gender, formulaic expressions preferred in Chinese, etc. Required: one quarter of Chinese 1 or 1B, or equivalent. GER: 3a, 4a (DR: 2 or 7)
4 units, Win (Sun)

74. Women and Children in the May Fourth Literary Imagination—Students examine literary portrayals of women and children as social and cultural metaphors during the May Fourth Period of Chinese history (1919-30s), a period of iconoclastic intellectual ferment which included movements to adopt the use of vernacular Chinese in literature and the exploration of different forms of Western cultural and political models. Images of women and children are looked at as a response to the historical events of that period and a re-assessment of their role in Chinese society.
5 units, Spr (Abraham)

4 units, Win (Suttmeier)

81N. Stanford Introductory Seminar: Writing and Writing Systems—Preference to freshmen. The material nature of writing, primarily writing in languages which do not rely on exclusively phonetic symbols for expression, such as ancient Egyptian, Chinese, Japanese, etc. The representational capabilities, on the micro-level, of such writing in its interplay with other visual arts, its facility with visual puns, and its thematic discussions of major representative works available in English translation. GER: 3a, 4a (DR: 2 or 7)
4 units, Win (Egan)

85C. Aspects of Asian American Culture—(Enroll in Comparative Literature 85C.)
2 units, Aut (Palumbo-Liu, Staff)

86C. Asian Pacific Islander American Men: Contemporary Issues— (Enroll in Comparative Literature 86C.)
2 units, Win (Palumbo-Liu, Staff)

87C: Asian Pacific Islander Women: Contemporary Issues— (Enroll in Comparative Literature 87C.)
2 units, Spr (Palumbo-Liu, Staff)

91. Traditional East Asian Civilization: China—Introduction to Chinese culture in a historical context. GER: 3a, 4a (DR: 2 or 7)
5 units, Aut (Egan)

92. Traditional East Asian Civilization: Japan—Perspectives on Japan's traditional civilization, focusing on the literature, religion, history, music, and visual arts of Japan's medieval period (approximately 1200 to 1600 A.D.). The historical context from which the medieval period emerged, and some of the social and intellectual contributions it made to the development of modern Japan. The focus is on the society of samurai, priests, actors, and poets which created the rich culture of Japan's middle ages. GER: 3a, 4a (DR: 2 or 7)
5 units, Win (Hare)

95. The Japanese Language in Culture and Society—Introduction to the essentials of how the language functions in Japanese society and culture; salient characteristics are contrasted with English. Topics: politeness rules, conversational strategies, language and gender, formulaic expressions and factors that make certain linguistic forms preferred in Japanese. Recommended: one quarter of Japanese 1 or equivalent. GER: 3a (DR: 7)
4 units (Matsumoto) not given 1999-2000

114. Haiku—Japanese haiku from the 16th century to the present. Works of Basho, Buson, Issa, and other representative poets in English translation. Students exchange their readings of individual poems in class, learning how others have filled in the blanks in the text. Analysis of traditional Japanese aesthetics.
3 units (Staff) not given 1999-2000

4 units, Win (Shao)

131/231. Chinese Poetry in Translation—The Chinese poetic tradition from the first millennium B.C. to the 14th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. Topics on the history, language, and culture relevant to the literary works under study. GER: 3a, 4a (DR: 2 or 7)
4 units, Win (J. Wang)

4 units Spr (Lyell)

133A/233A. Introduction to Modern Chinese Literature—Developments in literature and literary theory in 20th-century China. The May Fourth Period, Mandarin Ducks, and Butterfly urban popular fiction, the socialist realism era beginning in the 1930s and extending through the Yan'an days in the 1940s, the Cultural Revolution, and the rapidly changing literary forms of post-Mao society. Readings in English. GER: 3a, 4a (DR: 2 or 7)
4 units, Spr (Sang)

135. Classic Japanese Drama—The development of drama from early religious ritual forms through noh, puppet theater, and kabuki. Plays are analyzed as dramatic literature and in terms of performance. Texts are in English translation. Video tapes supplement lectures. GER: 3a (DR: 7)
4 units (Hare) not given 1999-2000

137/237. Classical Japanese Fiction in Translation—Introduction to major works of prose narrative from premodern Japan (7th through mid-19th centuries) read in English translation, and emphasizing the historical, intellectual, and cultural context in which they were written. Work varies each year; may be repeated for credit with instructor's consent.
4 units, Aut (Wallace)

138/238. Modern Japanese Literature in Translation—Required for Japanese majors. Introduction to Japanese literature since 1868. Authors: Futabatei Shimei, Higuchi Ichiyo, Natsume Soseki, Yoshimoto Banana, etc. GER: 3a, 4a (DR: 2 or 7) (WIM)
4 units, Win (A. Ueda)

141. Chinese Mythology and Lyrical Imagination—Introduction to Chinese mythology. The mythic narratives about Chinese ancestry, legendary dynasties, natural deities, and divine heroes in Chinese culture, and the dissemination of myths in poetry that reenact earlier
mythopoetic impulses and/or invoke primal fears and desires in different historical contexts. Approach is eclectic, incorporating Chinese and Western perspectives and drawing on theories of sinologists and general mythologists. GER:3a (DR:7)
4 units (Liu) not given 1999-2000

168. Introduction to Asian American Culture—(Enroll in Comparative Literature 168.)
5 units, Win (Pal gum-Bo Liu)

173.—For juniors and seniors. See 73.
4 units, Win (Sun)

181. Japanese Women Writers—Works in translation by women novelists and poets from the Meiji period to the present. Focus is on women’s response to their marginal role in Japanese society and the literary establishment.
4 units (Staff) not given 1999-2000

187/287. Romance, Desire, and Sexuality in Modern Japanese Literature—Constructions of romance, desire, and sexuality (sexual connoisseurship, love suicide, nan shoku, etc.) in Edo Japan and how these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiy, So seki, Tanizaki, and Mishima. GER:3a,4c (DR:7)
4 units (Reichert) not given 1999-2000

200. Directed Reading—By instructor’s assignment. For both Chinese and Japanese literatures.
units by arrangement, Aut, Win, Spr (Staff)

273. The Postmodern Pacific—(Enroll in Comparative Literature 273.)
5 units (Pal gum-Bo Liu) not given 1999-2000

372. Literary Theory and the Necessary Fiction of Asia—Examination of effective multiculturality (fantasy, misunderstanding, exaggeration, projection, and mirror effects) in the theories about literature and culture. The enabling role of a hypothetical “other” culture, integrating the lessons into our practice as students of Asia. Readings from Hegel, Nietzsche, Segalen, Pound, Husserl, Corbin, Heidegger, Foucault, Derrida, de Man, Geertz, Said, Kristeva, Clifford, etc.
5 units (Saussy) not given 1999-2000

CHINESE
FIRST- AND SECOND-YEAR LANGUAGE

Note—Students registering for the first time in a first- or second-year course must take a placement test if they have had any training in Chinese before entering Stanford. All entering students must take Part I (written) of the placement test on-line during the summer, followed by Part II (oral), to be administered on campus 9/26/99. Consult the Stanford Language Center for further information or see the web site.

1, 2, 3. First-Year Modern Chinese—Conversation, grammar, reading, elementary composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements.
1. 5 units, Aut (Chung, Zeng, Choy)
2. 5 units, Win (Chung, Zeng, Choy)
3. 5 units, Spr (Chung, Zeng, Choy)

1B, 2B, 3B. First-Year Modern Chinese for Bilingual Students—For students with elementary comprehension and speaking skills. Provides a basic knowledge of modern Chinese literature and culture, improving conversation and grammar.
1B. 3 units, Aut (Rozelle, Staff)
2B. 3 units, Win (Rozelle, Staff)
3B. 3 units, Spr (Rozelle, Staff)

4. Intensive First-Year Modern Chinese—Equivalent to 1, 2, and 3 combined. Five weeks at Stanford and four weeks at Peking University.
8 units, Sum (Staff)

6, 7, 8. Beginning Conversational Chinese—Three-quarter sequence equips students with basic language skills in Mandarin to function abroad.
2 units, Aut, Win, Spr (Rozelle, Staff)

10, 11, 12. Beginning Southern Min (Taiwanese) Conversation
2 units, Aut, Win, Spr (Lin)

15, 16, 17. Beginning Cantonese Conversation—Three-quarter sequence designed to equip students with the basic language skills needed in everyday life situations.
2 units, Aut, Win, Spr (Choy)

21, 22, 23. Second-Year Modern Chinese—Further study in grammar, reading, conversation, composition. Prerequisite: 3 or equivalent.
21. 3 units, Aut (Chan, Staff)
22. 3 units, Win (Chan, Staff)
23. 3 units, Spr (Chan, Staff)

21B, 22B, 23B. Second-Year Modern Chinese for Bilingual Students—For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Equivalent to 21, 22, 23.

21B. 3 units, Aut (Staff)
22B. 3 units, Win (Staff)
23B. 3 units, Spr (Staff)

25. Intensive Second-Year Modern Chinese—Equivalent to 21, 22, 23 combined. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 3 or equivalent.
8 units, Sum (Staff)

27, 28, 29. Intermediate Chinese Conversation—Prerequisite: 3 or consent of instructor.
27. 2 units, Aut (Chan)
28. 2 units, Win (Chan)
29. 2 units, Spr (Chan)

51. Chinese Calligraphy—Practice in writing Chinese characters with a brush and learning different scripts. Limited enrollment. May be repeated for credit. Prerequisite: 3 or equivalent. (AU)
1-2 units, Win, Spr (Chuang)

99. Language Specials—With consent of department only. See instructor for section number.
1-5 units, Aut, Win, Spr (Staff)

ADVANCED

101, 102, 103. Third-Year Modern Chinese—Designed to help students solidify and further their communicative ability in Chinese through contact with various written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; on-line Chinese software and e-mail network to facilitate study. Prerequisite: 23 or equivalent.
5 units, Aut, Win, Spr (Li)

101B, 102B, 103B. Third-Year Modern Chinese for Bilingual Students—For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Equivalent of 101, 102, 103.
3 units, Aut, Win, Spr (Li)
105. Intensive Modern Chinese—Equivalent to 101, 102, 103 combined. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent.
121. 2 units, Sun (Staff)

121.2,3. Advanced Chinese Conversation—Prerequisite: 23 or equivalent.
121. 2 units, Aut (Chung)
122. 2 units, Win (Chung)
123. 2 units, Spr (Chung)

125.126.127. Beginning Classical Chinese—For students who need to develop a reading knowledge of Classical Chinese and have completed at least two years of Modern Chinese, or its equivalent. Students who have no background in Classical Chinese and are taking 127 to satisfy Chinese major requirements must begin with 125. Introduces basic grammar and commonly used vocabulary of classical Chinese. Prerequisite: 23 or equivalent.
125. 5 units, Aut (Sun)
126. 5 units, Win (Sun)
127. 5 units, Spr (Sun)

131.132.133. Business Chinese—Chinese for doing business (specialized vocabulary on commercial, economic, and business-related subjects). Materials include a text of formal conversations of typical business transactions, newspaper and journal articles, and TV news broadcasts on foreign trade and economic development in the world. Students achieve a familiarization with the technical language and business etiquette, and report in spoken and written Chinese based on their own research regarding recent economic developments, using sources in Chinese. Prerequisite: 23 or equivalent.
131. 3-4 units, Aut (Li)
132. 3-4 units, Win (Li)
133. 3-4 units, Spr (Li)

191. The Structure of Modern Chinese—Introduction to the grammatical structure of Chinese, focusing on syntax and semantics. Designed to help students, who have had one year or more of modern Chinese, develop a sophisticated knowledge of Chinese grammar. Prerequisite: 3 or equivalent, or consent of instructor.
4 units (Sun) not given 1999-2000

192. The History of Chinese—Historical changes in the Chinese language in the last 2,000 years, emphasizing syntactic and semantic changes, and grammaticalization. Students use a computer corpus to do research on the history of Chinese. Prerequisite: 206 or consent of instructor.
4 units (Sun) not given 1999-2000

199. Individual Reading in Chinese—Asian Languages majors only. Prerequisite: 103 or consent of instructor.
4 units, Aut, Win, Spr (Staff)

GRADUATE

200. Directed Reading in Chinese—Prerequisite: 213 or 223, or consent of instructor.
units by arrangement, Aut, Win, Spr (Staff)

201. Proseminar—Introduction to the research tools and sources relevant to Chinese humanistic studies, taught as a workshop with participation by faculty from various departments. Prerequisite: knowledge of classical Chinese.
5 units, Aut (Saussy, Staff)

205.206.207.—For graduate students; see 125, 126, 127.
205. 5 units, Aut (Sun)
206. 5 units, Win (Sun)
207. 5 units, Spr (Sun)

208. Teaching Asian Languages—Lectures on teaching methods, class visitsations, and in-class teaching exercises prepare students for a career in teaching. May be repeated for credit. Pass/no credit only. Prerequisite: consent of mentor teacher.
2 units, Spr (Matsumoto)

211.212.213. Advanced Modern Chinese—Appropriate for non-majors and individuals with language experience overseas. Year-long sequence helps students become functional speakers, readers, and writers of modern Chinese through articles and essays from newspapers, magazines, and scholarly journals. Frequent opportunities for oral presentations reflect the students’ interests and form the basis of papers. Prerequisite: minimum three years of Chinese language training.
211. 5 units, Aut (Staff)
212. 5 units, Win (Staff)
213. 5 units, Spr (Staff)

214. Introduction to Modern Chinese Literature I—Introduction to modern and contemporary Chinese literature (short stories, novels, plays, and poetry) through annotated texts. Students discuss materials in Chinese during class. Prerequisite: three years of modern Chinese.
5 units (Lyell) not given 1999-2000

215. Introduction to Modern Chinese Literature II—Continuation of
214. Prerequisite: advanced Chinese.
5 units (Lyell) not given 1999-2000

221,222,223. Advanced Classical Chinese—Prerequisite: 207 or equivalent.
221. 3-4 units, Staff not given 1999-2000
222. Historical Narration
5 units, Spr (J. Wang)
223. Literary Essays—Prerequisite: basic classical Chinese.
5 units (Li) not given 1999-2000

241. The Short Story—Prerequisite: three of four years of Chinese.
5 units, Aut (Lyell)
242. Essay
5 units (Staff) not given 1999-2000
243. The Novel
5 units, Win (Lyell)

244. Workshop in Translation—Students practice translating modern and contemporary Chinese works of literature into good English. Books and articles on the theory and practice of translation are required. Students translate identical works and criticize and improve each other’s work. Tool books are introduced and discussed. Prerequisite: advanced Chinese.
5 units (Lyell) not given 1999-2000

251. 3-4 units, Aut (Li)
252. 3-4 units, Win (Li)
253. 3-4 units, Spr (Li)

261. Sources of Chinese Poetry—Selections from the Book of Songs (c. 1000-500 B.C.) and the Songs of Ch’u (c. 400 B.C.), the two earliest anthologies of Chinese poetry.
4 units (Saussy) not given 1999-2000

262. Early Chinese Prose and Verse Genres—Readings from the 6th-century anthology Wen xuan, encompassing examples of the shi lyric, the fu rhapsody, critical essays, letters, deliberations, memorials, eulogies.
etc. Focus is on the intrinsic interest of the texts and on the anthologists’ reasons for singling them out as model compositions. Readings in classical Chinese. Prerequisite: 207 or consent of instructor.

4 units (Saussy) not given 1999-2000

263. Lyric (shī) I—Selected readings in the early history of the lyric (shī), Han through Sui dynasties.
4 units (Liu) not given 1999-2000

264. Lyric (shī) II—In-depth examination of T’ang poetry, focusing on major figures and forms.
4 units (Liu) not given 1999-2000

266. Chinese Tz’u Poetry (Song Lyrics)—Highlights from the Northern and Southern Sung periods. Patterns of generic development are correlated to social changes in historical context. Prerequisite: classical Chinese.
4 units (Liu) not given 1999-2000

267. Methodologies in Approaching Modern and Contemporary Chinese Literature—Survey of the methodologies various scholars have employed in looking at, and writing about, modern and contemporary Chinese literature. Students are expected to write a reasoned summary of their own methodology.
5 units, Aut (Lyell)

271,272. Traditional Chinese Fiction—Selected readings in short stories and novels from early times to Ch’ing. Prerequisite: 127/207 or consent of instructor.
4 units (J. Wang) not given 1999-2000

272. Novels
4 units (J. Wang) not given 1999-2000

273. Chinese Drama—Selected readings in the dramatic works of the Yulan, Ming, and Ch’ing periods emphasizing literary, not theatrical qualities. Prerequisite: 207 or consent of instructor.
4 units, Win (J. Wang)

274. Apparitions of Women in Traditional Chinese Fiction—Selections from Lienu zhu, (a Han Dynasty exemplar book), Sai Yangdi yanyi, Nü caizi shu, and Hong lou meng.
4 units (Saussy) not given 1999-2000

282. Qing Intellectual History—The main trends of Qing thought at different stages, from the mid-17th to the late 19th centuries. The Manchu ruler’s political theories and classical Confucian literati learning. The variety and changes in Qing intellectual history.
4 units, Win (Shao)

286. Women Writers of Transnational China—Chinese women writers across national borders, focusing on contemporary novelists in Taiwan, Hong Kong, and the mainland. Their stylistic innovations and approaches to gender, culture, and national identities. The contours and boundaries of transnational China through the female imaginary. Writers: Wang Anyi, Lin Bai, Chen Ran, Zhu Tianxin, Li Ang, Chen Xue, Xi Xi, Anchee Min.
4 units, Spr (Sang)

289. Master’s Thesis or Translation—A total of 5 units taken in one or more quarters.
Aui, Win, Spr (Staff)

324. Seminar in Modern Chinese Literature—May be repeated for credit. Prerequisite: 243 or consent of instructor.
5 units (Lyell) not given 1999-2000

368. Dream of the Red Chamber: The Novel and its Readers—A study of the novel Hong lou meng (ca. 1750) by Cao Xueqin and Gao E, together with its major commentaries, and a study of the intrinsic field of Hong lou meng criticism, one of the major areas of cultural debate in modern China. Methods of Euro-American criticism are tested against this important work. Readings mainly in Chinese.
4 units (Saussy) not given 1999-2000

371. Seminar in Chinese Literary Criticism—Readings/discussion of Chinese critical texts vs. a relevant literary theories in the West. May be repeated for credit. Prerequisite: 127/207 or consent of instructor.
5 units (J. Wang) not given 1999-2000

373. Seminar on the Tso-chuan—In-depth reading and study of the Tso-chuan as history and literature. Prerequisite: 127/207 or consent of instructor.
5 units, Spr (J. Wang)

1-12 units, Aut, Win, Spr, Sum (Staff)

400. Advanced Language Training—Open only to students in the Inter-University Board for Chinese language programs in Beijing or Taipei. For more information, contact the consortium office at U.C. Berkeley (510) 642-3873.
1-15 units per quarter (Staff)

JAPANESE

FIRST- AND SECOND-YEAR LANGUAGE

Note—Students registering for the first time in a course must take a placement test if they have had any training in Japanese before entering Stanford. All entering students must take Part I (written) of the placement test on-line during the summer, followed by Part II (oral), to be administered on campus 9/26/99. Consult the Stanford Language Center for further information or see the web site.

FIRST-YEAR JAPANESE

1,2,3. First-Year Modern Japanese—Provides students with a solid foundation in grammar, conversation, reading, and basic composition (150 Kanji characters introduced).
1. 5 units, Aut (Busbin)
2. 5 units, Win (Busbin)
3. 5 units, Spr (Busbin)

5. Intensive First-Year Modern Japanese—Equivalent to 1, 2, and 3 combined.
12 units, Sum (Staff)

7A/107A, 8A/108A, 9A/109A. First-Year Japanese Language, Culture, and Communication A—Strongly recommended for those interested in studying in Japan in a program such as SCTI. Focus is on the skills necessary to communicate successfully in Japanese, offering a practical means of acquiring a working knowledge of current Japanese. On-line listening exercises, audiovisual materials, and Kanji tutorials enhance students’ competence. At the completion of the course, students
are able to talk, write, and read on topics such as personal history, experiences, familiar people, and places. Serves as the core course of the 5 units option of JLCC (7B/107B, 8B/108B, and 9B/109B). See http://www-leland.stanford.edu/class/japanese7/j7a.html.

7A/107A. 3 units, Aut (Okano)
8A/108A. 3 units, Win (Okano)
9A/109A. 3 units, Spr (Okano)

7B/107B, 8B/108B, 9B/109B. First-Year Japanese Language, Culture, and Communication B—Strongly recommended for those interested in studying in Japan in a program such as SCTI. Enhances the students' ability to use Japanese as a tool, building on language competence developed in 7A/107A, 8A/108A, 9A/109A. Two components focus on the cultural background necessary for successful communication, and on speaking and listening strategies for effective communication. See http://www-leland.stanford.edu/class/japanese7/j7b.html.

7B/107B. 5 units, Aut (Okano)
8B/108B. 5 units, Win (Okano)
9B/109B. 5 units, Spr (Okano)

SECOND-YEAR JAPANESE

17A/117A. 3 units, Aut (Kubo)
18A/118A. 3 units, Win (Kubo)
19A/119A. 3 units, Spr (Kubo)

17B/117B. 5 units, Aut (Kubo)
18B/118B. 5 units, Win (Kubo)
19B/119B. 5 units, Spr (Kubo)

21, 22, 23. Second-Year Modern Japanese—Continuation of Japanese 3 (or 5). Students develop conversation and expression of ideas, master more advanced grammatical patterns, use 600 kanji, write simple compositions, and have an enhanced understanding of Japanese culture. At the completion of the sequence, students can read original source material. Prerequisite: 3 or equivalent.

21. 5 units, Aut (Nebri, Aroa)
22. 5 units, Win (Aroa)
23. 3 units, Spr (Aroa)

25. Intensive Second-Year Modern Japanese—Equivalent to 21, 22, and 23 combined. Prerequisite: 3 or equivalent.

26 units, Sum (Staff)

27, 28, 29. Intermediate Japanese Conversation—Develops oral proficiency ("survival level") through the practice of simple sentence patterns, use of audiotapes, and oral presentations. Targeted for the practical use of Japanese. Prerequisite: 3 or consent of instructor.

27. 2 units, Aut (Gibeau)
28. 2 units, Win (Kikunaga)
29. 2 units, Spr (Kikunaga)

99. Language Specials—With consent of department only. See instructor for section number.

1-5 units, Aut, Win, Spr (Staff)

THIRD-YEAR ADVANCED JAPANESE

101, 102, 103. Third-Year Modern Japanese—Third-year Japanese students move beyond acquisition of fundamental grammatical forms reading and discussion of more complex material. Emphasis is on the accurate understanding of Japanese sentence structure in newspaper and journal articles; and readings from other genres (fiction, poetry, and essays). Polite language (keigo) skills and additional written and spoken patterns are mastered. Videos of everyday Japanese spoken at normal speed develop listening skills. Sequence course. Prerequisite: 23 or equivalent.

101. 5 units, Aut (Aroa)
102. 5 units, Win (Aroa)
103. 5 units, Spr (Aroa)

105. Intensive Third-Year Modern Japanese—Equivalent to 101, 102, and 103 combined. Prerequisite: 23 or equivalent.

12 units, Sum (Staff)

111, 112, 113. Business Japanese—Conducted entirely in Japanese. Readings/discussions focus on business-related topics: cultural attitudes and approaches, work ethic, the stock market, import-export trade. Introduction to business letters, job interviews, and resume writing. May be repeated for credit. Prerequisite: 23 or 25 or consent of instructor.

111. 3 units, Aut (Fukuma)
112. 3 units, Win (Fukuma)
113. 3 units, Spr (Fukuma)

114. Japanese for Business—Eight-week summer course designed to improve Japanese language skills as used in business circles in Japan. Focuses on cultural attitudes and approaches, the stock market, international trade, business letters, usage of honorific forms and expressions, telephone etiquette, etc. Entirely in Japanese. Prerequisite: 23 or equivalent.

3 units, Sum (Staff)

121, 122, 123. Advanced Japanese Conversation—Creates "paragraph persons" with three focal points: fine tuning grammatical points, practice explaining things in Japanese, more fluency in speech. Use of audio/visual tapes, oral presentations, and discussions. Prerequisite: 23, 29, or consent of instructor.

121. 2 units, Aut (Kubo)
122. 2 units, Win (Kubo)
123. 2 units, Spr (Kubo)

127A, 128A, 129A. Third-Year Japanese Language, Culture, and Communication A

3 units, not given 1999-2000

127. 5 units, Aut (Okano)
128. 5 units, Win (Okano)
129. 5 units, Spr (Okano)

177/277. The Structure of Japanese—Linguistic analysis of the major grammatical structures of Japanese, focusing on their salient characteristics and functions. Prerequisites: two years of Japanese. Recommended: previous course in linguistics.

4 units (Matsumoto) not given 1999-2000

199. Individual Reading in Japanese—Asian Languages majors only. Prerequisite: 103 and consent of instructor.

4 units, Aut, Win, Spr (Staff)
200. Directed Reading in Japanese—Prerequisite: 213 or equivalent.
units by arrangement, Aut, Win, Spr (Staff)

201. Proseminar—Bibliography and research methods in Japanese studies. Prerequisite: 103 or equivalent.
5 units, Win (Wallace)

208. Teaching Asian Languages—Lectures on teaching methods, class visitations, and in-class teaching exercises to prepare students for a career in teaching. May be repeated for credit. Prerequisite: consent of mentor teacher.
2 units, Win (Matsumoto)

211, 212, 213. Advanced Modern Japanese—Increase the ability to understand the structure of Japanese, become familiar with writings in different genres and styles, utilize such knowledge in writing, and discuss and express verbally questions and opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 103 or equivalent.
211. 3-5 units, Aut (Matsumoto)
212. 3-5 units, Win (Kubo)
213. 3-5 units, Spr (Kubo)

246. Introduction to Classical Japanese—The basic principles of the classical literary language, concentrating on grammar and vocabulary. Prerequisite: 103 or equivalent.
5 units, Aut (Wallace)

247, 248. Readings in Classical Japanese—Readings of texts in classical Japanese from Nara through Tokugawa periods. Literary analysis, rhetoric, and poetics (Japanese and Western). Offered alternate years and can be taken independently. Prerequisite: 246.
247. 5 units, Win (Wallace)
248. 5 units, Spr (A. Ueda)

258. Japanese Buddhist Texts—(Enroll in Religious Studies 258.)
5 units, Spr (Bielefeldt)

4 units (Hare) not given 1999-2000

281. Master's Thesis or Translation—A total of 5 units, taken in one or more quarters.
Aut, Win, Spr (Staff)

330. Seminar in Heian Fiction—Advanced work in Heian fiction, concentrating on Genji monogatari. Substantial reading in the original text, discussions of narrative voice, literary structure, the interaction of poetry and prose, and critical reception. Students complete a major paper. Prerequisite: 247 or 248.
5 units (Hare) not given 1999-2000

333. Seminar in Japanese Classical Drama—Advanced work in traditional dramatic forms, emphasizing the relation between text and performance in Noh, Joruri, and other performance narratives. Paper. Prerequisite: 247 or 248 or consent of instructor.
5 units, Win (Hare)

336. Seminar: Writing in Early Japan—Advanced work in the textualities of the 6th through mid-8th century Japan. Focus is on Man'yoshu, with attention to other early texts of literary, historical, and/or religious interest. Prerequisites: 246, and 247 or 248.
5 units (Hare) not given 1999-2000

396. Seminar in Modern Japanese Literature—May be repeated for credit. Prerequisite: 213.
5 units, Aut (A. Ueda)

1-12 units, Aut, Win, Spr, Sum (Staff)

400. Advanced Language Training—Open only to students at the Yokohama Center. For more information, see the program description under the “Inter-University Center for Japanese Studies in Yokohama” section in this bulletin.
1-15 units per quarter (Staff)

KOREAN

1, 2, 3. First-Year Modern Korean—Elementary spoken and written Korean, equipping students with basic sentence patterns using basic vocabulary. Speaking, reading, writing, and listening comprehension with spoken language emphasized. Students develop the ability to say greetings, tell time, carry on limited conversation in classrooms, stores, and ask directions.
5 units, Aut, Win, Spr (Cho)

21, 22, 23. Second-Year Modern Korean—Intermediate spoken and written Korean, providing students with more complex sentences in advanced grammatical patterns, building on the grammatical structures taught and learned during first-year Korean. Students are expected to be competent in conversing on topics in daily life situations. Emphasis is on speaking, reading, writing, and listening comprehension. Students communicate at an intermediate level of topics in everyday life, read simple texts, and have a good knowledge of Korean culture.
5 units, Aut, Win, Spr (Cho)

101, 102, 103. Third-Year Modern Korean—Advanced spoken and written Korean. Develops communicative competence in reading, writing, speaking, and listening skills. Students build their vocabulary, heighten their reading ability, and strengthen aural/oral skills. Through weekly writing assignments, students learn about syntax, pragmatic ways of expression, and logical ways of thinking in Korean. Short story telling, free-group discussion, and acquaintance with Korean drama, movie, news, newspapers, and songs.
1-3 units, Aut, Win, Spr (Cho)

171/271. The Structure of Korean—Introduction to modern Korean linguistics, focusing on history, phonology and morphology, syntax and
astrophysics: 100, Introduction to Observational and Laboratory Astronomy. The following courses are suitable for undergraduates oriented course of study should contact the chair of the Astronomy Program Committee. The following courses are suitable for advanced undergraduates, subject to prior approval by the course instructor.

**208. Teaching Asian Languages**—Lectures on teaching methods, class visitations, and in-class teaching exercises. Prepares students for a career in teaching. May be repeated for credit. Prerequisite: consent of instructor.
2 units, Win (Cho)

**ASTRONOMY COURSE PROGRAM**

*Emeriti: (Professors)* Ronald N. Bracewell, Von R. Eshleman, John R. Spreiter, Peter A. Sturrock

*Committee in Charge: (Director)* Vahe Petrosian; Roger W. Romani, Robert V. Wagoner, Arthur B. C. Walker, Jr., Jeffrey Willick

*Professors:* Blas Cabrera (Physics), Peter Michelson (Physics), Vahe Petrosian (Physics, Applied Physics), G. Leonard Tyler (Electrical Engineering), Robert V. Wagoner (Physics), Arthur B. C. Walker, Jr. (Physics, Applied Physics)

*Associate Professor:* Roger W. Romani (Physics)

*Assistant Professors:* Sarah Church (Physics), Jeffrey Willick (Physics)

*Professor (Research):* Philip H. Scherrer

Although Stanford University does not have a degree program in astronomy or astrophysics, teaching and research in various branches of these disciplines is an ongoing activity in the departments of Applied Physics, Electrical Engineering, and Physics. For the convenience of students interested in the general areas of astronomy, astrophysics, and cosmology, a course program for undergraduate and graduate study is listed below.

The program is especially committed to providing introductory courses for the student who wishes to be informed about the fields of astronomy without the need for prerequisites beyond high school algebra and physics. Astronomy courses numbered below 100 are designed to serve this group of students.

Astronomy courses numbered 100-199 serve the student interested in an initial scientific study of astronomy.

The courses numbered 200 and above are for graduate students and advanced undergraduates, subject to prior approval by the course instructor.

**UNDERGRADUATE PROGRAMS**

The University does not offer a separate undergraduate major in astronomy. Students who intend to pursue graduate study in astronomy or space science are encouraged to major in physics, following the advanced sequence if possible, or in electrical engineering if the student has a strongly developed interest in radioscience. The course descriptions for these basic studies are listed under the appropriate department sections of this bulletin. Students desiring guidance in developing an astronomy-oriented course of study should contact the chair of the Astronomy Program Committee. The following courses are suitable for undergraduates and are recommended to students considering advanced study in astronomy or astrophysics: 100, Introduction to Observational and Laboratory Astronomy; 106, Planetary Exploration; 160, Introduction to Stellar and Galactic Astrophysics; 161, Extragalactic Astrophysics and Cosmology. Students planning study in astronomy beyond the B.S. are urged to take 260 and 262, Introduction to Astrophysics and to Gravitation, and consider an undergraduate thesis (Astronomy 169) or honors thesis in astrophysics-related area. The above-mentioned courses are required in physics majors who choose the curriculum with concentration in astrophysics (see the "Physics" section of this bulletin). The student observatory, located in the hills to the west of the campus and equipped with a 24-inch and other small reflecting telescopes, is used for instruction on the observation-oriented courses.

**MINORS**

The minor program in Astronomy is described in the "Physics" section of this bulletin. A non-technical minor, intended for students whose major does not require the Physics 40 series, requires 9 units of Physics courses (21, 23, 25) and 10 units of Astronomy courses (50 or 100, 34 units; 15, 16, 18N, 27, and 162, 6-7 units). The technical minor for other students consists of Physics courses 27, 70, 100, 160, 161, and 162.

To be accepted to the minor program, students need to obtain an advisor selected from the faculty in the Astronomy Course Program. The minor declaration deadline is three quarters before graduation (that is, beginning Autumn Quarter if the student is graduating at the end of Spring Quarter). All courses for the minor must be taken at Stanford University, and a letter grade of "C" or better must be received for all units applied toward the minor.

**GRADUATE PROGRAMS**

Graduate programs in astronomy and astrophysics, and related topics, are carried out in the departments of Applied Physics, Electrical Engineering, and Physics. Students should consult the course listings, degree requirements, and research programs of these departments for more detailed information. For graduate research opportunities, see the "Center for Space Science and Astrophysics" section of this bulletin.

Stanford is a member of a consortium building the Hobby Eberly telescope, a 10-meter-class telescope to be located at McDonald Observatory in Texas. Construction of the telescope is nearly completed. Opportunities to do research projects using this telescope were available for graduate students starting in late 1998.

Students planning to conduct research in astronomy and astrophysics are required to take Physics 360 (Physics of Astrophysics) and at least one of the following: 361 (Stellar and Galactic Physics), 362 (Extragalactic Astrophysics and Cosmology) or Applied Physics 363 (Solar Physics). Students lacking background in astrophysics, gravitation, and plasma physics are recommended to take Physics 260 and 262, Introduction to Astrophysics and to Gravitation, and Applied Physics 312 on Plasmas and Plasma Physics. Students with special interests in theories of gravitation are recommended to take Physics 364, Advanced Gravitation.

Students interested in research programs in space physics involving spacecraft studies of the planets, their satellites, and their near-space environments should see the "Center for Space Science and Astrophysics" section of this bulletin.

**COURSES**

**ELEMENTARY LECTURES**

The following courses provide a descriptive knowledge of astronomical objects and astrophysics of the universe. 15A and B are for students not majoring in the sciences and are taught in different quarters by different instructors, but are related in topic. 27 is similar to 15, but at a more quantitative level. Students cannot receive credit for more than one of these courses. 18N is a freshman seminar and 81Q and 82Q are sophomore discussions.

**PHYSICS**

15. The Nature of the Universe
3 units, Aut (Wagoner)

16. Cosmic Horizons
3 units, Spr (Romani)
18N. Stanford Introductory Seminar: Revolutions in Concepts of the Cosmos
4 units, Spr (Walker)

27. Evolution of the Cosmos
3 units, Win (Wagoner)

31Q. Stanford Introductory Dialogue: Lookback Time in Cosmology
1 unit, Win (Romani)

32Q. Stanford Introductory Dialogue: Expanding Cosmic Horizons
1 unit, Aut (Wagoner)

OBSERVATORY
The following courses are intended to familiarize students with observational methods and analysis of astronomical data. 100 involves more advanced observations and is intended for students with some background in physics.

PHYSICS

50. Astronomy Laboratory and Observational Astronomy
3-4 units, Aut, Sum (Walker)

100. Introduction to Observational and Laboratory Astronomy
4 units, Win (Walker)

ADVANCED UNDERGRADUATE
The following courses are for students with more advanced knowledge of basic physics and mathematics and form the core courses for a concentration in astrophysics for Physics majors.

ELECTRICAL ENGINEERING

106. Planetary Exploration
3 units, Spr (Fraser-Smith)

PHYSICS

160. Introduction to Stellar and Galactic Astrophysics
3 units, Aut (Petrosian)

161. Introduction to Extragalactic Astrophysics and Cosmology
3 units, Spr (Church)

169 A,B,C. Independent Study in Astrophysics and Honors Thesis
1-9 units, Aut, Win, Spr (Staff)

GRADUATE

PHYSICS

260. Introduction to Astrophysics
3 units

262. Introduction to Gravitation
3 units, Spr (Wagoner)

301. Astrophysics Laboratory
3 units, Sum (Walker)

360. Physics of Astrophysics
3 units

361. Stellar and Galactic Astrophysics
3 units

362. Extragalactic Astrophysics and Cosmology
3 units, Spr (Petrosian)

363. Solar and Solar-Terrestrial Physics
3 units, Win (Kosovichev) alternate years, not given 2000-01

364. Advanced Gravitation
3 units

463. Special Topics in Astrophysics
3 units

ATHLETICS, PHYSICAL EDUCATION, AND RECREATION

Emeriti: (Professor) Wesley K. Ruff; (Associate Professor) William P. Fehring; (Athletic Director) Joseph H. Ruetz; (Associate Director) Robert C. Young; (Assistant Director) Shirley Schoof

Athletic Director: Ted Leland
Senior Associate Athletic Director: Cheryl Levick
Associate Athletic Director, External Relations: Jon Denney
Associate Athletic Director, Finance and Operations: Debra Gore-Mann
Assistant Athletic Director, Community and Student Relations: Darrin Nelson
Assistant Athletic Director, Operations and Events: Ray Purpur
Assistant Athletic Director, Development: Karen Recht
Assistant Athletic Director, Finance: Chuck Spielman
Assistant Athletic Director, Marketing, Tickets: Bob Carruesco
Assistant Athletic Director, Football Operations/Athletic Services: Scott Schuhmann
Assistant Athletic Director, Media Relations: Gary Migdol
Assistant Athletic Director, Student Services: Susan Burk
Assistant Athletic Director, Intercollegiate Sports and Championships: Earl Koberlein

Director, Major Gifts: John R. Kates
Director of Physical Education, Club Sports, Intramurals and Recreation: to be announced

Senior Lecturers: Anne Gould, Elizabeth Weeks

Sports Directors: Aimee Baker (Crew, women), Steve Bourdow (Sailing), Frank Brennan (Tennis, women), Bobby Clark (Soccer, men), Heidi Connor (Lacrosse), Mark Cook (Gymnastics, women), Dante Dettamanti (Water Polo, men), Gail Emery (Synchronized Swimming), Wallace Goodwin (Golf, men), Richard Gould (Tennis, men), Sadao Hamada (Gymnastics, men), Chris Horpel (Wrestling), Cheryl Johnson (Field Hockey), Skip Kenney (Swimming, men), Wieslaw Kuja (Crew, men), Vin Lanana (Track and Field), Mark Marquez (Baseball), Mike Montgomery (Basketball, men), Ruben Nieves (Volleyball, men), Caroline O’Connor (Golf, women), Richard Quick (Swimming, women), John Rittman (Softball), Richard Schavone (Diving), Don Shaw (Volleyball, women), Steve Swanson (Soccer, women), John Tanner (Water Polo, women), Tara VanDerVeer (Basketball, women), Tyrone Willingham (Football)

Sport Assistant Coaches: Lonni Alameda (Softball), Beth Alford-Sullivan (Track and Field), Kyle Asano (Gymnastics, men), Kent Baer (Football), Nathalie Bartleson (Synchronized Swimming), Tom Bratianu (Football), Josh Cohen (Volleyball, women), Denise Corlett (Volleyball, women), Bill Diedrick (Football), Edrick Floreal (Track and Field), Lele Forood (Tennis, women), Kristine Franson (Crew, women), Ross Gerry (Swimming, women), John Kaitz (Crew, men), Ted Knapp (Swimming, men), John Kosty (Volleyball, men), Rene Lyst (Gymnastics, women), Karen Middleton (Basketball, women), Lisa Milgram (Fencing), Chuck Moller (Football), Mark O’Brien (Baseball), Susan Ortwein (Water Polo, women), Buzz Preston (Football), Mike Reilly (Track and Field), Eric Reveno (Basketball, men), Mose Rison (Football), Denny Schuler (Football), Dean Stotz (Baseball), Blaine Taylor (Basketball, men), Dave Tipton (Football), Amy Tucker (Basketball, women), Robert Weir (Track and Field), John Whittington (Tennis, men), Wayne Wright (Gymnastics, women), Philip Zacharias (Football)
From the founding of the University, Stanford’s leaders have believed physical activity is valuable for its own sake and complementary to the educational purpose of the University. The mission of the Department of Athletics, Physical Education, and Recreation is to offer the widest possible range of quality programs for athletic participation and physical fitness at all levels of skill and interest. Within the limitations of its resources, the department provides a broad range of instructional, recreational, and intramural competitive programs for all who wish to participate. The intrinsic value to the participant is the primary criterion by which the worth of the programs should be judged.

The goals of the instructional programs are to promote understanding of the value and role of physical activity as an important dimension of the human condition, to develop performance skills in sport, to develop the habit of participation, and to provide leadership opportunities in athletics, sports, and other physical activities. To this end, the program encompasses a diversity of learning and participating opportunities from informal recreation through organized intramural competition, basic instructional classes, and theoretical study to, and including, intercollegiate athletic competition.

PROGRAMS

No degrees are offered in Physical Education.

INTERCOLLEGIATE ATHLETICS

In keeping with American university tradition, Stanford offers a broad intercollegiate athletic program. The objectives are to provide the opportunity to compete at the highest possible level without jeopardizing the integrity of the individual or the institution; to adhere strictly to all University, association, and conference rules governing athletic participation; and to encourage effectively the achievement of academic goals by student athletes at the same rate as other University students. As a member of the National Collegiate Athletic Association (NCAA), Stanford fields both men’s and women’s varsity teams. Those for men are baseball, basketball, crew, cross country, fencing, football, golf, gymnastics, sailing, soccer, swimming and diving, tennis, track and field, volleyball, water polo, and wrestling. Those for women are basketball, crew, cross country, fencing, field hockey, golf, gymnastics, lacrosse, sailing, soccer, softball, swimming and diving, synchronized swimming, tennis, track and field, volleyball, and water polo.

Both men’s and women’s teams are affiliated with the Pacific Ten Conference, one of the premier athletic conferences in the nation. Additional or alternative intercollegiate athletic competition is available for all teams.

CLUB SPORTS

The Stanford Club Sports program is coeducational. It provides competition in sports not included in the intercollegiate varsity program and instruction in classes or activities not included in the Physical Education program. It also develops student leadership in organizing, administering, and funding activities. The club program is actively supervised by the Director of Club Sports, but the emphasis is on student interest and potential. Those for men are badminton, baseball, basketball, crew, cross country, fencing, hockey, football, golf, gymnastics, sailing, soccer, softball, swimming and diving, tennis, track and field, volleyball, and water polo.

Both men’s and women’s teams are affiliated with the Pacific Ten Conference, one of the premier athletic conferences in the nation. Additional or alternative intercollegiate athletic competition is available for all teams.

INTRAMURAL SPORTS (IM)

Students interested in intramural competition may receive information from the IM Office in Burnham Pavilion or through their campus residences. The program includes formal competition in league and tournament play for many different sports leading toward the All-University, Coed, and Women’s Intramural championships. Competing organizations, teams, and individuals are urged to contact the IM office on the day before the start of classes to obtain meeting dates and times. Each quarter’s printed materials and IM handbooks are available on or after the day before the start of classes. The intramural manager meetings are held the first Wednesday of the first week of classes each Autumn, Winter, and Spring Quarters.

RECREATION

The department provides facility use for faculty, staff, and students (and, for some activities, their immediate families) to participate in aquatics, conditioning, and sports for general recreation. Specific recreation hours for all the facilities are published throughout the year in both the Stanford Report, at the respective facilities, and on the department’s website, www.stanford.edu/dept/pe.

The golf course and driving range are available for faculty, staff, and student use on a fee basis; information is available from the Golf Pro Shop.

FACILITIES

Athletic facilities are located throughout the campus. On the west side of campus are the Golf Course, the Golf Driving Range, the Red Ban Stables, Roble Gym, the Sand Hill Intramural Fields, and the West Campus Tennis Courts. Centrally located is the Tresidder Fitness Center. On the east side of campus are the Arrillaga Family Sports Center, Burnham Pavilion, Cobb Track and Angell Field, the DeGuerre Complex, Encina Tennis Courts, the Ford Center for Sports and Recreation, the Maloney Fields, Maples Pavilion, the Stanford Stadium, Sunken Diamond, and Taube Tennis Stadium.

Off campus facilities include a sailing center and a rowing facility.

CURRICULUM AND SERVICES

The diverse instructional program strives to accommodate the sports interests of all undergraduate and graduate students. Only intercollegiate varsity men’s and women’s teams are limited to undergraduates. Homogeneous skill groupings and limited class sizes enable the beginning student or the advanced performer to achieve success within the limits of individual motivation and potential. Skill level in, and knowledge about, a specific activity as well as available space are the only limitations to enrollment. Physically disabled students are encouraged to contact Anne Gould for enrollment advice.

Academic Credit—Activity classes carry 1 unit of credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other University activity classes) may be applied toward undergraduate graduation requirements (see the "Undergraduate Degrees" section of this bulletin).

Auditing—No auditing is allowed in activity classes. Faculty and staff may take an activity class as space is available with instructor consent after student enrollment is completed.

Class Fees—Fees are charged for enrollment in all physical education classes and club sports.

Class fees are payable only by check or money order. Cash is not acceptable. Checks or money orders should be made payable to Stanford University. Fees are payable at the first, and are required by the second, class meeting for a student to remain in class. Late enrollees must submit fees no later than the second time they attend the class.

Full refund is given to students who drop a class during the first two weeks of classes and request a refund at that time. No refund is given if a student either neglects to request a refund under the conditions listed previously or drops the class after the second week.

Class Sign-Ups vs. Axess—All classes (except varsity and club sports) require sign-ups. Information on sign-up procedures can be found on the department’s web site, www.stanford.edu/dept/pe or under Athletics in the Time Schedule. Students must attend the first class meeting at which time they are informed if they are in the class and, therefore, can register for that class through Axess.

Deadline for Adding a Class—Students who have never appeared in a class may not enroll in that class after the fourth class meeting has passed. Students may add the class after the fourth meeting if they have been in attendance and, for whatever reason, did not get registered until the fourth week (the University deadline for adding courses).
Equipment—Students provide their own rackets for tennis. Specific information on equipment and recommended class attire is available from the department or instructor.

Lockers—Lockers are available for rent to faculty/staff and students at the Arrillaga Family Sports Center and Roble Gym. The fee for faculty/staff is $15 a quarter or $40 a year. The fee for students is $10 a quarter or $25 a year.

COURSES

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

PHYSICAL EDUCATION AND SPORTS THEORY

190. Analysis of Human Movement—Overview of skeletal and muscular anatomy and a study of the mechanical principles of movement as related to efficient performance in aquatics, dance, and sports.

3 units, Aut, Win (Weeks)

LEADERSHIP OPPORTUNITIES IN PHYSICAL EDUCATION

81. Manager: Athletic Team—For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach. (AU)

1 unit, Aut, Win, Spr (Staff)

AQUATIC ACTIVITY AND THEORY

78. Lifeguard Training—Aspects of professional lifeguarding: lifeguard characteristics and responsibilities, recognition of hazards and emergencies, patrol and duty procedures, public service, and rescue skills. Community first aid and CPR for the professional rescuer. Priority to those with summer jobs requiring certification; bring letter from employer to first class meeting. Fee. Prerequisite: pass swim test (swimmer/advanced swimmer level); see instructor for details.

2 units, Spr (Weeks)

106. Sailing: Beginning Keelboat—Basic skills, theory, and techniques to enable beginners to sail with confidence. Emphasis is on safety and seamanship skills. Fee. (AU)

1 unit, Aut, Spr (Bourdow)

107. Sailing: Beginning Dinghy—Basic skills, theory, and techniques to enable beginners to sail with confidence in small centerboard boats. Fee. (AU)

1 unit, Aut, Spr (Bourdow)

108. Sailing: Intermediate—Refinement of skills. Introduction to racing. Fee. Prerequisite: consent of instructor. (AU)

1 unit, Aut, Spr (Bourdow)

109. Sailing: Advanced—Refinement of heavy weather sailing skills, with emphasis on racing. Fee. Prerequisite: 108 or consent of instructor. (AU)

1 unit, Spr (Bourdow)

132. Swimming III: Intermediate—Continued work on crawl, elementary backstroke, backstroke, and sidestroke. Safety skill work as needed. Introduction to or review of breaststroke. Open turns. Introduction to butterfly, flipturn, and conditioning. Fee. Prerequisites: fair technique in crawl, elementary backstroke, backstroke; some sidestroke and breaststroke; ability to swim approximately 100-200 yards continuously by mixing strokes. (AU)

1 unit, Aut, Win, Spr (Gerry, Weeks)

133. Swimming IV: Advanced—Review and refinement of all basic strokes and safety skills. Introduction to or review of butterfly and flipturn. Stroke drills and information on conditioning and designing individual workouts. Prerequisite: average to good strokes; ability to swim approximately 400-500 yards continuously. Fee. (AU)

1 unit, Aut, Win, Spr (Dettamanti, Quick, Tanner)

134. Swim Conditioning—For students wanting to improve cardiorespiratory endurance through directed swimming workouts. Technique corrections as needed. Prerequisite: advanced swimmer. Fee. (AU)

1 unit, Aut, Win, Spr (Dettamanti, Kenney, Knapp)

166. Water Polo: Beginning—Introduction to basic skills and game play. For those who have never played or have had limited experience. Fee. (AU)

1 unit, Spr (Dettamanti)

167. Water Polo: Intermediate/Advanced—Further work on skills. Game strategies. Fee. (AU)

1 unit, Aut, Spr (Dettamanti, Tanner)

FITNESS, INDIVIDUAL, AND TEAM SPORT ACTIVITIES

2. Aerobics—High-powered strength building class. Focus is on body awareness, balance of strength, and flexibility through continuous body motion and cardiovascular enhancement. All levels. Fee. (AU)

1 unit, Aut, Win, Spr (Coughlin)

38. Fencing: Beginning—The fundamentals of the golf swing; introduction (AU)

1 unit, Win (Wateska)

39. Fencing: Intermediate/Advanced—Continuation of 38; learn advanced footwork and handwork. Strategy and bouting. Introduction to epee and saber. All equipment provided. Fee. Prerequisite: 38 or consent of instructor. (AU)

1 unit, Win (Milgram)

40. Fencing: Saber Class—Continuation of 38. Learn saber technique, the fastest of the three weapons. Saber takes speed, quick reflexes and a sly, strategic mind. All equipment provided. Fee. Prerequisite: 38 or consent of instructor. (AU)

1 unit, Spr (Milgram)

45. Field Hockey: Advanced for Women—Understanding techniques and skills under competitive pressure. Must know team strategies and positioning. Prerequisite: varsity competition. Fee. (AU)

1 unit, Win (Johnson)

52. Golf: Beginning—The fundamentals of the golf swing; introduction to putting, chipping, sand play. Golf etiquette and knowledge of rules
53. Golf: Advanced Beginning—Further development of the golf swing and short game. How to practice effectively and gain the confidence to play a round of golf. Rules and etiquette. Prerequisite: 52 or previous golf experience. Fee. (AU)

1 unit, Aut, Win, Spr (Hamada, Miller, Stotz, Uchiyama)

54. Golf: Intermediate—Improvement through the use of drills and practice on all facets of golf game. Utilization of these skills in the game. Lower your score and manage your game on the course. Fee. Prerequisite: 52 or the equivalent. (AU)

1 unit, Aut, Win, Spr (Miller, Stotz, Uchiyama)

55. Golf: Advanced—Understanding of and refining the golf swing and increasing power, distance, and accuracy. Course management, mental preparation, visualization techniques. Fee. Prerequisites: 54 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. (AU)

1 unit, Aut, Win, Spr (Miller)

59. Gymnastics: Beginning—Fundamental gymnastics movement for men and women, including flexibility and strength exercises taught on the Olympic apparatus (e.g., floor, balance beam, bars, rings, etc.). Fee. (AU)

1 unit, Aut, Win, Spr (Hamada)

60. Gymnastics: Intermediate/Advanced—For students who have completed 59 or have a background in gymnastics. Emphasis is on tumbling and somersaulting. Group work and individualized instruction for men and women. Limited apparatus work. Fee. (AU)

1 unit, Aut, Win, Spr (Cook, Lyst)

65. Horsemanship: Beginning Riding—No background or very little. Includes walk, trot, and canter. Fee. (AU)

1 unit, Aut, Win, Spr (Saxe, Staff)

66. Horsemanship: Advanced Beginning Riding—Can walk and trot, but not with very secure seat. Gymnastic work develops position and rhythm. Fee. (AU)

1 unit, Aut, Win, Spr (Saxe, Staff)

68. Horsemanship: Intermediate Riding and Jumping—Work at the walk, trot, canter. Cross rails up to two foot jumps. Fee. (AU)

1 unit, Aut, Win, Spr (Saxe, Staff)

73. Interval Training—For students who want to improve their overall fitness level. Active participation in workouts include brief periods of high intensity exercise interspersed with lower-intensity exercise or rest. Short duration agility runs, weight lifting, and cardiovascular improvement. Emphasis is on proper stretching techniques, warm-ups, cool-downs, and monitoring heart rate. Fee. (AU)

1 unit, Win, Spr (Johnson)

74. Women’s Lacrosse: Beginning/Intermediate—Introduction to the basics of women’s lacrosse. Emphasis is on learning and improving stick skills such as cradling, passing, catching, and shooting, and on an overall knowledge of the game and its rules. Fee. (AU)

1 unit, Aut (Connor)

101. Posture—Individual standing posture evaluation; exercises for proper body alignment emphasizing flexibility and balance of muscle strength development. Techniques for correct body mechanics: push, pull, lift, carry, reach, sit, lie, walk. Some nutrition, relaxation, and weight management; group and individualized exercise program. Fee. (AU)

1 unit, Aut, Win, Spr (Weeks)

102. Power Walk—Physical fitness is increased through walking exercises. The intensity of exercise varies according to individual levels of fitness. Focus is on the use of walking to improve aerobic fitness, muscular strength and endurance, body composition and flexibility, and to provide stress release. Fee. (AU)

1 unit, Aut (Hamada)

119. Soccer, Indoor: Beginning—Uses a smaller ball and playing area. Emphasis is on individual ball skills through small-sided games. Fee. (AU)

1 unit, Win (Swanson)

120. Soccer, Indoor: Intermediate—For the intermediate player looking to hone his/her skills and learn more about the game. Emphasis is on skill development through technical sessions and small sided games. Basic tactics and the rules of the game. Limited enrollment. Fee. (AU)

1 unit, Win (Clark)

121. Soccer: Beginning—Introduction to soccer for the true beginner. The rules of the game and basic skills for dribbling, passing, controlling, shooting, and defending. Small game tactics. Fee. (AU)

1 unit, Aut, Spr (Swanson)

122. Soccer: Intermediate—The basic skills and rules of the game. Small group tactics offensively and defensively. Improving play through drills and small-sided games. Fee. (AU)

1 unit, Aut, Win, Spr (Clark)

123. Soccer: Advanced for Men—Techniques under pressure; small group and team tactics. Fitness for the soccer player. Fee. Prerequisites: consent of instructor, tryouts. (AU)

1 unit, Win (Clark)

124. Soccer: Advanced for Women—Techniques under pressure; small group and team tactics. Fitness for the soccer player. Fee. Prerequisites: consent of instructor, tryouts. (AU)

1 unit, Win, Spr (Swanson)

125. Soccer: Advanced—Designed for the advanced player looking to improve individual technique under pressure, small group and team tactics, and fitness. Fee. Prerequisites: consent of instructor, tryouts. (AU)

1 unit, Aut, Spr (Swanson)

148. Tennis: Beginning—Fundamental strokes (forehand, backhand, serve, and net play), rules, and scoring. Fee. (AU)

1 unit, Aut, Win, Spr (Staff)

149. Tennis: Low Intermediate—Intended as a bridge between beginning and intermediate classes. Review of fundamental strokes and utilization of these skills in a game situation. Fee. Prerequisites: beginning-level class or knowledge of rules and scoring and average ability in fundamental strokes, but limited playing experience. (AU)

1 unit, Aut, Win, Spr (Staff)

150. Tennis: Intermediate—Fundamental stroke review and increased emphasis on singles and doubles tactics. Prerequisites: low intermediate class or average ability in fundamental strokes and regular playing experience. NTRP rating of 3.0 or equivalent. Fee. (AU)

1 unit, Aut, Win, Spr (Staff)

151. Tennis: Advanced—Review of fundamental strokes. Drills emphasize footwork, serve and return, approach shots, volleys, lobs, and overheads. Strategy for competition in singles and doubles. Prerequisites: well above average stroking and game playing ability; NTRP rating above 4.0 or equivalent. Fee. (AU)

1 unit, Aut, Win, Spr (Staff)
152. Tennis: Tournament—Advanced drills and practice sessions for tournament-experienced players of near-varsity-level ability. Tryouts at Varsity Courts in Autumn Quarter for autumn enrollment and position on all-University ladder for winter and spring classes. Fee. Prerequisite: consent of instructor. (AU)
1 unit, Aut, Win, Spr (Staff)

154. Tennis: Analysis—Use of computer for analyzing tennis matches. Assist players and coaches by collecting data on player performance. Prerequisite: consent of instructor. Recommended: excellent knowledge of tennis, background in computers and statistics. (AU)
2 units, Aut, Win, Spr (Brennan, D. Gould)

1 unit, Aut, Win, Spr (Corlett, Kosty)

161. Volleyball: Intermediate—Drills to improve skills and game playing strategy. As ability indicates, more emphasis on team play and strategy. Fee. (AU)
1 unit, Aut, Win, Spr (Kosty, Nieves)

1 unit, Aut, Win, Spr (Staff)

175. Weight Training: Intermediate—Review of basic exercises and techniques. Emphasis is on individualized programs and learning the use of available machines and free weights. Further discussion on exercise physiology. Fee. Prerequisite: 174 or thorough knowledge of basic weight training principles. (AU)
1 unit, Aut, Win, Spr (Staff)

186. Wrestling: Beginning/Intermediate—Introduces intercollegiate wrestling. Conditioning, cultivating the spirit of one-on-one competition. Basic skills and high-level sequences of upper- and lower-body technique. Fee. (AU)
1 unit, Spr (Horpel)

188. Yoga: Beginning—Challenging practice designed for beginning-intermediate student. Focus is on a completely integrated and balanced body. Promotes increased flexibility; strengthens skeletal, muscular, and nervous systems; improves circulation; releases tension and stress; improves concentration and clarity of mind. Fee. (AU)
1 unit, Aut, Win, Spr (Coughlin)

189. Yoga: Intermediate—Builds and expands on the basic asanas. Student should be comfortable with the beginning class and ready for more challenging poses. More inverted poses, i.e., shoulder stand. Range of motion is increased as is length of time in poses. Deeper understanding of pranayama. Fee. Prerequisite: beginning yoga or previous yoga experience. (AU)
1 unit, Aut, Win, Spr (Coughlin)

INTERCOLLEGIATE ATHLETIC TEAMS
Varsity men's and women's teams in PAC-10 are for the highly talented and motivated undergraduate student. Unless specified, team tryouts are open to men and women students.

14V. Baseball: Varsity—Men's team. (AU)
1-2 units, Aut, Win, Spr (Marquess, Stotz)

17V. Basketball: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win (Montgomery, Staff) men's team
Aut, Win (Van Derveer, Staff) women's team

26V. Crew: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win (Kujda) men's team
Aut, Win, Spr (Baker) women's team

29V. Cross Country: Varsity—Men's and women's teams. (AU)
1-2 units, Aut (Lananna)

35V. Diving: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Schavone)

41V. Fencing: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win (Staff)

46V. Field Hockey: Varsity—Women's team. (AU)
1-2 units, Aut, Spr (Johnson)

49V. Football: Varsity—Men's team. (AU)
1-2 units, Aut, Spr (Willingham, Staff)

57V. Golf: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Hamada) men's team
Aut, Win, Spr (O'Connor) women's team

62V. Gymnastics: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Hamada) men's team
Aut, Win, Spr (Cook) women's team

75V. Lacrosse: Varsity—Women's team. (AU)
1-2 units, Aut, Win, Spr (Connor)

111V. Sailing: Varsity—Coed and women's teams. (AU)
1-2 units, Aut, Win, Spr (Bourdow)

124V. Soccer: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Clark) men's team
Aut (Swanson) women's team

127V. Softball: Varsity—Women's team. (AU)
1-2 units, Aut, Win, Spr (Rittman)

136V. Synchronized Swimming—Women's team. (AU)
1-2 units, Aut, Win (Emery)

137V. Swimming: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Kenney) men's team
Aut, Win, Spr (Quick) women's team

153V. Tennis: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Brennan) men's team
Aut, Win, Spr (Brennan) women's team

157V. Track and Field: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Lananna)

163V. Volleyball: Varsity—Men's and women's teams. (AU)
1-2 units, Aut, Win, Spr (Nieves) men's team
Aut, Win, Spr (Shaw) women's team

Athletics, Physical Education, and Recreation
168V. Water Polo: Varsity—Men’s and women’s teams. (AU)  
1-2 units, Aut, Win, Spr (Dettamanti) men’s team  
Aut, Win, Spr (Tanner) women’s team

184V. Wrestling: Varsity—Men’s team. (AU)  
1-2 units, Aut, Win, Spr (Horpel)

**CLASS SPORTS**

The Stanford Club Sports Program is affiliated with the department but is initiated, organized, and conducted by students. All clubs are co-educational except as specified. Clubs, whose instructional classes meet the criteria for academic credit, are scheduled for meeting times as published each quarter in the *Time Schedule*. For additional information, contact the Club Sports Director.

11C. Badminton Club Team—(AU)  
1 unit, Aut, Win, Spr

32C. Cycling Club Team—(AU)  
1 unit, Aut, Win, Spr

36C. Equestrian Club Team—(AU)  
1 unit, Aut, Win, Spr

70C. Horse Polo Club Team—(AU)  
1 unit, Aut, Win, Spr

72C. Ice Hockey Club Team—Men. (AU)  
1 unit, Aut, Win

75C. Lacrosse Club Team—Men. (AU)  
1 unit, Aut, Win, Spr

88C. Judo Club Team—(AU)  
1 unit, Aut, Win, Spr

104C. Rugby Club Teams—Men’s and women’s teams. (AU)  
1 unit, Aut, Win

118C. Ski Club Team—(AU)  
1 unit, Win

159C. Ultimate Frisbee Team—Women. (AU)  
1 unit, Aut, Win, Spr

Additional clubs (Cricket, Squash, Table Tennis, and Ultimate Frisbee—men) schedule activities each quarter for no credit.

**BIOLOGICAL SCIENCES**

*Emeriti: (Professors)* Winslow R. Briggs, David D. Perkins, David C. Regnery, Robert Schimke, John H. Thomas, Dow O. Woodward; (Research) R. Paul Levine; (by courtesy) David C. Fork

*Chair:* H. Craig Heller

*Associate Professors:* Barbara A. Block, Martha S. Cyert, Deborah M. Gordon, Paul MacDonald, Susan K. McConnell, Michael A. Simon

*Assistant Professors:* David Ackerly, Brendan Bohannon, Judith Friedman, Elizabeth A. Hadly, Liqun Luo, Michael F. Rexach, Timothy P. Stearns

*Associate Professor (Teaching):* Carol L. Boggs

*Professor (Research):* Robert Metzenberg, Jr.

*Consulting Professors:* Richard G. Klein, Irving L. Weissman

*Consulting Associate Professor:* Shauna C. Somerville

*Consulting Assistant Professor:* Alfred Sporman

*Lecturers:* Shyamala D. Malladi, Laura McIntosh, Roger Morrisett, James Watanabe, Melanie Yelton

*Consulting Professor:* Terrence M. Gosliner

*Consulting Associate Professors:* Nina G. Jablonski, Patrick J. Kociok

*Visiting Associate Professor:* Alex Meyer

**LIBRARIAN:** Michael Newman

The facilities and personnel of the Department of Biological Sciences are housed in the Gilbert Building, Herrin Laboratories, Herrin Hall, the Jasper Ridge Biological Preserve on the main campus, and at the Hopkins Marine Station in Pacific Grove on Monterey Bay.

The department provides: (1) courses designed for the nonmajor, (2) a major program leading to the B.S. degree, (3) a minor program, (4) a coterminal program leading to the M.S. degree, (5) a terminal program leading to the Ph.D. degree.

Course work and laboratory instruction in the Department of Biological Sciences conform to the "Policy on the Use of Vertebrate Animals in Teaching Activities" section of this bulletin.

The Jasper Ridge Biological Preserve is a 1,200-acre natural area containing an unusual diversity of plant communities. It is managed solely for teaching and research purposes and is available to investigators from various institutions. Stanford-based research at Jasper Ridge currently concentrates on physiological, ecological, and population studies.

Special laboratory facilities for marine research are described in the pamphlet *Hopkins Marine Station*, available at the department’s Student Services office (Gilbert 108) or from Hopkins Marine Station.

The department’s large collections of plants (Dudley Herbarium), fishes, reptiles, and amphibians, as well as smaller collections of birds, mammals, and invertebrates, are housed at the California Academy of Sciences in San Francisco, where they, and extensive collections of the academy, are available to those interested in the systematics of these groups. Entomological collections, restricted to those being used in particular research projects, are housed in the Herrin Laboratories. No general collections are maintained except for teaching purposes.

The Falconer Biology Library in Herrin Hall contains over 1,200 current subscriptions and an extensive collection of monographs and reference works. A specialized library is maintained at the Hopkins Marine Station.

**UNDERGRADUATE PROGRAMS**

**BACHELOR OF SCIENCE**

**ADVISING**

Most members of the Biological Sciences faculty are available for advising on such academic matters as choice of courses and career plans. The Student Services office maintains a current list of faculty advisers, advising schedules, and research interests.

The Student Services office is prepared to answer questions on administrative matters, such as requirements for the major, approved out-of-department electives, transfer course evaluations, and petition procedures. This office also distributes the department’s *Bachelor of Science Handbook*, which delineates policies and requirements, as well as other department forms and information handouts.

Each undergraduate student interested in the major in Biological Sciences is required to select a department adviser as part of the major declaration process. Students who plan to attend medical or graduate school, enroll in the honors or coterminal programs, take courses at Hopkins Marine Station, or attend one of the overseas campuses will find their faculty adviser particularly helpful.

**REQUIREMENTS**

Candidates for the B.S. degree must complete:
Electives

Biology 51*
Biology 52*
Biology 53*
Biology 44X
Biology 44Y (may be replaced by 4 units of 175H)

Total

Courses

Biology 53*
Biology 52*

Total

Electives

* May be used to satisfy either area I or area II requirement.

No more than 6 units from any combination of individual instruction courses (143, 175H, 198, 199, 290, 291, or 300) may be applied toward the total number of elective units. No more than 6 units applied toward the elective unit requirement may be taken CR/NC.

Students intending to pursue research careers in biology, especially in ecology, population genetics, or theoretical biology, should be aware that Mathematics 19, 20, 21, or Mathematics 41, 42 are minimum math requirements for the B.S. degree in Biological Sciences. Substantial additional training in mathematics, including differential equations, linear algebra, and probability theory, is often highly advisable. Students should consult the Biological Sciences faculty to discuss individual needs.

Additionally, even though only two or three quarters of physics are required, students should be aware that many graduate and professional schools (for example, medicine and education) require a year of general physics with a lab. Biological Sciences majors are therefore advised to take the year-long physics sequence Physics 21, 22, 23, 24, 25, 26 (or Physics 41, 43, 45, 46, 47, 48).

For students considering residence at Hopkins Marine Station during the junior or senior year, or an overseas program, the department recommends fulfilling as many University General Education Requirements as possible in the first two years at Stanford. A student may use 175H for up to 6 departmental elective units (these are considered research units). For information, contact the Student Services office.

Because of differences between Stanford undergraduate courses and prerequisites and those of many other institutions, transfer students may face problems not encountered by entering freshmen. Transfer students are strongly urged to visit the Student Services office in Gilbert 108 during Transfer Orientation to obtain information on credit evaluations. Course catalogs, syllabi, and/or lecture notes from the former institution are necessary in the evaluation and accreditation process. Transfer students are encouraged to find a faculty adviser soon after arrival.

All transfer courses intended to fulfill department requirements must be evaluated on Evaluation of Transfer Course Content forms (available in the Student Services office), which is kept in the student’s file. This
4. If graduating in June, participate in the Biological Sciences Honors Program. For more information about the honors program, including requirements, research sponsors, and petition forms, see the Undergraduate Research Coordinator in Gilbert 118.

5. Complete and submit, by the end of the quarter of graduation, two copies of the honor thesis abstract. Students must submit two complete copies of the honor thesis abstract, signed and bound copies of an honors thesis approved by at least two readers (one of whom must be from the faculty of the Department of Biological Sciences and both Academic Council members). In addition, students must submit two copies of the honor thesis abstract, which now includes name, thesis title, sponsor, and department.

Further information on the honors program, including petition forms, examples of honors posters, theses, and proposals, is available in the Group Study Room in Falconer Library. See the Web page "Research and Honors" for more information about the honors program, including requirements, research sponsors, and petition forms. Questions should be directed to the Undergraduate Research Coordinator in Gilbert 118.

PREMEDICAL, PREDENTAL, AND PREPARAMEDICAL REQUIREMENTS

Premedical, preprofessional, and preprofessional students who are not premedical, preprofessional, and preprofessional students who are not biology majors should take at least the following courses in Biological Sciences: 44X, 44Y, 51, 52, 53, and such upper-division electives as may be recommended by Stanford's Preprofessional Advising Office (Undergraduate Advising Center, Student Services Office).

COTERMINAL B.S./M.S. DEGREE

The Department of Biological Sciences admits a limited number of undergraduate students to work for coterminal B.S. and M.S. degrees in Biological Sciences. Students must apply to the program between their seventh and eleventh quarters. They are required to submit a complete application, which includes a statement of purpose, a Stanford transcript, official GRE or MCAT scores, two letters of recommendation from faculty members in this department, and a list of courses in which they intend to enroll to fulfill degree requirements. A minimum GPA of 3.0 is necessary in all courses required for the undergraduate degree in Biological Sciences. Students must meet all requirements for both the B.S. and M.S. degrees. They must complete 15 full-time quarters (or the equivalent), or three full quarters after completing 180 units. Unit requirements for a coterminal program are 180 units for the bachelor's degree and 45 units for the master's degree. A more detailed description of the coterminal master's degree program may be obtained from the Student Services office.

GRADUATE PROGRAMS

MASTER OF SCIENCE

For information on the University's basic requirements for the M.S. degree, see the "Graduate Degrees" section of this bulletin. The M.S. degree program offers general or specialized study to individuals seeking biologically oriented work and to graduate students majoring in biological sciences. Students who have majored in related fields are eligible to apply, must complete, or have completed the time of graduation, the equivalent of a Stanford B.S. in Biological Sciences.

The M.S. program consists of Department of Biological Sciences courses (or otherwise approved) course work totaling at least 45 units of academic credit, distributed as follows:

1. A minimum of 36 units must be Department of Biological Sciences courses approved out-of-department electives (list available in the University Services Office).
   a) At least 18 of these 36 units must be courses designated primarily for graduate students (generally at the 200-level or above), excluding research and teaching units.
   b) At least 9 of the 36 units must be 3-unit or more upper-division courses from the Department of Biological Sciences, taken from three different Biology faculty members. Teaching and research units do not fulfill this requirement.
   c) Up to 9 of these 36 units may be advanced-level cognate courses in chemistry, mathematics, statistics, computer sciences, or physics beyond the level required for the undergraduate degree.
   d) Up to 18 of the 36 units may be a combination of biological research and teaching (biology courses 175H, 198, 199, 200, 291, or 300).

2. The remaining 9 units may come from any other Stanford course work other than research or teaching.

Each candidate designs a coherent program of study in consultation with her or his department adviser. Although there are no specific courses required, program proposals must adhere to department parameters. A Program Proposal signed by the student's adviser, and approved by the chair of the M.S. Committee, must be filed during the first month of the first quarter of enrollment. Students may take only 6 units on a credit/no credit basis and must receive a grade of "B+" or better in all courses taken for the degree.
To apply, students submit an application for admission to the M.S. program, two letters of recommendation, official transcripts, and official Graduate Record Examination (GRE) scores. Applicants should plan on taking the GRE at least one month prior to the application deadline to insure that the official scores are available when applications are evaluated. Applications are accepted for Autumn Quarter only; the deadline is March 15. Financial support is not available from either the department or the University for students in this program.

MASTER OF ARTS IN TEACHING

The Master of Arts. Teaching degree is offered jointly by this department and the School of Education. The degree is intended for candidates who have a teaching credential and wish to strengthen their academic preparation. The program consists of a minimum of 25 units in the teaching field and 12 units in the School of Education. Detailed requirements are outlined in the “School of Education” section of this bulletin or may be obtained from the Admissions Director, School of Education.

TEACHING CREDENTIALS

For information concerning the requirements for teaching credentials, consult the “School of Education” section of this bulletin or address an inquiry to the Credential Administrator, School of Education.

DOCTOR OF PHILOSOPHY

For information on the University’s basic requirements for the Ph.D., see the “Graduate Degrees” section of this bulletin.

Preparation for Graduate Study—Students seeking entrance to graduate study in Biological Sciences ordinarily should have the equivalent of an undergraduate major in Biological Sciences at Stanford. However, students from other disciplines, particularly the physical sciences, are also encouraged to apply. Such students are advised at the time of initial registration on how they should complete background training during the first year of graduate study. In addition to the usual basic undergraduate courses in biology, it is recommended that preparation for graduate work include courses in chemistry through organic chemistry, general physics, and mathematics through calculus.

Application, Admission, and Financial Aid—Prospective graduate students should request application information, instructions, and materials from Graduate Admissions, the Registrar’s Office. The department’s program is divided into three separate tracks—Population/Evolution Biology, Integrative and Organisimal, and the third in Molecular/Cell Biology. Applications to the three tracks are evaluated separately; all applicants should specify the track which interests them. The deadline for receiving applications is December 15.

Scores on the general test and the advanced biology, biochemistry, cellular and molecular biology, or chemistry test of the Graduate Record Examination (GRE) are required. Applicants should plan on taking the GRE at least one month prior to the application deadline to insure that the official scores are available when applications are evaluated.

Competition for admission to the Ph.D. program is keen and in recent years it has been possible to offer admission to only 15 percent of the applicants. Admitted students normally are offered financial support in the form of Stanford Presidential Graduate Fellowships, biology research assistantships, NIH traineeships, or Biological Sciences student fellowships. Qualified applicants should apply for predoctoral national competitive fellowships, especially those from the National Science Foundation and the Howard Hughes Medical Institute. Applicants to the Ph.D. program should consult their financial aid officers for information and applications.

General Departmental Requirements—An admitted applicant is required to fulfill the requirements of the University as outlined in the “Graduate Degrees” section of this bulletin and the department requirements stated below.

Each student must take at least 3 units of course work under each of four or more Stanford faculty members. Course work is planned in consultation with an advising committee assigned for his or her track. In addition, all students must take a course on the ethical conduct of research, including Bio. 325, one the ethics courses in the Medical School or another similar course.

1. Teaching experience and training are part of the graduate curriculum. Each student assists in teaching one course in the department’s core lecture (51, 52, 53) or lab courses (44X, 44Y), a second course that can be either a core course or central menu course, and a third department course recommended to be an advanced course in the student’s area of specialization.

2. Graduate seminars devoted to the discussion of current literature and research in particular fields of biology are an important means of attaining professional perspective and competence. Seminars are presented under individual course listings or are announced by the various research groups. A department seminar meets on most Mondays at 4 p.m. Topics of current biological interest are presented by speakers from Stanford and other institutions and are announced in the weekly Stanford Report. Graduate students are expected to attend.

3. Third Year and Beyond: each student must meet with the Advising Committee beginning the third year, and each year thereafter prior to the end of the Spring Quarter. The committee signs a form to ensure compliance. During Autumn Quarter of the fourth year, candidates must meet with their committee to evaluate the project and to discuss financial support, if required, beyond the fourth year. Advanced students are encouraged to meet with their committee at least twice a year.

Academic requirements for the three tracks are as follows:

Molecular/Cell Ph.D. Track Requirements—

1. First Year:
   a) Advising Committee: shortly after arrival, each entering student meets with the First-Year Advising Committee. The committee reviews the student’s previous academic work and current goals and advises the student on a program of Stanford courses, some of which may be required and others recommended. Satisfactory completion of the Core Curriculum (below) is required of all students.
   b) Core Curriculum: all students are required to take the following courses for a letter grade, unless previous course work has fulfilled these requirements.

   Biology 203: Advanced Genetics
   Biology 214: Cell Biology of Physiological Process
   Biochemistry 201: Advanced Molecular Biology
   A fourth course is selected from the student’s area of specialization.

2. Second Year: each student must pass a two-part qualifying exam.

   c) Lab Rotations: successful completion of rotations in three different laboratories is required of all first-year students. As lab space is limited, students with a definite interest in a particular lab should make arrangements as early as possible. Written petitions for exemptions to requirements “Core Curriculum” and “Lab Rotations” are considered by the Advising Committee. Approval is contingent upon special cir-cumstances and is not routinely granted.

   d) Dissertation Lab: by the end of Spring Quarter, each first-year student is expected to have selected a lab in which to perform dissertation research and to have been accepted by the faculty member in charge. Students and faculty must wait until April 15 to discuss the choice of a dissertation lab. In consultation with that faculty member (who at this point becomes the student’s adviser), the student chooses a projected field of expertise that is broader than the research of the adviser’s lab, such as Developmental Biology or Plant Biology. Students electing to do a summer rotation at the Hopkins Marine Station may postpone selection of a lab for their dissertation research until the end of Summer Quarter.

   e) Seminar: each student must present a public seminar that is evaluated by two faculty members. Evaluation consists of meeting with each faculty member within one week following the seminar to obtain feedback and signatures. Faculty may require an additional seminar presentation.
3. First Year: each entering student is assigned a supervisory committee of three faculty members whose function is to develop an appropriate schedule of required and recommended courses and to meet once each quarter with the student during the first year.

b) Area Proposal: before the end of Winter Quarter of the second year, the student must prepare and submit a paper, which outlines the student's projected dissertation research. The written proposal should be submitted in the form of a grant application, including references, plans for specific experiments, and discussion of the interpretation of possible experimental results. The written proposal must be turned in to the chair of the Graduate Studies Committee by the end of Autumn Quarter. Before the end of Winter Quarter, the student is examined orally on the contents of the written proposal and on general knowledge in the student's projected field of expertise, including important cognate areas. The oral examination is administered by the Dissertation Advising Committee (consisting of the adviser and three other faculty members who have agreed to serve on the committee) and one representative from the Graduate Studies Committee. (Three to five representatives from the Graduate Studies Committee are chosen to be available for these committees.)

b) Dissertation Proposal: before the end of Spring Quarter of the second year, the student must prepare and submit a dissertation proposal that outlines the student's projected dissertation research. An expert assessment of the current literature is expected. After submission of the proposal to the Dissertation Advising Committee, an oral examination is held. The student's adviser is not present at the examination, which is administered by the other members of the Dissertation Advising Committee and the Graduate Committee representative.

Advancement to candidacy is contingent on satisfactory completion of both proposals and oral exams. The deadline for completion is mid-May, before the annual faculty meeting devoted to evaluation of student progress. Failure to complete these requirements on schedule results in the withholding of graduate stipend.

3. Third Year and Beyond:

a) Dissertation and Dissertation Defense: the finished dissertation must be turned in to the student's Reading Committee at least one month before the oral exam is planned. The Reading Committee is comprised of at least three faculty members, two of whom must be Stanford Academic Council members, and is generally comprised of members who have served on the Oral Examination Committee. At least three weeks before the oral exam, the student checks in with the committee and must incorporate any changes they require by the time of the exam. The exam cannot be formally scheduled or publicly announced until the student receives comments; however, the student should make informal arrangements with the committee earlier to ensure that everyone is available on the projected date. A minimum of three weeks is required by the Student Services office to publicize the exam and schedule appropriate rooms.

b) First-Year Paper: each student must prepare and submit a paper, before the end of Spring Quarter their first year, that is evaluated by the advising committee. This paper should be a step toward the development of a dissertation proposal and may consist of an analysis of new data or a literature review and synthesis. Evaluation is in written form by two faculty members.

2. Second Year: the student is expected to write a major dissertation proposal. The proposal is evaluated by a committee of three faculty (the Dissertation Advising Committee) in an oral presentation. This is to be completed by the end of Spring Quarter of the second year. Advancement to candidacy depends on satisfactory completion of the dissertation proposal. Failure to complete these requirements on schedule will result in withholding of the graduate stipend.

3. Third Year and Beyond:

a) Dissertation and Dissertation Defense: at least one month before the oral exam takes place, the student must submit his or her dissertation to the Dissertation Advising Committee, which then becomes the Dissertation Reading Committee. At least two weeks before the oral exam, the student must incorporate into the dissertation any changes required by the committee. The exam cannot be formally scheduled or publicly announced until that time.

Residency Requirement—A minimum of nine quarters of full-time graduate registration is required of each candidate. The department normally accepts only full-time students for study leading to the Ph.D. degree.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

Additional courses not listed here are frequently offered by selected postdoctoral or advanced Ph.D. personnel in the areas of their special research competence. They are listed in the quarterly Time Schedule, with course descriptions available in the Student Services office.

INTRODUCTORY

2. Current Research Topics in Biological Sciences—Primarily for sophomores, enrollment limited to prospective and declared Biological Sciences majors. Weekly seminars by faculty on current research in biological sciences. Molecular biology and genetics; theory and mathematics in biology; ecology, physiology, and the environment; molecular and cellular aspects of neurobiology, immunology, and developmental biology; biological chemistry; behavioral biology; evolution.

1 unit, Aut, Win (Staff)
8S. Introduction to Human Physiology—Preparation for the college premedical curriculum through an overview of human physiology. Topics: biochemistry, nervous system, respiratory system, major organs, metabolism, and disease. Prerequisite: one year of high school chemistry. Recommended: anatomy or general biology.

3 units, Sum (Staff)

STANFORD INTRODUCTORY SEMINARS

Enrollment in seminars 11 through 37 are either open primarily to freshmen or sophomores. See http://www.stanford.edu/group/introsems/ for applications or more information.

11N. Stanford Introductory Seminar: Biotechnology in Everyday Life—Preference to freshmen. The science making transgenic plants and animals possible. Current and future applications of biotechnology, and the ethical issues raised. GER:2a (DR:5)

3 units, Aut (Walbot)

12N. Stanford Introductory Seminar: The Origin of Species—Preference to freshmen. Close reading of Darwin’s Origin of Species and additional secondary sources. Focus is on the logic of Darwin’s argument (what was the best evidence for evolution at the time the book was written?). What were the weakest points and missing pieces? How does each chapter contribute to the overall argument? How was Darwin’s thinking influenced by social conditions in his day? Oral presentations and a paper required. GER:2a (DR:5)

3 units, Spr (Ehrlich)

14N. Stanford Introductory Seminar: Plants and Civilization—Preference to freshmen. Lectures, readings, and discussions on the role of plants in the development of civilization. Topics: the use of forests, woodlands and grazing lands, centers of origins and spread of crops, the development of grains and fruits, viticulture, the spice route, the use of plants as medicine, fungi in human affairs, the global spread of weeds, engineering plants for the future. GER:2a (DR:5)

3 units, Spr (Mooney)

15N. Stanford Introductory Seminar: Environmental Literacy—Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of the scientific and decision making processes that accompany most environmental issues: what can happen, what are the odds, how can the credibility of various sources of expertise for the above be assessed, what components of several examples of environmental debates deal with factual and theoretical issues, and which are the political value judgments? Student-led discussions, student peer review and revised term papers, and oral paper presentation. GER:2a (DR:5)

3 units, Win (Schneider) alternate years, not given 2000-01

16N. Stanford Introductory Seminar: Island Ecology—Preference to freshmen. Introduction and illustration of the ways that ecologists think about the world. Focus is on the Hawaiian Islands: their origin, geology, climate, the evolution and ecology of their flora and fauna, and the distribution and functioning of Hawaiian ecosystems. The reasons for the concentration of threatened and endangered species in Hawaii, the scientific basis for their protection and recovery. The ways in which knowledge of island ecosystems can contribute to ecology and conservation biology on continents. GER:2a (DR:5)

3 units, Win (Vitousek)

17N. Stanford Introductory Seminar: Assesment of Chronic, Low-Level Environmental Risks—Preference to freshmen. How society views risks, especially chronic, low-level risks to the environmental and public health, and how those attitudes are translated into public policies. The contrast between the public perception of risks and those of “experts,” and how such views are weighted in the development of laws and regulations. The roles of litigation and regulation as alternative solutions to the external costs of private activity. Students examine case studies individually or in small groups. GER:2a (DR:5)

3 units, Aut (Kennedy)

18N. Stanford Introductory Seminar: Plant Genetic Engineering—Preference to freshmen. Flavr-Savr tomatoes, Round-Up Ready soybeans, plastic plants. Lectures, readings, and discussions about genetically modified plants. A survey of crop modifications that have been made or are currently in development. Discussions of the scientific basis of genetic engineering in plants and its social, economic, and environmental consequences. Oral presentations and short term papers.

3 units, Win (C. Somerville, S. Somerville)

19N. Stanford Introductory Seminar: Sex and Gender—An Evolutionary Perspective—Preference to freshmen. Themes: the feminist literature on gender and its social construction, mathematical theory for the evolution of sexual reproduction, and case studies of gender characteristics among animals and plants. Evolutionary studies from biology contribute to the understanding of gender, a topic mostly considered in the humanities and social sciences. Readings/discussion, term paper. Computer programming. GER:4c (DR:1)

3 units, Win (Roughgarden)

21N. Stanford Introductory Seminar: Readings in Molecular Biology and Genetics—Preference to freshmen. In-depth discussion of original research papers, parallel to what is being lectured on concurrently in Bio. 52. How to critically read original research papers to interpret and evaluate experimental findings on your own. Corequisite: 52.

3 units, Win (Baker)

22Q. Stanford Introductory Seminar: Infection and Immunity—Preference to sophomores. The causes and prevention of infectious diseases, focusing on the interplay between pathogens and the immune system that determines the outcome of the disease. The basic principles of microbiology, immunology, and epidemiology. Discussion of diseases of the past and present (including AIDS, TB, and malaria); the roles of geographical, societal, and biological factors in disease spread and prevention. Primary scientific literature, student-led discussions, and written reports. Prerequisite: good biology background, AP biology or introductory college biology (52 or 53, or Human Biology 2A, 3A).

3 units, Spr (Jones)

23N. Stanford Introductory Seminar: Experimental Strategy in Microbiology—Preference to freshmen. Scientific experimental strategy is taught through examination of classic and modern papers in microbiology. Topics: design, the importance of controls, and the formulation of hypotheses. Readings from original literature (translated to English) including Pasteur, Koch, Beijerinck, and Winogradsky; genetic studies by Jacob, Delbruck, etc.; and recent papers on molecular genetics. Reading papers from older literature allows exploration of the scientific process by students in the beginning of the Biological Sciences core. Corequisite: 52.

3 units (Long)

3 units, Spr (Kopito)

26N. Stanford Introductory Seminar: Maintenance of the Genome—Preference to freshmen. Focus is on systems that scan the cellular DNA
27N. Stanford Introductory Seminar: Nature and Nurture in Brain Development—Preference to freshmen. The brain consists of billions of neurons that are precisely interconnected in circuits that ultimately underlie our ability to think, behave, and perceive the world around us. During development, these neurons are born, migrate into position, and extend axons over long distances in order to contact appropriate target cells, wiring themselves into a particular circuit. The wiring of the brain is influenced by innate, genetically-driven processes and by our life experiences. The biological mechanisms that guide the development of neuronal circuits in animal model systems and humans. The relative influences of nature and nurture on neural development. Readings from the primary scientific literature focus for student discussions. Co-requisite: 53.

3 units, Spr (McConnell)

29N. Stanford Introductory Seminar: The Outer Limits of Life—Preference to freshmen. Introduction to the diversity of microbial life, emphasizing microbes that define the biochemical limits of life and which have unique life histories. Topics: microbial evolution and early life; life at extremes of temperature, pH, salinity, radiation and pressure; microbial life deep in the earth’s crust; life without oxygen; intimate associations between microbes and other organisms; applications of microbial diversity research in engineering, medicine, and astrobiology. Discussion, oral presentation, and short term paper. GER:2a (DR:5)

3 units, Win (Bohannan)

3 units, Aut (Gordon)

CORE

44X, Y. Core Experimental Laboratory—Two quarters of lab projects provide a working familiarity with the concepts, organisms, and techniques of modern biological research. Emphasis is on experimental design, analysis of data, and written and oral presentation of the experiments. Lab fee. Prerequisites: Chemistry 31, 33. Recommended: Biological Sciences or Human Biology core and statistics; 44X and Y should be taken sequentially in same year. (WIM)

44X. 4 units, Win (Staff)
44Y. 4 units, Spr (Staff)

51, 52, 53. Principles of Biology—Comprehensive study of the principles of modern biological sciences, taken in sequence, preferably in the sophomore year. Biology majors must take for a letter grade. Prerequisites: Chemistry 31, 33, 35; Mathematics 19, 20, 21, or 41, 42.

51. Evolution, Genetics, and Ecology—Core lectures on evolution, genetics, and ecology. Topics: diversity and the history of life; the physical and chemical basis of life; structural genetics; evolutionary genetics; the origin of species and natural selection; population, community, and ecosystem ecology. Prerequisites: see above.

5 units, Aut (Watt, Simon, Gordon, Vitousek)

52. Biochemistry, Molecular Biology, and Cell Biology—Core lecture on the biochemical and structural basis of cell function, emphasizing macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and to higher order assembly. Topics: enzyme structure, activity and kinetics, metabolism, hormone control, and cell structure and function. Prerequisites: see above.

5 units, Win (Cytcer, Macdonald, Simoni)

53. Development and Physiology of the Organism—Core lecture on plant and animal development and physiology. Topics: basic concepts in determination, differentiation, and morphogenesis; neurobiology, endocrinology, and immunology; the principles underlying the exchanges of mass and energy between organisms and their environments; the organ system specializations, which utilize these principles in adapting organisms to different environments. The mechanism by which the function of each system is controlled and regulated. Prerequisites: see above.

5 units, Spr (Luo, Sapolsky, Jones, Heller)

INTERMEDIATE UNDERGRADUATE AND GRADUATE

110. Vertebrate Biology—(Enroll in Human Biology 110.) 3-4 units (Porzig) not given 1999-2000

110L. Vertebrate Biology Lab—(Enroll in Human Biology 110L) 3 units (Porzig) not given 1999-2000

112/212. Human Physiology—The functioning of organ systems, emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise and gastrointestinal physiology. Lectures/discussion. Prerequisite: Biological Sciences or Human Biology core.

4 units, Win (Heller, Harris) alternate years, not given 2000-01

117. Biology and Global Change—(Same as Earth Systems 111.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisites: Biological Sciences or Human Biology core or graduate standing in any department.

3 units, Win (Matson, Vitousek, Mooney)

4 units, Win (Mooney, Berry, Field) alternate years, not given 2000-01

125. Ecosystems of California—The principles of ecosystem functions, with emphasis on the vegetation components and on California systems. Prerequisite: 33 or 51, or Human Biology 2A.

3-4 units, Spr (Mooney)

128. Cell Biology: Molecular Organization—The biochemistry and biophysics of macromolecules, emphasizing how macromolecules interact to form complex cellular structures. Topics: protein biosynthesis and
129. Cell Biology: Cellular Dynamics—The principles of eukaryotic cellular function, emphasizing how cellular structures carry out important cell processes. Topics: cell cycle, mitosis, cytoskeleton and cell motility, cell-cell interactions, and signal transduction. Experimental logic and interpretation of experimental results. Prerequisite: Biological Sciences Core.
4 units, Win (Kopito, Frydman)

130. Algae/Fungi—Introduction to these groups, their utilization in molecular biology in studying biological problems, and their ecological significance. Lectures, lab, field trips. Prerequisite: Biological Sciences core or consent of instructor.
4 units, Win (Grossman) alternate years, not given 2000-01

132. Developmental Genetics—The uses of the tools of modern genetics to understand outstanding questions in developmental biology.
3 units, Win (Baker)

133. Genetics of Prokaryotes—Analysis of prokaryotic genes and genomes with emphasis on the evolution of genetic systems. Prerequisite: 52.
3 units, Aut (Campbell)

134. Replication of DNA—Modes of DNA replication and their control in prokaryotic and eukaryotic systems. Emphasis is on experimental approaches and their limitations. Critical review of current literature in seminar format. Lectures and student reports on specialized topics. Enrollment limited to 14 advanced undergraduates. Prerequisites: 52 and/or consent of instructor.
3 units, Aut (Hanawalt)

137. Plant Genetics—Gene analysis, mutagenesis, and transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; lessons from transgenic plant studies. Prerequisites: 51, 52, 53, or consent of the instructor.
3 units, Spr (Walbot)

138. Ecology and Evolution of Plants—Introduction to the basic principles of ecology and evolutionary biology, focusing on plants. Topics: plants in the environment, population dynamics, natural selection in plant populations, the origin and maintenance of diversity, speciation, extinction, conservation of plant populations. Limited enrollment, lab with field trips and independent projects. Prerequisite: 51 or consent of the instructor. Recommended: statistics.
3-5 units, Spr (Ackerley) alternate years, not given 2000-01

139. Biology of Birds—The ways birds interact with their environments and each other, emphasizing studies that had impact in the fields of population biology, community ecology, and evolution. Students become familiar with local bird communities; emphasis is on field research. One one-hour lecture and one three to five hour lecture or field trip per week. Enrollment limited to 20. Prerequisites: 51 or equivalent, and consent of instructor. Recommended: birding experience.
3 units (Ehrlich) alternate years, given 2000-01

140. Population Biology of Butterflies—Lectures, field studies of the dynamics and genetics of butterfly populations, life histories, and resource utilization. The evolution and taxonomy of this group of insects, which has become a key research tool in population biology. Lab includes field work on Euphydryas populations now under study on campus and elsewhere in California. Students must register both quarters for field work credit. Prerequisites: 51, and consent of instructor.
2-5 units (Ehrlich) alternate years, given 2000-01

141. Biostatistics—Introduction to the statistical analysis of biological data. Lectures, discussion, and student exercises.
4-5 units, Win (Feldman)

4 units, Aut (Roughgarden)

144. Conservation Biology—(Enroll in Human Biological Sciences 119.)
3-4 units, Win (Boggs, Launer)
advanced undergraduates and graduate students, focusing on cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: cell biology of the neuron, wiring of the neuronal network, synapse structure and synaptic transmission, signal transduction in the nervous system, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Prerequisite for undergraduates: Biological Sciences core or equivalent, plus at least one of 118, 128, 129, or 153, or consent of the instructors.

4 units, Au (Luo, Schulman)

158. Developmental Neurobiology—Lecture/seminar for advanced undergraduates and coterminus master's students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Enrollment limited to 75. Prerequisites: 53 or equivalent; and 153 or Neurobiology 200, or consent of instructor.

4 units (McConnell) alternate years, given 2000-01

184/284. Principles and Practices of Biosystematics—The basic principles and major operating procedures of systematic biology; the study of the classification of organisms and of the relationships among them. Concepts and issues common to the study of all organisms; examples from particular groups of creatures.

4 units (Watt, Gosliner, Jablonski, Ackerly) alternate years, given 2000-01

HOPKINS MARINE STATION

Note that several of these courses can be used to fulfill department menu requirements and that completion of the Biological Sciences core is a prerequisite for all of these courses. For course descriptions, see Hopkins Marine Station section.

56H. Seminar: History and Philosophy of Science
2 units, Spr (Somero)

160H/260H. Cell Physiology
4 units, Win (Epel)

161H/261H. Invertebrate Zoology
5 units, Win (Watanabe)

162H/262H. Comparative Animal Physiology
5 units (Block) alternate years, given 2000-01

163H/263H. Principles of Oceanic Biology
4 units, Win (Denny, Somero)

164H/264H. Marine Botany
4 units (Staff) alternate years, given 2000-01

165H/265H. Air and Water
3 units (Denny) alternate years, given 2000-01

166H/266H. Locomotion
3 units, Win (Denny) alternate years, not given 2000-01

167H/267H. Nerve, Muscle, and Synapse
5 units, Win (Gilly)

168H/268H. Seminar: Cellular Signal Transduction—(AU)
1 unit, Spr (Thompson)

169H/269H. Neurobiology and Behavior
5 units, Win (Thompson)

170H/270H. Seminar: Topics in Marine Biology
1 unit, Win (Staff)

171H/271H. Ecological and Evolutionary Physiology
4 units (Somero) given 2000-01

172H/272H. Marine Ecology
5 units, Win (Staff)

173H/273H. Marine Conservation Biology
3 units (Block) alternate years, given 2000-01

174H/274H. Chance in Biology: Experimental Design and Probability
3 units, Spr (Denny, Watanabe)

175H. Problems in Marine Biology
12 units, Spr (Gilly, Levine, Somero, Epel Thompson, Watanabe)

179H. Subtidal Communities
6 units, Sum (Watanabe)

180H/280H. Problems in Subtidal Ecology
6 units, Sum (Watanabe)

238H. Biomechanics of Intertidal Organisms
5 units (Denny) alternate years, not given 2000-01

277H. Biomechanics and Ecological Physiology of Intertidal Communities
4 units (Denny, Somero) alternate years, given 2000-01

UNDERGRADUATE, INVOLVING INDIVIDUAL WORK

Students majoring in Biological Sciences are encouraged to pursue directed reading and research opportunities. An introduction to research is provided by Bio. 2.

191. Research in Bird Biology—Semi-independent field research in ornithology, emphasizing ecological relationships. Projects complement on-going research, planned and carried out by the student in consultation with the instructor. Results are written in publication format. Enrollment limited. Prerequisites: 51, concurrent or subsequent enrollment in 139, and consent of instructor.

3 units, Win, Spr (Ehrlich)

1 unit, Aut, Win, Spr (Staff)

194/294. Seminar in Environmental Policy Research—Principles of and current problems in environmental policy. Lectures, student presentations, and intensive library research or participation in group research project required. May be repeated for credit. Prerequisite: consent of instructor.

3 units, Spr (Ehrlich) alternate years, not given 2000-01

198. Directed Instruction/Reading—May be taken as a prelude to research. Read/discuss biology-related literature with a faculty sponsor, possible participation in a lab or research group seminars, and library research. Credit for work arranged with out-of-department instructors is restricted to Biological Sciences majors and requires department approval. See http://www.stanford.edu/dept/biology/undergrad/honors/, Research and Honors under “Research Courses” for information on re-
search sponsors, units, petition instructions, deadlines, credit for summer research, and out-of-Stanford research.

198I. Directed Instruction/Reading—For work done under supervision of Hopkins Marine Station faculty.

199. Undergraduate Research—Individual research taken by arrangement with in-department or out-of-department instructors. Credit for work arranged with out-of-department instructors is restricted to Biological Sciences majors and requires department approval. See http://www.stanford.edu/dept/biology/undergrad/honors/, Research and Honors under “Research Courses” for information on research sponsors, units, petition instructions, deadlines, credit for summer research, and out-of-Stanford research.

199H. Undergraduate Research—For undergraduate research done under supervision of Hopkins Marine Station faculty.

ADVANCED UNDERGRADUATE AND GRADUATE

203. Advanced Genetics—(Same as Genetics 203.) Explores the genetic toolbox. Examples of analytic methods and modern synthetic genetic manipulation, including original papers. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Graduate students in biological sciences welcome; those with minimal experience in genetics should prepare themselves by working out problems in Suzuki, et al, or Hartl, et al.

4 units, Aut (Botstein, Kim, Stearns, Villeneuve)

205. DNA Repair and Mutagenesis—Interactions of endogenous and environmental mutagens with DNA. Responses of living systems to damaged DNA, including molecular mechanisms for DNA repair and recombinational modes. Inducible repair responses and "error-prone" mechanisms. Human hereditary deficiencies in DNA repair that predispose to cancer. The relationships of DNA repair to mutagenesis and carcinogenesis. Lectures/discussion of selected topics and review of current research literature. Prerequisites: 52, 118, and/or consent of instructor.

3 units, Spr (Hanawalt)

207. The Life and Death of Proteins—How proteins are made and degraded in the cell. Critical reading/discussion of primary literature. Selected "case studies" follow the evolution of scientific ideas, and evaluate how different experimental approaches can contribute to our understanding of a biological problem. Topics: protein folding and assembly, mechanisms of chaperone action, sorting into organelles and the ubiquitin-proteasome pathway. Enrollment limited to 20.

3 units, Spr (Frydman)

208. Developmental Biology—(Enroll in Developmental Biology 210.)

5 units, Spr (Fuller, Crabtree, Stuart Kim, Kingsley, Nusse, Scott, Seung Kim, Talbot)

209. Advanced Neurosciences Laboratory—The use of equipment and techniques required to record and analyze extracellular and intracellular activity in vertebrates, or other state-of-the-art neuroscience techniques. In-depth training in a subset of these techniques as applied to a specific research project. Students present/critically evaluate representative neuroscience methodologies in weekly discussion groups. Enrollment limited to 10; admission by application (available in Student Services office). Prerequisites: Biological Sciences core, Biochemistry 201.

4 units, Win (Heller, Grahn)

213. Viruses—Principles of virus growth, genetics, architecture, and assembly. The relation of temperate viruses and other epimemes to the host cell. Prerequisite: 52. Recommended: 118.

3 units, Spr (Campbell)

214. Cell Biology of Physiological Processes—(Same as Molecular and Cellular Physiology 221.) The basic mechanisms of membrane and cellular bioenergetics in relation to physiological processes. Emphasis is on the regulatory and signaling mechanisms involved in coordinating complex cellular phenomena, such as cellular organization, function, and differentiation. Topics: cellular compartmentalization, transport and trafficking of macromolecules, organelle biogenesis, cell division, motility and adhesion, and multicellularity. Prerequisites: Biological Sciences core, Biochemistry 201.

5 units, Win (Kopito, W. Nelson)

215. Biochemical Evolution—Lectures/discussion covering biochemical viewpoints on diverse aspects of the evolutionary process. Topics: prebiotic biochemistry and the origins of life; adaptive organization of metabolism; enzyme polymorphisms and other biochemical aspects of population genetics; macromolecular phylogeny and protein clocks. Prerequisites: Biological Sciences core or substantial equivalent.

3 units, Aut (Watt)

216. Ecosystem Ecology and Global Biogeochemistry—Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

3 units (Vitousek) alternate years, given 2000-01

217. Climate Theory, Modeling, Applications, and Implications—(Same as Civil Engineering and Environmental 263S.) The history of the coevolution of climate and life. Theories of climate, external and internal climatic forcings, definitions of climate and the climate system, and rationale for climatic modeling. Hierarchy of climatic models; interactions among atmosphere, biosphere, oceans, hydrosphere, and cryosphere. Climatic predictability; implications of predictions and relevance to current controversies. Prerequisites: Biological Sciences core or Civil and Environmental Engineering 163, and math through differential equations, or consent of instructor.

3 units, Win (Schneider) alternate years, not given 2000-01

218. Atmosphere Biosphere Interactions—Interactions between the atmosphere and biosphere: biophysical and biochemical interactions, atmospheric effects on biospheric processes and biogeochemistry, biophysical effects on the radiation balance and water cycle of the atmosphere, equilibrium states of the coupled system, and interactions that lead to global change including land use changes and elevated atmospheric carbon dioxide concentrations. Prerequisites: Biological Sciences core or Civil and Environmental Engineering 163, and math through differential equations, or consent of instructor.

3 units Aut (Staff)

230. Molecular and Cellular Immunology—For graduate students and advanced undergraduates. Basic components of the immune system: structure and functions of antibody molecules; cellular basis of immunity and its regulation; molecular biology of antigen recognition structures; genetics of immunity and disease susceptibility. Emphasis is on key experimental approaches that have advanced our understanding. Prerequisites for undergraduates: Biological Sciences or a Human Biology core, or consent of instructor.

4 units, Aut (Jones)

237. Introduction to Biotechnology—(Enroll in Chemical Engineering 450.)

3 units, Spr (Robertson)

249. Neural Basis of Sleep and Circadian Rhythms—How the activity of the brain is affected by changes in the sleep/wake state. The neurochemistry of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiolog-
ical phenomena of sleep homeostasis, REM-sleep regulation, circadian rhythms, hibernation, and anesthesia. Enrollment limited to 30. Prerequisite: basic understanding of the nervous system (at least one of 53, Human Biology 4A, Psychology 70, or consent of instructor).
4 units (Heller, Edgar) alternate years, given 2000-01

252. Gene Action—Instructor/student presentations of selected studies on gene structure and function, and regulation of gene expression in prokaryotes. Prerequisites: Biochemistry 200 and 203 or equivalent; consent of instructor.
3 units, Spr (Yanofsky)

256. Plant Physiology—Physiological functions of land plants from analytical and quantitative points of view; photosynthetic energy and gas exchange; water and photosynthate long-distance transport; mineral nutrient ion uptake and transport; growth at cellular and organismal levels, and its hormonal regulation; responses to light, gravity, temperature, etc. Prerequisite: Biological Sciences core.
4 units, Win (Roy)

258. Neural Development—Seminar for graduate students, with optional lectures that meet jointly with 158. See 158.
4 units (McConnell) alternate years, given 2000-01

280A. Environmental Microbiology I—(Enroll in Civil and Environmental Engineering 274A.)
3 units, Aut (Spormann)

280B. Environmental Microbiology II—(Enroll in Civil and Environmental Engineering 274B.)
3 units, Win (Spormann)

280C. Environmental Microbiology Laboratory—(Enroll in Civil and Environmental Engineering 274C.)
3 units, Spr (Spormann)

283. Theoretical Population Genetics—Detailed survey of models in population genetics. Selection, random drift, gene linkage, migration and inbreeding, and the influence they have on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisite: consent of instructor.
1 unit, Aut (Feldman)

290. Teaching of Biological Science—Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor.
1-5 units, Aut, Win, Spr (Staff)

291. Development and Teaching of Core Experimental Laboratories—Preparation for teaching the core experimental courses (44X and 44Y). Emphasis on lab, speaking, and writing skills. Focuses on updating the lab to meet the changing technical needs of the students. Must be taken prior to teaching either of the above courses. Prerequisite: selection by instructor.
2 units, Aut, Win (Staff)

PRIMARILY FOR GRADUATE STUDENTS

300. Research—For graduate students only. Individual research taken by arrangement with in-department or out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biological Sciences students and requires an approved department petition. See http://www.stanford.edu/dept/biology/undergrad/honors/, Research and Honors under "Research Courses" for information on research sponsors, units, petition instructions, deadlines, credit for summer research, and out-of-Stanford research.
1-3 units (Mooney, Berry, Staff) given 2000-01

301. Current Topics in Molecular, Cell, Developmental, Genetic, and Integration Biology—Enrollment limited to Biological Science Ph.D. students in the first year of graduate study. Lectures in areas of faculty's current research interests first three weeks.
1 unit, Aut (Staff)

302. Current Topics in Population Biology—Required of first-year graduate students in population biology and open to all graduate students. Discussion of the major conceptual issues and developing topics in population biology.
1 unit, Win (Staff)

303. Concepts in Population Biology—Required of first-year graduate students in population biology and open to all graduate students. Discussion of the major conceptual issues and developing topics in population biology.
1 unit, Win (Staff)

304. Concepts in Population Biology—Required of first-year graduate students in population biology and open to all graduate students. Discussion of the major conceptual issues and developing topics in population biology.
1 unit, Spr (Staff)

305. Seminar on DNA Repair and Genetic Toxicology—Enrollment limited to graduate students and advanced undergraduate students doing research in this field. Literature review and discussion of current research, emphasizing experimental approaches for studying DNA damage processing in bacteria, yeast, and mammalian cells. Prerequisite: consent of instructor.
1-3 units, Aut, Win, Spr (Hanawalt)

306. Current Topics in Integrative Organismal Biology—Enrollment limited to graduate students doing research in this field.
1 unit, Aut (Staff)

307. Seminar in Microbial Ecology and Evolution—Discussion of recent and classical research papers in microbial ecology and evolution, and presentation of research in progress by participants. Prerequisite: consent of instructor.
1-3 units (Watt) given 2000-01

315. Seminar in Biochemical Evolution—Literature review and discussion of current topics in biochemical evolution and molecular evolutionary genetics. Prerequisite: consent of instructor.
1-3 units (Watt) given 2000-01

325. Professional Responsibility and Academic Duty—Seminar for dissertation-level Ph.D. candidates who intend academic careers. Topics: teaching and preparation for it, obligations to students, faculty governance, obligations to the institution and conflict of interest, consulting, research and research funding, regulation of the conduct of research, roles of reviewers and editors, intellectual property and academic authorship, misconduct in research, constraints on freedom of publication. Class participation and final paper required. Enrollment limited to 25. Prerequisite: consent of instructor.
3 units, Aut (Kennedy)

333. Seminar in Evolutionary Ecology—Literature review and research discussion on a selected topic in ecology and evolution. Student participation required. Prerequisite: consent of instructor.
1-3 units (Ackerly) alternate years, given 2000-01

3 units (Mooney, Berry, Field) alternate years, given 2000-01

342. Plant Biology Seminar—Topics announced at the beginning of
346. Advanced Seminar in Molecular Biology—Enrollment limited to graduate students directly associated with departmental research groups in genetics or molecular biology.
1-3 units, Aut, Win, Spr (Long, Campbell, Sporman, Grossman, Yanofsky)

360. Frontiers in Interdisciplinary Biosciences—(Enroll in Biochemistry 459.)
1 unit, Aut, Win, Spr (Spudich, Robertson, Chu, Mobley)

383. Seminar in Population Genetics—Literature review and research discussion of current problems in the theory and practice of population genetics and molecular evolution. Student participation required. Prerequisite: consent of instructor.
1-3 units, Aut, Win, Spr (Fieldman)

384. Seminar in Theoretical Ecology—(Same as Geophysics 185Y.) Discussion of recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.
1-3 units, Spr (Roughgarden)

DIVISION OF MARINE BIOLOGY
HOPKINS MARINE STATION

Emeritus: (Professor) John H. Phillips, Jr.; (Professor-Research) R. Paul Levine
Director: Dennis A. Powers (on leave 1999-2000)
Acting Director: George N. Somero
Professors: Mark W. Denny, David Epel, William F. Gilly, Dennis A. Powers, George N. Stuart H. Thompson
Associate Professor: Barbara A. Block
Courtesy Professor: Irving L. Weissman
Lecturer: James M. Watanabe

The Hopkins Marine Station is at Pacific Grove, on the south side of Monterey Bay, 90 miles from the main University Campus. The 11-acre grounds, on the main portion of Cabrillo Point, include a sheltered landing place and storage for small boats. Buildings include the Lawrence Blinks Laboratory, Alexander Agassiz Laboratory, Jacques Loeb Laboratory, Harold A. Miller Library, Monterey Boat Works, Walter K. Fisher Laboratory, Tuna Research and Conservation Center, and De Nault Family Research Building. The 15,000 volume library subscribes to approximately 450 journals, and its collections are particularly strong in embryology, marine biology, microbiology, and oceanography.

The station is open during the entire year and maintains a permanent staff of resident investigators and technical assistants. The staff is supplemented by visiting faculty members, especially during the summer. There are facilities for visiting investigators and for elementary and advanced instruction in biology. For further information, write Hopkins Marine Station, Pacific Grove, CA 93950.

COURSES

56H. Seminar: History and Philosophy of Science—The nature of scientific inquiry, its logic, historical patterns, and sociology. Emphasis is on the unique aspects of the biological sciences.
2 units, Spr (Somero)

160H/260H. Cell Physiology—(Graduate students register for 260H.) The structures and processes that control life at the cellular level. Topics: membrane structure and function, signal transduction, the cytoskeleton, transport processes, cell division, cell-cell interactions, and motility. Similar to Bio. 121 but using marine examples. Prerequisites: Biology Core or consent of instructor.
4 units, Win (Epel)

161H/261H. Invertebrate Zoology—(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine form examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Prerequisites: Biology core or consent of instructor.
5 units, Win (Watanabe)

162H/262H. Comparative Animal Physiology—(Graduate students register for 262H.) Physiological principles are examined using the diversity of solutions apparent in vertebrates and invertebrates, and focusing on how animals work. Topics: physiology of respiration, circulation, energy metabolism, thermoregulation, osmotic regulation, muscle physiology, and locomotion. Labs introduce physiological measurements with animals, discussion sections emphasize current topics in evolutionary and ecological physiology. Prerequisites: Biology core.
5 units (Block) alternate years, given 2000-01

163H/263H. Principles of Oceanic Biology—(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Recommended: Physics 21 or 51, Chemistry 31, Biology Core, or consent of instructor.
4 units, Win (Denny, Somero)

164H/264H. Marine Botany—(Graduate students register for 264H.) Introduction to plants in the sea. Phytoplankton and oceanic productivity, macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisites: Biology Core or consent of instructor.
4 units (Staff) alternate years, given 2000-01

165H/265H. Air and Water—(Graduate students register for 265H.) Introduction to environmental physics. The physical properties of life’s fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: Physics 21, 23, or 51, 53; calculus; Biology Core; or consent of instructor.
3 units (Denny) alternate years, given 2000-01

166H/266H. Locomotion—(Graduate students register for 266H.) How animals and plants swim, crawl, run, and fly. The principles of fluid and solid mechanics determine the possibilities and limitations of organismal motion. Recommended: Physics 21 or 51, Biology Core, or consent of instructor.
3 units, Win (Denny) alternate years, not given 2000-01

167H/267H. Nerve, Muscle, and Synapse—(Graduate students register for 267H.) Fundamental aspects of membrane excitability and conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Prerequisites: Physics 23, 28, 43, or equivalent; Chemistry 31, 135; calculus; or consent of instructor.
5 units, Win (Gilly)

168H/268H. Seminar: Cellular Signal Transduction—(Graduate students register for 268H.) Lecture/seminar, group discussions. Focus is on
169H/269H. Neurobiology and Behavior—(Graduate students register for 269H.) The neural mechanism responsible for generating animal behavior. Topics: neuronal excitability, synaptic plasticity, signal transduction, and neural circuits. Lectures, discussions, demonstrations, and lab. Prerequisites: Biology Core or consent of instructor.
5 units, Win (Thompson)

170H/270H. Seminar: Topics in Marine Biology—(Graduate students register for 270H.) A specific topic of current interest to marine science is explored through discussion of the primary literature. Prerequisites: Biology Core or consent of instructor.
1 unit, Win (Staff)

171H/271H. Ecological and Evolutionary Physiology—(Graduate students register for 271H.) The interplay between environmental factors (e.g., temperature, light, nutrient supply, salinity, and oxygen availability) and adaptive change at the physiological level. Emphasis is on marine species and the roles played by physiological adaptations in establishing their distribution and performance. Prerequisites: Biology core or consent of instructor.
4 units (Somero) given 2000-01

172H/272H. Marine Ecology—(Graduate students register for 272H.) Introduction to the principles of ecology as applied to life in the sea. Population dynamics, community ecology, and the effects of man on the oceans. Lectures, lab. Prerequisites: Biology core or consent of instructor.
5 units, Win (Staff)

173H/273H. Marine Conservation Biology—(Graduate students register for 273H.) Offered with the support of the Pew Conservation Trust. The science of preserving marine diversity and the major conservation issues associated with marine ecosystems. Topics: the decline of open fisheries, salmon conservation, bycatch issues in fisheries, the use of marine reserves, marine invasions and pollution, and global warming. Guest lecturers from other universities who specialize in marine conservation.
3 units (Block) alternate years, given 2000-01

174H/274H. Chance in Biology: Experimental Design and Probability—(Graduate students register for 274H.) Random behavior on the part of molecules, organisms, and the environment is an integral part of life. Introduction to the study of chance effects in a biological context. Topics: the use of statistics in the proper design and analysis of experiments and the use of probability theory to predict the effects of chance in diffusion, action potentials, chemotaxis, sight, hearing, and predator-prey interactions. Prerequisites: Biology Core or consent of instructor.
3 units, Spr (Denny, Watanabe)

175H. Problems in Marine Biology—Designed primarily to engage advanced undergraduates in research. Lectures, lab work, field studies, and individual problems. Prerequisites: junior or senior standing and consent of instructors.
12 units, Spr (Epel, Gilly, Levine, Somero, Thompson, Watanabe)

198H. Directed Instruction/Reading—May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biological Sciences majors and requires department approval.
Aut, Win, Spr, Summer—both terms (Staff)

199H. Undergraduate Research—For experience in biological research, qualified undergraduate students may undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.
Aut, Win, Spr, Summer—both terms (Staff)

200H. Research—Graduate study involving original work may be undertaken with members of the staff in the fields indicated:
B. Block: Comparative Vertebrate Physiology—biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy.
M. Denny: Biomechanics—the mechanical properties of biological materials and their consequences for animal size, shape, and performance.
W. Gilly: Neurobiology—analysis of giant axon systems in marine invertebrates from molecular to behavioral levels.
R. P. Levine: molecular biology and biochemistry of biomineralization.
G. Somero: Ecological and Evolutionary Physiology—adaptations of marine organisms to the environment: temperature, pressure, desiccation, and oxygen availability.
S. Thompson: Neurophysiology—neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neurotransmission.
J. Watanabe: Marine Ecology—kelp forest ecology and invertebrate zoology.

SUMMER PROGRAM
The summer program is open to all advanced undergraduate, graduate, and postdoctoral students, and to teachers whose biological backgrounds, teaching, or research activities can benefit from a summer's study of marine life. Application blanks and further information may be obtained by writing to Hopkins Marine Station, Pacific Grove, CA 93950. Completed applications should be submitted by March 31. Applications received later are considered if space is still available.

The Summer Quarter is divided into two terms. It is possible to register for either term, or for the full quarter. Registration is possible for only one course during each term.

FIRST TERM

179H. Subtidal Communities—Lectures, lab, and field trips treating shallow water marine communities. Emphasis is on local habitats and the introduction of physical environmental parameters, community composition, aspects of the biology of constituent species, and methods for subtidal studies. Prerequisites: SCUBA certification, SCUBA equipment, ocean diving experience, and some background in biology.
6 units (Watanabe)

238H. Biomechanics of Intertidal Organisms—Introduction to the mechanical design of wave-swept organisms, emphasizing the ecological implications of wave forces. The theories of water waves, fluid dynamics, and solid mechanics; the design of materials, structures, whole organisms, and communities. Recommended: background in invertebrate zoology, algology, or intertidal ecology; basic physics and calculus.
5 units (Denny) alternate years, not given 2000-01
277H. Biomechanics and Ecological Physiology of Intertidal Communities—Introduction to the mechanical and physiological design of wave-swept organisms. How different abiotic stresses (wave exposure, wind speed, temperature, light) influence marine animals and plants, and adaptive responses to these stresses. Lab introduces methods for measuring environmental stress and organismal responses. Recommended: background in algology, intertidal ecology, or invertebrate zoology; basic physics and calculus.

4 units (Denny, Somero) alternate years, given 2000-01

SECOND TERM

180H/280H. Problems in Subtidal Ecology—(Graduate students register for 280H.) Group and individual research projects focus on shallow water marine communities, emphasizing the importance of identifying a relevant problem through review of the scientific literature, formulating an adequate research plan, and collecting data in the field. Lectures/discussions focus on proper experimental design, data analysis, and critiques of selected papers from the scientific literature. Prerequisites: 179H or consent of instructor; SCUBA certification, SCUBA equipment, and ocean diving experience.

6 units (Waitanabe)

BIOPHYSICS PROGRAM

Professors: Richard W. Aldrich (Molecular and Cellular Physiology), Steve Block (Applied Physics), Steven Boxer (Chemistry), Martin J. Brown (Radiation Oncology), Steven Chu (Applied Physics), Sebastian Doniach (Applied Physics), Philip C. Hanawalt (Biological Sciences), Keith O. Hodgson (Chemistry), Wray H. Huestis (Chemistry), Oleg Jarzetzky (Molecular Pharmacology), Ron Kopito (Biological Sciences), Roger D. Kornberg (Structural Biology), Michael Levitt (Structural Biology), Harden M. McConnell (Chemistry), David B. McKay (Structural Biology), W. E. Moerner (Chemistry), Norbert Pelc (Radiology), Ed Solomon (Chemistry), James A. Spudich (Biochemistry, Developmental Biology)

Associate Professors: Gilbert Chu (Oncology), Amato Giaccia (Radiation Oncology), David Heeger (Psychology), Daniel Herschlag (Biochemistry), Jody Puglisi (Biochemistry), William Weis (Structural Biology)

Assistant Professors: Jody Puglisi (Biochemistry), William Weis (Structural Biology)

The Biophysics Program offers instruction and research opportunities leading to the Ph.D. in Biophysics. Students admitted to the program may perform their graduate research in any appropriate department.

GRADUATE PROGRAM

For information of the University’s basic requirements for the Ph.D. degree, see the “Graduate Degrees” section of this bulletin.

A small number of highly qualified applicants are admitted to the program each year. Applicants should present strong undergraduate backgrounds in the physical sciences and mathematics. The graduate course program, beyond the stated requirements, is worked out for each student individually with the help of appropriate advisers from the Committee on Biophysics. The requirements and recommendations for the Ph.D. degree include:

1. Training in physics or chemistry equivalent to that of an undergraduate physics or chemistry major at Stanford.
2. Completion of the following courses (or their equivalents):
   a) Biophysics 250
   b) Biochemistry 200, 201
   c) Chemistry 131, 171, 173, and 175
   d) Structural Biology 241 and 242
   e) Additional courses as required for the individually tailored program
3. Proficiency in one or more foreign languages and/or a computer language may be required at the discretion of the major professor.
4. Opportunities for teaching are available during the first nine quarters, at the discretion of the advising committee.
5. The student must prepare a Dissertation Proposal defining the research to be undertaken, including methods of procedure. This proposal should be submitted by Winter Quarter of the third year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Committee on Biophysics. The candidate must defend the dissertation proposal in an oral examination. The Dissertation Reading Committee normally evolves from the Dissertation Proposal Review Committee.
6. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of biophysics.
7. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

COURSES

205. DNA Repair and Mutagenesis—(Enroll in Biological Sciences 205.)

3 units, Spr (Hanawalt)

210. Advanced Topics in Membrane Biochemistry—(Enroll in Biochemistry 210.)

4 units (Pfeffer)

210A. Principles of Cell Physiology—(Enroll in Molecular and Cellular Physiology 210.)

4 units, Spr (Aldrich, Lewis)

214. Physical and Chemical Principles of Biochemistry—(Enroll in Biochemistry 214.)

4 units, Spr (Herschlag)

225. Molecular Motor Proteins and the Cytoskeleton—(Enroll in Biochemistry 225, Developmental Biology 225.)

3 units, Win (Spudich), Spr (Robertson)

228. Protein and Nucleic Acid Structure, Dynamics, and Engineering—(Enroll in Structural Biology 228.)

3 units, Win (Levitt)

232. Macromolecular Structure: Diffraction Methods and Diffraction Results—(Enroll in Structural Biology 232.)

3 units, Win (Weis, McKay)

237. Introduction to Biotechnology—(Enroll in Biochemistry 237, Biological Sciences 237, Chemical Engineering 450, Civil and Environmental Engineering 237, Developmental Biology 237, Structural Biology 237.)

3 units, Spr (Robertson)

3 units, Aut (Baldwin, Puglisi, Weis)

242. Methods in Molecular Biophysics—(Enroll in Structural Biology 242.)

3 units, Win (Baldwin, McKay, Puglisi, Weis)

250. Seminar in Biophysics—All graduate students in Biophysics must participate. Presentation of current research projects and results by all faculty in the Biophysics Program.

1 unit, Aut, Win (Staff)

255. Responsible Conduct of Research—All graduate students must complete.

Win

289. Biophysical Chemistry—(Enroll in Chemistry 289.)
3 units (Staff) not given 1999-2000

291. Biophysical Chemistry—(Enroll in Chemistry 291.)
3 units (Staff) not given 1999-2000

3 units (Solomon) alternate years, given 2000-01

300. Research
(Staff)

Other biophysics courses in related departments:
Chemistry 251, Neurobiology 216.

Other recommended courses:
Biological Sciences 230, 252; Biochemistry 200; Chemistry 271, 273, 275; Physics 170, 171, 230, 231, Structural Biology 211.

CHEMISTRY*

Chair: Barry M. Trost

Associate Professors: Christopher E. Chidsey, Chaitan Khosla, T. Daniel P. Stack

Assistant Professors: Hongjie Dai, Justin DuBois, Vijay S. Pande, Thomas J. Wandless

Courtesy Professors: Curtis W. Frank, Alice P. Gast, Robert J. Madix

Courtesy Associate Professor: Daniel Herschlag

Courtesy Assistant Professors: Stacey F. Bent, Karlene A. Cimprich

Lecturer: Jonathan Touster

* The curriculum leading to the B.S. degree in Chemical Engineering is described in the "School of Engineering" section of this bulletin.

UNDERGRADUATE PROGRAMS

BACHELOR OF SCIENCE

Entrance Preparation—Students intending to major in chemistry are expected to have entrance credit in the preparatory subjects of chemistry, physics, and mathematics (including algebra and plane trigonometry). Those who do not have entrance credit or equivalent training in these subjects, particularly mathematics, may experience some difficulty in meeting the department requirements for graduation in four years, especially if they expect to pursue a program leading to professional certification by the American Chemical Society or to the B.S. degree with Honors. A year or more of secondary school preparation in German is also desirable.

Minimum Requirements—University Writing and General Education Requirements; Mathematics 41, 42, 51, 53; Physics 41, 43, 45, 46, 47, 48; Chemistry 31, 33, 35, 36, 131, 132, 133, 134, 151, 153, 171, 173, 174, 175, 176. In addition, Computer Science 106A, 106B, and a reading knowledge of scientific German is strongly recommended for students planning graduate study. Students interested in attending overseas campuses should consult their advisers as early as possible to avoid scheduling problems. Note that it is particularly convenient to attend an overseas campus during Spring Quarter of the second or third year, since the courses listed in this quarter may be delayed to subsequent years without disadvantage. No required course may be taken on a credit/no credit basis.

TYPICAL SCHEDULE FOR A FOUR-YEAR PROGRAM

FIRST YEAR

Course No. and Subject  
Chem. 31. Chemical Principles 4  
Chem. 33. Structure and Reactivity 4  
Chem. 35. Monofunctional Compounds 4  
Chem. 36. Chemical Separations 4  
Math. 41, 42. Calculus, Linear Equations 5  
Writing and General Education Requirements or Electives* 6  
Totals 15 15 15

SECOND YEAR

Chem. 131. Polynuclear Compounds 3  
Chem. 132. Qualitative Organic Analysis 5  
Chem. 133. Special Topics in Organic Chemistry 3  
Chem. 134. Theory and Practice of Quantitative Chemistry 5  
Chem. 136. Synthesis Laboratory (elective) 3  
Math. 53. Differential Equations 5  
Physics 41, 43, 45-46. Mechanics, Electricity, and Magnetism 3  
Electives* 3  
Totals 16 15 15

THIRD YEAR

Chem. 151, 152. Inorganic Chemistry 3  
Chem. 171, 173, 175. Physical Chemistry 3  
Chem. 174, 176. Physical Chemistry Laboratory 5  
Physics 47-48. Light and Heat 5  
Electives* 7  
Totals 15 15 15

FOURTH YEAR

Electives* 15 15 15

* Elective courses must be used to complete the University Writing, General Education, and Language Requirements. They may also be used to broaden one's background in science and nonscience areas and to provide an opportunity for advanced study in chemistry. Courses offered by other departments that may be of interest to chemistry majors include Biochem. 200, 214; Biol. Sci. 31, 32, 33; Chem. Eng.; 20, 120, 130; Civ. & Envir. Eng. 170, Comp. Sci. 106A, B; Econ. 1; English 191; Engr. 50; Geo. & Envr. Sci. 278; Mat. 44, 106, 109B, 111, 131, 132, Mat. Sci. & Engr. 50; Physics 110, 111, 132, Stat. 60, 108, 116.

MINORS

Courses required for a minor are Chemistry 33, 35, 36, 130 or 132, 131, 134, 151, 171 and their Mathematics (19, 20, 21 or 41, 42) and Physics (41, 43, 45, 47) prerequisites (no substitutions). No course for the minor may be taken on a credit/no credit basis.

AMERICAN CHEMICAL SOCIETY CERTIFICATION

Students who wish to be certified as having met the minimum requirements of the American Chemical Society for professional training must complete, in addition to the above requirements, at least 6 units from Chemistry 136 and/or 190; and at least 3 additional units from one of the following: Chemistry 136, any chemistry course numbered above 200 for which permission to register had been granted by the instructor, Biochemistry 200, or an advanced course in mathematics or physics. A reading knowledge of German or Russian is strongly recommended.

HONORS PROGRAM

A limited number of undergraduates may be admitted to the Chemistry honors program at the beginning of the senior year. Those completing the program satisfactorily receive the B.S. degree in Chemistry with Honors.

Admission to the program requires a grade point average (GPA) of at least 3.0 on all course work in the University. In addition to the minimum requirements for the B.S. degree, the student must complete 9 units of Chemistry 190 to be taken 3 units per quarter for three quarters during the junior/senior years; and 9 additional units (including 3 units in chemistry) from Biochemistry 200, 214; Chemistry 221, 223, 225, 251, 253, 255, 271, 273, 275, 297; Mathematics 131, 132; Physics lecture courses numbered greater than 100; or other advanced courses approved by the
department’s Undergraduate Study Committee. Students may not overlap (“double-count”) courses for completing honors, major, minor, and coterminous requirements. An overall grade point average (GPA) of 3.3 in all chemistry, mathematics, and physics course work including 9 (most recent) units in Chemistry 190 is required for a degree with honors.

Students who wish to be admitted to the honors program should register in the department undergraduate office in Mudd 283 at the beginning of the senior year. Those who do not meet all of the above formal requirements may petition the department for admission.

TEACHING CREDENTIALS

The requirements for certification to teach chemistry in the secondary schools of California may be ascertained by consulting the section on credentials under the “School of Education” section of this bulletin and the Credential Administrator of the School of Education.

GRADUATE PROGRAMS

The University’s basic requirements for the M.S., M.A.T., and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

GENERAL REQUIREMENTS

Qualifying Examinations—Each new graduate student must take qualifying examinations on entrance. These examinations consist of three written exams of two hours each in the fields of inorganic, organic, and physical chemistry, and cover such material as ordinarily is given in a rigorous one-year undergraduate course in each of these subjects. Students majoring in biophysical chemistry must pass examinations in biophysical and physical chemistry, and either organic or inorganic chemistry. Students who fail to pass these examinations in the Autumn Quarter are required to repeat them during the first week of the Winter Quarter. All qualifying examinations are given the week before instruction begins in Autumn Quarter, and must be taken at that time.

Satisfactory performance is required for permission to begin dissertation research and to continue work for an advanced degree. Students on full-time fellowships may complete all requirements for the Ph.D. degree in nine quarters. Students on research or teaching assistantships may complete their requirements in fifteen quarters.

Candidates for advanced degrees must have a minimum grade point average (GPA) of ‘B’ for all chemistry lecture courses as well as for all courses taken during graduate study. Required courses may not be taken with the credit/no credit option. All students are expected to give full time to graduate work once they have begun dissertation research. All prospective Ph.D. candidates, regardless of the source of financial support, are required to gain teaching experience as an integral part of graduate training. During the period in which a dissertation is being read by members of the faculty, candidates must be available for personal consultation until the dissertation has had final department approval.

MASTER OF SCIENCE

Applicants for the M.S. degree in Chemistry are required to complete, in addition to the requirements for the bachelor’s degree, a minimum of 36 units of work and an M.S. thesis. Of the 36 units, approximately two-thirds must be in the department and must include at least 12 units of advanced course work in chemistry exclusive of the thesis. Of the 12 units, at least 3 units must be from Chemistry 221, 223, 225, 251, 253, 255, 271, 273, 275, or 297.

MASTER OF ARTS IN TEACHING (CHEMISTRY)

In cooperation with the School of Education, the department offers a program leading to the Master of Arts in Teaching (Chemistry). This degree is for candidates who have a teaching credential and wish to strengthen further their academic preparation. The program consists of a minimum of 25 units in the teaching field and 12 units in the School of Education. Detailed requirements are outlined under the “School of Education, Master of Arts in Teaching” section of this bulletin. Not offered 1999-2000.

DOCTOR OF PHILOSOPHY

Graduate students are eligible to become formal candidates for the Ph.D. degree after passing the department qualifying examinations, satisfactorily completing most of the formal lecture course requirements, and beginning satisfactory progress on a dissertation research project. They then file for admission to candidacy for the Ph.D. degree. This filing must be done before June of the second year of graduate registration.

After passing the departmental qualifying examinations, students select research advisers by first interviewing at least ten members of the Chemistry faculty about their research. Students then file an Application to Start Research form with the Department of Chemistry Graduate Study Committee and begin research on their Ph.D. dissertation under the supervision of an adviser. All students in good standing are required to start research by the end of the Winter Quarter of the first year of graduate registration.

There is no foreign language requirement for the Ph.D. degree.

Candidates for the Ph.D. degree are required to participate continually in the department seminar (Chemistry 300), and in the division seminar of the major subject. In addition, continuous enrollment in Chemistry 301 is expected after the student has passed the qualifying examinations and chosen a research supervisor. As part of graduate training, Ph.D. candidates are required to gain experience as teaching assistants.

Before candidates may request scheduling of the University oral examination, clearance must be obtained from the major professor and the chair of the department’s Graduate Study Committee. Conditions that must be fulfilled before clearance is granted vary with the different divisions of the department and may be ascertained by consulting the chair of the committee.

It is the policy of the department to encourage and support in every possible way the pursuit of research and other advanced work by qualified students. Information about staff members with lists of their recent research publications is found in Chemistry at Stanford and the Directory of Graduate Research published by the American Chemical Society.

COURSE REQUIREMENTS

Students major in inorganic, organic, and physical, or biophysical chemistry. All graduate students are required to take six graduate-level courses (course numbers greater than 199) of at least 3 units each in chemistry or related disciplines (for example, biochemistry, electrical engineering, mathematics, pharmacology, physics, and so on), to be selected in consultation with their research adviser and the Graduate Study Committee. At least four of these courses should be taken in the first year.

In addition, students majoring in Organic Chemistry must take 3 units in Chemistry 231 in the second year and 3 units in 233 in the second and third year. Required courses must be taken for a letter grade.

Students majoring in inorganic, physical or biophysical chemistry, or chemical physics and entering after 1998 must meet with their Reading Committee between the middle of their third year and the end of their fourth year to present past research and to propose and discuss ideas and research goals for the future. A written report of approximately two pages is given to the committee members prior to the mandatory meeting. The meeting consists of a 15-minute presentation plus discussion. The student and/or committee may ask for additional meetings prior to the thesis defense.

CHEMICAL PHYSICS

Students with an exceptionally strong background in physics and mathematics may, upon special arrangement, pursue a program of studies in chemical physics.

Ph.D. MINOR

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in chemistry must complete, with a GPA of 3.0 or higher, 20 graduate-level units in chemistry.
FELLOWSHIPS AND SCHOLARSHIPS

In addition to school fellowships and scholarships open to properly qualified students, there are several department fellowships in chemistry. Undergraduate scholarships are administered through the Financial Aid Office. Teaching assistantships and research assistantships are open to graduate students. Graduate fellowships, scholarships, and teaching assistantships are administered through the Department of Chemistry.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

Note—Lab fees, against which charges are made for breakage, are a minimum of $35 per quarter. Students taking courses with an * must preregister in the Department of Chemistry.

UNDERGRADUATE

22N. Stanford Introductory Seminar: The Frontiers of Science—Preference to freshmen. Expands the research focus of Chem. 32. Materials from readings on research breakthroughs, research seminars, and Ph.D. oral examinations campus-wide are integrated in discussions on the nature of modern research. Prerequisite: 32 or equivalent.

2 units, Win (Collman)

23N. Stanford Introductory Seminar: Chemistry and Biology—Preference to freshmen. An enrichment of introductory organic chemistry with biological applications. A clinically important molecule is selected to illustrate important contributions that biology has made to chemistry and vice versa. Topics: structure elucidation of complex molecules, chemical and biological synthesis of complex molecules, mechanism of action, and drug or agrochemical development. Prerequisite: 33 or equivalent.

2 units, Spr (Khosla)

24N. Stanford Introductory Seminar: Nutrition and History—Preference to freshmen. Intended to broaden the introductory chemistry experience (31, 32, or 33 would be useful). The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. GER:2a (DR:5)

3 units, Sum (Huestis)

26N. Stanford Introductory Seminar: Macromolecules—Is Bigger Better?—Preference to freshmen. Enrichment of the basic knowledge of chemistry with big molecules (31, 33, or equivalent would be helpful). An aspect of macromolecules, or polymers, is that some of their properties depend strongly on local chemical structure, whereas other properties can be described almost independently of their chemical structure. This mix of chemistry and physics is central to understanding the behavior of large molecules. The general features responsible for unusual properties in natural and man-made macromolecules and why polymers are replacing more traditional materials. Prerequisite: high school chemistry. GER:2a (DR:5)

3 units, Spr (Waymouth)

30. Introduction to Chemistry—Preparation for 31. For students with limited background in chemistry and mathematics. Introduction to chemical principles: moles, valence, stoichiometry, definitions, problem solving, quantitative skills.

3 units, Aut (Chidsey)

*31. Chemical Principles—For students with substantial chemistry background. Preparation for chemistry, chemical engineering, medicine, biochemistry, biology, and related fields. Atomic and molecular orbital theory, periodicity, bonding properties of matter, stoichiometry.

Recitation. Prerequisites: high school chemistry and algebra. Recommended: high school physics. GER:2a (DR:5)

4 units, Aut (Boxer, Stack)

Win (Fayer)

Sum (Staff)

*32. The Frontiers of Chemical Science—For students with AP Chemistry scores of 4 or 5 who wish to develop a deeper understanding. Complements a previous rigorous introduction to chemistry; encompasses structure and reactivity, and cuts across the traditional subdivisions of chemistry. Recent advances in structures, analytical methodologies, catalysis, redox phenomena, organometallic, and bio-inorganic chemistry. Lab and recitation. GER:2a (DR:5)

5 units, Aut (Collman, Zare)

*33. Structure and Reactivity—Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31, 32, or an AP Chemistry score of 4 or 5. GER:2a (DR:5)

4 units, Win (Wandless, Stack)

Spr (Wender)

Sum (Staff)

*35. Organic Monofunctional Compounds—Organic chemistry of oxygen and nitrogen aliphatic compounds. Recitation. Prerequisite: 33.

4 units, Aut (Waymouth)

Spr (DuBois, Huestis)

Sum (Staff)

*36. Chemical Separations—Techniques for separations of compounds: distillation, crystallization, extraction, and various chromatographic procedures. Lecture treats the theory; lab provides practice. Prerequisites: 33 and concurrent or previous enrollment in 35.

3 units, Spr (Touster)

Sum (Staff)

110. Directed Instruction/Reading—Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31 or 32, and 33; approval of the instructor and of the Chemistry Undergraduate Study Committee.

1-2 units (Staff)

*130. Theory and Practice of Identification—For students in biomedical sciences; Chemistry majors take 132. Lectures on theory and interpretation of ultraviolet, infrared, nuclear magnetic resonance, and mass spectral data. Lab involves identification of unknowns and components of a mixture using derivatives and spectra. Lab. Prerequisites: 35, 36 (36 and 130 should be taken in consecutive years). Corequisite: 131.

4 units, Aut (DuBois, Touster)

*131. Organic Polyfunctional Compounds—Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35.

3 units, Aut, Win (Huestis, Touster)

*132. Qualitative Organic Analysis—Required of and limited to chemistry majors; others may be admitted with consent of instructor. Separation of mixtures of organic compounds and identification of the components using rational synthesis and analysis of spectral data. Lab. Prerequisites: 35, 36, and concurrent registration in 131.

5 units, Aut (DuBois, Touster)

3 units, Win (Smith, Goldstein)
134. Theory and Practice of Quantitative Chemistry—Methods include gravimetric, volumetric, spectrophotometric, and electrometric. Lab. Prerequisite: 130 or 132. (WIM) 3 units, Win (Zare)

135. Physical Chemical Principles—Terminal physical chemistry for non-chemistry majors. Emphasis is on portions of physical chemistry most useful for students of the life sciences. Introduction to chemical thermodynamics, heterogeneous equilibria, thermodynamics of solutions, electrolytes, chemical kinetics, macromolecular solutions, and colloidal dispersions. Prerequisites: 31, calculus. 3 units, Win (Pecora)

136. Synthesis Laboratory—Advanced synthetic methods in organic and inorganic laboratory chemistry. Prerequisites: 130 or 132, 131. 3 units, Spr (Touster)

151. Inorganic Chemistry I—Systematic introduction to the theories of electronic structure, stereochemistry, and symmetry properties of inorganic and organometallic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and elementary ligand field and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35, 171. 3 units, Win (Collman)

153. Inorganic Chemistry II—Systematic presentation of the theoretical aspects of inorganic chemistry. Group theory; many electron atomic theory; molecular orbital theory, emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes; and theoretical aspects of electron transfer reactions. Prerequisites: 151, 173. 3 units, Spr (Solomon)

171. Physical Chemistry—Chemical thermodynamics; fundamental principles, Gibbbsian equations, equilibrium conditions, phase rule, systematic deduction of equations, gases, solutions. Prerequisites: 35; Mathematics 41, 42; Physics 41, 43, 45; and previous or concurrent registration in Physics 47. 3 units, Aut (Fande)

173. Physical Chemistry—Introduction to quantum chemistry; the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. 3 units, Win (Boxer)

174. Physical Chemistry Laboratory—Thermodynamics, transport, and rotation-vibration spectroscopy. Experimental techniques include electronics, potentiometry, amperometry, calomelometry, and Fourier-transform infrared spectroscopy. Lab tours and supporting lectures on experimental techniques used in research projects at Stanford. Lab. Prerequisites: 134, 171, previous or concurrent enrollment in 173; Mathematics 53, 103 or 113; and Physics 45, 46. Recommended: Physics 47. 4 units, Win (Chidsey)

175. Physical Chemistry—Introduction to kinetic theory and statistical mechanics: molecular theory of matter and heat, transport phenomena in gases, Boltzmann distribution law, partition functions for ideal gases. Introduction to chemical kinetics: measurement of rates of reactions, relationship between rate and reaction mechanism, consideration of specific reactions, transition-state theory of reaction rates. Prerequisite: 173. 3 units, Spr (Moerner)

176. Physical Chemistry Laboratory—Use of chemical instrumentation to study fundamental areas of physical chemical time-dependent processes. Experiments include reaction kinetics, fluorimetry, and nuclear magnetic and electron spin resonance spectroscopy. Lab. Prerequisites: 173, 174, previous or concurrent enrollment in 175. 3 units, Spr (Dai)

GRADUATE

Undergraduates may register for chemistry courses numbered above 200 only if admitted to the honors program or by consent of the instructor.

221. Advanced Organic Chemistry—Molecular orbital theory and orbital symmetry. Thermochemistry and thermochemical kinetics. Unimolecular reaction rate theory. Methods of determining organic reaction mechanisms from a theoretical and experimental point of view. Prerequisites: 133, 175. 3 units, Aut (Brauman)

223. Advanced Organic Chemistry—Continuation of 221 with emphasis on physical methods. Prerequisite: 221 or consent of instructor. 3 units, Win (Wandless)

225. Advanced Organic Chemistry—Continuation of 223. Organic reactions, new synthetic methods, conformational analysis, and exercises in the syntheses of complex molecules. Prerequisite: 223 or consent of instructor. 3 units, Spr (Wender)

227. Selected Topics in Organic Chemistry—May be repeated for credit. Possible topics: synthetic organic chemistry, photochemistry, inorganic-organic chemistry, bio-organic chemistry, reaction mechanisms, stereochemistry, structural chemistry of organic and biological molecules. 3 units (Staff)

229. Organic Chemistry Seminar—Attendance required of all graduate students majoring in organic chemistry. Students giving seminars register for 231. 1 unit, Aut, Win, Spr (Brauman)

230. Organic Chemistry Seminar Presentation—Required of all graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters. 1 unit, Aut, Win, Spr (Brauman)

232. Protein Science and Engineering—(Same as Chemical Engineer 452.) The physio-chemical interactions that govern structure and the function of proteins. Topics: protein function and structure, techniques for probing protein structure and function, mechanisms of protein function, design of proteins with novel properties. Examples from literature on enzymes. Recommended: background in physical and organic chemistry. 3 units, Win (Khosla)

233. Creativity in Organic Chemistry—Required of all second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report and two research proposals is practiced and criticized. Second-year students must enroll autumn and spring, 3rd year students must enroll winter. 1 unit, Aut, Win, Spr (Brauman)

235. Applications of NMR Spectroscopy—The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments. 3 units, Win (Keifer)

251. Selected Topics in Advanced Inorganic Chemistry—May be repeated for credit. Prerequisites: one year of physical chemistry, consent of instructor. 3 units (Staff) not given 1999-2000

279
253. Advanced Physical Inorganic Chemistry—Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance (including hyperfine interactions and zero field splitting) and electronic absorption spectroscopy (including vibrational interactions). Prerequisite: 153 or the equivalent.
3 units (Solomon) alternate years, not given 2000-01

257. Research Proposals in Inorganic Chemistry—May be required of second-year students in inorganic chemistry at the discretion of the research adviser. Research progress reports and research proposals are presented in oral and written form. Writing ability, oral defense, and scientific content is criticized.
1 unit, Aut, Win, Spr (Staff)

259. Inorganic Chemistry Seminar—Attendance required of all graduate students majoring in inorganic chemistry.
1 unit, Aut, Win, Spr (Staff)

271. Advanced Physical Chemistry—The principles of quantum mechanics. General formulation, mathematical methods, and elementary applications of quantum theory to the structure of atoms and molecules, including variational procedures, perturbation theory, operator and matrix methods, theory of angular momentum, and elements of the electronic structure of atoms. Prerequisite: 175.
3 units, Aut (Foyer)

273. Advanced Physical Chemistry—Topics in advanced quantum mechanics: vibrations and rotations of polyatomic molecules (normal modes, anharmonicity, wavefunctions and energy levels of rigid rotations, vibration-rotation interaction), \textit{ab initio} electronic structure theory (Hartree-Fock, configuration interaction, multiconfiguration self-consistent-field, and many-body perturbation theory techniques), angular momentum theory (operators and wavefunctions, Clebsch-Gordan coefficients, rotation matrices), time-dependent quantum mechanics (time evolution operator, Feynman path integrals, scattering theory, Born approximation, Lipmann-Schwinger equation, correlation functions), interaction of radiation and matter (semiclassical and quantum theories of radiation, transition probabilities, selection rules). Prerequisite: 271 or Physics 230.
3 units, Win (Dai)

275. Advanced Physical Chemistry—The basic principles and methods of statistical mechanics from the ensemble point of view, statistical thermodynamics, heat capacities of solids and polyatomic gases, chemical equilibria, equations of state of fluids, phase transitions. Prerequisite: 271.
3 units, Spr (Pande)

277. Selected Topics in Physical Chemistry—Possible topics: structure elucidation using diffraction techniques, advanced statistical mechanics, crystal field theory, advanced quantum mechanics, magnetic relaxation, advanced thermodynamics, chemical applications of group theory. May be repeated for credit. Prerequisite: 275 or consent of instructor.
3 units (Staff)

279. Physical Chemistry Seminar—Required of all graduate students majoring in physical chemistry.
1 unit, Aut, Win, Spr (Staff)

283. Research Proposals in Physical Chemistry—May be required of 2nd- and 3rd-year graduate students at the discretion of the research adviser. Students present research proposals and progress reports on their research in physical chemistry, using oral and written forms. Topics may be drawn from the student’s research of a related area in physical chemistry. Written form, oral presentation, and scientific merit are evaluated.
1 unit, Aut, Win, Spr (Staff)

287. Biophysical Chemistry—The theoretical and experimental aspect of biophysical phenomena, emphasizing membrane biophysics and membrane biology. Pre- or corequisites: 171 and 173, or the equivalent.
3 units (Staff) not given 1999-2000

289. Biophysical Chemistry—Experimental methods in biophysics. Emphasis is on spectroscopic techniques including magnetic resonance and optical methods. Prerequisite: 287.
3 units (Staff) not given 1999-2000

291. Biophysical Chemistry—Special topics in biophysical chemistry. Pre- or corequisites: 171 and 173, or the equivalent.
3 units (Staff) not given 1999-2000

293. Structural Inorganic Chemistry—Structural biophysical chemistry, x-ray crystallography, and related techniques as used in biophysical research. Electron and optical microscopy and neutron diffraction. Prerequisite: 291 or consent of instructor.
3 units (Staff) not given 1999-2000

3 units, Spr (Kool)

297. Bio-Inorganic Chemistry—Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.
3 units (Solomon) alternate years, given 2000-01

299. Teaching of Chemistry—Required of all teaching assistants in chemistry. Techniques of teaching chemistry by means of lectures and labs.
1-3 units, Aut, Win, Spr (Staff)

300. Department Colloquium—Required of all graduate students.
1 unit, Aut, Win, Spr (Staff)

301. Research in Chemistry—Required of all graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Students register giving section number of staff member and number of units agreed upon.
2 units, Aut, Win Spr (Staff)

459. Frontiers in Interdisciplinary Biosciences—Literature/discussion on how to critically evaluate the cutting edge of current research, held in conjunction with a seminar series, occurring once per month for 1999-2000, and more frequently thereafter. Leading investigators in interdisciplinary research from Stanford and from throughout the world present their work in a particular area. Before the seminar, students and faculty read and critically discuss one or more papers from the primary research literature on a related topic. After the seminar, students meet informally with the speakers to discuss the research and future directions. Emphasis is on how to read papers in the primary research literature, and familiarization with the broad set of techniques and approaches used to study problems in the biosciences. This interdisciplinary course is listed in many departments in the schools of Engineering, Medicine, Humanities and Sciences. Students should enroll in their affiliated department, if it is offered. If not, students may enroll in any department within their school where the course is listed.
1 unit, Aut, Win Spr (Spudich, Robertson, Chu, Mobley)

RESEARCH AND SPECIAL ADVANCED WORK
190. Introduction to Methods of Investigation—Limited to undergraduate students admitted under the honors program or by special arrange-
lectuate students are encouraged to undertake research, or advanced lab work, and a number of units agreed upon. For research and special work, students register for 200 (190, if undergraduate), giving section number of staff member under whom work is carried on and number of units agreed upon. (Staff)

CLASSICS

Emeriti: (Professors) Mark W. Edwards, Michael H. Jameson, Edward Spofford, Michael Wigodsky
Chair: Susan A. Stephens
Graduate Director: Andrea W. Nightingale
Undergraduate Director: Joseph G. Manning
Professors: Alessandro Barchiesi, Andrew M. Devine, Richard P. Martin, Marsh H. McCall, Jr., Ian Morris (Classics, History), Michael Shanks, Susan A. Stephens, Susan Treggiari (Classics and, by courtesy, History)
Associate Professors: Jody Maxmin (Art and Art History, Classics), Andrea W. Nightingale (Classics, Comparative Literature), M. Rush Rehm (Drama, Classics)
Assistant Professors: Joseph G. Manning, Reviel Netz, Yasmin Syed
Courtesy Professors: George Brown, Robert C. Gregg, Ian Hodder, Valentin Y. Mudimbe
Lecturers: Barbara Clayton, Maud Gleason
Acting Assistant Professors: Walter Scheidel, Jennifer Trimble
Visiting Professor: Eric Gruen
Visiting Assistant Professor: Joy Connolly

UNDERGRADUATE PROGRAMS

The Department of Classics offers courses on all aspects of Greek and Roman culture: art and archaeology, cultural studies, history, language, literature, and philosophy. The department offers five majors in Classics (Ancient History, Classical Studies, Greek, Greek and Latin, and Latin) which vary in the number of language courses they require; each of these majors can be completed in conjunction with a second major in the sciences or other humanities departments.

The major in Classics affords an opportunity to develop a competence in the classical languages; an appreciation, comprehension, and enjoyment of classical literature; and an understanding of the history and culture of the ancient world. The department is interested in students who wish to do their major work in Classics and in students who wish to relate work in Classics to work in other departments.

BACHELOR OF ARTS

Prospective majors in Classical Studies, Greek, and Latin (options 1, 2, and 3) are encouraged to declare at the beginning of the junior year but are urged to discuss their plans with the undergraduate director as early as possible. Students who choose to major in Greek and Latin (option 4) should begin the curriculum as soon as possible, since it is difficult to complete the language requirements without an early start; those with no previous knowledge of Latin or Greek should begin study in the freshman year or as early as possible in the sophomore year.

To declare the major, a student must fill out the Declaration of Major form in the Registrar’s Office and meet with the undergraduate director in the Department of Classics. At that time, the undergraduate director assigns each student a department adviser who helps to prepare a program of study; students should meet with their advisers at least once a quarter. Each student’s progress towards fulfillment of the major requirements is recorded in a file kept in the main office. It is the student’s responsibility to work with his or her adviser in keeping this file up to date.

The A.B. degree may be earned by fulfilling the requirements for one of the five following majors:

1. Classical Studies: at least 60 units, including at least two courses in Latin or Greek at the 100 level or higher, or one course in one of the languages at the 100 level or higher plus the series 1, 2, 3, or 51 and 52 in the other language (or an equivalent approved by the department). In addition, students are required to take the Majors Seminar (378-176) and at least one course in each of the following five groups: ancient history, art and archaeology, literature in translation, philosophy, religion and mythology. Students are strongly urged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region. This major is recommended for students who wish to study the classical civilizations in depth but do not wish to study the languages to the extent required by options 2, 3, and 4. It is not suitable for students who wish to do graduate work in Classics or to teach Latin or Greek in high school, as the language work is insufficient for these purposes.

2. Greek: at least 60 units, including a minimum of 31 units in Greek courses at the 100 level or higher (it is recommended that one of these courses be Greek 175A, although this course should not be attempted until students have completed three years of Greek). In addition to courses in Greek, students are required to take the Majors Seminar (378-176) and at least one course in each of the following three groups: history and/or archaeology, literature in translation, and religion and/or philosophy. The introductory sequence (1, 2, 3, or 51 and 52) or one 100-level course in Latin is recommended. Beginning courses in Greek, if required, may be counted towards the total of 60 units. Relevant courses in other departments of the humanities may count towards the major with the consent of the undergraduate director. Students are strongly urged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region.

3. Latin: at least 60 units, including a minimum of 31 units in Latin courses at the 100 level or higher (it is recommended that one of these courses be Latin 175A, although this course should not be attempted until students have completed three years of Latin). In addition to courses in Latin, students are required to take the Majors Seminar (378-176) and at least one course in each of the following three groups: history/archaeology, literature in translation, and philosophy/religion. The introductory sequence (1, 2, 3, or 51 and 52) or one 100-level course in Greek is recommended. Beginning courses in Latin, if required, may be counted towards the total of 60 units. Relevant courses in other departments of the humanities may count towards the major with the consent of the undergraduate director. Students are strongly urged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region.

4. Greek and Latin: at least 60 units, including 30 units in Greek courses and the same number in Latin. It is recommended that students take Greek 175A or Latin 175A (or both), although these courses should not be attempted until students have completed three years of the respective language. All students are required to take the Majors Seminar (378-176); it is strongly recommended that students take a course in ancient history. Relevant courses in other departments of the humanities may count towards the major with the consent of the undergraduate director. Students are strongly urged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region.

5. Ancient History Major: at least 60 units of approved courses. All courses counted for the degree must be taken for a letter grade. Students must satisfy four requirements:

a) Writing in the Major (WIM) Requirement: this is fulfilled by taking the Majors Seminar (5 units), Interpreting Antiquity (378-176).

b) Depth Requirement. A major must take at least 40 units of ancient history and civilization courses, drawn from courses with 371 and 378 prefixes. The courses chosen must be approved in advance by the undergraduate director. With the approval
of the instructor and the undergraduate director, students may substitute graduate seminars in ancient history for some of these courses.

c) Breadth Requirement. Each student must take at least 4 units in each of the following areas: archaeology and art; comparative ancient civilizations; historical and social theory. The courses chosen must be approved in advance by the undergraduate director, and will normally be chosen from the list of recommended courses below:

1. Archaeology and Art, for example, any course with the 372 prefix; Cultural and Social Anthropology 1/100, 90, 92, 211, 253, 272, 275; Archaeology 33; Art and Art History 100A, B, or C, 120A, 200, 200C.

2. Comparative Ancient Civilizations, for example, Anthropological Sciences 4, 7, 10, 103, 106, 150; History 192A.

3. Historical and Social Theory: for example, Cultural and Social Anthropology 1/101, 90; History 173C, 202; Sociology 1, 114, 136, 140, 142, 170.

Students are strongly urged to meet with the undergraduate director to discuss options for pursuing a period of study in the Mediterranean region.

Note 1: University credit earned by placement tests or advanced placement work in secondary school is not counted towards any major program in the department; work done in other universities or colleges is subject to department evaluation.

Note 2: A letter grade is required in all courses taken for the minor. No course receiving a grade lower than 'C' is counted toward fulfilling major requirements.

MINORS

The undergraduate director meets with each student who opts for a minor to discuss his/her chosen curriculum and assigns the student an adviser in the relevant field. Students are required to work closely with their advisers to create a cohesive curriculum within each area. Students may organize their curriculum according to different principles: for example, they may wish to focus on a specific historical period (Classical Athens, Imperial Rome), or on a specific theme or topic (women in antiquity). After consulting with the adviser, each student must submit (in writing) a "Proposed Curriculum" to the undergraduate director. Students may proceed with the minor when the undergraduate director has approved the proposal. Courses offered in Greek and Latin above the 100 level may count toward the minor, provided the subject matter is suitable. Students may choose between three minors in Classics:

1. **Classical Languages**: students are required to take a minimum of five courses in Greek or in Latin plus the Majors Seminar (378-176). Students wishing to combine Greek and Latin may only do so if courses for one of the two languages are all above the 100 level; for example, Greek 51, 52, plus Latin 103, 111, 175.

2. **History**: students are required to take a minimum of five courses in history, art history, and archaeology plus the Majors Seminar (378-176). Courses offered in Latin and Greek that focus on historical topics or authors may count toward the minor.

3. **Literature and Philosophy**: students are required to take a minimum of five courses in classical literature or philosophy plus the Majors Seminar (378-176). Courses offered in Latin and Greek that focus on philosophical or literary topics or authors may count toward the minor.

All students minoring in Classics are required to take the Majors Seminar (378-176), Interpreting Antiquity, which is writing intensive.

HONORS PROGRAMS

A minimum grade point average (GPA) of 'B+' in Classics courses is required for students to enroll in the honors program. To be considered for honors in Classics, the student must select a professor who can supervise him or her on this honors thesis. Together with the supervisor, the student writes a two- to three-page proposal at the beginning of the senior year. The proposal should outline the project in detail, list relevant courses that have been taken, and name the supervisor. The department gives approval only if it is satisfied that the student has a sufficient basis of knowledge derived from department course work in the general areas the thesis covers (that is, course work in art, Greek, and/or Latin language, history, literature, philosophy, and so on). If the proposal is approved, the student may sign up for Undergraduate Thesis (378-199) during one or two quarters of the senior year for a maximum of 6 units a term, up to an overall total of 10 units. Honors are awarded only if the essay receives a grade of 'B+' or higher from the supervisor and a second reader.

HUMANITIES

For majors in Classics with appropriate interests, the honors program in Humanities is available, a description of which is found under the "Interdisciplinary Studies in Humanities" section of this bulletin.

OVERSEAS STUDIES

**Funding**—Students whose record in Classics indicates that they are fully qualified for a given program may apply for funding from the Department of Classics. Students must submit a proposal to the undergraduate director, which should include an itemized list of expenses based on the fees charged by the program (that is, room, board, tuition, and other expenses). Limited funding is available each year; preference is shown to students with strong records.

**Programs**—

1. **Rome**: Classics majors are encouraged to apply for the Intercollegiate Center for Classical Studies (ICCS) in Rome. Duke University manages the center for about 50 constituent colleges and universities. It is open to Sanford majors in Classics, History, and Art History. All students receive full credit at Stanford and may be applied to the respective major. Students interested in this program should consult the undergraduate director and the ICCS representative in the Department of Classics as early as possible in their career at Stanford to plan their course preparation and application. Competition is strong and applicants are expected to have taken one or more courses in Roman history and at least two years of Latin before they arrive in Rome. Brochures are available at the department office.

   Other programs offer a quarter, semester, or summer session in Rome. Interested students are urged to visit Bechtel International Center.

2. **Greece**: students are encouraged to apply for the summer session at the American School of Classical Studies in Athens. The school is recommended principally for Classics majors with at least two years of ancient Greek. A student wishing to apply should prepare by taking courses in Greek history, archaeology, and art; beginning Modern Greek is strongly recommended. Applicants should see the undergraduate director early in the academic year. Other programs offer a quarter, semester, or summer session in Greece. Interested students are urged to visit Bechtel International Center.

GRADUATE PROGRAMS

MASTER OF ARTS

University requirements for the master's degree are described in the "Graduate Degrees" section of this bulletin.

Students who have completed an undergraduate major in Classics (Greek and/or Latin) or its equivalent may be accepted as candidates for the A.M. degree in Classics or A.M. in Classics in the field of Greek and Latin, and may expect to complete the program in twelve months (usually three quarters of course work plus three months study for the thesis of examination). Students without an undergraduate major in Classics may also be accepted as candidates, though they may require a longer period of study before completing the requirements for the degree. These requirements are:

1. Attaining a standard of scholarship such as would be reached by three quarters of study in the department after fulfilling the requirements for an undergraduate major in the department. Normally, this means completing at least 18 units of graduate courses and 18 units of work at the 140 level or above.

2. Satisfactory completion of one Greek course at the 100 level (if the undergraduate major has been Latin) or one Latin course at the 100 level (if the undergraduate major has been Greek).
3. Passing an examination testing the candidate's ability to translate into English from a selected list of Greek and/or Latin authors.
4. Satisfactory completion of the 275A, B sequence in at least one language (Latin or Greek).
5. Writing a thesis, or passing of an examination on a particular author or topic, or written work having been accepted by the graduate committee as an equivalent. Three completed and satisfactory seminar papers are normally an acceptable equivalent.
6. Reading knowledge of French or German.
7. Completion of a Program Proposal for a Master's Degree form in the first quarter of enrollment.

Candidates for the Ph.D. degree may also (on the recommendation of the department) become candidates for the A.M. degree. In their case, requirement 5 above is waived provided that they have completed some work beyond the course requirements listed under requirements 1 and 2 above.

DOCTOR OF PHILOSOPHY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

All candidates for the Ph.D. degree in Classics must fulfill the following requirements:

1. Complete at least three years (nine quarters) of full-time work, or equivalent, in study beyond the bachelor's degree. This must include the 175-205 sequence and the 202-203 sequence (unless the student is exempted by examination) and normally at least twelve graduate seminars acceptable to the department, in addition to the doctoral dissertation. At least three consecutive quarters of graduate work and the final units of credit in the program must be taken at Stanford. More detailed information on the Ph.D. program is available from a brochure in the Department of Classics office.

2. Candidates are required to pass examinations as follows:
   a) Reading examinations in French and German. In some circumstances Italian may be substituted for French. Students should plan to satisfy this requirement as soon as possible, normally no later than the end of the second year.
   b) Translation examinations into English from a prepared set of Greek and Latin authors. These examinations must be taken at the end of the first year and at the end of the second year as part of the requirement for the 202-203 sequence.
   c) General examinations in four of the following fields: Greek literature, Latin literature, ancient philosophy, Greek history, and Roman history. At least one field must be historical and another must be literary. Students select the fields in consultation with the graduate director no later than June of the second year of graduate study. Three of the fields are tested by written examination combined with a supplemental general oral examination. General examinations must be taken in October of the third year.
   d) The University oral examination on the candidate's dissertation. The examinations in translation from Greek and Latin authors must be taken at the end of the first and at the end of the second year of graduate work, the general written and oral examinations in October of the third year, and the University oral examination at the end of the dissertation. In preparing for the general examinations, candidates are expected to make full use of relevant secondary material in modern languages. They should therefore plan to satisfy the requirements in French and German as soon as possible, preferably before the translation examinations. Except in very special circumstances, candidates may not take the general examinations until the modern language requirements have been completed.

3. Each candidate, after passing the general examination, selects a dissertation director who must be a member of the Academic Council. In consultation with the dissertation director, the candidate prepares a statement of the dissertation topic to be submitted for approval by the Graduate Committee. When the statement of the dissertation topic has been approved, the candidate, the dissertation director, and the Graduate Committee collaborate to select an appropriate dissertation committee.

4. All students are required to undertake the equivalent of four one-quarter courses of teaching under department supervision. This teaching requirement must be completed during the second and third years of study.

Ph.D. MINOR

For a graduate minor, the department recommends at least 20 units in Latin or Greek at the 100 level or above, and at least one course at the graduate (200) level.

CLASSICS AND A MINOR FIELD

The Ph.D. in Classics may be combined with a minor in another field, such as anthropology, history, humanities (see below), classical linguistics (see below), or philosophy. Requirements for the minor field vary, but might be expected to involve about six graduate-level courses in the field and one written examination, plus a portion of the University oral exam. Such a program is expected to take five years. The department encourages such programs for especially able and well prepared students and is normally able to offer one fellowship each year to support a student in the fifth year of a combined program. The following timetable would be typical for a five-year program:

First Year: course work, almost entirely in Classics. One translation exam taken in June. One or both modern language exams taken.
Second Year: course work, both in Classics and the minor field. Second translation exam completed. French and German exams completed.
Third Year: course work, both in Classics and the minor field. General examinations in Classics.
Fourth Year: remaining course work, both in Classics and the minor field. General examination in the minor field. Preparation for dissertation.
Fifth Year: dissertation, University oral examination.

GRADUATE PROGRAM IN HUMANITIES

The Department of Classics participates in the Graduate Program in Humanities leading to the joint Ph.D. degree in Classics and Humanities. For a description of that program see the "Interdisciplinary Studies in Humanities" section of this bulletin.

COMPARATIVE LITERATURE

The Department of Classics cooperates closely with the graduate program in the Department of Comparative Literature. Interested students should consult the chair of the department.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

GREEK

UNDERGRADUATE

Students whose major work is in another department and who wish to fulfill a departmental foreign language requirement by taking Greek should consult their departmental advisers to determine the precise nature of that department's requirements.

Courses in Greek all have department prefix 373.

1. First-Year Greek—For beginners.
   5 units, Aut (Clayton)

2. First-Year Greek—Continuation of 1.
   5 units, Win (Clayton)

3. First-Year Greek—Continuation of 2.
   5 units, Spr (McCall)

10. Intensive First-Year Greek—Intensive beginning Greek equivalent to 1, 2, 3. The goal is the reading of easy classical or New Testament
Greek by the end of the quarter. Short readings in philosophical Greek are included.

8-9 units, Sum (Staff)

51/52. Accelerated First-Year Greek
10 units, given 2000-01

INTERMEDIATE/ADVANCED

Students are admitted to these courses by completing Greek 3, 10, or 51-52, or on the basis of previous work done in secondary school or elsewhere. Usually two to three years of secondary school Greek qualifies a student for 101, three to four years for 111. Students with previous knowledge of Greek should consult the undergraduate director in Classics to determine the course for which they are best suited.

Students whose major work is in another department and who wish to fulfill a departmental foreign language requirement by taking Greek should consult their department advisers to determine the precise nature of that department's requirements. Most departments are satisfied if part of the series 101, 102, 103 is completed.

101. Second-Year Greek—Selections from Plato, Xeophon, Lucian. 5 units, Aut (Coty)

102. Second-Year Greek—Greek Tragedy, one play. 5 units, Win (Kleps)

103. Second-Year Greek—Homer, selected books from the Odyssey. 5 units, Spr (Martin)

104. New Testament Greek 2-3 units, given 2000-01

111. Third-Year Greek—Poetry 3-5 units, Aut (Prince)

112. Third-Year Greek—Prose. 3-5 units, Win (Serfass)

113. Third-Year Greek—Plato. 3-5 units, Spr (Netz)

175/275A,B. Greek Syntax—(First-year graduate students register for 275.) The nuances of Greek syntax and style, stylistic analysis of selected prose authors, techniques of sight-translation, and the writing of idiomatic Greek prose. Begins the 5th week of the Winter Quarter and continues through the end of the Spring Quarter. Prerequisite for undergraduates: three years of Greek.

2 units, Win (Syed) (Sweeks) 4 units, Spr (Syed)

370. Advanced Greek Prose or Verse Composition 2-3 units, any quarter (Staff)

LATIN

UNDERGRADUATE

Students whose major work is in another department and who wish to fulfill a departmental foreign language requirement by taking Latin should consult their department's advisers to determine the precise nature of those requirements. Most departments are satisfied if part of the series 101, 102, 103 is completed.

Courses in Latin have department prefix 375.

1. First-Year Latin—For beginners. 5 units, Aut (Henchy)

2. First-Year Latin—Continuation of 1. 5 units, Win (Henchy)

3. First-Year Latin—Continuation of 2. 5 units, Spr (Henchy)

10. Intensive First-Year Latin—Intensive beginning Latin equivalent to 1, 2, 3; or 51 and 52. The goal is the reading of easy Latin prose and poetry by the end of the quarter.

8-9 units, Sum (Staff)

51. First-Year Latin—Accelerated. 6 units, given 2000-01

52. First-Year Latin—Accelerated; continuation of 51. 6 units, given 2000-01

INTERMEDIATE/ADVANCED

Students are admitted to these courses by completing Latin 3, 10, 51, and 52, or on the basis of previous work done in secondary school or elsewhere. Usually two to three years of secondary school Latin qualifies a student for 101, three to four years for 111. Students with previous knowledge of Latin should consult the undergraduate director in Classics to determine the course for which they are best suited. Students whose major work is in another department and who wish to fulfill a departmental foreign language requirement by taking Latin should consult their department’s advisers to determine the precise nature of those requirements. Most departments are satisfied if part of the series 101, 102, 103 is completed.

101. Second-Year Latin—Poetry and prose of the Republic. 5 units, Aut (Treggiari)

102. Second-Year Latin—Poetry and prose of the Empire. 5 units, Win (Hawkins)

103. Second-Year Latin—Selections from Vergil, Aeneid, selected books. 5 units, Spr (Connolly)

111. Third-Year Latin—Poetry, lyric. 3-5 units, Aut (Barchiesi)

112. Third-Year Latin—Poetry. 3-5 units, Win (D. Smith)

113. Third-Year Latin—Poetry. 3-5 units, Spr (Clayton)

175/275A,B. Latin Syntax—(First-year graduate students register for 275.) Intensive review of Latin syntax. Begins in Autumn Quarter and ends the 5th week of the Winter Quarter. Prerequisite for undergraduates: minimum of three years of Latin.

4 units, Aut (Devine) 2 units, Win (Devine) (five weeks)

177. Introduction to Paleoigraphy and Codicology—(Enroll in English 209.) 4-5 units, Aut (Brown)

370. Advanced Latin Prose or Verse Composition 2-3 units, any quarter (Staff)

GRADUATE

These courses have department prefix 378.

202A,B,C, 203A,B,C. Survey of Greek and Latin Literature—Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material is in roughly equal proportions, poetry and prose organization is generic. Non-Classics majors may take one or more quarters without the language component.
202A. Epic
4-5 units, given 2000-01

202B. Ancient Philosophy
4-5 units, given 2000-01

202C. Greek Drama
4-5 units, given 2000-01

203A. History
4-5 units, Aut (Scheidel)

203B. Lyric and Bucolic
4-5 units, Win (Martin)

203C. Rhetoric
4-5 units, Spr (Connolly)

205A.B. The Semantics of Grammar—Supplements Latin and Greek
275, providing an introduction to the grammatical encoding of semantic and informational meaning. Topics: case, gender, tense, and aspect. A theoretical background for teachers of Greek and for the analysis of literary and non-literary texts.
2 units, Aut (Devine)
1 unit, Win (Devine)

Some of the above courses may be continued the following quarter by arrangement with the instructor. This usually requires the writing of an extended research paper based on work directly related to the course.

COURSES IN TRANSLATION

UNDERGRADUATE

These courses have department prefix 378.

1. An Introduction to Ancient Egyptian Hieroglyphics—The ancient Egyptian writing system has more than 3,000 years of continuous development covering stories, letters, and documents concerning the history of women, law, economics, and medicine. Introduces the language and its scripts to be able to read basic texts and inscriptions. The legacy of the ancient Egyptian language and Egyptian texts to the classical world and beyond.
3-4 units, given 2000-01

2. Introduction to Coptic—The Coptic language is the final stage of ancient Egyptian. It is a key language for the study of early Christianity and the survival pagan culture in Egypt, and the key to the decipherment of the Rosetta Stone and Egyptian hieroglyphic writing. The basic grammar and, as time permits, some important literature preserved in Coptic (the "New Testament" and the "Saying of the desert fathers").
3-4 units, Aut (Manning)

12. Greek Tragedy—The tragedies produced in 5th-century Athens represent a moment in the history of human creativity. Introduces the range and depth of Greek tragedy. Twelve plays by Aeschylus, Sophocles, and Euripides are studied with Aristotle’s Poetics and Aristophanes’ Frogs. Emphasis is on the power and complexity of the poetry, the connections to 5th-century social and political issues, and the performance conditions and conventions of the ancient theater. GER:3a (DR:7)
3-5 units, given 2000-01

16N. Stanford Introductory Seminar: Bimillennium, High and Low Life in Rome 2000 Years Ago—Preference to freshmen. The evidence for how people of different classes, from slaves and laborers to senators and the emperor, lived in the time of Augustus. Topics: the City of Rome and its monuments, demographic factors, living conditions, status and wealth, work, leisure, family, marriage, and sexual life.
3-4 units, Aut (Treggiari)

18. Greek Mythology—The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to study of individuals and society. Illustrated lectures. Selected readings, in translation, of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy. GER:3a (DR:8)
3-4 units, Spr (Syed)

20N. Stanford Introductory Seminars: Love and Death in Epic
Poetry—Preference to freshmen. Great epics: Homer’s Iliad and Odyssey, Virgil’s Aeneid and Derek Walcott’s Omeros (which won the Nobel Prize). Epic poems deal with central issues of human life: love, death, and the meaning of life. What is a hero, and how do the different works celebrate and/or criticize different heroic attributes? What sorts of gods inhabit the world of the epic? What roles do women play in heroic narratives, and what is their status in relation to the male characters? How do these poems deal with the subject of war and human violence? In a world of suffering and loss, what gives human life significance and value? What happens when an epic is set in Rome instead of Greece or in contemporary St. Lucia (a Caribbean Island) instead of ancient Greece or Rome? How do the different cultures in which these authors lived affect the form and substance of the epic?
3-4 units, Win (Nightingale)

21N. Stanford Introductory Seminar: Love as an Art Form in Latin
Poetry and the European Novel—Preference to freshmen. Can love be taught? Two texts from different historical periods conceptualize love as a teachable art form: Ovid’s didactic poem The Art of Love and Choderlos de Laclos’ epistolary novel Les Liaisons Dangereuses. These are contrasted with contemporaneous depictions of love as a romantic experience (the poetry of Catullus and Propertius and Jane Austen’s Sense and Sensibility). Do ideas about the nature of love change over time? Are they influenced by the politics of the time in which they are written? What roles do literary factors such as generic convention and literary tradition play in the depiction of love?
3-4 units, Aut (Syed)

30Q. Stanford Introductory Seminar: Literature and Culture of Modern Greece—Preference to sophomores. Focus is on modern Greece since its establishment as a nation. Discussion and analysis of literary works of prominent authors, films, and documents highlight issues related to Greek institutions, social structures, traditions, and culture. Emphasis is on topics of ethnicity, Greek heritage and national identity, kinship and gender issues, and migration patterns. GER:3a (DR:7)
3-5 units, Aut (Prionas)

117. Gender, Violence, and the Body in Ancient Religion—Greek religious rites of gender reversal; Bacchanalian ecstasy in Greece and Rome; exquisite suffering, martyrdom as erotic spectacle; harlots of the desert who mortified the flesh; holy anorexia: the search of medieval women for spiritual transcendence. The changing meanings assigned to the body in the ancient world’s search for holiness; why contact with the divine was often manifested violently, and how ancient concepts of gender informed ritual practice, and how Christianity’s idealization of the suffering body offered new problems and possibilities for women. GER:3b,4c (DR:9)
3-4 units, Aut (Stephens, Gleason)

137. The Greek Invention of Harmony and Proportion—A painting by Leonardo, a Bach fugue, and Einstein’s theory of relativity represent the idea that the universe embodies certain simple, mathematical relations, which offer the key to truth and beauty. This idea arose in classical Greece, through the twin concepts of harmony and proportion. Where did such ideas come from, and what was their original significance? The way Greek science and culture mutually reinforced each other, in a wide range of beliefs about proportions: between geometrical figures or inside cities, in the human body, or on the guitar. Proportion and harmony, for the Greeks, connected the abstract and the concrete and led to intellectual and aesthetic breakthroughs: perspective painting, Western musical harmony, the idea of mathematical physics, etc. By understanding the historical background to such developments, strands in contemporary culture from the “arts” and “the sciences” are recognized as essentially belonging together.
4 units, Spr (Netz)
139. Medicine in Ancient Greece and Rome—Contemporary medical practice traces its origins to the creation of “Scientific Medicine” by Greek doctors, e.g., Hippocrates and Galen. Is this something modern medicine can be proud of? The scientific achievements and the ethical limitations of ancient medicine. Contemporary ideas and practices that had their beginning in the ancient world, a world where “scientific medicine” was no more than another form of “alternative medicine.” “Scientific Medicine” had to compete in the marketplace of ideas, struggling to be recognized where the boundaries between the scientific and social aspects of medicine were difficult to draw. This background for the creation of modern medicine helps us understand better the interaction between medicine and society in our own culture. GER:3b (DR:9)
4 units, Aut (Netz)

169. Introduction to the Ethics of Socrates, Plato, and Aristotle—The ethical philosophy of Socrates, Plato, and Aristotle, and its relation to traditional Greek notions of goodness and happiness. The ideological systems (gender, sexuality, race, and class) which these thinkers set out to corroborate or contest. The nature of philosophic language and its relation to other kinds of discourse (especially poetry and rhetoric). GER:3a (DR:8)
4-5 units, Win (Nightingale)

176. Majors Seminar: Interpreting Antiquity—The field of Classics, including an introduction to basic theoretical issues in classical literature, history, and philosophy. The evolution and coherence of the discipline of classics, and the various ways in which antiquity was/is appropriated by post-classical cultures. (WIM)
3-5 units, Spr (McCall)

CLASSICS/HISTORY

These courses have department prefix 371.

17N. Stanford Introductory Seminars: Decoding Ancient Egypt—Preference to freshmen. The ancient Egyptian hieroglyphic writing systems are one of the world’s oldest and longest lasting languages, and one of the most efficient modes of communication ever invented. How the writing system was deciphered by Champollion in the context of 19th-century European cultural history. The basic hieroglyphic signs and the grammar of ancient Egypt. Emphasis is on the discussion of the Egyptian writing system, analysis of actual Egyptian texts and museum objects, and their relationship to ancient Egyptian history and culture. At the end of term, students can read a variety of Egyptian texts.
3-4 units, Spr (Manning)

18N. Stanford Introductory Seminars: All is a Number—Preference to freshmen. Did Pythagoras really say, “All is a number?” What could that mean? The diverse ways Greeks used numbers and thought about them. How to count the Greek way, and how to use the Greek Abacus. What was the role of numbers in Greek economic, political, and social life? What were the ideas the Greeks first developed concerning numbers, starting with Pythagoras and the Pythagoreans. How was Greek thinking about the role of numbers in the universe at the root of Western sciences and mysticism?
3-4 units, Win (Netz)

101. History of Greece—The social, political, economic, and cultural history of ancient Greece, from the fall of the Bronze Age palaces (c.1200 B.C.) to the death of Alexander the Great (323 B.C.). Focus is on the class and gender structures of Athenian democracy, and on the struggles for power between the Greek city-states. Readings from original sources in translation.
4-5 units, Aut (Scheidel)

4-5 units, Win (Scheidel)

101A. Reading Tutorial in History—in Greek.
3-4 units, any quarter (Staff)

102. Roman History I: The Republic—How did Rome grow from a village to the capital of a Mediterranean empire? The underlying factors of culture, customs, and structures of Rome in the context of a world of tribes and city-states. For the later period, contemporary texts.
4-5 units, Win (Scheidel)

103. Roman History II: The Empire—The Roman Empire from the dictatorship of Julius Caesar and the Principate of Augustus through the consolidation of the system and the brink of its later crisis. Emphasis on the achievement of Augustus in establishing a constitutional system, the Principate, which gave relative peace and security to the Roman world for 250 years; the subsequent history of the Julio-Claudian dynasty; the life and culture of the empire (Mediterranean lands and Europe) during the first two centuries A.D.; the contribution of Rome to the cultures of western Europe and its successors (e.g., literature, architecture, science, the transmission of Greek and Judeo-Christian ideas, and the acculturation of Romans to non-Romans and the non-transmission of Roman culture elsewhere). Contemporary texts and archaeological data where possible. GER:3b (DR:9)
4-5 units, Spr (Treggiari)

105. History and Culture of Egypt—Survey of the history and culture of ancient Egypt from the pre-dynastic, 3100 B.C., through the early Christian period, A.D. 500. Emphasis is on historical development and continuity and the contribution of Egyptian culture to other Mediterranean societies. GER:3b,4a (DR:2 or 9)
4-5 units, Spr (Manning)

108A. Reading Tutorial in Late Antiquity—in Greek or Latin.
3-4 units, any quarter (Staff)

121. Slavery Ancient and Modern—How and why slave labor became important in some societies; the relationships between slavery, serfdom, and free labor; the violent domination of slaves; slave resistance and rebellion; and the collapse of servile economies. Emphasis is on comparative approaches; case studies from ancient Greece and Rome and modern Africa and America.
3-4 units, given 2000-01

CLASSICS, ART/ARCHAEOLOGY

Courses in Classical Art and Archaeology have department prefix 372.

33. Landscape: From Fine Art to Archaeology—Landscape is about people’s relationship with environment, land, place, and history. How range of disciplines and media since the 18th century have approached this complex and evocative idea. The aim is to explore interdisciplinary links and to locate this contentious ideological field in its historical and intellectual context. Topics: landscape in paintings, modes of visiting European romanticism, contemporary land and environmental art, new human geographies of place, landscape architecture, and garden design, anthropological perspectives on people’s relationships with land, and landscape archaeology. GER:3b (DR:9)
4-5 units, Win (Shanks)

34. The City of Rome: A Social Topography—Traditional Roman topography presents the city of Rome as an assemblage of individual monuments. The history and significance of the ancient city range from the period of Roman state formation, its emergence as caput mundi in the Late Republic and Early Empire, and its ultimate transformation into a Christian City. These developments are explored spatially and socially, emphasizing a range of material evidence and to historical and literary sources in urban design, public and private architecture, supply systems, entertainment facilities, and the provisions for death that shaped and changed the city, over time, in terms of Roman social organization and lived experience.
4-5 units, Aut (Trimbile)

100A. Archaic Greek Art—(Same as Art and Art History 100A.)
4 units, Aut (Maxmin)
History 100B.

Art History 202C.

CoUoquium: Aspects of Later Greek Art—(Same as Art and Art History 100C.)

Museum ART AND ARCHAEOLOGY (372)

candidates from other departments, advanced classics majors, and oth-

301. Hellenistic Poetry

4-5 units, Win (Stephens)

303. Art in Roman Empire: Ideology, Place, and the Individual—

What do images do in an imperial system? How do they do it? Modern

and ancient thinking about the role of images in the public spaces of the

early and high Roman Empire. Drawing on new works of art and the

religious practices of cultural politics in Italy, N. Africa, Egypt, Asia

Minor, and Roman Greece, examines the role of images in framing

imperial meaning and the shaping of individual responses. Selected

images and their context of viewing, and discussion in terms of ideology,

reception, tensions of the empire and place, and individual agency.

4-5 units, Spr (Trimble)

304. Thinking through Archaeology: Key Issues in Theory—Archae-

ological theory is a major area of international debate in the discipline.

The cutting edge of archaeology is inseparable from the development of

a sophisticated body of thought and principles aimed at understanding

archaeologists and the material remains of society. Theory equips

students with the tools for understanding. Practicing archaeologists are

critically aware of their character as human science. The place of the

archaeology in a contemporary (post) modern and postcolonial world.

4-5 units, Win (Shanks)

LATIN (375)

322. Roman Epic: Statius' 'Achilleid'—Detailed reading of the epic frag-

ment 'Story of Achilles or Achilleid', composed at the end of the Domitianic

period, in the mid-90s BC. The text focuses on gender and sexual differ-

cences and the recapitulation in miniature of virtually the whole epic tra-
dition of Greece and Rome. Discussions, and varied presentations on the

anti-epic within epic, on gender and genre, on Imperial projects of man-

hood, on Greek myth in Roman art and poetry, and on programmatic writing.

4-5 units, Aut (Barchiesi)

GENERAL (378)

300. Ancient Economies—Surveys recent literature and problems in the

structure of ancient economies, from the classical economies of Greece

and Rome to Hellenistic economic structures, including Ptolemaic Egypt.
The classic account of Moses Finley, how new and reinterpreted docu-

mentary evidence and archaeology have shaped new understandings in

the ways in which the ancient economies worked and how they differ from

each other and from modern ones. Attention to theory and to an exami-
nation of the texts which have shaped the theory. Required review of a

body of literature on one aspect of the ancient economy and research paper.

4-5 units, Aut (Manning)

302. Classical Archaeology: Experiences of the Discipline—The re-

mains of Classical Greece still fascinate and have generated a global

culture. How archaeologists have dealt with the ancient Greek world. The

history and workings of a discipline, of communities of academics. The

thesis that archaeologists deal with source materials and that these require

interpretations. How interpretation proceeds depends upon the charac-
ter of the evidence, the ideas and preconceptions of the archaeologist, and

their interests and aims. Interpretations differ and change. The experi-

ence of archaeology is not a set of static images of past gone, but a pro-
cess of detection and supposition, following connections, constructing

plausibilities forever rooted in uncertainty.

4-5 units, Aut (Sanks)

303. Art in Roman Empire: Ideology, Place, and the Individual—

What do images do in an imperial system? How do they do it? Modern

and ancient thinking about the role of images in the public spaces of the

early and high Roman Empire. Drawing on new works of art and the

religious practices of cultural politics in Italy, N. Africa, Egypt, Asia

Minor, and Roman Greece, examines the role of images in framing

imperial meaning and the shaping of individual responses. Selected

images and their context of viewing, and discussion in terms of ideology,

reception, tensions of the empire and place, and individual agency.

COMMUNICATION

Emeriti: (Professors) Elie Abel, Richard A. Brody; (Professors—Teaching) Ronald Alexander, Marion Lewenstein
Chair: Kristine Samuelson
Director, Institute for Communication Research: Byron B. Reeves
Director, John S. Knight Fellowships for Professional Journalists: James V. Risser
Director, Documentary Film and Video: Jan Krawitz
Director, Journalism: Theodore L. Glasser
Director, Media Studies: Henry Breitrose
Deputy Director, John S. Knight Fellowships for Professional Journalists: James Bettinger
Professors: Henry S. Breitrose, Steven H. Chaffee (on leave Autumn), Theodore L. Glasser, Shanto Iyengar (on leave Winter), Jan Krawitz (on leave Spring), Byron B. Reeves, Donald F. Roberts, Kristine Samuelson
Associate Professor: Clifford I. Nass
Assistant Professors: François Bar (on leave), Laura Lecats (on leave)
Professor (Teaching): James V. Risser
Consulting Professor: Jon Else
Visiting Professors: Dale Maharidge, William Woo
Lecturer: Lynn Rampoldi-Hnilo

The Department of Communication engages in research in communication and offers curricula leading to the A.B., A.M., and Ph.D. degrees. The A.M. degree prepares students for research on mass media or for careers in journalism or documentary film and video. The Ph.D. degree leads to careers in teaching and research-related specialties. The Institute for Communication Research offers research experience primarily to advanced Ph.D. students.

The John S. Knight Fellowship Program brings promising mid-career professional journalists to the University to study for nine months in a nondegree program. Six International Fellows sponsored by Reuters Foundation, the Knight Foundation, and others join twelve U.S. journalists.

ADMISSION

Prospective Undergraduate Students—Write to the University’s Office of Undergraduate Admissions, Stanford University, Stanford, California 94305.

Prospective Graduate Students—Write to Graduate Admissions, the Registrar’s Office, Stanford University, Stanford, CA 94305-3005. Online application also readily available via the web http://www.applyweb.com/aw/stanford.

The department requires that applicants for graduate admission submit verbal and quantitative scores from the Graduate Record Examination (GRE). Admission to each graduate degree program is competitive based on the pool of applicants each year rather than on standard criteria that can be stated in advance.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

PREPARATION

Before declaring the major, students must have completed or be concurrently enrolled in Communication 1, 106 or 108; and Statistics 60 or Psychology 10. Students interested in declaring the major should speak to the student services administrator in building 120, room 434 during the scheduled office hours.

PROGRAM OF STUDY

The undergraduate curriculum is intended for liberal arts students who wish to develop a fundamental understanding of communication in society, drawing on the perspective of the social sciences. Undergraduate students majoring in communication are expected to become acquainted with the fundamental concerns, theoretical approaches, and methods of the field, and to acquire advanced knowledge in one or more of the subareas of communication institutions, processes, and effects.

While the department does not attempt to provide comprehensive, practical training at the undergraduate level, the curriculum provides opportunities for professional practice including courses in print and broadcast journalism, and internships.

The department is committed to providing students with the analytical and critical skills that are necessary for future success, be it in graduate programs, professional schools, or immediate career entry.

The major is structured to provide several levels of study: a core curriculum, intended to expose students to a broad-based understanding of communication theory and research, and a number of intermediate-level options and electives. Majors also have the opportunity to do advanced research in the form of senior projects and honors theses.

All undergraduate majors are required to complete a set of either Communication courses which include 1, Mass Communication and Society (5 units); 104, Writing and Reporting the News (WIM, 5 units), 106, Communication Research Methods (5 units); and 108, Communication Process and Effects (5 units).

Students must also complete an introductory course in statistics (typically Psychology 10 or Statistics 60) in preparation for courses in methodology and advanced courses in communication processes and effects. It is recommended that this be done as soon as possible so as not to prevent registration in a course requiring statistical understanding.

In addition to the core courses and the statistics requirement, undergraduate majors select courses from the areas described below. Many of the courses require core courses as prerequisites.

Area I: Communication Processes and Effects—Area I emphasizes ways in which communication scholars conduct research in, and consider the issues of, human communication. These studies aim to provide expert guidance for social policy makers and media professionals. A minimum of two courses must be taken from Communication 130, 137, 155, 160, 166, 169, 170, 172.

Area II: Communication Systems/Institutions—Area II considers the roles and interaction of institutions such as broadcasting, film, journalism, constitutional law, and business within communication and mass communication contexts. A minimum of two courses must be taken from Communication 116, 122A or B, 125, 131, 133, 141A or B, 142, 178, 183.

To be recommended for the A.B. degree in Communication, the student must complete at least 60 units (approximately twelve courses) in the department. No more than 10 units of transfer credit or Summer Session may be applied to meet department requirements. Communication majors must receive a letter grade for all communication courses unless they are offered only for satisfactory/no credit (S/NC).

MINORS

PREPARATION

Before declaring the minor, students must have completed or be concurrently enrolled in Communication 1, 106 or 108; and Statistics 60 or Psychology 10. Students interested in declaring the minor should visit the registrar’s web site (www-Ireland.stanford.edu/dept/registrar) to apply for the minor.
The minor is structured to provide a foundation for advanced course work in communication through a broad-based understanding of communication theory and research.

The minor in Communication consists of three introductory Communication core courses which include 1, Mass Communication and Society (5 units); 106, Communication Research Methods (5 units); and 108, Communication Process and Effects (5 units).

In addition to core courses, the minor requires a minimum of five intermediate-level elective courses in the department. The department also requires completion of or concurrent registration in an introductory statistics course (Statistics 60, 70, or Psychology 10) prior to registration in Communication 106, Communication Research Methods. It is strongly recommended that the course in statistics be taken as early as possible, preferably in the Autumn Quarter of the junior year.

Students interested in declaring a minor must do so no later than registration in the Autumn Quarter of the junior year. Core courses are offered only once annually, and they constitute a sequence.

Prerequisite: introductory statistics course (for example, Psychology 10)

Core Courses: Communication 1, 106, 108

Area I, Communication Processes and Effects. A minimum of one course from Communication 130, 137, 155, 160, 166, 169, 170, 172

Area II, Communication Systems and Institutions. A minimum of one course from Communication 116, 122A,B, 125, 131, 133, 141A,B, 142, 178, 183

Plus three elective courses

Some courses are not given every year. Refer to program handout and the Time Schedule for details.

HONORS PROGRAM

The honors program provides undergraduates the opportunity to undertake a significant program of research in an individual professor/student mentoring relationship. The aim is to guide students through the process of research, analysis, drafting, rethinking, and redrafting, which is essential to excellence in scholarship. Working one-on-one with a faculty adviser, seniors may earn between 5 and 15 Communication units, culminating in an honors thesis. In order to be eligible for the honors program, interested majors must have: (1) successfully completed both a research methods and statistics course, (2) selected an adviser, and (3) submitted an application to the department by the end of their junior year. Applications may be picked up outside of room 110 of Building 120.

A final copy of the honors thesis must be read and approved by the adviser and submitted to the department by the eighth week of Spring Quarter (exact date to be arranged). It becomes part of a permanent record held by the department. Honors work may be used to fulfill Communication elective credit but must be completed and a letter grade submitted prior to graduation. A student failing to fulfill all honors requirements may still receive independent study credit for work completed and it may be applied toward fulfilling major requirements.

The designation "graduation with honors" is awarded by the Department of Communication to those graduating seniors who, in addition to having completed all requirements for the Communication major:

1. Complete an honors thesis
2. Maintain a distinguished grade average in all communication course work
3. Are recommended for distinction by the Communication faculty

COTERMINAL PROGRAM

The Department of Communication offers students who are completing an A.B. in another department a coterminal program with an A.M. emphasis in Media Studies: applications can be picked up at Degree Progress, the Registrar’s Office, room 132, Old Union.

Applications for coterminal study must be submitted at least four quarters in advance of the expected master’s degree conferment date. Stanford undergraduates may apply as early as the eighth quarter (or upon completion of 105 units), but no later than the eleventh quarter of undergraduate study. Requirements include: Application for Admission to Coterminal Master’s Program form, preliminary program proposal, statement of purpose, three letters of recommendation from Stanford professors, and a current Stanford transcript. GRE scores are required; a request must be submitted to Graduate Admissions, Registrar’s Office. Coterminal applications are submitted directly to the department. Review procedures and the Graduate Admissions Committee determines criteria.

GRADUATE PROGRAMS

MASTER OF ARTS

University requirements for the master’s degree are described in the “Graduate Degrees” section of this bulletin.

The department awards terminal A.M. degrees in two fields: Journalism and Documentary Film, and Video Production and Directing. Applicants for each program, and for doctoral work, are evaluated for admission on different criteria. A student may complete more than one A.M. degree in the department, but course work applied to the requirements for one A.M. degree may not be applied to a second. All work to fulfill graduate degree requirements must be in courses numbered 100 or above.

Students who complete an A.M. degree and who desire entry into the Ph.D. program must file a Graduate Program Authorization Petition application, which can be picked up at Graduate Degree Progress, room 132, Old Union. Such students are considered alongside all other doctoral applicants.

DOCUMENTARY FILM AND VIDEO

The graduate program in documentary film and video is a master’s program designed to train students in the conceptual and craft skills for the production of nonfiction film and video.

RESIDENCY

The program requires continuous enrollment for a period of two academic years, with a completion date of June in the second year.

Students proceed through the program as a cohort. The degree requires three full terms of registration in the first year. In the second year, full-time registration is required in Autumn Quarter, with half-time registration the remaining two quarters. Full-time registration consists of a minimum of 11 units; half-time registration consists of 9 units. The residency requirement is calculated on the basis of terms of registration and not on the basis of total number of units earned. The program does not allow for leaves of absence.

CURRICULUM

The curriculum is intended to teach an array of technical and conceptual skills as well as relevant historical and theoretical knowledge.

First-Year Curriculum—

Autumn Quarter
202A. Graduate Colloquium in Film and Television
222A. Documentary Film
223A. Documentary Film/Video Directing I
224A. Film Production I

Winter Quarter
222B. Documentary Colloquium in Film and Television
223B. Documentary Film/Video Directing II
224B. Film Production II
Elective (3-4 units)

Spring Quarter
222C. Graduate Colloquium in Film and Television
223C. Documentary Film/Video Directing III
224C. Film Production III
Elective (3-5 units)

Second-Year Curriculum—

Autumn Quarter
202A. Graduate Colloquium in Film and Television
222B. Documentary Film
292A. Documentary Film/Video A.M. Project Seminar I
Elective (1-4 units)

Winter Quarter
222B. Graduate Colloquium in Film and Television
292B. Documentary Film/Video A.M. Project Seminar II

Spring Quarter
202C. Graduate Colloquium in Film and Television
292C. Documentary Film/Video A.M. Project Seminar III
EQUIPMENT AND SUPPLIES

The department maintains film and video production facilities for teaching and research purposes. However, the costs of supplies and processing services are the responsibility of the students.

In the first year, students purchase a "course kit" at the beginning of each quarter which includes sufficient materials to complete the assignments. Once students have depleted the supplies in the course kit, subsequent purchases are made at outside vendors. The expense for normal film processing is included in the course kit fee during the Autumn and Winter Quarters, but each student sets up an account directly with a film lab during the Spring Quarter. In the second year, students are responsible for purchasing all materials and setting up their own accounts for necessary services during the production of the A.M. project. Students are given a partial list of vendors, online facilities, and motion picture laboratories.

Material costs are approximately $1,800 for the first year of residence. In the second year, costs vary depending on subject, format/length, and logistics, but $5,000 is typically the minimum average cost of an A.M. project.

A.M. PROJECT

In the second year of the program, each student produces an A.M. project which consists of a 15-20 minute film or video documentary. In order for students to have sufficient time to complete their own A.M. projects and gain the experience of assisting others, shooting must begin prior to Thanksgiving break, and shooting days are limited to a total of ten.

Students own their own work, but the department reserves the right to use student projects for non-profit University-related purposes.

In order to graduate, students must deposit with the faculty adviser a Beta SP copy of their film or video project and a revised final budget that reflects the projected and actual cost of their production. In the case of video, the Beta SP copy must be made once the film is printed and in the case of film, the Beta SP copy must be made from the on-line master. Students must contact the department's Student Services Administrator during the quarter in which they expect to graduate in order to determine what needs to be done to file for graduation. Students working in film may not have completed their final printing work prior to the end of the Spring Quarter. It is therefore possible for a student to officially graduate in the Summer Quarter immediately following their enrollment in Communication 292C, although they will not have access to facilities during this period. No extensions or leaves of absence are granted.

All A.M. projects must be completed by the end of the Spring Quarter of the second year. In the case of video, the student must have completed on-line editing, and in the case of film, the student must have completed the final sound mix. The A.M. projects are screened for the public during Commencement weekend.

JOURNALISM

The graduate program in Journalism is designed for students with an interest in the news-editorial area of journalism. Applicants are not required to have previous education or experience in journalism.

The master's degree requires a minimum of 47 units, including 4 units dedicated to a master's project. All courses must be selected in consultation with (and approved by) an academic adviser. An advisory committee must approve amendments to or deviations from the approved Program Proposal in writing. To remain in good standing, students must maintain a grade point average (GPA) of 'B.' Students who do not remain in good standing may not be able to complete the program. The students share a core of communication courses as follows:

- 204. Writing and Reporting the News
- 207. Editing the News
- 216. Media Law
- 217. Journalism and the Internet
- 225. Perspectives on American Journalism
- 275. Reporting of Public Affairs
- 290. A.M. Project
- 291. Graduate Journalism Seminar

Students are required to take a minimum of four additional courses, two in specialized writing and two in communication. The two specialized writing courses must be chosen from the following:

- 236. Broadcast Journalism
- 250. Magazine Writing
- 277. (Specialized writing course)
- 277A. Opinion Writing
- 277G. Social Issues Reporting
- 280. Film Criticism

Two communication courses must be chosen from the following:

- 206. Communication Research Methods
- 208. Communication Process and Effects
- 222. Documentary Film
- 231. Media Ethics and Responsibility
- 233. Communication and Culture
- 241. History of Film
- 242. Broadcast in America
- 260. The Press and the Political Process
- 269. Computers and Interfaces
- 270. Communication and Children
- 272. Communication Psychological Processing

There will be curriculum changes, effective with the 2000-01 class in next year's bulletin.

MEDIA STUDIES

The Media Studies master's program provides a broad introduction to scholarly literature in mass communication. This one-year program is designed primarily for students without prior academic work in communication, experienced media professionals who wish academic preparation for teaching, or coterminal students at Stanford.

Media Studies students must complete 42 units in Communication related areas in the social sciences and humanities, maintaining high academic standing throughout. In consultation with professors, students must also complete extensive projects in two of the required communication courses listed below.

Required core courses:

- 206. Communication Research Methods
- 208. Communication Process and Effects
- 204. Writing and Reporting the News
- 216. Media Law
- 217. Journalism and the Internet
- 225. Perspectives on American Journalism
- 231. Media Ethics and Responsibility
- 241. History of Film
- 242. Broadcast in America
- 260. The Press and the Political Process
- 269. Computers and Interfaces: Psychological and Social Issues
- 270. Communication and Children I
- 271. Communication and Children II
- 272. Communication Psychological Processing
- 318. Doctoral Research Methods I
- 319. Doctoral Research Methods II

Additional courses are selected in consultation with an academic adviser. A course in statistical methods is strongly recommended.
The Media Studies program is in its last year, and will not be offered 2000-01.

DOCTOR OF PHILOSOPHY

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The department offers the Ph.D. in Communication Theory and Research. First-year students are required to complete introductory courses in communication theory and research, research methods, and statistics. These core courses are grounded in the social science literature emphasizing how people respond to communication and media and how media institutions function. In addition, Ph.D. students must complete a minimum of three literature survey courses and three advanced seminars in communication and related departments. Each student builds a research specialty relating communication to current faculty interests in such areas as ethics, ethnic identity, human-computer interactions, information processing, information technology, law, and politics and voting. Regardless of the area of specialization, the Ph.D. program is designed primarily for students interested in teaching and research careers or policy formation positions.

The Ph.D. program encompasses four years of graduate study (subject to completion of the A.B. degree) during which, in addition to fulfilling University residency requirements, Ph.D. candidates are required to:

1. Complete all departmental course requirements with above average graduate grades, normally defined as a minimum grade point average (GPA) of 3.5. Currently these courses include Communication 206, 208, 311, 317, 318, 319, and a sequence in statistics (for example Statistics 160) that includes multiple regression and complex analysis of variables.
2. Pass the general qualifying examinations by the end of the second academic year of study and pass a specialized area examination by the end of the third academic year of study.
3. Demonstrate proficiency in tools required in the area of research specialization. Chosen with the advice of the faculty, such tools may include advanced statistical methods, computer programming, a foreign language, or other technical skills.
4. Complete two predissertation research projects.
5. Teach or assist in teaching at least two courses, including Communication 1.
6. Complete a dissertation satisfactory to an advisory committee of three or more faculty members.
7. Pass the University oral examination, which is a defense of the dissertation.

Because the multifaceted nature of the department makes it possible for the Ph.D. student to emphasize several areas of communication study, there tend to be several “typical” programs of course work followed by students, depending on their specialties. Variation in course programs worth occurs after the first year of graduate study; the first year is devoted primarily to the “core” courses required of all doctoral students.

In addition, students must complete other advanced Communication theory and research courses preparatory to their particular specializations. Specification of these courses depends on (1) individual student needs to prepare for preliminary and area examinations, and (2) the requirements of the particular area of emphasis chosen by the student.

Ph.D. candidacy is valid for five years. Extensions of candidacy are rarely granted and require reexamination.

Ph.D. MINOR

Candidates for the Ph.D. degree in other departments who elect a minor in Communication are required to complete a minimum of 20 units of graduate courses in the Department of Communication, including a total of three theory or research methods courses, and are examined by a representative of the department. A department adviser in consultation with the individual student determines the particular communication theory and methods courses.

THE INSTITUTE FOR COMMUNICATION RESEARCH

The institute is an office of project research for the faculty of the Department of Communication and operates under grants to faculty from foundations, communication media, and other agencies. Research assistantships are often available to qualified Ph.D. students in communication.

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

PRIMARILY FOR UNDERGRADUATES

1. Mass Communication and Society: Media Technologies, People, and Society—Open to non-majors. Introduction to the fundamental concepts and contexts of communication. A topics-structured orientation emphasizing the field and the scholarly endeavors represented in the department. Lectures and discussion sections. GER:3b (DR:9)
   5 units, Aut (Nass, Reeves)

101. Film Aesthetics—(Graduate students register for 201.) Theoretical, historical examination of the nature of the film medium. Emphasis is on the problems of aesthetics and communication from the viewpoints of practitioner, critic, and audience.
   5 units (Staff) not given 1999-2000

104. Reporting and Writing the News—Reporting and writing, emphasizing various forms of journalism: news, interpretation, features, opinion. Detailed criticism of writing. Prerequisite: typing speed of 35 wpm. (WIM)
   5 units, Win, Sum (Staff)
   Spr (Maharidge)

106. Communication Research Methods—(Graduate students register for 206.) The conceptual and practical concerns underlying commonly used quantitative approaches (experimental, survey, content analysis, and field research) in communication. Students become acquainted with the techniques of research so they may become intelligent consumers and practitioners of research. Lectures and discussion sections. Recommended: 1 or Psychology 1. GER:3b (DR:9)
   5 units, Win (Staff)

108. Communication Process and Effects—(Graduate students register for 208.) The process of communication theory construction, including a survey of social science paradigms and major theories of communication. Lectures/discussion. Recommended: 1 or Psychology 1. GER:3b (DR:9)
   4 units, Aut (Rampoldo-Hnilo)

113Q. Stanford Introductory Seminar: Online Media, the Future of News in a Democracy—More people are turning to the internet for their news. Will this impact the way they respond to democratic institutions? Class participates in research on this question. Discussion of the history of news presentation via computers and methods by which subjects access this news, and related topics, is followed by selection, taping, and analysis of subjects’ behavior.
   1-3 units, Win (Lewenstein)

116. Media Law—(Graduate students register for 216.) Preference to Communication seniors. Law and government regulation impacting on journalists. Topics: libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, broadcast regulation, etc. Prerequisite: consent of instructor.
   5 units, Aut (Staff)

117. Journalism and the Internet—(Graduate students register for 217.) Preference to Communication seniors. The implications of new
media for journalists. Professional and social issues related to the
Internet as a case of new media deployment, as a story, as a research and
reporting tool, and as a publishing channel. Seminar discussion and
hands-on practicum. Prerequisite: consent of instructor.
5 units, Aut (Sandvig)

122A. Documentary Film—(Graduate students register for 222A.)
Analysis of the techniques and strategies of films designed to effect
attitudinal and behavioral change. Prerequisite: consent of instructor.
5 units, Aut (Breitrose)

122B. Documentary Film—(Graduate students register for 222B.)
Issues in contemporary documentary film/video including objectivity/
subjectivity, ethics, censorship, representation, reflexivity, responsibil-
ity to the audience, and authorial voice. The viewing and analysis of films
has a parallel focus on form and content. Prerequisite: consent of
instructor.
5 units (Krawitz) alternate years, given 2000-01

125. Perspectives on American Journalism—(Graduate students reg-
ister for 225.) Survey of issues, ideas, and concepts in the development
of American journalism, emphasizing the role of the press in society,
the meaning and nature of news, and professional norms that influence
conduct in and outside of the newsroom. Prerequisite: 1 or junior
standing. GER:3b (DR:9)
5 units, Win (Glasser)

130. Language and Interpersonal Communication—(Graduate stu-
dents register for 230.) Theory and research regarding language and
interpersonal communication. Issues on the above in relationships
(initiation, maintenance, deterioration); gender; persuasion; and decep-
tion (use and detection).
5 units (Staff) not given 1999-2000

131. Media Ethics and Responsibility—(Graduate students register
for 231.) The development of professionalism among American journal-
ists, emphasizing the emergence of objectivity as a professional and the
epistemological norm. An applied ethics course where questions of
power, freedom, and truth autonomy are treated normatively so as to
foster critical thinking about the origins and implications of commonly
accepted standards of responsible journalism.
5 units, Spr (Glasser)

133. Communication and Culture—(Graduate students register for
233.) The relationship between communication and culture, emphasizing
the mass media and their symbolic import. GER:3b (DR:9)
5 units (Glasser) not given 1999-2000

136. Broadcast Journalism—(Graduate students register for 236.)
Preference to Communication Seniors. Survey of broadcast journalism,
focusing on commercial and public broadcast news outlets. Students are
introduced to broadcast newswriting and prepare tapes for radio news
broadcast. Lab. Prerequisite: 104.
5 units, Spr (Staff)

137. U.S. Communication Policy—(Graduate students register for
237.) Policy issues surrounding the emergence of a National Information
Infrastructure (NII) in the U.S. Adopting a pluri-disciplinary approach,
examines the historical context of the policy debate, the technical and
business aspects of the networking transformation underway, and its
economic and social dimensions. GER:3b (DR:9)
5 units (Bar) not given 1999-2000

141A. History of Film: The First 50 Years—(Graduate students register
for 241A.) Studies in the development of the motion picture as an art form
and cultural industry. Lab. Screenings of films announced in class.
GER:3b (DR:9)
5 units (Breitrose) alternate years, given 2000-01

141B. History of Film: The Second 50 Years—(Graduate student
register for 241B.) The evolution of the motion picture as an art form in
art and culture industry in the U.S. and other nations from 1941. Topics:
the battle of the studio system, the impact of WW II, the rise and fall of
auteur cinema, television, industrial concentration and its effects, and the
"high concept" film. Mandatory evening screenings.
5 units, Win (Breitrose)

142. Broadcasting in America—(Graduate students register for 242)
The development of American broadcasting and its contemporary prob-
lems.
5 units, Win (Breitrose)

149Q. Stanford Introductory Dialogue: Interethnic Communi-
ation—Preference to sophomores. Students read, discuss, and participate
in ongoing research related to ethnic identity and communication. Coreq-
quisite: 155.
1 unit (Leets) alternate years, not given 2000-01

150. Magazine Writing—(Graduate students register for 250.) Practice
in writing magazine articles, with emphasis on marketing manuscripts,
Conference. Prerequisite: 104.
5 units (Staff) not given 1999-2000

155. Interethnic Communication—(Graduate students register for
255.) Working from an intergroup perspective, examines the influence of
ethnicity on the process of interpersonal communication. The problem
and opportunities inherent in communication among people from differ-
ent ethnic heritages and value orientations, and the steps relevant to
improving interethnic communication. GER:3b (DR:9)
5 units (Leets) not given 1999-2000

160. The Press and the Political Process—(Graduate students register
for 260.) Analysis of the role of mass media and other channels of
communication in political and electoral processes. GER:3b (DR:9)
5 units, Spr (Iyengar)

166. Communication Policy in Comparative Perspectives—(Gradu-
ate students register for 266.) A comparative overview of the ongoing
change in the communications policy environment of different countries.
How different nations are tackling the transformation, the reasons for
these differences, and the impact of distinct policy approaches on the
respective national economies and societies. GER:3b (DR:9)
5 units (Bar) not given 1999-2000

169. Computers and Interfaces: Psychological and Social Issues—
(Graduate students register for 269.) Interdisciplinary approach to issues
of human-computer interaction (primarily) and computers and society
(secondarily). General models of the link between technology, psychol-
ogy, and society, addressing the question of which is/are cause and which
is/are consequence. Issues: anthropomorphism and interface design;
what is a human; conversation and interfaces; metaphors in interfaces;
identity, privacy, and computing; and computer-mediated communica-
tion. GER:3b (DR:9)
5 units, Spr (Nass)

170. Communication and Children I—(Graduate students register
for 270.) Developmental approach to issues of human-computer interaction
(primarily) and computers and society (secondarily). General models of the
link between technology, psychology, and society, addressing the question
of which is/are cause and which is/are consequence. Issues: anthropomor-
phism and interface design; what is a human; conversation and interfaces;
metaphors in interfaces; identity, privacy, and computing; and computer-
mediated communication. GER:3b (DR:9)
4 units, Win (Roberts)

171. Communication and Children II—(Graduate students register for
271.) Research practicum; limited enrollment. Prerequisites: 170, consent
of instructor.
3 units, Spr (Roberts)
172. Psychological Processing—(Graduate students register for 272.) Examines the literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences between reading, watching, and listening. 

5 units, Win (Reeves)

177. Specialized Workshops—(Graduate students register for 277.) One or more classes are offered in specializations such as science or sports writing, or other areas. Organized around writing projects oriented toward the field of specialization.

177A. Opinion Writing—(Graduate students register for 277A.) 

5 units, Spr (Woo)

177B. Science Writing—(Graduate students register for 277B.) 

5 units (Staff)

177D. Environmental Reporting—(Graduate students register for 277D.) 

5 units (Staff)

177F. Feature and Analytical Writing—(Graduate students register for 277F.) 

5 units (Staff)

177G. Social Issues Reporting—(Graduate students register for 277G.) 

5 units (Staff)

177M. Medical and Health Care Reporting—(Graduate students register for 277M.) 

5 units, Win (Lehrman)

180. Film Criticism—(Graduate students register for 280.) A practical and critical view of film. Readings/discussion consider models of artistic and literary criticism as points of comparison. Weekly reviews stress the analysis of the films and a lucid writing style. Prerequisite: 101 or 141.

5 units (Breitrose) not given 1999-2000

183. Media Economics—(Graduate students register for 283.) The economics of communication media. A survey of the economic organization and characteristics of traditional communication sectors (newspaper publishing, film, broadcast and cable TV, telephony). The second half deals in greater detail with specific, cross-sector economic issues related to networks, media technologies, and digital convergence.

5 units (Bar) not given 1999-2000

185. Internship Experience—Professional experience in the media. Prerequisite: Communication major.

1-4 units, Aut, Win, Spr (Staff)

190. Senior Project—Research project or production of a finished piece of work in journalism or film. A combination of the senior project and an internship is possible. Prerequisite: senior standing.

3 units, Aut, Win, Spr (Staff)

195. Honors Thesis—Qualifies students to conduct communication research.

5-15 units, Aut, Win, Spr (Staff)

199. Individual Work—Communication majors with high academic standings are permitted to undertake individual work.

1-4 units, any quarter (Staff)

PRIMARILY FOR MASTER’S STUDENTS

201. Film Aesthetics—Graduate section; see 101.

202A,B,C. Graduate Colloquium in Film and Television—Topics in film and television focusing mainly on production-related issues. Prerequisite: A.M. student in film or television program.

1 unit, Aut (Samelson) 
Win (Krawitz) 
Spr (Breitrose)

204. Reporting and Writing the News—Reporting and writing, emphasizing the various forms of journalism: news, interpretation, features. Assignments are completed under realistic time and space constraints. Lectures and labs focus on the skills needed to produce polished, publishable material.

5 units, Aut (Risser)

206. Communication Research Methods—Graduate section; see 106.

4 units, Aut (Iyengar)

207. Editing the News—Copy editing, headline writing, news display, and photo cropping. Lab includes editing copy, Associated Press style, news circulation, and page make-up.

2 units, Aut (Woo)

208. Communication Process and Effects—Graduate section; see 108.

4 units, Aut (Rampoldo-Hnilo)

211. Mass Communication and Society—Graduate section; see 1.

4 units, Aut (Nass, Reeves)

216. Media Law—Graduate section; see 116.

4 units, Aut (Staff)

217. Journalism and the Internet—Graduate section; see 117.

4 units, Aut (Sandvig)

222A. Documentary Film—Graduate section; see 122A.

4 units, Aut (Breitrose)

222B. Documentary Film—Graduate section; see 122B.

223A. Documentary Film/Video Directing I—For graduate students. Emphasis is on conceptualizing and executing ideas for the production work done jointly with 224A, covering all aspects of preproduction at an introductory level. Prerequisite: admission to the A.M. Documentary Film and Video program.

5 units, Aut (Staff)

223B. Documentary Film/Video Directing II—For graduate students. Further professional training in preproduction and producing for motion pictures and television. Interview skills and other documentary directing techniques are developed utilizing video. Prerequisite: 223A. Corequisite: 224B.

5 units, Win (Staff)

223C. Documentary Film/Video Directing III—For graduate students. Further examination of structure, emphasizing writing and directing the documentary. Practical training in fundraising and distribution. Prerequisite: 223B. Corequisite: 223C.

5 units, Spr (Samelson)

224A. Documentary Film Production I—For graduate students. First of a three-quarter sequence leading to professional training in motion picture production. 16mm exercises and a short 16mm non-synchronous film with multiple sound tracks and effects. Corequisite: 223A.

5 units, Aut (Krawitz)

224B. Documentary Film Production II—For graduate students. Produce a short 16mm film exercise in color utilizing synchronous sound, with emphasis on observational filming techniques. Prerequisites: 223A, 224A. Corequisite: 223B.

5 units, Win (Krawitz)
224C. Documentary Film Production III—For graduate students. Final quarter of professional training in motion picture production. A five- to seven-minute, 16mm film utilizing skills acquired in 224A,B. Issues of documentary form and content. Prerequisites: 224A,B. Corequisite: 225C.
5 units, Spr (Staff)

225. Perspectives on American Journalism—Graduate section; see 125.
4 units, Win (Glasser)

226. Reconstructing Documentary Theory—Seminar addressing current controversies in the theory of documentary, drawing on the writings of Noel Carroll, Carl Plantinga, Leslie Woodhead, Trevor Ponek, Robert Rosenstone, etc. Topics: the rhetoric of non-fiction, the border between factual and fictional, subjectivity and objectivity, truth claims, reflexivity and the "art documentary." Prerequisite: graduate standing or consent of instructor.
3-4 units, Spr (Breitrose)

230. Language and Interpersonal Communication—Graduate section;
see 130.

231. Media Ethics and Responsibility—Graduate section; see 131.
4 units, Spr (Glasser)

233. Communication and Culture—Graduate section; see 133.
4 units (Glasser) not given 1999-2000

236. Broadcast Journalism—Graduate section; see 136.
4 units, Spr (Staff)

237. U.S. Communication Policy—Graduate section; see 137.
4 units (Bar) not given 1999-2000

241A. History of Film: The First 50 Years—Graduate section; see 141A.
4 units (Breitrose) not given 1999-2000

241B. History of Film: The Second 50 Years—Graduate section; see 141B.
4 units, Win (Breitrose)

242. Broadcasting in America—Graduate section; see 142.

4 units (Breitrose) not given 1999-2000

250. Magazine Writing—Graduate section; see 150.
4 units (Staff) not given 1999-2000

255. Interethnic Communication—Graduate section; see 155.
4 units (Leets) not given 1999-2000

260. The Press and the Political Process—Graduate section; see 160.
4 units, Spr (Iyengar)

266. Communication Policy in Comparative Perspectives—Graduate section; see 166.
4 units (Bar) not given 1999-2000

269. Computers and Interfaces; Psychological and Social Issues—Graduate section; see 169.
4 units, Spr (Nass)

270. Communication and Children I—Graduate section; see 170.
4 units, Win (Roberts)

271. Communication and Children II—Graduate section; see 171.

272. Psychological Processing—Graduate section; see 172.
4 units, Win (Reeves)

275. Reporting of Public Affairs—For graduate students. Coverage of traditional news beats, e.g., police, city hall, education, courts, and issue oriented coverage of policy area beats. Prerequisite: consent of instructor.
5 units, Win (Woo)

277. Specialized Workshops—Graduate section; see 177.
277A. Opinion Writing
4 units, Spr (Woo)
277B. Science Writing
277D. Environmental Reporting
277F. Feature and Analytical Writing
277G. Social Issues Reporting
277M. Medical and Health Care Reporting
4 units, Win (Lehrman)

280. Film Criticism—Graduate section; see 180.
4 units (Breitrose) not given 1999-2000

283. Media Economics—Graduate section; see 183.
4 units (Bar) not given 1999-2000

290. A.M. Project
4 units, Spr (Staff)

291. Graduate Journalism Seminar—Required of all A.M. journalism students. Discussions are devoted to preparation for the A.M. project and to current issues in the practice and performance of the press. Meets throughout the academic year.
1 unit, Aut, Win, Spr (Bettinger)

292A,B,C. Documentary Film and Video A.M. Project Seminar—Discussions devoted to A.M. projects and to current issues in the practice and performance of documentary film and video production.
6 units, Aut (Samuelson)
8 units, Win (Krawitz)
Spr (Staff)

299. Individual Work
1-4 units, any quarter (Staff)

PRIMARILY FOR DOCTORAL STUDENTS

301. Communication Curriculum Development and Pedagogy—Required of all second-year Ph.D. students.
1-3 units, Aut (Nass, Reeves)

1-3 units (Staff) not given 1999-2000

311. Theory of Communication—Required of all communication doctoral students. Approaches to communication theory, seminar and tutorial meetings, and extensive reading and papers. Prerequisite: Communication Ph.D. student, or consent of instructor.
4-5 units, Aut (Roberts)

317. Doctoral Research Methods I—Prerequisite: Ph.D. admission in Communication.
4 units, Win (Reeves)

318. Doctoral Research Methods II—Prerequisite: 317.
4 units, Win (Nass)
319. Doctoral Research Methods III—Prerequisite: 318.
   3-4 units, Spr (Iyengar)

330G. Seminar in Language and Interpersonal Communication—
   Limited to Ph.D. students. Advanced topics in language and interpersonal
   communication. Prerequisite: 230.
   1-3 units (Leets) not given 1999-2000

331G. Seminar in Communication/Media Ethics—Limited to Ph.D.
   students. Advanced topics in press ethics and responsibility. Prerequisi-
   site: 231 or consent of instructor.
   1-3 units (Glasser) not given 1999-2000

332G. Seminar in Communication and Culture—Limited to Ph.D.
   students. Advanced topics in communication and culture. Prerequisite:
   233 or consent of instructor.
   3-4 units (Glasser) alternate years, given 2000-01

355G. Seminar in Intergroup Communication—Limited to Ph.D.
   students. Advanced topics in intergroup communication. Prerequisite:
   255 or consent of instructor.
   1-3 units (Leets) alternate years, not given 2000-01

360A,B,C Seminar in Political Socialization—Students design a ques-
   tionnaire for the Kids Voting Project. Pre- or corequisite: 106 or 206.
   1-4 units (Staff) not given 1999-2000

360G. Seminar in Political Communication—Limited to Ph.D. stu-
   dents. Advanced topics in political communication. Prerequisite: 260 or
   consent of instructor.
   1-3 units (Iyengar) not given 1999-2000

365G. Interpersonal Communication—Limited to Ph.D. students.
   Prerequisite: consent of instructor.
   1-3 units (Leets) not given 1999-2000

369G. Seminar in Communication, Technology, and Society—Lim-
   ited to Ph.D. students. Advanced topics in communication, technology,
   and society. Prerequisite: 269 or consent of instructor.
   1-3 units, Spr (Nass)

370G. Seminar in Communication and Children—Limited to Ph.D.
   students. Advanced topics in communication and children. Prerequisite:
   270 or consent of instructor.
   1-3 units, Spr (Roberts)

372G. Seminar in Psychological Processing—Limited to Ph.D. stu-
   dents. Advanced topics in psychological processing. Prerequisite: 272 or
   consent of instructor.
   1-3 units, Win (Reeves)

374G. Seminar in Structure and Control of Communication—
   Limited to Ph.D. students. Advanced topics in the structure and control
   of communication. Prerequisite: 273 or consent of instructor.
   1-3 units (Glasser) not given 1999-2000

375. Communication Theory Review Seminar—Limited to Ph.D.
   students. Prerequisite: 311.
   3 units (Staff)

379. Communication: History and Evolution of the Field—The
   history and current status of the field of communication research.
   Prerequisite: graduate standing in Communication.
   3-4 units (Staff) not given 1999-2000

380A,B,C,D. Curriculum Practical Training—Practical experience
   in the communication industries. Prerequisites: graduate standing in
   Communication, consent of instructor.
   1-3 units, Aut, Win, Spr, Sum (Staff)

397. First Research Project—Individual research in lieu of master's
   thesis.
   3-6 units, Aut, Win, Spr (Staff)

398. Predissertation Research Project—Advanced research for Ph.D.
   candidates.
   3-6 units, Aut, Win, Spr (Staff)

399. Advanced Individual Work
   1-8 units, Aut, Win, Spr (Staff)

400. Dissertation Research
   6-10 units, Aut, Win, Spr (Staff)

AFFILIATED DEPARTMENT OFFERINGS

See individual department offerings for course descriptions of the
following, all of which are accepted for credit toward the Communica-

SLAVIC LANGUAGES AND LITERATURES

148. The Factory of the Eccentric Actor (1921-1929): Between The-
   ater and Film, Avant-Garde and Trivial Genres, East and West
   4 units, Aut (Bulgakowa)

166. Russia on the Silver Screen: U.S., Eastern European, and
   Émigré Cinema
   4 units, Spr (Bulgakowa)

OVERSEAS STUDIES

FLORENCE

52. Realism, Utopia, Myth, and Society in Italian Cinema: Bernar-
   do Bertolucci, Pier Paolo Pasolini, and Federico Fellini
   5 units, Win (Campani)

OXFORD

31. Media Accountability in Britain and the U.S.
   4 units, Aut (Glasser)

33. Mass Media in the Tradition of British Cultural Studies
   4 units, Aut (Glasser)

COMPARATIVE LITERATURE

Emeriti: (Professors) Joseph Frank, John Freccero, René Girard; (Cour-
tesy Professors) W. B. Carnochan, Gerald Gillespie

Chair: Seth Lerer

Director of Admissions: Hans U. Gumbrecht

Director of Graduate Studies: Monika Greenleaf (on leave Winter,
   Spring); Seth Lerer (Winter, Spring)

Director of Undergraduate Studies: Seth Lerer

Professors: John Bender (English, Comparative Literature), Russell
   Berman (German Studies, Comparative Literature), Hans U. Gumb-
   rech (French and Italian, Spanish and Portuguese, Comparative
   Literature; Kyoto, Spring), Seth Lerer (English, Comparative Literature),
   Herbert Lindenberger (English, Comparative Literature),
   Valentin Y. Mudimbe (French and Italian, Comparative Literature),
   Patricia Parker (English, Comparative Literature), Mary Louise Pratt
   (Spanish and Portuguese, Comparative Literature), Richard Rorty
   (Comparative Literature), Ramon Saldívar (English, Comparative
   Literature; on leave 1999-2000), Jeffrey Schnapp (French and Ita-
   lian, Comparative Literature)

Associate Professors: Monika Greenleaf (Slavic Languages and Litera-
   tures, Comparative Literature; on leave, Winter, Spring), Thomas
   Hare (Asian Languages, Comparative Literature), Elisabeth Mu-
   dimbe-Boyi (French and Italian, Comparative Literature; on leave
   1999-2000), Andrea Nightingale (Classics, Comparative Literature),
The interdisciplinary program in Comparative Literature (CL) admits students for the Ph.D. It works toward the Ph.D. in individual language departments and, in conjunction with the Humanities honors program, offers a concentration in comparative literature for undergraduates.

**UNDERGRADUATE PROGRAM**

**BACHELOR OF ARTS**

The undergraduate major in Comparative Literature is designed for students who combine the drive and ability to master foreign languages with a strong commitment to literary study. In all cases, students must do a substantial portion of their work in at least one foreign language. The major enables these students to pursue carefully constructed programs of study involving the in-depth study of literature in one or more languages not their own and the study of their literature of specialization, its theory, and its practice in relation to other literatures, communications media, and disciplines.

The major is distinct from those in the national literatures by its comparative scope, by the requirement of seminars that focus on fundamental theoretical questions regarding the nature of literature and literary inquiry, and by its requirement that students’ programs of study be structured around the exploration of a single literary genre, historical epoch, or theoretical problem. It differs from the “interdisciplinary” majors in English, and Modern Thought and Literature (MTL) by the requirement that every student’s program be anchored in the study of a literature other than that of his or her native language and, with specific regard to MTL, by its chronological scope.

The “comparative” aspect of each student’s program of specialization is fulfilled according to which of the two available tracks he or she elects to follow:

**Track A: The Literary Studies track** integrates in-depth work in a primary literature with extensive work in a second literature (in the original language) and complementary course work in an outside field.

**Track B: The Interdisciplinary track** integrates in-depth work in a primary literature with the focused study of literature in relation to other arts (film, music, painting, and so on), intellectual disciplines (anthropology, history, linguistics, philosophy, and so on), or comparative work in area studies.

An honors program is available in Comparative Literature for both of these tracks (see below) that integrates substantial in-depth work in a primary literature with extensive work in a second literature (in the original language) or discipline, but also requires the writing of a senior honors paper.

In both tracks, students work closely with the department’s Director of Undergraduate Studies in designing an individually tailored program of specialization involving two related areas of study. Individual study plans require considerable advance planning and must meet the approval of the Director of Undergraduate Studies.

**Declaring the Major**—As soon as a student knows that he or she would like to declare the Comparative Literature major (and no later than Autumn Quarter of the junior year), he or she should obtain an application form for the appropriate track (see below) from the Comparative Literature office. The completed worksheet (with prospective courses for future years) should be handed to the Director of Undergraduate Studies with an updated official transcript and the student’s advising file. The director should sign the worksheet, indicating his or her approval of the feasibility of the proposed program. This worksheet needs to be updated at least once during each academic year.

**Advising**—When a student declares Comparative Literature, he or she may choose to declare the Director of Undergraduate Studies as his or her adviser, since the director approves credit for all course work (including course work abroad). The adviser may also be a member of the core Comparative Literature faculty. If this occurs, the student must meet periodically with the Director of Undergraduate Studies to monitor his or her progress in the major and for all questions regarding the major’s requirements.

**Overseas Campuses and Abroad Programs**—The Department of Comparative Literature encourages time abroad, both for increased proficiency in language and the opportunity for advanced course work. Course work done at campuses other than Stanford’s is counted toward the major at the discretion of the Director of Undergraduate Studies and is contingent upon the University’s acceptance of classes for units. To that end, students abroad must make an effort to save all notes, papers, correspondence, and so on, to increase the chance of acceptance.

**Honors College**—The Department of Comparative Literature encourages all honors students to enroll in the honors college scheduled during the weeks preceding the beginning of every academic year. Applications to the college are available from the department administrator. The department has traditionally run its honors college in collaboration with Interdisciplinary Studies in Humanities.

**REQUIREMENTS**

**CORE FOR TRACKS A AND B**

All majors in Comparative Literature (including honors) are required to complete the following courses, the first as near as possible to the date of declaration and the second during the senior year. Together, these core seminars ensure that majors have been introduced to the framing propositions and principal methods of the discipline. More specifically these courses are designed to lead students to inquire about the historical standing of such concepts as the “literary,” the “aesthetic,” “criticism,” “genre,” “text,” and “theory.”

1. **CL 101, Seminar on Literature and the Institution of Literary Study** (5 units) provides students with an introduction to the comparative study of literature, to the history of poetic theory, and to the historical development of literary fields. It is concerned with addressing foundational questions such as: what kind of knowledge is literary knowledge and how has this knowledge been codified and categorized with respect to other forms of knowledge?

2. **CL 199, Senior Seminar on Literary Theory** (5 units) offers advanced students of comparative literature the opportunity for in-depth study of the evolution of modern literary theory and, particularly, of contemporary theoretical perspectives regarding the study of literary artifacts.

**TRACK A—LITERARY STUDIES**

Literary works are shaped by a complex interplay of historical forces and constraints, including contacts between differing cultures and traditions; the evolution of literary genres, practices, and conventions; shifts in media and technologies of reproduction and diffusion; and the imitation of model authors. By combining in-depth work in a primary literature with work in a second literature, this track emphasizes the study of such phenomena. It requires:

1. **Courses using materials in the original language:**
   a) Five of which make up an intellectually coherent program, in the literature of the first language A.
   b) Three are in the literature of language B. These course selections must be coordinated with the courses selected in the literature of language A in order that, taken together, they form a cohesive program of study focused on one of:
      1) a specific literary genre
      2) a historical epoch
      3) a theoretical question

Note: if either A or B is the student’s native language, further work must be done in a third language to the extent of at least one course in its literature. Literature courses usually begin after two years of college-level study. Bilingual students may count either tongue as “native” and the other as “acquired.” If language A, B, or C is Chinese, Japanese, Russian, or another language in which two years of language...
Comparative Literature

MINORS

The undergraduate minor in Comparative Literature (CL) represents an abbreviated version of the major. In all cases, students must do a substantial portion of their work in at least one foreign language.

All minors in Comparative Literature are required to complete CL 101, Seminar on Literature and the Institution of Literary Study (5 units). This provides an essential introduction to the framing propositions and principal methods of the discipline.

In addition, all minors must complete two courses in the literature of a language other than their native tongue. All materials in each course must be in the original language.

1. **Literary Studies Track**: integrates in-depth work in a primary literature with work in a second literature. Requirements are:
   a) Two courses in a second literature (this may include courses in translation, as well as courses in English and/or American literature).
   b) One additional course in Comparative Literature numbered 0-100

2. **Interdisciplinary Track**: integrates in-depth work in the primary literature with the focused study of literature in relation to another art or intellectual discipline. Requirements are:
   a) Two courses in a single discipline, or the cultural history of a single historical epoch.
   b) One additional course in Comparative Literature numbered 0-100.

The minor is modeled primarily on the structure and progression of the major (with the appropriate reduction in course and unit requirements, as stipulated by the Committee on Undergraduate Studies). It retains the distinction between the two CL tracks and enables students to design a course of study built around the core CL seminar.

The Director of Undergraduate Studies is responsible for evaluating all requests and individual study plans for the minor.

HONORS PROGRAM

The honors option is reserved for exceptionally motivated students who wish to undertake an even more intensive and extensive program of study leading to the writing of a senior honors paper. The program allows for either a "Literary Studies" or an "Interdisciplinary" emphasis and it requires:

1. Six courses, using materials in the original language and making up an intellectually coherent program in the literature of a language other than the student's native tongue. Bilingual students may satisfy this requirement in either of their original languages or in a third language.

2. One additional course in Comparative Literature numbered 0-100.

3. A third course in a language other than the student's native tongue.

4. An "outside" perspective on the student's field of specialization.

Note: It is worth emphasizing that, as even a cursory review of the Stanford Bulletin demonstrates, this track in no way overlaps with current offerings in the modern language and literature departments whose majors neither require nor encourage students to pursue an integrated program of interdisciplinary study in tandem with their specialization in a national literature field. What it provides is an opportunity which is elsewhere unavailable to Stanford undergraduates: namely, a major analogous to the "English with an Interdisciplinary Emphasis" track in the Department of English, yet grounded in the study of non-English literature(s) and offering broad training in literary theory.
further intellectual shape. One course from the CL 100 series (but not 101 or 199) may be counted under this rubric.

b) For an Interdisciplinary Emphasis: six courses as outlined in the general requirements for the Interdisciplinary Track (Track B), above. This course work must be shaped around the literature courses selected in item 1. It must either treat cogent analytic or thematic issues in the chosen discipline, or be directly relevant to the chosen historical specialization. Students who choose area studies for their interdisciplinary work must complete courses that include work outside a single area studies focus or that have a genuinely comparative aspect. Each of these six courses must be approved in advance by the Director of Undergraduate Studies.

3. One further course is required, usually in translation, on a literature distant from the two of the student’s concentrations, so as to provide an “outside” perspective on the student’s area of specialization.

4. During Spring Quarter of the junior year, a letter requesting admission to the honors program must be submitted to the department’s Director of Undergraduate Studies. This letter must be accompanied by:
   a) The completed, signed worksheet
   b) An updated transcript
   c) A sample seminar paper
   d) An intended plan of study for the senior year (drawn up according to the emphasis selected)
   e) A preliminary statement (two to five pages) regarding the proposed topic of the honors paper (elaborated in consultation with the Director of Undergraduate Studies)

   (In Spring Quarter of the junior year, the student may enroll for 2 units of credit for independent research in CL 194.)

   This application is voted on by the Comparative Literature honors committee, made up of the Director of Undergraduate Studies and the Chair of the Department of Comparative Literature. Should it be approved, a faculty tutor is appointed by the director according to the topic. At the appropriate time, a second reader is designated by the honors committee.

5. Once the request for admission to the honors track has been approved, the student may choose to enroll in a 5-unit tutorial (CL 195, graded credit/no credit) with a faculty member during Autumn Quarter of the senior year in order to refine the project description, begin all necessary research, and initiate the composition of the honors paper.

6. During Winter Quarter of the senior year, the student must enroll in a 5-unit independent study (CL 195) with his or her faculty tutor for purposes of drafting the honors paper. At the end of the quarter, a completed draft must be submitted to the tutor. If it meets his or her approval as is, two copies must then be forwarded to the honors committee which will decide on the basis of the paper’s quality whether or not the student is awarded honors. If the faculty tutor feels that the paper still requires rewriting at the end of Winter Quarter, the student may enroll for 2 units of independent study during Spring Quarter for purposes of final submission. In order to be considered for honors in Comparative Literature, two copies of the final paper must be submitted to the honors committee no later than the fifth week of Spring Quarter.

   Honors papers vary considerably in length as a function of their topic, historical scope, and methodology. They may make use of previous work developed in seminars and courses, but must be of appropriate comparative or theoretical scope and should reflect the student’s chosen emphasis. Quality (not quantity) is the key criterion. As a rule of thumb, however, they run in the range of 40-70 pages.

   Honors Awards—The two readers of any honors thesis in Comparative Literature may elect to nominate the thesis in question for University-wide awards if they feel that it is deserving. In addition, the department honors committee evaluates on a competitive basis the honors theses completed in a given year and nominates one for University-wide awards competitions.

GRADUATE PROGRAM

DOCTOR OF PHILOSOPHY

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The Ph.D. program is designed for a small group of students whose linguistic background, breadth of interest in literature, and curiosity about the problems of literary scholarship and theory (including the relation of literature to other disciplines) make this program more appropriate to their needs than the Ph.D. in one of the individual literatures. Students take courses in at least three literatures (one may be that of the native language) to be studied in the original. The program is designed to encourage familiarity with the major approaches to literary study prevailing today.

Before starting graduate work at Stanford, students should have completed an undergraduate program with a strong background in one literature and some work in a second literature studied in the original language. Since the program demands an advanced knowledge of two non-native languages and a reading knowledge of a third non-native language, students should at the time of application have an advanced enough knowledge of one of the three to take graduate-level courses in that language when they enter the program. They should be making enough progress in the study of a second language to enable them to take graduate courses in that language not later than the beginning of the second year, and earlier if possible. Applicants are expected to take an intensive course in the third language before entrance.

A considerable part of a student’s work consists of individual study toward the oral examinations, for which each student devises reading lists in consultation with the graduate advisor. These examinations are centered on the study of particular periods, genres, and problems of literary study.

Students are admitted under a fellowship plan which attempts to integrate financial support and completion of residence requirements with their training as prospective university teachers. Tenure as a fellow, assuming satisfactory academic progress, is for a maximum of four years, graduate-level work in literature completed elsewhere being counted as part of this four-year period. The minimum teaching requirement is the same regardless of financial support. (For specific teaching requirements, see below.) Although financial support is limited to four years, the completion of requirements often requires five years. Students in the fifth year ordinarily apply for outside fellowships or for part-time teaching positions in language and literature departments at Stanford.

APPLICATION PROCEDURES

Competition for entrance into the program is keen. The program is kept small so that students have as much opportunity as possible to work in individual projects under faculty supervision throughout the period of study. No more than 16 students are in residence at any one time. The department does not plan to admit more than three or four new students for the class entering in September. Completed applications are due January 1. Because of the special nature of comparative literature studies, the statement of purpose included in the application for admission should contain the following information besides the general plan for graduate work called for on the application:

1. A detailed description of the applicant’s present degree of proficiency in each of the languages studied, indicating the languages in which the applicant is prepared to do graduate work at present and outlining plans to meet additional language requirements of the program.

2. A description of the applicant’s area of interest (for instance, theoretical problems, genres, periods) within literary study and the reasons for finding comparative literature more suitable to his or her needs than the study of a single literature. Applicants should also indicate what they think will be their primary field.

All applicants should arrange to have the results of the general section of the Graduate Record Examination sent to the Department of Comparative Literature.

Recommendations should, if possible, come from faculty in at least two of the literatures in which the student proposes to work.

Applicants must submit a copy of an undergraduate term paper which they consider representative of their best work.
DEGREE REQUIREMENTS

Residence—A candidate for the Ph.D. degree must complete three years (nine quarters) of full-time work, or the equivalent, in graduate study beyond the A.B. degree. The student is expected to offer at least 72 units of graduate work in addition to the doctoral dissertation. At least three consecutive quarters of course work must be taken at Stanford.

Languages—Students must know three non-native languages, two of them sufficiently to qualify for graduate courses in these languages and the third sufficiently to demonstrate the ability to read a major author in this language. Only the third language may be certified by examination. The other two are certified by graduate-level course work specified below. Language preparation must be sufficient to support graduate-level course work in at least one language during the first year and in the second language during the second year. Students must demonstrate a reading knowledge of the third non-native language no later than the beginning of the third year.

Lectures made up of works written in the same language (such as Spanish and Latin American) are counted as one. One of the student’s three literatures usually is designated as the primary field, the other two as secondary fields, although some students may offer two literatures at the “primary level” (six or more graduate courses).

Teaching—Fellows, whatever their sources of financial support, are ordinarily required to undertake a total of five quarters of supervised apprenticeships and teaching at half time. Fellows must complete whatever pedagogy courses are required by the departments in which they teach. The department’s minimum teaching requirement is a total of three quarters.

Minimum Course Requirements—Students are advised that the range and depth of preparation necessary to support quality work on the dissertation, as well as demands in the present professional marketplace for coverage of both traditional and interdisciplinary areas of knowledge, render these requirements as bare minimum.

1. CL 369E.
2. A sufficient number of courses (six or more) in the student’s primary field to assure knowledge of the basic works in one national literature from its beginnings until the present.
3. At least two additional complementary courses, with most of the reading in the original, in each of two different national literatures. Students whose primary field is a non-native language are required to take two courses in one additional literature not their own.

Minimum course requirements must be completed before the student is scheduled to take the University oral examination. These requirements are kept to a minimum so that students have sufficient opportunity to seek out new areas of interest. A “course” is an offering of 3-5 units. Independent study may take the place of up to two of the required courses, but no more; classroom work with faculty and other students is central to the program.

Examinations—Three examinations are required. The third and last is the University oral examination. Students’ reading lists for each examination must be approved by an examination committee and by the graduate adviser. The examinations consist of the following, each of which takes the form of an oral colloquy between the student and a committee of faculty members with interests in the subject areas:

1. First One-Hour Examination: on a literary genre to consist of (a) a knowledge of a substantial number of literary works in a single genre, the list to include works from a number of centuries and from at least three national literatures, and (b) a grasp of the theoretical problems involved in dealing with this genre and with the question of genre in general. The examination must be taken no later than the beginning of the student’s second year of graduate work (or the third quarter of the first year for students who enter with a year of graduate work). Students may elect to take this section of the examination before the genre section, in which case it must be taken at the earlier time.
2. Second One-Hour Examination: on literary criticism and theory, to consist of the exploration of a specific problem proposed and defined by the student. The problem must be sufficiently wide-ranging to demand the reading of critical texts from a variety of periods. The examination must be taken no later than the first quarter of the student’s third year of graduate work (or the third quarter of the second year for students who enter with a year of graduate work). Students may elect to take this section of the examination before the genre section, in which case it must be taken at the earlier time.
3. University Oral Examination: on a literary period, to consist of in-depth knowledge of a period of approximately a century in three or more literatures with primary emphasis on a single national literature or, in occasional cases, two national literatures. The reading list covers chiefly the major literary texts of this period but may also include some studies of intellectual backgrounds and modern critical discussions of the period. Students must demonstrate a grasp of how to discuss and define this period as well as the concept of periods in general. This examination is not to be on the dissertation topic, on a single genre, or on current criticism, but rather on a multiplicity of texts from the period. Students whose course work combines an ancient with a modern literature have the option of dividing the period sections into two wholly separate periods.

Qualifying Procedures—The qualification procedures for students in Comparative Literature take place during the quarter in which the student takes the first Ph.D. examination. Ordinarily, this is the beginning of the second year, but students who enter with a year of graduate work elsewhere must take the examination no later than the third quarter of the first year. Any student may elect to take the examination during the third quarter of the first year.

Students are judged qualified to proceed to the Ph.D. on the basis of the first part of Ph.D. examination as well as other aspects of their work (for example, performance in courses, ability to do original research) that predict strong promise for their dissertations and future careers as scholars and critics. As soon as the student has completed the qualifying procedures, the chair recommends him or her for admission to candidacy for the Ph.D. At this time the student is also recommended for the Master of Arts degree in Comparative Literature if he or she has completed 36 units of work at Stanford and has not already completed an A.M. before entering the program.

Colloquium—The colloquium normally takes place in the quarter following the University oral examination. The colloquium lasts one hour, begins with a brief introduction to the dissertation prospectus by the student lasting no more than five minutes, and consists of a discussion of the prospectus by the student and the three readers of the dissertation. At the end of the hour, the faculty readers vote on the outcome of the colloquium. If the outcome is favorable (by majority vote), the student is free to proceed with work on the dissertation. If the proposal is found to be unsatisfactory (by majority vote), the dissertation readers may ask the student to revise and resubmit the dissertation prospectus and to schedule a second colloquium.

The prospectus must be prepared in close consultation with the dissertation adviser during the months preceding the colloquium. It must be submitted in its final form to the readers no later than one week before the colloquium. A prospectus should not exceed ten double spaced pages, in addition to which it should include a working bibliography of primary and secondary sources. It should offer a synthetic overview of the dissertation, describe its methodology and the project’s relation to prior scholarship on the topic, and lay out a complete chapter by chapter plan.

It is the student’s responsibility to schedule the colloquium no later than the first half of the quarter after that quarter in which the student passed the University Oral Examination. The student should arrange the date and time in consultation with the department administrator and with the three examiners. The department administrator schedules an appropriate room for the colloquium.

Members of the dissertation reading committee ordinarily are drawn from the University oral examination committee, but need not be the same.

Ph.D. MINOR

This minor is designed for students working toward the Ph.D. in the various foreign language departments. Students working toward the Ph.D. in English are directed to the program in English and Compara-
tive Literature described among the Department of English offerings. Students must have:

1. A knowledge of at least two foreign languages, one of them sufficient to qualify for graduate-level courses in that language, the second sufficient to read a major author in the original language.

2. A minimum of six graduate courses, of which three must be in the department of the second literature and three in the Department of Comparative Literature, the latter to include a seminar in literary theory or criticism. At least two of the three courses in comparative literature should originate in a department other than the one in which the student is completing the degree. Except for students in the Asian languages, students must choose a second literature outside the department of their major literature.

COURSES

Courses meeting Writing in the Major requirements are indicated by (WIM).

CORE

These courses are aimed at freshmen and sophomores who are non-majors (and/or potential majors) and provide an entry point to the discipline of Comparative Literature.

All majors are required, as soon as possible after declaration, to successfully complete CL 101. During the senior year, majors enroll in 199.

20N. Stanford Introductory Seminar: Worlds (No Longer) Apart—Preference to freshmen. For those interested in reading literature and viewing films to make sense of historical and contemporary worlds. Literary narratives, films, documentaries, and videos examine the new textures of modern life, characterized by movements of people across nations and globe, shrinking under new global politics and economies and telecommunications. New forms of identity reflect the cultural changes of such movements. The narratives of Chinua Achebe, Junichiro Tanizaki, Amitav Ghosh, and Gabriel Garcia Marquez (with films and documentaries). The impact of re-drawn borders and immigration in the U.S. in works by Maxine Kingston, David Hwang, Bienvenido Santos, and Americo Paredes. Films from the Philippines and India, television in Kathmandu with Pico Iyer. GER:3a (DR:7)

3 units (Palumbo-Liu) not given 1999-2000

24Q. Stanford Introductory Seminar: Ethnicity and Literature—Preference to sophomores. What is meant by “ethnic literature”? Answers to that question propose a sense of the constituent terms developed, i.e., what is literature? How do such notions of literature enter into a particular dynamic when “what is ethnicity” is asked? How is “ethnic writing” different from non-ethnic writing, or is there such a thing as either? If “ethnicity” is accepted as an analytic perspective, how does it affect the way literature is read by ethnic peoples? Articles and works of fiction; films on the subject of ethnic literature and cultural politics. Goal: to understand better how ethnic literature represents the nexus of crucial social, historical, political, and personal issues. GER:4b (DR:3)

3-5 units, Aut (Palumbo-Liu)

25N. Stanford Introductory Seminar: Latin American Nobel Prize Winners—(Same as Spanish and Portuguese 125N) Preference to freshmen. An inquiry simultaneously into the powers of the artistic imagination and the dynamics of modern Latin American society and culture. The works of six Nobel Prize writers and intellectuals: Pablo Neruda, Gabriela Mistral, Octavio Paz, Gabriel Garcia Marquez, Miguel Angel Asturias, and Rigoberta Menchu. All write from deep connections to the tumultuous history of Latin America in this century. GER:3a (DR:7)

5 units, Spr (Pratt)

30N. Stanford Introductory Seminar: Opera and Literature—Preference to freshmen. Designed for students who desire an introduction to opera and who wish to enhance their responsiveness to music and to theatrical performance. Eight operas based on major literary texts are studied to gain an introductory knowledge and appreciation this form of classical music. The form’s beginnings around 1600 to the late 20th century, and the literary works that inspired their production (Rossini’s Barber of Seville, Mozart’s Marriage of Figaro, Monteverdi’s Orfeo, Bizet’s Carmen, Verdi’s Otello, Richard Strauss’ Salome, Alban Berg’s Wozzeck, and Benjamin Britten’s Death in Venice). Students watch videotapes or hear CDs before particular operas are taken up, and write short papers comparing aspects of the operas heard and literary works read. GER:3a (DR:7)

3-5 units, Aut (Lindemerger)

70N. Stanford Introductory Seminar: The Bible and World Culture—Preference to freshmen. The Bible is to many a little-known text, though it has been the foundation of major literary texts and political movements, art, and music. Its most influential portions are read, from Genesis through Apocalypse, and are considered in relation to, e.g., literary excerpts, music from Handel to reggae, anti-slavery and liberationist narratives, and the major speeches of Martin Luther King. GER:3a (DR:7)

3 units, Spr (Parker)

80N. Stanford Introductory Seminar: The Science Wars—Does Physics get Closer to Reality than Poetry?—Preference to freshmen. Do the truths of natural science correspond to the intrinsic nature of reality? Does reality have an intrinsic nature, or does it just have lots of different descriptions? Is scientific progress progress toward how things really are? Does postmodern relativism rot the mind and undermine the foundations of civilization? The answers introduce students to the study of philosophy. Readings E. O. Wilson, Consilience; A. J. Ayer, Language, Truth, and Logic; Hilary Putnam, Reason, Truth, and History; T. S. Kuhn, The Structure of Scientific Revolutions. GER:3a (DR:7)

5 units, Aut (Rorty)

84Q. Stanford Introductory Seminar: Shakespeare, Playing, Gender—Preference to sophomores. Focus is on several of the best-known and lesser-known plays of Shakespeare and on theatrical and other kinds of “playing” (the “purpose of playing”— Hamlet), and on ambiguities, and of gender and “playing gender” in particular. Topics: transvestism inside and outside of the theater, medical and other discussions of sex changes from female to male, hermaphrodites, and fascination with the “monstrous” more generally. Possible plays: The Taming of the Shrew, The Merry Wives of Windsor, Twelfth Night, As You Like It, A Midsummer Night’s Dream, Hamlet, Othello, The Tempest, Pericles, Antony and Cleopatra, and The Merchant of Venice. GER:3a,4c (DR:7)

3 units, Win (Parker)

85C. Aspects of Asian American Culture—The different dimensions of the contemporary Asian American cultural experiences in art, film, theater, television, literature, and pop culture. Analysis emphasizes issues of race, class, gender and sexuality, cultural resistance and empowerment, and ethnic identity and solidarity. Final project.

2 units, Aut (Palumbo-Liu, Staff)

86C. Asian Pacific Islander American Men: Contemporary Issues—Issues of men and gender among APIs. Student discussions and readings with films, panels, and workshops on sexuality, gangs, family, mixed race descent, interracial dating, community organizing, and mixed gender relations. Final project.

2 units, Win (Palumbo-Liu, Staff)

87C. Asian Pacific Islander Women: Contemporary Issues—Issues of women and gender among APIs. Student discussions and readings with films, panels, and workshops on domestic violence, sexuality, mixed race descent, interracial dating, community organizing, feminism, and mixed gender relations. Final project.

2 units, Spr (Palumbo-Liu, Staff)

91. Literary Institutions: A Comparative Approach—(Same as German Studies 126A.) Taught simultaneously at different overseas campus...
sites and at Stanford. The institutional structures and contexts for literature in different cultures, i.e., how literature is presented to the public at various levels. What sorts of literature are discussed in the press, and what issues are raised by such literary criticism? How is literature presented in schools? (Is it primarily the "local" national literature or is "world literature" read?) Do students read "minority authors?" What texts are taught at universities, what plays performed, and what films are screened in theaters? Students work as project groups in local sections, communicating with the instructor at Stanford and with students at distant sites through the Web. Group projects involve students at several locations and include comparisons of local literary institutions (e.g., the range of theater performance or the character of literary criticism in the different sites).

4 units, Win (Berman)

101. Seminar on Literature and the Institution of Literary Study— The impulse to the comparative study of literature and to the institutionalization of that impulse. Where are the origins of comparative literature as an academic discipline, and what does comparative literature mean today? To what degree has contemporary literary theory decentralized the comparatist, and what is lost if this position is no longer stable? Where are the limits of what we can compare? These questions are asked of selected shortish works of literature, and of some non-literary works (selected films, a memoir, essays in criticism), from writings on mimesis through psychoanalysis and cultural studies. (WIM)

5 units, Win (Middlebrook)

103. Egyptian East/Egyptian West—The texts and visual arts of ancient Egypt reveal a persistent and sophisticated engagement with problems of language, the body, and multiplicity. These problems are related to the later understanding of Egypt's position vis-a-vis subsequent civilizations in "the West." Focus is on the written and visual representational systems used in the ancient Nile Valley, on Egyptian mythology as it represents gender difference, and on the ways the Egyptians constructed their relations with the divine, the metaphysical, and the eternal. GER:3a (DR:7 or 8)

3 units, Spr (Hare)

113, Seminar: Voice and Literature in Russia and America 1776-1917—Introduction to the comparative study of literature through voice and text. In the modern era, prose and poetry have drawn from the productive tension between the vital but ephemeral spoken word and the objectification of language in writing. The shifting relationship between these modes of expression and the changing representations of voice in text have defined forms of social and cultural identity (gender, race, class, nation), and the notion of literature itself. Concepts from theoretical readings are explored in active dialogue with literary texts from several national traditions and genres. GER:3a (DR:7)

5 units (Greenleaf) not given 1999-2000

115Q. Stanford Introductory Seminar: Thinking in the Present—Discussions about 20th-Century European Philosophy—Preference to sophomores. More than the Anglo-American ("analytic") tradition which dominates in this country's philosophy departments, European ("continental") 20th-century philosophy has made the effort of thinking to/our own present with its existential, social, political consequences. The continental tradition has taken greater risks and probably accepted, in exchange, a lesser degree of rigor in its style of argumentation. Readings/discussion of several analyses of "present situations," written (in different moments and from different angles) by continental philosophers: Helene Cixous, Jacques Derrida, Martin Heidegger, Niklas Luhmann, Jean-Francois Lyotard, and Gianni Vattimo. Texts deal with questions regarding the continued viability (or non-viability) of concepts and patterns of thought in Western cultural and intellectual life (e.g., Subjectivity, Reason, Knowledge, History).

3 units, Win (Gumbrecht)

194. Independent Research

1-5 units, Aut, Win, Spr (Staff)

4 units, Aut (Greenleaf)

170E. Introduction to African Systems of Thought—(Same as French and Italian 170E.) Anthropology, ethnography, and the classical debates on ethnoscience. The problems involving intellectual histories, with emphasis on African cultures. What is Africa? Analysis of representative cosmologies and ethno-knowledges, a critical presentation of African practices of philosophy. GER:3a (DR:8)

3-5 units, Win (Mudimbe)

171. Comparative Narrations of Race, Ethnicity, and Nation—How can we get a better sense of issues of race and ethnicity by comparing the construction of these notions in the U.S. to their appearance (or invisibility) in another country? The historical and contemporary constructions of race and ethnicity in France and the U.S., the histories of colonization and decolonization, global labor and economies, immigration and redrawn borders, have all demanded different modes of incorporating diverse populations into variously reformulated notions of the Nation. Use of films; music; literary texts; with historical, anthropological, sociological materials.

3-5 units, Spr (Palumbo-Liu)

172. From Religion through Philosophy to Literature—Introduction to non-analytic philosophy. Discussion of attempts by philosophers (Plato, Kant, and Hegel) to replace religion with philosophy, of criticisms of such attempts by Nietzsche and Kierkegaard, and of Heidegger’s attempt to end philosophy and to substitute something more like poetry.

5 units, Win (Rorty)

190E. The Decameron and the 1001 Nights—(Same as French and Italian 190E.) Boccaccio’s Decameron and the 1001 Nights begin with a “frame-story” describing a catastrophe that threatens a city, then presents a series of scintillating tales to distract the audience from looming disaster. Beginning from the structural echoes, the two works are compared and contrasted, considering the role of women in the frame-story and in the tales; difference and exoticism; the salvific narrative; science, knowledge, and moral education in Christianity and Islam; and the modern retellings of the two works in film and fiction.

GER:3a (DR:7)

4-5 units, Aut (Malette)

212. The History of Rhetoric—(Same as English 212.) The history of the discipline of rhetoric from Classical Greek and Latin traditions, through medieval, Renaissance, modern, and contemporary treatments. Schemes and tropes (Cicero and Quintillian); grammatic education and the schools (Geoffrey Vinsauf, John of Garland); Renaissance handbooks (Wilson, Puttenham); 18th- and 19th-century oratory; current appropriations (e.g., Paul de Man, deconstruction). Texts are read for their deployments of rhetorical devices and their thematic attentions to verbal organization (e.g., selections from the Aeneid, medieval lyrics, Chaucer’s Canterbury Tales, Shakespeare’s Hamlet, Augustan and Romantic poetry, 19th-century prose fiction). Modern English translations; some emphasis to original-language texts of earlier periods.

4-5 units, Win (Lerer)

218. Latinity and Vernacularity—How did Latin literature respond to the challenge posed by the new vernacular traditions of the high Middle Ages? Readings of Latin texts and modern cultural and gender theory explore Latinity and linguistic difference. Topics: bi-literal writers (Boccaccio, Petrarch); Latinity and orality (the Carmina burana, sermons); works written by or for women (Hildegard of Bingen, Abelard and Heloise); translation (Ramon Llull). Prerequisite: basic knowledge of Latin.

5 units, Win (Mallette)

220. Versions of the Self—Studies of the genre of autobiography in cross-cultural perspective, concentrating on the topics of “the self, the subject, and the other” in myth, religion, history, and literature in the 20th century. How have the “extreme” situations of 20th-century life (atomic warfare, population displacement, concentration camps, changes in the conditions of work, plagues, and ecodisasters) led to the dismantling of traditional (religious and humanistic) notions of selfhood and the effort to redefine the nature of human subjectivity? Readings of Western, Asian, Latin American, and Middle Eastern autobiography.

5 units (White) not given 1999-2000

233E. Dante’s Divine Comedy—(Same as French and Italian 233E.) A reading of Dante’s poem, with reference to his other works (especially the Vita Nuova) and the European literary traditions of his age. Topics: Dante’s afterword in relation to Christian and Islamic visionary writings; his response to the Provencal and Sicilian poetry of courtly love; the idea of history, both personal and political, in the Comedy; Dante’s manipulation of Latin literary history; the Comedy and the autobiographical tradition.

GER:3a (DR:7)

3-5 units, Spr (Mallette)

236J. Weimar Republic—(Same as German Studies 236J.) The relationship between literature and democracy during the 1920s. The impact of military defeat and revolution on the restructuring of the institutions and on cultural life. Problems of nationhood and popularity; the tension between engagement and tradition; literature and film; representations of war.

3-5 units, Aut (Berman)

251E. Theories of Difference—Introduction to a reflection on differences and a methodological analysis of a history of histories of differences.

3-5 units (Mudimbe) not given 1999-2000

252E. Languages, Structures, and Societies: An Introduction to Structuralism—Analysis of the background and the basic concepts of structuralism. Readings: Ferdinand de Saussure, Course in General Linguistics; Roland Barthes, Elements of Semiology; Lévi Strauss, Mythologies; and from George Dumézil, Luc de Heush, and Edmund Leach.

3-5 units (Mudimbe) not given 1999-2000

156/256. Inside Picture Books—(Same as Art and Art History 156/256.)

4 units, Spr (Spitz)

258E. Jean-Paul Sartre: The Intellectual as Writer—Critical introduction to the chief positions and controversies of French existentialism. Is existentialism an amoral subjectivism? Can we describe the human in the same way we define an article of manufacture? How and why should we take atheism seriously? Human’s finitude and his/her relation to nothingness. In which sense should philosophy seek and define the human?

3-5 units (Mudimbe) not given 1999-2000

259E. Michel Foucault and the Archaeology of Knowledge—(Same as French and Italian 259E.) Introduction to, and explanation of, the basic tenets and methods of Michel Foucault’s theses and methods and their significance for the individualization and specification of each culture and individual. Close reading of Foucault’s major works.

3-5 units, Aut (Mudimbe)

264E. Seminar: Petrarch and Petrarchism—Examination of the Latin and vernacular writings of Francesco Petrarca, and their influence and impact on European cultural history in literature and the arts. Readings from Petrarch’s fundamental works (Trionfi, Canzoniere, Affrica, Secretum, Epistulae, etc.), and authors such as Garcilaso, Gongora, Sydney, Spenser, and Ronsard. Readings available in English translation.

5 units (Schnapp) not given 1999-2000

268. Introduction to Dream of the Red Chamber—A study of the great Chinese novel Hong lou meng (ca. 1750) by Cao Xueqin and Gao E.
together with its major commentaries. Methods of Euro-American criticism are tested against this seductive and challenging work. 

4 units (Saussay) not given 1999-2000

5 units, Spr (Middlebrook)

5 units (Palumbo-Liu) not given 1999-2000

300. The Theory of the Text—Introduction to theoretical issues in discourse, textualism, hermeneutics, poststructuralism.

5 units (White) not given 1999-2000

300B. Colloquium: The Bible and Literature—(Same as English 300B.) Combines intensive readings from Genesis to Revelation, with selections from a wide range of literary texts (from Dante and medieval drama, through Shakespeare, Spenser, Renaissance lyric, and Milton to 19th- and 20th-century poetry and novels from British, American, African-American, African, and other writings). Related topics: the relation between biblical eschatology and literary structures, Song of Songs and the history of lyric, the influence on prototypes of race/gender difference, citations in radical and hegemonic political contexts.

4-5 units, Spr (Parker)

301C. Nations and Cosmopolitanisms—The origins of modern comparative literary study may be traced to an engagement with the idea of distinct nations and national cultures, and the modern articulation of cosmopolitan culture. The various facets and formations of this engagement, including historical studies which point to the construction of “literature” as a modern object, and recent work on nations and national identity (cultural wars, patriotism, postethnicity) and new cosmopolitanisms (“rooted cosmopolitanism,” cultural studies in different national and institutional sites, etc.) in which “literature” variously appears and disappears, removed from or reinstated in its role as “culture.”

5 units, Spr (Palumbo-Liu)

308. Seminar: Introduction to Literary Criticism and Theory—Introduction to literary theory and criticism from New Criticism through Structuralism, post-Structuralism, archetypal, and psychoanalytical criticism to post-Modernist textualism.

5 units, Win (White)

5 units, Win (White)

314. Seminar: Epic and Empire—(Same as English 314.) Focusing on Virgil’s Aeneid and its influence, traces the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

5 units, Win (Parker)

320E. The Avant-Gardes of the Middle Ages—(Same as French and Italian 320E) The medieval courtly love movements parallel many of the social and aesthetic tensions of the modernist avant-gardes. Readings of Provencal, Arabic, and Italian poetry highlight similarities to the avant-garde and issues peculiar to the Middle Ages: the revolution in poetic language and form; the antagonistic relation with literary tradition; the role of the court in the evolution of new literatures; orality and the lyric text; gender and courtly love; vernacular literatures and the construction of cultural identity. Readings available in translation.

4-5 units, Win (Mallette)

331E. What Intellectually Mattered between 1958 and 1968 in Paris and the Rest of Europe—(Same as French and Italian 331E.) In relation to the present-day agenda in the Humanities (if there is a “shared agenda”), the years 1958-68 are both extremely remote and close. Remote because the “quietism” of the post-WW II period and the “student revolution” of 1968, as a reaction to it, appear as episodes long left behind. Those years seem close because some of those intellectual protagonists (mostly “French theorists”), who are still agenda-setting for us, published their first (or most important) books between 1958 and 1968: Roland Barthes, Jacques Derrida, Michel Foucault, Jacques Lacan, Jürgen Habermas, Carlo Ginzburg, Raymond Williams, etc. Seminar analyzes the texts that have become foundational of our present-day intellectual situation in their specific historical contexts (and in their often-complicated interrelations).

3-5 units, Win (Gumbrecht)

358E. The Practice of Sociology and the Humanities: An Analysis of Pierre Bourdieu’s Work—(Same as French and Italian 358E.) Specialized study of the work of Pierre Bourdieu, focusing on themes such as the function of the school, the practice of social sciences, and the politics of knowledge. Emphasis is on the philosophical presuppositions of Bourdieu’s work in the logic of his investigation.

4 units, Aut (Mudimbe)

369E. The Disciplines of Literature—(Same as French and Italian 369E) Open to all entering graduate students in the Division of Litera-
399. Dissertation
1-15 units, any quarter (Staff)

RELATED OFFERINGS
Courses primarily of a comparative nature are listed below and require enrollment in the departments they are listed under.

ART AND ART HISTORY
140/240. Introduction to Film Study
4 units, Aut (Bukatman)

143/243. The Hollywood Musical
4 units, Win (Bukatman)

146/246. Cyborgs and Synthetic Humans
4 units, Aut (Bukatman)

347. Phenomenology of Film
4 units, Win (Bukatman)

ENGLISH
150. Poetry and Poetics
5 units, Aut (Fields)
Win (Felstiner)
Spr (Boland)

184. Seminar: The Gothic Novel
5 units, Aut (Bender)

293. Seminar in Literary Translation
4-5 units, Win (Felstiner)

FRENCH AND ITALIAN
304H. Seminar: Early 20th-century Avant-Garde
4-5 units, Aut (Perloff)

108N. Stanford Introductory Seminar: Female Saints—The Rhetoric of Religious Perfection
4 units, Aut (Cazelles)

191E. The Cinema as a Space of the Sacred
3-5 units, Spr (Campani)

225E. Pirandello, Sartre, and Beckett: Self and World in Modern Literature
3-5 units, Win (Harrison)

389E. Common Roots: A Perspective on the History of Linguistics and Linguistic Ideas
3-5 units, Aut (Gambarara)

GERMAN STUDIES
191. Mentoring Comparative Institutions
2 units, Win (Berman)

241A-243A. Open to graduate students, advanced undergraduates, and sophomores with consent of instructor.

241A. Deutsche Geistesgeschichte I: 18th-Century German Thought
3-5 units, Aut (Strum)

242A. Deutsche Geistesgeschichte II: 19th-Century German Thought
3-5 units, Win (Mueller-Vollmer)

243A. Deutsche Geistesgeschichte III: 20th-Century German Thought
3-5 units, Spr (Staff)

292A. Concord and Jena: The Coming of Romanticism to America
3-5 units, Spr (Mueller-Vollmer)
HISTORY

274A/374A. Undergraduate Colloquium: Body Works—Medicine, Technology, and the Body in Late 20th-Century America
4-5 units, Win (Lenoir, Taylor)

INTERDISCIPLINARY STUDIES IN HUMANITIES

193N. Ecology in Philosophy and Literature
4 units, Spr (Nightingale)

INTRODUCTION TO THE HUMANITIES

30A,B. Transculturations
5 units, Win, Spr (Batchelor, Saussy)

LANGUAGE CENTER

125A,C,D. Topics in Arabic Literature and Culture—May be taken independently. Readings/discussion in English.
125A. The Contemporary Arabic World and Culture through Literature
4 units, Aut (Barhoum)
125C. Contemporary Arab Women Writers and Issues
4 units, Win (Barhoum)
125D. Arab World through Travel Literature
4 units, Spr (Barhoum)

MODERN THOUGHT AND LITERATURE

361. Graduate Colloquium: The Modern Tradition—Globalization and Modernity
5 units, Aut (Palumbo-Liu, Gupta)

SLAVIC LANGUAGES AND LITERATURES

145/245. The Age of Experiment (1820-1850)
3-4 units, Aut (Fleishman)
146/246. The Age of Transgression: Russian Literature from Turgenev to Tolstoy
3-4 units, Win (Safran)
147/247. The Age of Revolution: Russian Literature and Culture since 1917
3-4 units, Spr (Fleishman)

151. Dostoevsky
4 units, Win (Frank)

166/266. Russia on the Silver Screen: U.S., Western European, and Émigré Cinema
4 units, Spr (Bulgakowa)

168/268. Documentary Film and Fiction in Russian and Western Cinema, 1920 to the Present
4 units, Aut (Bulgakowa)

220A. Verse Translation: From Intuition to Artistry
4 units, Spr (Hofstadter)

221. Modernism and the Jewish Voice in Europe—(Same as German Studies 221A.)
3-4 units, Aut (Safran, Eshel)

SPANISH AND PORTUGUESE

190. Fiction and Political Imagination
3-5 units, Spr (Pratt)

308E. Scholarly Research and Writing: Workshop and Tutorial
3-5 units, Win (Pratt)

357. Latin American Fiction of the 1990s
5 units, Aut (Pratt)

OVERSEAS STUDIES

These courses are approved for the Comparative Literature major and taught overseas at the campus indicated. Students should discuss with their major advisers which courses would best meet individual needs. Descriptions are in the “Overseas Studies” section of this bulletin, or at the Overseas Studies Office, 126 Sweet Hall.

MULTI-SITE COURSE

91. Literary Institutions: A Comparative Approach—(Same as Comparative Literature 91, German Studies 126A.)
4 units, Win (Berman)

BERLIN

274A. Bodyworks
5 units, Win (Bender)

PARIS

130P. Paris: 1200-2000
4 units, Win (Bender)

KYOTO

121K. The Asian Others of Western Culture
3-5 units, Spr (Gumbrecht)
122K. Western Permutations in Thinking Technology
3-5 units, Spr (Gumbrecht)

COMPARATIVE STUDIES IN RACE AND ETHNICITY (CSRE)

Director: Albert Camarillo
Steering Committee: Albert Camarillo (History), David Palumbo-Liu (Comparative Literature), George Fredrickson (History), Gail Ladidus (Institute for International Studies), Hazel Markus (Psychology), John Rickford (Linguistics), C. Matthew Snipp (Sociology), Dorothy Steele (Research Institute of Comparative Studies in Race and Ethnicity), Claude Steele (Psychology), Guadalupe Valdés (Education), Steven Zipperstein (History)

Affiliated Faculty: David Abernethy (Political Science), Anthony Antoni (Education), Rick Banks (Law), Lucius Barker (Political Science), John Baugh (Linguistics), Joel Beinin (History), Rudy Busto (Religious Studies), Albert Camarillo (History), Martin Carnoy (Education), Clayborne Carson (History), Gordon Chang (History), George Collier (Cultural and Social Anthropology), Nadinne Cruz (Haas Center), Larry Cuban (Education), Jennifer Bhard (Psychology), Paul Ebron (Cultural and Social Anthropology), Arnold Eisen (Religious Studies), Harry Elam (Drama), Roberto Fernandez (Business), Claire Fox (Spanish and Portuguese), Luis Fraga (Political Science), George Fredrickson (History), Estelle Freedman (History), Sonya Grier (Business), Akhil Gupta (Cultural and Social Anthropology), Kenji Hakuta (Education), Janet Halley (Law), Shirley Heath (English), Sharon Holland (English), Terry Karl (Political Science), Roy King (Psychiatry), Michael Kirst (Education), Barbara Koenig (Biomedical Ethics), Jan Krawitz (Communication), Teresa LaFromboise (Education), Sam LeBaron (Family and Community Medicine), Gail Lapidus, (Institute for International Studies), Laura Leets (Communication), Yonne Maldonado (Pediatrics), Purnima Mankekar (Cultural and Social Anthropology), Hazel Markus (Psychology), Raymond McDermott (Education), Paula Moya (English), Norman Naimark (History), Daniel Okimoto (Political Science), Susan Olzak (Sociology), Amado Padilla (Education), David Palumbo-Liu (Comparative Literature), Mary L. Pratt (Spanish and Portuguese), John Rickford (Linguistics), Cecilia Ridgeway (Sociology), Richard Roberts (History), Aron Rodrigue (History), Renato Rosaldo (Cultural and Social Anthropology), Ramón Saldívar (English),
Stephen Sano (Music), Debra Satz (Philosophy), Anna D. Smith (Drama), C. Matthew Snipp (Sociology), Paul Sniderman (Political Science), Tim Stanton (Haas Center), Claude Steele (Psychology), Michael Thompson (History), Robert Trujillo (Green Library), David Tyack (Education), Guadalupe Valdés (Education), Robert Warrior (English), Richard White (History), Carolyn Wong (Political Science), Sylvia Yanagisako (Cultural and Social Anthropology), Yvonne Yarbro-Bejarano (Spanish and Portuguese), Bob Zajonc (Psychology), Steven Zipperstein (History)

Affiliated Lecturers: Diann McCants (Psychology), Sandra Soo-Jin Lee (Cultural and Social Anthropology)

Teaching Fellows: Stephanie Fryberg, Martha Mabie Gardner, Sara Johnson

UNDERGRADUATE PROGRAMS

MAJORS

CORE CURRICULUM

The Interdisciplinary Program in Comparative Studies in Race and Ethnicity (CSRE) provides students the opportunity to structure a major or minor in comparative ethnic studies or to focus their course work in a single ethnic studies area. Four new majors and minors (Asian American Studies, Comparative Studies, Chicana/o Studies, and Native American Studies) are offered as part of CSRE. All courses taken for the major must be taken for a letter grade. In addition, the existing Program in African and Afro-American Studies and the Program in Jewish Studies are affiliated with the new majors.

Students who declare any of the four new majors participate in a common curriculum of the CSRE consisting of at least two introductory "core" courses and a senior seminar. Students who declared the major in African and Afro-American Studies beginning Autumn Quarter 1997 enroll in this core curriculum. Individually designed majors in Jewish Studies may also enroll in the CSRE core curriculum.

MINORS

Students who wish to minor in the new study areas must complete six courses (a minimum of 30 units) from the approved CSRE course list, two of which must be introductory "core" courses. Proposals for the minor must be approved by the chair or curriculum of each study area.

DIRECTED READING AND RESEARCH

Directed reading and research allows students to focus on a special topic of interest. In organizing this plan, the student consults with the program director and one or more faculty members specializing in the area or discipline.

SENIOR SEMINAR

Research and writing of the senior honors thesis or senior paper is under the supervision of a faculty project adviser. The seminar format consists of presentations by students through the process of research (conceptualization, development of prospectus, development of theses, research, analysis, and writing). This course meets the writing in the major requirement. (WIM)

HONORS

Majors in each of the study areas who meet academic qualifications (at least a grade point average of 'B+' in CSRE-related courses) may apply for admission. Majors may participate in summer programs to facilitate their honors thesis research. Prizes for the best undergraduate honors theses are awarded annually by the Faculty Steering Committee of CCSRE.

AFRICAN AND AFRO-AMERICAN STUDIES (AAAS)

Chair: John Rickford

As of 1997-98, AAAS is a CSRE-related major. For major and minor descriptions and requirements, see the "African and Afro-American Studies" section of this bulletin.

ASIAN AMERICAN STUDIES

Chair: David Palumbo-Liu

Asian American Studies (AAS) provides an interdisciplinary approach to understanding the historical and current experiences of persons of Asian ancestry in the United States. In using the term "Asian American," the AAS faculty recognizes that the term seeks to name a rapidly developing, complex, and heterogeneous population and that there is neither a single Asian American identity nor one "community" that comprises all Asian Americans. Asian Americans include those with ancestral ties to countries or regions in East Asia, South Asia, Southeast Asia, or the Philippines, among others.

AAS brings together courses that address the artistic, historical, humanistic, political, and social dimensions of Asian Americans and is an appropriate course of study for students interested in a variety of concerns related to Asian Americans, including: artistic and cultural contributions, current social significance, historical experiences, immigration, intellectual, policy issues, relationships with other social groups, and the construction of "Asian American" as it addresses important theoretical and practical issues.

REQUIREMENTS

AAS offers undergraduates opportunities for either a major or a minor. In addition to the 15 units in the CSRE core curriculum, 45 units are distributed as follows: 5 units in a course with an international dimension; 30 units in Asian American focus courses selected from among historical studies, social sciences, and humanities; and 10 units in courses offering comparative perspectives. In certain instances, students are able to apply credit from the study of an Asian language to help meet requirements and receive a special citation for relevant language study. For students already fluent in an Asian language, the citation may also be earned by using the language in a substantial way in the research for their senior papers. An honors option is available. Minors take 30 units in a program of study similar in form to that of majors.

Students interested in the major or minor in AAS work with a faculty adviser to develop a specific program of study. The proposal must be approved by the chair of AAS. Policies and programming for the new major and minor are guided by the Asian American Studies Curriculum Committee.

CHICANA/O STUDIES

Chair: Guadalupe Valdés

Chicana/o Studies is an interdisciplinary major focusing on the Mexican-origin population of the U.S., the second largest ethnic group in the nation. Students who major or minor in Chicana/o Studies have an opportunity to select from a wide variety of courses in the humanities and social sciences as well as selected courses offered by affiliated faculty in the School of Education. In addition to the CSRE introductory "core" courses, students who major and minor in Chicana/o Studies are required to enroll in the Introduction to Chicana/o History and Culture survey course.

REQUIREMENTS

Together with their faculty mentors, majors design a thematic concentration consisting of eight courses (40 units). The substantial number of courses available across the disciplines permit majors to develop unique and innovative thematic concentrations. Students also have opportunities to participate in public service-learning internships related to their academic course of study. The Chicana/o Studies Curriculum Committee approves applications for majors and minors and reviews proposals for the honors program.

A "Spanish Language Proficiency Option" is offered to majors interested in using Spanish in their course work or for their research. This option, modeled on programs of foreign language study across the curriculum at other institutions, is aimed at students who have a strong interest in using the Spanish language proficiency they have acquired in meaningful contexts outside of foreign language courses. There are several ways to complete the Spanish Language Proficiency Option. Consult with the chair of Chicana/o Studies for details about these options.
Students who wish to minor in Chicana/o Studies must enroll in two CSRE introductory "core" courses and the Introduction to Chicana/o History and Culture course. The remaining three courses must be designed around a general theme or topic.

COMPARATIVE STUDIES IN RACE AND ETHNICITY

Chair: Albert Camarillo

The new major and minor in Comparative Studies in Race and Ethnicity (CSRE) offers students one of the first, and most unique, opportunities in higher education to study the topics of race and ethnicity from comparative national and international perspectives. How to manage and understand ethnic differences and conflicts has long been a central issue in international affairs, especially since the end of the Cold War, and an intense debate has developed in the United States on how to achieve justice and equality in an ethnically diverse, multicultural society. The themes of both interethnic cooperation and conflict are critical for comprehending the history and current social reality of racial and ethnic minorities worldwide. Students have an opportunity to structure a major or minor through CSRE that encourages the study of these and other important issues facing the U.S. and other societies.

REQUIREMENTS

Students who major in CSRE enroll in the core curriculum, and in consultation with the chair of the program and a faculty mentor, develop a thematic course of study focusing on the comparative dimensions of race and ethnicity. Though majors and minors in CSRE must complete the CSRE core introductory courses before they focus their work on the thematic concentration, students have great flexibility to structure and design their comparative curriculum. For example, students may opt to develop a concentration comparing two or more groups within the U.S. or they may choose to study groups in the U.S. in comparison to ethnic groups elsewhere in the world. Or, they may opt to study the diaspora of a single group or the sovereignty of indigenous peoples within and across different national contexts. In different examples of thematic concentrations for the CSRE major, students may prefer to study issues of international migration or how social constructions of racial identities are influenced by gender or class.

The thematic course of study developed by CSRE majors must be approved by the CSRE chair and by the CCSRE Faculty Steering Committee. Proposals for the minor and admission to the CSRE honors program must be approved by the chair. The policies and programs for the major and minor are guided by the Subcommittee on the Curriculum of the CCSRE Faculty Steering Committee.

PROGRAM IN JEWISH STUDIES

Chair: Steven Zipperstein

Jewish Studies is an affiliated program of CCSRE. For program and course descriptions see the "Jewish Studies" section of this bulletin.

NATIVE AMERICAN STUDIES

Chair: C. Matthew Snipp

Native American Studies provides an intensive approach to understanding the historical and contemporary experiences of Native American people. Attention is paid not only to the special relationship between tribes and the Federal government, but issues across national boundaries, including tribal nations within Canada, and North, Central, and South America. In using the term "Native American," the NAS faculty recognize the heterogeneous nature of this population. Native Americans include the Alaska Native population, which comprises Aleuts, Eskimos, and other Native American people residing in Alaska.

The purpose of the Native American Studies major and minor is to introduce students to a broad range of approaches in the academic study of Native American people, history, and culture. Students who major in Native American Studies have the opportunity of doing advanced work in a number of related fields, including literature, sociology, education, and law. In addition to specialized course work on Native American issues, students also are expected to concentrate in a traditional discipline such as anthropology, history, or psychology to ensure they have a well rounded educational experience. The area of concentration and related course work should be selected in consultation with an faculty adviser in Native American Studies. All courses in the program in some way promote the ongoing discussion of how academic knowledge about Native Americans relates to the historical and contemporary experiences of Native American people and communities.

REQUIREMENTS

NAS offers undergraduates opportunities for either a major or minor. The major requires 60 units of course work. In addition to the 15 units of CSRE core courses, 45 units are distributed as follows: 30 units in Native-American focus courses selected from among humanities and social sciences; 5 units in a course devoted to the methodologies, theories, or field research in a particular area of study; and 10 units in courses offering comparative perspectives. Students may acquire credit from a service-learning internship option. Minors take 30 units in a program of study similar in form to that of majors.

COURSES

CORE

COMPARATIVE STUDIES IN RACE AND ETHNICITY

200XYZ. Senior Seminar—(WIM)
units by arrangement, Aut, Win, Spr (Staff)

CULTURAL AND SOCIAL ANTHROPOLOGY

88. Theories of Race and Ethnicity: A Comparative Perspective
5 units (Yanagisako) not given 1999-2000

EDUCATION

156X. Understanding Racial and Ethnic Identity
5 units (LaFromboise) not given 1999-2000

HISTORY

64. Introduction to Race and Ethnicity in the American Experience
5 units, Win (Castillo)

65. Introduction to Comparative Studies in Race and Ethnicity
5 units, Spr (Camarillo, Fredrickson)

257. Undergraduate Colloquium: Immigrants and Racial Minorities in American Cities—Comparative Perspectives
5 units (Castillo) not given 1999-2000

PHILOSOPHY

177. Philosophical Issues in Race and Racism
4 units, Spr (Satz)

THEMATIC

AFRICAN AND AFRO-AMERICAN STUDIES

103A,B,C. African and Afro-American Lecture Series

103A. 1-3 units, Aut (Rickford)
103B. 1-4 units, Win (Rickford)
103C. 1-3 units, Spr (Rickford)

104. African and Afro-American Learning Expedition
1 unit, Spr (Rickford)

105. Introduction to African and Afro-American Studies
5 units, Spr (McCants)

COMMUNICATION

122B. Documentary Film
5 units (Krawitz) alternate years, given 2000-01

155. Interethnic Communication
3 units (Leets) not given 1999-2000
141. Race, Class, and Gender
5 units, Win (Andersen)

200R. Directed Research
1-5 units, Aut, Win, Spr (Staff)

200W. Directed Reading
1-5 units, Aut, Win, Spr (Staff)

COMPARATIVE LITERATURE
24Q. Stanford Introductory Seminar: Ethnicity and Literature
3-5 units, Aut (Palumbo-Liu)

85C. Aspects of Asian American Culture
2 units, Aut (Palumbo-Liu, Staff)

86C. Asian Pacific Islander American Men: Contemporary Issues
2 units, Win (Palumbo-Liu, Staff)

87C. Asian Pacific Islander American Women: Contemporary Issues
2 units, Spr (Palumbo-Liu, Staff)

168. Introduction to Asian American Culture
5 units, Win (Palumbo-Liu)

171. Comparative Narrations of Race, Ethnicity, and Nation
5 units, Spr (Palumbo-Liu)

301C. Nations and Cosmopolitanisms
5 units, Spr (Palumbo-Liu)

CULTURAL AND SOCIAL ANTHROPOLOGY
13. Critical Perspectives on Popular Culture
5 units, Spr (Mankekar)

15. Africa and the Diaspora
5 units (Ebron) not given 1999-2000

33. Inventing the Savage
5 units, Aut (Ramirez)

72. Dance and Culture in Latin America—(Same as Drama 168.)
3-4 units, Spr (Cashion)

77. Japanese Society and Culture
5 units, Win (Inoue)

79. Anthropological Perspectives on the Middle East
5 units, Win (Razieli)

83. Gender in South Asian Communities at Home and Abroad
5 units (Mankekar) not given 1999-2000

89B. Comparative Race and Inequality
5 units, Win (Turnstall)

104. Race and Language in the U.S.
5 units, Win (Gordon)

129A. Gender in East Asia
5 units, Spr (Lee)

130B. Asian American Immigration and Health
5 units, Win (Lee)

143. Anthropology of Death and Dying
5 units, Spr (Koenig)

147. Comparative Feminism
5 units (Mankekar) not given 1999-2000

157C. Cultural Studies of Youth
5 units, Spr (Bakrania)

251. Cultural Studies
4-5 units, Aut (Rosaldo)

251A. Latino Studies
5 units, Spr (Rosaldo)

255. Cultural Citizenship

EDUCATION
105. American Education and Public Policy—(Same as History 105B)
4 units (Kirst, Tyack) not given 1999-2000

141. Race, Education and Media
5 units, Spr (Carnoy, Steyer)

149. Theory and Issues in the Study of Bilingualism
3-4 units (Valdés) not given 1999-2000

175. African-American English in Educational Context—(Same as 275.)

177X. Education of Immigrants in Cities
4 units (Padilla) not given 1999-2000

188B. Bilingual Education
3 units, Win (Hakuta)

193B. Peer Counseling: Chicano Community
2 units, Aut (Martinez)

193C. Peer Counseling: The African-American Community
2 units, Aut (Edwards, Reede-Hoskins)

193F. Peer Counseling: The Asian American Community
2 units, Win (Brown)

193N. Peer Counseling in the Native American Community
2 units, Win (Martinez, Simms)
201. History of Education in the United States—(Same as History 158B.)
3 units, Aut (Tyack, Williamson)

202. Introduction to Comparative and International Education
4-5 units, Aut (Carnoy)

203X. Education and Equality in American Culture: Discussion
2-3 units, Aut (McDermott)

203Y. Discussion: Education and Inequality in American Culture
2 units, Aut (McDermott)

283. Attitudes towards Languages and Language Study
3 units (Padilla) not given 1999-2000

306A. Education and Economic Development
5 units, Win (Carnoy)

306C. Technologies of the Mind
4 units, Spr (McDermott)

335X. Language Policy and Planning: National and International Perspectives
3 units, Spr (Valdés)

340X. Psychology and American Indian Health
3 units (LaFromboise) not given 1999-2000

381. Multicultural Issues in Higher Education
4 units, Spr (Antonio)

ENGLISH

123D. The Multicultural Moment: American Literature from the Civil War to World I
5 units, Spr (Jones)

159. 19th- and 20th-Century African-American Poets
not given 1999-2000

162G. Writing by 20th-Century Women of Color
5 units, Aut (Moya)

162L. Caribbean Literatures in English
5 units, Spr (Aldama)

164B. Imagining the Holocaust
not given 1999-2000

168. American Indian Mythology, Legend, and Lore
not given 1999-2000

168B. Introduction to Afro-American Literature
5 units, Spr (Rampersad)

168C. Introduction to Chicana/o Literature
not given 1999-2000

187R. Seminar: Literature of Colonialism and Postcolonialism
5 units, Aut (Drake)

187Y. African American Autobiography
5 units, Win (Rampersad)

238. The Third World Novel in English
4-5 units, Aut (Drake)

The Stanford University Bulletin includes a course catalog that details offerings in various departments. This extract from the catalog focuses on the Department of Cultural and Social Anthropology. It lists course titles, credit units, instructors, and relevant departmental information. The courses are categorized under different topics such as American Indians, Asian Americans, Caribbean, and Mexican studies. Each course entry includes essential details like credit units, instructors, and additional information like course descriptions or specific notes on course content. The bulletin also highlights the departmental faculty, with listings that include professors, associate professors, assistant professors, consulting professors, lecturers, and courtesy professors. The overall goal is to provide students with a comprehensive overview of the course offerings and to guide them in their academic decision-making process.
with the Cultural and Social Anthropology Student Program Coordinator.

UNDERGRADUATE PROGRAMS
BACHELOR OF ARTS

The Department of Cultural and Social Anthropology (CASA) offers an A.B. degree in Cultural and Social Anthropology and an honors program. The major provides students with expertise for understanding social and cultural transformations from an international and cross-cultural perspective. In addition to gaining an excellent foundation for graduate study and research, students majoring in Cultural and Social Anthropology can pursue careers in government, international business, international development agencies, international education, law, mass media, non-profit organizations, and public policy.

Within the major, students may include course offerings in other departments such as Anthropological Sciences, Classics, Economics, English, History, Political Science, Psychology, and Sociology, as well as course offerings in programs such as African Studies, American Studies, Comparative Studies in Race and Ethnicity, East Asian Studies, Feminist Studies, Latin American Studies, Public Policy, and Urban Studies.

All undergraduate majors in Cultural and Social Anthropology must fulfill the following requirements:

1. A program of 65 units, with at least 40 in Cultural and Social Anthropology. The remaining 25 units may be taken from courses in related departments, including Anthropological Sciences. The 65 units must form a coherent program of study and be approved by the student’s academic adviser and the Undergraduate Committee as part of the application for the major.

2. The units in anthropology must include at least one course in four of the following topical categories:
   a) Linguistic and Symbolic Anthropology (CASA 4, or related, courses in linguistics in other departments such as Anthropological Sciences 4, 111, 119; or Linguistics 146, 150, Cultural and Social Anthropology 152, 153C, 154)
   b) Race and Ethnicity (8N, 53, 73, 84, 88, 89B, 104, 130B, 148)
   c) Feminist Anthropology (11C, 12, 13, 83, 129A, 142, 145, 154, 160, 166)
   d) Globalization and Transnationalism (13, 15, 73, 79, 83, 84, 86, 133A, B, C)
   e) Science, Technology or Medicine (130B, 138, 143)
   f) Material Culture (92, 136)

   For courses listed in two topical areas, the student may use the course to meet the requirement in either area, but not in both.

3. Students must choose an area of concentration, taking at least 15 units or three courses in that field. Possible areas of concentration include cultural studies, economic development, kinship, mass media, material culture, migration and immigration, political economy, popular culture, race and ethnicity, religion, urban cultures, or a particular culture area, i.e., Japan, Europe. Students must have their areas of concentration approved by their advisers.

4. To facilitate studying social and cultural issues in an international and cross-cultural framework, majors must take at least two courses in area studies (30-130B).

5. A minimum of 15 units must be in Cultural and Social Anthropology seminars above the 100 level.

6. A grade of ‘B’ or better in CASA 90 (letter grade only for students entering Stanford Autumn 1996 or later). This course is required of all cultural and social anthropology majors and should be taken within a year of declaring the major or before the end of the junior year. It introduces students to anthropological theory and prepares them for upper-division courses in the department.

7. Competence in a foreign language beyond the first-year level. Such competence is usually demonstrated by completing a course at the second-year level with a grade of ‘B’ or better. The requirement may be met by special examination administered through the Language Center.

Up to 10 units of the Anthropology or Cultural and Social Anthropology Area 1 track may be counted toward the major. Students whose programs require additional language study as part of a geographical or linguistic focus may petition the Undergraduate Committee to count up to 10 units of language courses toward the degree if such courses are at the second-year level or are in a second language. No more than 10 units may be in Directed Individual Study. All required units for undergraduate programs must be passed with a grade of ‘C’ or better, and not more than 8 (5 units in Cultural and Social Anthropology and 3 units in related subjects) of the required 65 units may be taken for a satisfactory/no credit grade.

Majors are strongly encouraged to develop field research projects. Research course work includes 93, Prefield Research Seminar; 94, Postfield Research Seminar; and 96, Directed Individual Study. The department has summer field research grants available to support individually designed research projects.

To declare the major in Cultural and Social Anthropology, a student first must contact the student program coordinator who explains the degree requirements and also gives general guidance. It may be helpful for students to meet with the chair of the Undergraduate Committee for initial academic advising and assistance in choosing an appropriate faculty adviser in the department. In consultation with their faculty adviser, students must develop a coherent program of study to be submitted to the Undergraduate Committee as an application for the major. Application forms may be obtained from the student program coordinator. Students must submit the application form along with their proposal for the major to the student program coordinator no later than the beginning of the Winter Quarter of the junior year.

Majors are required to meet with their advisers at least once every quarter. Each student’s progress towards fulfilling the major requirement is recorded in a file kept in the student program coordinator’s office. It is the student’s responsibility to see that this file is kept up to date.

MINORS

Prospective Cultural and Social Anthropology minors should request a Minor Planning Form and Checklist from the student program coordinator. Requirements for the minor are:

1. Have an adviser in Cultural and Social Anthropology approve the program of study for the minor.

2. Complete 30 units of Anthropology with a GPA of ‘C’ or better. No more than 10 of the required 30 units may be taken for an instructor-elected satisfactory/no credit grade. No student-elected satisfactory/no credit units are allowable. Of the 30 units:
   a) Not more than 10 units may be in entry-level courses, normally Cultural and Social Anthropology 1-20, including no more than 5 units of the Cultural and Social Anthropology Area 1 track.
   b) At least 15 units must be numbered Cultural and Social Anthropology 70 or above.
   c) Five units must be in an area course.
   d) Fifteen units must be in an area of concentration, approved by the minor adviser.
   e) Only 5 units of independent research can be used toward the minor.

Deadline for Declaring the Minor—Students must complete the declaration process (including the adviser’s signature) no later than the last day of the quarter, two quarters prior to degree conferral (Autumn Quarter if Spring Graduation is planned).

HONORS

The Honors Program in Cultural and Social Anthropology is open to all majors in the department. Candidates of sophomore or junior standing should submit an application to the student program coordinator no later than the end of the fourth week of the Spring Quarter. It must include a brief statement of the project, a transcript, a short paper, and a letter of recommendation from the professor who is to supervise the honors thesis. The Undergraduate Committee reviews applications and notifies accepted students.
Candidates whose application to the honors program has been approved by the Undergraduate Committee must complete all of the requirements for their major and submit an honors thesis no later than four weeks prior to the end of the quarter in which graduation is anticipated. The thesis is read by the candidate’s adviser and a second reader appointed by the Undergraduate Committee. Honors candidates enroll in 95A, Research in Cultural and Social Anthropology, for as many as 10 units, and 95B, Honors, for as many as 10 units. Most honors projects involve a total of 10 to 20 units of course work in 95A and 95B. No more than 5 of those units can count toward the 65-unit degree requirement.

GRADUATE PROGRAMS

University requirements for the degrees of Master of Arts and Doctor of Philosophy are described in the “Graduate Degrees” section of this bulletin.

Masters of Arts

The Department of Cultural and Social Anthropology offers the A.M. degree to four groups of students: (1) Stanford undergraduates who enroll in the coterminal program; (2) Stanford graduate students taking advanced degrees in other departments or schools at Stanford; (3) Ph.D. students in Cultural and Social Anthropology who fulfill the A.M. requirements in the course of their work toward the Ph.D. degree; and (4) students who apply from outside of Stanford for entry into the terminal A.M. program.

Stanford students interested in the coterminal program and graduate students in other departments or schools at Stanford should review the “Graduate Degrees” section of this bulletin and consult with the student program coordinator in the department. Other prospective students should request application materials from Graduate Admissions, the Registrar’s Office. Successful applicants for the A.M. program usually enter Autumn Quarter. Applications from Stanford students are reviewed in Winter Quarter if received by January 1 and in Spring Quarter if received by April 15. Outside applicants must file their scores on the Graduate Record Examination.

Applicants whose ultimate goal is the Ph.D. degree should apply directly to the Ph.D. program. Students accepted for the terminal A.M. degree program cannot transfer to the Ph.D. program; they must reapply on the same basis as other Ph.D. applicants and in competition with other Ph.D. applicants. Ph.D. students who decide to take the A.M. on the way to the Ph.D. are governed by separate requirements described in the department’s Guide to the Ph.D. Program.

Graduate enrollment at Stanford for at least three quarters of full tuition is required of all candidates for the master’s degree, including coterminal students. A.M. students in Cultural and Social Anthropology must take a minimum of 45 quarter units in sociocultural anthropology beyond the undergraduate degree with a grade point average (GPA) of 'B' or better. Thirty-six of those units, which constitute the University minimum for the A.M. degree, must be at or above the 100-level, and 18 of the 36 must be in courses designated primarily for graduate students (typically at least at the 200 level). The department further requires at least 15 additional units of sociocultural anthropology at Stanford or elsewhere, constituting a minimum total of 60 units in anthropology. At the discretion of the department, the 15 additional units may have been taken in fulfillment of the undergraduate degree. Within the 45 units taken at Stanford, students must take Cultural and Social Anthropology 211, plus two additional graduate-level seminars in the department. The remaining units may be made up of courses selected in consultation with the faculty adviser to meet the needs and interests of the student.

The A.M. program usually requires more than one year of study. However, full-time students entering the program with appropriate background can complete the A.M. program in one calendar year. To provide a meaningful A.M. program within a one-year period, advance planning of course work with an adviser is required.

A field or library research paper read and approved by at least two departmental faculty members must be presented. Ph.D. students in the department may submit the first-year paper in fulfillment of this requirement. Other A.M. students must submit a project proposal for the master’s paper for approval. Coterminal students must obtain approval either by the end of the second quarter of the fifth year of study, or if earlier, by the end of the quarter preceding the quarter in which the degree is completed. All other A.M. students must do so not later than the end of the second quarter of graduate study.

Doctor of Philosophy

Prospective graduate students should request application materials from Graduate Admissions, the Registrar’s Office. Applicants must file a report of their scores on the Graduate Record Examination and submit a writing sample in English that demonstrates the ability to produce original analytical work at the graduate level. Successful applicants for the Ph.D. program may enter only in Autumn Quarter. The deadline for applications is January 4.

The Ph.D. program includes a number of required courses and examinations. It also allows the student to develop a flexible program reflecting special interests, under the supervision of a faculty committee chosen by the student. Students are encouraged to plan for completion of all work for the Ph.D. in five years.

The Ph.D. requirements for students who matriculated beginning 1999 are as follows (those matriculating earlier should consult the department’s Guide through the Ph.D. Program for their cohort).

1. Pass within the first year, with a grade of "B" or better:
   a) At least three of the graduate-level courses in department designated by the faculty as theory/evaluation courses, including Cultural and Social Anthropology 210 and 211
   b) Cultural and Social Anthropology 212, Anthropological Research Methods
   c) At least 40 units of completed course work overall

2. In Spring Quarter of the first year, enroll and participate in the teaching apprenticeship practicum (CASA 298C).

3. Submit an acceptable, substantial research paper in the Spring Quarter of the first year.

4. During the second year, pass at a satisfactory level:
   a) Additional graduate-level theory/evaluation courses in the department to make a total of six such courses over the first two-years of the program
   b) The Proposal Writing Seminar (CASA 294)
   c) At least 27 units of completed course work overall

5. Serve as a teaching assistant during the second year for three courses (or two courses if not on University financial aid). An approved internship may be substituted for one course of the teaching assistantship requirement.

6. By the end of Winter Quarter in the second year, recruit the special examination committee, and by the end of Spring Quarter in the second year, schedule examinations (see item 9, below).

7. For those whose native language is English, pass, by the end of Spring Quarter of the second year, a reading examination in a language other than English in which there is a substantial body of general theoretical literature relevant to anthropology. For those whose native language is not English, demonstrate satisfactory command of English, as evidenced by successful completion of the first two years of graduate study.

8. Upon completion of the above requirements, and upon recommendation of the Cultural and Social Anthropology faculty, petition for candidacy at the end of Spring Quarter of the second year or Autumn Quarter of the third year.

9. Pass a special examination (written and oral), before or during Winter Quarter (but in no case later than the fourth week of Spring Quarter) of the third year, covering the candidate’s major topic of specialization and one major ethnological area of the world. The oral part of this examination is normally taken as the University oral.

10. Serve as a teaching assistant for one course in the third year if on financial aid (waived for those who complete all requirements above no later than Winter Quarter of the third year).

11. Prepare a dissertation proposal to be approved by the student’s dissertation committee, and obtain needed research clearances before the end of Spring Quarter of the third year and before undertaking doctoral research.
12. Present an approved dissertation based on independent research.

Ph.D. MINOR

Prospective Ph.D. minors in Cultural and Social Anthropology should request an application from the Department of Cultural and Social Anthropology student program coordinator. The requirements for a minor in Cultural and Social Anthropology consist of the following:

1. Complete 30 units of courses in the Department of Cultural and Social Anthropology at Stanford with a grade point average (GPA) of 'B' or better. Course work for a minor can not also be used to meet requirements for a master's degree.

2. Enlist a faculty member within the Department of Cultural and Social Anthropology at Stanford who will provide written consent to serve as the adviser for the minor (see the student program coordinator for a listing of faculty and office hours).

3. In conjunction with the adviser, determine a coherent course of study related to the Ph.D. program, including Cultural and Social Anthropology 211, two courses in theory, and one course in a geographical area (for a list of current theory/methods courses, see the student program coordinator).

4. File the necessary paperwork with the student program coordinator, Department of Cultural and Social Anthropology requirements listed above are more extensive than the University requirements.

FINANCIAL SUPPORT

The department endeavors to provide needed financial support (through fellowships, teaching and research assistantships, and tuition grants) to all students admitted to the Ph.D. program who maintain a satisfactory course of study. Applicants for the Ph.D. program must file a request for financial aid when applying to the program if they wish to be considered for support. First-year students in the Ph.D. program who have not entered with outside funding are required to apply for such funding during their first quarter. No financial support is available to students enrolled for the A.M. degree.

TEACHING CREDENTIALS

For information concerning the requirements for teaching credentials, consult the "School of Education" section of this bulletin or address the inquiry to the Credential Administrator, School of Education.

COURSES

(WIM) indicates that the course meets the writing in the major requirements.

UNDERGRADUATE

GENERAL

Open to all students, these courses are introductory in the sense that prior knowledge is not assumed. The numbers are only labels; they say nothing about the level of the course. Students who want a general introduction to human behavior and culture are advised to take CASA 1; those who are interested in introductory courses focused on specific areas of anthropological inquiry should choose from among the courses numbered 2 through 18.

1. Cultural and Social Anthropology—(Upper-division students, register for 101.) Cross-cultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual and related topics. Lectures, films, and readings present case studies illustrating basic principles of the cultural process. GER:3b,4a (DR:2 or 9)

5 units, Win (Mankekar)

4. Language and Culture—Language in its relationship to culture and society. Focus is on the roles of language and language use in constructing worldviews, cultural values, social relationships, institutional orders, and identities. The ways language is employed in differing social and cultural contexts. Drawing on existing empirical studies of language-culture interaction, student projects involve data-collection, transcription, analysis, and consideration of theoretical implications and linkages to the existing literature. GER:3b (DR:9)

5 units, Aut (Inoue)

7N. Stanford Introductory Seminar: Investigating Culture—Preference to freshmen. Students compare and contrast their experience of entering the University with that of anthropologists entering another culture. The culturally specific ways that people situate themselves (as they are situated) in space and time, by means of language, the structures of everyday life and the global economy, in terms of the body, and symbols and frameworks provided by public myth and ritual. Classic anthropological readings, supplemented by weekly ethnographic exercises, enable students to become more deeply aware of culture as a constructed phenomenon that is open to investigation of its implicit premises and explicit forms.

4-5 units (Delaney) not given 1999-2000

8N. Stanford Introductory Seminar: Narratives of Self and Society—Preference to freshmen. How people portray their lives, the facts that made them become who they are, the nature and impact of encounters with different worlds, and the ways they find meaning in their lives. How external factors, such as globalization, class, race, and migration shape people's life stories. GER:3b (DR:9)

5 units, Win (Rosaldo)

9,10. Encounters and Identities—(Enroll in Introduction to the Humanities 27A, 27B.)

9. From the Age of Exploration to the Present: South Asia—GER:1 (DR:1) (two-quarter sequence)

5 units, Win (Gupta)

10. From the Age of Exploration to the Present: Europe and the U.S.—GER:1 (DR:1) (two-quarter sequence)

5 units, Spr (Yanagisako)

11C. Gender in Cross-Cultural Perspective—Anthropological theories of gender constructions. Recent questions posed to anthropologists about representation, power, and the interpretive authority of ethnographers, drawing on a range of resources (ethnography, film, fiction, and life stories). How gender is a lens through which other forms of social organization can be illuminated and how given theoretical tools act as framing devices for the kind of cross-cultural interpretation one makes.

5 units (Ebron) not given 1999-2000

12. Introduction to Feminist Study—Understanding the creation and perpetuation of gender inequality. Topics: sexuality, reproduction, work, family, welfare, violence, language, and religion. Examples from non-western societies illuminate the cultural and historical construction of gender in western society.

5 units (Delaney) not given 1999-2000

13. Critical Perspectives on Popular Culture—Introduces critical perspectives on popular culture, including Hollywood and Indian films, Latin American and U.S. soap operas, popular music, and video. Emphasis is on the historical, sociological, anthropological, and cultural perspectives on popular culture and mass media in cross-cultural contexts. Issues: the relationship between film and nationhood, television sitcoms and racial identity, soap operas and gender, and video and ethnicity. GER:3b (DR:9)

5 units, Spr (Mankekar)

15. Africa and the Diaspora—Lecture/discussion. Surveys the debate surrounding Africa and the diasporic communities. The cultural history offers insight into contemporary discussions about the culture and politics of these mapped cultural spaces. Methodological approaches to the context, providing basic analytic tools for research projects. GER:4b (DR:2)

5 units (Ebron) not given 1999-2000
THEORY AND RESEARCH

90. Theory in Cultural and Social Anthropology—Anthropological interpretations of other societies contain assumptions about ourselves and about “Western” societies. Seminar highlights that interpret and consider how underlying assumptions and implicit categories have influenced the presentation of data in a major anthropological monographs. Emphasis on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of nonwestern societies. (WIM)
5 units, Win (Ebron)

92. Introduction to Approaches in Archaeology—Over recent decades, archaeology has seen a vigorous debate about approaches to interpretation of the past. Why these approaches matter in the contemporary world: objective scientific universals about cultural development vs. individuals use of the past to create identities for themselves in the present. Their application to specific sites and problems: the explosion of symbolism in the Upper Palaeolithic, the adoption of Catalhoyuk in Turkey, the adoption of farming in the New World, the experience of prehistoric monuments in Europe and N. America, the archaeology of indigenous peoples, gender archaeology, internet archaeology. GER:3b (DR:9)
5 units, Win (Hodder)

93. Prefield Research Seminar—Prepares students for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisite: introductory course in anthropology or consent of instructor. GER:3b (DR:9)
5 units, Spr (Rosaldo)

94. Postfield Research Seminar—Undergraduates analyze and write about material gathered during summer fieldwork, emphasizing writing and revising as key steps in analysis and composition. Students critique classmates’ work and revise their own writing in light of other’s comments. Reading/discussion on ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts. Objective: produce an excellent ethnographic report based on original field research. GER:3b (DR:9)
5 units, Aut (Delaney)

95A. Research in Cultural and Social Anthropology—Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of an honors project. May be taken more than one quarter for credit. Prerequisite: approved application to the honors program.
1-10 units, any quarter (Staff)

95B. Honors—Taken in the final quarter of the student’s work for graduation with honors. Independent study and honors thesis work for students admitted to the program. Prerequisites: acceptance to the honors program and a draft of the honors thesis.
1-10 units, any quarter (Staff)

96. Directed Individual Study—For undergraduate students with special needs, and showing the capacity to do independent work. Prerequisite: 1 or consent of instructor.
1-10 units, any quarter (Staff)

96A/B/C/199A/B/C. Honors/Masters Writing Workshop—(Graduate students register for 199.) For students in the process of writing their honors or master’s papers. Techniques of interpreting data, organizing bibliographic materials, writing, editing, and revising. Preparation of papers for conferences and publications in anthropology.
2-6 units, Aut, Win, Spr (Roth Gordon)

UNDERGRADUATE AND GRADUATE AREA STUDIES

33. Inventing the Savage—Examines colonialism as the root cause of cultural trauma in Native American communities, including domestic violence, criminality, and post-traumatic stress disorder. How Native American scholars have theorized cultural trauma and how Native American writers have fashioned strategies to heal the negative effects of colonialism.
5 units, Aut (Ramirez)

72. Dance and Culture in Latin America—(Same as Drama 168.) 3-4 units, Spr (Cushion)

73. Introduction to Chicano Life and Culture—Chicano culture in historical perspective, including indigenous and African heritages and comparisons with Mexico and other U.S. Latino groups. Emphasis is on the contemporary period and popular culture.
5 units (Rosaldo) not given 1999-2000

5 units, Aut (Gupta, Mancall)

76. Political Economy of India—The changing nature of relations of power in the Indian economy since British colonial rule. Conflicting interpretations of Indian economic history, the success of post-Independence development efforts, the relationships between agriculture and industry in contemporary India, and the position of the subcontinent in the world systems. Prerequisite: 120 or History 186.
5 units (Gupta) not given 1999-2000

77. Japanese Society and Culture—Using anthropological literature as a baseline, discusses the problem of knowing and representing Japanese people, history, and culture. Beginning with a basic problematizing of any unreflective idea of “Japanese society and culture,” students are introduced to diverse lives and historically situated experiences to make them aware of the problems entailed in representation. Student views of Japanese people, ethnographic reports. GER:3b,4a (DR:2 or 9)
5 units, Win (Inoue)

79. Anthropological Perspectives on the Middle East—Who lives in the Middle East? What forces shape peoples lives in this region? Why does this part of the world appear to be so rife with conflict? The diversity of life in the region known commonly as the Middle East. Peoples living in rural, urban, and nomadic settings. Through a close reading of ethnographies and other cultural texts, analyzes how constructions of race, religion, ethnicity, nationalism, and gender shape everyday life.
5 units, Win (Razieli)

83. Gender in South Asian Communities at Home and Abroad—The relationship between men and women in S. Asian communities. Material from scholarship on gender relations in India, Pakistan, Bangladesh, Sri Lanka, Nepal, and overseas S. Asian communities (e.g., those in N. America, Africa, and the U.K.). Focus is on the relationship between the practices and ideologies of gender, and other social institutions (e.g., religion, family, state, mass media, and ideologies of communalism and nationalism). Prerequisite: 12 or consent of instructor.
5 units (Manekkar) not given 1999-2000

84. The Multicultural City in Europe—European cities have become a kaleidoscope of peoples and cultures. How does multiculturalism mean in the European setting? How have different governments dealt
with the issues, and with what results? The theoretical issues of migration, citizenship, and international labor as they affect people's lives. How does culture affect how different groups utilize space and time, health, and educational resources? How do different notions of gender, family, work, religion, and food and clothing operate as symbols of identity? What are the politics of language? In what way does the city foster or mitigate difference?

5 units (Delaney) not given 1999-2000

87. Social Change in Contemporary China: Modernity and the Middle Kingdom—Seminar introduces cultural issues of contemporary China through an examination of various types of social change. How People's Republic of China residents of different backgrounds experience the state's post-Mao policies of economic liberalization and openness. Areas of social change shaping China today, including changes in ancestor worship, ritual practices, religion, shifts in marriage markets, interpersonal relations, child bearing, rises in urbanization, migration, unemployment, and shifts in minority-Han relations. Enrollment limited to 25. GER:3b,4a (DR:2 or 9)

5 units, Aut (Kohrmann)

104. Race and Language in the U.S.—The role of language in the social construction of race, racism, and racial identity in the U.S. context. Emphasis is on African-American Vernacular English (AAVE), Spanish-English bilingualism, and other language groups. Combines theory and research from anthropology and linguistics on identity and ideology. Language issues in education, law, and politics.

5 units, Spr (Roth Gordon)

110. The Middle East through Ethnography—For advanced undergraduates and graduate students. Exploration of the Middle East and anthropological theory through a close reading of ethnographies. Emphasis is on issues associated with the region (honor and shame, public and private, sexual segregation, religion, and orientalism).

5 units (Delaney) not given 1999-2000

129A. Gender in East Asia—Focus is on gender relations in contemporary societies in East Asia with respect to nationalism, global capitalism, and the politics of sexuality. How do notions of the private and public, tradition and modernity, non-Western and Western inform gender ideologies? The role of patriarchal authority in the family and the nation-state, the meaning of agency and resistance in everyday life; and the relevance of feminism on local histories. Ethnographic work from Japan, Korea, China, Taiwan, and Hong Kong. Topics: gendering of transnational labor, "choice" and reproductive technology, prostitution and the military, and images of masculinity and femininity in popular culture.

5 units, Spr (Lee)

130B. Asian American Immigration and Health—Employing a critical medical anthropological approach, focus is on the experience and meanings of illness for Asian immigrants newly arrived in the U.S. Beginning with a study of immigrants as a feared source of disease and contagion, issues of power, race, and nationhood in the ideology and practice of biomedicine. The immigrant's navigation of the U.S. health care system and the attribution of culture in the construction of the sick. Topics: post-traumatic stress disorder, AIDS, culture bound syndrome, risk assessment and preventative health.

5 units, Win (Lee)

TOPIC COURSES AND SEMINARS

86. Environmental Politics and Development—How do global environmental problems affect developing countries? What is the relationship between environmental degradation, poverty, and population? Why the perspective of developing countries of the South differs from the industrial nations of the North, and what can be done to reconcile environmental concerns with the amelioration of poverty.

5 units (Gupta) not given 1999-2000

88. Theories of Race and Ethnicity: A Comparative Perspective—Introduces the concepts and theories of race and ethnicity in the social sciences and cultural studies. U.S.-based definitions, ideas, and problems of race and ethnicity are compared to those that have emerged in other areas of the world.

5 units (Yanagisako) not given 1999-2000

89B. Comparative Race and Inequality—Analyzes the persistence of inequality in racially and culturally hybrid societies in Africa, Latin America, the Caribbean, and the U.S. What is the relationship between race and cultural, economic, and political inequality? What are the boundaries of racial "purity" and whom do they keep in or out? Given the diversity of large groups such as blacks and mestizos, what becomes the basis of group solidarity.

5 units, Win (Tunstall)

133A,B,C. Ethics of Development in a Global Environment (EDGE)—(Same as Engineering 297A,B,C) Wednesday evening seminars on world affairs, mostly on issues affecting poor nations. Autumn Quarter treats war and peace: the background of current wars and peace negotiations, the UN peacekeeping efforts, war and religion, arms trade. Winter Quarter treats international resources and commerce: the debt crisis, environmental protection, resource depletion, Japan in the world economy, aid and monetary institutions. Spring Quarter treats poverty and prejudice: development models, comparative national health, AIDS, control of wealth, India-China-Africa-S. America today. Speakers from Stanford and other institutions are experts who directly deal with world policy makers through research and advisory activities. One unit credit for attendance of the speaker series; 5 units additional credit for optional workshops treating selected issues in more depth. (Sequential registration not required.)

1-4 units, Aut, Win, Spr (Lusignan, Gupta)

136. The Anthropology of Consumption—Ethnographic historical approach to the study of consumption and its related topic, production. The social life of things are traced through interrelated processes addressing questions about the organization of labor that help produce an object; contingencies of value and the making of consumer distinctions; and the role of advertising. GER:3b (DR:9)

5 units, Spr (Ebron)

138. Anthropology of Medicine: Illness, Suffering, and Health Policy—Introduction to basic issues in medical anthropology through detailed discussions of the ways health care professionals and local residents in Euroamerican and non-Euroamerican contexts have understood, experienced, and responded to modes of bodily distress during the last century. How, in places like Haiti, India, Brazil, and China, people have come to use multiple medical approaches for understanding and dealing with illness, death, and other forms of distress. GER:3b,4a (DR:2 or 9)

5 units, Spr (Kohrmann)

142. Person, Gender, and Family in Welfare Policy—Explicit, implicit notions of the individual person, gender, and family embodied in U.S. welfare policy. Historical roots of welfare, its institutionalization, actual practices, and effects on recipients. Who has responsibility for children? Do theorists and policy makers have different assumptions about person, gender, and family when thinking about the poor? What assumptions are implied about marriage, the individual, independence? What are the assumptions of personhood, gender, and family among those who shape policy?

5 units (Delaney) not given 1999-2000

143. The Anthropology of Death and Dying—Examines fundamental topics in medical anthropology, focusing on the medical and social practices of caring for the ill or aging body throughout the process of dying and following death. How are the boundaries between life and death constructed and negotiated? What is considered a timely, or "good" death? What is the role of the healer as a person that dies? How is the body viewed (or used) after death and what is the appropriate ritual response
to loss of close kin? The cultural responses focus on contemporary biomedical practices: the declaration of brain death, physician-assisted suicide, and the commodification of human body parts.

3 units, Spr (Koenig)

145. Comparative Feminism—Preference to juniors and seniors majoring in Feminist Studies and anthropology. Interdisciplinary seminar for upper-level undergraduates. Women’s struggles for empowerment, situating them in the specific cultural and historical contexts in which they have emerged in different parts of the world. Focus: broaden an understanding of women’s struggles in the world, and develop analytical models that enable study of these struggles in their complexities and specificities by calling into question dominant assumptions about feminism. GER:4c (DR: 15)

5 units (Manekar) not given 1999-2000

148. Latino Cultural Citizenship—Cultural citizenship refers to the right to be different and to belong in a participatory democratic sense. Readings are drawn from the historical experiences of Chicanos, Puerto Ricans, and Dominicans in the U.S. and from different disciplines including imaginative literature.

5 units (Rosaldo) not given 1999-2000

152. Symbolic Anthropology—For undergraduates. Symbolic anthropology is an approach to the study of human society developed along with the concept of culture as a system of symbols and meanings, a system presumed to be embedded in and expressed by institutions, values, attitudes, structures of everyday life, and social action. The intellectual roots, exemplary texts, and opportunities to do symbolic analysis.

5 units (Delaney) not given 1999-2000

153C/253C. Millennial Fever—(Graduate students register for 253C.) Seminar opportunity for students to observe and analyze the social responses and events leading up to the turn of the millennium. The rituals of celebration being planned, apocalyptic movements and anxieties including the Y2K problem, the notion of time as an organizing principle. Comparisons of contemporary responses with those at the turn of the first millennium, and with other millennial movements. The Christian basis for the millennium focuses the issue of religious and political domination and the role of religion in creating identity and difference. GER:3b (DR: 9)

5 units, Aut (Delaney)

154. Creation/Procreation: A Comparative Study—An alternative to the study of religion and reproduction as distinct categories and separate domains. The gendered aspects of cosmological or religious systems and the cosmological significance of gender in terms of their symbolic interrelationships. Anthropological and other literatures examine these relationships in several cultures, including our own. Emphasis is on the ways these beliefs are embedded in practices and structures of social life and on Western categories and meanings, and their implications for theorizing.

5 units (Delaney) not given 1999-2000

157C. Cultural Studies of Youth—Introduction to anthropological and cultural studies of educational institutions, capitalism, popular culture, workplaces, and the nation as they shape youth identities, “sub-cultures,” and resistance. Emphasis is on theories of social reproduction and inequality, and on the cultural practices that produce gender, race, ethnic, and class-specific youth identities.

5 units, Spr (Bakrania)

158. Culture and Learning—(Same as Education 287.) Learning in various institutional settings in U.S. and around the globe. Learning in families, in schools, on the job, and on the streets. Emphasis is on the cultural organization of success and failure in American schools. Tentative consideration of opportunities for making less inequality.

3-4 units, Win (McDermott)

166. Sexuality and Culture—The history of sexuality in Western and non-Western traditions and how sexuality is affected by capitalism, globalization, and consumerism at the end of the 20th century. The major theoretical and methodological approaches to the study of sexuality (heterosexualities, homosexualities, bisexualities, and transgendered sexualities). Focus is on the rise of gay and lesbian sexualities in postcolonial societies.

5 units, Aut (Boellstorff)

170S. Space, Place, and Culture—(Same as Modern Thought and Literature 193S.) The ways cultures are embedded in spaces and places, how geography effects identity, how communities make and negotiate places, and the connections between space, power, and knowledge. The ways “space” has been theorized by cultural geographers and used as a trope in cultural theory. Interdisciplinary readings in cultural geography, anthropology, political economy, critical theory, and literature. Feminist geography, cartography and imperialism, race and space, and the politics of landscape.

5 units, Spr (Stein)

GRADUATE AND ADVANCED UNDERGRADUATE

210. Reading Theory through Ethnography—Restricted to first-year doctoral students. Graduate seminar focusing on contemporary ethnography and related cultural and social theories generated by texts. Topics: agency, resistance, identity formation, discourse analysis, etc. Enrollment limited to 10.

5 units, Aut (Ebron)

211. History of Anthropological Theory—The history of cultural and social anthropology is studied in relation to historical and national contexts and to key theoretical and methodological issues as these continue to inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.

5 units, Win (Delaney)

212. Anthropological Research Methods—Open to all graduate students; Anthropology Ph.D. candidates have first priority. Introduces a range of research methods and modes of evidence building in ethnographic research. Enrollment limited to 10.

5 units, Spr (Gupta)

5 units (Inoue) not given 1999-2000

227. Linguistic Anthropology—For graduate students. Intensive reading, focusing on the relationship between language and political economy, and from a range of theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. Goal: explore the diverse theorization of language in its linkages to power, social relations, and history. Prerequisites: either linguistics or anthropology course work.

5 units, Aut (Inoue)

235. Mass Media and Subjectivities—Graduate seminar on critical approaches to mass media and popular culture. Object is to collaborate in developing methodologies and critiques and to interrogate prevailing theoretical perspectives. Emphasis is on feminist perspectives, national and transnational circulation and reception of popular texts, questions of narrativity, identity, agency, and cross cultural conceptions of subjectivity.

5 units (Manekar) not given 1999-2000

243. Culture as Commodity—Graduate seminar focusing on theories of commodification, interests in tourism, national cultures as marketable objects, how identities are constituted through production and consumption. Formation of global style and taste.

5 units (Ebron) not given 1999-2000
244. Naturalizing Power: Kinship/Gender/Race/Sexuality—Graduate seminar examines discursive and material practices through which social relations of inequality are naturalized. Ideologies of family, kinship, gender, race, and sexuality are compared to consider the parallel processes of naturalization and mutual affirmation. The role of anthropological theory in these naturalizations. Enrollment limited to 20. Prerequisite: graduate student or advanced undergraduate major in anthropology, or consent of instructor.
5 units (Yanagisako) not given 1999-2000

245. Advanced Feminist Theory—Interdisciplinary graduate seminar examines cultural differences and recent feminist theory within dialogues of contemporary social theory. Enrollment limited to 20. Prerequisite: graduate student or advanced undergraduate major in anthropology, or consent of instructor.
5 units (Ebron) not given 1999-2000

247. Feminist Methodologies—Interdisciplinary graduate seminar for students with a thorough working knowledge of feminist theories. Focus is on feminist epistemologies and methodologies, drawing on questions from feminists working at the intersection of feminist anthropology and cultural studies, and in political theory, film theory, history, and literary theory. Feminist negotiations of poststructuralism and postmodernism and interrogations of concepts such as difference, experience, fieldwork, location, and voice. Students think through readings by doing specific research, pedagogical, and community projects.
5 units (Mankekar) not given 1999-2000

249. Seminar on Studying Up—Graduate seminar on issues in cultural theory and methodology through research on people who have greater material and cultural resources than those usually studied by anthropologists. How ideas about ideology, hegemony, identity, power, and practice are altered when we study those we consider to be agents of power rather than the subaltern. Topics: global capitalism, masculinity, white racial subjectivity. Enrollment limited to 20.
5 units, Win (Yanagisako)

250. Nationalism and Gender—The co-implication of discourses of nationalism and gender, focusing on nationalist movements and ideologies in newly-independent countries and “Third World” contexts. Themes: discourses and practices of nationalism with institutions such as the state, mass media, the family; masculinity, femininity, and militarization; and questions of representation, historiography, location, and strategy.
5 units, Spr (Mankekar)

251. Cultural Studies—Focus is on the politics of identity and community. Broader topics: questions on nationalism, displaced nationalism, and ethnicity. Interdisciplinary readings in cultural studies provide a theoretical context.
5 units, Aut (Rosaldo)

251A. Latino Studies—Graduate seminar on issues concerning Latino and indigenous groups in the Americas, including racial formations, migration, nationalisms, and settler colonialism. Readings primarily from ethnography, social history, and personal testimony.
5 units, Spr (Rosaldo)

252. Advanced Symbolic Anthropology—See 152.
5 units (Delaney) not given 1999-2000

253. Religion and Society—Covers theoretical and ethnographic material, sensitizing students to the complexity of the issues involved in the study of religion. In what ways is it useful, or not useful, to talk of religion as a human universal? What is the nature of religion, how is it practiced and by whom, what counts as religious phenomena and what accounts for the persistence of religion and the power of religious movements? What is the relationship between religion and state and what are some issues blurring that distinction? What is the relation between religion, power, and gender? Prerequisite: consent of instructor.
5 units (Delaney) not given 1999-2000

253A. “Fundamentalism” in the Modern World—Social scientists and others assumed religion would become a minor element in the modern world. In the evolutionary schema, myth was replaced by religion and religion by science. Yet in the U.S., the most modern and advanced society on earth, religion is still flourishing. Why are fundamentalist forms becoming popular around the world? Is “fundamentalism” a reaction against or an integral aspect of modernity? What does it portend for the future? Students debate definitions of religion, and become more aware of the interrelations between gender, religion, society, and law.
5 units, Win (Delaney)

254. Narrative, History, and Memory—Interdisciplinary graduate seminar on the debates surrounding theories of narrative and their relevance to ideas of history and memory. The importance of methodological implications of these approaches and their applicability to the analysis of social research, particularly anthropology and history.
5 units (Ebron) not given 1999-2000

255. Cultural Citizenship—The right to be different and to be equal, and the political and the cultural issues at stake in this formulation. Readings on the U.S. and the politics of difference.
5 units, Rosaldo not given 1999-2000

257. Medical Anthropology—Graduate seminar examining the history and theories of medical anthropology. Focus is on medical anthropology’s transformations in the 20th century: how medical anthropology has emerged as a field of inquiry, grown in dialogue with other areas of scholarship, and come to offer a unique array of theoretical positions and modes of ethnographic engagement. Emphasis is on debates within interpretive and critical medical anthropology, and how an understanding of these debates may be used to assess contemporary works within the field.
5 units, Win (Kohrman)

261. Graduate Colloquium: The Modern Tradition—Globalization and Modernity—(Same as Modern Thought and Literature 361.) Rather than assume one modern tradition, the colloquium encourages the analysis of the (uneven) appearance of a number of possible “modernities” in various geopolitical spaces, their cultural and historical formations, and their inter-relations. Can modernity be seen as a uniquely “western” achievement? By examining such diverse topics as trade and finance, colonialism, ecological transformations, immigration and forced migration, nationalism, and postcolonialism, the complicated history of modernity is understood as a global phenomenon. Prerequisite: consent of instructor.
5 units, Aut (Gupta, Palumbo-Liu)

262. Topics in Political Economy—Introduction to selected themes in political economy, emphasizing Marxist approaches. Topics: the development and articulation of capitalism, imperialism, colonialism, dependency, and world systems; 20th-century capitalism, post-Fordism, and postmodernism; the political economy of race, gender, and ethnicity; class relations and productive inequalities in the Third World; the discourse of development; and the cultural mediation of political economic transformation. The ethnographic material that employs these theories is used to examine specific socio-historical contexts.
5 units (Gupta) not given 1999-2000

263. Political Economy and Poststructuralist Theories of the State—Advanced graduate seminar on classic and contemporary Marxist, structuralist, and poststructuralist approaches to the state. Readings initiate dialogue between institutional analysis and those emphasizing process...
of representation and the cultural construction of the state. Prerequisite: 262 or consent of instructor.
5 units (Gupta) not given 1999-2000

272. Objectification: The Study of Material Culture—Theories of material culture and how the object world participates in social processes. The Hegelian and Marxist background and recent attempts to develop material culture studies between archaeology, anthropology, sociology, and psychology. Why are objects important to us? The relationships between conscious thought and daily material practice. The role of objects in thought and subjective experience. Objects in human evolutionary development and in child development. The nature of commodification. Objects in relations to power, authority, resistance; and in relation to the construction of self. The dependence of human subjectivity on the object world.
5 unit, Spr (Hodder)

275. Archaeology and Globalism—The emergence of archaeology as a discipline in the context of the rise of the nation state. The emergence of global economies and other global issues has created a new context for archaeology. How are archaeology and heritage responding to this new situation? The idea of "world heritage." The impact of postcolonialism. The commodification of the past: the past as theme park, as travel tourism or nostalgia, as exotic and other. Conflict between uses of the past for identity and as theme park; between heritage and resource or play. The impact of the Goddess, New Age, and other movements. Archaeology and human rights issues (including forensic archaeology).
5 units, Win (Hodder)

280. Ethnographic Approaches to Cultural Diversity in Schooling—(Same as Education 280.) How to learn about culture and to analyze education-relevant situations such as the culturally diverse classroom. The cultural process is approached by acquiring techniques of observation, interview, and interpretation of behavior in context, and soliciting and recording the "native" explanations of their own behavior; developing an internally consistent conceptual structure that orients observation and elicitation productively; and being sensitized to one's own culture and how it influences perception and interpretation of behavior. Techniques of ethnographic research applicable to the study of schooling are demonstrated and applied in modest field research projects. Writing of one research report or proposal for research.
4 units, Spr (Spindler)

4 units, Spr (Spindler)

292. Dissertation Seminar—For graduate students in the process of writing dissertations and preparing for professional employment.
0-3 units, Aut, Win, Spr (Mankekar)

293. Internship
1-15 units, any quarter (Staff)

294. Proposal Writing Seminar—Required of Ph.D. students in anthropology in their second year. Treats conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus of the sort suitable for dissertation proposals and research grant applications. Limited enrollment. Prerequisite: 289 or consent of instructor.
5 units, Spr (Yanagisako)

295. First-Year Paper—Required of first-year students.
2-5 units, Win, Spr (Inoue)

296. Research Assistantship—Supervised work with an individual faculty member on a research project. May be taken for more than one quarter.
5 units (Staff)

297. Directed Individual Study—Opportunities for advanced students to explore special areas of interest.
any quarter (Staff)

298. Teaching Assistantship—Supervised experience as assistant in one undergraduate course.
5 units, any quarter (Staff)

298C. Teaching Apprenticeship Practicum—Required of Ph.D. students in Cultural and Social Anthropology in their first year of study. Orientation and training in the skills and practices of effective undergraduate teaching. Limited enrollment, consent of instructor.
2 units, Spr (Staff)

299. A.M. Project—Research in connection with the master's paper.
any quarter (Staff)

AFFILIATED DEPARTMENTAL OFFERINGS

AFRICAN AND AFRO-AMERICAN STUDIES

105. Introduction to African and Afro-American Studies
5 units, Spr (McCants)

ANTHROPOLOGICAL SCIENCES

213. Topics in Linguistic Anthropology
5 units (Fox) not given 1999-2000

CLASSICS

33. Landscape: From Fine Art to Archaeology
4-5 units, Win (Shanks)

302. Classical Archaeology: Experiences of the Discipline
4-5 units, Aut (Shanks)

ENGLISH

398A. Writing for Academic Publication
5 units, Win (Heath)

LINGUISTICS

DRAMA

Emeriti: (Professors) Wendell Cole, Martin Essin, Helen W. Schrader, H. Donald Winbigler; (Associate Professor) Miriam B. Lidster; (Adjunct Professors) Evelyn M. Draper, Inga Weiss
Chair: Michael F. Ramsaur

Drama Division

Professors: Jean-Marie Apostolidis (French and Italian, Drama), Carl Weber
Associate Professors: William S. Eddelman, Harry J. Elam, Jr., Alice Rayner, Rush Rehm (Drama, Classics), Anna Deaver Smith
**Drama Division**

The Department of Drama bases its undergraduate and graduate programs on the integration of theory and performance. The faculty commit themselves to the need for artists to be able to analyze their aesthetic work and for scholars to be able to understand specialization to prepare students for continued work at the graduate level, either in professional or in conservatory programs that aim to educate artists for careers in the theater. As well, the Drama major offers a generalist theater education. The Ph.D. program, which demands that its candidates work as both theorists and theater artists, offers a chance to develop the skills for further work in the professional and university theaters.

**UNDERGRADUATE PROGRAMS**

**Bachelor of Arts**

The requirements for the A.B. degree in Drama are planned to integrate the critical and historical study of drama with the study and experience of performance. The major provides aesthetic and critical opportunities for students to develop special aptitudes. For example, a student may elect an emphasis in acting, directing, design, or critical theory or may combine areas of emphasis. Examples of how students can structure course work to take advantage of such an emphasis are available from the major adviser. Students are encouraged to declare a major in their sophomore year.

The core program of Drama courses required of all majors is:

1. Performance/Literature: 161, 162, and 163
2. Stage Management Project: 134
3. A practical production class in technical theater or performance: one of 29, 39A, 39B, or 39C.
4. Senior Project: every Drama major must complete an approved Senior Project in the area of their specialization: a minimum of 2 units in 200.

Two years of a college-level foreign language are strongly recommended.

All majors, in addition to completing the core described above, are required to complete one of the following five specializations:

1. **Acting:**
   a) Drama 120A, B (Fundamentals of Acting)
   b) The student must have completed at least 4 units of Drama 29 and acted in at least two department productions.
   c) Drama 28 (Make-Up for the Stage)

   d) Drama 47 (Period Movement and Dance)
   e) Four additional acting classes
   f) One course in dramatic literature
   g) Eight units of approved electives

2. **Directing:**
   a) Drama 170A (Introduction to Directing), 170B (Advanced Directing), and 171 (Undergraduate Theater Workshop)
   b) Drama 166 (Performance, Space, and Technology)
   c) Drama 159 (Shakespeare)
   d) Drama 30 (Introduction to Theatrical Design)
   e) Drama 31 (Introduction to Lighting and Sound)
   f) One course in acting
   g) One course in dramatic literature
   h) Eight units of approved electives

3. **Playwriting/Dramaturgy:**
   a) Drama 177 (Playwriting)
   b) Drama 170A (Introduction to Directing) and 170B (Advanced Directing)
   c) Drama 176 (Undergraduate Dramaturgy Project)
   d) Drama 166 (Performance, Space, and Technology)
   e) Drama 159 (Shakespeare)
   f) Two courses in acting
   g) One course in dramatic literature
   h) Four units of approved electives

4. **Design/Stagecraft:**
   a) Drama 30 (Introduction to Theatrical Design)
   b) Drama 31 (Introduction to Lighting and sound)
   c) Drama 131 (Lighting Design)
   d) Drama 132 (Costume Design)
   e) Drama 133 (Stage Scenery Design)
   f) Drama 39A, 39B, 39C (Performance: Crew)
   g) Drama 166 (Performance, Space, Technology)
   h) Two courses in design
   i) Eight units of approved electives

5. **Performance Theory and Cultural Studies:**
   a) Drama 156 (Contemporary Ethnic Drama)
   b) Drama 159 (Shakespeare)
   c) Drama 166 (Performance, Space, and Technology)
   d) Twenty-four units of course work in dramatic literature, criticism, theater history, history, art history, and so on, to be determined in consultation with the undergraduate adviser.

**SENIOR PROJECT**

Work for this project normally begins in Spring Quarter of the junior year and is completed by the end of the senior year. The student must do a senior project in his or her area of specialization: Acting, Directing, Playwriting/Dramaturgy, Design/Stagecraft, Performance Theory and Cultural Studies. The project can be a creative or research project, or a combination of both. The student has the option of writing an essay associated with the project. Students receive credit for senior projects through Drama 200, Senior Project.

Students pursuing senior projects should consult with both the Department of Drama undergraduate adviser and a faculty adviser in the project's specialty area. These consultations should take place early in the junior year. Students must petition approval of senior projects through the Department of Drama undergraduate adviser. Projects are typically approved by the department faculty at the end of Spring Quarter of the junior year or the end of Autumn Quarter of the senior year.

The student proposal should include an outline of the courses the student has taken and grades received in the area requirements, and should describe the courses in which they plan to enroll as part of the project. It should describe in detail the purpose and methods involved in the project; a bibliography, if appropriate; and a one-to-two page abstract of the associated essay if an essay is part of the project.

**MINORS**

For students wishing to minor in Drama, the following core requirements must be met:
1. The three-quarter sequence in Performance/Literature: Drama 161, 162, 163.
2. Stage Management Project: Drama 134.
3. A practical production class in technical theater or performance: one of Drama 29, 39A, 39B, or 39C.
4. Elective courses totaling a minimum of 15 units from the specified courses in any one of the five specializations listed above would constitute a minor concentration in: Acting, Directing, Playwriting/Dramaturgy, Design/Stagecraft, or Performance Theory and Cultural Studies.

HONORS PROGRAMS

Drama
For a limited number of students, the department confers the degree of Bachelor of Arts with departmental honors in Drama. To be considered for departmental honors, students must meet the following requirements:
1. The student must have fulfilled the requirements for the Drama major.
2. The student must be a Drama major in good standing with a grade point average (GPA) of 'B+' including all the student's work in Drama.
3. The student must have completed prerequisite courses in the area of specialization with a GPA of 'A-' or better.
4. The student must have completed a senior project that the Department of Drama considers outstanding.
5. Honors are awarded on the basis of both the senior project and the student's entire work in the Department of Drama.

HUMANITIES
An honors program in Humanities is available for Drama majors who wish to supplement their major with related and carefully guided studies. See the "Interdisciplinary Studies in Humanities" (ISH) section of this bulletin for a description of the honors program. Students who enroll in this program may offer ISH 160 and two seminars from 190-198 in fulfillment of the departmental elective requirement.

GRADUATE PROGRAMS

Doctor of Philosophy
University requirements for the Ph.D. are described in the "Graduate Degrees" section of the bulletin.
All graduate study in the Department of Drama leads to the Ph.D. degree. The doctoral program in Drama aims to integrate practical theater work with the critical and historical study of dramatic literature and theory. All candidates are expected to function both as scholars and as theater directors. The curriculum offers a two-year practical concentration in directing along with the study of critical and performance theory, aesthetics, history, and literature. The goal of the program is to give students a thorough knowledge of the field that leads to original and significant scholarly work grounded in practice.
The following department requirements are in addition to the University's basic requirements for the doctorate.

UNITS AND COURSE REQUIREMENTS
1. A minimum of 72 units of graduate courses and seminars in support of the degree. These units are in addition to units for the doctoral dissertation.
2. The sequence in Performance and Critical Theory (Drama 300, 301).
3. Six (6) additional graduate seminars within the Department of Drama. These must include at least one seminar in each of the following fields: (a) intersections of theory and performance (designated by suffix A in course number); (b) theater history (designated by suffix B in course number); and (c) dramatic literature (designated by suffix C in course number).
4. The five workshops in directing: Drama 370, 371, 372, 373, 374. In the first year, students will take 370 (Concepts of Directing), 372 (Projects in Directing), 371 (Visual Aesthetics for the Director), and 373 (Directing and Dramaturgy). The Projects class consists of the conceptual development, design, and production of a short play in a multi-form space. In the second year, students take Drama 374 (Graduate Directors' Performance Project) to stage a more fully developed production chosen in consultation with the faculty.

LANGUAGE REQUIREMENT
The candidate must demonstrate reading knowledge of one foreign language in which there is a major body of dramatic literature. The language requirement may be fulfilled in any of the following ways:
1. Achievement of a sufficiently high score (70th percentile) on the foreign language examination prepared by the Educational Testing Service (ETS). Latin and Greek are not tested by ETS.
2. A reading examination given each quarter by the various language departments, except for Latin and Greek.
3. Passage with a grade of 'B' or higher a course in literature numbered 100 or higher in a foreign language department at Stanford.
The language requirement must be met before the student can be advanced to candidacy.

TEACHING REQUIREMENT
Five quarters of supervised teaching at half time are a required part of the Ph.D. program. The requirement is normally met by teaching three courses during the second year and two courses during the third year.

EXAMINATIONS
Candidates must complete three examinations, one comprehensive and two qualifying examinations, by the end of the first three years of study at Stanford.
The comprehensive examination is taken as a four-hour sit-down in the Spring Quarter of the first year. The first part of the comprehensive exam is based on a range of texts given to the student by the department at the beginning of the first year. The second part of that exam is based on a list of texts from a given period determined by the student and faculty adviser. It may focus on texts or critical approaches of special interest to the student. Students who do not enter with significant background in dramatic literature may opt to take this exam in the week prior to the start of classes in the second year.
The first qualifying exam, which must be completed before advancement to candidacy at the end of the second year, consists of three 15-20 page essays written in consultation with a faculty adviser, covering a specific period of dramatic literature and theater history. These essays should not duplicate any written work from seminars. After approval by the adviser, the Graduate Studies Committee reads and evaluates these essays.
The second qualifying examination is a departmental oral with three faculty members, at least two of whom should be from the Department of Drama. This oral covers a second period of dramatic literature and theater history. The format of this exam approximates that of the University oral.
For the two qualifying examinations, the essays and the oral, each student will work out a program of study with a faculty adviser drawing from the following periods of Western drama, but may include non-Western texts:

CLASSICAL
Medieval and Renaissance
17th, 18th, and early 19th century
Modern: 1870-1980
Contemporary: 1980 to the present

Satisfactory Progress
Graduate students in Drama are expected to make consistent progress toward the completion of the Ph.D. degree. At the end of the first year, the departmental Graduate Studies Committee evaluates the work of each student in classes, seminars, examinations, and in performance work. Continuation in the program depends upon the recommendation of this faculty group. At the end of the second year, the committee reviews the student's work in consideration of advancement to candidacy. At the end...
of the third year, students are expected to have developed an approved dissertation prospectus in preparation for the University oral.

APPLICATION FOR CANDIDACY

By the end of the second year of residence, the following requirements or appropriate equivalents must be completed:
1. Performance and Critical Theory sequence (Drama 300, 301) and four seminars
2. The directing workshop series (Drama 370-374), including the successful production of two works in public performance
3. A foreign language
4. At least two examinations

Based on its evaluation of the student’s progress, the Graduate Studies Committee certifies the student’s qualifications for candidacy. Upon favorable action, the student files formal application for candidacy, as prescribed by the University, by the end of Summer Quarter of the second year.

DISSERTATION PROSPECTUS

The dissertation prospectus must be approved by the candidate’s adviser and by the departmental Graduate Studies Committee by the end of Spring Quarter of the third year.

UNIVERSITY ORAL EXAMINATION

The University oral examination, to be taken during the fourth year, is to demonstrate the candidate’s ability to conduct significant research in the general area of the dissertation. The examining committee consists of four faculty members, at least two of whom must be from the Department of Drama, as well as one faculty chair from outside the department. The University oral covers the area of the dissertation and is based on the prospectus and bibliography of the candidate.

DISSERTATION

Normally, the Ph.D. program is completed in four years. The first year should be devoted to full-time graduate study, the second and third years to graduate study and teaching, the fourth year to writing the dissertation. Following formal admission to candidacy (typically at the end of the second year), the dissertation must be completed and approved within five years from the quarter in which candidacy is granted. A candidate taking more than five years is required to restate candidacy by repassing the written examinations on dramatic literature.

APPLICATION AND FELLOWSHIPS

Applicants for the Ph.D. program may write directly to the Department of Drama for information and to Graduate Admissions, Registrar’s Office, Old Union, Stanford, CA 94305-3005, for an application. In addition to the required statement of purpose, all applicants must submit a statement detailing their practical theater experience and a sample of their written critical work. An interview, while not required, is recommended. Interviews are best scheduled after January 10 and before February 4. Graduate students in the Department of Drama begin study in the Autumn Quarter of each academic year; there are no mid-year admissions.

APPLICATION FOR CANDIDACY

Applicants for the Ph.D. program may write directly to the Department of Drama for information and to Graduate Admissions, Registrar’s Office, Old Union, Stanford, CA 94305-3005, for an application. In addition to the required statement of purpose, all applicants must submit a statement detailing their practical theater experience and a sample of their written critical work. An interview, while not required, is recommended. Interviews are best scheduled after January 10 and before February 4. Graduate students in the Department of Drama begin study in the Autumn Quarter of each academic year; there are no mid-year admissions.

All graduate students must be degree candidates. All admissions materials must be submitted to the Department of Drama, Memorial Auditorium m144, 551 Serra Mall, Stanford, CA 94305-5010 by December 17, 1999. The Department of Drama awards a number of fellowships to students in the Ph.D. program.

FOR MORE INFORMATION

Write to the Department of Drama, Memorial Auditorium, m144, 551 Serra Mall, Stanford, CA 94305-5010 or telephone (650) 723-2576. The FAX number is (650) 723-0843. Email is et.jlf@forsythe.stanford.edu and the website is: http://www.stanford.edu/dept/drama/.

JOINT PH.D. IN DRAMA AND HUMANITIES

The Department of Drama participates in the Graduate Program in Humanities (GPH) leading to a joint Ph.D. degree in Drama and Humanities. For a description of that program, see the “Interdisciplinary Studies in Humanities” section of this bulletin.

BLACK PERFORMING ARTS DIVISION

The Committee on Black Performing Arts (CBPA) is an interdisciplinary program supporting the presence of Black art forms at Stanford. Started as a student project in 1968, the committee became an official University program in 1972. In 1997, the CBPA joined the Department of Drama as a division.

The CBPA functions as: (1) a liaison with departments in hiring faculty and devising courses in Black performing arts; (2) a presenter of professional performances in dance, drama and music, and film and symposia, framed by related academic study in anthropology, dance, drama, history, philosophy, and sociology; (3) a producer of student productions; and, (4) as a resource for student organizations promoting artistic expression in the Black cultural tradition. Through the cooperation of the departments, students are able to take relevant courses in dance, drama, literature, and music. While the offerings do not, at this time, constitute an academic minor, students are able to concentrate studies in Black performing arts as part of the A.B. major in African and African American Studies or Drama.

The CBPA publishes a journal, the Black Arts Quarterly (BAQ), three times a year. The BAQ is a forum for reflective explorations of Black performativity. It showcases original student work from campuses across the country and addresses the material impact of Black representation in the arts, in media, and popular culture.

The CBPA has developed a strong relationship with the city of East Palo Alto through the holding artist residencies in the community and via “Dreams of a City: The East Palo Alto Project.” The project incorporates commissioning plays, co-producing a video documentary and creating an archive about the community. The CBPA intends to continue its relationship with East Palo Alto in its future programming.

DANCE DIVISION

The Dance Division aims to develop a trained body, an aesthetic imagination, and an active engagement through the experience of movement. In this way, the program supplements the University’s emphasis on stimulating the whole range of “intelligences” outside the strictly verbal, including the bodily kinesthetic, spatial, musical, and personal.

Since its inception in 1920, dance at Stanford University has positioned itself responsively to the needs of a changing university and society. By offering a range of studio and lecture courses aimed at enhancing understanding of dance as a way to create and communicate meaning, the program enables students to make connections between dance and other disciplines.

UNDERGRADUATE PROGRAMS

Students who wish to major in Drama with a specialization in Dance should see the undergraduate adviser, Susan Cashion, in the Dance Division.

MINORS

For students wishing to minor in Dance, the following core requirements must be met and a program of study arranged in consultation with the minor adviser in Dance.
1. Three of the following courses in Theory/Advanced Theory: Dance 160, Dance, Gender and History; 161, Dance and Live Art in the 20th Century; 168, Dance and Culture in Latin America; 170, World Dance and Cultures; 242, The Work of Art and the Creation of Mind.
2. Dance 134, Stage Management Project.
4. Additional choreographic experience: Dance 154, Dance Composition, or creating a work for Dance 100, Performance Workshop; Dance 106, Vintage Dance Ensemble, or another acceptable venue.
5. Studio courses totaling a minimum of 12 units. There must be a concentration of at least three classes chosen from a single dance form.
with the other classes chosen from at least three other dance forms, and at least one class of dance performance (Dance 23, 27, 100, 105, 106, 150). A member of the dance faculty must confirm that the student has attained an appropriate level of proficiency in their areas of emphasis. The studio dance classes are from the series in: Modern Dance (Dance 40, 45, 140, 141, 165); Latin American Dance (Dance 42, 43, 56, 75); Jazz (Dance 44, 143, 144, 145); Social Dance (Dance 46, 47, 146, 147); Ballet (Dance 38, 48, 148, 149); and Acting (any class).

GRADUATE PROGRAMS

The A.M. degree in Education/Dance Specialization addresses the fundamental issues of how to nurture effective educational leadership. One major emphasis of the program is to develop strategies for revitalizing and refocusing teaching skills in response to changing societal needs. Values and ethics in education are examined through course work that focuses on artistic considerations of human development, the patterning of dance education in a cross-cultural perspective, and teaching practices. To apply for admission to graduate study, successful completion of undergraduate courses in dance at Stanford, a bachelor’s degree in dance from an accepted university or college, or proof of equivalent professional experience is required. For further information about the Dance Division of the Department of Drama, contact Janice Ross.

DANCE DIVISION

Registration for most dance classes takes place at the first class meeting; further registration information is printed in the Time Schedule each quarter. Some class sizes are limited and require advanced registration in the Dance office in Roble Gym. Series classes (I, II, III) should be taken in order or with consent of instructor. Selected dance courses may fulfill General Education Requirements (GERs).

COURSES

(WIM) indicates that the course meets the Writing in the Major requirements.

(AU) indicates that the course is subject to the University Activity Unit limitations (8 units maximum).

DRAMA DIVISION

Registration for most drama classes takes place at the first class meeting; further registration information is printed in the Time Schedule each quarter. Some class sizes are limited and require advanced registration in the Department of Drama, room 144, Memorial Auditorium. INTRODUCTORY

3. Production Processes—Workshop, introducing the production process and preparation for creating a show. The role of the producer, from the hiring of the staff to the scheduling of a production, and that of the technical director.

1-2 units, Aut, Spr (Duxbury)

12N. Stanford Introductory Seminar: Antigone—From Ancient Democracy to Contemporary Dissent—Preference to freshmen. Sophocles’ tragedy as evidence of the tensions inherent in the democracy of ancient Athens, the myth as a paradigm for modern philosophical and ethical approaches to social change, and a look at modern dramatic versions (Brecht, Anouilh, Fugard, von Trotta) and essays (Hegel, Marx, Kierkegaard, Heidegger) that show how Antigone may be relevant to contemporary issues (the status of women, the struggle to save the environment, and resistance to illegitimate political authority). GER:3a, 4c (DR:7† or 8†)

4 units, Win (Rehm)

14N. Stanford Introductory Seminar: Contemporary German Drama from Brecht to Heiner Mueller—Preference to freshmen. Traces the movement from the modernist playwright Bertolt Brecht and the Berliner Ensemble to the postmodern theater of Heiner Mueller. GER:3a (DR:7)

4 units, Win (Weber)

15N. Stanford Introductory Seminar: The Shakespearean Era—Preferre to freshmen. The visual forms (architecture, painting, sculpture, and costume) that expressed the cultural style of the Shakespeare era. Dramatic texts, slides, and video. GER:3a (DR:7)

4 units, Aut (Eddelman)

17N. Stanford Introductory Seminar: (Re)Viewing Valdez in the Year 2000—Preference to freshmen. Reading, dramatic writing, and performance, examining (from Chicana feminist, indigenous, and cultural nationalist perspectives) the actos, mitos, full-length plays, films and philosophical thought developed by Luis Valdez, Founding Director of El Teatro Campesino, over a thirty-year period (1968-1998). GER:3a (DR:7)

3 units, Win (Moraga)

19N. Stanford Introductory Seminar: The Arts and Civic Dialogue—Preference to freshmen. Issues surrounding the position of the artist in society. GER:3a (DR:7)

4 units, Aut (Smith)

20. Acting: An Introduction—Theater games and physical exercises in concentration, attention, playing an objective, voice, movement, stage terminology, characterization, performing a monologue, and rehearsal techniques. Provides an experiential overview of actor training and prepares actors for advanced courses. Enrollment limited.

2 units, Aut, Win, Spr (Staff)

2 units, Aut (Mederos)

22. Scene Work—For actors who complete substantial scene work with graduate directors in the graduate workshop.

1-2 units, any quarter (Staff)

28. Make-up for the Stage—The basic techniques of make-up application for the artist and/or actor, which include aging, prosthetics, stylization, characterization, animals, and fantasy make-up.

2 units, Aut (Strayer)

29. Acting in Performance—Students cast in department productions receive credit for their participation as actors; 1-2 units for Graduate Directing Workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated. Prerequisite: consent of instructor.

1-3 units, any quarter (Staff)

30. Introduction to Theatrical Design—Lecture/lab introducing the basic skills of visual communication used in stage productions. Design and construction methods for stage scenery, costumes, and lighting.

4 units, Win (Guirguis, Strayer)

31. Introduction to Lighting and Production—The technical and aesthetic aspects of lighting and the production process.

3 units, Win (Ramsaur)

32. Textiles—Introduction to fabric techniques and processes for stage costumes.

3 units, Win (Strayer)
33. Drafting for the Theater—Lecture/lab, introducing the basic mechanical drawing techniques utilized by scenic and lighting designers. The basic pencil techniques through orthographic and isometric drawing, culminating with the technique of drop point perspective.
   2 units, Win (Guirguis)

34. Stage Management Techniques—Survey lecture introducing the production process and the duties and responsibilities of a stage manager. Provides the skills needed to stage manage a production.
   2-3 units, Aut, Spr (Duxbury)

35. Sound Design for the Theater—Lecture/lab introducing the practical handling of sound equipment, acoustics, and editing. The analysis, creation, and implementation of theatrical sound effects, live and recorded.
   3 units, Win (Duxbury)

36. Scene Shop Tutorial—Lecture/lab introducing the practical handling of shop equipment used in theatrical production.
   1 unit, Win (Duxbury)

37. Costume Construction—Lecture/lab, introducing the basic skills of constructing costumes for the stage.
   2 units (Strayer) alternate years, given 2000-01

38. Scene Painting—Lecture/lab, introducing the basic skills of scene painting for the stage.
   2 units, Spr (Guirguis)

39A, B, C. Theater Performance: Crew—Participation in the design and technical areas of department productions. Students commit to a specific show and receive credit for preparation and construction as a member of “running crew” in a specific area.
   1-3 units, any quarter (Staff)

39A. Scenery and/or Property
39B. Lighting and/or Sound
39C. Costumes and/or Make-up

53. Greek Tragedy—(Enroll in Classics/Greek 12.)
   3-5 units, given 2000-01

65. American Musical Theater: Broadway/Hollywood—As a unique and indigenous art form, American musical theater represents an important facet of American culture. Focusing primarily on Hollywood film musicals, explores technology, ethnicity, gender, concepts of romance, stardom, and developments in dance and musical forms as they change within the genre. Slides, recordings, and films. GER:3a (DR:7)
   4 units, Aut (Eddelman)

INTERMEDIATE

Primarily for the major but open to all undergraduates who have the necessary prerequisites.

103. Improvising—The improvisational theater techniques that teach spontaneity, cooperation, team-building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports™ by Keith Johnstone. Required readings, written papers, and attendance at performances of improvisational theater. Enrollment limited.
   3 units, Aut, Spr (Ryan)

113. Group Communication—Focuses on the interpersonal processes of communication as they relate to intergroup experience.
   4 units, Win, Spr (Schrader)

120A, B. Acting: The Fundamentals—For students who intend to begin serious actor training. First quarter emphasizes the understanding and utilization of the basic vocabulary of objective and action. Theater games and improvisation develop the actor’s ability to act with focus, intention, and energy. Introduction to the basics of characterization and transformation. Second quarter: the actor’s spontaneity and imagination are used to reveal the life of a play (working with dramatic texts). Approaches the actor’s craft range from character biography to moment-to-moment truthful playing. Exercises from Strasberg, Meisner, Chaiken, Linklater, and others. Scene and monologue work are drawn from primarily naturalistic plays. Outside rehearsal time required. Must be taken in sequence.

   120A. 3 units, Aut (Freed)
   Win (Ryan)

   120B. Prerequisite: 120A or consent of instructor.
   3 units, Win (Freed)
   Spr (Ryan)

121C. Acting: The Craft of Comedy—The basics of comedy playing from its origins in the utterly truthful to its destination in the over-the-top characterization, mask, and exaggeration; classwork on non-verbal scenes. The actor’s understanding of the mechanics of comedy, timing, and clowns are developed through improvisation and in-class exercises designed to free the imagination. Texts may include scenes from Feydeau, Woody Allen, Moss Hart, and Ayckbourne.
   4 units, Spr (Freed)

121K. Acting: Commedia dell’Arte—Mask and character work in the traditional style of the original slapstick comedy.
   4 units, Spr (Kairschner)

121M. Playing the Monologue—Students preparing for graduate or professional training can benefit from this solo work. Acting alone provides a special challenge for the performer. Monologues may be found within a play or may be used as audition material. The particular conventions which apply to this art form.
   3 units (Ryan) alternate years, given 2000-01

121P. Acting: Period and Style—Provides the actor with an approach to Classical, Expressionist, and historically unfamiliar texts. Acting beyond the “Method” emphasizes work on voice, language, and movement. Material is from Classical texts that have a strong formal “style” and from plays that have special demands based on theatrical time-period or genre. Scenes and monologues from Shakespeare, the Restoration, Molière, Feydeau, Chekhov, and Shaw.
   4 units (Freed) alternate years, given 2000-01

121R. Acting American Realism—Provides the actor with skills appropriate to the work of major American playwrights from Williams and Miller to Mamet and beyond.
   4 units, Win (Freed)

121S. Acting Shakespeare Project—Intensive work on a shortened Shakespeare play (Macbeth) selected by the ensemble, and leading to a studio performance project. Develops skills in understanding and performing Shakespeare, conducted as a series of rehearsals, and culminating in group performance. The development of the voice, movement, and speaking skills necessary for demanding classical theater work. Prequisite: 120A,B or consent of instructor.
   4 units, Aut (Freed)

121V. One Person Shows—Exercises in the creation of work by a solo performer.
   4 units, Win (Reese)

121W. Actors Who Write/Writers Who Act—The development of dramatic scripts for solo performance and multi-character plays. Work happens “on its feet,” with regular writing deadlines and through an informal workshop environment in which students engage actively in the presenting scripts, with support and feedback in dramaturgy and help with performance and staging issues where appropriate.
   4 units, Spr (Freed)
129A. Arcadia Workshop—A series of exercises culminating in a classroom presentation of Tom Stoppard’s play.
   2-3 units, Aut (Zack)

131. Lighting Design—Lecture/lab dealing with all of the practical and aesthetic aspects of lighting: electricity, light sources, color instrumentation, control, drafting, plotting, and the aesthetic principles of lighting design, interpretation, and concept. Prerequisites: 30, 31, or consent of instructor.
   3 units, Spr (Ramsaur)

132. Costume Design—A visual analysis of historical styles of costume design, interpreted for the modern theater and developed by the student in various presentational media. Prerequisite: 30 or consent of instructor.
   3 units, Aut (Guirguis)

133. Stage Scenery Design—Creations of increasing complexity involving text analysis, historical and artistic style, visual research, spatial organization, drafting, sketching, model building, and director-designer collaboration. Prerequisite: 30, or consent of instructor.
   3 units, Aut (Guirguis)

134. Stage Management Project—For students stage managing a Department of Drama production.
   1-5 units, any quarter (Duxbury)

135. Project in Theatrical Production—Assistant directing: stage, costume, lighting, and sound design; technical production, stage managing, or other work in connection with Department of Drama productions. Prerequisite: consent of instructor.
   1-5 units, any quarter (Staff)

156. Contemporary Ethnic Drama—Contemporary and earlier plays by playwrights of color (Asian-American, African-American, Latino-American) are analyzed to identify the diversity of cultural experience in American theater.
   4 units (Elam) alternate years, given 2000-01

   4 units, Win (Apostolidès)

158K. Women Playwrights and Feminist Performance Theory—Investigation of a range of women playwrights, confronting the issues raised within the plays and by the fact of their female authorship, situating these works within the broader contexts of various feminism(s).
   4 units, Win (Kuzminki)

158M. The Art of the Performer: A Century of Acting in Europe and America—The diversity of the actor’s craft from a historical perspective. What do we mean when we say “theatrical truth,” and how does that “truth” change when we change era and country? How have the shifting demands of dramaturgy, scenic design, directing, and evolving notions of “natural” behavior shaped and changed our ideas of performance over a century? What can historical styles and techniques teach the contemporary performer? Through film, video, audio, and written records, examines theater practice in terms of the major European and American movements in actor training and performance.
   4 units, Spr (Mease)

159A,B,C. Shakespeare—(Enroll in English 173A,B,C.)
   159A. 5 units, Aut (Orgel)
   159B. 5 units, Win (Parker)
   159C. 5 units, Spr (Rebholtz)

   4 units, Win (Rayner)

162. Performance and the Actor—How an actor’s performance serves as a sign for class, race, and gender in various historical moments. Theories of acting (Diderot, Brecht, Artaud, Meyerhold, Stanislavski), play texts, and contemporary performances are used to examine the cultural mapping of the body on stage. Emphasis is on works that present culturally significant images of women. Readings from plays by Benmussa, Brecht, Shakespeare, Kleist, Hansberry, Genet, Pones, Strindberg, Chekhov, Churchill, Kushner, Wertenbaker. GER:3a (DR:7) (WIM)
   4 units, Win (Rayner)

163. Performance and America—Key dramas by women, men, Asian-Americans, Latino-Americans, and African-Americans are examined as to the role of dramatic performance within contemporary American society, and as an affective and effective arena for inducing social change. GER:3a,4b (DR:3 or 7) (WIM)
   4 units, Aut (Elam)

164. 17th-Century French Theater—(Enroll in French and Italian 221.)
   3-5 units, Win (Apostolidès)

166. Performance, Space, and Technology—Theater history is analyzed through dramatic texts, slides, and videos to discover the ways in which performing styles, spatial evolutions, and technological advances express the cultural and social changes that are embedded in the theatrical event.
   4 units, Aut (Kuzminki)

167. Sour Grapes: Writing in Resistance—(Enroll in Spanish and Portuguese 282.)
   4-5 units, Spr (Moraga)

170A. Introduction to Directing—Prerequisite: consent of instructor.
   4 units, Aut (Mease)

170B. Advanced Directing—Prerequisite: 170A or consent of instructor.
   4 units, Win (Mease)

171. Undergraduate Theater Workshop—Undergraduate directors present one-act plays in workshop performances. Credit is available for actors and directors. Prerequisite: 170A/170B or consent of instructor.
   1-4 units, Spr (Mease, Ramsaur)

176. Undergraduate Dramaturgy Project—Serve as a dramaturg on any department production. Research the production’s text source, the writing of program notes, the compilation and editing of the playbill, and possible adapting/editing of the performance text or translating text from a foreign language.
   2 units, any quarter (Staff)

177. Playwriting: Writing for Performance—The Fundamentals—The autobiographical monologic/ poetic possibilities in Performance Art are explored to learn the elements of playwriting.
   5 units, Win (Moraga)

178. Intensive Playwriting—Opportunity to develop new material for the stage or complete a play-in-progress. Focus is on the most essential elements of playwriting, with an emphasis on the process of revision, and culminating in public readings of highlights of plays-in-progress. Prerequisite: prior experience in playwriting or consent of instructor.
   5 units (Moraga) alternate years, given 2000-01

179B. Teatro America Workshop: The Theater of Native/Chicano America—Traces the contributions of indigenous Americans to Native American theater.
American, Chicano, and Latin American popular, radical, and grassroots theater. Prerequisite: consent of instructor.

5 units, Spr (Moragga)

189Q. Stanford Introductory Seminar: Noam Chomsky—The Drama of Resistance—Preference to sophomores. Focuses on the ideas and work of Noam Chomsky, who challenged the reigning political and economic paradigms governing the U.S. the last 30 years. Chomsky's model for linguistics, Chomsky's work in the U.S., S.E. Asia, the Middle East, Central America, E. Timor, the media, "terrorism," ideology and culture, student/popular movements, and the role of resistance.

3 units, Spr (Rehm)

182Q. Stanford Introductory Seminar: Improvisation—The Jazz of Theater—Preference to sophomores. The new paradigm of improvisation as a "method" and as a developing art form. Readings on the theory of improvisation, compared and reinforced by attendance at performances of improvised theater in the Bay Area. Prerequisite: consent of instructor.

3 units (Ryan) alternate years, given 2000-01

189Q. Stanford Introductory Seminar: Mapping and Wrapping the Body—Preference to sophomores. Investigation into the concepts behind gender boundaries and clothing systems. Prerequisite: consent of instructor.

3 units, Spr (Eddelman)

190. Special Research—Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

1-5 units, any quarter (Staff)

191. Independent Research—Individual supervision of off-campus internship. Prerequisite: consent of instructor.

1-18 units, any quarter (Staff)

ADVANCED COURSES

Courses numbered 200 through 299 are designed for advanced undergraduates and graduates.

200. Senior Project—See "Undergraduate Programs" for description.

2-9 units, any quarter (Staff)

203. Advanced Improvisation—By audition only, become members of the Stanford improvisers (SIMPS) group. Prerequisite: 103.

3 units, Win (Ryan)

210A.B. The Actor in Performance—Preference to Drama majors and minors. Sequence provides a wide range of techniques and vocal training for the serious student who may be interested in further training in the performing arts. Guest-teachers from the professional theater contribute to the student's practical work on Shakespeare and text, movement, characterization, and comedy. Limited enrollment. Prerequisite: interview with instructor.

5 units (Freed) alternate years, given 2000-01

213. Stanford Improv Ensemble—By audition only, for members of the improvisation troupe. Special project work. Prerequisite: 103. (AU)

1-2 units, any quarter (Ryan)

231. Advanced Lighting Design—Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.

1-5 units, any quarter (Staff)

232. Advanced Costume Design—Individually structured tutorial for costume designers. Prerequisite: 132 or consent of instructor.

1-5 units, any quarter (Staff)

233. Advanced Scenery Design—Fast-paced, individually structured workshop. Prerequisite: 133 or consent of instructor.

1-5 units, any quarter (Staff)

235. Project in Theatrical Production—See 135.

1-5 units, any quarter (Staff)

242. The Work of Art and the Creation of Mind—(Enroll in Education 200.)

4 units, Win (Eisner, Chagoya, Rehm, Ross, Sano)

4 units, Spr (Rehm)

262. Performance and the Actor—See 162.

4 units, Win (Rayner)

263. Performance and America—See 163.

4 units, Aut (Elam)

264. 17th-Century French Theater—(Enroll in French and Italian 221.)

3-5 units, Win (Apostolides)

266. Performance, Space, and Technology—See 166.

4 units, Aut (Kuzminski)

273. Shakespeare: "The Voice of a Whole Epoch"—(Enroll in English 273.)

4-5 units, Aut (Brooks)

290. Special Research—Individual project on the work of a playwright, period, or genre.

1-5 units, any quarter (Staff)

GRADUATE

For graduates; open to advanced undergraduates with consent of instructor.

300. Performance Theory—Seminar addresses the relationship between aesthetic theory and practical criticism by examining selected works of recent scholarship in 20th-century Athenian tragedy, Shakespeare, and Beckett that display the relative impact of poststructuralism, cultural materialism, postmodernist theory, feminism(s), or psychoanalytic aesthetic theory.

3-5 units, Aut (Rayner)

301. From Theory to Criticism—Theater, performance, and performativity as theoretical concepts for interdisciplinary trends in critical studies. Performance theory as an arena in which to investigate the paradoxes of "interdisciplinarity" itself, focusing on how theories derived from the interdisciplinary arts, the social sciences, and literary and rhetorical studies. The contexts for engaged conversation or heated controversy, depending upon disciplinary heritage. Theater and performance in light of contemporary concerns in cultural studies, focusing on shared topics and methods, and on theatrical innovations in modes of scholarly representation.

3-5 units, Win (Jackson)

302A. Staging Analysis: The Psychoanalytic Scene—Readings of psychoanalytic case studies (Freud, Lacan, Montrelay, etc.) and dramatic texts to focus on how theatrical elements inform the analytic field related to actor/audience relations, material and signifying objects, memory and narrative, and the historical exclusions of gender and race.

3-5 units, Win (Rayner)

303A. Race, Gender, and Identity in Modernism—Readings from Ibsen to the Harlem Renaissance.

3-5 units, Spr (Elam)
304D. Classical Seminar—Performing the Ancient City—(Enroll in Interdisciplinary Studies in Humanities 311.)
3-5 units, Aut (Rehm)

308B. Seminar: Topics in Theater History—Classical Greece to the Beginning of the 19th Century—The stylistic evolution of theaters and staging from the classical period to the early development of Romanticism. Emphasis is on the ways theaters and staging reflect their own cultural and spatial environments.
3-5 units (Eddelman) alternate years, given 2000-01

309B. Seminar: Topics in Theater History—1800 to the 1980s—Staging from the classical period to the early development of Romanticism, behind early Realism, Naturalism, Appia, Craig, the "isms," and scenography created by artists.
3-5 units, Spr (Eddelman)

20. Basic Approaches to Teaching Acting—Workshop on the pedagogy of acting to prepare graduate student teachers for introductory classes in acting.
1-3 units, Aut (Staff)

359A, B. Seminar: Shakespeare—Text and Performance—(Enroll in English 373A, B.)
4-5 units, Aut, Win (Orgel)

370-374. Graduate Directing Workshop—The core curriculum for graduate students in directing. Prerequisite: consent of instructor.
370. Concepts of Directing—The basic directorial definitions of time, space, movement, and the performer/spectator relationship. Experimentation with texts chosen from literary and other sources, including works from the realistic tradition in drama, using a multi-form performance space.
5 units, Aut (Weber)

371. Visual Aesthetics for Directors—Introduction to the concepts of stage, costume, and light design. Creative procedures, e.g., designing groundplans and elevations, building a model, sketching and swatching costumes, and practical work in the lighting lab.
3 units, Win (Eddelman, Ramsaur)

5 units, Win (Weber)

373. Directing and Dramaturgy—Discussion/application of dramaturgy, directorial methods, and visual concepts in plays from the Elizabethan tradition to postmodernist texts. Work on the text is tested in the staging of scenes.
3-5 units, Aut, Spr (Weber)

374. Graduate Directors' Performance Project—Production of a full-length play, selected in consultation with faculty. Project is designed by graduate students, sometimes in collaboration with undergraduate design students, under the supervision of design faculty. Four to five weeks rehearsal. Public performance.
3-5 units, any quarter (Ramsaur, Weber)

376. Graduate Directors' Dramaturgy Project—Serve as a dramaturg on any department production. Work includes research on the production's text source, the writing of program notes, and the compilation and editing of the playbill. Possible adapting/editing of the performance text, and translating text from a foreign language.
2 units, any quarter (Staff)

377. Graduate Directors' Staged Reading Project—Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.
2 units, any quarter (Staff)

390. Tutorial
1-9 units, any quarter (Staff)

391. Tutorial for the First Exam (Sit-Down)
1-2 units, any quarter (Staff)

392. Tutorial for the Second Exam (Essays)
1-4 units, any quarter (Staff)

393. Tutorial for the Third Exam (Oral)
1-2 units, any quarter (Staff)

399. Dissertation Research
1-9 units, any quarter (Staff)

BLACK PERFORMING ARTS DIVISION
Students are advised to consult the Time Schedule each quarter to note changes. See the Drama and the Dance Division of this bulletin for additional course listings and descriptions.

AFRICAN AND AFRO-AMERICAN STUDIES

105. Introduction to African and Afro-American Studies
5 units (Staff)

BLACK PERFORMING ARTS

1-2 units, Aut (Elam)

DANCE DIVISION
Registration for most dance classes takes place at the first class meeting; further registration information is printed in the Time Schedule each quarter. Some class sizes are limited and require advanced registration in the Dance office in Roble Gym.
Series classes (I, II, III) should be taken in order or with consent of instructor. Selected dance courses may fulfill General Education Requirements (GERs).

INTRODUCTORY
Open to all students. No previous dance experience needed.

38. Ballet Barre—Barre work, as the foundation for future work in classical ballet, grounding the beginning student in aspects of poise, precision, and placement.
1 unit, Aut (Ryan)

40. Modern Dance I—The technical and creative principles of modern dance, designed to develop the body as an articulate instrument.
1 unit, Aut, Win, Spr (Cashion)

42. Dances of Latin America—Selected dances of Latin America, specifically Argentina, Brazil, Chile, Cuba, Mexico, Peru, and Puerto Rico. (AU)
1 unit, Aut (Cashion)

43. Afro-Brazilian and Afro-Peruvian Dance—Brazilian dance forms of the Northeast: Samba, Maracatu, Maculele, Bloco Afro. Peruvian
dance of the coastal region: Festejo and Zamacueca.
1 unit, Aut (Cashion)

44. Jazz Dance I—Introduction to the basic techniques, with emphasis on current jazz style. Historical jazz steps are studied to enhance an understanding of contemporary jazz forms.
1 unit, Aut, Win, Spr (Kramer)

45. Improvisation plus Contact—The development of improvisation skills as a creative performance practice and as a basis for choreography; techniques of contact improvisation.
1 unit, Aut, Win, Spr (Kramer)

46. Social Dances of North America I—Introduction to the partner dances found in American popular culture: waltz, swing, tango, foxtrot, two-step, blues. Fee. (AU)
1 unit, Aut, Win, Spr (Powers)

48. Ballet I—Emphasis is on the fundamentals of classical technique: alignment, basic barre exercises, and movement sequences in the center and across the floor. (AU)
1 unit, Aut, Win (Ryan)

56. Argentine Tango—Emphasis is on leading/following and techniques of tango dancing. Styling, musicality, and other aspects of partnering. (AU)
1 unit, Spr (Staff)

75. Mexican Dance and Folklore—For the novice dancer. Three forms of Mexican dance: regional/folklorico, popular/social, and religious. Taught for technical and cultural understanding.
2 units, Win (Cashion)

INTERMEDIATE

Open to all undergraduates who have previous dance experience.

140. Modern Dance II—Intermediate technique. Introduction of improvisation and composition in directed studies.
1 unit, Aut, Spr (Kramer)

143. Afro-American Roots of American Concert Dance—Traditional African and Caribbean dance forms and their influences on American concert dance performers of the 20th century. Reading materials and lectures support a dance historical approach.
2 units, Win (Moses)

144. Jazz Dance II—Intermediate level, emphasizing alignment, control, rhythmic coordination, and the learning of movement combinations.
1 unit, Aut, Spr (Moses)

146. Social Dances of North America II—Accelerated survey of the partner dances found in American popular culture: waltz, swing, tango, foxtrot, two-step. Prerequisites: 46 or equivalent experience; must know basic waltz and swing.
1 unit, Aut, Win (Powers)

147. Living Traditions of Swing—In-depth instruction in many forms of swing dancing, from the early Lindy of the 1920s to 6- and 8-count Lindy shag, street swing, and hustle. A foundation of partnering and improvisation is supplemented with advanced variations.
1 unit, Spr (Powers)

148. Ballet II—Intermediate level. Continuation of 48, repeating the fundamentals with increased complexity and introducing additional movement vocabulary.
1 unit, Aut, Spr (Elliott, Ryan)

154. Dance Composition: The Practice of Making Dances—Students investigate movement material, compositional tools, and traditional and non-traditional methods of dance composition, leading to choreography. Structured as a participatory lab, class informs performance and compositional skills through an enhanced understanding of how dances are made.
3 units, Win (Frank)

165. Dance Heritage: History and Styles—Workshop/seminar on the origins of movement forms that have influenced Western contemporary dance, e.g., Duncan, Graham, Horton, Limon, Ailey, Cunningham. Specific approaches and techniques utilize cross-cultural and historical perspectives; studio work is amplified by lectures, films, and readings.
2 units, Win (Ross)

ADVANCED

Open to all undergraduates who have previous dance experience.

1 unit, Aut, Spr (Frank)

145. Jazz Dance III—Advanced level of technical proficiency. Focus on advancing the performance skills of projection and movement quality. Prerequisite: consent of instructor.
1 unit, Aut, Win, Spr (Moses)

149. Ballet III—Advanced level of classical ballet training.
1 unit, Win, Spr (Elliott)

PERFORMANCE

23. Public Performance—For students participating in movement oriented performance. (AU)
1 unit, Aut, Win, Spr (Kramer)

27. Faculty Choreography—Rehearsal and performance of faculty choreography. Selection by audition.
1 unit, Aut, Win, Spr (Staff)

100. Performance Workshop—Explores and develops composition and performance skills. Required for participation in certain faculty and/or student-directed productions.
1 unit, Win, Spr (Kramer, Frank)

105. Grupo Folklorico Los Decanos—Dance material of Latin America (e.g., Folk, Carnival) is arranged for performance with a variety of performing experiences off and on the Stanford campus. Prerequisite: previous dance experience in Latin American forms, or consent of instructor.
1 unit, Win, Spr (Cashion)

106. Stanford Vintage Dance Ensemble—Training and mastery of period ballroom dances, from the 19th century to the 1930s. Advanced social dance is taught in a rehearsal format in a variety of performance experiences, including Viennese and Ragtime Balls.
1 unit, Aut, Win, Spr (Powers)

134. Stage Management Project—For students stage managing a Dance Division production.
1-5 units, any quarter (Kramer)

150A.B.C. Ballet Repertory—Designed for students with at least one year of ballet. Learn, rehearse, and perform choreography from the classical and contemporary repertoire. Participants must enroll in all three quarters of sequence. Corequisite: 148 or 149.
1 unit, Win, Spr (Elliott)

THEORY

Classroom or classroom/studio combination courses on topics in Dance and Performance.
158. The Body in Motion—Approaches and methods in body therapy: body maintenance and conditioning, the Laban movement system, body-mind centering
3 units (Staff) alternate years, not given 2000-01

160. Dance, Gender, and History—Historical lecture/survey of Western theatrical dance, examining changing notions of gender construction and the body in dance over the last 200 years. Ballet and modern dance are looked at in the context of social and political events as and artistic developments and ideologies. GER:4c (DR:‡)
3-4 units, Win (Ross)

3-4 units, Spr (Ross)

168. Dance and Culture in Latin America—(Same as Cultural and Social Anthropology 72.) Selected dance forms of Latin America are viewed as aspects of human behavior. Emphasis is on the cultural influences (European, African, and indigenous) which have shaped the ritual and social dance forms of Argentina, Brazil, Chile, Cuba, Mexico, and Puerto Rico.
3-4 units, Spr (Cashion)

169. Methodologies for Creation, Staging, and Reconstruction—Develops the skills and criteria for the choreographic process in dance. The work of invention, staging, and reconstruction in dance. Students are led through the creative process and practical considerations in making a dance work.
3 units, Aut (Kramer, Moses)

170. Dance and World Cultures—Dance as the embodiment of cultural identities. Emphasis is on issues of cultural representation, transmission, socialization, and education through dance in a variety of world cultures. Comparative cultural examination of identity formation in dance from ritual to theatrical forms, in historical to contemporary settings.
3 units, Aut (Cashion, Ross)

190. Special Research—In-depth study of topics related to the discipline of dance.
1-5 units, any quarter (Staff)

191. Independent Research—Individual supervision of off-campus internship. Prerequisite: consent of instructor.
1-18 units, any quarter (Staff)

197. Art and Community Learning through Service in Dance—Participatory seminar allows students to research the nexus of art and community, using the specific medium of dance to study how art affects self-perception and social development in female and male juvenile populations at risk. Students participate in service through the arts by developing a relationship to a specific population, by reading and reflecting on existing literature, and by hearing testimony from experts in the field.
4 units, Spr (Ross)

ADVANCED THEORY

Courses numbered 200 through 299 are designed for advanced undergraduates and graduates in the A.M. program.

241. Masters' Seminar: Issues in Dance Education—Required of first-year A.M. students in Dance Education. Introduction to the current issues and research concerning dance in education. Readings/discussions focus on the challenges to the field of dance in academic and artistic institutions.
1-2 units Aut (Ross)

242. The Work of Art and the Creation of Mind—(Enroll in Education 200.)
3-4 units, Win (Eisner, Chagoya, Rehm, Ross, Sano)

246. Dance Teaching Internship—The methodologies of teaching dance and using music resources within a variety of classroom situations. Instruction and guided practice in the preparation of lesson plans, developing sequence and progression in a class setting, and using accompaniment.
1-3 units, Win (Frank)

248. Graduate Design Project—Three part, individually designed creative project required for completion of the A.M. Degree in Dance Education.
5 units (Ross, Frank, Kramer)

290. Special Research—Individual project on the work of any choreographer, period, genre, or dance-related topic.
1-5 units, any quarter (Staff)

EAST ASIAN STUDIES

Director: Jean Oi

Affiliated Faculty:
Art and Art History: John D. La Plante (emeritus), Michael Sullivan (emeritus), Sarah Fraser, Melinda Takeuchi, Richard Vinograd (on leave 1999-2000)
Comparative Literature: David Palumbo-Liu
Cultural and Social Anthropology: Harumi Befu (emeritus), Miyako Inoue, Matthew Kohrman
Economics: Masahiko Aoki, John J. Gurley (emeritus), Lawrence Lau
Education: Thomas Rohlen
History: Gordon Chang, Peter Duus, Harold L. Kahn (emeritus), Jeffrey Mass, Ellen Neskar, Roger Thompson, Lyman P. Van Slyke (emeritus)
Law: Stanley Lubman (Consulting)
Linguistics: Peter Sells
Philosophy: David S. Nivison (emeritus)
Political Science: Jennifer Amyx, John W. Lewis (emeritus), Daniel Okimoto (on leave 1999-2000), Michel Oksenberg, Jean Oi, Kurt Scitler (emeritus), Robert E. Ward (emeritus)
Religious Studies: Carl Bielefeldt, Angelika Czodzich, Bernard Fuare, Lee H. Yearley
Sociology: Andrew Walder

In addition, a number of other Stanford faculty have some teaching or research interests related to East Asia: Takeshi Amemiya (Economics), Barton Bernstein (History), Henri-Claude de Bettignies (Business), Walter P. Falcon (Institute for International Studies), William B. Gould (Law), Tetsuya Kataoka (Hoover Institution), Thomas Metzger (Hoover Institution), David Montgomery (Business), Ramon Myers (Hoover Institution), Leonard Ortolano (Urban Studies), Mark Peattie (Hoover Institution) Sylvia Yanagisako (Cultural and Social Anthropology), Pan A. Yotopoulos (Food Research)

The Center for East Asian Studies (CEAS) coordinates all University instructional, research, and special activities related to China, Japan, and Korea. Faculty and students who share a common interest in the study
of East Asia are brought together by the center from a broad range of academic concerns covering nearly every discipline and historical period. In addition to supporting a wide variety of academic and extra-curricular activities on the Stanford campus, the center is also involved in programs that link the University’s resources on East Asia with civic groups, secondary schools, and local colleges in the San Francisco Bay area. As a National Resource Center designated by the Department of Education, Title VI, CEAS sponsors programs that provide opportunities for East Asian Studies faculty and students to meet and work with one another.

Further information may be obtained from the Center for East Asian Studies, Building 50, Stanford University, Stanford, California 94305-2034; telephone 650-723-3362, 723-3363.

UNDERGRADUATE PROGRAMS

BACHELOR OF ARTS

The undergraduate major in East Asian Studies enables students to obtain a comprehensive understanding of East Asia broadly conceived, that is the vast area stretching from Japan through Korea and China to the contiguous areas of the Central Asian landmass. Majors in East Asian Studies begin or continue the mastery of Chinese, Japanese, or Korean. Within the humanities or social sciences, they focus on a particular subregion, for example, Japan, south China, Hong Kong and Taiwan; or western China and Central Asia, or a substantive issue involving the region as a whole, such as environment, public health, rural development, historiography, cultural expression, Buddhism’s impact on East Asian cultures, or traditional Japanese civilization. The major seeks to reduce the complexity of a region to intellectually manageable proportions and illuminate the interrelationships among the various facets of a society.

Potential majors must submit a Student Proposal for a Major in East Asian Studies not later than the end of the first quarter of the junior year for approval by the East Asian Studies Subcommittee on the Bachelor of Arts program.

Majors must complete at least 75 units of course work on China, Japan, and/or Korea. Courses to be credited toward major requirements must be completed with a grade of ‘C’ or better. Specific requirements are:

1. **Language**: proficiency in Chinese, Japanese, or Korean language at the second-year level or above, to be met either by course work or examination. Students who meet the requirement through examination are still expected to take an additional 15 units of language at a higher level or literature courses taught in the language, or first year in an additional Asian language.

2. A minimum of two of the three gateway courses, or one gateway course plus Asian Languages 91 (East Asian Civilization: China) or 92 (East Asian Civilization: Japan). The gateway courses are “The Roots of Modern East Asia” offered in Autumn Quarter, East Asia in the Age of Imperialism offered in Winter Quarter, and Contemporary East Asia, offered in Spring Quarter.

3. **History**: completion of at least two courses from one of the following course sequences:

   - History 192A, 192B, 192C (Chinese History)
   - History 194A, 194B, 194C, 194D (Japanese History)

4. **Substantive Concentration**: additional courses on East Asia, one of which must be a seminar.

5. **Capstone Essay**: completion of a paper of approximately 7,500 words, written either in a directed reading course or for one of the courses in item 4 above, which optimally would be built upon the student's thematic interest. A one-credit Spring Quarter course is required for all majors, in which they share their senior theses.

Majors are encouraged to distribute their course work among at least three disciplines and two subregions in Asia. (The subregions need not be traditionally defined. Examples include China, Japan, or Korea; or, in recognition of the new subregions which are emerging, South China, Hong Kong, and Vietnam; or Central Asia, Xinjiang, and Mongolia.) At least four courses must have a thematic coherence built around a topic such as:

Buddhism’s impact on East Asian cultures
Culture and society of modern Japan
Economic development in South China NETS (Natural Economic Territories)
Environmental issues of Asia
Fine arts and literature in late imperial China
Political economy of postwar Japan
Social transformation of modern China
Traditional Japanese civilization

An East Asian Studies course that satisfies the University Writing in the Major requirement (WIM) should be completed before beginning the senior essay. This year, Asian Languages 133 and 138 and Art and Art History 2 satisfy the WIM requirement, as do Department of History courses at the 100 and 200 level.

The courses for the major must add up to at least 75 units and all must be taken for a letter grade.

MINORS

The goal of the minor in East Asian Studies is to provide the student with a broad background in East Asian culture as a whole, while allowing the student to focus on a geographical or temporal aspect of East Asia. The minor may be designed from the following, for a total of six courses. All courses should be taken for a letter grade.

1. Two quarters of the gateway courses, The Roots of Modern East Asia, East Asia in the Age of Imperialism, and Contemporary East Asia. One of the following may substitute for one quarter of the gateway courses:
   - Asian Languages 91, Traditional East Asian Civilization: China
   - Asian Languages 92, Traditional East Asian Civilization: Japan
   - Political Science 125, The Rise of Industrial Asia

2. A course in the History sequences 192 (China) or 194 (Japan)

3. One undergraduate seminar and two other courses from among those listed each quarter as approved for East Asian Studies majors, including literature courses but excluding language courses.

Applications for the minor are due no later than the second quarter of the junior year.

HONORS PROGRAM

Majors with a grade point average (GPA) of 3.25 or better in all courses related to East Asia may apply for the honors program no later than the final quarter of the junior year. Application entails submitting an honors prospectus to the student’s adviser for approval. Admission is granted by the subcommittee on the A.B. program, acting on the adviser’s recommendation.

Honors requirements are satisfactory completion of: (1) an honors thesis of high quality of approximately 10,000 words to be submitted in lieu of the senior essay otherwise required for the major, (2) 5 to 10 units of directed individual study in connection with the thesis project, and (3) one advanced level colloquium or seminar dealing with China, Japan, or both.

COTERMINAL DEGREE

The center admits a limited number of Stanford undergraduates to work for a coterminal A.M. degree in East Asian Studies. While the coterminal degree program permits admission to a graduate program at early as the eighth quarter and no later than the end of the eleventh quarter of undergraduate study at Stanford, the center accepts A.M. applications only once a year. Therefore, applications must be submitted by January 1. Applicants are expected to meet the same general standards as those seeking admission to the A.M. program: they must submit a written statement of purpose; a Stanford transcript; three letters of recommendation, at least two of which should be from members of the department of concentration; and scores from the General Test of the Graduate Record Exam. In addition, applicants must provide a list of courses they intend to take to fulfill degree requirements. The decision on admission rests with the A.M. Admissions Committee of the Center for East Asian Studies. Students must meet all requirements for both A.B. and
A.M. degrees. They must complete a total of 15 full-time quarters (or the equivalent), or three full quarters after completing 180 units for a total of 217 units.

**EAST ASIAN STUDIES (PAYSON J. TREAT) THEME HOUSE**

EAST House, on campus at Governor's Corner, is an undergraduate residence that houses 60 students and offers them a wide variety of opportunities to expand their knowledge, understanding, and appreciation of Asia. A member of the East Asian Studies faculty serves as resident fellow of EAST House. Assignment is made through the regular undergraduate housing draw.

**KYOTO CENTER FOR JAPANESE STUDIES**

Students interested in the study of Japanese language, history, culture, and social organization can apply to the Kyoto Center for Japanese Studies, a September-to-April program managed by Stanford that includes students from eight other American universities. Every Spring Quarter, the Stanford Center in Technology and Innovation, also at the Kyoto Center, offers an academic quarter focused on Japanese organizations and the political economy of research, development, and production of high technology and advanced industries. An internship in a Japanese firm, laboratory, or agency follows the training program. For information about Kyoto, contact the Overseas Studies office at Sweet Hall, telephone 650-723-3358.

**GRADUATE PROGRAMS**

**MASTER OF ARTS**

University requirements for the master's degree are described in the "Graduate Degrees" section of this bulletin.

The A.M. program in East Asian Studies is designed both for students who plan to complete a Ph.D., but who have not yet decided on the particular discipline in which they prefer to work, and for students who wish to gain a strong background in East Asian Studies in connection with a career in nonacademic fields such as business, law, education, journalism, or government service. However, career-oriented students should realize that a master's degree in East Asian Studies alone may often provide insufficient preparation for work in many professions, and they are advised to plan for additional professional training.

The master's degree program allows a great deal of flexibility in combining language training, interdisciplinary area studies, and a disciplinary concentration. The director of the center assigns faculty advisers to all students. Members of the staff and faculty are available for academic and career planning. The A.M. program is normally completed in two academic years, but students can shorten this time by receiving credit for prior language work or by attending summer sessions. Students are urged to complete the degree requirements within one year if their background makes it possible.

Applicants must submit scores for the General Test of the Graduate Record Examination. Foreign applicants are also required to take the Test of English as a Foreign Language. Applications for admission and financial aid may be obtained by writing to Graduate Admissions, Old Union, Stanford University, Stanford, California 94305-3005. The deadline for completed applications for admission and financial aid is January 1.

The basic requirements for the A.M. degree in East Asian Studies are as follows:

**Language Requirement**—Students must complete the equivalent of Stanford's first three years of language training in either Chinese, Japanese, or Korean. Students entering the program without any language preparation should complete first- and second-year Chinese, Japanese, or Korean within the first year of residence at Stanford. This will necessitate completing a summer language program. Language courses taken at Stanford must be for letter grades.

The language requirement may be satisfied in part or in full by placing into an appropriate Stanford language class through the language proficiency exam given by the Department of Asian Languages. Students who fulfill this minimum three-year language requirement before completing other requirements are encouraged to continue language study, or take courses in which Chinese or Japanese are used, for as long as they are in the program. Language courses beyond the third-year level may be applied to the Area Studies requirement discussed below.

Students in the A.M. program are eligible to apply for the Inter-University Language programs in Taipei, Beijing, and Yokohama. For further information, see the "Institute for International Studies" section of this bulletin. Work completed in one of these programs may be counted toward the A.M. degree's language requirement. Students may petition to have advanced work counted for a maximum of three out of the nine area studies courses required for the degree.

**Area Studies Requirement**—Students must complete the 1-unit core course, East Asian Studies 330, and an additional nine courses numbered 100 or above related to East Asia. A total of 37 units beyond the courses used to fulfill the third-year level language requirement is required for the degree. (Chinese and Japanese language courses numbered 100-199 are considered to be at the third-year level and do not count toward the courses required for the degree.) The nine courses must be 3 or more units and be taken for a letter grade. At least 18 units must be designated primarily for graduate students (typically at the 200 level).

An integral part of the program is training in research and a demonstration of research ability in a discipline. Three courses, one of which must be a seminar, colloquium, or advanced course in which a research paper on China or Japan is written, must be within a single department. A master's paper, representing a substantial piece of research, should be filed with the center's program office as part of the graduation requirements. With the adviser's approval, the master's paper requirement may be satisfied by using a research paper written for an advanced course. The six additional area courses may be taken in departments of the student's choosing. Some theory-oriented or methodological courses may be used to meet part of these requirements provided they are demonstrably useful for understanding East Asian problems. Except in unusual circumstances, credit toward the Area Studies requirement is not given for courses taken before entering the A.M. program. Students in this program may, however, take courses for exchange credit at the University of California, Berkeley with the approval of their adviser and the Office of the Registrar. In any case, Stanford University requires the payment of three full quarters of tuition for a University degree to be granted.

**DUAL DEGREE PROGRAMS**

**EAST ASIAN STUDIES AND LAW**

This joint program grants an A.M. degree in East Asian Studies and a Doctor of Jurisprudence (J.D.) degree. It is designed to train students interested in a career in teaching, research, or the practice of law related to East Asian legal affairs. Students must apply separately to the East Asian Studies A.M. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of training in Chinese or Japanese.

**EAST ASIAN STUDIES AND EDUCATION**

This joint program grants an A.M. degree in East Asian Studies and a secondary school teaching credential in social studies. To be eligible for this program, students should apply to the A.M. program in East Asian Studies and then apply to the Stanford Teacher Education Program during the first year at Stanford. Completing the joint program requires at least two years, including one summer session when beginning the education component of the program.

**EAST ASIAN STUDIES AND BUSINESS**

This joint program grants an A.M. degree in East Asian Studies and a Master of Business Administration. Students must apply separately to the East Asian Studies A.M. program and the Graduate School of Business and be accepted by both. Completing this combined course of study requires approximately three academic years (perhaps including summer sessions), depending on the student's background and level of training in Chinese or Japanese language.
EAST ASIAN STUDIES AND HEALTH SERVICES RESEARCH

The M.S. degree in Health Services Research (HSR) is an interdisciplinary program training students in research and analytic skills for careers in the growing health industry as innovative health planners, system analysts, and policy-makers. Students concluding the first year of graduate study at Stanford are eligible to apply for the degree, which is granted by the Department of Health Research and Policy in the School of Medicine. The degree may be pursued concurrently with the second and subsequent years of graduate study and is awarded on completion of 45 units of course work. This work is to be split approximately equally between research workshops and formal courses relevant to the health sector. Each student’s program is planned to meet individual interests in health services in addition to fulfilling HSR core requirements. For more information, apply to the Program Administrator, Division of Health Services Research, Health Research and Policy Building, Stanford, CA 94305.

DOCTORAL PROGRAMS

Stanford does not offer a Ph.D. in East Asian Studies. However, there are more than 100 doctoral students with a specialization on China or Japan within various departments and schools of the University. The departments that offer an East Asian concentration are: Anthropological Sciences, Art and Art History, Asian Languages, Comparative Literature, Cultural and Social Anthropology, Economics, History, Linguistics, Philosophy, Political Science, Religious Studies, and Sociology. It is also possible to specialize in East Asia within some of the doctoral programs of the professional schools of Business, Education, and Law. Inquiries should be directed to the individual department or school concerned.

FINANCIAL AID

Students in A.M. or Ph.D. programs who plan to do work in Chinese or Japanese language, or language-related area courses, may be eligible for Foreign Language and Area Studies (FLAS) fellowships and are encouraged to apply for them at the time of application to Stanford. Recipients of FLAS fellowships must be American citizens or permanent residents. For further information, contact FLAS Grant Administrator, Building 50, Stanford, California 94305-2034.

COURSES

The courses listed below deal primarily with China, Japan, and/or Korea. Many other theoretical and methodological courses within the various departments at Stanford are taught by faculty who are East Asian specialists; these courses often have a substantial East Asian component and may be found under the department listings in this bulletin.

GATEWAY COURSES FOR UNDERGRADUATES

92A. The Roots of Modern East Asia—China, Korea, and Japan in Early Modern Times—(Enroll in History 92A.)
5 units, Aut (Kahn)

92B. East Asia in the Age of Imperialism—(Enroll in Political Science 28, History 92B.)
5 units, Win (Okseberg, Duus)

92C. Contemporary East Asia—(Enroll in Political Science 29.)
5 units, Spr (Okseberg)

ADVANCED COURSES

198. Senior Colloquium in East Asian Studies
1 unit, Spr (Oi)

330. Graduate Core Seminar: Issues and Approaches in East Asian Studies
1 unit, Aut (Staff)

AFFILIATED DEPARTMENT OFFERINGS

ANTHROPOLOGICAL SCIENCES

7. Marriage and Kinship
5 units (Wolf) not given 1999-2000

24N. Stanford Introductory Seminar: Chinese Women and Girls
3 units (Gates) not given 1999-2000

125B. Late Imperial China
5 units, Aut (Chau)

220. China for Social Analysts
5 units (Gates) not given 1999-2000

ART AND ART HISTORY

2. Ideas and Forms in Asian Art—(WIM)
5 units, Win (Takeuchi)

12. Theme and Style in Japanese Art
4 units (Takeuchi) not given 1999-2000

13. Introduction to Chinese Art
4 units (Vinograd) not given 1999-2000

126A/226A. Introduction to the Study of Chinese Painting
4 units (Vinograd) not given 1999-2000

126B/226B. Early Chinese Pictorial Art
4 units (Vinograd) not given 1999-2000

126C/226C. Artists and Systems in Later Chinese Painting
4 units (Vinograd) not given 1999-2000

126E/226E. Across Cultures: Encounters of Eastern and Western Art
4 units (Vinograd) not given 1999-2000

129/229. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868
4 units (Takeuchi) not given 1999-2000

129A/229A. Painting in Late Medieval and Early Modern Japan, 1500-1868
4 units (Takeuchi) not given 1999-2000

228A. Seminar: Pictorial Art and Cultural Spaces in Late Ming China
4 units (Vinograd) not given 1999-2000

229C. Seminar: Nostalgia in Japanese Art—Revivals, Reformations, Representations
4 units (Takeuchi) not given 1999-2000

229D. Seminar: Japanese Discourse on Painting and Its Chinese Antecedents
4 units, Spr (Takeuchi)

229E. Colloquium: “Pictures of the Floating World”—Images from Japanese Popular Culture
4 units (Takeuchi) not given 1999-2000

229G. Colloquium: The Arts of Zen Buddhism
4 units, Aut (Takeuchi)

ASIAN LANGUAGES

51/151. Japanese Business Culture
3 units (Staff) not given 1999-2000
11N. Stanford Introductory Seminar: Language and Gender in Japan—Myths and Reality
3 units, Spr (Matsumoto)

73/173. Chinese Language, Culture, and Society
4 units, Win (Sun)

74. Women and Children in the May Fourth Literary Imagination
5 units, Spr (Abraham)

75/175. Contemporary Japanese Cinema
4 units, Spr (Suttmeier)

81N. Writing and Writing Systems
3 units, Spr (Hare)

91. Traditional East Asian Civilization: China
5 units, Aut (Egan)

92. Traditional East Asian Civilization: Japan
5 units, Win (Hare)

95. The Japanese Language in Culture and Society
4 units (Matsumoto) not given 1999-2000

114. Haiku
3 units (Staff) not given 1999-2000

121/221. The Chinese Cultural Revolution: History, Ideology, and Texts
4 units, Win (Shao)

131/231. Chinese Poetry in Translation
4 units, Aut (Egan)

132/232. Chinese Fiction and Drama in Translation
4 units, Win (J. Wang)

133/233. Modern and Contemporary Chinese Literature in Translation—(WIM)
4 units, Spr (Lyell)

133A/233A. Introduction to Modern Chinese Literature
4 units, Spr (Sang)

135. Classic Japanese Drama
4 units (Hare) not given 1999-2000

137/237. Classical Japanese Fiction in Translation
4 units, Aut (Wallace)

138/238. Modern Japanese Literature in Translation
4 units, Win (A. Ueda)

141. Chinese Mythology and Lyrical Imagination
4 units (Liu) not given 1999-2000

181. Japanese Women Writers
4 units (Staff) not given 1999-2000

187/287. Romance, Desire, and Sexuality in Modern Japanese Literature
4 units (Reichert) not given 1999-2000

CHINESE

Students registering for the first time in a first- or second-year course
must take a placement test if they have had any training in Chinese
before entering Stanford. Sign up for a section in the department office
before the quarter begins.
