5. Students must complete the Public Policy core, concentration area courses and the senior seminar with an overall grade point average (GPA) of 2.3 (C+) or higher.

6. It is recommended that the major be declared by the end of sophomore year but no later than the end of Autumn Quarter of the junior year. Application forms are available in the Public Policy Program office and on the web site.
The Public Policy Program encourages students to attend the Bing Stanford in Washington Program and to participate in appropriate Stanford internship programs, especially those available through the Haas Center for Public Service.

**HONORS PROGRAM**

The Public Policy Program offers students the opportunity to pursue honors work during the senior year. To graduate with honors in Public Policy, a student must:

1. Apply for admission to the honors program no later than the end of Spring Quarter of the junior year.
2. Complete the requirements for the B.A. in Public Policy and achieve an overall grade point average (GPA) of 3.5 in the following courses: the Public Policy core concentration area courses; the Senior Seminar; PUBLPOL 199, Senior Research; and PUBLPOL 105. Students are encouraged to complete PUBLPOL 105 by the end of Spring Quarter of the junior year and take PUBLPOL 200A during Autumn Quarter. Courses not taken at Stanford are not included in calculating the GPA.
3. During Senior year, enroll in at least 8 but no more than 15 units of PUBLPOL 199, Senior Research, with the thesis adviser. Students need to contact the program office to have their thesis adviser listed as a 199 instructor. The honors thesis must demonstrate mastery of relevant analytical tools and address a policy issue. All PUBLPOL 199 units must receive a final grade of at least a ‘B+. ‘
4. The honors thesis must be submitted to both the thesis adviser and the Public Policy Program office. In order to be considered for University and department awards, the final thesis must be submitted to the program office no later than the third Wednesday in May in both hard copy and electronic forms. All other theses must be submitted by the last Friday in May in both hard copy and electronic forms.

To apply for honors, a student must submit a completed application to the Public Policy Program office with a brief description of the thesis. Applications are found online or in the program office. The student must obtain the sponsorship of a faculty member who approves of the thesis description and who agrees to serve as a thesis adviser. Students intending to write a thesis involving more than one discipline may wish to have two advisers, at least one of whom is affiliated with the Public Policy Program.

Graduation with honors requires that the thesis be approved by both the adviser and the program director. The role of the director is to assure that the thesis deals with an issue of public policy and satisfies the standards of excellence of the program. However, the grade for the honors thesis (PUBLPOL 199 units) is determined solely by the adviser.

Members of the core faculty in Public Policy are available to provide assistance in selecting a thesis topic and adviser.

**MINORS IN PUBLIC POLICY**

The Public Policy Program offers a minor that is intended to provide students with interdisciplinary training in applied social sciences. Students who pursue the minor are required to take the courses listed below for a total of 35 units in Public Policy and its supporting disciplinary departments. Because University rules prohibit double-counting courses, the requirements for a minor differ according to the student’s major requirements. Courses for the minor must be completed for a letter grade.

For students whose major department or program requires no courses in economics and political science, the requirements for a Public Policy minor are:

<table>
<thead>
<tr>
<th>Subject and Catalog Number</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 1AB, 50, 51</td>
<td>20</td>
</tr>
<tr>
<td>POLISCI 2*</td>
<td>5</td>
</tr>
<tr>
<td>PUBLPOL 101</td>
<td>5</td>
</tr>
<tr>
<td>PUBLPOL 104</td>
<td>5</td>
</tr>
</tbody>
</table>

* The U.S. government and politics requirement can be fulfilled by taking POLISCI 2, passing a diagnostic exam offered by the Public Policy program, or by receiving a score of at least 4 on the Advanced Placement exam in U.S. government and politics (which appears on the Stanford transcript).

**GRADUATE PROGRAMS IN PUBLIC POLICY**

University requirements for the master’s degree are described in the “Graduate Degrees” section of this Bulletin.

The Graduate Program in Public Policy offers two master’s degrees: Master of Public Policy (M.P.P.), a two-year program leading to a professional degree, and Master of Arts (M.A.), a one-year program not intended as a professional degree. The following joint degree programs, permitting students to complete requirements for two degrees with a reduced number of total residency units, are also offered: Juris Doctor with a Master of Public Policy (J.D./M.P.P.); Juris Doctor with an M.A. of Public Policy (J.D./M.A.); Doctor of Philosophy in Economics, Education, Management Science and Engineering, Psychology, or Sociology with a Master of Public Policy (Ph.D./M.P.P); Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.); Master of Arts in International Policy Studies with a Master of Public Policy (M.A./M.P.P.); Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.). Requirements for the joint degrees differ from completing the two degrees separately. See the "Master’s Degrees in Public Policy" section for more details.

Courses in the graduate program in Public Policy offer advanced skills necessary to assess the performance of alternative approaches to policy making and implementation, evaluating program effectiveness, understanding the political constraints faced by
COTERMINAL M.A. IN PUBLIC POLICY

The coterminal M.A. in public policy is a structured program designed to impart the basic analytical tools of public policy analysis, or to permit public policy majors to specialize in an applied field of policy analysis. Most students will complete their M.A. in a fifth year at Stanford; occasionally students may be able to complete their B.A. and coterminal M.A. in the fourth year.

Students seeking the coterminal M.A. in Public Policy follow one of two tracks through the program:

• Track A for students majoring in Public Policy consists of at least 45 units of course work as follows: 31 or more units in an area of concentration, 4 or 5 units of applied econometrics (PUBLPOL 105 or 303C), and participation in a 10-unit Practicum or a faculty-supervised internship. All 45 units must be taken in upper division (100-level) courses, and at least 25 of those units must be at the graduate level (200-level and above). Track A students must also complete ECON 52 and PUBLPOL 302B, which do not count toward the 45 units. Each Concentration consists of a set of required core courses and a variety of electives. Students must present a coherent written study plan to support concentration course choices, designed in consultation with a faculty adviser and approved by the program director.

• Track B, for students who have not majored in Public Policy, consists of at least 45 units of core subjects in the analysis of public policy. The following preparatory courses are required, but do not count toward the 45 units: MATH 51, POLISCI 2, ECON 1A, 1B, 50, 51, 102A and 102B. The following core courses are required and do count toward the required 45 units: PUBLPOL 201 (political science) or PUBLPOL 304A (collective action), PUBLPOL 301A (microeconomics), PUBLPOL 202 or MS&E 180 (organizations), PUBLPOL 307 (political philosophy), PUBLPOL 301B (cost-benefit analysis), PUBLPOL 105 (applied econometrics) or PUBLPOL 303C (Bayesian econometrics), PUBLPOL 206 or 302B (economic analysis of law) and one of the following: PUBLPOL 305A (decisions) or PUBLPOL 305B (social psychology). At least 23 units of the Public Policy core must be taken at the graduate level (200-level and above).

Application and Admission—There are two application deadlines for the 2009-10 academic year: November 13, 2009 and February 19, 2010. Seniors wishing to apply to the coterminal program must apply by November 13, 2009.

To apply for admission to the Public Policy coterminal M.A. program, students should submit the following materials directly to the Public Policy office:

1. the coterminal application;
2. 1-2 page statement of purpose;
3. a preliminary program proposal;
4. a current unofficial undergraduate transcript;
5. two confidential letters of recommendation from Stanford faculty members familiar with the student’s academic work. All applicants must have completed (or be currently enrolled in) required preparatory course work (MATH 51, POLISCI 2, ECON 1A, 1B, 50, 51, 102A and 102B) prior to application.

University regulations govern both the coterminal M.A. degree application process and the requirements for the degree. Undergraduates with strong academic records may apply for admission upon completion of 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree. The University requires that units for a given course may not be counted to meet the requirements of more than one degree; that is, no units may be "double-counted." Also, no courses taken more than two quarters prior to admission to the coterminal master’s program may be used to meet the 45-unit University minimum requirement for the master’s degree.

To graduate with a coterminal M.A. in Public Policy, students must:
1. Take all courses applied to the coterminal master’s degree for a letter grade. No units are counted for courses in which a student earns a grade less than B-. (Courses offered only for C/NC or other non-letter grade system may be applied upon approval of a petition to the program director.)
2. Achieve a cumulative grade point average (GPA) of 3.0 (B) or better for all courses taken towards the M.A.
3. Comply with all relevant University and program deadlines and policies.

Advising—Coterminal M.A. students in Track B (for non-majors) should meet with their assigned faculty adviser upon acceptance to the program. Students in Track A (for majors) must meet with their proposed faculty adviser prior to application as well as upon acceptance. Advisers in Track A must confirm that the courses proposed for each applicant’s course of study are likely to be taught during the applicable period, or that appropriate substitute courses are available. Public Policy student services will verify scheduling of courses.

Financial Aid—The Public Policy Program does not provide financial assistance to coterminal M.A. students. For information on student loans and other sources of support, please consult the Stanford Financial Aid Office. Students who enter public service employment with local, state, or federal agencies, schools, or certain non-for-profit organizations may obtain forgiveness for educational loans, based on years of public service employment.

MASTER’S DEGREES IN PUBLIC POLICY

MASTER OF PUBLIC POLICY AND MASTER OF ARTS IN PUBLIC POLICY JOINT DEGREES
Juris Doctor and Master of Public Policy (J.D./M.P.P.)
Juris Doctor and Master of Arts in Public Policy (J.D./M.A.)
Doctor of Philosophy in Education and Master of Public Policy (Ph.D./M.P.P.)
Doctor of Philosophy in Economics and Master of Public Policy (Ph.D./M.P.P.)
Doctor of Philosophy in Management Science & Engineering and Master of Public Policy (Ph.D./M.P.P.)
Doctor of Philosophy in Psychology and Master of Public Policy (Ph.D./M.P.P.)
Doctor of Philosophy in Sociology and Master of Public Policy (Ph.D./M.P.P.)
Master of Business Administration and Master of Public Policy (M.B.A./M.P.P.)
Master of Arts in International Policy Studies and Master of Public Policy (M.A./M.P.P.)
Master of Science in Management Science & Engineering and Master of Public Policy (M.S./M.P.P.)

MASTER OF PUBLIC POLICY DUAL DEGREE (M.P.P.)
MASTER OF ARTS IN PUBLIC POLICY DUAL DEGREE (M.A.)

PREREQUISITES
Graduate students in Public Policy are expected to be literate in mathematics and economics at the Stanford equivalent of MATH 51 and ECON 50 before beginning the curriculum. A no-credit “boot camp” refresher course in mathematics and economics is offered in the two weeks preceding the start of Autumn quarter.

ADMISSIONS
Applications for graduate study in Public Policy are accepted only from Stanford students currently enrolled in any graduate degree program or from external applicants seeking a joint degree.
External applicants for joint degrees must apply to the department or school offering the other graduate degree (i.e., Ph.D., M.A., M.S., M.B.A., or J.D.), indicating an interest in the M.P.P./joint degree program; applicants admitted to the other degree program are then evaluated for admission to the M.P.P. program. Students currently enrolled in any Stanford graduate program may, with the consent of that program, apply either for the applicable joint degree program or for the dual M.P.P. or M.A. degree. Applications are reviewed and accepted on a rolling basis but must be received by the Public Policy Program office no later than April 1, 2010.

CURRICULUM

Core curriculum consisting of the following courses—PUBLPOL 301A,B, 302A,B, 303A,B, 304A,B, 305A,B, 306 (M.P.P. students only), 307, 311 (1 quarter only).

Practicum (M.P.P. students only)—10 units of PUBLPOL 309.

Concentration (M.P.P. students only)—Course work in a specialized field, chosen from the approved list of concentration courses with the prior approval of the student’s faculty adviser and the program director.

Master’s Thesis (M.A. students only)—Students complete a 5-unit thesis by contacting the program office with the name of their advisor and enrolling in PUBLPOL 310 during the quarter of their choosing. The 5-units can be spread over multiple quarters, and an ‘N’ grade will be given during any quarters prior to Spring. The thesis must be submitted to the Public Policy Program office in both electronic and hard copy no later than the last Friday in May. The final grade for PUBLPOL 310 is the M.A. thesis grade.

PUBLIC POLICY JOINT DEGREE REQUIREMENTS

1. A joint degree is regarded by the university as distinct from either of its component degrees, and requirements for the joint degree generally differ from the sum of the requirements for the individual degrees.

2. All core courses must be taken for a letter grade and must be completed with an overall grade point average (GPA) of 3.0 (B) or better.

3. Up to a maximum of 45 units, or one year, of the university residency requirement can be credited toward both degree programs (put differently, the joint degree requirements may contain up to 45 units less than the sum of the individual degree unit requirements). For example, a J.D./M.P.P. has a four-year residency requirement, one year less than the sum of the requirements for the separate degrees. This recognizes that there is a subject matter overlap between the fields comprising the joint degree.

4. The Public Policy Program strives to encourage an intellectual, professional, and social community among its students. For this reason, joint degree students are expected to devote one year of full-time study at Stanford (usually the second) entirely to the Program, rather than spacing public policy courses throughout their graduate careers.

5. All graduate degree candidates must submit a Master’s Degree Program Proposal to the Public Policy office by the end of Autumn Quarter and must amend this proposal formally if plans for meeting the degree requirements change.

6. Year-long participation in the weekly colloquium (PUBLPOL 311) is required for all first-year M.P.P. and M.A. students, and strongly encouraged for second-year M.P.P. students. One unit of credit is given, for which students may register in any quarter.

7. Public Policy students are never required to repeat a course which duplicates material they have already mastered. Students may, by petition, substitute a different course (generally in the same subject area) for a course whose material would be duplicative. This flexibility does not, however, reduce the unit requirements for any degree.

8. Joint degree students are expected to have and to consult regularly with an academic adviser. The adviser is generally a member of the faculty of both of the joint degree programs. The program director is available to make adviser recommendations.

9. In order to take advantage of the reduced residency requirement, joint M.P.P. students must define their area of concentration from among courses offered in their non-public-policy program. For example, J.D. students must select one of the M.P.P. concentrations offered by the School of Law, and M.B.A. students must select their concentration from the Public and Global Management curriculum at the G.S.B.

11. All joint M.A. students must submit a 5-unit Master’s Thesis, written under the guidance of an adviser who is a member of the Public Policy-affiliated faculty on a topic approved by the program director in advance. Students provide the program office with the name of their thesis adviser during Autumn Quarter and enroll in PUBLPOL 310 units.

OVERSEAS STUDIES COURSES IN PUBLIC POLICY

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

Phone: (650) 723-3322
Web Site: http://stanford.edu/dept/relstud

Courses offered by the Department of Religious Studies are listed under the subject code RELIGST on the Stanford Bulletin’s ExploreCourses web site.

MISSION OF THE DEPARTMENT

The field of Religious Studies brings a variety of disciplinary perspectives to bear on the phenomena of religion for the purpose of understanding and interpreting the history, literature, thought, social structures, and practices of the religious traditions of the world. Comprised of a dozen regular faculty with particular strengths in the study of Buddhism, Christianity, Islam, and Judaism, it enrolls about thirty graduate students (mostly doctoral) and roughly as many undergraduate majors, minors, and joint majors.

Religious Studies works closely with several related programs at Stanford: the Department of Philosophy, with which it offers a joint undergraduate major; the Stanford Center for Buddhist Studies; the Taube Center for Jewish Studies; the Abbasi Program in Islamic Studies; the McCoy Center for Ethics in Society; the Program in Medieval Studies; and the Asian Religions and Cultures Initiative.

While some undergraduates continue their study of religion in a graduate or professional program, most pursue meaningful and successful careers in business, government, the nonprofit sector, and medicine. In this respect, Religious Studies is an ideal interdisciplinary major in the liberal arts. Graduates of the department’s doctoral program pursue academic careers and are routinely placed in the best universities and colleges in the country.

UNDERGRADUATE PROGRAMS IN RELIGIOUS STUDIES

The department offers a Bachelor of Arts major, minor, and honors program in Religious Studies, and a joint major with the Philosophy department in Religious Studies and Philosophy. Undergraduate courses in Religious Studies are designed to engage students existentially and to assist them in thinking about intellec
tual, ethical, and sociopolitical issues in the world’s religions. The department’s faculty seek to provide tools for understanding the complex encounters among religious ideas, practices, and communities, and the past and present cultures that have shaped and been shaped by religion. Courses therefore expose students to: leading concepts in the field of religious studies such as god(s), sacrifice, ritual, scripture, prophecy, and priesthood; approaches developed over the past century, including the anthropological, historical, psychological, philosophical, and phenomenological, that open religion to closer inspection and analysis; and major questions, themes, developments, features, and figures in the world’s religious traditions. The department encourages and supports the acquisition of languages needed for engagement with sacred texts and interpretive traditions as well as study abroad at Stanford’s overseas centers where religions can be observed and experienced in the culture of their origin.

BACHELOR OF ARTS IN RELIGIOUS STUDIES

SUGGESTED PREPARATION FOR THE MAJOR

There is no prescribed route or prerequisite to the major; students typically find themselves majoring after taking courses in the department and becoming acquainted with department faculty. Students contemplating the major or joint major are invited to consult with the Director of Undergraduate Studies. Sunny Toy, the undergraduate student services associate in 71K, can field questions regarding the declaration procedure within the department.

DEGREE REQUIREMENTS

The curriculum for majors is designed to move students sequentially from foundational courses, through deeper investigations, culminating in integrative research courses. Thus, the introductory sequence is designed to lead to courses which build on this foundation with topics including: particular traditions such as Judaism or Buddhism; comparative studies such as nonviolence in Hinduism and Buddhism, or Muslim and Christian interpretations of scripture; specific topics such as mysticism, gender and religion, or theodicy; and distinctive approaches such as the philosophy of religion or ritual studies. Majors complete their careers with integrative courses that afford opportunity for research and consolidation of the knowledge and skills gained earlier.

A Bachelor of Arts in Religious Studies requires 60 units of course work. At least 44 units are to be taken in courses numbered above 100. Ten units out of the 60 may be taken for the grade of C/NC.

Required Courses—
1. At least 8 of the 60 units must be courses at the introductory level. Students may satisfy this requirement by taking either:
   a. IHUM 68A,B. Performing Religion (Winter/Spring sequence), or
   b. one course in each of the following categories: introduction to religious traditions (courses numbered 11-50) and introductory topics in the study of religion (courses numbered 51-99). In consultation with the Undergraduate Director, one Stanford Introductory Seminar in Religious Studies may be applied to this introductory requirement.
2. At least 29 units are to be taken in intermediate lecture and seminar courses numbered 100-289. Of these, at least two seminars are required from courses numbered above 200. Language courses relating to students’ study of religion within the department, such as Arabic, biblical Hebrew, New Testament Greek, Chinese, or Japanese, but not counted towards the University language requirement may, with departmental approval, be counted among these 29 units.
3. 15 units in integrative courses:
   a. Majors’ Seminar: RELIGST 290, Theories of Religion (5 units; Winter Quarter of junior year; fulfills WIM requirement; letter grade only)
b. Senior Essay or Honors Thesis Research: RELIGST 297 (3-5 units; minimum 5 units; up to 10 units over two quarters; graded ‘N’ until completion of essay or thesis)

c. Senior Majors’ Colloquium: RELIGST 298 (5 units; Spring Quarter; grading option S/NC)

d. completion of either a senior essay or honors thesis. See below concerning the difference between these options.

4. Each student, in consultation with his/her adviser, works out a focus of study centering on either a particular religious tradition or on a theme or problem that cuts across traditions such as ritual, ethics, scripture, or gender.

5. Students focusing on one religious tradition must take at least 8 units in one or more religious traditions outside their concentration.

SENIOR ESSAY

A 25-30 page essay on a topic chosen by the student and approved by the adviser upon receipt of a student’s proposal by the end of the third quarter prior to expected graduation. The character and content of the essay, which is meant to allow the student to call into play knowledge and skills learned in the course of the major, may take several forms. For example, a student may return to a subject studied earlier but now pursued in more depth or from a new perspective, research a recent or new topic of interest in the field, or offer a carefully framed critical assessment of what has been learned in the major based on review of influential sources, theories, and methods of studying religion. The senior essay is read and graded by the student’s adviser and one other member of the Religious Studies faculty.

HONORS THESIS

A 40-80 page research paper on a topic chosen by the student and approved by the adviser upon receipt of a proposal in the fourth quarter prior to expected graduation. The paper, supported by mastery of primary and secondary scholarship, advances a well-reasoned, supportable thesis. Writers of honors theses must have a grade point average (GPA) of 3.5 in Religious Studies courses, and at least 3.2 overall, and are expected to have already demonstrated success in writing research papers. The honors thesis is read and graded by the student’s adviser and one other member of the Religious Studies faculty. Theses earning a grade of ‘B+’ or above receive honors.

COGNATE COURSES

The following courses in other departments/programs have been approved by the Chair as fulfilling requirement 2 above.

CLASSGEN 18. Greek Mythology
HISTORY 220G/320G. Demons, Witches, Holy Fools, and Folk Belief: Popular Religion in Russia, 19th-20th Centuries
POLISCI 149S. Islam and the West

MAJOR IN RELIGIOUS STUDIES AND PHILOSOPHY

The departments of Religious Studies and Philosophy jointly nominate for the B.A. in Religious Studies and Philosophy those students who have completed a major in the two disciplines. See a description of this joint major in the "Philosophy" section of this bulletin, or in the guidelines available from the undergraduate director of either department.

MINOR IN RELIGIOUS STUDIES

A Religious Studies minor is a complement to many majors throughout the University. Students contemplating the minor are invited to consult with the Director of Undergraduate Studies. Sunny Toy, the undergraduate student services associate in room 71K, can field questions regarding the declaration procedure within the department.

Requirements—A minor in Religious Studies requires a minimum of 30 graded units. Students are encouraged to focus their program of study either in a religious tradition or in a theme that cuts across traditions. In consultation with their advisers, students may design the minor in Religious Studies to complement their major. The minor must be declared no later than the last day of the quarter, two quarters before degree conferral.

Required Courses for the Minor—

1. Two introductory courses. To satisfy this requirement, students take either:
   a. IHUM 68A,B. Performing Religion (Winter/Spring sequence), or
   b. one course in each of the following categories: introduction to religious traditions (courses numbered 11-50) and introductory topics in the study of religion (courses numbered 51-99). In consultation with the Undergraduate Director, one Stanford Introductory Seminar in Religious Studies may be applied to this introductory requirement.
   2. At least 22 units in courses at the intermediate and advanced level (above 100), including at least one 200-level seminar.
   3. Diversity requirement: Students may not take all courses in one religious tradition.
   4. One course in directed reading (RELIGST 199) may count towards the minor.
   5. With approval of the Undergraduate Director, one language course related to the student’s program of study (such as Arabic, biblical Hebrew, New Testament Greek, Chinese, or Japanese), but not counted towards the University language requirement, may be counted toward the minor.
   6. Courses from other departments may not count towards the minor. (Exception: language courses covered by point 5.)

GRADUATE PROGRAMS IN RELIGIOUS STUDIES

The graduate mission of the department is to provide students with an interdisciplinary setting of study within which to focus on their respective areas of specialization. The department offers an M.A. and a Ph.D. degree in Religious Studies.

MASTER OF ARTS IN RELIGIOUS STUDIES

University requirements for the M.A. are described in the "Graduate Degrees" section of this bulletin. The department offers a one-year terminal M.A. program. Students can also earn their M.A. degree as part of their terminal degree program. The M.A. program serves two groups of students: a) those who wish to prepare for a doctoral program in religious studies and b) those who wish to further deepen their knowledge in an area in which they have acquired some expertise during their undergraduate work.

DEGREE REQUIREMENTS

The following requirements are in addition to the University’s basic requirements.

The student completes at least 45 units of graduate work at Stanford beyond the B.A. degree, including either RELIGST 290, Majors Seminar, or, with consent of instructor, RELIGST 304A or B, Theories and Methods. Residence may be completed by three quarters of full-time work or the equivalent.

The student’s plan of courses is subject to approval by the Graduate Director. No field of specialization is expected, but students may focus work in particular areas. Advanced and graduate courses in other departments may be taken (see below). No thesis is required; a thesis, if elected, may count for as many as 9 units.

Each student demonstrates reading knowledge of at least one foreign language.

DOCTOR OF PHILOSOPHY IN RELIGIOUS STUDIES

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin. The Ph.D. in Religious Studies signifies special knowledge of an interdisciplinary field of study and potential mastery of an area of specialization within it. The faculty of the department have established certain fields of study in which the department’s strengths and those of other Stanford departments cohere. They are: East Asian religions, Christian-
ity, Islam, Judaism, religious ethics, and modern Western religious thought. Students who wish to specialize in other fields must obtain early approval by the faculty. Each of these areas of specialization follows a shared structure of study.

DEGREE REQUIREMENTS

The following requirements are in addition to the University’s basic requirements.

1. Residence—Each student completes three years (nine quarters) of full-time study, or the equivalent, in graduate work beyond the B.A. degree, and a minimum of 135 units of graduate course work (excluding the dissertation).

2. Required Courses—The 135 units of graduate course work must include the following:

   RELIGST 304A. Theories and Methods
   RELIGST 304B. Theories and Methods
   RELIGST 391. Pedagogy
   RELIGST 399. Recent Works in Religious Studies

   The remainder of the course work is individually designed, in consultation with the adviser.

3. Languages—Each student demonstrates a reading knowledge of two foreign languages, including French or German. One of those language requirements should be fulfilled by the time of advancing to candidacy at the end of the second year. Competence in the second language must be demonstrated at the time of the qualifying examination. Each student also demonstrates reading knowledge of other ancient or modern languages necessary for the field of study, area of specialization, and dissertation topic.

4. Candidacy—At the end of each academic year, the department’s faculty recommend second-year students for candidacy on the basis of all relevant information, and especially on the student’s candidacy dossier that includes the approved declaration of an area of specialization, certification for one foreign language, and two substantial papers written for courses during the previous two years. Students are required to take RELIGST 391 and RELIGST 399 prior to candidacy.

5. Paper-in-Field—During the third year, under the supervision of their advisers, students prepare a paper suitable for submission to an academic journal in their field. The paper is read and approved by at least two faculty members in the department.

6. Teaching Internship—At least one teaching internship under the supervision of faculty members is undertaken at a time negotiated with the Graduate Director. Students receive academic credit for the required internship, which is a part of academic training and not of employment.

7. Qualifying Examination—To qualify for writing a dissertation, the student must pass a comprehensive examination in the chosen field and the area of specialization, typically during the first quarter of their fourth year. The student must complete the second language requirement before taking the qualifying examination. The qualifying examination is normally conducted by a committee of at least three Academic Council members of the department, one of whom is the adviser. One faculty member may be from outside the department with permission of the Director of Graduate Studies.

8. Dissertation—The dissertation contributes to the humanistic study of religion and is written under the direction of the candidate’s dissertation adviser and at least two other members of the Academic Council. The University Oral examination is a defense of a completed draft of the dissertation.

   a. Dissertation Proposal—Candidates submit their dissertation proposal in consultation with their advisers. It is read by a committee of at least three faculty, of whom one is the adviser (as chair) and the two others are members of the Academic Council. One non-departmental faculty member may be included.

   b. Dissertation Committee—The dissertation committee may be formed after acceptance of the dissertation proposal. It is normally composed of the dissertation adviser and at least two Academic Council members of the Religious Studies department. One non-departmental faculty member may serve as a reader when approved by the Director of Graduate Studies.

9. University Oral Examination—This examination, required by the University of Ph.D. students, is a defense of a completed draft of the dissertation. The composition of the examination committee is set by University regulation: five or more faculty, normally all of whom are members of the Academic Council, one of whom must be outside the department to serve as chair of the committee. Normally, the examining committee includes all qualified members of the dissertation committee.

PH.D. IN RELIGIOUS STUDIES AND HUMANITIES

Currently enrolled Religious Studies students in the Ph.D. Program in Religious Studies and Humanities will be able to complete their degree. No new students are being accepted into this program.

PH.D. MINOR IN RELIGIOUS STUDIES

Candidates for the Ph.D. in other departments may select a Ph.D. minor in Religious Studies.

Requirements—The minor requires at least 24 units in Religious Studies at the 200 level or above. Four of the 24 units should be in RELIGST 304 A,B, Theories and Methods.

Required Courses for the Minor—

RELIGST 304A or B. Theories and Methods

Optional Courses for the Minor—

RELIGST 391 and RELIGST 399 prior to candidacy.

OVERSEAS STUDIES COURSES IN RELIGIOUS STUDIES

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

SPRING QUARTER

KYOTO

OSPKYOTO 17R. Religion and Japanese Culture. 4-5 units, Catherine Ludvik, GER:DB:Hum, EC:GlobalCom

RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

Emeriti: Joseph N. Frank, Richard Schupbach

Director: Gabriella Safran (Slavic Languages and Literatures)

Professors: Lazar Fleishman (Slavic Languages and Literatures), Gregory D. Freidlin (Slavic Languages and Literatures), David J. Holloway (History, Political Science), Terry L. Karl (Political Science), Nancy S. Kollmann (History), David Laitin (Political Science), Norman Naimark (History), William J. Perry (School of Engineering), Condoleezza Rice (Political Science, on leave), Aron Rodrigue (History), Nancy B. Tuma (Sociology), Steven J. Zipperstein (History)

Professor (Research): Siegfried S. Hecker (School of Engineering)

Associate Professors: Shahzad Bashir (Religious Studies), Robert Crews (History, on leave), Maria Gough (Art History, on leave), Monika Greenleaf (Slavic Languages and Literatures), Michael A. McFaul (Political Science, on leave), Gabriella Safran (Slavic Languages and Literatures), Amir Weiner (History, on leave)
Assistant Professors: Lera Boroditsky (Psychology), Marton Dornbach (German Studies), Branislav Jakovljevic (Drama, on leave), Pavle Levi (Film Studies), Bissera Pentcheva (Art History), Nariman Skakov (Slavic Languages and Literatures) 
Senior Lecturers: Rima Greenhill (Slavic Languages and Literatures), Katherine Jollock (History), Geoffrey Rothwell (Economics), Allen S. Weiner (School of Law) 
Lecturers: Dritan Agulliu (Special Language Program), Les Bartoszewski (Special Language Program), Jara Dusatko (Special Language Program), Lessia Jarboe (Special Language Program), Eugenia Khassina (Slavic Languages and Literatures), Ingo Klein (Overseas Studies Program), Jack Kollmann (Center for Russian, East European and Eurasian Studies), Karen Kravitz (Overseas Studies Programs), Alma Kunanbaeva (Anthropology), Vladimir Mau (Overseas Studies Program), Sergei Medvedev (Overseas Studies Program), Roumiana Nenova (Special Language Program), Bertrand Patenaude (History), Asya Perelstvaig (Linguistics), Bisera Rakicevic-More (Special Language Program), Suzan Negip-Schatt (Special Language Program), Shafiq Shamel (Comparative Literature), Eva Soos Szoke (Special Language Program), Kathryn Stoner-Weiss (Political Science) 
Courtesy Professor: Coit Blacker (Political Science) 
Visiting Associate Professors: Ewa Domanska (Anthropology), Karla Oeler (Film Studies) 
Affiliates: Alexander Abashkin (Overseas Studies Program), Maya Arad (Taube Center for Jewish Studies), Michael B. Bernstein (Hoover Institution), Jasminka Bopic (International Relations), Margaret Brandeau (School of Engineering), Chaim Braun (Freeman Spogli Institute for International Studies), John B. Dunlop (Hoover Institution), Lynn Eden (Freeman Spogli Institute for International Studies), Timothy Garton Ash (Hoover Institution), Paul Gregory (Hoover Institution), A. Ross Johnson (Hoover Institution), Christine Joffarth (Freeman Spogli Institute for International Studies), Gail Lapidus (Freeman Spogli Institute for International Studies, emerita), Kenneth Jawitt (Hoover Institution), Azim Nanji (Abasi Program in Islamic Studies), Gary Mukai (Freeman Spogli Institute for International Studies), Douglas Owens (School of Medicine), Bertrand Patenaude (Hoover Institution), Dmitri Petrov (Biological Sciences), Pavel Podvig (Freeman Spogli Institute for International Studies), Karen Rondestvedt (Stanford Libraries), Nancy Ruttenburg (English), John M. Shalikashvili (Freeman Spogli Institute for International Studies), Elizabeth Sherwood-Randall (Freeman Spogli Institute for International Studies, on leave), Anatol Shmyklov (Hoover Institution), Maciej Siekierski (Hoover Institution), Mitchell Stevens (School of Education and Sociology), Kathryn Stoner-Weiss (Freeman Spogli Institute for International Studies), Ilya Strebulaev (Graduate School of Business), Mikk Titma (Sociology) 
Center Offices: Encina West, Rm. 217 
Mail Code: 94305-6045 
Phone: (650) 723-3562 
Web Site: http://CREEES.stanford.edu 
Courses offered by the Center for Russian, East European and Eurasian Studies are listed under the subject code REEES on the Stanford Bulletin’s ExploreCourses web site. 
The Center for Russian, East European and Eurasian Studies (CREEES) coordinates the University’s teaching, research, and extracurricular activities related to the former Soviet Union and Eastern Europe, and administers two interdisciplinary academic programs: an undergraduate minor and an M.A. graduate degree program. Information on center programs and activities is available at http://CREEES.stanford.edu. CREEES and its degree programs are directed by the CREEES Steering Committee, composed of faculty members associated with the Center. The programs draw on the strengths of nationally recognized area faculty and research affiliates and significant library and archival collections at Stanford. The Center is a U.S. Department of Education Title VI National Resource Center for Russia and East Europe.

UNDERGRADUATE PROGRAMS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

The center offers a minor in Russian, East European and Eurasian Studies. 
Slavic Theme House—Slavianskii Dom (SlavDom), at 650 Mayfield Avenue, is an undergraduate residence which houses 50 students and offers a wide variety of opportunities to expand knowledge, understanding, and appreciation of Russia, the former Soviet Union, and Eastern Europe. 
Overseas Studies Programs—Undergraduates interested in the study of languages, history, culture and social organization of the countries of Russia, Eurasia, and Eastern Europe can apply to study at the Stanford centers in Moscow and Berlin. Participation in these programs is encouraged and easily integrated into the REEES minor. Information about these programs is available at http://osp.stanford.edu.

MINOR IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

The minor in Russian, East European and Eurasian Studies is an interdisciplinary area studies program that allows the participating student the opportunity to select REEES courses in various departments according to his or her interests.

REQUIREMENTS

1. Two core courses: one on Russia and one on Eastern Europe or Eurasia, to be chosen by the student from an annual list of qualifying courses issued by CREEES.
2. At least four additional REEES courses, totaling at least 20 units.
3. The student’s courses, core and additional, must be distributed among at least three disciplines. In addition to REEES courses in the departments of History, Political Science, and Slavic Languages and Literatures, REEES courses in departments such as Anthropology, Art and Art History, Economics, Religious Studies, and Sociology, when offered, may qualify. The CREEES associate director determines which courses qualify for the minor.
4. A capstone experience in REEES, including, but not limited to, one of the following:
   a. A departmental seminar course for advanced undergraduates
   b. Directed reading and research with a Stanford faculty member or a CREEES-approved resident or visiting scholar
   c. Participation in the Stanford Overseas Studies Program in Moscow or Berlin.

Foreign Language—The REEES minor has no language requirement, but students are strongly encouraged to attain working competence in Russian or another relevant language. Courses at the third-year level or above in Russian or another language of Central Asia, the Caucasus, or Eastern Europe may be counted towards the REEES minor, up to a maximum of 3 units per academic quarter, 9 units total.

Additional Information—Courses counting towards the REEES minor may not be counted towards the student’s major. Courses taken at Stanford overseas campuses in Moscow and Berlin may count towards the REEES minor, with the approval of the CREEES associate director; at least three courses for the minor must be taken in residence at Stanford.

Approval of CREEES Associate Director—Students interested in pursuing the REEES minor should consult the CREEES associate director. The minor is declared online using the Axess system. Students declaring the REEES minor must do so no later than three quarters prior to their intended quarter of degree conferral. Approval of minor declarations and certification of requirements
are made by the associate director.

Students pursuing the REEES minor work with the CREEES associate director, who is responsible for determining that requirements for the minor are satisfied.

Core Courses for 2009-10

ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia
FILMSTUD 145. Politics and Aesthetics in East European Cinema
HISTORY 120A. Russian Civilization from Beginnings to the Enlightenment
HISTORY 125. 20th-Century Eastern Europe
OSPMOSC 57. Social Inequality in Socialist and Post-Socialist Societies
OSPMOSC 62. Economic Reform and Economic Policy in Modern Russia
SLAVGEN 13N. Russia and the Russian Experience
SLAVGEN 77Q. Russia’s Weird Classic: Nikolai Gogol
SLAVGEN 145. Age of Experiment: From Pushkin to Gogol
SLAVGEN 151. Dostoevsky and His Times (Same as COMPLIT 119)
SLAVGEN 221. Modernism and the Jewish Voice in Europe (Same as COMPLIT 247, GERGEN 221A)
SLAVLIT 100. Oedipus and his Vicissitudes: Tales of Modernity from Sophocles, Freud, Turgenev, Chekhov, Babel, and Virginia Woolf
SLAVLIT 129. Poetry as System: Introduction to Theory and Practice of Russian Verse
SLAVLIT 167: Introduction to Russian Cultural Studies (in Russian)
SLAVLIT 169. Advanced Russian Seminar: Reading Pushkin’s Evgenii Onegin (in Russian)
SLAVLIT 184. History of the Russian Literary Language
SLAVLIT 188. From Aleksandr Blok to Joseph Brodsky: Russian Poetry of the 20th Century
SLAVLIT 225. Readings in Russian Realism
SOC 15N. The Transformation of Socialist Societies

Additional 2009-10 courses which may be counted for the minor—

ANTHRO 148A. Nomads of Eurasia: Culture in Transition
COMPLIT 248. Afghanistan: Literature and History
HISTORY 20Q. Russia in the Early Modern European Imagination
HISTORY 222N. Crime, Punishment, and Rebellion in Early Modern Russia
HISTORY 245. The Soviet Union Through Western Eyes: Workers’ Paradise and Evil Empire
HISTORY 137. The Holocaust
HISTORY 185B. Jews in the Modern World
HISTORY 220G. Demons, Witches, Holy Fools, and Folk Belief: Popular Religion in Russia, 19th-20th Centuries
HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
HISTORY 221B. The Woman Question in Modern Russia
HISTORY 223F. The Nationality Question in the Russian Empire and the Soviet Union
HISTORY 227. East European Women and War in the 20th Century
HUMANITIES 100: Text and Context in Humanities: Oedipus and His Vicissitudes (Same as ENGLISH 184B)
INTNLREL 122A. The Political Economy of the European Union
INTNLREL 141A. Camera as Witness: International Human Rights Documentaries
IPS 211. The Transition from War to Peace: Peacebuilding Strategies
LINGUIST 167. Languages of the World
MS&E 193. Technology and National Security
OSPBBER 11. The Vanishing City: Lost Architecture and Art of Commemoration in Berlin
OSPBBER 60. Citiescape as History: Architecture and Urban Design in Berlin
OSPBBER 161X. German Economy in the Age of Globalization
OSPMOSC 72. Space, Politics and Modernity in Russia
OSPMOSC 74. Post-Soviet Eurasia and SCO: Society, Politics, Integration
OSPMOSC 78. Russian-American Relations: from the War of Independence to the War on Terror
POLISCI 114D. Democracy, Development, and the Rule of Law (Same as IR 114D)
POLISCI 116. History of Nuclear Weapons (Same as HISTORY 103E)
PSYCH 17N. Languages and Society: How Languages Shape Lives

REES 35. Documentary Films of Central Asia: Two Epochs of National Identity Formation
RELIGST 27. Exploring Islam
RELIGST 225. Unveiling the Sacred: Explorations in Islamic Religious Imagination
SLAVGEN 13N. Russia and the Russian Experience
SLAVGEN 77Q. Russia’s Weird Classic: Nikolai Gogol
SLAVGEN 145. Age of Experiment: From Pushkin to Gogol
SLAVGEN 151. Dostoevsky and His Times (Same as COMPLIT 119)
SLAVGEN 221. Modernism and the Jewish Voice in Europe (Same as COMPLIT 247, GERGEN 221A)
SLAVLIT 100. Oedipus and his Vicissitudes: Tales of Modernity from Sophocles, Freud, Turgenev, Chekhov, Babel, and Virginia Woolf
SLAVLIT 129. Poetry as System: Introduction to Theory and Practice of Russian Verse
SLAVLIT 167: Introduction to Russian Cultural Studies (in Russian)
SLAVLIT 169. Advanced Russian Seminar: Reading Pushkin’s Evgenii Onegin (in Russian)
SLAVLIT 184. History of the Russian Literary Language
SLAVLIT 188. From Aleksandr Blok to Joseph Brodsky: Russian Poetry of the 20th Century
SLAVLIT 225. Readings in Russian Realism
SOC 15N. The Transformation of Socialist Societies

Other courses may be counted towards the minor by special arrangement with the instructor and the CREEES associate director.

GRADUATE PROGRAMS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

The center offers an M.A. in Russian, East European and Eurasian Studies. The center also offers a coterminal M.A. in Russian, East European and Eurasian Studies.

Financial Aid—Subject to funding, CREEES may have a limited number of Foreign Language and Area Studies (FLAS) fellowships for U.S. citizens or permanent residents. Additional financial aid may also be available from CREEES. Applicants in the M.A. program have priority in the annual FLAS competition; in recent years CREEES has also awarded FLAS fellowships in the Graduate School of Business, the School of Medicine, the School of Education, and the School of Law. Consult the CREEES associate director for further information about the application and award process. Applications for FLAS fellowships can be obtained at http://CREEES.stanford.edu/grants/index.html.

Doctoral Programs—Since the University does not offer a Ph.D. in Russian, East European and Eurasian Studies, students wishing to pursue a REEES-related doctoral program must apply to one of the departments offering a Ph.D. with an emphasis on Russia, Eurasia, or Eastern Europe, such as the departments of History, Political Science, or Slavic Languages and Literatures.

MASTER OF ARTS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

CREEES offers a one-year intensive interdisciplinary master’s degree program in Russian, East European and Eurasian Studies for students with a strong prior language and area studies background. The program structure allows students the flexibility to pursue their particular academic interests, while providing intellectual cohesion through a required core curriculum that addresses historical and contemporary processes of change in the former Soviet Union and Eastern Europe. This core curriculum consists of three core courses and REES 200, Core Seminar Series. The program may be taken separately or coterminally with a B.A. degree program. The interdisciplinary M.A. program typically serves three types of students:

1. Those who intend to pursue careers and/or advanced degrees in such fields as business, education, government, journalism, or
1. Those who intend to apply to a Ph.D. program involving Russian, East European and Eurasian studies are designated as M.A. core courses; students may select three of these to meet the core course requirement. Courses selected as core courses examine subject areas of fundamental importance within modern Russian, East European and Eurasian Studies, and address questions of research, methodology, and current scholarship.

2. Core seminar: REES 200, Current Issues in Russian, East European and Eurasian Studies, is required of all students in the M.A. program for a total of three academic quarters. The goal of this course is to survey current methodological and substantive issues in Russian, East European and Eurasian studies, acquaint students with Stanford resources and faculty, and present professional development and career options.

3. Interdisciplinary course work: a minimum of five graduate courses in Russian, East European and Eurasian studies must be completed and distributed among at least three disciplines. All course work applied to the 48-unit minimum must deal primarily with Russian, Eurasian, or East European studies.

4. Language study: students in the program are expected to study Russian or another language of Eastern Europe, Central Asia or the Caucasus. Credit towards the 48-unit minimum (maximum 3 units per quarter, 9 units total) is allowed for advanced language work; in the case of Russian, “advanced” is defined as third-year Russian language instruction and above. Similar standards apply for other languages.

5. All course work qualifying for the 48-unit minimum (except REES 200) must have a letter grade of ‘B’ or higher. (‘B-’ does not count for degree credit, nor does ‘S’ or ‘CR’.)

6. All courses counting towards the 48-unit minimum must be approved by the CREEES associate director, who ensures that planned course work satisfies requirements towards the degree. The CREEES director and steering committee determine the requirements.

Core Courses for 2009-10—

FILMSTUD 345. Politics and Aesthetics in East European Cinema
HISTORY 321A. Classics of Russian Historiography
HISTORY 223F. The Nationality Question in the Russian Empire and the Soviet Union
IPS 241. International Security in a Changing World (Same as POLSCI 114S)
POLSCI 140C. The Comparative Political Economy of Post-Communist Transitions
POLSCI 210R. International Conflict: Management and Resolution (Same as IPS 250)
POLSCI 314D. Democracy, Development, and the Rule of Law (Same as IPS 230)
REES 320. State and Nation Building in Central Asia
SLAVLIT 225. Readings in Russian Realism
SLAVLIT 310. Civilizing Process: Paradigms of Society and Culture in Modern Russian Literature and Film

Additional 2009-10 courses which may be counted for the M.A. degree—

ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia
ANTHRO 248A. Nomads of Eurasia: Culture in Transition
ARTHIS 411. Animation, Performance, Presence in Medieval Art
COMPLIT 248. Afghanistan: Literature and History
FILMSTUD 406. Montage
FRENCH 361. Theories of Resistance
HISTORY 120A. Russian Civilization from Beginnings to the Enlightenment
HISTORY 125. 20th-Century Eastern Europe
HISTORY 137. The Holocaust
HISTORY 185B. Jews in the Modern World
HISTORY 220G. Demons, Witches, Holy Fools, and Folk Belief: Popular Religion in Russia, 19th and 20th Centuries
HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
HISTORY 221B. The Woman Question in Modern Russia
HISTORY 227. East European Women and War in the 20th Century
HISTORY 229. Poles and Jews
HISTORY 236C: Reordering Europe, 1917-1923
HISTORY 236S. European Nationalism, 1600 to Present
HISTORY 238K. European Collaboration, Resistance, and Retribution: 1938-1948
HISTORY 299X. Design and Methodology for International Field Research
HISTORY 355. Decision Making in International Crises: The A-Bomb, the Korean War, and the Cuban Missile Crisis
IPS 211. The Transition from War to Peace: Peacebuilding Strategies
INTNLREL 122A. The Political Economy of the European Union
INTNLREL 140A. International Law and International Relations
INTNLREL 141A. Camera As Witness: International Human Rights Documentaries
LINGUIST 167. Languages of the World
MS&E 293. Technology and National Security
POLISCI 116. History of Nuclear Weapons (Same as History 103E)
POLISCI 216E. International History and International Relations Theory
POLISCI 243R. Research Seminar in Democratization and Human Rights
POLISCI 314S. Decision Making in U.S. Foreign Policy (Same as IPS 314S)
RELIGST 222B. Sufism Seminar
RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination
SLAVGEN 221. Modernism and the Jewish Voice in Europe (Same as COMPLIT 247)
SLAVGEN 245. Age of Experiment: From Pushkin to Gogol
SLAVGEN 246. The Great Russian Novel: History and Other Theories of Time and Action
SLAVGEN 248. Dissent and Disenchantment: A Survey of Russian Literature and Culture, 1953 to Present
SLAVGEN 251. Dostoevsky and His Times (Same as COMPLIT 219)
SLAVLIT 167. Introduction to Russian Cultural Studies
SLAVLIT 169. Advanced Russian Seminar: Reading Pushkin’s Evgenii Onegin (in Russian)
SLAVLIT 200A. Introduction to Russian Literary Scholarship: Russian Formalism and Structuralism
SLAVLIT 229. Poetry as System: introduction to Theory and Practice of Russian Verse
SLAVLIT 245. Age of Experiment from Pushkin to Gogol
SLAVLIT 269. Pushkin and the Golden Age
SLAVLIT 284. History of Russian Literary Language
SLAVLIT 288. From Alexander Blok to Joseph Brodsky: Russian Poetry of the 20th Century

Other courses may be counted towards the M.A. by special arrangement with the instructor and the CREEES associate director. A description of the M.A. program is also available on the web at http://CREEES.stanford.edu/academic/graduate-masters.html and by request from the Center for Russian, East European and Eurasian Studies.

COTERMINAL MASTER’S IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

To qualify for a coterminal M.A. degree in Russian, East European and Eurasian Studies, besides completing University requirements for the B.A. degree, a student must:

1. Submit a coterminal application for admission to the program no later than the quarter prior to the expected completion of the undergraduate degree, normally Winter Quarter prior to Spring Quarter graduation. Students with advanced placement and transfer credit must apply at least four quarters before the expected master’s degree conferral date. Applications and instructions may be obtained at http://registrar.stanford.edu/shared/publications.htm#Coterm. The deadline for all coterminal applications to the M.A. program in Russian, East European, and Eurasian Studies is January 5, 2010.

2. Include in the application a program which outlines, by quarter, the schedule of courses the student plans to complete toward the M.A. degree. The student should seek the advice of the CREEES associate director in drafting this schedule. The application also should include: (a) a current Stanford transcript; (b) a one-page statement of purpose; (c) two letters of recommendation from Stanford professors; and (d) a writing sample. Applicants must have a grade point average (GPA) of at least 3.0 (B). Coterminal applicants must take the general test of the Graduate Record Examination and have the results sent to Graduate Admissions, Office of the University Registrar.

3. Complete 15 full-time quarters or the equivalent, or three quarters in full-time residence after completing 180 units; and complete, in addition to the 180 units required for the bachelor’s degree, a minimum of 48 units for the master’s degree. The same courses may not be counted to meet both undergraduate and graduate requirements, and no courses taken before the junior year may be used to meet the course requirements for the master’s degree. Requirements for completion of the M.A. degree are summarized below: a more detailed description of the program and requirements is available through the center.

SCIENCE, TECHNOLOGY, AND SOCIETY

Emeriti: James Adams (Management Science and Engineering, Mechanical Engineering), Alex Inkeles (Sociology), Walter Vincenti (Aeronautics and Astronautics)
Director: Robert McGinn (Management Science and Engineering; Science, Technology and Society)
Program Committee: Stephen Barley (Management Science and Engineering), Mark Granovetter (Sociology), Hank Greely (Law), Ursula K. Heise (English), Brad Ogusood (Electrical Engineering), Eric Roberts (Computer Science), Rebecca Slayton (Science, Technology and Society), Fred Turner (Communication), John Willinsky (Education)
Lecturers: Rebecca Slayton, Patrick Windham
Affiliated Faculty and Staff: Stephen Barley (Management Science and Engineering), Barton Bernstein (History), Scott Bukatman (Art and Art History), Thomas Byers (Management Science and Engineering), Jean-Pierre Dupuy (French), Hank Greely (Law), Ursula K. Heise (English), Sarah Jain (Anthropology, on leave), Clifford Nass (Communication), Brad Ogusood (Electrical Engineering), Jessica Riskin (History), Eric Roberts (Computer Science), Scott Sagan (Political Science), Michael Shanks (Classics, Anthropology), Fred Turner (Communication), John Willinsky (Education), Gavin Wright (Economics)

Mail Code: 94305-2120
Phone: (650) 723-2565
Web Site: http://sts.stanford.edu

Courses offered by the Program in Science, Technology, and Society are listed under the subject code STS on the Stanford Bulletin’s ExploreCourses web site.

Technology and science are activities of central importance in contemporary life, intimately bound up with society’s evolving character, problems, and potentials. If scientific and technological pursuits are to further enhance human well-being, they and their effects on society and the individual must be better understood by non-technical professionals and ordinary citizens as well as by engineers and scientists. Issues of professional ethics and social responsibility confront technical practitioners. At the same time, lawyers, public officials, civil servants, and business people are increasingly called upon to make decisions requiring a basic un-
understanding of science and technology and their ethical, social, and environmental consequences. Ordinary citizens, moreover, are being asked with increasing frequency to pass judgment on controversial matters of public policy related to science and technology. These circumstances require education befitting the complex sociotechnical character of the contemporary era.

Science, Technology, and Society (STS) is an interdisciplinary program devoted to understanding the natures, consequences, and shaping of technological and scientific activities in modern and contemporary societies. Achieving this understanding requires critical analysis of the interplay of science and technology with human values and world views, political and economic forces, and cultural and environmental factors. Hence, students in STS courses study science and technology in society from a variety of perspectives in the humanities and social sciences. To provide a basic understanding of technology and science, STS majors are also required to achieve either literacy (B.A.) or a solid grasp of fundamentals (B.S.) in some area of engineering or science.

STS courses may be used, individually or in groups, for purposes such as:
1. To satisfy University General Education Requirements (GER)
2. To satisfy the Technology in Society requirement of the School of Engineering
3. To comprise parts of student-designed concentrations required for majors in fields such as Human Biology and Public Policy
4. To satisfy the requirements of the STS honors program complementing any major (see below)
5. To satisfy requirements for majors in STS (see below)
6. To satisfy requirements for a minor in STS (see below)

The mission of the Science, Technology and Society (STS) Program is to provide Stanford undergraduates with intellectually stimulating education that will prepare them for life in the contemporary era, one in which science and technology are pervasive and potent forces for transformative social change. To that end, STS courses explore the evolving natures and interrelationship of science and technology, influences of science and technology on different kinds of societies, how societies manage and otherwise shape their scientific and technological endeavors and products, and ethical, social, cultural, and policy issues raised by scientific and technological innovations in contemporary societies. STS faculty believe that probing study of this vital subject matter is the basis for an innovative form of liberal arts and pre-professional education, one that helps STS students fulfill their future civic and professional roles in an informed, responsible manner.

The STS Program is interdisciplinary in nature; its students learn to critically analyze the interplay of science and technology with human values and world views, political and economic forces, and cultural and environmental systems. To a set of core STS interdisciplinary courses promoting such learning, Program majors add structured sets of pertinent disciplinary courses in the humanities, social sciences, natural sciences, and engineering. The Program prepares its majors for successful careers in business, law, medicine, education, engineering, public policy, and public service, for masters-level work in selected social scientific and engineering disciplines, and for doctoral work in STS and STS-related academic areas.

UNDERGRADUATE PROGRAMS IN SCIENCE, TECHNOLOGY, AND SOCIETY

Degree programs in STS are interdisciplinary curricula devoted to understanding the nature and significance of technology and science in modern society. Majors analyze phenomena of science and technology in society from ethical, aesthetic, historical, economic, and sociological perspectives. In addition, students pursuing the B.A. degree study a technical field in sufficient depth to obtain a grasp of concepts and methods, and complete a structured concentration on a theme, issue, problem, or area of personal interest related to science and technology in society. Those seeking the B.S. degree complete at least 50 structured units in technology, science, and/or mathematics. The particular technical courses chosen reflect the student’s special interest in science and technology in society.

BACHELOR OF ARTS IN SCIENCE, TECHNOLOGY, AND SOCIETY

1. STS Core (eight courses)—
   a. Interdisciplinary Foundational course: STS 101 or 101Q
   b. Disciplinary Analyses (five courses with at least one in each category):
      1. Philosophical/Ethical/Aesthetic Perspectives: STS 110, 112, 114; ENGLISH 176
      2. Historical Perspectives: STS 128; CLASSGEN 123, 133; ECON 116; HISTORY 41A/141A, 140A, 208A; POLISCI 116
      3. Social Science Perspectives: ANTHRO 82, 180; COMM 120, 169; ECON 113; MS&E 181, 185, 193; POLISCI 114S, 116; SOC 114
     c. Advanced courses (one course in each category):
        1. Disciplinary Analysis: STS 210, 211; CS 181; COMM 268; ECON 224, 225, 226; EDUC 358X; HISTORY 243G; ME 314; SOC 115
        2. STS 200. Senior Colloquium

2. Technical Literacy (five courses)—
   a. CS 105 or 106A or equivalent; and
   b. A four-course sequence (minimum of 12 units) in one field of engineering or science (sample sequences available in the STS office); or
   c. Four of the following Engineering Fundamentals courses: ENGR 10, 14, 15, 20, 25, 30, 31, 40, 50, 50M, 60, 62, 70A (see course descriptions in the “School of Engineering” section of this bulletin).

3. Thematic Concentration (minimum of 20 units, at least five courses, one each from among those designated on the appropriate concentration course list as foundational and advanced). Thematic concentrations are organized around an STS-related problem or area. The following thematic concentrations have been pre-certified as declarable fields of study on Axess: The Intersections of Technology and Science with Aesthetics; Development; History and Philosophy; Information and Society; Public Policy; Social Change; and Work and Organizations. These fields of study appear on the transcript but not on the diploma.

4. HONORS PROGRAM

STS offers students an opportunity to achieve honors through in-depth study of the interaction of science and technology with
The honors program is open to students majoring in any field, including STS. Students accepted for this program carry out an honors research project, typically beginning in the Winter or Spring Quarter of the junior year and finishing by May of the senior year. Students who want their projects to be considered for University awards must complete their theses by early May. STS projects entail writing an original honors thesis, although occasionally students have also chosen to produce a technical artifact or carry out some other work that itself represents original thinking. When a project results in a work other than an essay, students must also submit an accompanying scholarly exegesis of the work in question. Past honors projects are on file in the STS office library.

ADMISSION
Application for admission to the STS honors program is typically made during the last quarter of the student’s junior year. By the end of that quarter, interested students must have a plan for completing all courses required to satisfy honors requirements 1-3 listed below. Students requiring a major grant should enroll in STS 190, Junior Honors Seminar, during the Winter Quarter of the junior year in order to submit a research proposal by the University deadline in early April. Each applicant must submit a research proposal to the STS Honors Director, Rebecca Slayton (rslayton@stanford.edu), including the name of at least one potential thesis adviser. For proposal parameters, see the document STS Honors Program, available in the STS office and on the STS web site. Students are also encouraged to apply to join the STS contingent of the Bing Honors College in early September to get a running start on their theses. See http://ual.stanford.edu/OO/honors/BingHonors.html for further details.

REQUIREMENTS
1. Course Work—Non-STS majors must complete requirements 1 and 2 of the STS minor and either STS 190 and/or the Bing Honors College. STS majors must complete the STS core. Students pursuing STS honors must also sign up for STS 290 A,B,C, Senior Honors Seminar, in each quarter of the senior year for which the students are on campus. STS majors pursuing honors are not required to enroll in STS 200, Senior Colloquium, or to write a separate senior paper. The minimum GPA for courses taken to meet these requirements is 3.4.
2. The Honors Project—An original critical essay or investigative project with accompanying explanatory essay on an STS topic of general importance. To earn honors, students must earn at least a ‘B’ on the completed thesis.
3. STS Honors Day—All students present their research projects at a special event in early June of the senior year. If all these requirements are met, the designation "Honors Program in Science, Technology, and Society" is affixed to the student’s permanent record and appears in the Commencement program.

COGNATE COURSES
The following cognate courses offered by other departments may be used to fulfill STS major, minor, and honors requirements:
1. **Disciplinary Analysis: Philosophical/Ethical/Aesthetic Perspectives**
   - ENGLISH 176. Science Fiction
2. **Disciplinary Analysis: Historical Perspectives**
   - CLASSGEN 123. Urban Sustainability
   - CLASSGEN 133. Invention of Science
   - ECON 116. American Economic History
   - HISTORY 41A/141A. Emergence of Medicine
   - HISTORY 140A. The Scientific Revolution
   - HISTORY 208A. Science and Law in History
3. **Disciplinary Analysis: Social Science Perspectives**
   - ANTHRO 82. Medical Anthropology
   - ANTHRO 180. Science, Technology, and Gender
   - COMM 120. Digital Media in Society
   - COMM 169. Computers and Interfaces
   - ECON 113. Economics of Innovation
   - ENGR 145. Technology Entrepreneurship
   - MS&E 181. Issues in Technology and Work for a Post-Industrial Economy
   - MS&E 185. Global Work
   - MS&E 193/193W. Technology and National Security
   - POLISCI 116. History of Nuclear Weapons
   - PUBLPOL 194. Technology Policy
   - SOC 114. Economic Sociology
4. **Disciplinary Analysis: Level II Courses**
   - CS 181. Computers, Ethics, and Public Policy
   - COMM 268. Experimental Research in Advanced User Interfaces
   - ECON 224. Science, Technology, and Economic Growth
   - ECON 225. Economics of Technology and Innovation
   - ECON 226. U.S. Economic History
   - EDUC 358X. Developments in Access to Knowledge and Scholarly Communication
   - HISTORY 243G. Tobacco and Health in World History
   - ME 314. Good Products, Bad Products
   - SOC 115. Topics in Economic Sociology

**BACHELOR OF SCIENCE IN SCIENCE, TECHNOLOGY, AND SOCIETY**
The student pursuing the B.S. degree must complete the STS Core (see requirement 1 in "Bachelor of Arts in Science, Technology, and Society" above) and a structured package of at least 50 units of technical courses intended to enable students to understand socially significant technical phenomena in some field of engineering or science. Introductory courses in mathematics or physics (for example, MATH 19 or PHYSICS 19) are not normally counted as parts of this technical depth component. The B.S. candidate follows one of two models in fulfilling the minimum 50-unit technical depth requirement:
1. **Focused Depth**—at least seven courses amounting to at least 25 units in a single field of science or engineering, with the remaining units (except for at most two stand-alone courses) grouped in sequences of at least three courses each in other fields of science or engineering. For example, a focused depth package might contain eight mechanical engineering, three physics, three mathematics, and three computer science courses, and one course each in electrical engineering and chemistry. At least four of the seven courses in the focused depth area must be advanced, that is, not normally taken in the first year of study in that field.
2. **Clustered Depth**—two or more clusters of at least five courses and 15 units each in different fields of science or engineering, with at most two stand-alone courses, and remaining courses, if any, in sequences of three or more courses. For example, a clustered depth package might contain five-course clusters in computer science, electrical engineering, and physics, three courses in civil engineering, and one course each in biology and chemical engineering. At least two courses in each cluster area must be advanced.

It is recommended that B.S. majors complete CS 106A or equivalent.

3. Each STS major not writing an honors thesis must produce an original, 20-25 page senior paper on an STS topic of personal interest. Intended as a capstone experience, each student’s senior paper is evaluated by an STS faculty committee and placed in the student’s permanent STS major file.

**COGNATE COURSES**
For a list of cognate courses offered by other departments that can be used to satisfy requirements for the B.S. in Science, Technology, and Society, see the "Bachelor of Arts in Science, Technology, and Society" section of this bulletin.
MINOR IN SCIENCE, TECHNOLOGY, AND SOCIETY

Students planning careers in many technical and non-technical fields, including business, education, engineering, science, law, medicine, and public affairs, are faced with important STS issues in their professional practice. Therefore, a minor in STS is likely to prove practically valuable as well as intellectually stimulating.

Requirements—The STS minor requires completion of six courses satisfying the following requirements:

1. Foundational Course: STS 101 or 101Q
2. One disciplinary analysis course from each of the following categories:
   a. Philosophical/Ethical Perspectives: STS 110, 112, 114, 115; ENGLISH 176
   b. Historical Perspectives: STS 128; CLASSGEN 123, 133; ECON 116; HISTORY 41A/141A, 140A, 208A; POLISCI 116
   c. Social Science Perspectives: ANTHRO 82, 180; COMM 120, 169; ENGR 145; MS&E 181, 185, 193; POLISCI 114S, 116; PUBLPOL 194; SOC 114
3. Two advanced courses, from one or two of the following categories:
   a. Philosophical/Ethical/Aesthetic Perspectives: STS 210, 211; CS 181; ME 314
   b. Historical Perspectives: ECON 224, 226; HISTORY 243G
   c. Social Science Perspectives: COMM 268; ECON 224, 226; EDUC 358X; SOC 115
4. At least one of the courses taken under requirements 1 and 2 should incorporate a weekly small-group discussion.
5. With at most one exception, all courses taken to satisfy STS minor requirements must be taken for a letter grade where available. The exception cannot be STS 101 or STS 101Q.
6. The six courses taken under requirements 1-3 should be chosen so as to realize a measure of intellectual coherence and interrelatedness.

Note: Students wishing to use a course not listed above to satisfy one of the requirements for a minor in STS may petition to do so. For details, inquire at the STS office, Building 200, Room 19.

COGNATE COURSES

For a list of cognate courses offered by other departments that can be used to satisfy requirements for the minor in Science, Technology, and Society, see the "Bachelor of Arts in Science, Technology, and Society" section of this bulletin.

OVERSEAS STUDIES COURSES IN SCIENCE, TECHNOLOGY, AND SOCIETY

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

FLORENCE
OSPFLOR 134F, Modernist Italian Cinema. 5 units, Ermelinda Campani, GER:DB:Hum

SPRING QUARTER

BERLIN
OSPBER 45, Computers, Ethics, and Public Policy. 3-4 units, Eric Roberts, WIM, GER:EC:EthicReas
program-related activities. Undergraduates may also choose to study in Moscow through the Stanford Overseas Studies Program. Our undergraduate program has attracted students seeking careers in journalism, business, international relations, law, and human rights, as well as academia. Russian is still the lingua franca over the vast territory of the former Soviet Union, and a good command of this language offers a gateway to Eurasia’s diverse cultures, ethnicities, economies, and religions, including Buddhism, Judaism, and Islam.

Stanford students are in a privileged position in relation to Russian and, more broadly, East European and Eurasian Studies, because of Stanford’s tremendous faculty resources that are without peer in the U.S. Green Library and the Hoover Institution libraries and archives possess the premier Russian and East European collections, which our undergraduates and graduate students use in their research. Our students master a difficult language and a rich and challenging literature, and are rewarded by gaining entry into a unique, powerful, and diverse civilization that defined major trends in the past century and plays an increasingly significant role in the world today.

SLAVIC THEME HOUSE
Slavianskii Dom, at 650 Mayfield Avenue, is an undergraduate residence that offers opportunities for students to expand their knowledge, understanding, and appreciation of Russia, Eastern Europe, and Eurasia.

BACHELOR OF ARTS IN SLAVIC LANGUAGES AND LITERATURES
The department offers two fields of study for undergraduate majors: Russian Language and Literature; and Russian Language, Culture, and History. These fields of study are declared on Axess and appear on the transcript but not on the diploma. The department also offers a degree option in Russian and East European Studies, which our undergraduates and graduate students use in their research. Our students master a difficult language and a rich and challenging literature, and are rewarded by gaining entry into a unique, powerful, and diverse civilization that defined major trends in the past century and plays an increasingly significant role in the world today.

SLAVIC THEME HOUSE
Slavianskii Dom, at 650 Mayfield Avenue, is an undergraduate residence that offers opportunities for students to expand their knowledge, understanding, and appreciation of Russia, Eastern Europe, and Eurasia.

RUSSIAN LANGUAGE AND LITERATURE
The Russian Language and Literature field of study is designed for those students who wish to gain command of the Russian language and to study the nation’s literary tradition. Emphasis is placed on the linguistic and philological study of literature, as well as the history of Russian literature and related media in the broader context of Russian culture. Students may explore historically related literary traditions (for example, English, French, German), as well as other related fields. The Russian Language and Literature field of study also welcomes students with an interest in Russian and Slavic linguistics.

Majors who concentrate in Russian Language and Literature must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites—Completion of SLAVLANG 51, 52, 53, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a Russian Language and Literature field of study must complete an additional 56 units according to the following distribution:

Russian Literature—The 20-unit core literature sequence consisting of:

SLAVGEN 145. Age of Experiment: Pushkin, Lermontov, Gogol
SLAVGEN 146. The Great Russian Novel
SLAVGEN 147. The Age of Revolution
SLAVGEN 148. Dissent and Disenchantment
SLAVLIT 187. Russian Poetry of the 18th and 19th Centuries or 188. Russian Poetry of the 20th Century

Electives—Students must take 24 units of electives embracing at least two of the following categories. These courses are chosen in consultation with the department’s director of undergraduate studies. With department consent, work in related academic fields may be applied toward the degree requirements. Students who have completed IHUM 28A,B, Poetic Justice: Order and Imagination in Russian Culture, with a grade of ‘B’ or better may count these 10 units towards elective courses required for the major.

1. Russian language or linguistics; courses for 2009-10 include: SLAVLIT 184/284, History of the Russian Literary Language
2. Russian literature; courses for 2009-10 include: SLAVGEN 77Q. Russia’s Weird Classic: Nikolai Gogol
SLAVLIT 184/245. Age of Experiment
SLAVGEN 146/246. The Great Russian Novel
SLAVGEN 148/248. Dissent and Disenchantment
SLAVLIT 151/251. Dostoevsky and His Time
SLAVLIT 169. Reading Pushkin’s Evgenii Onegin
SLAVLIT 168/288. Russian Poetry of the 20th Century
SLAVLIT 225. Russian Realism
SLAVLIT 226. Bakhtin and his Legacy
SLAVLIT 269. Pushkin and the Golden Age

3. Historically related literatures

RUSSIAN LANGUAGE, CULTURE, AND HISTORY
The Russian Language, Culture, and History field of study is for students who want to obtain command of the Russian language and to pursue a broad, interdisciplinary study of Russian literature and culture in an historical context. Emphasis is on the relation of the Russian literary tradition to other arts, including film, as well as the disciplines that have enriched the historical understanding of Russian literature: history, anthropology, communications, art history, political science, and sociology. Majors in the Russian Language, Culture, and History field of study must earn a GPA of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites—Completion of SLAVLANG 51, 52, 53, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a Russian Language, Culture, and History field of study must complete an additional 56 units according to the following distribution.

19th-Century Russian Literature and History—A minimum of 12 units chosen from the following courses or the equivalent; students must choose one course from Slavic and one course from History.
SLAVGEN 145, 146

A pre-revolutionary Russian history course

20th-Century Russian Literature and History—A minimum of 12 units chosen from the following or the equivalent; students must choose one course from Slavic and one course from History.
SLAVLIT 187

A post-revolutionary Russian history course

History 22N, 20Q, 120-129, or 220-229 will satisfy the history requirements. Contact the Director of Undergraduate Studies with questions.

Electives—In order to complete the basic degree requirements, students must take 24 additional units of course work embracing at least two of the following categories. These courses are chosen in consultation with the undergraduate director. With department consent, work in related academic fields (for example, anthropology, communications, political science, religion, sociology) may apply toward the degree requirements. Students who have completed IHUM 28A, B, Poetic Justice: Order and Imagination in
Russian Culture, with a grade of ‘B’ or better may count these 10 units towards elective courses required for the major.

1. Russian language or linguistics; courses for 2009-10 include:
   SLAVLIT 184/284. History of the Russian Literary Language

2. Russian literature; courses for 2009-10 include:
   SLAVGEN 77Q. Russia’s Weird Classic: Nikolai Gogol
   SLAVGEN 145/245. Age of Experiment
   SLAVGEN 146/246. The Great Russian Novel
   SLAVGEN 148/248. Dissent and Disenchantment
   SLAVGEN 151/251. Dostoevsky and His Time
   SLAVLIT 169. Reading Pushkin’s Evgenii Onegin
   SLAVLIT 188/288. Russian Poetry of the 20th Century
   SLAVLIT 225. Russian Realism
   SLAVLIT 226. Bakhtin and his Legacy
   SLAVLIT 269. Pushkin and the Golden Age

3. Russian history

COGNATE COURSES

Units earned for completion of the following cognate courses may be applied to unit requirements for the departmental major. Other courses may also be applied toward unit requirements, with the approval of the department.

ANTHRO 148A/248A. Nomads of Eurasia
HISTORY 20A/120A. Russian Civilization from Beginnings to the Enlightenment
HISTORY 20Q. Russia in the Early Modern European Imagination
HISTORY 222N. Russia and the Enlightenment
HISTORY 245. The Soviet Union through Western Eyes: Workers’ Paradise and Evil Empire
HISTORY 123. Reform and Revolution in Modern Russia, 1856-2009
HISTORY 125. 20th-Century Eastern Europe
HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
HISTORY 221B. The Woman Question in Modern Russia
HISTORY 223F/323F. The Nationality Question in the Russian Empire and the Soviet Union
HISTORY 227/327. East European Women and War in the 20th Century
HISTORY 229/329. Poles and Jews
HISTORY 321A. Classics of Russian Historiography
POLISCI 140C. The Comparative Political Economy of Post-Communist Transitions
REES 200. Current Issues in Russian, Eastern European, and Eurasian Studies
SOC 15N. The Transformation of Socialist Societies

RUSSIAN AND PHILOSOPHY

The Russian and Philosophy option offers students the opportunity to gain a command of the Russian language and literary tradition, while gaining a background in philosophical thought, broadly construed. They take courses alongside students in other departments participating in the program in Philosophical and Literary Thought, with administrative staff in the DLCL. This option is not declared on Axess. Majors who concentrate in Russian and Philosophy must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major. Courses in other departments may not, in general, be counted toward the Russian language, Russian literature, and elective requirements, but may be counted toward the other requirements.

Prerequisites—Completion of SLAVLANG 51, 52, 53, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a concentration in Russian and Philosophy must complete an additional 67 units according to the following distribution:

Russian Language—A minimum of 12 units selected from:
SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183.

Russian Literature—A minimum of 16 units of Russian literature, including the following:
SLAVGEN 145 and 146
SLAVGEN 147 or 148
SLAVLIT 187 or 188

Electives—At least 12 units of electives in Russian language and literature, chosen in consultation with the undergraduate director.

Philosophy and Literature Gateway Course (4 units)—SLAVGEN 181 (same as PHIL 81).

Philosophy Writing in the Major (5 units)—PHIL 80; prerequisite: introductory philosophy course.

Philosophy Core—12 units, including the following:
Value Theory; a course in the PHIL 170 series

Related Course—An upper-division course of special relevance to philosophy and literature. A list of approved courses is available from the program director.

Capstone Seminar—One capstone seminar must be taken in the student’s senior year. This year’s capstone seminars are:
COMPLIT 154/GERLIT 154. Heidegger on Hölderlin
PHIL 173A. Aesthetics: Metaphor across the Arts

HONORS PROGRAM

Majors in any track or option with a grade point average (GPA) of 3.3 (B+) or better in their major courses are eligible to participate in the department’s honors program. Prospective honors students must choose a senior thesis tutor from among the department’s regular faculty in their junior year and may enroll for 2 units of credit in SLAVLIT 189B in Spring Quarter of the junior year to conduct preliminary research and draft an honors proposal under the guidance of their tutor. In addition to the program requirements above, students must also complete the following:

1. Majors who propose a senior project in literature must take a course in literary or cultural theory, such as SLAVLIT 200 (Proseminar in Literary Theory and Study of Russian Literature); this requirement may also be fulfilled by enrollment in DLCL 189 or, with approval of the thesis adviser, in an advanced course related to the area of the student’s expected research. Students concentrating in Russian Language, Culture, and History, and pursuing a project in cultural history, must take a course in literary or cultural theory, a graduate seminar in the area of their topic, or DLCL 189, a 5-unit seminar that focuses on researching and writing the honors thesis. DLCL 189 is taken in Autumn Quarter of the senior year. Students concentrating in Russian Language and Literature who propose a senior project in Russian language select their course in consultation with the Director of Undergraduate Studies.

2. SLAVLIT 189A, taken for 5 units of credit while composing the thesis during Winter Quarter. Students who did not enroll in a 189B course in the junior year may enroll in SLAVLIT 189B in Spring Quarter of the senior year while revising the thesis, if approved by the thesis adviser.

3. To qualify for honors, the candidate must receive a grade of ‘B’ or better on the thesis or project completed during this period. A total of 10-12 units may be awarded for completion of honors course work, independent study, and the finished thesis.

OVERSEAS STUDIES

The department encourages interested students to consider studying abroad at the Stanford Center in Moscow. Some courses taken there may be applied toward the major. Courses approved for the Slavic Languages and Literatures major and taught overseas can be found in the “Overseas Studies” section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.
MINORS IN SLAVIC LANGUAGES AND LITERATURES

The Department of Slavic Languages and Literatures offers three undergraduate minor options in Slavic Languages and Literature.

The minor is designed for students who, while pursuing a major in another program, seek a comprehensive introduction to Russian culture, whether through (1) Russian language courses, or (2) a combination of minimal proficiency in Russian and courses in the history of Russian culture, or (3) courses on Russian literature in translation and, depending on the student’s interest, other forms of the country’s cultural expression and social institutions. Students seeking a Slavic minor are encouraged to take advantage of the Bing Overseas Studies Program in Moscow. Students who have chosen one of the minor programs in Russian may use 5 units of IHAM credit towards their electives.

MINOR IN RUSSIAN LANGUAGE

Prerequisites—The minor option in Russian Language requires completion of SLAVLANG 51, 52, 53, or a demonstrated equivalent competence, as determined by the departmental Russian language placement examination.

Requirements—Candidates for the B.A. degree with a minor option in Russian Language must complete 24 units of Russian language and literature courses according to the following distribution: 12 to 15 units selected from SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183; the remaining 9-12 units should be chosen from SLAVGEN 145, 146, 147, 148, SLAVLIT 187, 188, other monograph courses offered by the department, or, with the approval of the department’s undergraduate adviser, history, politics, linguistics, or other relevant programs.

MINOR IN RUSSIAN LANGUAGE, LITERATURE, AND CULTURE

Prerequisites—The minor option in Russian Language, Literature, and Culture requires completion of SLAVLANG 1, 2, 3, or the equivalent, as determined by the departmental Russian language placement examination.

Requirements—Candidates for the B.A. degree with the minor option in Russian Language, Literature, and Culture must complete 28 units according to the following distribution:

- A minimum of 16 units of courses on literature and culture including two from the SLAVGEN 145, 146, 147, 148 sequence (Russian Literature in English Translation), or one from the SLAVGEN 145, 146, 147, 148 sequence and one from the SLAVLIT 187, 188 sequence; and at least one monograph course focusing on a single author.
- 12 units of elective courses either in the Department of Slavic Languages and Literatures or, with the approval of the Slavic department’s undergraduate adviser, in other relevant programs dealing with Russian culture, politics, society, and history.

MINOR IN RUSSIAN CULTURE

Candidates for the B.A. degree with the minor option in Russian Culture must complete 36 units according to the following distribution: a minimum of 20 units of courses on literature and culture selected from the SLAVGEN 145, 146, 147, 148 sequence (Russian Literature in English Translation), and two courses focusing on a single author. In addition, one course in Russian history. History 22N, 20Q, 120-129, or 220-229 will satisfy the requirements. No knowledge of Russian is required.

Electives—11 units of elective courses either in the Department of Slavic Languages and Literatures or, with the approval of the Slavic department’s undergraduate adviser, in other relevant programs dealing with Russian history, politics, society, and culture.

The deadline for minor declarations in all options is no later than the last day of the third quarter before degree conferment.

MINOR IN LITERATURE AND MINOR IN MODERN LANGUAGES

The Division of Literatures, Cultures, and Languages offers two undergraduate minor programs, the minor in Literature and the minor in Modern Languages. These minors draw on literature and language courses offered in this and other literature departments. See the "Literatures, Cultures, and Languages" section of this bulletin for further details about these minors and their requirements.

COTERMINAL BACHELOR’S AND MASTER’S PROGRAM IN SLAVIC LANGUAGES AND LITERATURES

The department allows a limited number of undergraduates to work for coterminal B.A. and M.A. degrees in Slavic Languages and Literatures with a concentration in Russian. In addition to University requirements for the B.A. degree, the student must:

1. Submit an application for admission by January 31 of the senior year. Applicants must meet the same general standards as those seeking admission to the M.A. program. Applicants must submit: an application for admission; a written statement of purpose; a transcript; and three letters of recommendation, at least two of which should be from members of the Department of Slavic Languages and Literatures faculty.
2. Meet all requirements for both the B.A. and M.A. degrees. Applicants must complete 15 full-time quarters (or the equivalent), or three full-time quarters after completing 180 units, for a total of 225 units. During the senior year they may, with the consent of the instructors, register for as many as two graduate courses. In the final year of study, they must complete at least three graduate-level courses.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

MASTER OF ARTS IN SLAVIC LANGUAGES AND LITERATURES

University requirements for the M.A. degree are discussed in the “Graduate Degrees” section of this bulletin.

Admission—The requirements for admission to the master’s degree program in Russian are:

1. A B.A. (or its equivalent) from an accredited college or university.
2. A command of the Russian language sufficient to permit the student to do satisfactory graduate work in an area of specialization.
3. A familiarity with Russian literature sufficient to permit the student to perform adequately in courses at the graduate level.

The applicant’s previous academic training in Russian language and literature normally serves as an indication of competence. Accordingly, the department does not ordinarily consider applications from students who have not had at least three years of college Russian and some undergraduate training in Russian literature of the 19th and 20th centuries. Before registering for the first quarter’s work in the department, entering graduate students are required to take placement examinations in Russian. Students who fail to perform satisfactorily on such examinations must register for remedial courses in the areas in which they are deficient. Course work in third-year Russian and below carries no credit toward either the M.A. or the Ph.D. degree.

Course Requirements—Candidates for the M.A. who are not also candidates for the Ph.D. should plan course work that ensures adequate preparation for the M.A. final examination at the end of the third quarter of work. Ph.D. candidates should attempt to include as many of the department’s basic course offerings as possible in the first-year program to ensure sufficient time to complete the M.A. thesis during the fifth quarter of registration. In any case, course work should be planned in consultation with the graduate adviser, whose approval of the overall course load is required.

Candidates for the M.A. must complete a program of 45 units, of which 36 units must be selected from courses given by the department. The other 9 units may, with approval of the candidate’s adviser, be selected from courses in related fields. Of the 36 units...
in the department, a minimum of 9 may be in language and a minimum of 9 in literature. The remaining 18 units may be distributed in accordance with the needs and interests of the student, and with the advice and approval of the department adviser.

No credit toward the M.A. degree is allowed for first- or second-year courses in non-Slavic languages required for the Ph.D. degree.

The M.A. Thesis—A requirement for candidates for a Ph.D., the M.A. thesis represents a complete article-length research paper (6-9,000 words) that, in both form and substance, qualifies for submission to English-language professional publications in the Slavic field. The M.A. thesis must be submitted to the thesis adviser no later than the fifth quarter and approved no later than the sixth quarter of registration.

Final Examination—Students not enrolled in the Ph.D. program may either submit an M.A. thesis or take a final examination. In the latter case, regardless of the area of specialization, the student must demonstrate in a written examination: (1) command of the phonology, morphology, syntax, and lexicology of contemporary Standard Russian sufficient to teach beginning and intermediate courses at the college level; (2) an ability to read contemporary Standard Russian sufficient to assist students studying contemporary Russian poetry or literary prose; and (3) sufficient familiarity with Russian literature of either the 19th or 20th century to successfully handle survey courses dealing with the chosen period of specialization. The examination should be taken at the end of the final quarter of required course work.

DOCTOR OF PHILOSOPHY IN SLAVIC LANGUAGES AND LITERATURES

University requirements for the Ph.D. are discussed in the “Graduate Degrees” section of this bulletin. Students enrolled in the Ph.D. program in Slavic Languages and Literatures are expected to fulfill the following requirements:

1. Minor or Related Fields: during the course of study, students must develop substantial expertise in a field contiguous to the area of specialization. A candidate may elect to present a full minor or, in consultation with the graduate adviser, develop a special program in a related field.
   a. Related Field: a student is required to complete a sequence of basic courses (12 units) in a chosen discipline outside the Department of Slavic Languages and Literatures. The choice of patterns is one of the following:
      1. a sequence of three courses in one West European literature, selected in consultation with the adviser, or
      1. three basic courses in comparative literature chosen in consultation with the graduate adviser and the Department of Comparative Literature or the Department of German Studies, or
   b. Minor: students electing a minor should take a minimum of 20 units in graduate-level courses in the minor department or fulfill the minor requirements established by that department. Students considering minors should consult with their adviser, the chair of Slavic Languages and Literatures, and the chair of the minor department.
   c. Students may fulfill the department’s “minor or related field” requirement by enrolling in the Graduate Program in the Humanities (see “Interdisciplinary Program in Humanities” in this bulletin).

2. Admission to Candidacy—candidates should read carefully the general regulations governing the degree, as described in the “Graduate Degrees” section of this bulletin. No student is accepted as a candidate until the equivalent of the M.A. degree requirements, including the M.A. thesis described above, is completed. Admission to candidacy is determined early in the sixth quarter of graduate studies. The candidate by that time must have demonstrated commitment to graduate studies by completion of a minimum of 60 quarter units of credit with a grade point average (GPA) of 3.3 or better, and submission of a complete draft of an M.A. thesis approved by the adviser and the second reader. Failure to do so results in termination of enrollment for the Ph.D. The terminated student may, at the discretion of the faculty, be given the opportunity to take the M.A. written examinations. If successful, the student is then awarded the M.A. degree.

3. Proficiency Test: administered for all entering graduate students, this test determines whether the student’s knowledge of Russian language and literature falls below the department’s standard. Students who fail to meet the standard in this test are asked to complete appropriate courses in the first year of graduate study.

4. Course Requirements: before qualifying for the department oral and written examinations, a Ph.D. candidate is expected to accumulate at least 72 quarter units of credit for courses taken while in graduate school. No less than half of this course work (36 units) must be done in the Department of Slavic Languages and Literatures, including at least 24 units of credit for seminar-level courses. Entering graduate students must enroll in SLAVLIT 200.

5. Foreign Languages: a candidate must demonstrate reading knowledge of French or German, plus another language useful for the student’s area of concentration, by passing written examinations, or receiving a grade of ‘A’ or better in a class.

6. Examinations: a candidate must pass the departmental general qualifying examinations, which has written and oral parts. The written part covers the history of Russian literature from the medieval period through the twentieth century. The departmental oral qualifying examination follows shortly after completion of the comprehensive exams. The oral examination committee should include a faculty member representing the student’s “minor or related field.” The student makes a 20-minute presentation of a scholarly paper, possibly the master’s thesis. Each examining committee questions the student on the presentation and related topics. Following the departmental examinations, a candidate must pass a University oral examination, which is a defense of a dissertation prospectus covering content relevant to the area of study, rationale for the proposed investigation, and strategy to be employed in the research.

Continuation—Continuation in the Ph.D. program is contingent on: for first-year students, a high quality of performance in course work (decided by department evaluation); for second-year students, an M.A. thesis, which should be completed no later than the end of the second quarter of the second year.

Course Work, Breadth Requirements, and Overall Scheduling—

1. Candidates for the Ph.D. degree are allowed as much freedom as possible in the selection of course work to suit their individual program of study. However, candidates are held responsible for all of the areas covered by the general examinations, regardless of whether they have registered for the department’s offerings in a given field. For this reason, it is strongly recommended that before taking Ph.D. examinations, students complete seminar-level work directly related to the following broad areas:
   a. Russian poetry
   b. the Russian novel
   c. 20th-century Russian literature
   d. 19th-century Russian literature (the Age of Pushkin and after)
   e. 18th-century Russian literature (the early 1700s to the Age of Pushkin)
   f. Medieval Russian literature
   g. a monograph course on a major Russian author
   h. theory of literature

The department’s general qualifying examinations must usually be taken by the end of the first quarter of the third year of study; they may be taken during the second year if the student and the adviser feel this is appropriate. During
the two quarters following the general qualifying examinations, the student should be concerned primarily with preparation for the departmental and the University oral examinations, which should take place no later than the end of the third quarter of the third year. The fourth and fifth years should be devoted to research and writing leading to completion of the Ph.D. dissertation.

2. Students possessing the equivalent of the Stanford M.A. are normally expected to adhere to the schedule for the second, third, and fourth years of work outlined under item 1 above.

3. Students in the Ph.D. program are required to do five quarters of teaching, including three quarters of first-year Russian and one quarter of literature as a teaching assistant to a faculty member, usually for one of the survey courses in translation: SLAVGEN 145, 146, 147, 148. Students are required to take a one quarter TA training course, DLCL 201, during their second year.

Non-Slavic Language Requirements—Credit toward either the M.A. or the Ph.D. degrees is not given for first- or second-year courses in non-Slavic languages. It is assumed that, on entering the program, the student has a reading knowledge of either German or French. The reading examination in German or French must be passed by the end of the first year of study. The reading examination in the second language of choice must be passed by the end of the second year of study. Both language examinations must be passed before the candidate takes the University oral examination, that is, before the end of the third year.

**PH.D. IN SLAVIC LANGUAGES AND LITERATURES AND HUMANITIES**

The department participates in the Graduate Program in Humanities leading to a Ph.D. degree in Slavic Languages and Literatures and Humanities. At this time, the option is available only to students already enrolled in the Graduate Program in Humanities. Although the Graduate Program in Humanities is not currently accepting new students, it continues to provide advising for students already enrolled as well as courses, open to all students. The University remains committed to a broad-based undergraduate education in the humanities, and a successor program is under discussion by the faculty of the Division of Literatures, Cultures, and Languages. For further information, please consult Gregory Freidin, the director of the program; the list of courses and events may be found on the program web site: http://ish.stanford.edu/programs/graduate.

**SOCILOGY**

Chair: Karen Cook

Associate Professors: Shelley Correll, Michael Rosenfeld

Assistant Professors: Henning Hillmam, Tomás Jiménez, Monica McDermott, Paolo Parigi, Rebecca L. Sandefur

Consulting Professor: Glenn Carroll, Michele Landis Dauber, Larry Diamond, Clifford J. Nass, Walter Powell, Francisco Ramirez

Consulting Associate Professors: Prudence Carter, Daniel McFarland, Sean Reardon, Jesper Sorensen, Mitchell Stevens

Consulting Assistant Professor: Christine Min Wotipka

Lecturers: Patricia Chang, Annemette Sorensen, Szonja Szelenyi

Professor Emeritus: Ruth Cronkite

Visiting Associate Professors: Eva-Maria Meyersson Milgrom, Patricia Thornton

Department Offices: Building 120, Room 160

Mail Code: 94305-2047

Phone: (650) 723-3956

Web Site: http://sociology.stanford.edu

Courses offered by the Department of Sociology are listed under the subject code SOC on the Stanford Bulletin’s Explore Courses web site.

Sociology seeks to understand all aspects of human social behavior, including the behavior of individuals as well as the social dynamics of small groups, large organizations, communities, institutions, and entire societies. Sociologists are typically motivated both by the desire to better understand the principles of social life and by the conviction that understanding these principles may aid in the formulation of enlightened and effective social policy. Sociology provides an intellectual background for students considering careers in the professions or business. Students may pursue degrees in sociology at the bachelor’s, master’s, or doctoral levels. The department organizes its courses by areas of study to assist students in tailoring their education and research to their academic interests and career goals.

**UNDERGRADUATE PROGRAMS IN SOCIOLOGY**

The Sociology major consists of a core curriculum plus elective courses intended to provide breadth of exposure to the variety of areas encompassed by sociology.

**UNDERGRADUATE MISSION STATEMENT FOR SOCIOLOGY**

The mission of the Sociology Program is to provide students with the skills necessary to understand and address social problems and inequalities in global, institutional, organizational and interpersonal social relations. At its core the curriculum in the major is deeply rooted in social theory and the scientific method. Sociology majors are given opportunities to develop a broad understanding of core sociological theories and the methodological skills used to evaluate human behavior and social organizations. Sociology provides an intellectual background for students considering careers in business, social services, public policy, government service, international non-governmental organizations, foundations, or academia.

**AREAS OF STUDY**

The Department of Sociology specializes in four areas of study, allowing students to tailor their education and research to their
Major Requirements—To graduate with a B.A. in Sociology, students must complete a minimum of 60 units of course work in the major. Units applied to the major must be taken for a letter grade (except for independent study or directed reading), and a grade point average (GPA) of 2.0 (C) or better must be achieved. Related course work from other departments may fulfill part of this requirement; such work must be pre-approved by the Sociology student services office and a faculty adviser and may not exceed 15 units.

CORE CURRICULUM FOR ALL SOCIOLOGY MAJORS

Students are required to complete a minimum of 40 units of core and foundation course work as detailed below.

CORE COURSES REQUIRED FOR THE MAJOR

The following core courses (25 units) are required of majors. It is recommended that students complete SOC 181B, SOC 180A, and SOC 180B in this order.

1. SOC 170. Classics of Modern Social Theory
2. SOC 181B. Sociological Methods: Statistics, or another introductory statistics course such as STATS 60, PSYCH 10, or equivalent
3. SOC 180A. Foundations of Social Research
4. SOC 180B. Evaluation of Evidence
5. SOC 200. Junior/Senior Seminar for Majors. It is recommended that students take this course in Spring Quarter of the junior year or Autumn Quarter of the senior year. This course fulfills the Writing in the Major (WIM) requirement. Students considering honors are encouraged to enroll in SOC 202, Preparation for Honors Thesis, in the junior year; see “Honors Program” below.

FOUNDATION COURSES REQUIRED FOR THE MAJOR

In addition to core courses, students pursuing the B.A. in Sociology must complete at least three foundation courses (15 units). To ensure breadth of course work, each foundation course must represent a different area of study. For detailed information about Sociology concentration areas, see section on areas of study. Foundation courses, classified by area of study, are as follows:

Organizations, Business, and the Economy:
- SOC 114. Economic Sociology
- SOC 160. Formal Organizations

Social Movements, Comparative Politics, and Social Change:
- SOC 110. Politics and Society
- SOC 118. Social Movements and Collective Action
- SOC 130. Education and Society

Social Psychology and Interpersonal Processes:
- SOC 120. Interpersonal Relations
- SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology

Social Inequality:
- SOC 140. Introduction to Social Stratification
- SOC 149. The Urban Underclass

In addition to the 40 units required in core and foundation course work, students pursuing the Sociology major must complete 20 elective units of Sociology course work. Students may choose their elective courses according to personal interest; however, students are encouraged to complete some course work at the 200-level. Sociology majors are encouraged to participate in directed research or undertake independent research with Sociology faculty. Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study.

HONORS PROGRAM

Sociology majors who wish to complete an independent scholarly project under the direction of a faculty member are encouraged to apply for admission to the department’s honors program. Admission to the program requires a grade point average (GPA) of 3.5 or higher in courses taken within the major, and an overall GPA of 3.3 (B+) or higher in all undergraduate course work. Applicants are required to identify a Sociology faculty member to

BACHELOR OF ARTS IN SOCIOLOGY

To declare a major in Sociology, students must email the Sociology student services office once they have declared in Axess; see http://www.stanford.edu/dept/soc/contact/index.html for contact information. It is recommended that new majors schedule a meeting with their assigned faculty adviser promptly after declaring the major.

academic interests and career goals. The four areas of study supported by the department are:

Organizations, Business, and the Economy—Focus is on the arrangements which societies construct for the provision of material goods or services. A formal organization which provides goods or services for profit and sells them through a market is called a business, and the economic system is capitalism. Social needs are also met through government and not-for-profit organizations, such as garden clubs, hospitals, prisons, and the Red Cross; some private and social needs are met outside of organizations, such as health care provided by family members and exchange of favors among friends. Courses stress the factors that determine whether needs that people define are met through markets or non-market allocation, through organizations, or by other means. They also investigate the environmental and technical factors that shape organization structure, the determinants of how efficiently organizations operate, and the interpersonal processes that shape individual behavior within organizations. Careers related to this field include management and administration in business or public settings, management consulting and analysis, and legal studies related to corporations, organizations, and business.

Social Movements, Comparative Politics, and Social Change—Focus is on the emergence, reproduction, and change of political systems and institutions, especially on why and how different political systems and social movements appear in different times and places, and how differences in political regimes and economic systems influence attempts to change these systems. The origins and significance of national and transnational social movements, transition to democracy, including revolution, nationalism, and other forms of collective action, in creating and sustaining these changes analyzed across countries and over time. Careers that are relevant to this field include law, public policy, government service, nonprofit and international nongovernmental organizations, business organizations (especially those with international interests), consulting, and managerial jobs.

Social Psychology and Interpersonal Processes—Focus is on the social organization of individual identity, beliefs, and behavior, and upon social structures and processes which emerge in and define interpersonal interactions. Processes studied include social acceptance and competition for prestige and status, the generation of power differences, the development of intimacy bonds, the formation of expectation states which govern performance in task oriented groups, and social pressures to constrain deviance. Foundation courses emphasize the effect of social processes on individual behavior and the analysis of group processes. This field provides training for careers with a significant interpersonal component, including advertising and marketing, business, education, law, management, medicine and health, or social work.

Social Inequality—Focus is on forms of social inequality, including fields such as: the shape and nature of social inequalities; competition for power; allocation of privilege; production and reproduction of social cleavages; and consequences of class, race, and gender for outcomes such as attitudes, political behavior, and life styles. Many courses emphasize changes in the structure of social inequalities over time, and the processes which produce similarities or differences in stratification across nations. Topics include educational inequality, employment history, gender differences, income distributions, poverty, race, and ethnic relations, social mobility, and status attainment. Careers related to this field include administration, advertising, education, foreign service, journalism, industrial relations, law, management consulting, market research, public policy, and social service.
advise on the research and writing of the essay. With the approval of the director of the undergraduate studies committee, students may work with faculty advisers in other departments.

The honors project is typically initiated when a student enrolls in SOC 202, Preparation for Honors Thesis, or SOC 200, Junior/Senior Seminar. Students undertaking an honors project are encouraged to enroll in SOC 202 or 200 in the junior year. Students begin designing their honors project in connection with this seminar and in consultation with the seminar leader. If the student is admitted to the program, the honors project is completed during the senior year.

To apply to the honors program, students must complete the application form available from the Sociology student services office or from the department’s web site. This form requires the faculty adviser’s endorsement, a brief description of the proposed project, and a copy of the student’s unofficial undergraduate transcript. Applicants must submit the completed application to the Sociology student services office no later than the fourth quarter before graduation, typically Spring Quarter of the junior year.

Honors students may earn up to 12 independent study units for work leading to completion of the required honors thesis, excluding units associated with the Junior/Senior Seminar. Completion of honors in Sociology requires: (1) completion of all requirements for the major; and (2) completion of a thesis of honors quality (a grade of ‘A-’ or higher). The thesis is due on or before the beginning of the End-Quarter period in the student’s final quarter before graduating. If the thesis adviser is a faculty member outside the department, the thesis must be submitted to both that sponsor and to the Sociology student services office, who coordinates appointment of a departmental reader to evaluate the paper. Both the honors adviser and the reader must agree that the paper merits honors. In every case, two copies of the final paper must be submitted; one is retained by the department and becomes a part of the department’s permanent collection. If a grade of ‘A-’ is not earned, the thesis credit counts toward meeting the standard major requirements.

MINOR IN SOCIOLOGY

Students must complete a minimum of 35 units in Sociology for the minor. Courses must be taken for a letter grade, and a minimum grade point average (GPA) of 2.0 (C) must be achieved. Students are encouraged to complete a course in sociological theory, such as SOC 170, and to obtain exposure to one of the areas of study. Students who wish to declare a minor in Sociology must do so no later than the deadline for their application to graduate. Related course work from other departments may fulfill a minor requirement. All course substitutions must be pre-approved by the Sociology student services office and the Undergraduate Program Director; a student may not exceed 5 substitution units for the minor.

Course requirements for a minor in Sociology are as follows:

GRADUATE PROGRAMS IN SOCIOLOGY

The Department of Sociology offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Arts in Sociology which is restricted to currently enrolled Stanford undergraduates
- the Master of Arts in Sociology which is available to Stanford students who are currently enrolled in other advanced degree programs

The department does not have a terminal M.A. program for external applicants.

COTERMINAL MASTER OF ARTS IN SOCIOLOGY

Stanford undergraduates, regardless of undergraduate major, who wish to pursue an M.A. in Sociology may apply for the coterminal master’s program. The coterminal M.A. in Sociology is a flexible, self-designed program. Most students complete their M.A. in a fifth year at Stanford; occasionally students are able to complete their B.A. and coterminal M.A. in the fourth year.

Application and admission—Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to their B.A. conferral. A cumulative GPA of at least 3.5 in previous undergraduate work is required for admission; GRE test scores are required. It is highly recommended that applicants have completed at least one Sociology course at the 100 level with a grade of ‘B’ or better. The department accepts applications once a year; the application deadline is February 15th for admission in the Spring quarter immediately following. There are no exceptions to this deadline. All application materials are submitted directly to the Sociology graduate student services office. To apply for admission to the Sociology coterminal M.A. program, students must submit the coterminal application and the following: (1) a 2-5 page statement of purpose; (2) a preliminary program proposal that specifies at least 45 units of course work relevant to the degree program with at least 40 units in Sociology; (3) a current unofficial undergraduate transcript; (4) two letters of recommendation from Stanford faculty familiar with the student’s academic work; and (5) GRE scores. The department does not fund coterminal M.A. students.

Program requirements—Coterminal M.A. students are required to take 45 units of course work during their graduate career; 40 of these units must be in Sociology courses. Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study. All units for the coterminal M.A. must be taken at or above the 100 level; advanced-level course work is encouraged and a minimum of 20 units must be taken at the 200 level. Students who wish to take courses outside the department must seek prior approval from the Sociology student services office; coterminal master’s students are limited to 5 units from outside of the department; outside courses must be taken in other Social Science departments. Students may transfer a maximum of 10 units from their undergraduate career; to be eligible for transfer, courses must have been taken in the two quarters preceding admission to the M.A. program. All units applied to the coterminal master’s degree must be taken for a letter grade and an overall grade point average (GPA) of 3.0 (B) or better is required for the degree. Because research methods are an important component of graduate training in the social sciences, coterminal students are encouraged to take SOC 180A, Foundations of Social Research, and 180B, Evaluation of Evidence, in sequence when possible. These methods courses provide skills for research opportunities within the department and in academic or professional careers. Coterminal M.A. students should meet with their assigned faculty adviser upon acceptance to the program.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/pdf/CotermApplic.pdf. For detailed information regarding the Sociology coterminal M.A. and how to apply, see http://www.stanford.edu/dept/soc/coterminal/index.html.

MASTER OF ARTS FOR CURRENT GRADUATE STUDENTS IN SOCIOLOGY

The M.A. degree in Sociology is available to current Ph.D. candidates in Sociology and to students in advanced degree programs (Ph.D., J.D., M.D.) from other Stanford departments and schools. For the M.A. degree, students must complete a minimum of 45 units of Sociology course work with a grade point average (GPA) of 3.0 (B) or better. All 45 units must be taken in courses
taught by Sociology faculty. Students must enroll in SOC course offerings; cross-listed offerings will not be accepted. All courses must be taken for a letter grade if possible. Workshop, research, directed reading, and independent study units do not count towards the M.A. University regulations pertaining to the M.A. are listed in the “Graduate Degrees” section of this bulletin. Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study. No thesis is required. While formal application to the M.A. program is not required, applicants from outside of the Sociology department must submit: (1) a completed Graduate Authorization Petition form, available electronically through Axex for submission to the Office of the University Registrar; (2) a completed Program Proposal for an M.A. form; and (3) a short statement of purpose to the Sociology student services office. Sociology Ph.D.s typically receive their M.A. in their second or third year of graduate study. Interested students from other degree programs should visit the Department’s web site here: http://www.stanford.edu/dept/soc/doctoral/magrads.html

DOCTOR OF PHILOSOPHY IN SOCIOLOGY

The Ph.D. curriculum and degree requirements are designed to provide students with the knowledge and skills to become proficient scholars and teachers. Doctoral students in the department must take required courses for a letter grade if available and are expected to earn a grade of “B+” or better in each course. Any grade of ‘B’ or below is considered to be less than satisfactory. Grades of ‘B’ or below are reviewed by faculty and the following actions may take place: the grade stands and the student’s academic performance is monitored to ensure that satisfactory progress is being made; the grade stands and the student is required to revise and resubmit the work associated with that course; or the student may be required to retake the course.

Students must complete the following department requirements for the Ph.D. degree in Sociology:

1. Students must enroll in SOC 305, Graduate Proseminar, in Autumn Quarter of the first year; the course provides an introduction and orientation to the field of sociology, and to the department and faculty. One unit of credit is given for this course; grading is on a satisfactory/no credit basis.

2. In order to establish breadth in the field, students are required to complete 45 units of course work in Sociology in the first academic year, then 15 units of Sociology course work in the second academic year. Course work excludes workshop, independent study, and directed reading units.

3. Students must complete three quarters of research experience, working under the supervision of one or more faculty members, including regular, emeritus, and affiliated faculty. The research experience may involve paid work as a research assistant (RA), or unpaid work as a research apprentice. With prior approval, this requirement may be met through work on research projects conducted outside the department or University. It is recommended that students complete their research requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.

4. Students must complete three quarters of teaching apprenticeship in departmental courses, or in other courses by approval. Work as either a teaching assistant (TA) under the supervision of a faculty member or as a teaching fellow (TF) fulfills this requirement. Students are required to take SOC 300, Workshop: Teaching Development, in Spring Quarter of the first year. In addition, students are encouraged to take advantage of department and University teacher training programs. Students for whom English is a second language are expected to acquire sufficient facility in English to be an effective teacher.

5. Students must complete four broad survey courses to demonstrate command of a range of sociological literatures. Each year the department specifies which courses meet this requirement, and undertakes to ensure that an adequate selection of such courses is offered. A list of courses that fulfill this requirement is listed in the requirements section below. Students should consult with their adviser to ensure that the combination of courses chosen to meet this requirement exhibits sufficient breadth. This requirement is normally completed by the end of the second year of residency and must be met by the end of the third year of residency.

6. Students must take one course in classical sociological theory (SOC 370A or B, or equivalent), and one course on the development of theory and research design (SOC 372 or equivalent). It is recommended that students complete SOC 370A and B, although only one of these courses is formally required.

7. Students must complete the series of required research methods courses listed in the requirements section below. Students with little background in statistics are encouraged to take SOC 281B or an equivalent statistics course such as STATS 60 or PSYCH 10.

8. Beginning in year two, doctoral students are required to enroll in at least one workshop each quarter. Sociology workshops are offered for 1-2 units and attendance is required to receive course credit. The Graduate Studies Director may approve a student’s petition to attend a workshop when enrollment is prohibited by unit constraints; such attendance is not noted on the transcript.

9. Students must complete a paper in the second year of residency on any sociological topic; it may address theoretical, empirical, or methodological issues. The paper is expected to reflect original work and is considered an important piece of evidence in the decision to advance to candidacy. A two-person committee that includes the primary adviser evaluates the paper. Although the reading committee is usually comprised of two regular faculty members in the department, emeritus and affiliated faculty may also serve as readers. The two readers of the second-year paper committee provide a review that speaks to: (1) whether the paper is publishable; and (2) what types of revisions, insofar as the paper is publishable, the student should pursue to ready the paper for publication. These comments are shared with the Director of Graduate Studies. Additionally, the committee meets with the student in June of the second year to discuss these reviews. To ensure that students are making adequate progress on their paper, students are required to provide a first draft of the paper to readers by April 1. The final deadline for paper submission is May 15.

10. Students are required to present at least two papers at a major professional meeting in their first five years of graduate study.

11. Students must prepare a dissertation prospectus and pass the University oral examination. The oral exam is intended to evaluate the dissertation prospectus or a partial draft of the dissertation and to assess the student’s knowledge of the theory and research area in which the project intends to contribute. This requirement must be completed by December 1 of the fourth year of residency.

12. Each student must complete a doctoral dissertation. At the choice of the student, and in consultation with the adviser, the dissertation requirement may be met either by submitting the standard book-style document or by submitting three independent papers. The latter papers may overlap substantially with the second-year paper or with one another. The main criterion in judging substantial overlap is whether any standard journal, such as The American Journal of Sociology, would regard the papers as too similar to publish both. The dissertation must be submitted to all committee members at least 30 days in advance of the filing deadline. Assessment of satisfactory completion is determined by the student’s doctoral committee members. Students are invited to present their dissertation findings at an informal department colloquium.

The faculty is responsible for providing students with timely and constructive feedback on their progress toward the Ph.D. In order to evaluate student progress and to identify potential problem areas, the department’s faculty reviews the academic progress of each first-year student at the beginning of Winter and Spring quar-
ters and again at the end of the academic year. The first two reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if more serious concerns warrant, a student may be placed on probation with specific guidelines for addressing the problems detected. The review at the end of Spring Quarter is more thorough; each student’s performance during the first year is reviewed and discussed. Possible outcomes of the spring review include: (1) continuation of the student in good standing, or (2) placing the student on probation, with specific guidelines for the period of probation and the steps to be taken in order to be returned to good standing. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include: (1) restoration to good standing; (2) continued probation, again with guidelines for necessary remedial steps; or (3) termination from the program. Students leaving the program at the end of the first year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residence or financial support. All students are given feedback from their advisers at the end of their first year of graduate work, helping them to identify areas of strengths and potential weakness.

At the end of the second year of residency, the faculty again review the progress of all doctoral students in the program. Students who are performing well, as indicated by their course work, teaching and research apprenticeship performance, and second-year paper, are advanced to candidacy. This step implies that the student has demonstrated the relevant qualities required for successful completion of the Ph.D. Future evaluations are based on the satisfactory completion of specific remaining department and University requirements. Students who are still on probation at this stage may be (1) advanced to candidacy; (2) retained on probation with specification of the steps still required to be removed from this status; or (3) terminated from the program.

At any point during the degree program, evidence that a student is performing at a less than satisfactory level may be cause for a formal academic review of that student.

REQUIREMENTS

SURVEY COURSES

Students must complete four courses from an approved list. This list is updated and circulated to students at the start of each academic year. Note: class offerings rotate; not all approved survey courses are offered every year. The following courses typically fulfill the survey course requirement:

- 308. Social Demography
- 310. Political Sociology
- 314. Economic Sociology
- 316. Historical and Comparative Sociology
- 318. Social Movements and Collective Action
- 320. Foundations of Social Psychology
- 322. Social Interaction, Social Structure, and Social Exchange
- 340. Social Stratification
- 342B. Gender and Social Structure
- 345. Comparative Race and Ethnic Relations
- 360. Foundations of Organizational Sociology
- 363A. Seminar on Organizational Theory

RESEARCH METHODS

The following course requirements apply to students who entered the Ph.D program in 2005-06 or later. Students are also expected to complete one elective from a list of approved courses that is updated and circulated at the start of each academic year. Students are required to enroll in 384, Sociology Methodology IV: New Models and Methods, in their first or second year of the program.

- 281B. Statistics (not required but recommended for students with little statistical background)
- 381. Sociological Methodology I: Introduction
- 382. Sociological Methodology II: The General Linear Model
- 384. Sociology Methodology IV: New Models and Methods
- 385A. Research Practicum I
- 385B. Research Practicum II

The following course requirements apply to students who entered the Ph.D program in 2004-05 or earlier.

- 381A. Sociological Methodology I: Computer Assisted Data Analysis
- 382. Sociological Methodology II: The General Linear Model
- 388. Advanced Models for Analysis of Tabular Arrays or 389. Mixed Method Research Design

THEORY

- 370A. Sociological Theory: Social Structure, Inequality, and Conflict
- 370B. Sociological Theory: Social Interaction and Group Processes
- 372. Theoretical Analysis and Design

Students must complete additional course work sufficient to prepare them to write their second-year paper.

PH.D. MINOR IN SOCIOLOGY

Sociology offers a minor for currently enrolled doctoral students in other Stanford departments and schools. Students must complete a minimum of 30 graduate-level units with a grade point average (GPA) of 3.0 (B) or better. All 30 units for the minor are to be in courses taught by Sociology faculty. Students must enroll in the SOC course offerings (not cross-listed sections). There is one exception: 5 units may be taken in a statistics or methods course taught in another department. All units must be taken for a letter grade. Workshop, research, directed reading, or independent study units do not count towards the Ph.D. Minor. The program must be approved by a Sociology adviser and filed with the Sociology student services office. While there is not a formal application process, candidates must submit a short statement of purpose (2 pages), and a completed Application for Ph.D. Minor to the Sociology student services office. The Application for Ph.D. Minor must have all Sociology or other courses to be applied to the minor listed, including course number, units, and final grades.

JOINT PROGRAMS IN SOCIOLOGY WITH THE SCHOOL OF LAW

The School of Law and Department of Sociology conduct joint programs leading to either a combined J.D. degree with an M.A. degree in Sociology or to a combined J.D. degree with a Ph.D. in Sociology.

Law students interested in pursuing an M.A. in Sociology apply for admission to the Department of Sociology during the first year of Law school. Once admitted to the Department of Sociology, the student must complete standard departmental master’s degree requirements as specified in this bulletin. Applications for the joint J.D./M.A. degree program must be approved by both the department and the Law school. Faculty advisers from each program participate in the planning and supervising of the student’s academic program.

The J.D./Ph.D. degree program is designed for students who wish to prepare themselves for research or teaching careers in areas relating to both legal and sociological concerns. Students interested in the joint degree program must be admitted to both the School of Law and the Department of Sociology. Interest in the joint degree program must be noted on each of the student’s applications. Alternatively, an enrolled student in either the Law School or the Sociology department may apply to the other program, preferably during their first year of study.

Upon admission, students are assigned a joint program faculty adviser who assists the student in planning an appropriate program.
and ensuring that all requirements for both degrees are satisfied. The faculty adviser serves in this capacity during the student’s course of study regardless of whether the student is enrolled in the School of Law or the Sociology department.

J.D./Ph.D. students may elect to begin their course of study in either the School of Law or the Department of Sociology. Students must be enrolled full-time in the Law school for the first year of Law school, and must enroll full time in the graduate school for the first year of the sociology program. After that time, enrollment may be in the graduate school or the Law school, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees. Up to 81 quarter (54 semester) hours of approved courses may be counted toward both degrees, but no more than 36 quarter (24 semester) hours of courses that originate outside the Law school may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the Law school but count toward the Law degree, the Law school credits permitted under Section 17(1) of the Law School Regulations for cross-registration in other schools or departments of Stanford University are reduced on a unit-per-unit basis, but not below zero. Students must complete the equivalent of 183 quarter units to complete both degrees. Tuition and financial aid arrangements normally are through the school in which the student is currently enrolled.

OVERSEAS STUDIES COURSES IN SOCIOLOGY

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses web site (http://exploreCourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

MADRID
OSPMAADR 61. Society and Cultural Change: The Case of Spain. 5 units, Antonio Muñoz

MOSCOW
OSPMOSC 57. Social Inequality in Socialist and Post-Socialist Societies. 3-5 units, Nancy Tuma, GER:DB:SocSci

WINTER QUARTER

BERLIN
OSPBER 19. Work and Family. 4 units, Myra Strober

CAPE TOWN
OSPCPTWN 32. Adult Learning, Development and Social Change: Service-Learning in the Contemporary South African Context. 4-5 units, Janice McMillan

SPRING QUARTER

BEIJING
OSPEBJ 72. Societal Changes from the Natives’ Point of View. 2-5 units, Xueguang Zhou
OSPEBJ 73. Formal Organizations. 5 units, Xueguang Zhou, GER:DB:SocSci

CAPE TOWN
OSPCPTWN 32. Adult Learning, Development and Social Change: Service-Learning in the Contemporary South African Context. 4-5 units, Janice McMillan

FLORENCE

OXFORD
OSPOXFORD 117W. Gender and Social Change in Modern Britain. 4-5 units, Amanda Palmer, GER:DB:SocSci

STATISTICS

Emeriti: Theodore W. Anderson, Ingram Olkin, Charles Stein
Chair: Wing H. Wong
Associate Professors: Jonathan Taylor, Guenther Walther
Assistant Professors: Andrea Montanari, Nancy Zhang
Professor (Teaching): Susan Holmes
Consulting Professors: Philip W. Lavori, Richard A. Olshen
Consulting Associate Professors: Simon Jackman, David Rogosa
Consulting Professors: John Chambers, Charles Chui, David G. Stork

Mail Code: 94305-4065
Phone: (650) 723-2620
Web Site: http://stat.stanford.edu

Courses offered by the Department of Statistics are listed under the subject code STATS on the Stanford Bulletin’s ExploreCourses web site.

The department’s goals are to acquaint students with the role played in science and technology by probabilistic and statistical ideas and methods, to provide instruction in the theory and application of techniques that have been found to be commonly useful, and to train research workers in probability and statistics. There are courses for general students as well as those who plan careers in statistics in business, government, industry, and teaching.

The requirements for a degree in Statistics are flexible, depending on the needs and interests of the students. Some students may be interested in the theory of statistics and/or probability, whereas other students may wish to apply statistical and probabilistic methods to a substantive area. The department has long recognized the relation of statistical theory to applications. It has fostered this by encouraging a liaison with other departments in the form of joint and courtesy faculty appointments: Economics (Anderson), Education (Olkin, Rogosa), Electrical Engineering (Cover), Geological and Environmental Sciences (Switzer), Health Research and Policy (Efron, Hastie, Johnstone, Lavori, Oshlen, Tibshirani, Wong), Mathematics (Dembo, Diaconis), Political Science (Jackman), and the SLAC National Accelerator Laboratory (Friedman). The research activities of the department reflect an interest in applied and theoretical statistics and probability. There are workshops in biology/medicine and in environmental factors in health.

In addition to courses for Statistics majors, the department offers a number of service courses designed for students in other departments. These tend to emphasize the application of statistical techniques rather than their theoretical development.

The Department of Statistics is well equipped for statistical applications and research in computational statistics. Computer facilities include several networked Unix servers and a PC lab for general research and teaching use. The Mathematical Sciences
Library serves the department jointly with the departments of Mathematics and Computer Science.

The department has always drawn visitors from other countries and universities. As a consequence, there is usually a wide range of seminars offered by both the visitors and our own faculty.

UNDERGRADUATE PROGRAMS IN STATISTICS

MAJORING IN STATISTICS

Students wishing to build a concentration in probability and statistics are encouraged to consider declaring a major in Mathematical and Computational Science. This interdepartmental program is administered in the Department of Statistics and provides core training in computing, mathematics, operations research, and statistics, with opportunities for further elective work and specialization. See the “Mathematical and Computational Science” section of this bulletin.

MINOR IN STATISTICS

The undergraduate minor in Statistics is designed to complement major degree programs primarily in the social and natural sciences. Students with an undergraduate Statistics minor should find broadened possibilities for employment. The Statistics minor provides valued preparation for professional degree studies in postgraduate academic programs.

The minor consists of a minimum of six courses with a total of at least 20 units. There are two required courses (8 units) and four qualifying or elective courses (12 or more units). All courses for the minor must be letter graded. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

1. Required Courses: STATS 116 and 200.
2. Qualifying Courses: at most, one of these two courses may be counted toward the six course requirement for the minor: MATH 52; STATS 191.
3. Elective Courses: at least one of the elective courses should be a STATS 200-level course. The remaining two elective courses may also be 200-level courses. Alternatively, one or two elective courses may be approved courses in other departments. Special topics courses and seminars for undergraduates are offered from time to time by the department and these may be counted toward the course requirement. Students may not count any Statistics courses below the 100 level toward the minor. Examples of elective course sequences are:
   - STATS 202, 203, 204, emphasizing data analysis and applied statistics
   - STATS 205, 206, 207, emphasizing statistical methodology
   - STATS 206, ECON 160, 181, emphasizing economic optimization
   - STATS 206, PSYCH 156, 160, emphasizing psychology modeling and experiments
   - STATS 207, EE 264, 279, emphasizing signal processing
   - STATS 217, BIO 283, emphasizing genetic and ecologic modeling
   - STATS 217, 218, emphasizing probability and its applications
   - STATS 240, 250, emphasizing mathematical finance

GRADUATE PROGRAMS IN STATISTICS

University requirements for the M.S. and Ph.D. degrees are discussed in the “Graduate Degrees” section of this bulletin.

MASTER OF SCIENCE IN STATISTICS

The department requires that the student take 45 units of work from offerings in the Department of Statistics or from authorized courses in other departments. Ordinarily, four or five quarters are needed to complete all requirements.

Students must fulfill the following requirements for the M.S. degree:

1. STATS 116, 191, 200, and 217. All must be taken for a letter grade. Courses previously taken may be waived by the adviser, in which case they must be replaced by other graduate courses chosen by the department.
2. One of MATH 104, 113, 115, 171; and one of CS 106A, 106X, 140-181. Substitution of other courses in Mathematics and Computer Science may be made with consent of the adviser.
3. At least four additional Statistics courses from graduate offerings in the department (202-399). All must be taken for a letter grade. Consent of the adviser is required in order to take more than six units of STATS 260ABC, 298, 299, 390, or 399.
4. Additional elective units to complete the requirements may be chosen from the list available from the department web site. Other graduate courses (200 or above) may be authorized by the adviser if they provide skills relevant to statistics or deal primarily with an application of statistics or probability and do not overlap courses in the student’s program. There is sufficient flexibility to accommodate students with interests in applications to business, computing, economics, engineering, health, operations research, and biological and social sciences.
5. Courses below 200 level are generally not acceptable, with the following exceptions: STATS 116, 191; MATH 103, 113, 115, 171, 180; CS 106A, 106B, 106X, 137, 138. At most, one of these two courses may be counted: (1) MATH 151 or STATS 116, (2) MATH 103 or MATH 115.

Students with a strong mathematical background who may wish to go on to a Ph.D. in Statistics should consider applying to the Ph.D. program.

The eight Statistics courses required for the M.S. degree must be taken for letter grades. Courses other than the eight required statistics courses may be taken for a letter grade or Credit/No Credit. There is no thesis requirement. An overall 2.75 grade point average (GPA) is required.

DOCTOR OF PHILOSOPHY IN STATISTICS

The department looks for students who wish to prepare for research careers in statistics or probability, either applied or theoretical. Advanced undergraduate or master’s level work in mathematics and statistics provides a good background for the doctoral program. Quantitatively oriented students with degrees in other scientific fields are also encouraged to apply for admission. In particular, the department is expanding its research and educational activities toward computational biology, mathematical finance and information science, via a VIGRE program. The program normally takes four years to complete.

Program Summary—STATS 300A,B,C, 305, 306A,B, and 310A,B,C (first-year core program); pass two of three parts of the qualifying examinations (end of first year); breadth requirement (second or third year); successfully complete the thesis proposal meeting (before end of third year); pass the University oral examination (fourth year); dissertation (fourth year).

In addition, students are required to take 9 units of advanced topics courses offered by the department (including at least two of the following: 314, 317, 318, 315A, or 315B, but not including literature, research, or consulting), and 3 units of 390 statistical consulting. All students who have passed the qualifying exams but have not yet passed the University oral examination must take 319 at least once per year.

First-Year Core Courses—STATS 300 systematically surveys the ideas of estimation and of hypothesis testing for parametric and nonparametric models involving small and large samples. 305 is concerned with linear regression and the analysis of variance. 306 surveys a large number of modeling techniques, related to but going beyond the linear models of 305. 310 is a measure-theoretic course in probability theory, beginning with basic concepts of the law of large numbers and martingale theory. Students who do not have enough mathematics background can take 310 after their first year but need to have their first-year program approved by the Ph.D. program adviser.

Qualifying Examinations—These are intended to test the student’s level of knowledge when the first-year program, common to
Breadth Requirement—Students are advised to choose an area of concentration in a specific scientific field of statistical applications; this can be realized by taking at least 15 units of course work approved by the Ph.D. program adviser.

Current areas with suggested course options include:

- **Computational Biology and Statistical Genomics**—Students are expected to take 9 units of graduate courses in genetics or neurosciences (imaging), such as GEN 203/BIO 203, as well as 9 units of classes in Statistical Genetics or Bioinformatics, GEN 344A,B, STATS 345, STATS 366, STATS 367.

- **Machine Learning**—Courses can be chosen from the following list:
  - Statistical Learning: STATS 315A and 315B
  - Data Bases: CS 245, 346, 347
  - Probabilistic Methods in AI: CS 221, 354
  - Statistical Learning Theory and Pattern Classification: CS 229

- **Applied Probability**—Students are expected to take 15 units of graduate courses in some of the following areas:
  - Control and Stochastic Calculus: MS&E 322, 351, MATH 237, EE 363
  - Finance: STATS 250, FINANCE 622, MATH 236
  - Information Theory: EE 376A, 376B
  - Monte Carlo: STATS 318, 345, 362, MS&E 323
  - Queuing Theory: GSB 661, 663, MS&E 335
  - Stochastic Processes: STATS 317, MATH 234

- **Earth Science Statistics**—Students are expected to take:
  - STATS 317, 318, 352
  - and three courses from the GES or Geophysics departments, such as GES 144 or GEOPHYS 210.

- **Social and Behavioral Sciences**—Students are expected to take three advanced courses from the department with an applied orientation such as:
  - STATS 261/262, 324, 343, 354
  - and three advanced quantitative courses from departments such as Anthropology, Economics, Political Science, Psychology, and Sociology, and the schools of Education, Business, or Medicine.

- **Ph.D. Thesis Meeting and University Oral Examinations**—The thesis proposal meeting is intended to demonstrate students’ depth in some areas of statistics, and to examine the general plan for their research. In the meeting, they will give a short presentation and discuss their ideas for completing a Ph.D. thesis, with a committee consisting of their advisor and thesis committee (a total of three members). The meeting must be successfully completed before the end of their third year. If the student does not pass, the exam must be repeated. Repeated failure can lead to a loss of financial support.

The oral examination consists of a 40-minute presentation on the thesis topic, followed by a question period. The questions relate both to the student’s presentation and also explore the student’s familiarity with broader statistical topics related to the thesis research. The oral examination will normally be completed within the last few months of the student’s Ph.D. period. The examining committee usually consists of four faculty members from the Statistics Department and a fifth faculty member from outside the department. Four out of five passing votes are required and no grades are given. Nearly all students can expect to pass this examination, although it is common for specific recommendations to be made regarding completion of the thesis.

A reading committee must also read and approve the thesis. The reading committee will typically be the same as the thesis committee from the thesis proposal meeting.

Transition policy: This is a new scheme that will take effect starting Autumn Quarter 2009-2010. Students who have already passed their Ph.D. proposal defense orals do not need to take the thesis defense oral. Students currently in their first year in 2008-2009 must follow this new policy. Other students currently in second year and beyond can choose either the old or new system; students in this category who choose the new scheme and have already finished their third year can have their initial committee meeting as soon as they are ready.

For further information on University oral examinations and committees, please see the Graduate Academic Policies and Procedures (GAP) Handbook (http://gap.stanford.edu) section 4.7.

Financial Support—Students accepted to the Ph.D. program are offered financial support. All tuition expenses are paid and there is a fixed monthly stipend determined to be sufficient to pay living expenses. Financial support can be continued for five years, departmental resources permitting, for students in good standing. The resources for student financial support derive from funds made available for student teaching and research assistantships. Students receive both a teaching and research assignment each quarter which, together, do not exceed 20 hours. Students are strongly encouraged to apply for outside scholarships, fellowships, and other forms of financial support.

**PH.D. MINOR IN STATISTICS**

The minimum requirement for a Ph.D. minor is 20 units of course work at the 200 level or higher, taken at Stanford. The Department of Statistics devides individual Ph.D. minor programs, but the department recommends that graduate students in other fields who wish to have a subspecialty in statistics study for an M.S. degree instead. The unit requirement for an M.S. degree is 45 units, whereas the number of units required for a minor averages around 30. The student can make up this difference by including in the M.S. program courses from his or her own field that are related to statistics or applications of statistics. Contact the Student Services Officer for further information.

**SYMBOLIC SYSTEMS**

Director: Kenneth Taylor
Director of Graduate Studies: Christopher Manning
Associate Director: Todd Davies
Program Committee: Lera Boroditsky, Todd Davies, Scott Klemmer, Eric Roberts, Ivan A. Sag, Kenneth A. Taylor, Thomas A. Wasow
Program Faculty:
- **Art and Art History**: Scott Bukatman (Associate Professor)
- **Applied Physics**: Bernardo Huberman (Consulting Professor)
- **Classics**: Reviel Netz (Professor)
- **Civil and Environmental Engineering**: John Kunz (Lecturer)
- **Communication**: Jeremy Bailenson (Assistant Professor), Clifford J. Nass (Professor), Byron Reeves (Professor), Frederick Turner (Assistant Professor)
- **Computer Science**: David Dill (Professor), Michael Genesereth (Associate Professor), Jeffrey Heer (Assistant Professor), Ousama Khatib (Professor), Scott Klemmer (Assistant Professor), Daphne Koller (Professor), Jean-Claude Latombe (Professor), Marc Levoy (Professor), Christopher Manning (Associate Professor), John McCarthy (Professor, emeritus), Andrew Ng (Associate Professor), Nils Nilsson (Professor, emeritus), Vaughan Pratt (Professor, emeritus), Eric Roberts (Professor, Teaching), Tim Roughgarden (Assistant Professor), Mehran Sahami (Associate Professor, Teaching), Sebastian Thrun (Professor), Terry Winograd (Professor)
- **Economics**: Muriel Niederle (Associate Professor)
- **Education**: Raymond P. McDermott (Professor), Roy Pea (Professor), Daniel Schwartz (Professor)
- **Electrical Engineering**: Krishna Shenoy (Associate Professor)
- **French and Italian**: Jean-Pierre Dupuy (Professor)
The core requirements of the Symbolic Systems Program (SSP) include courses in symbolic logic, the philosophy of mind, formal linguistics, cognitive psychology, programming, the mathematics of computation, statistical theory, artificial intelligence, and interdisciplinary approaches to cognitive science. These courses prepare students with the vocabulary, theoretical background, and technical skills needed for study and research at the advanced undergraduate and graduate levels. Most of the courses in SSP are drawn from affiliated departments. Courses designed specifically for the program are aimed at integrating and supplementing topics covered by the department-based offerings. The curriculum includes humanistic approaches to questions about language and intelligence, as well as training in science and engineering.

SSP offers B.S. and M.S. degree programs. Both programs require students to master a common core of required courses and to choose an area of specialization.

BACHELOR OF SCIENCE IN SYMBOLIC SYSTEMS

The program leading to a B.S. in Symbolic Systems provides students with a core of concepts and techniques, drawing on faculty and courses from various departments. The curriculum prepares students for advanced training in the interdisciplinary study of language and information, or for postgraduate study in any of the main contributing disciplines. It is also excellent preparation for employment immediately after graduation.

Symbolic Systems majors must complete a core of required courses plus a field of study consisting of six additional courses. All major courses are to be taken for letter grades unless an approved course is offered satisfactory/no credit only. All core courses must be passed with a grade of ‘C-’ or better. Students who receive a grade lower than this in a core course must alert the program of this fact so that a decision can be made about whether the student should continue in the major.

CORE REQUIREMENTS

In order to graduate with a B.S. in Symbolic Systems, a student must complete the following requirements. Some of these courses have other courses as prerequisites; students are responsible for completing each course’s prerequisites before they take it.

1. Cognitive Science: SYMSYS 100. Introduction to Cognitive and Information Sciences
2. Computer Programming:
   a. CS 106A. Programming Methodology and 106B. Programming Abstractions; or 106X. Programming Methodology and Abstractions (Accelerated); and
   b. CS 107. Computer Organization and Systems
3. Logic:
   a. PHIL 150. Basic Concepts in Mathematical Logic
   b. PHIL 151. First-Order Logic
4. Computational Theory:
   a. CS 103. Mathematical Foundations of Computing
5. Probability: one of the following:
   a. CS 109. Introduction to Probability for Computer Scientists
   b. EE 178. Probabilistic Systems Analysis
   c. MATH 151. Introduction to Probability Theory
   d. STATS 110. Statistical Methods in Engineering and the Physical Sciences
6. Philosophical Foundations:
   a. an introductory course in Philosophy must be taken prior to the required PHIL 80, from among the following:
      PHIL 10. God, Self, and World: An Introduction to Philosophy
      PHIL 20. Introduction to Moral Philosophy
      PHIL 30. Introduction to Political Philosophy
      PHIL 60. Introduction to Philosophy of Science
      PHIL 102. Modern Philosophy, Descartes to Kant
IHUM 23A,B. The Fate of Reason

7. Cognitive Psychology: PSYCH 55. Introduction to Cognition and the Brain
8. Language and Mind: one of the following:
   - LINGUIST 1. Introduction to Linguistics
   - LINGUIST 140. Language Acquisition I
   - PHIL 181. Philosophy of Language
   - PSYCH 131. Language and Thought
   - PSYCH 137. Birds to Words: Cognition, Communication, and Language
9. Linguistic Theory: one of the following:
   - LINGUIST 120. Introduction to Syntax
   - LINGUIST 130A. Introduction to Linguistic Meaning
   - LINGUIST 180. From Languages to Information
   - LINGUIST 230A. Introduction to Semantics and Pragmatics
10. Artificial Intelligence: CS 121. Introduction to Artificial Intelligence, or 221. Artificial Intelligence: Principles and Techniques
11. Advanced Small Seminar:* an upper-division, limited-enrollment seminar drawing on material from other courses in the core. Courses listed under Symbolic Systems Program offerings with numbers from SYMSYS 200 through 209 are acceptable, as are other courses which are announced at the beginning of each academic year.

* A course taken to fulfill one of these requirements can also be counted toward another requirement, as part of either the core or a student’s concentration (see below), but not both.

FIELDS OF STUDY
In addition to the core requirements listed above, the Symbolic Systems major requires each student to complete a field of study consisting of six courses that are thematically related to each other. Students select concentrations from the list below or design others in consultation with their advisers. The field of study is declared on Axess; it appears on the transcript but not on the diploma.

Applied Logic
- Artificial Intelligence
- Cognitive Science
- Computer Music
- Decision Making and Rationality
- Human-Computer Interaction
- Learning
- Natural Language
- Neurosciences
- Philosophical Foundations

UNDERGRADUATE RESEARCH
The program strongly encourages all SSP majors to gain experience in directed research by participating in faculty research projects or by pursuing independent study. In addition to the Symbolic Systems Honors Program (see below), the following avenues are offered.

1. Summer Internships: students work on SSP-related faculty research projects. Application procedures are announced in the winter quarter for SSP majors.
2. Research Assistantships: other opportunities to work on faculty research projects are typically announced to SSP majors as they arise during the academic year.
3. Independent Study: under faculty supervision. For course credit, students should enroll in SYMSYS 196.

Contact SSP for more information on any of these possibilities, or see http://symsys.stanford.edu. In addition, the Undergraduate Advising and Research office offers grants and scholarships supporting student research projects at all levels; see http://ual.stanford.edu/OO/research_opps/Grants http://ual.stanford.edu/OO/research_opps/Grants.

HONORS PROGRAM
Seniors in SSP may apply for admission to the Symbolic Systems honors program prior to the beginning of their final year of study. Students who are accepted into the honors program can graduate with honors by completing an honors thesis under the supervision of a faculty member. Course credit for the honors project may be obtained by registering for SYMSYS 190, Honors Tutorial, for any quarters while a student is working on an honors project. Juniors who are interested in doing an honors project during their senior year are advised to take SYMSYS 200, Symbolic Systems in Practice. SYMSYS 191, Senior Honors Seminar, is recommended for honors students during the senior year. Contact SSP or visit the program’s web site for more information on the honors program, including deadlines and policies.

COGNATE COURSES
The following is a list of cognate courses that may be applied to the B.S. in Symbolic Systems. See respective department listings for course descriptions and General Education Requirements (GER) information.

BIO 20. Introduction to Brain and Behavior (Same as HUMBIO 21)
BIO 150/250. Human Behavioral Biology (Same as HUMBIO 160)
BIO 153. Cellular Neuroscience: Cell Signaling and Behavior
CME 106. Introduction to Probability and Statistics for Engineers
   (Same as ENGR 155C)
COMM 106/269. Computers and Interfaces
COMM 172/272. Media Psychology
CS 21N. Can Machines Know? Can Machines Feel?
CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects
CS 47N. Computers and the Open Society
CS 51N. Visionaries in Computer Science
CS 74N. Digital Dilemmas
CS 103. Mathematical Foundations of Computing
CS 103A. Discrete Mathematics for Computer Science
CS 103B. Discrete Structures
CS 103X. Discrete Structures (Accelerated)
CS 106A. Programming Methodology (Same as ENGR 70A)
CS 106B. Programming Abstractions (Same as ENGR 70B)
CS 106X. Programming Abstractions (Accelerated) (Same as ENGR 70X)
CS 107. Computer Organization and Systems
CS 108. Object-Oriented Systems Design
CS 109. Introduction to Probability for Computer Scientists
CS 110. Principles of Computer Systems
CS 121. Introduction to Artificial Intelligence
CS 124. From Languages to Information (Same as LINGUIST 180/280)
CS 142. Web Applications
CS 147. Introduction to Human-Computer Interaction Design
CS 148. Introductory Computer Graphics and Imaging
CS 154. Introduction to Automata and Complexity Theory
CS 157. Logic and Automated Reasoning
CS 161. Design and Analysis of Algorithms
CS 170. Composition, Coding, and Performance with SLOre (Same as MUSIC 128)
CS 181. Computers, Ethics, and Public Policy

DEGREES IN SYMBOLIC SYSTEMS

The M.S. degree in Symbolic Systems is designed to be completed in the equivalent of one academic year by coterminal students or returning students who already have a B.S. degree in Symbolic Systems, and in two years or less by other students depending upon level of preparation. Admission is competitive, providing a limited number of students with the opportunity to pursue course and project work in consultation with a faculty adviser who is affiliated with the Symbolic Systems Program. The faculty adviser may impose requirements beyond those described here.

Admission to the program as a coterminal student is subject to the policies and deadlines described in the “Undergraduate Degrees and Programs” section of this bulletin (see “Coterminal Bachelor’s and Master’s Degrees”). Applicants to the M.S. program are reviewed each Winter Quarter. Information on deadlines, procedures for applying, and degree requirements are available from the program’s student services coordinator in the Linguistics Department office (460-127E) and at http://symsys.stanford.edu/ssp_static?page=masters.html.

REQUIREMENTS

A candidate for the M.S. degree in Symbolic Systems must complete a program of 45 units. At least 36 of these must be graded units, passed with an average grade of 3.0 (B) or better, and any course taken to fulfill requirements A, B, or C below must be taken for a letter grade unless the course is offered S/NC only. The 45 units may include no more than 21 units of courses from those listed below under Requirements A and B. Furthermore, none of the 45 units to be counted toward the M.S. degree may include units already counted toward an undergraduate degree at Stanford or elsewhere. Course requirements are waived only if evidence is provided that similar or more advanced courses have been taken, either at Stanford or another institution. Courses that are waived rather than taken may not be counted toward the M.S. degree.

Each candidate for the M.S. degree must fulfill the following requirements:

REQUIREMENT A

Demonstrated competence in the core requirements for the B.S. degree in Symbolic Systems. Candidates who have gone through the Symbolic Systems undergraduate program satisfy this requirement in the course of the B.S. degree in Symbolic Systems. Other students admitted as candidates for a Symbolic Systems M.S. degree must complete or show evidence of having passed equivalent courses covering all the Symbolic Systems undergraduate core requirements, with the exception of the advanced small seminar requirement.

REQUIREMENT B

1. Submission to and approval by the Symbolic Systems Program office of these pre-project research documents:
   a. project area statement, endorsed with a commitment from the student’s prospective project adviser due no later than May 1 of the academic year prior to the expected graduation year; and
   b. qualifying research paper due no later than the end of the Summer Quarter prior to the expected graduation year.

2. Completion of two additional skill requirements:
   b. Empirical Methods: one of the following:
      COMM 206. Communication Research Methods

MASTER OF SCIENCE IN SYMBOLIC SYSTEMS

The M.S. degree in Symbolic Systems offers a special Symbolic Systems track for interdisciplinary graduate level work.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.
COMM 239. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives
COMM 268. Experimental Research in Advanced User Interfaces
LINGUIST 284. Natural Language Processing (Same as CS 224N)
PSYCH 110. Research Methods and Experimental Design
PSYCH 252. Statistical Methods for Behavioral and Social Science (for 3 or more units)
PSYCH 253. Statistical Theory, Models, and Methodology (for 3 units)
STATS 191. Introduction to Applied Statistics
STATS 200. Introduction to Statistical Inference
a Statistics course numbered higher than 200
3. Completion of three quarters of the Symbolic Systems Program M.S. Seminar (SYMSYS 291).

REQUIREMENT C
Completion of an approved specialization track. All tracks of the Symbolic Systems M.S. program require students to do a substantial project. The course requirements for each track are designed to prepare a student to undertake such a project. The nature of the project depends on the student’s focus, but it should be academic in nature (contributing to generalizable knowledge) and it should relate to the subject matter of symbolic systems more or equally appropriately as it does to other master’s degree programs at Stanford. In all cases, a written thesis or paper describing the project is required. The project normally takes three quarters, and work on the project may account for up to 15 units of a student’s program. The thesis must be read and approved for the master’s degree in Symbolic Systems by two qualified readers approved by the program, at least one of whom must be a member of the Academic Council. Each track of the Symbolic Systems M.S. program has its own core requirements, as well as unit requirements from a set of elective courses. The tracks and their requirements are as follows.

The Human-Computer Interaction (HCI) Track—The HCI Core: a course in Computer Science numbered 141-179 (excluding 147), or CS 241-279 (excluding 247), or CS 295. Software Engineering; and CS 147, Introduction to Human-Computer Interaction Design; and CS 247, Human-Computer Interaction: Interaction Design Studio; and CS 376, Research Topics in Human-Computer Interaction or COMM 269, Computers and Interfaces.

For HCI electives, at least 9 additional units of HCI courses, chosen in consultation with the student’s adviser. The following are examples of themes around which an elective program might be built: animation, business systems, computer-aided design, computer graphics, data interfaces, decision systems, design for disabilities, design principles, dialogue systems, digital art, digital media, education technology, game design, history of computers, information retrieval, interface design, internet design, medical informatics, multimedia design, object-oriented design, philosophy of computation, social aspects of computing, usability analysis, virtual reality, and workplace computing.

The Natural Language Technology (NLT) Track—For the NLT core, in addition to the courses below, students must complete LINGUIST 284/CS 224N, Natural Language Processing, which can be used as the empirical methods course for Requirement B above.

1. An in-depth theory of English grammar course such as LINGUIST 221A, Foundations of English Grammar
2. A graduate-level semantics course (if not already taken as part of Requirement A) such as LINGUIST 232A, Lexical Semantics, or 230B, Semantics and Pragmatics
3. A two-course sequence in Computational Linguistics:
   a. LINGUIST 280. From Languages to Information, and
   b. LINGUIST 282. Computational Theories of Syntax
For NLT electives, at least 9 additional units of natural language technology courses, chosen in consultation with the student’s adviser.

The Individually Designed Option—Students wishing to design their own M.S. curriculum in Symbolic Systems must present a project plan as part of their application. This plan must be endorsed by the student’s adviser prior to admission to the Symbolic Systems M.S. program. The application must also specify at least 20 units of course work that the student will take in support of the project.

Students are admitted under this option only if they present well-developed plans whose interdisciplinary character makes them inappropriate for any departmental master’s program, but appropriate for Symbolic Systems.

COGNATE COURSES
The following is a list of cognate courses that may be applied to the M.S. in Symbolic Systems. See respective department listings for course descriptions and General Education Requirements (GER) information.

BIO 20. Introduction to Brain and Behavior (Same as HUMBIO 21)
BIO 150/250. Human Behavioral Biology (Same as HUMBIO 160)

PSYCH 159. Psychology of Attitude Change and Social Influence
Courses offered by the Urban Studies Program are listed under the subject code URBANST on the Stanford Bulletin’s Explore-Courses web site.

The Urban Studies program treats urbanism as an interdisciplinary field; it brings together students, faculty, and outside specialists concerned with cities, and the impacts of cities on society and personal lives. The Urban Studies major encourages students to inquire deeply into the nature of cities and the techniques used to modify urban environments. It prepares students to address urbanization, and gives students a knowledge base and theoretical, analytical, and practical skills to understand urban social systems and effect social change.

A major in Urban Studies prepares students for careers and advanced academic pursuits in fields including architecture, community service, education, environmental planning, real estate development, urban design, and urban planning; many have obtained graduate degrees in architecture, business, law, public policy, urban design, and urban planning from major universities across the country. Information on careers and graduate programs pursued by Urban Studies alumni is available from the Urban Studies program office.

UNDERGRADUATE MISSION STATEMENT FOR URBAN STUDIES

The mission of the Urban Studies Program is to develop students’ understanding of the nature of cities and their impacts on both the individual and society at large. The program is interdisciplinary in nature, drawing from fields in the social sciences, history and education. Courses in the program focus on issues in contemporary urban society and on the tools and concepts that can bring about change to improve urban life. Courses also address how cities have changed over time and how they continue to change today in societies around the world. Through a comprehensive curriculum that includes coursework, an internship, and independent research, the program prepares students for graduate study and careers in fields such as business, law, public policy, the nonprofit sector, education and urban planning.

Bachelor of Arts in Urban Studies

The Urban Studies major requires students to complete four types of courses totaling at least 73 units: 19 units in the core; at least 8 units of skills courses; at least 25 units in an area of concentration; and 13 units in the capstone sequence. If units in these categories total less than 73, the remaining units may be fulfilled by courses in other concentrations or in Urban Studies courses numbered 100 or higher (except URBANST 198 and 199). Majors must also complete two prerequisites: ECON 1A, Introductory Economics A; and ECON 1B, Introductory Economics B; the units for these prerequisite courses do not count toward the 73 units required for the major. URBANST 198, URBANST 199, and prerequisites for required courses and for electives also do not count towards the 73-unit minimum.

Urban Studies students interested in graduate school in business or urban planning are advised to obtain basic quantitative skills by completing MATH 19, 20, and 21, or MATH 41 and 42, preferably before the junior year. A course in statistical methods, such as STATS 60, ECON 102A, POLSCI 150A or 151B, or SOC 181B, is recommended for students interested in business or urban planning.

Urban Studies students carry out an internship in an urban organization in the public or private sector, typically by enrolling in URBANST 201A during Winter Quarter of the junior year. This internship, or an appropriate substitute where necessary, should be arranged no later than Autumn Quarter of the junior year. Urban Studies majors who wish to receive academic credit for additional internship work may enroll only once in URBANST 194. Students can consult the Haas Center for Public Service for other courses with internship work.

Urban Studies students are encouraged to spend at least one quarter studying overseas to learn how cities vary across societies.
Some Urban Studies core course requirements, as well as electives, can be satisfied at Stanford overseas campuses. Courses offered overseas vary from year to year, and students should check in advance with Overseas Studies and Urban Studies concerning which courses meet Urban Studies requirements. Students may arrange to fulfill the internship requirement through a summer placement at one of Stanford’s overseas locations.

Courses counted toward the 73-unit graduation requirement for the major (except URBANST 201A) must be taken for a letter grade, and a minimum grade of ‘C’ is required. Qualified students may write a senior honors thesis and graduate with honors; see details in “Honors Program” below. Students interested in declaring Urban Studies as a major are required to meet first with the student services administrator and one of the program’s advisors; they then declare the Urban Studies major on Axess.

**URBAN STUDIES CORE**

Urban Studies majors should complete URBANST 110, Introduction to Urban Studies, before Spring Quarter of the junior year. The following courses, totaling 19 units, are required:
- URBANST 110. Introduction to Urban Studies
- URBANST 112. The Urban Underclass
- URBANST 114. Cities in Comparative Perspective
- URBANST 113. Introduction to Urban Design

**SKILLS**

A minimum of 8 units are required. The following courses may be used to fulfill the skills requirement; consult an adviser to determine if additional courses may be available:
- ANTHRO 130B. Introduction to GIS in Anthropology
- SOC 180A. Foundations of Social Research

**CONCENTRATIONS**

Students must complete at least 25 units in one of the following concentrations. Courses may not be double counted. Students should consult an adviser to develop a program that meets their intellectual goals; relevant courses not listed here, including research methods courses taken in preparation for the capstone project, may be counted toward the concentration with the prior consent of an adviser.

These concentrations are declared to the department; they are not declared on Axess, and they do not appear on the transcript or the diploma.

**CITIES IN COMPARATIVE AND HISTORICAL PERSPECTIVE**

Focus is on how cities have evolved over time, and how they are continuing to change in societies around the world, drawing on disciplinary approaches including anthropology, archaeology, art history, geography, and history. By placing urban issues in perspective, students improve their comprehension of the present as well as the past.

Students in this concentration are encouraged to study off campus, and preferably overseas, for at least one quarter. Many courses offered through the Overseas Studies Program can be counted toward the concentration. Similarly, internships offered at many of Stanford’s overseas locations can be used to fulfill the Urban Studies internship requirement. Students should also consider enrolling in one of the Stanford Overseas Seminars, intensive courses taught in September in locations which do not have overseas campuses.

The following course is required for the cities in comparative and historical perspective concentration:
- ANTHRO 103. The Archaeology of Modern Urbanism

The following courses may be counted toward the cities in comparative and historical perspective concentration:
- AFRICAST 107. Community Restructuring and Development in South Africa
- AMELANG 177. Middle Eastern Cities in Literature and Film
- AMSTUD 184. Cityscapes of the Imaginary: The Urban World in Literature and Film
- ANTHRO 105. Ancient Cities in the New World

ANTHRO 126A. Post-Socialist City
ANTHRO 127. City and Sounds
ANTHRO 146A. The Aztecs and their Ancestors: Introduction to Mesoamerican Archaeology
ARTHIST 3. Introduction to the History of Architecture
ARTHIST 141. The Invention of Modern Architecture
ARTHIST 143A. History of American Architecture
ARTHIST 212. Renaissance Florence, 1400-1540
ARTHIST 252A. Place: Making Space Now
ARTHIST 283A. Paris and Shanghai, 1880-1940: Mediating the City

**URBAN EDUCATION**

The purpose of this concentration is to prepare students for a career in educational policy and practice in diverse settings. This concentration is a useful basis for graduate study in educational...
policy, law, or business, and for students who have been admitted by the School of Education to pursue a coterminal master’s degree in the Stanford Teacher Education Program (STEP) or the Policy, Organization, and Leadership Studies Program (POLIS). Students planning to pursue a coterminal master’s should take one of the three practica: EDUC 103A, B, and C (for the STEP elementary coterm); EDUC 101X (for the STEP secondary coterm); or EDUC 270A (for the POLS coterm). Application and admission to a coterminal degree in these programs occurs during the Autumn Quarter of the junior year and is handled by the School of Education.

Opportunities to obtain teaching and advising experience are available in nearby schools through Upward Bound and other programs administered by the Haas Center for Public Service and through courses offered by the School of Education.

Students who choose this concentration may be eligible for the undergraduate honors program of the School of Education, in which case they should enroll in EDUC 199A, B, or C during their senior year.

The following course is required for the urban education concentration:
EDUC 112X. Urban Education

The following courses may be counted toward the urban education concentration:
AFRICAST 111. Education for All? The Global and Local in Publication concentration:
EDUC 112X. Urban Education
EDUC 103A. Tutoring: Seeing a Child through Literacy (Same as PSYCH 103A)
EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
EDUC 103C. Educational Policy, Diversity, and English Learners
EDUC 104X. Conduct of Research with and in Communities
EDUC 115Q. Identities, Race, and Culture in Urban Schools
EDUC 116X. Service Learning as an Approach to Teaching
EDUC 144. Child Development in and Beyond Schools
EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners
EDUC 149. Theory and Issues in the Study of Bilingualism
EDUC 177. Education of Immigrant Students: Psychological Perspectives
EDUC 178X. Latino Families, Languages, and Schools
EDUC 179. Urban Youth and Their Institutions: Research and Practice
EDUC 189. Language and Minority Rights
EDUC 198X. Tutoring with Adolescents: Ravenswood Writes
EDUC 201. History of Education in the United States
EDUC 201B. Education for Liberation
EDUC 202. Introduction to Comparative and International Education
EDUC 204. Introduction to the Philosophy of Education
EDUC 207X. School: What Is It Good For?
EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990
EDUC 220A. Introduction to the Economics of Education
EDUC 220B. Introduction to the Politics of Education
EDUC 220C. Education and Society
EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
EDUC 221A. Policy Analysis in Education
EDUC 233A. B. Adolescent Development and Mentoring in the Urban Context
HUMBIO 142. Adolescent Development or PSYCH 60. Introduction to Developmental Psychology
OSPCPTWN 40. Education in the Post-Apartheid City
SOC 132. Sociology of Education: The Social Organization of Schools

URBAN SOCIETY AND SOCIAL CHANGE

Focus is on issues in contemporary urban society and the tools and concepts that planners, policy makers, and citizens use to address those issues. Topics include environmental challenges, racial and class inequality, and the provision of adequate urban infrastructure. Students learn how community action, urban planning and design, and organizations in nonprofit, for-profit, and government sectors address urban social and environmental problems. This concentration prepares students to enter graduate programs concerned with urban affairs, community service, and public policy, and to work with local governmental agencies and for-profit and nonprofit organizations engaged in community service and development.

The following course is required for the urban society and social change concentration:
POLISCI 133. Ethics and Politics of Public Service

The following courses may be counted toward the urban society and social change concentration:
ANTHRO 32. Theories in Race and Ethnicity
CEE 64. Air Pollution: From Urban Smog to Global Change
CEE 100. Managing Sustainable Building Projects
CEE 115. Goals and Methods of Sustainable Building Projects
CEE 124. Sustainable Development Studio
CEE 129. Engineering and Policy Responses to Climate Change Impacts on Seaports
CEE 131. Architectural Design Process
CEE 141A. Infrastructure Project Development
CEE 142A. Creating Sustainable Development
CEE 171. Environmental Planning Methods
CEE 172. Air Quality Management
EARTHYS 124. Environmental Justice: Local, National, and International Dimensions
EARTHYS 133. California Climate Change Law and Policy
ECON 150. Economic Policy Analysis
ECON 155. Environmental Economics and Policy
EDUC 270A. Learning to Lead in Public Service Organizations
ENGR 150. Social Innovation and Entrepreneurship
HISTORY 105. Gandhi, King and Non-Violence
HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice
HISTORY 259A,B. Poverty and Homelessness in America
HISTORY 260. California’s Minority-Majority Cities
HUMBIO 122S. Social Class, Race, Ethnicity, Health
HUMBIO 127A,B. Community Health: Assessment and Planning
HUMBIO 128. Community Health Psychology
OSPCPTWN 20. Supervised Service Learning
OSPCPTWN 22. Preparation for Community-Based Research in Community Health and Development
OSPCPTWN 24. Targeted Research: Project in Community Health and Development
OSPCPTWN 42. Race, Class, and Status: Cape Town in Comparative Perspective
OSPMADRD 20. Sustainability of the Natural, Built, and Social Environments of Spain
OSPMADRD 57. Social Inequality in Socialist and Post-Socialist Societies
POLISCI 221F. Race and American Politics
POLISCI 236. Theories of Civil Society, Philanthropy, and the Nonprofit Sector
PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley
PUBLPOL 183. Philanthropy and Social Innovation
SOC 118. Social Movements and Collective Action
SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960’s
SOC 135. Poverty, Inequality, and Social Policy in the United States
SOC 140. Introduction to Social Stratification
SOC 141. Controversies About Inequality
SOC 141A. Social Class, Race, Ethnicity, Health
SOC 143. Prejudice, Racism, and Social Change
SOC 145. Race and Ethnic Relations
SOC 160. Formal Organizations or MS&IE 180. Organizations: Theory and Management
Students who wish to concentrate in an area of urban studies other than one of the above concentrations must complete the Urban Studies core, skills, and capstone requirement, and design additional units to bring the total to at least 73 units. The self-designed portion of the major should concentrate on a particular area of urban study, such as urban health care or urban environmental management. Additional units must be approved by both the Director of Urban Studies and an academic adviser who is a member of the Academic Council and has expertise in the particular area of interest to the student. Proposals for courses in the self-designed portion of the concentration should include a list of courses and a description of how each course meets the student’s educational objectives. A proposal for a self-designed concentration must be accompanied by a letter to the Director of Urban Studies indicating that the academic adviser has examined and approved the student’s plan.

Students pursuing a self-designed concentration must submit proposals for approval by the Director of Urban Studies by the beginning of the third quarter of the student’s sophomore year. Applications received after that deadline are not considered. Students interested in designing their own concentration are strongly encouraged to meet with the Director of Urban Studies before the end of their sophomore year.

CAPSTONE

All majors are required to complete an internship and a sequence of two seminars, totaling 13 units, in which students participate in the work of an urban organization related to their area of interest, design a senior project, and write the results of their project. The capstone seminars can be used to satisfy the Writing in the Major requirement and to complete some work on an honors thesis. URBANST 201A and 201 or 202 should be taken in the junior year, and URBANST 203 in the senior year.

URBANST 201. Preparation for Senior Project
   or URBANST 202. Preparation for Honors Thesis
URBANST 201A. Capstone Internship in Urban Studies
URBANST 203. Senior Seminar (WIM)

HONORS PROGRAM

The honors program offers qualified students an opportunity to conduct independent research and to write a thesis summarizing the results. Before being accepted to the honors program in Urban Studies, a student must
1. declare a major in Urban Studies and complete at least 30 of the 73 required units including all prerequisites and core classes
2. complete URBANST 201 or 202 (offered Winter Quarter)
3. have an overall GPA of 3.3 and a GPA of at least 3.5 in Urban Studies
4. submit an application, including a one-page abstract and the signatures of an adviser and, if applicable, a second reader. If the adviser is not a member of Stanford’s Academic Council, the student must have a second reader who is an Academic Council member. The application must be submitted to the honor’s program office no later than April 30 of the junior year, and it must then be approved by the Director of the Urban Studies honors program.

Honors students are expected to complete a portion of their honors work in URBANST 203, Senior Seminar, in Autumn Quarter. Additionally, they must register for 5-10 units total in URBANST 199, Senior Honors Thesis, over the course of their senior year. The units of URBANST 199 do not count towards the 73-unit requirement for graduating with a B.A. in Urban Studies. Honors work is considered to be above and beyond regular graduation standards.

URBANST 201 or 202 should be taken during the junior year. Students who plan to be away during Winter Quarter of their junior year are advised to take URBANST 201 or 202 in the Winter Quarter of their sophomore year. All honors students are required to present their theses at the Senior Colloquium in Spring Quarter of senior year.

To graduate with honors, students must receive a grade of at least ‘A-’ in the honors work and have a GPA of at least 3.5 in courses for the Urban Studies major at the time of graduation.

MINOR IN URBAN STUDIES

The minor in Urban Studies is designed to introduce students to several disciplinary approaches to the study of cities, and provides the opportunity to explore one of three specialized options: cities in comparative and historical perspective; urban education; or urban society and social change.

The minor in Urban Studies requires completion of seven courses for a letter grade, including the four core courses, the required course in the student’s chosen concentration area, and two additional courses in that option as listed above.

COTERMINAL PROGRAMS IN URBAN STUDIES

Undergraduates in Urban Studies may enter coterminal master’s degree programs in a number of departments and schools in the University. In recent years, Urban Studies majors have developed coterminal programs with the departments of Civil and Environmental Engineering, Communication, and Sociology, and with the School of Education. Information and applications for coterminal degree programs are available at Undergraduate Advising and Research. Students should discuss the coterminal program with a program director during their junior year.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

OVERSEAS STUDIES COURSES IN URBAN STUDIES

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses website (http://explore.courses.stanford.edu) or the Bing Overseas Studies website (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

BERLIN

OSPBER 60. Cityscape as History: Architecture and Urban Design in Berlin. 5 units, Matthias Pabsch, GER:DB-Hum
STANFORD IN WASHINGTON

Director: Adrienne Jamieson

The Bing Stanford in Washington program provides highly-qualified undergraduates with an opportunity to work and study in the nation’s capital. In addition to providing students with an understanding of public policymaking, the program offers an opportunity to take advantage of the city’s unique cultural resources.

Central in the student’s educational experience is a full-time internship. Students serve as interns at such institutions and agencies as the Senate, the House of Representatives, the Office of Management and Budget, the White House, the National Institutes of Health, the Smithsonian Institution, CNN, World Bank, the departments of State, Justice, Treasury, Education, and Health and Human Services.

In addition to the internship, students must also complete an academic course of study consisting of small tutorials taught by policy experts, and weekly policy seminars taught by Stanford faculty members. Seminars are generally 3-5 units. Past seminar topics have included Congressional Oversight and the Press; Economic Growth & Development Patterns, Policies, and Prospects; Critical Health Issues in the U.S. and Abroad; Policymaking in the Washington Community; and Criminal Justice Policy. Frequently, speakers from the Washington policy community join students and faculty for discussions. Students usually write a major paper related to their internship for 3-5 units of credit. Course and seminar topics vary according to student and faculty interest.

Stanford in Washington offers stretch quarters in the Autumn and Spring (early September to mid-December, and late March to the end of June) and a regular quarter in Winter, which focuses on environmental and health policy. The program is designed for students in their junior year or during the first or second quarter of their senior year. Applications must be completed two quarters in advance, and three quarters in advance if a student is overseas or otherwise not on campus during the qualifying quarter. To attend SIW during Autumn Quarter, apply early Winter Quarter of the previous year. For Winter Quarter, apply early Spring Quarter of previous year. For Spring Quarter, apply early Autumn Quarter. Students interested in the program should contact the Public Policy Program, Encina Hall West, Room 204, (650) 725-0109, or email publicpolicy@stanford.edu.
SCHOOL OF LAW

Dean: Larry D. Kramer

Vice Dean: Mark G. Kelman

Associate Dean for Curriculum: Jane Schnaerter

Associate Dean for Executive Education and Special Programs: F. Daniel Siciliano

Associate Dean for Graduate Studies: Deborah R. Hensler (on leave)

Professor (Teaching): Faye Deal, Catherine Glaze, Sabrina Johnson, Susan Robinson, Scott Showalter

Associate Professors: Daniel Ho, Alison D. Morantz

Assistant Professors: David Freeman Engstrom, Nora Freeman Engstrom, Barbara van Schewick, Michael W. Wara

Professors (Teaching): Juliet M. Brodie, William S. Kossi, Deborah A. Sivas

Associate Professors (Teaching): Jeffrey L. Fisher, Jayashri Srikantiah (on leave Autumn)

Senior Lecturers: Margaret R. Caldwell (on leave), Janet Martinez, David W. Mills, F. Daniel Siciliano, Helen Stacy, Allen S. Weiner

Professors (by courtesy): Maureen F. McNichols, Paul C. Pfefferer, Madhav Rajan, Jack Rakove, Rebecca Sandefur

Visiting Professors: Michael Asimow, Daphne Barak-Erez, Jared R. Curhan, Siegfried Fina, James L. Gibson, Robert W. Gordon, Adrian Lamont, Donald Lewis, Rogelio Perez-Perdono, Leo M. Romero, William Simon, Taft IV, George Triantis, Jonathan Zittrain

Legal Research and Writing Instructors: Jeanne Merino, Elizabeth Pollman, Briana Rosenbaum, Andrea Roth, Shirin Sinnar, Deepa Varadarajan

Affiliated Faculty: Kyle Bagwell (Economics/SIEPR), Anne Beyer (GSB), Judith Goldstein (Political Science/SIEPR), Tamar Herzog (History), David Holloway (FSI), Joy Ishii (GSB), Lee Ross (Psychology), Robert Staiger (Economics), Frank Wolak (Economics/PESD)

Courses offered by the School of Law are listed on the Stanford Bulletin’s ExploreCourses web site under the subject codes LAW and LAWGEN.

The School of Law, established 1893, provides a legal education for students who are fitted by their maturity and academic training to pursue professional study under University methods of instruction. The curriculum leading to the first professional degree in law, the Doctor of Jurisprudence (J.D.), constitutes an adequate preparation for the practice of law in any English-speaking jurisdiction. Graduate work leading to the degrees of Master of Laws (L.L.M.), Master of the Science of Law (J.S.M.), and Doctor of the Science of Law (J.S.D.), and a non-professional degree, Master of Legal Studies (M:L:S.), is also offered. For the full curriculum, see http://lawreg.stanford.edu/stanford. Stanford Law School offers joint or dual degree options in combination with other Stanford graduate departments and universities across the country; see the “Joint and Dual Degrees in Law” section of this bulletin.

For further information about admission, programs, curriculum, and faculty, see http://www.law.stanford.edu.

JOINT AND DUAL DEGREES IN LAW

Formal admission to both the Law School and to the other cooperating school or department in accordance with the established admission standards of each school or department is required. In addition to the formal joint degree programs offered, the school considers requests for a dual program on an individually designed basis. For additional information on Law School joint or dual degree programs, see http://www.law.stanford.edu/program/degrees. See relevant web sites or department sections of this bulletin for degree requirements.

Formal joint degree programs at Stanford:

School of Business—See http://www.gsb.stanford.edu/mba.

J.D./M.B.A. Master of Business Administration

School of Earth Sciences—

J.D./M.S. Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

J.D./Ph.D. Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

School of Education—

J.D./M.A. Education

School of Engineering—

J.D./M.S. Bioengineering

J.D./Ph.D. Bioengineering

J.D./M.S. Computer Science

J.D./M.S. Electrical Engineering

J.D./M.S. Management Science and Engineering (MS&E)

J.D./Ph.D. Management Science and Engineering (MS&E)
School of Humanities and Sciences—
J.D./M.A. Economics
J.D./Ph.D. Economics
J.D./M.A. History
J.D./Ph.D. History
J.D./Ph.D. Philosophy
J.D./Ph.D. Political Science
J.D./Ph.D. Psychology
J.D./M.P.P. Public Policy
J.D./Ph.D. Sociology
School of Medicine—
J.D./M.S. Health Research and Policy (HRP)
Formal joint degree programs with other universities—
J.D./M.P.A. with the Woodrow Wilson School of Public and International Affairs at Princeton University
J.D./M.A. with the Paul H. Nitze School of Advanced International Studies at Johns Hopkins University

COURSES IN LAW

Detailed course descriptions are posted on the Stanford Law School, Office of the Registrar web site at http://lawreg.stanford.edu/stanford. Some law courses have special enrollment instructions and restrictions, but many law courses are open to qualified graduate students in other departments of Stanford University with instructor consent. Non-law students may not enroll in courses that are part of the required first-year JD curriculum. Stanford non-Law students intending to enroll in any course with a LAW subject code must consult the Office of the Law School Registrar in the Stanford Law School Administration Building, room 100, or see http://www.law.stanford.edu/school/offices/registrar.

SCHOOL OF MEDICINE

Dean: Philip Pizzo
Senior Associate Dean for Graduate Education and Postdoctoral Affairs: John Pringle
Senior Associate Dean for Medical Student Education: Charles Prober

The School of Medicine offers courses of study leading to the M.S., Ph.D., and M.D. degrees.

UNDERGRADUATE PROGRAMS IN THE SCHOOL OF MEDICINE

At the undergraduate level, a number of the school’s courses are open to any registered Stanford student who has fulfilled the prerequisites, subject to the usual limits of course enrollment and faculty approval. In the classroom, the school offers courses targeted to undergraduates as well as graduate-level courses where advanced undergraduates with a strong background in the life sciences are welcome. Among these offerings are Stanford Introductory Seminars for freshmen and sophomores; interested students are encouraged to peruse the complete list of these offerings in the “Stanford Introductory Studies” section of this bulletin or at http://ual.stanford.edu/OO/intro_seminars/IntroSemsOverview.

M.S. AND PH.D. PROGRAMS IN THE SCHOOL OF MEDICINE

The School of Medicine is home to graduate programs covering a broad range of disciplines within biomedicine leading to Ph.D. or M.S. degrees. These programs focus on interdisciplinary training with in-depth investigation of an original problem of fundamental importance to the biosciences. Each degree program sets its own curriculum, but many courses are taught by groups of faculty from multiple programs and departments. Flexibility is a priority to ensure that all students obtain the best possible training for pursuing careers in their areas of interest. The school is dedicated to training students from diverse backgrounds, and to the promotion of diversity in graduate education. Admission is through one of about 15 home programs. These home programs enable students to carry out dissertation research and training with School of Medicine faculty, as well as investigators in the departments of Biology and Biophysics in the School of Humanities and Sciences. Detailed information on School of Medicine M.S. and Ph.D. programs, curricula, and research can be found at http://med.stanford.edu/ms and http://med.stanford.edu/phd. Application information can be found at http://gradadmissions.stanford.edu.

M.D. PROGRAM IN THE SCHOOL OF MEDICINE

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world’s people through research, innovation, and leadership. The Stanford M.D. curriculum provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. Alternative pathways through the curriculum include an option of a fifth or sixth year of study as well as opportunities for pursuing a second degree, such as an M.P.H. or Ph.D.

Broad clinical science education occurs throughout the curriculum with exposure to patient care and the practice of medicine beginning on the first day of medical school. Students may begin clinical clerkships as early as May of the second year. A population health course combines classroom and experiential learning to
provide understanding of the socioeconomic determinants of the health of patients and communities.

Scholarly concentrations offer opportunities for developing skills that enhance basic science and clinical training in areas such as bioengineering, biomedical ethics and medical humanities, biomedical informatics, clinical research, community health, health services and policy research, and the molecular basis of medicine. Through the scholarly concentration program, these skills may be applied in clinical areas housed within centers at Stanford such as the Comprehensive Cancer Center, the Cardiovascular Institute, the Neuroscience Institute, the Institute of Immunity, Transplantation, and Infection, and Women’s Health at Stanford. Study in a scholarly concentration typically includes course work and research activities. Research for scholarly concentrations can be supported through the Medical Scholars program, which funds student research projects at Stanford and overseas.

Students with interests in medical research as a career are encouraged to investigate opportunities available through the Medical Scientist Training Program (MSTP). Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at http://med.stanford.edu/combined_degree.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

The M.D. degree requires 13 quarters of registration at full Med-MD tuition; the joint M.D./Ph.D. degree requires 16 quarters. All additional quarters are charged at the reduced Terminal Medical Registration (TMR) tuition rate, which is $2,251 per quarter in 2009-10. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see http://med.stanford.edu/md.

MULTIPLE-DEGREE PROGRAMS IN THE SCHOOL OF MEDICINE

MEDICAL SCIENTIST TRAINING PROGRAM

The Medical Science Training Program (MSTP) provides medical students with an opportunity to pursue an individualized program of research and course work leading to both the M.D. and Ph.D. degrees. It is designed to equip students for careers in academic investigative medicine, and emphasizes individualization of curricular and research programs for each trainee. Training for a combined M.D./Ph.D. should include the same content encountered by students who pursue each degree separately, but the total training time should be less than the sum of the time normally required for each degree. The flexible curriculum at Stanford’s School of Medicine allows each student, in consultation with a preceptor and other advisers, to pursue a plan of study that satisfies the requirements for the M.D. degree and allows performance of doctoral-level research leading to the Ph.D. Students interested in joining the MSTP are considered for admission at the time of their application to the School of Medicine M.D. program and are asked to provide supplemental information relevant to their research background. Current Stanford M.D. students may also apply for admission to the MSTP. Further information regarding admission may be obtained from the MSTP administrator; details about the MSTP may be found at http://mstp.stanford.edu.

MASTER OF SCIENCE IN MEDICINE PROGRAM

The Master of Science in Medicine program admits Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease so they are better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master’s program. During their first five quarters, students take basic biomedical science courses with Stanford M.D. students. The School of Medicine M.D. curriculum is presented in a succinct format that allows time for students to concurrently complete their Ph.D. course requirements and lab rotations. By early in their second year, students choose a lab for their Ph.D. thesis research and complete their medical course work. They also elect a clinical mentor to discuss translational research needs and help to arrange a short clinical experience. Upon completion of the Ph.D., participating students receive an M.S. in Medicine. Details about the program can be found at http://msm.stanford.edu.

BIOCHEMISTRY

Chair: Mark A. Krasnow
Professors: Patrick O. Brown, Gilbert Chu, Ronald W. Davis, James E. Ferrell, Jr., Daniel Herschlag, Mark A. Krasnow, Suzanne R. Pfeiffer, James A. Spudich
Associate Professors: Pehr A. B. Harbury, Julie A. Theriot
Assistant Professors: Rhiu Das, Aaron F. Straight

Courtey Professors: Chaitan S. Khosla, Sharon Long, Rajat Rohatgi

Department Offices: Beckman Center, B400
Mail Code: 94305-5307
Phone: (650) 723-6161
Web Site: http://biochemistry.stanford.edu

Courses offered by the Department of Biochemistry are listed under the subject code BIOC on the Stanford Bulletin’s Explore-Courses web site.

Biochemistry is a department within the School of Medicine, with offices and labs located in the Beckman Center for Molecular and Genetic Medicine at the Stanford Medical Center. Courses offered by the department may be taken by undergraduate, graduate, and medical school students.

Advanced courses offered in more specialized areas emphasize recent developments in biochemistry, cell biology, and molecular biology. These courses include the physical and chemical principles of biochemistry, enzyme reaction mechanisms, membrane trafficking and biochemistry, molecular motors and the cytoskeleton, mechanisms and regulation of nucleic acid replication and recombination, the biochemistry of bacterial and animal viruses, the molecular basis of morphogenesis, the molecular and cell biology of yeast, and the structure and function of both eukaryotic and prokaryotic chromosomes.

Opportunities exist for directed reading and research in biochemistry and molecular biology, utilizing the most advanced research facilities, including those for light and electron microscopy, chromatography and electrophoresis, protein and nucleic acid purification, rapid kinetic analysis, synthesis and analysis, single molecule analyses using laser light traps, microarray generation and analysis and computer graphic workstation facilities for protein and nucleic acid structural analysis. Ongoing research utilizes a variety of organisms, from bacteria to animal cells.
DOCTOR OF PHILOSOPHY IN BIOCHEMISTRY

Requirements for the M.S. and Ph.D. degrees are described in the “Graduate Degrees” section of this bulletin. The department does not offer undergraduate degrees.

The Department of Biochemistry offers a Ph.D. program which begins in the Autumn Quarter of each year. The program of study is designed to prepare students for productive careers in biochemistry; its emphasis is training in research, and each student works closely with members of the faculty. In addition to the requirement for a Ph.D. dissertation based on original research, students are required to complete six advanced courses in biochemistry and related areas among the 135 total units required for the Ph.D. Selection of these courses is tailored to fit the background and interests of each student. A second requirement involves the submission of two research proposals which are presented by the student to a small committee of departmental faculty members who are also responsible for monitoring the progress of student curricular and research programs, and a journal club presentation. All Ph.D. students are expected to participate actively in the department’s seminar program, and students are encouraged to attend and to present papers at regional and national meetings in cellular biochemistry and molecular biology. Teaching experience is an integral part of the Ph.D. curriculum and is required for the degree.

The Department of Biochemistry offers an M.S. degree only to students already enrolled in the Ph.D. program. Students should contact the Graduate Studies adviser for more details.

Those applying for graduate study should have at least a baccalaureate degree and should have completed work in cell and developmental biology, basic biochemistry and molecular biology, and genetics. Also required are: at least one year of university physics; differential and integral calculus; and analytical, organic, inorganic, and physical chemistry. The department is especially interested in those applicants who have research experience in biology or chemistry. Students must submit an application, including transcripts and letters of recommendation, by December (see web site) for admission in the following Autumn Quarter.

Applications should be submitted at http://gradadmissions.stanford.edu. Applicants are notified by March 31 of decisions on their applications. Stanford University requires scores from the Graduate Record Examination (GRE) (verbal, quantitative, and analytical), and applicants are encouraged to submit scores from the GRE Subject Test in either biochemistry, biology, or chemistry. Applicants should take the October GRE exam.

All applicants are urged to compete for non-Stanford fellowships or scholarships, and U.S. citizens should complete an application for a National Science Foundation Predoctoral Traineeship. Students are provided with financial support to cover normal living expenses; Stanford tuition costs are paid. Applicants for admission to the department are considered without regard to race, color, creed, religion, sex, age, national origin, or marital status.

Postdoctoral research training is available to graduates who hold a Ph.D. or an M.D. degree. Qualified individuals may write to individual faculty members for further information.

At present, the primary research interests of the department are the structure and function of proteins and nucleic acids, the biochemistry and control of development processes, molecular motors and the cytoskeleton, the trafficking of proteins between membrane-bound organelles, the control and regulation of gene expression, bioinformatics/protein structure design, and the application of microarrays to problems in human health and disease.

CENTER FOR BIOMEDICAL ETHICS

Director: David C. Magnus
Director Emeritus: Thomas A. Raffin
Associate Director: Mildred K. Cho
Participating Faculty and Staff: Clarence H. Braddock, Julie A. Collier, LaVera M. Crawley, Maren Grainger-Monsen, Henry Greely, Katrina A. Karkazis, Sandra S. Lee, Jose R. Maldonado, Kelly E. Ormond, Christopher T. Scott, Audrey Shafer, Sara L. Tobin, Abraham C. Verghese, Lawrence I. Zaroff

Center Offices: 701 Welch Road, Building A, Suite 1105
Mail Code: 94304-5748
Phone: (650) 723-5760
Web Site: http://bioethics.stanford.edu

The Stanford University Center for Biomedical Ethics (SCBE) is dedicated to interdisciplinary research and education, and provides clinical and research ethics consultation. SCBE serves as a scholarly resource on emerging ethical issues raised by medicine and biomedical research.

SCBE offers a scholarly concentration in Biomedical Ethics and Medical Humanities (BEMH) to medical students. This program allows medical students to study in depth the moral, social, and humanistic dimensions of medicine and biomedical science. Using cross-disciplinary methods such as those from philosophy, social science, film, literature, art, and law, students examine the meaning and implications of medicine and medical research.

Requirements: Students who pursue Biomedical Ethics and Medical Humanities in conjunction with an application area, such as Immunology, are required to complete 6 units including:
INDE 212. The Human Condition: Medicine, Arts, and Humanities (2 units)
MED 250A. Medical Ethics I (2 units)

Students may select the other two core BEMH units from a wide variety of university, Medical School, and Law School courses, and students interested in completing all 12 units in the BEMH scholarly area may do the same. Students are encouraged to go through the various offerings and devise a course plan to present to the directors, David Magnus, Ph.D., and Audrey Shafer, MD. Additional information on requirements for the scholarly concentration, is available at http://bioethics.stanford.edu/education/bemh.

STANFORD BULLETIN, 2009-10 | 359
Committee: Russ B. Altman (Chair and Program Director); Lawrence M. Fagan, Mark A. Musen (Co-Directors); Betty Cheng (Associate Director); Atul Butte, Amar K. Das, David Paik, Daniel L. Rubin

Participating Faculty and Staff by Department:

- Biochemistry: Douglas L. Brutlag (Professor, emeritus), Rhiju Das (Assistant Professor), Ronald Davis (Professor), James Ferrell (Professor), Julie Theriot (Associate Professor)
- Bioengineering: Russ B. Altman (Professor), Kwabenia Boahen (Associate Professor), Markus Covert (Assistant Professor), Matthew Delp (Professor), Charles A. Taylor (Associate Professor)
- Biology: Markus Feldman (Professor), Dmitri Petrov (Associate Professor)
- Chemistry: Vijay Pande (Associate Professor)
- Chemical and Systems Biology: Joshua Elias (Assistant Professor), James Ferrell (Professor)
- Computer Science: Serafin Batzoglou (Associate Professor), Gill Bejerano (Assistant Professor), David Dill (Professor), Leo Guibas (Professor), Daphne Koller (Associate Professor), Jean-Claude Latombe (Professor), Chris Manning (Associate Professor), Terry Winograd (Professor)
- Developmental Biology: Gill Bejerano (Assistant Professor), Stuart Kim (Professor), Harley McAdams (Professor, Research)
- Genetics: Russ B. Altman (Professor), Mike Cherry (Associate Professor, Research), Stanley N. Cohen (Professor), Ronald Davis (Professor), Stuart Kim (Professor), Teri E. Klein (Senior Research Scientist), Gavin Sherlock (Assistant Professor), Michael P. Snyder (Professor)
- Health Research and Policy: Mark A. Hlatky (Professor), Richard A. Olshen (Professor), Robert Tibshirani (Professor)
- Management Science and Engineering: Margaret Brandeau (Professor), Russ D. Shachter (Associate Professor)
- Medicine: Russ B. Altman (Professor), Jayanta Bhattacharya (Assistant Professor), Atul Butte (Assistant Professor), Robert W. Carlson (Professor), Betty Cheng (Associate Director), Amar K. Das (Assistant Professor), Lawrence M. Fagan (Co-Director), Alan M. Garber (Professor), Mary Goldstein (Professor), Peter D. Karp (Consulting Assistant Professor), Henry Lowe (Associate Professor, Research; Senior Associate Dean for Information Resources and Technology), Mark A. Musen (Professor), Douglas K. Owens (Associate Professor), Robert W. Shafer (Assistant Professor, Research), Samson Tu (Senior Research Scientist), P.J. Utz (Assistant Professor), Michael G. Walker (Consulting Associate Professor)
- Microbiology and Immunology: Karla Kirkegaard (Professor), Garry Nolan (Professor), Julie Theriot (Associate Professor)
- Pediatrics: Atul Butte (Assistant Professor)
- Psychiatry and Behavioral Sciences: Amar K. Das (Assistant Professor), Vinod Menon (Associate Professor)
- Radiation Oncology: Lei Xing (Professor)
- Radiology: Sam Gambhir (Professor), Gary H. Glover (Professor), Sandy A. Napel (Professor), David Paik (Assistant Professor), Norbert J. Pelc (Professor), Sylvia Plevritis (Associate Professor), Daniel L. Rubin (Assistant Professor), Geoffrey D. Rubin (Professor)
- Structural Biology: Michael Levitt (Professor)
- Statistics: Trevor J. Hastie (Professor), Susan Holmes (Professor), Art Owen (Professor), Robert Tibshirani (Professor), Michael G. Walker (Consulting Associate Professor), Nancy Zhang (Assistant Professor)
- Surgery: Thomas Krummel (Professor), Charles A. Taylor (Associate Professor, Research)

Program Offices: Medical School Office Building (MSOB), room X-215, 251 Campus Drive
Mail Code: 94305-5479

Courses offered by the Program in Biomedical Informatics are listed under the subject code BIOMEDIN on the Stanford Bulletin’s ExploreCourses web site.

The program in Biomedical Informatics emphasizes research to develop novel computational methods that can advance biomedicine. Students receive training in the investigation of new approaches to conceptual modeling and to development of new algorithms that address challenging problems in the biological sciences and clinical medicine. Students with a primary interest in developing new informatics methods and knowledge are best suited for this program. Students with a primary interest in the biological or medical application of existing informatics techniques may be better suited for training in the application areas themselves.

**GRADUATE PROGRAMS IN BIOMEDICAL INFORMATICS**

The Biomedical Informatics Program is interdepartmental and offers instruction and research opportunities leading to M.S. and Ph.D. degrees in Biomedical Informatics. All students are required to complete the core curriculum requirements, and also to elect additional courses to complement both their technical interests and their goals in applying informatics methods to clinical settings, biology, or imaging. Candidates must maintain a 3.0 GPA in each of the five core areas, and an overall GPA of 3.0. If the candidate’s GPA does not meet the minimum requirement, the Biomedical Informatics Executive Committee may require corrective courses of action. In addition, prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of biomedical informatics fundamentals and a potential for research by passing a qualifying exam.

The core curriculum is common to all degrees offered by the program but is adapted or augmented depending on the interests and experience of the student. Deviations from the core curriculum must be justified in writing and approved by the student’s Biomedical Informatics academic adviser and the chair of the Biomedical Informatics Executive Committee. It should be noted, however, that the program is intended to provide flexibility and to complement other opportunities in applied medical research that exist at Stanford. Although most students are expected to comply with the basic program of study outlined here, special arrangements can be made for those with unusual needs or those simultaneously enrolled in other degree programs within the University. Similarly, students with prior relevant training may have the curriculum adjusted to eliminate requirements met as part of prior training.

**CORE CURRICULUM AND PROGRAM REQUIREMENTS IN BIOMEDICAL INFORMATICS**

**CORE CURRICULUM IN BIOMEDICAL INFORMATICS**

Students are expected to participate regularly in the Biomedical Informatics Student Seminar (BIOMEDIN 201) and a research Colloquium, such as BIOMEDIN 200 or BIOMEDIN 205. In addition, all students are expected to fulfill requirements in the following five categories:

1. **Core Biomedical Informatics** (17 units): students are expected to understand current applications of computers in biology and medicine and to develop a broad appreciation for research in the management of biomedical information. Required courses are: BIOMEDIN 210, 211, 212, 214, and 217, all of which should be taken during the first and second year in the program.

2. **Computer Science** (9 units): the student is expected to acquire a knowledge of the use of computers, computer organization, programming, and symbolic systems. It is assumed that prior to matriculation students have computing experience at least equivalent to a course introducing the fundamentals of data programming, and symbolic systems.
structures and algorithms, such as CS 103A, B, 103X, 106A, B, 106X, or other courses approved by academic adviser or executive committee. Students are required to take a minimum of 9 units of courses in the Department of Computer Science. If similar courses have not been taken previously, these units must include CS 161, a class in artificial intelligence or learning (for example, CS 121, CS 228, CS 229, STATS 315A, STATS 315B), and a course that requires significant programming and knowledge of machine architectures (for example, CS 108). For those who have taken such courses previously, replacement units may be taken from any other course in CS selected by the student and approved by the academic adviser. A course in databases is especially recommended. With the exception of CS 108 and 121, all other CS courses applied to the degree requirements must be numbered 137 or higher.

3. **Probability, Statistics, and Decision Science** (9 units): students are required to take at least three courses from the following five topics: basic probability theory, Bayesian statistics, decision analysis, machine learning, and experimental-design techniques. Prior courses in statistics at least equivalent to STATS 60 and calculus equivalent to MATH 42 are prerequisites. A prior course in linear algebra equivalent to MATH 103 or 113 is recommended. For the probability requirements, students may, for example, take MS&E 220, STATS 116, or MS&E 221. For the statistics requirements, students should take STATS 141 or STATS 212, if they have had an equivalent prior course to entry to the program. Otherwise, sequences (taken after STATS 116) may include STATS 200 followed by a course in stochastic modeling, machine learning or data mining, such as STATS 202 or 315A, B, or CS 228 or 229. Options for decision analysis include MS&E 152 or 252, or cost-effectiveness analysis (BIOMEDIN 432). Also recommended is a course in the psychology of human problem solving. Specific courses should be chosen in consultation with the student’s academic adviser.

4. **Biomedical Domain Knowledge** (6 units): students are expected to acquire an understanding of pertinent life sciences and how to analyze a domain of application interest. Prior courses in biology at least equivalent to BIO 41 and 42 are prerequisites. All students must have completed a course in basic biochemistry, molecular biology, or genetics. Other areas of basic biology may be an acceptable alternative. Exposure to laboratory methods in biology is encouraged. All students without formal health care training are encouraged to take IMMUNOL 230 (formerly BIOMEDIN 207).

5. **Social and Ethical Issues** (4 units): candidates are expected to be familiar with issues regarding ethics, public policy, financing, organizational behavior, management, and pertinent legal topics. Students are required to take MED 255, The Responsible Conduct of Research, or the equivalent. Students may choose at least 3 units from suitable courses, including BIOMEDIN 432; CS 201; MS&E 284, 197; HRP 391, 392; or any other advanced course in policy and social issues proposed by the student and approved by the Biomedical Informatics academic adviser.

The core curriculum generally entails a minimum of 45 units of course work for master’s students and 54 units of course work for Ph.D. students, but can require substantially more or less depending upon the courses selected and the previous training of the student. All courses must be taken for a letter grade. Students may request an elective course be taken for a grade of credit/no credit by submitting a petition to the BMI executive committee. BIOMEDIN 299, 801 and 802 may be taken for satisfactory/no credit (S/NC). The varying backgrounds of students are well recognized and no one is required to take courses in an area in which he or she has already been adequately trained; under such circumstances, students are permitted to skip courses or substitute more advanced work. Students design appropriate programs for their interests with the assistance and approval of their Biomedical Informatics academic adviser. At least 27 units of formal course work are expected.

**PROGRAM REQUIREMENTS FOR THE ACADEMIC M.S., PROFESSIONAL M.S., AND COTERMINAL DEGREES**

Students enrolled in any of the M.S. degrees must complete the program requirements in order to graduate. Programs of at least 45 units that meet the following guidelines are normally approved:

1. Completion of the core curriculum.
2. Masters candidates who are able to attend classes on campus should sign up at least once for BIOMEDIN 201, Student Seminar, plus a Research Colloquium in their field of research, such as BIOMEDIN 200 or BIOMEDIN 205. Regardless of their registration status, students should participate in the Student Seminar and Research Colloquium every quarter.
3. Electives: additional courses to bring the total to 45 or more units as necessary.
4. Masters candidates should sign up for BIOMEDIN 801 for their project units.

The University requirements for the M.S. degree are described in the “Graduate Degrees” section of this bulletin.

**MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (ACADEMIC)**

This degree is designed for individuals who wish to undertake in-depth study of biomedical informatics with research on a full-time basis. Normally, a student spends two years in the program and implements and documents a substantial project during the second year. The first year involves acquiring the fundamental concepts and tools through course work and research project involvement. All first- and second-year students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics. This degree requires a written research paper to be approved by two faculty members.

**MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (PROFESSIONAL/HONORS COOPERATIVE PROGRAM)**

This degree is designed primarily for the working professional who already has advanced training in one discipline and wishes to acquire interdisciplinary skills. All classes necessary for the degree are available online. The professional M.S. is offered in conjunction with Stanford Center for Professional Development (SCPD), which establishes the rates of tuition and fees. The program uses the honors cooperative model (HCP), which assumes that the student is working in a corporate setting and is enrolled in the M.S. on a part-time basis. The student has up to five years to complete the program. Research projects are optional and the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

**MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (COTERMINAL)**

The coterminal degree program allows Stanford University undergraduates to study for a master’s degree while completing their bachelor’s degree(s) in the same or a different department. Please refer to the “Coterminal Bachelor’s and Master’s Degrees” section under “Undergraduate Degrees and Programs” in this bulletin for additional information.

The coterminal Master of Science program follows the same program requirements as the Master of Science (Professional), except for the requirement to be employed in a corporate setting. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Research projects are optional and the student must make arrangements with program faculty. Graduates of...
Informatics Executive Committee; the following are additional requirements imposed by the Biomedical Informatics Executive Committee:

1. A student plans and completes a coherent program of study including the core curriculum and additional requirements as for the master’s program. In addition, doctoral candidates are expected to take at least nine more units of advanced courses to bring the total to 54 units. Recommended classes include: Computer Sciences courses numbered 135 or higher, courses in Management Science and Engineering or Statistics numbered 200 or higher, PSYCH 256 or 225, or relevant courses in other departments approved by the student’s academic adviser. In the first year, two or three research rotations are encouraged. The master’s requirements should be completed by the end of the second year in the program (six quarters of study, excluding summers). Doctoral students are generally advanced to Ph.D. candidacy after passing the qualifying exam, which takes place during the second year of training. A student’s academic adviser has primary responsibility for the adequacy of the program, which is regularly reviewed by the Biomedical Informatics Executive Committee.

2. To remain in the Ph.D. program, each student must attain a grade point average (GPA) of 3.0 (B) in each of the five core areas and an overall GPA of 3.0 for the required courses. The student must fulfill these requirements and apply for admission to candidacy for the Ph.D. by the end of six quarters of study (excluding summers). In addition, reasonable progress in the student’s research activities is expected of all doctoral candidates.

3. During the third year of training, generally in Winter Quarter, each doctoral student is required to give a preproposals seminar that describes evolving research plans and allows program faculty to assure that the student is making good progress toward the definition of a doctoral dissertation topic.

4. By the end of nine quarters (excluding summers), each student must orally present a written thesis proposal for the written dissertation and must orally defend the proposal before a dissertation committee that generally includes at least one member of the Biomedical Informatics Executive Committee. The committee determines whether the student’s general knowledge of the field and the details of the planned thesis are sufficient to justify proceeding with the dissertation.

5. After application for Terminal Graduate Registration (TGR) status, the Ph.D. candidate should register each quarter for BIOMEDIN 802 so their research effort may be counted toward the degree.

6. As part of the training for the Ph.D., each student is required to be a teaching assistant for two courses approved by the Biomedical Informatics Executive Committee; one should be completed in the first two years of study.

7. The most important requirement for the Ph.D. degree is the dissertation. Prior to the oral dissertation proposal and defense, each student must secure the agreement of a member of the program faculty to act as dissertation adviser. The principal adviser need not be an active member of the Biomedical Informatics program faculty, but all committees should include at least one participating BMI faculty member.

8. At the completion of training, while still matriculated and shortly prior to deposit of the dissertation, the student gives a final talk describing his or her results. No official additional oral examination is required upon completion of the written dissertation. The oral defense of the dissertation proposal satisfies the University oral examination requirement.

9. The student is expected to demonstrate an ability to present scholarly material and research in a lecture at a formal seminar.

10. The student is expected to demonstrate an ability to present scholarly material in concise written form. Each student is required to write a paper suitable for publication, usually discussing his or her doctoral research project. This paper must be approved by the student's academic adviser as suitable for submission to a refereed journal before the doctoral degree is conferred.

11. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a member of the program faculty, and a third faculty member chosen from anywhere within the University.
The Cancer Biology Program at Stanford University is an interdisciplinary program leading to the Ph.D. degree. During the past three decades, understanding of cancer has increased with the discovery of oncogenes, tumor suppressor genes, pathways of DNA damage and repair, chromatin remodeling, cell cycle regulation, angiogenesis and responses to hypoxia, and recent glimpses into the molecular basis of metastasis and cancer stem cell biology. In addition, methods of parallel analysis including gene expression arrays, protein arrays, and tissue arrays have begun to refine and redefine the taxonomy of cancer diagnosis. This explosion of basic and clinical science has resulted in the first successful cancer chemotherapies and immunotherapies based on the knowledge of specific molecular targets. Stanford presents a unique environment to pursue interdisciplinary cancer research because the schools of Medicine, Humanities and Sciences, and Engineering are located on a single campus.

The goal of the Cancer Biology Ph.D. program is to provide students with education and training that enables them to make significant contributions to this field. Course work during the first year is designed to provide a broad understanding of the molecular, genetic, cell biological, and pathobiological aspects of cancer. Students also learn about the current state of the epidemiology, clinical diagnosis, treatment, and prevention of human cancers. Equally important during the first year is a series of three rotations in research laboratories chosen by each student. By the beginning of the second year, each student chooses a research adviser and begins work on the dissertation project. A qualifying examination must be completed by the end of the second year. An annual Cancer Biology conference at Asilomar on the Pacific Ocean provides students with an opportunity to present their research to one another and to faculty. The expected time to degree is four to five years.

 Students are not limited to a single department in choosing their research adviser. The Cancer Biology Ph.D. program currently has approximately 60 graduate students located in basic science and clinical departments throughout the School of Medicine and the School of Humanities and Sciences.
department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation adviser.

**CHEMICAL AND SYSTEMS BIOLOGY**

**Emeriti: (Professors)** Robert H. Dreisbach, Avram Goldstein, Dora B. Goldstein, Tag E. Mansour, Oleg Jardetzky, James P. White.

**Chair:** James E. Ferrell, Jr.

**Professors:** James E. Ferrell, Jr., Tobias Meyer, Daria Mochly-Rosen, Richard A. Roth

**Associate Professors:** Karlene A. Cimprich, Thomas J. Wandless

**Assistant Professors:** James K. Chen, Joshua Elias, Joanna K. Wysocka

**Courtesy Professors:** Stuart Kim, Beverly S. Mitchell, Paul A. Wender

**Associate Assistant Professors:** Calvin J. Kuo, Matthew Bogyo

**Courtesy Assistant Professors:** Marcus Covert, Jan M. Skotheim

**Web Site:** http://casb.stanford.edu

Courses offered by the Department of Chemical and Systems Biology are listed under the subject code CSB on the Stanford Bulletin’s ExploreCourses web site.

In Autumn of 2006, the Department of Molecular Pharmacology changed its name to become the Department of Chemical and Systems Biology. The department has established a new Ph.D. program in Chemical and Systems Biology. Molecular Pharmacology Ph.D. students who enrolled prior to Autumn 2007 have the option of receiving their Ph.D. in either Molecular Pharmacology or Chemical and Systems Biology. Ph.D. students matriculating in Autumn 2007 and thereafter are admitted to Chemical and Systems Biology. Further details about degree requirements are available from the department.

**MASTER OF SCIENCE IN CHEMICAL AND SYSTEMS BIOLOGY**

Students in the Ph.D. program may apply for an M.S. degree after having satisfactorily completed the course and laboratory requirements of the first two years. The degree also requires a written thesis based on literature or laboratory research. Postdoctoral research training is available to graduates having the Ph.D. or M.D. degree.

**DOCTOR OF PHILOSOPHY IN CHEMICAL AND SYSTEMS BIOLOGY**

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The Department of Chemical and Systems Biology offers interdisciplinary training to prepare students for independent careers in biomedical science. The main focus of the program is cell signaling, chemical biology, and systems biology.

The program leading to the Ph.D. degree includes formal and informal study in chemical biology, systems biology, drug discovery, biochemistry, and other areas of relevance to the interests of particular students. First-year students spend one quarter in each of three different laboratories, working closely with other graduate students, a professor, and postdoctoral fellows on various research projects. During the fourth quarter, the student chooses a faculty mentor with whom to undertake thesis research, based on available positions and the student’s interest. During or before the eighth quarter of study, students must pass a qualifying exam which consists of an oral exam on general knowledge and a defense of a research proposal. Course requirements are fulfilled during the first two years of study; the later years of the four- to six-year program are devoted to full-time dissertation research. Close tutorial contact between students and faculty is stressed throughout the program.

Research opportunities also exist for medical students and undergraduates. The limited size of the labs in the department allows for close tutorial contact between students, postdoctoral fellows, and faculty.

The department participates in the four quarter Health and Human Disease and Practice of Medicine sequence which provides medical students with a comprehensive, systems-based education in physiology, pathology, microbiology, and pharmacology.

**COMPARATIVE MEDICINE**

**Chair:** Sherrill Green

**Professors:** Donna M. Bouley, Linda C. Cork, Sherrill Green

**Associate Professors:** Paul Buckmaster, Corinna Darian-Smith, Shaul Hestrin

**Assistant Professors:** Megan Albertelli, Stephen Felt, Claude Nagamine

**Department Offices:** Edwards Building, Room R321

**Mail Code:** 94305-5342

**Phone:** (650) 498-5080

**Web Site:** http://med.stanford.edu/compmed

Courses offered by the Department of Comparative Medicine are listed under the subject code COMP MED on the Stanford Bulletin’s ExploreCourses web site.

The Department of Comparative Medicine is a clinical department that offers residency training in laboratory animal medicine for veterinarians, although it does not offer degrees. Its faculty offer courses at the undergraduate and graduate levels and participate in teaching in other departments. Both clinical faculty members, who are board-certified specialists in a veterinary medical specialty, and basic science faculty accept students to participate in ongoing research projects within the department and assist students with special research projects.

The discipline of Comparative Medicine uses the differences and similarities among species to understand biologic and disease mechanisms. It incorporates spontaneous or induced disease models as one of several approaches to research. The research interests of faculty are in neuroscience, infectious diseases, neuropathology, cancer, and molecular genetics.

**DEVELOPMENTAL BIOLOGY**

**Emeriti: (Professors)** David S. Hogness, A. Dale Kaiser

**Chair:** Roeland Nusse

**Associate Chair:** Lucy Shapiro

**Professors:** Ben Barres, Philip Beachy, Gerald Crabtree, Margaret Fuller, Stuart Kim, David Kingsley, Roeland Nusse, Matthew Scott, Lucy Shapiro, James Spudich, William Talbot, Anne Villemagne, Irving Weissman

**Associate Professor:** Seung Kim

**Assistant Professors:** Gill Bejerano, Joanna Wysocka

**Professor (Teaching):** Ellen Porzig

**Professor (Research):** Harley McAdams

Courses offered by the Department of Development Biology are listed under the subject code DBIO on the Stanford Bulletin’s ExploreCourses web site.

A fundamental problem in biology is how the complex set of multicellular structures that characterize an adult animal is generated from the fertilized egg. Recent advances at the molecular level, particularly with respect to the genetic control of develop-
ment, have been explosive. These advances represent the begin-
ning of a major movement in the biological sciences toward the un-
derstanding of the molecular mechanisms underlying develop-
mental decisions and the resulting morphogenetic processes. This
new thrust in developmental biology derives from the extraordin-
ary methodological advances of the past decade in molecular
genetics, immunology, and biochemistry. However, it also derives
from groundwork laid by the classical developmental studies, the
rapid advances in cell biology and animal virology, and from mod-
eled borrowings from prokaryotic systems. Increasingly, the work is
directed to human diseases, including oncogene function and inherited genetic disease.

The Department of Developmental Biology includes a critical
mass of scientists who are leading the thrust in developmental
biology and who can train new leaders in the attack on the funda-
mental problems of development. Department labs work on a wide
variety of organisms from microbes to worms, flies, and mice. The
dramatic evolutionary conservation of genes that regulate develop-
ment makes the comparative approach of the research particular-
ly effective. Scientists in the department labs have a very high
level of interaction and collaboration. The discipline of develop-
mental biology draws on biochemistry, cell biology, genetics, mo-
lecular biology, and genomics. People in the department have a
major interest in regenerative medicine and stem cell biology.

The department is located in the Beckman Center for Molecular
and Genetic Medicine within the Stanford University Medical
Center.

MASTER OF SCIENCE IN
DEVELOPMENTAL BIOLOGY

University requirements for the M.S. are described in the
“Graduate Degrees” section of this bulletin.

Students in the Ph.D. program in Developmental Biology may
apply for an M.S. degree, assuming completion of their course
requirements and preparation of a written proposal. The master’s
degree awarded by the Department of Developmental Biology
does not include the possibility of minors for graduate students
enrolled in other departments or programs.

Students are required to take, and satisfactorily complete, at
least three lecture courses offered by the department, including
210, Developmental Biology. In addition, students are required to
take three courses outside the department. Students are also ex-
pected to attend Developmental Biology seminars and journal
clubs. In addition, the candidate must complete a research paper
proposing a specific experimental approach and background in an
area of science relative to developmental biology.

DOCTOR OF PHILOSOPHY IN
DEVELOPMENTAL BIOLOGY

University requirements for the Ph.D. are described in the
“Graduate Degrees” section of this bulletin.

The graduate program in Developmental Biology leads to the
Ph.D. degree. The department also participates in the Medical
Scientists Training Program (MSTP) in which individuals are can-
didates for both the M.D. and Ph.D. degrees.

Students are required to complete at least six courses, including
Developmental Biology (210); Advanced Genetics (203); Frontiers
in Biological Sciences (215); and an advanced molecular biology,
biochemistry, or biophysics course. Students are expected to attend
Developmental Biology seminars and journal clubs.

Completion of a qualifying examination is required for admis-
sion to Ph.D. candidacy. The examination consists of two parts.
One proposal is on a subject different from the dissertation re-
search and the other proposal is on the planned subject of the the-

d. The final requirements of the program include presentation of a
Ph.D. dissertation as the result of independent investigation and
constituting a contribution to knowledge in the area of develop-
mental biology. The student must pass the University oral exami-
nation, taken only after the student has substantially completed
research. The examination is preceded by a public seminar in
which the research is presented by the candidate. The oral exami-
nation is conducted by a dissertation reading committee.

GENETICS

Emeritus: (Professor) Leonard Herzenberg
Chair: Michael Snyder

Professors: Russ Altman, Gregory Bash, Michele Calos, Stanley
Cohen, Ronald Davis, Andrew Fire, Uta Francke, Margaret Ful-
l, Mark Kay, Stuart Kim, Joseph Lipsick, John Pringle, Mat-
thew Scott, Tim Stearns

Associate Professors: Laura Attardi, Julie Baker, James Ford,
Arend Sidow, Zijie Sun, Anne Villeneuve, Douglas Vollrath

Assistant Professors: Anne Brunet, Julien Sage, Man-Wah Tan,
Hua Tang

Professor (Research): Leonore Herzenberg
Associate Professor (Research): J. Michael Cherry
Associate Professor (Teaching): Kelly Ormond

Assistant Professor (Research): Gavin Sherlock

Courtesy Professor: Hank Greely

Mail Code: 94305-5120
Phone: (650) 723-3335

Web Site: http://genetics.stanford.edu

Courses offered by the Department of Genetics are listed under
the subject code GENE on the Stanford Bulletin’s ExploreCourses
web site.

MASTER OF SCIENCE IN HUMAN GENETICS AND GENETIC COUNSELING

The University requirements for the M.S. are described in the
“Graduate Degrees” section of this bulletin.

The Department of Genetics offers an M.S. in Human Genetics
and Genetic Counseling, which is accredited by the American
Board of Genetic Counseling. This program prepares students to
practice in the healthcare profession of genetic counseling. The
program is a full time two year program, and accepts students to
begin the program only in Autumn Quarter. Students must be ad-
mitted directly into this program, and cannot automatically transfer
from the Ph.D. programs within the department, or vice ver-

sa. While courses are oriented primarily towards genetic counsel-
sing students, they may also be taken by medical students, other
graduate students, residents or post-doctoral fellows, and (with
permission) undergraduates.

The degree requires the completion of clinical rotations and an
approved research project. Students must also complete required
course work (GENE 271-286), several additional required courses
(MED 250A, MED 255, DBIO 201, and GENE 238), and are en-
couraged to take 3-4 elective courses of their choice, including a
research methods elective. Faculty members include members of
the Stanford faculty from Genetics, Pediatrics, Obstetrics, Pathology,
Developmental Biology, Biomedical Ethics, Law, and Psy-
chology, and practicing genetic counselors and clinical geneticists
in various medical centers across the Bay Area.

Applications are due in December (see web site) for admission in
the following Autumn Quarter. Applicants should demonstrate a
combination of academic preparation, exposure to genetic counsel-
ing, and counseling and/or laboratory experiences. Exposure to
persons with disabilities or chronic illness is also helpful. Addi-
tional information about the program is available at

DOCTOR OF PHILOSOPHY IN GENETICS

University requirements for the Ph.D. degree are described in the
“Graduate Degrees” section of this bulletin.

The Ph.D. program in the Department of Genetics offers gradu-
ate students the opportunity to pursue a discipline that encom-
passes both a set of tools and a coherent way of thinking about biology and medicine. All major areas of genetics are represented in the department, including human genetics (molecular identification of Mendelian traits and the pathophysiology of genetic disease, gene therapy, genetic epidemiology, analysis of complex traits, and human evolution), and application of model organisms such as bacteria, yeast, flies, worms, or mice to basic questions in biomedical research. The department is especially strong in genomic and bioinformatic approaches to genome biology and evolution, and includes several genome-scale databases such as the Saccharomyces Genome Database (SGD), the Stanford Microarray Database (SMD), and the Pharmacogenetics and Pharmacogenomics Knowledge Base (PharmGKB) and, administered through the Department of Biochemistry, the Stanford Genome Technology Center (SGTC).

Exposure to the intellectual scope of the department is provided by laboratory rotations, dissertation research, advanced courses in genetics and other areas of biomedical science, seminar series, journal clubs, and an annual three-day retreat of faculty, students, postdoctoral fellows, and staff scientists. Emphasis is placed on interactions and collaborations among students, postdoctoral students, and faculty within the department and throughout the campus.

During their first year, graduate students in the department take graduate courses and sample areas of research by doing rotations in three or four laboratories. At the end of the first three quarters, students may select a laboratory in which to do their dissertation research. While the dissertation research is generally performed in one laboratory, collaborative projects with more than one faculty member are encouraged. In addition to interacting with their faculty preceptor, graduate students receive advice regularly from other faculty members who serve as members of their dissertation committee. Study for the Ph.D. generally requires between four and five years of graduate work, most of which is focused on dissertation research.

Students are generally enrolled in the program to receive the Ph.D. degree, although a limited number of M.D. candidates can combine research training in genetics with their medical studies. Ph.D. candidates who have passed the qualifying exam in the second year can opt to receive the M.S. as a terminal degree.

There are opportunities for graduate students to teach in graduate-level and professional-school courses. In addition, students have the opportunity to participate in educational outreach activities coordinated by the department, which include opportunities to interact with secondary school students, postdoctoral fellows, and faculty within the department. Other student support is provided by departmental funds and from research grants, both federal and private, of the faculty. In addition, a number of graduate students are funded by fellowships, including those from the National Science Foundation and the Stanford Graduate Fellows program.

**MASTERS OF SCIENCE IN HEALTH SERVICES RESEARCH**

The master’s degree program in Health Services Research seeks to train students in the quantitative analysis of issues in health and medical care. The program emphasizes an individually designed program of course work and completion of a master’s project under the mentorship of a faculty member. The typical student in the program is either a physician who has completed residency training and is preparing for a research career, or a student with a strong background in policy analysis who wishes to focus on problems in health or medical care. Faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

To receive the degree, students are expected to demonstrate knowledge of issues in health services research and the quantitative skills necessary for research in this area. Students must take at least 45 units of course work (9 of the units may be double-counted to meet other degree requirements) and write a University thesis. The course work requirements are:

1. At least 8 units from the following group of Health Research and Policy (HRP) core courses: HRP 256, Economics of Health and Medical Care; HRP 391, Health Care Regulation; HRP 392, Analysis of Costs, Risks, and Benefits in Health Care.
2. At least 6 units of graduate-level statistics courses. The sequence of HRP 261, Intermediate Biostatistics: Analysis of Discrete Data; and HRP 262, Intermediate Biostatistics: Regression, Prediction, Survival Analysis, is strongly recommended.
3. At least 3 units of HRP 283, Health Services Research Core Seminar.
4. At least 15 units of HRP research credit from HRP 299, Directed Reading, or HRP 399, Research.
5. An additional set of approved elective courses to complete the program total of at least 45 units.

For additional information, address inquiries to the Educational Coordinator, Department of Health Research and Policy, Stanford University School of Medicine, HRP Redwood Building, Room T138C, Stanford, California 94305-5405.

---

---

**MASTERS OF SCIENCE IN EPIDEMIOLOGY**

The Graduate Program in Epidemiology offers instruction and interdisciplinary research opportunities leading to the M.S. degree in Epidemiology. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. It is important in its own right, and epidemiologic methods are used by clinical investigators and by other scientists who conduct observational and experimental research on the identification, prevention, and treatment of human disorders.

Core and affiliated faculty come from the Department of Health Research and Policy; other Stanford University departments, and notable Bay Area research facilities. The Program has particular strengths in cancer epidemiology, cardiovascular disease epidemiology, infectious disease epidemiology, musculoskeletal disease epidemiology, neuroepidemiology, and aspects of epidemiologic methods, genetic epidemiology, and reproductive epidemiology and women’s health.

The mission of the Stanford University School of Medicine is to be a premier research-intensive medical school that improves health through leadership and collaborative discoveries and innovation in patient care, education and research. With support from a NIH Clinical and Translational Science Award, the graduate program in Epidemiology fosters this mission through the training of physician investigators in techniques of clinical research. We also consider students from other disciplines who would benefit from formal training in epidemiologic methods.

A typical student has the M.D. degree and is in the fellowship stage of his or her postgraduate training, or in an early stage of faculty development. Other students may not have prior clinical training. These may include behavioral, social, and life scientists; law students; and students with the baccalaureate degree. They may wish to bring an epidemiologic orientation to their research or practice, or they may be considering careers in epidemiology or a related discipline.

To receive the M.S. degree, students are expected to obtain a grounding in epidemiologic methods and applied biostatistics and to demonstrate research skills through the completion of a thesis. Students must complete at least 45 units of course work:
3. Research seminars: HRP 236, Epidemiology Research Seminar (at least 3 units).
4. Research: HRP 399, Master thesis (at least 12 units).
5. Research conduct: Students must complete MED 255, Responsible Conduct of Research, and attend a Human Subjects Institutional Review Board meeting.
6. Additional approved selective and elective courses to complete the program total of at least 45 units.

Students are assigned a methodology mentor from the Department of Health Research and Policy, and they also select a research mentor, who may be from another department. For physicians, the research mentor is often an affiliated faculty member from the department of the student’s clinical specialty.

University requirements for the M.S. degree are described in the "Graduate Degrees" section of this bulletin. Other programmatic requirements are in Graduate Program in Epidemiology. Information and Guidelines, available from the educational coordinator in the Department of Health Research and Policy.

**IMMUNOLOGY**

*Chair, Executive Committee for the Immunology Program:* Lawrence Steinman (Professor, Neurology and Neurological Sciences)

*Director for Immunology Program:* Olivia Martinez (Professor, Research, Surgery, Transplantation)

*Director for Clinical Immunology Program:* C. Garrison Fathman (Medicine/Immunology and Rheumatology)

**Participating Departments and Faculty:**

*Biology:* Patricia P. Jones (Professor)

*Chemistry:* Harden M. McConnell (Professor, emeritus)*

*Developmental Biology:* Irving L. Weissman (Professor, Biology)

*Genetics:* Leonore A. Herzenberg (Professor, Research), Leonard A. Herzenberg (Professor, emeritus), Man-wah Tan (Assistant Professor)

*Medical Informatics:* Atul Butte (Assistant Professor, Pediatrics and Computer Science)

*Medicine/Bone Marrow Transplantation Program:* Robert Negrin (Professor), David Miklos (Assistant Professor), Judith Shizuru (Associate Professor)

*Medicine/Endocrinology, Gerontology and Metabolism:* Ajay Chawla (Assistant Professor)

*Medicine/Hematology:* Calvin Kuo (Associate Professor), Peter Lee (Associate Professor), Ravi Majeti (Assistant Professor)

*Medicine/Immunology and Rheumatology:* C. Garrison Fathman (Professor), William Robinson (Assistant Professor), Samuel Strober (Professor), Paul J. Utz (Associate Professor)

*Medicine/Oncology:* Gilbert Chu (Professor, and Biochemistry), Dean Felsher (Associate Professor, and Pathology), Ronald Levy (Professor), Shoshana Levy (Professor, Research)

*Medicine/Pulmonary and Critical Care Medicine:* Mark Nicolls (Associate Professor)

*Microbiology and Immunology:* John Boothroyd (Professor), Chang-Zhen Chen (Assistant Professor), Yueh-Hsiu Chien (Professor), Mark M. Davis (Professor), Hugh McDevitt (Professor), Garry P. Nolan (Professor), David Schneider (Associate Professor)

*Molecular and Cellular Physiology:* K. Christopher Garcia (Professor, and Structural Biology), Richard S. Lewis (Professor)

*Neurology and Neurological Sciences:* Lawrence Steinman (Professor, and Pediatrics), Tony Wyss-Coray (Associate Professor, Research)

**Neurosurgery:** Theo Palmer (Associate Professor)

**Pathology:** Eugene C. Butcher (Professor), Michael Cleary (Professor), Gerald R. Crabtree (Professor, and Developmental Biology), Edgar G. Engleman (Professor, and Medicine/Immunology and Rheumatology), Magali Fontaine (Assistant Professor), Stephen Galli (Professor), Sara Michie (Professor), Raymond A. Sobel (Professor)

**Pediatrics:** Ann Arvin (Professor, and Microbiology and Immunology), Christopher Contag (Associate Professor, Research, and Microbiology and Immunology, and Radiology), David B. Lewis (Professor), Elizabeth Mellins (Associate Professor), Kari Nadeau (Assistant Professor), Minnie Sarwal (Professor)

**Psychiatry and Behavioral Sciences:** Firdaus Dhabhar (Associate Professor), Emmanuel Mignot (Professor)

**Structural Biology:** Peter Parham (Professor, and Microbiology and Immunology)

**Surgery:** Sheri Krams (Associate Professor, Research), Olivia Martinez (Professor, Research)

*Recalled to active duty*

**Mail Code:** 94305-5173

**Phone:** (650) 725-5076

**Email:** npopan@stanford.edu

**Web Site:** http://immunol.stanford.edu

Courses offered by the Immunology Program are listed under the subject code IMMUNOL on the Stanford Bulletin's Explore-Courses web site.

**MASTER OF SCIENCE IN IMMUNOLOGY**

Students in the Ph.D. program in Immunology may apply for an M.S. degree in Immunology only under special circumstances, assuming completion of appropriate requirements. Students must complete:

1. Three full-tuition quarters of residency as a graduate student at Stanford.
2. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
3. 2-3 quarters of graduate research (IMMUNOL 399), consisting of rotations in the labs of three faculty members.
4. Course work in Immunology as follows: basic Immunology (for graduate students, BIO 230A, Molecular and Cellular Immunology Literature Review, and for medical students, IMMUNOL 205, Immunology in Human Health and Disease or equivalent), advanced Immunology such as IMMUNOL 201, 202, and 203. In addition, the student may take one elective course. Some possible electives are: MPHA 210, Signal Transduction Pathways and Networks; SBIO 241, Biological Macromolecules; CBIO 241, Molecular, Cellular, and Genetic Basis of Cancer; or DBIO 210, Developmental Biology. Other required core courses are: GENES 1, Advanced Genetics; IMMUNOL 215, Principles of Biological Technologies; BIO 214, Advanced Cell Biology.
5. Graduate-level biochemistry and molecular biology (BIOC 187 equivalents).
6. Course work in IMMUNOL 311, Seminar in Immunology, and IMMUNOL 311A, Seminar Discussion in Immunology.
7. Participation in the Immunology journal club (IMMUNOL 305), and attendance at the Immunology seminar series and at the annual Stanford Immunology Scientific Conference.
8. The qualifying examination process in Immunology before admission to Ph.D. candidacy has two parts: a comprehensive written examination on many fields in immunology, (qualifying examination process, Part I), in the third week in June, first year; the thesis proposal (qualifying examination process, Part II), before December 17th, second year. In addition, an oral presentation is required on the research of one rotation, early July in the first year.
9. Students must submit a master’s thesis paper on one of their rotations. This requirement may be waived under special circumstances.
DOCTOR OF PHILOSOPHY IN IMMUNOLOGY

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The Immunology Program offers instruction and research opportunities leading to a Ph.D. in Immunology. The goal of the program is to develop investigators who have a solid foundation in Immunology and related sciences to carry out innovative research. The program features a flexible choice of courses and seminars combined with extensive research training in the laboratories of participating Immunology faculty.

Students applying to the program typically have an undergraduate major in biological sciences, but majors in other areas are acceptable if the applicants have had sufficient course work in biology and chemistry. Formal application should be made by December 1st. Applications are evaluated by the Immunology predoctoral committee based upon: GRE scores; grades; evidence of research experience; letters of recommendation, including letters from research sponsor(s); and commitment to a career in biomedical research. Subject tests are not required. Interested Stanford medical students are welcome to apply to the program and should submit a formal application by December 1st.

Students admitted to the program are offered financial support covering tuition, a living stipend, insurance coverage, and an allowance for books/travel. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but Immunology graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program. On matriculation, each student is assisted by a first-year advising committee in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee including the dissertation adviser and two additional Immunology faculty, is constituted to guide the student during the dissertation research. The student must meet with the dissertation committee at least once a year.

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a three-year program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members.

The requirements for the Ph.D. degree in Immunology include:

1. Training in biology and cognate disciplines equivalent to that provided by the undergraduate Biology major at Stanford.
2. Completion of the following courses (or their equivalents from undergraduate work):
   a. Basic Immunology (BIO 230A, Molecular and Cellular Immunology Literature Review)
   b. Advanced Immunology (IMMUNOL 201, 202, 203)
   c. Chemistry of Biological Processes (BIOC 220 or CSB 220)
   d. Advanced Genetics (GENE 203)
   e. Advanced Cell Biology (BIO 214)
   f. Biostatistics (BIOC 141 or STATS 141)
   g. Principles of Biological Technologies (IMMUNOL 215)
   h. One elective course: suggested courses include: MPHA 210, Signal Transduction Pathways and Networks; CBIO 241, Biological Macromolecules; CBIO 241, Cancer Biology; DBIO 210, Developmental Biology.
   i. Responsible Conduct in Science (MED 255)
   j. Immunology Journal Club (IMMUNOL 305)
3. First-year students are required to take both the IMMUNOL 311, Seminar in Immunology, and the companion course, IMMUNOL 311A, Seminar Discussion in Immunology, and participate in IMMUNOL 305, Immunology Journal Club. Students in the second year and above must participate in the IMMUNOL 311, Seminar in Immunology and may opt to take the companion course, IMMUNOL 311A. Students who have not yet achieved TGR status must register for 1 unit for IMMUNOL 311. Students attend the Immunology Seminar Series (12:00pm, Tuesdays). Students read the papers of visiting seminar speakers and meet to discuss the material in Seminar Discussion, IMMUNOL 311A.
4. Elective courses as agreed upon by the student, adviser, and advisory committee. Electives may be chosen from graduate courses and seminars in any of the biomedical science departments and programs.
5. Completion in the first year of three one quarter rotations. Two weeks after taking the comprehensive written examination (part 1 of the qualifying examination process) at the end of June, students, including MSTP and M.D./Ph.D. students, present their lab rotation research projects to the predoctoral committee. Medical students who are accepted into the Ph.D. program must do at least three rotations.
6. Teaching assistantship in two Immunology courses (IMMUNOL 290, Teaching in Immunology). A teaching assistantship requirement may be fulfilled by proposing a graduate student-initiated course: IMMUNOL 315, Topics in Immunology. Before fulfilling their teaching assistantships, Immunology graduate students are required to attend a teaching assistantship orientation offered at the beginning of every quarter by the Center for Teaching and Learning. MSTP students may submit one of their medical school TAships as partial fulfillment of the TA requirement for the Ph.D. in Immunology.
7. For admission to Ph.D. candidacy, a comprehensive written examination (qualifying examination process, Part I) in Immunology and related biomedical sciences, and a rotation presentation on one of three lab rotations, must be completed satisfactorily by the middle of Summer Quarter of the first year. Students must prepare and defend a research proposal on their dissertation research (qualifying examination process, Part II) by December 17th, the end of Autumn Quarter of their second year, and complete all core course requirements by the end of the second year. Administration and evaluation of these requirements leading to Ph.D. candidacy is the responsibility of the Predoctoral Committee; the student’s dissertation committee is responsible for advising the student through the research and other courses as needed towards the completion of the Ph.D. dissertation.
8. Participation (through regular attendance and oral presentation) in the student-run Immunology journal clubs for at least the first three years (IMMUNOL 305), the Tuesday Immunology seminars, and the annual Stanford Immunology Scientific Conference. Students are required to give one poster and one scientific presentation at these annual Stanford Immunology scientific conferences. Fourth year and above students present their current research to fellow students and faculty in a monthly forum.
9. Passing the University oral examination on the dissertation research, which is to be taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the candidate presents his/her research.
10. Completion of a Ph.D. dissertation, resulting from independent investigation and constituting a contribution to knowledge in the area of Immunology.
MICROBIOLOGY AND IMMUNOLOGY

Emeriti: (Professors) Hugh O. McDevitt, Edward S. Mocarski, Sidney Raffel, Leon T. Rosenberg
Chair: Karla Kirkegaard
Associate Chair: Stanley Falkow
Associate Professors: Matthew Boggo, Christopher Contag, David Schneider, Julie Theriot
Assistant Professors: Manuel Amieva, Chang-Zheng Chen, Denise Monack, Upinder Singh, Justin Sonnenburg, Man-Wah Tan
Associate Professor (Teaching): Robert D. Siegel

Department Offices: D300 Fairchild Building, 299 Campus Drive
Mail Code: 94305-5124
Phone: (650) 725-8541
Email: micro_immuno@lists.stanford.edu
Web Site: http://microimmuno.stanford.edu

Courses offered by the Department of Microbiology and Immunology are listed under the subject code MI on the Stanford Bulletin’s ExploreCourses web site.

GRADUATE PROGRAMS IN MICROBIOLOGY AND IMMUNOLOGY

The Department of Microbiology and Immunology offers a program of training leading to the Ph.D. degree, as well as research training, courses, and seminars for medical students and postdoctoral fellows. Research interests focus on two broad areas: host/parasite interactions, and the function of the immune system. Laboratories investigate mechanisms of pathogenesis and the physiology of viruses, bacteria, and protozoan parasites, as well as the lymphocyte function in antigen recognition, immune response, and autoimmunity.

MASTER OF SCIENCE

A regular M.S. program is not offered, although this degree is awarded under special circumstances. Candidates for master’s degrees are expected to have completed the preliminary requirements for the B.S. degree, or the equivalent. In addition, the candidate is expected to complete 45 quarter units of work related to microbiology; at least 25 of these units should concern research devoted to a thesis. The thesis must be approved by at least two members of the department faculty.

DOCTOR OF PHILOSOPHY IN MICROBIOLOGY AND IMMUNOLOGY

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

Application, Admission, and Financial Aid—Prospective Ph.D. candidates should have completed a bachelor’s degree in a discipline of biology or chemistry, including course work in biochemistry, chemistry, genetics, immunology, microbiology, and molecular biology. The deadline for receipt of applications with all supporting materials is December 1.

Applicants must file a report of scores on the general subject tests of the Graduate Record Examination (GRE). It is strongly recommended that the GRE be taken before October so that scores are available when applications are evaluated.

In the absence of independent fellowship support, entering predoctoral students are fully supported with a stipend and tuition award. Highly qualified applicants may be honored by a nomination for a Stanford Graduate Fellowship. Successful applicants have been competitive for predoctoral fellowships such as those from the National Science Foundation.

Program for Graduate Study—The Ph.D. degree requires course work and independent research demonstrating an individual’s creative, scholastic, and intellectual abilities. On entering the department, students meet an advisory faculty member; together they design a timetable for completion of the degree requirements. Typically, this consists of first identifying gaps in the student’s undergraduate education and determining courses that should be taken. Then, a tentative plan is made for two to four lab rotations (one rotation per quarter). During the first year of graduate study in the department, each student also takes six or seven upper-level (200-series) courses. Three of these courses are requirements of the department: MI 215, Principles of Biological Techniques; MI 230, Medical Microbiology and Infectious Diseases; and MI 210, Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. Three courses are part of the core curriculum that is required of many graduate students in Stanford Biosciences: BIO 203 /DBIO 203 /GENE 203, Advanced Genetics; BIO 230, Molecular and Cellular Immunology; and BIO 214/BIOC 224, Advanced Cell Biology.

In Autumn Quarter of the second year, a research proposal based on the student’s own thesis topic is defended to the thesis committee. In Spring Quarter of the second year, each student defends orally a formal research proposal on a topic outside the intended thesis project. This qualifying examination proposal is due to the graduate program steering committee by May 1. Based on successful performance on this proposal, the student is admitted to candidacy. Teaching experience and training are also part of the graduate curriculum. Graduate students are required to act as teaching assistants for two courses. In addition, first- and second-year graduate students are required to participate in a bi-weekly journal club.

MOLECULAR AND CELLULAR PHYSIOLOGY

Chair: Brian K. Kobilka
Associate Professors: Christopher Garcia, John Huguenard, V. Daniel Madison, Merritt C. Maduke, Miriam B. Goodman
Assistant Professors: Maxence V. Nachury
Courtesy Associate Professors: Stefan Heller, Anthony J. Ricci
Courtesy Assistant Professor: Richard J. Reimer

Department Offices: Beckman Center, B100
Mail Code: 94305-5345
Phone: (650) 725-7554
Email: schantae@stanford.edu
Web Site: http://mcp.stanford.edu

Courses offered by the Department of Molecular and Cellular Physiology are listed under the subject code MCP on the Stanford Bulletin’s ExploreCourses web site.

The Department of Molecular and Cellular Physiology is located in the Beckman Center for Molecular and Genetic Medicine.

A central goal of physiology in the post-genomic era is to understand how thousands of encoded proteins serve to bring about the highly coordinated behavior of cells and tissues. Research in the department approaches this goal at many levels of organization, ranging from single molecules and individual cells to multicellular systems and the whole organism. The faculty share common interests in the molecular mechanisms of cell signaling and behavior, with a special focus on structure/function analysis of ion channels and G-protein coupled receptors, and their roles at the cellular, organ, and whole-organism levels; the molecular basis of sensory transduction, synaptic transmission, plasticity and memo-
ry; the role of ion channels and calcium in controlling gene expression in neural and immune cells; and the regulation of vesicle trafficking and targeting, cell polarity, and cell-cell interactions in the nervous system and in epithelia. Research programs employ a wide range of approaches, including molecular and cell biology, biochemistry, genetics, biophysics, x-ray crystallography and solution NMR, electrophysiology, and in vitro and in vivo imaging with confocal and multi-photon microscopy.

GRADUATE PROGRAMS IN MOLECULAR AND CELLULAR PHYSIOLOGY

The department offers required and elective courses for students in the School of Medicine and is also open to other qualified students with the consent of the instructor. Training of medical, graduate, and postdoctoral students is available. The program offers a course of study leading to the Ph.D. degree. No B.S. is offered, and an M.S. is offered only in the unusual circumstance where a student completes the course work, rotation, and the written portion of the qualifying exam, but is unable to complete the requirements for the Ph.D.

DOCTOR OF PHILOSOPHY IN MOLECULAR AND CELLULAR PHYSIOLOGY

Students with undergraduate or master’s degrees who have completed a year each of college chemistry (including lectures in organic and physical chemistry), physics, calculus, and biology are considered for admission to graduate study. Applicants submit a report of scores from the Graduate Record Examination (verbal, quantitative, analytical, and an advanced subject test in one of the sciences) as part of the application. Students who do not speak English as their native language must submit scores from TOEFL unless waived by Graduate Admissions.

Study toward the Ph.D. is expected to occupy five years, including summers. A minimum of six quarter-long courses is required. These include four graduate-level courses (200-300 series) and a choice of two out of these three courses: MCP 221, MCP 258, and MCP 256. Students are also required to take the Molecular and Cellular Physiology Seminar/Research In Progress series. Each student presents a talk on research in progress to the department at least every other year, starting their second year. Grades for course work must be a minimum of ‘B-‘, and at least two grades equal to ‘A’ or above are necessary but not sufficient for continuation in the program.

Qualifying Examination—At the end of the second year in residence as a graduate student, each Ph.D. candidate presents a written thesis proposal to be defended at an oral comprehensive examination. The examinations may be taken only after all course work has been completed by the required standard. Students undertake individual research studies as early as possible after consultation with their preceptor. Upon passing this exam, the student is advanced to candidacy for the Ph.D.

Dissertation and University Oral Examination—The results of independent, original work by the students are presented in a dissertation. The oral examination is largely a defense of the dissertation.

Advisors and Advisory Committees—A graduate advisory committee, currently professors Lewis and Madison, advises students during the period before the formation of their qualifying committees.

Financial Aid—Students may be funded by their advisors’ research grants, by training grants, by department funds, or by extramural funds. Students are encouraged to obtain funding from outside sources such as NIH and NSF.

NEUROBIOLOGY

Emeritus: Denis Baylor, Uel J. McManus, Eric Shooter, Lubert Stryer
Chair: Ben Barres
Professors: Eric I. Knudsen, William T. Newsome
Associate Professors: Thomas Clandinin, Jennifer Raymond
Assistant Professors: Stephen Baccus, Ricardo Dolmetsch, Tinir Moore

Department Offices: Fairchild Building, Second Floor
Mail Code: 94305-5125
Web Site: http://neurobiology.stanford.edu

Courses offered by the Department of Neurobiology are listed under the subject code NBIO on the Stanford Bulletin’s Explore Courses web site.

GRADUATE PROGRAM IN NEUROBIOLOGY

Graduate students in the Department of Neurobiology obtain the Ph.D. degree through the interdepartmental Neurosciences Ph.D. program. Accepted students receive funding for tuition and a living stipend. Applicants should familiarize themselves with the research interests of the faculty and, if possible, indicate their preference on the application form which is submitted directly to the Neurosciences Program.

Medical students are encouraged to enroll in the Ph.D. program. The requirements of the Ph.D. program are fitted to the interests and time schedules of the student. Postdoctoral training is available to graduates holding Ph.D. or M.D. degrees, and further information is obtained directly from the faculty member concerned.

Research interests of the department include information processing in vertebrate retina; structure, function, and development of auditory and visual systems; development and regeneration in the central and peripheral nervous system; neural mechanisms mediating higher nervous system functions, including perception, learning, attention and decision making.

NEUROSCIENCES

Director: John R. Huguenard (Professor, Neurology and Neurological Sciences)
Committee: Katrin Andreasson, Thomas Clandinin, Luis de Lecea, Craig Garner, Miriam Goodman, John R. Huguenard, Jennifer Raymond, Carla Shatz, Kang Shen, Anthony Wagner
Participating Faculty:
Anesthesia: Rona Griffard (Professor), M. Bruce Maclver (Associate Professor, Research), Sean Mackey (Associate Professor), David Yeomans (Associate Professor)

Applied Physics: Mark Schnitzer (Assistant Professor)
Bioengineering: Kwapana Boahen (Associate Professor), Karl Deisseroth (Associate Professor), Scott Delp (Professor), Matthew Scott (Professor)

Biology: Russell D. Fernald (Professor), William F. Gilly (Professor, H. Craig Heller (Professor), Ron Kopito (Professor), Liqun Luo (Professor), Susan McConnell (Professor), Robert M. Sappolksy (Professor), Mark Schnitzer (Assistant Professor), Carla Shatz (Professor), Kang Shen (Assistant Professor), Stuart Thompson (Professor)

Chemical and Systems Biology: Tobias Meyer (Professor), Daria Mochly-Rosen (Professor)

Comparative Medicine: Paul S. Buckmaster (Associate Professor), Corinna Darian-Smith (Associate Professor), Shaul Hestrin (Associate Professor)

Developmental Biology: Ben Barres (Professor), David Kingsley (Professor), Matthew P. Scott (Professor)

Electrical Engineering: Krishna Shenoy (Associate Professor)
SCHOOL OF MEDICINE

Genetics: Anne Brunet (Assistant Professor), Matthew Scott (Professor)

Microbiology and Immunology: Helen Blau (Professor)

Molecular and Cellular Physiology: Axel Brunger (Professor), Miriam B. Goodman (Assistant Professor), Brian Kobilka (Professor), Richard S. Lewis (Professor), V. Daniel Madison (Associate Professor), Merritt C. MaduKate (Assistant Professor), Stephen Smith (Professor), Thomas Sudhof (Professor), Richard Tisch (Professor)

Neurobiology: Stephen Baccus (Assistant Professor), Ben Barres (Professor), Tom Clandinin (Associate Professor), Ricardo Dolmetsch (Assistant Professor), Eric I. Knudsen (Professor), U. J. McKean (Professor), Tirin Moore (Assistant Professor), William T. Newsome (Professor), Jennifer Raymond (Associate Professor), Carla Shatz (Professor)

Neurology and Neurosciences: Katrin Andreasson (Associate Professor), Ben Barres (Professor), Helen Bronte-Stewart (Associate Professor), Paul Buckmaster (Associate Professor), Robert S. Fisher (Professor), Michael Greicius (Assistant Professor), May Han (Assistant Professor), Ting-Ting Huang (Assistant Professor, Research), John A. Huguenard (Professor), Frank Longo (Professor), William C. Mobley (Professor), Josef Parviz (Assistant Professor), David A. Prince (Professor), Thomas A. Rando (Professor), Lawrence Recht (Professor), Richard Reiner (Assistant Professor), Robert M. Sapolsky (Professor), Lawrence Steinman (Professor), Tony Wyss-Coray (Associate Professor, Research), Yanmin Yang (Associate Professor)

Neurosurgery: Marion Buckwalter (Assistant Professor), Pak H. Chan (Professor), Theo Palmer (Associate Professor), Gary K. Steinberg (Professor)

Ophthalmology: Yaping Joyce Liao (Assistant Professor)

Otolaryngology: Stefan Heller (Associate Professor), Anthony Ricci (Associate Professor)

Pathology: Isabella Graef (Assistant Professor), Bingwei Lu (Assistant Professor), Raymond Sobel (Professor), Marius Wernig (Assistant Professor)

Pediatrics: Heidi Feldman (Professor), Anna Penn (Assistant Professor), Lawrence Steinman (Professor)

Philosophy: Patrick Suppes (Professor, emeritus)

Psychiatry and Behavioral Sciences: Karl Deisseroth (Associate Professor), Luis de Lecea (Associate Professor), Firdaus Dhabhar (Associate Professor), Craig Garner (Professor), Terrence A. Ketter (Professor), Robert C. Malenka (Professor), Vinod Menon (Associate Professor, Research), Emmanuel Mignot (Professor), Karen Parker (Assistant Professor, Natalie Ranson (Professor), Allan L. Reiss (Professor), Edith Sullivan (Professor, Research), Jamie Zeitzer (Assistant Professor)

Psychology: Lera Boroditsky (Assistant Professor), Ian Gotlib (Professor), Kalanit Grill-Spector (Assistant Professor), James J. Gross (Professor), Brian Knutson (Associate Professor), James McClelland (Professor), Samuel McClure (Assistant Professor), Anthony Wagner (Associate Professor), Brian Wandell (Professor), Jeffrey J. Wine (Professor)

Radiology: Gary H. Glover (Professor)

Structural Biology: U. J. McMahan (Professor)

Program Offices: CCSR 425c
Mail Code: 94305-5173
Phone: (650) 723-9855
Web Site: http://neuroscience.stanford.edu/education/phd_program

Courses offered by the Neurosciences Program are listed under the subject code NEPR on the Stanford Bulletin’s ExploreCourses web site.

DOCTOR OF PHILOSOPHY IN NEUROSCIENCES

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The interdepartmental Neurosciences Program offers instruction and research opportunities leading to a Ph.D. in Neurosciences. The requirements for a Ph.D. degree follow those of the University and in addition are tailored to fit the background and interests of the student. Accepted students receive an award covering tuition, a basic health plan, and a living stipend. Qualified applicants should, where possible, apply for the predoctoral fellowships in open competition, especially those from the National Science Foundation. December 2 is the deadline for receipt in the Neurosciences Program office of applications with all supporting material.

Applicants should familiarize themselves with the research interests of the faculty and indicate their preferences on the application.

Since students enter with differing backgrounds, and the labs in which they may elect to work cover several different disciplines, the specific program for each student is developed individually with an advisory committee. All students are required to complete the basic introduction to neurobiology (NBIO 206 or equivalent). Students must also take five advanced courses, four of which must be distributed among four of the following core areas: systems and behavioral neuroscience, molecular and cellular neuroscience, developmental neuroscience, clinical neuroscience, and computational neuroscience. The fifth advanced course is chosen by the student in an area related to the student’s research interest, and may be selected from outside the Neurosciences core with prior approval from the program director and the student’s advisor.

Students usually rotate through several labs during their first year, although they may choose to begin thesis research on entry. After the first rotation, students may rotate both within and outside the Neurosciences Program. Required course work should be completed by the end of the second year. Passing of a comprehensive oral preliminary examination given by the student’s advisory committee is required for admission to Ph.D. candidacy. This examination is usually taken by the end of the second year. The student is required to present a Ph.D. dissertation, which is the result of independent investigation contributing to knowledge in an area of neuroscience, and to defend his or her dissertation in a University oral examination, which includes a public seminar.

Medical students may participate in this program provided they meet the prerequisites and satisfy all the requirements of the graduate program as listed above. The timing of the program may be adjusted to fit their special circumstances.

OBSTETRICS AND GYNECOLOGY

Chair: Jonathan S. Berek

Courses offered by the Department of Obstetrics and Gynecology are listed under the subject code OBGY on the Stanford Bulletin’s ExploreCourses web site.

The Department of Obstetrics and Gynecology does not offer degrees; however, qualified medical, graduate, or undergraduate students with an interest in basic research in reproductive biology may apply to arrange individual projects under the supervision of the faculty. The focus for the Division of Reproductive Biology is the study of the molecular and cellular biology of male and female reproductive organs.

PATHOLOGY

Emeriti: (Professor) Ronald Dorfman, Richard L. Kemppson, (Professor, Clinical) Lawrence F. Eng, Luis Fajardo, Heinz Furthmayr, F. Carl Grumet, Jon Kosek; (Associate Professor) P. Joanne Cornbleet

Chair: Stephen J. Galli

Rijn, Hannes Vogel, Teresa S. F. Wang, Roger A. Warnke, Irving L. Weissman, James Zehnder

Associate Professors: Jeffrey D. Axelrod, Matt Bogyo, Athena M. Cherry, Andrew Connolly, Tina Cowan, James D. Faix, Dean Felscher, Susan A. Galel, Sharon M. Geaghan, John P. Higgins, Neeraja Kambham, Christina Kong, Teri A. Longacre, Sara A. Michie, Yasodha Natkunam, Bruce Patterson, Jonathan R. Pollack, Iris Schrijver, Arend Sidow

Assistant Professors: Niaz Banaei, Raffick Bowen, Magali Fontaine, Tracy George, Dita Gratzinger, F. Kim Hazard, Kristin Jensen, Bingwei Lu, Jesse McKenney, Erich Schwartz, Uma Sundram, Marius Wernig, Robert West

Courtesy Professors: Donna Bouley, Bertil Glader, Lucy Tompkins

Courtescy Associate Professor: Robert Shafer

Clinical Educators: Susan Atwater, David Bingham, Barbara Egbert, Christopher Gonzales, Terri Haddix, Jinah Kim, Amy McKenney, Melanie Manning, Reetesh Pai, Run Shi, Brent Tan, Maureene Viele

Instructors: Ching-Cheng Chen, Neng Chen, Franklin Mullins, Chris Park, Adrian Piliponoky

Adjunct Clinical Faculty: Robert Archibald, Jerome S. Burke, Glenn Cockerham, Stephen Shi-Hua Chen, Seth Haber, Maie K. Herrick, Paul W. Herrmann, Anthony Lee, Steven Long, Charles Lombard, Judy Melinek, Gregory Moes, Joseph O’Hara, Girish Putcha, Mahendra Ranchod, Thomas W. Rogers, Joshua Sickel

Department Offices: Medical Center, Lane Building, L-235

Mail Code: 94305-5324

Phone: (650) 723-5255

Web Site: http://pathology.stanford.edu

Courses offered by the Department of Pathology are listed under the subject code PATH on the Stanford Bulletin’s ExploreCourses web site.

PROGRAMS OF STUDY IN PATHOLOGY

The Department of Pathology offers advanced courses in aspects of pathology. The department does not offer advanced degrees in pathology, but qualified graduate students who are admitted to department-based or interdepartmental graduate programs may elect to pursue their thesis requirements in the department’s research laboratories. The discipline of pathology has served as a bridge between the preclinical and clinical sciences and is concerned with the application of advances in the basic biological sciences, both to the diagnosis of human disease and the elucidation of the mechanisms of normal molecular, cellular, and organ structure and function that manifest themselves in clinical disease. Accordingly, the department’s research interests extend from fundamental molecular biology to clinical-pathological correlations, with an emphasis on experimental oncology.

Investigation in the department includes basic studies in areas using molecular biological, biochemical, and genetic cell biological techniques: DNA replication in yeast and cultured eukaryotic cells, cell cycle control in animal cells and yeast, identification and pathogenetic role of chromosomal aberrations in human malignancies and mechanisms of activation of oncogenes in human and animal cells, lymphocyte and neutrophil-interactions with endothelial cells, cell type specification and signal transduction pathways leading to specific gene expression or modulation of cytoskeletal behavior; cytoskeletal architecture, cell-matrix interaction, developmental biology of hematopoietic stem cells and thymus, regulation of the immune system, mechanisms of immune and other responses in the central nervous system, and neurodegenerative diseases. Various studies focus on the development of novel diagnostic and immunotherapeutic treatment modalities and techniques for solid tumors, lymphomas, HIV, and genetic diseases. Research training in all of these areas is available for qualified medical and graduate students by individual arrangement with the appropriate faculty member. A summary of the research interests of the department faculty is available at http://pathology.stanford.edu.

RADIATION ONCOLOGY

Emeriti: Malcolm A. Bagshaw, Peter Fessenden, Don R. Goffinet, George M. Hahn, Kendric Smith

Chair: Richard T. Hoppe

Professors: J. Martin Brown, Sarah S. Donaldson, Amato J. Giaccia, Steven L. Hancock, Richard T. Hoppe, Quynh-Thu Le, Daniel S. Kapp, Steven A. Liebel

Associate Professors: Iris C. Gibbs, Paul Keall, Christopher R. King, Susan J. Knox, Gary Luxton, Lei Xing

Assistant Professors: Laura Attardi, Daniel Chang, Nicholas Denko, Edward Graves, Albert C. Koong

Consulting Professor: Robert M. Sutherland

Courses offered by the Department of Radiation Oncology are listed under the subject code RADO on the Stanford Bulletin’s ExploreCourses web site.

Radiation Oncology focuses on the use of radiation for cancer therapy and research. The department does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department accepts students in other curricula as advisees for study and research. Graduate students in Biophysics and Cancer Biology may perform their thesis research in the department. Undergraduates may arrange individual research projects under supervision of faculty.

At this time, the major areas of basic research investigation in the department include: DNA repair in mammalian cells after ionizing irradiation; studies of the mechanism of tumor hypoxia in animal tumors; development of new anti-cancer drugs to exploit tumor hypoxia; cytogenetic and molecular methods of predicting the sensitivity of individual tumors to cancer therapy; radiolabeled monoclonal antibodies for cancer detection and treatment; studies of oxygen levels in human tumors using polarographic electrodes; clinical trials of a new hypoxic cytotoxic agent ( tirapazamine); studies of the late effects of cancer therapy; and techniques of conformal and intensity modulated radiation therapy.

RADIOLOGY

Chair: Gary M. Glazer

Associate Professors: Patrick D. Barnes, Francis Blankenberg, Bruce Daniel, Terry Dessier, Huy M. Do, Nancy Fischbein, Dominik Fleischmann, Garry E. Gold, Lawrence Hofmann, Beverley Newman, Eric W. Olcott, Daniel M. Spielman, Daniel Y. Sze

Associate Professors (Research): Kim Butts-Pauly, Craig Levin, Sylvia Plevritis

Assistant Professors: Sandip Biswal, Frandics P. Chan, Nishita Kothary, William Kuo, Andrew Quon, Jiannghong Rao, Justus Roos, Lewis Shin, Kathryn J. Stevens, Shreyas Vasanawala, Joseph Wu, Greg Zaharchuk

Assistant Professors (Research): Roland Bammer, Xiaoyuan Chen, Rebecca Fahrig, Samira Guccione, Brian Hargreaves, David Paik

Web Site: http://www-radiology.stanford.edu

Courses offered by the Department of Radiology are listed under the subject code RAD on the Stanford Bulletin’s ExploreCourses web site.
The Department of Radiology does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Undergraduates may also arrange individual research projects under the supervision of the department's faculty. This discipline focuses on the use of radiation, ultrasound, and magnetic resonance as diagnostic, therapeutic, and research tools. The fundamental and applied research within the department reflects this broad spectrum as it relates to anatomy, pathology, physiology, and interventional procedures. Original research and development of new clinical applications in medical imaging is supported within the Radiological Sciences Laboratory.

**STRUCTURAL BIOLOGY**

Chair: Joseph D. Puglisi  
Associate Chair: Michael Levitt  
Professors: Theodore Jardetzky, Roger D. Kornberg, Michael Levitt, Peter Parham, Joseph D. Puglisi, William I. Weis  
Associate Professor: K. Christopher Garcia  
Associate Professor (Research): Yahli Lorch  
Assistant Professor (Research): Elizabetta Viani Puglisi  
Consultant Professor: Axel Brunger  
Consultant Associate Professor: Vijay Pande  
Consultant Assistant Professor: Zev Bryant

Department Offices: Fairchild Building, D100  
Mail Code: 94305-5126  
Email: structuralbio@med.stanford.edu

Courses offered by the Department of Structural Biology are listed under the subject code SBIO on the Stanford Bulletin's ExploreCourses web site.

The department offers course work and opportunities for research in structural biology. Courses fall into two categories: (1) a series of one quarter courses that treat topics of current interest in structural biology and biophysics at an advanced level; and (2) INDE 216, Cells to Tissues, a course for medical students that includes lectures on structure-function relationships of mammalian cells and tissues and a lab on medical histology. The emphasis of research in the department is on understanding fundamental cellular processes in terms of the structure and function of biological macromolecules and their assemblies. Techniques used include standard methods of biochemistry, cell culture, single-molecule fluorescence spectroscopy, genetic engineering, and three dimensional structure determination by x-ray diffraction, nuclear magnetic resonance spectroscopy and electron microscopy, coupled with the development of computational methods.

**DOCTOR OF PHILOSOPHY IN STRUCTURAL BIOLOGY**

University requirements for the Ph.D. are described in the “Graduate Degrees” section of this bulletin.

The graduate program in Structural Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP) in which individuals are candidates for both Ph.D. and M.D. degrees.

The graduate program is intended to prepare students for careers as independent investigators in cell and molecular biology. The principal requirement of a Ph.D. degree is the completion of research constituting an original and significant contribution to the advancement of knowledge. The requirements and recommendations for the Ph.D. degree include:

1. Training in a major with connections to biophysics (e.g., physics, chemistry, or biology, with a quantitative background equivalent to that of an undergraduate physics or chemistry major at Stanford).

2. Completion of the following background courses or their equivalents at other institutions:
   a. CHEM 131, 171, 173, and 175
   b. BIOC 200, 201

3. Completion of the following courses or their equivalents:
   a. SBIO 241 and 242
   b. At least four additional graduate-level courses in physical or biological science
   c. MED 255

4. Opportunities for teaching are available during the first nine quarters at the discretion of the advising committee.

5. The student must prepare a dissertation proposal defining the research to be undertaken including methods of procedure. This proposal should be submitted by Winter Quarter of the third year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Department of Structural Biology. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.

6. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of structural biology.

7. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar on which the research is presented by the candidate.

Applicants to the program should have a bachelor’s degree and should have completed at least a year of course work in biology, mathematics, organic chemistry, physical chemistry, and physics. Application forms must be received by the department before December 15 for notification by April 15. Application to the National Science Foundation for fellowship support is also encouraged. Remission of fees and a personal stipend are available to graduate students in the department. Prospective applicants should contact the Department of Structural Biology for further information.

Current topics of research in the department lie in the areas of gene expression; theoretical, crystallographic, and genetic analysis of protein structure; and cell-cell interaction. See http://www.med.stanford.edu/school/structuralbio for further information.
COURSES OF INSTRUCTION
2009-10

This listing is based on a static extract of courses performed on August 13, 2009. For latest and correct information, including scheduling, see the Bulletin ExploreCourses web site at http://explorecourses.stanford.edu.

Courses of instruction are listed in alphabetical order by subject name, and then numerically by catalog number.

Stanford does not have a standard course catalog numbering system. Courses numbered from 1 through 99 are primarily for freshmen and sophomores. Courses numbered from 100 through 199 are primarily for juniors and seniors; some departments, however, offer courses numbered from 200 through 299 for juniors and seniors. Most courses numbered 200 and above are for graduate students; no graduate career course is numbered below 200, and all courses above 300 are for graduate students.

Courses offered for variable units require different amounts of work depending upon the units for which a student enrolls. Students are advised to consult with the department or instructor offering the course to determine the appropriate number of units.

Beginning in Autumn Quarter 2005, a modified and redefined set of undergraduate General Education Requirements, designated in this bulletin as GERs, went into effect. Students who matriculated Autumn Quarter 2004-05 or later are subject to the revised General Education Requirements effective Autumn Quarter 2005-06. Students who matriculated Autumn Quarter 2003-04 or earlier remain on the old General Education Requirements, but may elect to change to the new system. Students interested in electing the revised GER system should contact the Office of the University Registrar. No further changes are allowed once a student has elected to move to the new system.

WIM indicates courses that fulfill the undergraduate departmental Writing in the Major requirement. AU indicates Activity courses that are subject to undergraduate University Activity Unit limitations (8 units maximum).

SUBJECT CODES

Each course is identified by a subject code and a catalog number. Throughout this bulletin, Axess subject codes have been printed wherever relevant.

SUMMER SESSION

This bulletin includes, for the Summer Session, only those courses that can be tentatively scheduled at publication time by each department. For the complete list of courses and faculty, refer to http://summer.stanford.edu, updated in February. Courses added during the academic year are available on the Stanford Bulletin web site at http://bulletin.stanford.edu which is updated on a quarterly basis.

OVERSEAS STUDIES

Undergraduate courses taught overseas at Stanford’s Bing Overseas Studies Program are listed under the relevant Overseas Studies Center subject code. Courses applicable to an undergraduate major are also listed at the end of the courses section of the relevant subject code.

SCHEDULE OF CLASSES

AERONAUTICS AND ASTRONAUTICS (AA) COURSES

UNDERGRADUATE COURSES IN AERONAUTICS AND ASTRONAUTICS

AA 100. Introduction to Aeronautics and Astronautics
The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including takeoff, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. The history of aeronautics and astronautics. Prerequisites: MATH 41, 42; elementary physics. GER:DB-EngrAppSci
3 units, Aut (Alonso, J)

AA 113N. Structures: Why Things Don’t (and Sometimes Do) Fall Down
(F,Sem) SU Intro Seminar - Freshman. Preference to freshmen. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature’s structures from microorganisms to large vertebrates; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America’s Cup sailboats, and how they win or break; sports equipment; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci
3 units, Win (Springer; G)

AA 115N. The Global Positioning System: Where on Earth are We, and What Time is It?
(F,Sem) SU Intro Seminar - Freshman. Preference to freshmen. Why people want to know where they are: answers include cross-Pacific trips of Polynesians, missile guidance, and distraught callers. How people determine where they are: navigation technology from dead-reckoning, sextants, and satellite navigation (GPS). Hands-on experience. How GPS works; when it does not work; possibilities for improving performance. GER:DB-EngrAppSci
3 units, Aut (Enge, P)

AA 190. Directed Research and Writing in Aero/Astro
For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of student services manager and instructor. WIM
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 199. Independent Study in Aero/Astro
Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN AERONAUTICS AND ASTRONAUTICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AA 200. Applied Aerodynamics
Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on airfoil theory, finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, laminar-to-turbulent transition, compressibility effects, and similarity rules. Biweekly assignments require MATLAB or a suitable programming language. Prerequisite: undergraduate courses in basic fluid mechanics and applied aerodynamics, AA 210A.
3 units, Win (Alonso, J)

AA 201A. Fundamentals of Acoustics
Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multiple analysis of sound radiation; Kirchhoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.
3 units, Aut (Lele, S)

AA 201B. Topics in Aeroacoustics
Acoustic equations for moving medium, simple sources, Kirchhoff formula, and multiple representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsion jets, and airframe and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.
3 units, not given this year

AA 202. Hypersonic Flow
The fundamental principals and equations governing hypersonic flight and high temperature gas dynamics, including chemical and thermal equilibrium and non-equilibrium; statistical thermodynamics; kinetic theory; transport phenomena; radiation; surface heating; and scramjet engines. Prerequisite: understanding of aerodynamics. Recommended: AA 200A.
3 units, Spr (MacCormack, R)

AA 206. Bio-Aerodynamics
Topics: flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisite: course in aerodynamics such as 100, 200A, or 241A.
3 units, not given this year

AA 208. Aerodynamics of Aircraft Dynamic Response and Stability
3 units, Spr (Kroo, I)

AA 210A. Fundamentals of Compressible Flow
Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.
3 units, Aut (Cantwell, B)

AA 210B. Fundamentals of Compressible Flow
Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in non-steady flow. Nonlinear solutions for nonsteady constant area flow
and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonisentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.

3 units, not given this year

AA 214A. Numerical Methods in Fluid Mechanics
Principles underlying the Navier-Stokes equations. Relations between time-accurate and relaxation methods. Implicit and explicit methods combined with flux splitting and space factorization. Considerations of accuracy, stability of numerical methods, and programming complexity. Prerequisites: linear algebra and CME 200, 204, or equivalents with consent of instructor.

3 units, Aut (Pulliam, T)

AA 214B. Numerical Computation of Compressible Flow

3 units, Win (MacCormack, R)

AA 214C. Numerical Computation of Viscous Flow
Numerical methods for solving parabolic sets of partial differential equations. Numerical approximation of the equations describing compressible flow with adiabatic, isotermal, slip, and no-slip wall boundary conditions. Applications to the Navier-Stokes equations in two and three dimensions at high Reynolds number. Computational problems are assigned. Prerequisite: 214B.

3 units, Spr (MacCormack, R)

AA 215A. Advanced Computational Fluid Dynamics
(Same as CME 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Win (Jameson, A)

AA 215B. Advanced Computational Fluid Dynamics
(Same as CME 215B) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Spr (Jameson, A)

AA 218. Introduction to Symmetry Analysis
Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

3 units, Spr (Cantwell, B)

AA 222. Introduction to Multidisciplinary Design Optimization
Design of aerospace systems within a formal optimization environment. Mathematical formulation of the multidisciplinary design problem (parameterization of design space, choice of objective functions, constraint definition); survey of algorithms for unconstrained and constrained optimization and optimality conditions; description of sensitivity analysis techniques. Hierarchical techniques for decomposition of the multidisciplinary design problem; use of approximation theory. Applications to design problems in aircraft and launch vehicle design. Prerequisites: multivariable calculus; familiarity with a high-level programming language: FORTRAN, C, C++, or MATLAB.

3 units, Spr (Alonso, J)

AA 236A. Spacecraft Design
The design of unmanned spacecraft and spacecraft subsystems emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

3-5 units, Aut (Kalman, A)

AA 236B. Spacecraft Design Laboratory
Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisite: 236A or consent of instructor.

3 units, Win (Kalman, A)

AA 236C. Spacecraft Design Laboratory
3 units, Spr (Kalman, A)

AA 238. Human-Centered Design for Aerospace Engineers
The what, when, who, and how of human-centered design. Is it art, magic, science, or engineering? How to integrate human-centered processes into engineering design processes. Analysis of recent human-centered aeronautical and space systems to evaluate successes and limitations.

3 units, not given this year

AA 240A. Analysis of Structures
Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

3 units, Aut (Chang, F)

AA 240B. Analysis of Structures
Thin plate analysis. Structural stability. Material behavior: plasticity and fracture. Introduction of finite element analysis; truss, frame, and plate structures. Prerequisite: 240A or consent of instructor.

3 units, Win (Chang, F)

AA 241A. Introduction to Aircraft Design, Synthesis, and Analysis
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and failure considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

3 units, Aut (Kroo, I)

AA 241B. Introduction to Aircraft Design, Synthesis, and Analysis
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and failure considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

3-4 units, Win (Kroo, I)
AA 241X. Design, Construction, and Testing of Autonomous Aircraft
Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A,B); applied aerodynamics (200A,B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).
3 units, not given this year

AA 242A. Classical Dynamics
(Same as ME 331A) Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.
3 units, Win (Staff)

AA 242B. Advanced Dynamics and Simulations
Formulation of equations of motion with Newton/Euler equations; angular momentum principle; power, work, and energy; Kane's method; and Lagrange's equations. Numerical solutions of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Computed torque control.
3 units, Spr (Staff)

AA 243. Modern Dynamics
3 units, not given this year

AA 246. Computational Impact and Contact Modeling
Rigid body contact including multi-body impact, persistent contact, complementarity formulations, and solution techniques. Impact of elastic bodies using finite elements including penalty and mixed constraint formulations, solution techniques, and time-stepping methods. Shocks and vibration induced by impact. Friction and plasticity models for impact and persistent contact. Prerequisites: 242A, 242B or equivalent, familiarity with MATLAB.
3 units, not given this year

AA 247. Innovation for Aerospace and Space Exploration
How advancing technology needs have stimulated innovation in the aerospace industry. Guest speakers address their own experiences and their vision for those needs which can only be satisfied by innovations. May be repeated for credit.
1 unit, not given this year

AA 252. Techniques of Failure Analysis
Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.
3 units, Spr (Murray, S)

AA 253. Product and Systems Development
Modern approaches to aerospace design development for life cycle value. Concepts of air and space systems development in a systems context. Stakeholder value issues and requirements through manufacturing and delivery. Processes and practices for functional analysis, concept and architecture development, trades, domain criteria, interfaces, and verification and validation. Reliability, risk, and safety. Value stream analysis, integrated product and process development, key characteristics, and hardware/software integration aimed at information systems. Tools involve quality function deployment, design structure matrices, and decision mechanisms.
3 units, Spr (Weiss, S; Alonso, J)

AA 254. Information Systems in Aerospace Vehicles
Sensors, processors, actuators, and operators, and the media and protocols that integrate them for performance and safety.
2 units, Win (Weiss, S)

AA 255. Space Systems Engineering and Design
Systemized approaches to design, fabrication, integration, and testing of flight hardware from the component level through functional systems. The development of systems level requirements based on flow-down from mission requirements and goals. Comparison of systems engineering techniques related to requirements development, tracking, validation, and verification. An examination of risk tracking and mitigation. The development of the Gravity Probe B Relativity Mission will be used as a case study to illustrate key principles.
3 units, Aut (Staff)

AA 256. Mechanics of Composites
Fiber reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Individual design project required of each student, resulting in a usable computer software. Prerequisite: ENGR 14 or equivalent.
3 units, Win (Chang, F)

AA 257. Design of Composite Structures
Hands-on design, analysis, and manufacturing in composites. Composite beams, columns, and plates; application of finite element methods to composite structures; failure analysis and damage tolerance design of composite structures; and impact damage, compression after impact, and bonded and bonded composites joints. Class divided into working teams (design, analysis, manufacturing, and tests) to design and build a composite structure to be tested to failure; the structure may enter the national SAMPE composite bridge design contest. Prerequisite: 256 or consent of instructor.
3 units, not given this year

AA 260. Sustainable Aviation
Quantitative assessment of the impact of aviation on the environment including noise, local, and global emissions, and models used to predict it. Current and future technologies that may allow the air transportation system to meet anticipated growth while reducing or minimizing environmental problems. Atmospheric effects of NOx, CO2, particulates, unburned hydrocarbons, and water vapor deposition at high altitudes and metrics for assessing global climate effects. Noise sources, measurement, and mitigation strategies. Fundamentals of aircraft and engine performance needed to assess current and future concepts. Major national and international policy implications of existing and future technology choices. Recommended: AA 241B.
3 units, not given this year

AA 271A. Dynamics and Control of Spacecraft and Aircraft
The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA 242A, ENGR 105.
3 units, Spr (Rock, S)

AA 272C. Global Positioning Systems
Principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: matrix algebra and MATLAB (or another mathematical programming language).
3 units, Win (Engel, P)

AA 272D. Integrated Navigation Systems
Navigation satellites (GPS, GLONASS), GPS receivers, principles of inertial navigation for ships, aircraft, and spacecraft. Kalman Filters to integrate GPS and inertial sensors. Radio navigation aids (VOR, DME, LORAN, ILS). Doppler navigation systems. Prerequisites: 272C; ENGR 15, 105. Recommended: ENGR 205.
3 units, not given this year
AA 278. Optimal Control and Hybrid Systems
3 units, not given this year

AA 279. Space Mechanics
Orbits of near-earth satellites and interplanetary probes; transfer and rendezvous; decay of satellite orbits; influence of earth's oblateness; sun and moon effects on earth satellites. Prerequisite: ENGR 15 or equivalent, and familiarity with MatLab (or another mathematical programming language).
3 units, Spr (Eng, P)

AA 283. Aircraft and Rocket Propulsion
Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turbofans, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.
3 units, Win (Cantwell, B)

AA 284A. Advanced Rocket Propulsion
The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Nonchemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 or consent of instructor.
3 units, Spr (Karakayoglu, M)

AA 284B. Propulsion System Design Laboratory
Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.
3 units, Aut (Zilliace, G)

AA 284C. Propulsion System Design Laboratory
Continuation of 284A-B. Prerequisite: 284B, and consent of instructor.
3 units, Win (Zilliace, G)

AA 290. Problems in Aero/Astro
(Undergraduates register for 190 or 199.) Experimental or theoretical investigation. Students may work in any field of special interest. Register for section belonging to your research supervisor. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 291. Practical Training
Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student's academic program. Research report outlining work and problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 294. Case Studies in Aircraft Design
Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit.
1 unit, Spr (Jameson, A)

AA 295. Aerospace Structures and Materials
Presentations by researchers and industry professionals in aerospace structures and materials. May be repeated for credit.
1 unit, Spr (Chang, F)

AA 297. Seminar in Guidance, Navigation, and Control
For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.
1 unit, not given this year

AA 300. Engineer Thesis
Thesis for degree of Engineer. Students register for section belonging to their thesis adviser.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 301. Ph.D. Dissertation
Prerequisite: completion of Ph.D qualifying exams. Students register for section belonging to their thesis adviser. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AFRICAN AND AFRICAN AMERICAN STUDIES (AFRICAM)

UNDERGRADUATE COURSES IN AFRICAN AND AFRICAN AMERICAN STUDIES

AFRICAM 40. The Muse, Musings, and Music
Internal and external sources of inspiration and the practice of applying them through creative expression. Creativity as an act of manifestation in daily life. Writing exercises, improvisation games. Students perform their poetry, music, and visual art. Final class project.
3-5 units, Aut (Moses, R), offered only once

AFRICAM 54N. African American Women's Lives
(F.Sem) (Same as HISTORY 54N) Stanford Introductory Seminar. Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality. GER:DB-Hum
4-5 units, Aut (Hobbs, A)

AFRICAM 60. Nation, Diaspora, and the Gods of African American Religion
(Same as RELIGST 60) The histories of religion and faith cultures among communities of the African diaspora. The religious traditions and historical experiences of black communities across the 19th- and 20th-century U.S. and a comparative view of South American, Caribbean and African histories. Close readings of music, film, literature and visual arts and the overlapping religious affiliations of nation and diaspora. GER:DB-Hum
4 units, Spr (Hughes, B)

AFRICAM 64. From Freedom to Freedom Now!: African American History, 1865-1965
(Same as HISTORY 64C, HISTORY 164C) History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Sources include memoirs, letters, personal journals, pamphlets, speeches, literature, film and music. GER:EC-AmerCul
3 units, Win (Hobbs, A)

AFRICAM 75B. Black Sitcoms
The portrayal of black life on television in the 70s. Critical framework including concepts of identity, race, gender, and class. In-class viewings. Sitcoms in relation to theoretical work including that of Toni Morrison, Marlon Riggs, Hermann Gray, Ann duCille, and Mark Anthony Neal.
2 units, Aut (Barker-Alexander, J), offered occasionally
AFRICAAM 101. African American Lecture Series: Race and Faith
Weekly lectures on African or African American artistic expression, culture, history, language, literature, music, politics, religion, and society. One unit for attendance at lecture reading and submission of brief response papers. Additional units require participation in discussion sections, readings, and the opportunity to conduct and record interviews with experts in the lecture series for the AAAS archives. May be repeated for credit.
1-3 units, Spr (Elam, M)

AFRICAAM 105R. Race, Faith, and Migration
(Same as RELIGST 105) A weekly lecture series - drawing upon experts in various disciplines, departments, and centers on campus and beyond - which seeks to understand and explain Race, Faith, and Migration. GER:DB-Hum, EC-GlobalCom
2 units, Win (Hughes, B)

AFRICAAM 123. Great Works of the African American Tradition
Foundational African and African American scholarly figures and their work from the 19th century to the present. Historical, political, and scholarly context. Dialogues distinctive to African American culture. May be repeated for credit.
5 units, not given this year

AFRICAAM 144. African Women Writers
The intricacy and diversity of contemporary African women’s writings. Focus on fiction from various regions of Africa. Authors include Dangarembga, Ba, Okunut, Vera, Head, Aidoo, and El Saadawi. Theoretical readings locate the writings within historical, philosophical, and aesthetic traditions.
5 units, Win (Powell, P), offered once only

AFRICAAM 145. Writing Race, Writing Faith: The Poetics and Politics of Spirituality in Black Literature
How spirituality functions thematically and aesthetically in black literature; how different spiritual practices are articulated in black diasporic communities. Theoretical readings locate the writings within the historical, philosophical, and aesthetic traditions of the literature. Authors include DuBois, Marshall, Walker, Phillips, Broder, and Johnson.
5 units, Win (Powell, P), offered once only

AFRICAAM 145A. Poetics and Politics of Caribbean Women’s Literature
(Same as CSRE 145A) Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization. GER:DB-SocSci, DB-SocSci, EC-Gender
5 units, Win (Duffy, C)

AFRICAAM 146. New Possibilities for Writing and Art
Writing workshop to explore conventional as well as innovative approaches to writing, including digital, sound and movement. How different forms of music can inspire poetry. How still art, live performance, interviews or film shape the way one can think about and compose stories. What those stories and poems look and feel like when put to movement. CWriting experiments, museum visits, and performance of students’ works. Guest poets, fiction writers, and artists who blur these boundaries. Students submit written pieces each week to be discussed.
5 units, Spr (Powell, P), offered once only

AFRICAAM 152. DuBois and American Culture
(Same as ENGLISH 152D) His life and career. Focus on first half of his life from his Harvard doctoral dissertation to the end of the Harlem Renaissance in which he played a crucial role. Sources include his books on history and sociology, scholarly essays, novels, and journals that he edited. GER:DB-Hum, EC-AmerCul
5 units, Spr (Elam, M)

AFRICAAM 173S. Transcultural and Multiethnic Lives: Contexts, Controversies, and Challenges
(Same as ASNAMST 173S, CSRE 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multiethnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in mas media and multicultural communities. What the likes of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.
5 units, Spr (Murphy-Shigematsu, S)

AFRICAAM 190. Directed Reading
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAAM 199. Honors Project
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Win (Staff), Spr (Staff)

AFRICAAM 200X. Honors Thesis and Senior Thesis Seminar
Required for seniors. Weekly colloquia with AAAS Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing. Readings include foundational and cutting-edge scholarship in the interdisciplinary fields of African and African American studies and comparative race studies. Readings assist students situate their individual research interests and project within the larger. Students may also enroll in AFRICAAM 200Y in Winter and AFRICAAM 200Z in Spring for additional research units (up to 10 units total).
3-5 units, Aut (Staff)

AFRICAAM 200Y. Honors Thesis and Senior Thesis Research
3-5 units, Win (Staff)

AFRICAAM 200Z. Honors Thesis and Senior Thesis Research
3-5 units, Spr (Staff)

AFRICAAM 255. Racial Identity in the American Imagination
(Same as HISTORY 255D, HISTORY 355D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music. GER:DB-SocSci, EC-AmerCul
4-5 units, Spr (Hobsb, A)

AFRICAN AND MIDDLE EASTERN LANGUAGES (AMELANG)

UNDERGRADUATE COURSES IN AFRICAN AND MIDDLE EASTERN LANGUAGES

AMELANG 1A. Beginning Arabic, First Quarter
(Formerly AMELANG 120A.) One-year sequence. Emphasis is on reading and writing standard Arabic (fusha).
5 units, Aut (Obeid, K)

AMELANG 1B. Beginning Arabic, Second Quarter
(Formerly AMELANG 120B.) Continuation of 1A.
5 units, Win (Obeid, K)

AMELANG 1C. Beginning Arabic, Third Quarter
(Formerly AMELANG 120C.) Continuation of 1B.
5 units, Spr (Obeid, K)

AMELANG 1S. Intensive Beginning Arabic, Part A
(Formerly AMELANG 20A.) Stanford graduate students restricted to 9 units register for 1G .
5 units, Sum (Barhoum, K)
AMELANG 2A. Beginning Arabic: From Basic Script to Islamic Text, First Quarter  
(Formerly AMELANG 213A.) Introduction to Islam through Arabic. Islam as faith, practice, philosophy, and institution; personalities and dynasties.  
4 units, not given this year

AMELANG 2B. Beginning Arabic: From Basic Script to Islamic Text, Second Quarter  
(Formerly AMELANG 213B.) Continuation of 2A.  
4 units, Win (Staff)

AMELANG 2C. Beginning Arabic: From Basic Script to Islamic Text, Third Quarter  
(Formerly AMELANG 213C.) Continuation of 2B.  
4 units, Spr (Staff)

AMELANG 2S. Intensive Beginning Arabic, Part B  
(Formerly AMELANG 20A.) Continuation of 1S. Stanford graduate student restricted to 9 units register for 2G.  
5 units, Sum (Obeid, K)

AMELANG 3S. Intensive Beginning Arabic, Part C  
(Formerly AMELANG 20C.) Continuation of 2S. Stanford graduate students restricted to 9 units register for 3G.  
5 units, Sum (Aweiss, S)

AMELANG 11A. Intermediate Arabic, First Quarter  
(Formerly AMELANG 121A.) Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.  
2-4 units, Aut (Salti, R)

AMELANG 11B. Intermediate Arabic, Second Quarter  
(Formerly AMELANG 121B.) Continuation of 11A.  
2-4 units, Win (Salti, R)

AMELANG 11C. Intermediate Arabic, Third Quarter  
(Formerly AMELANG 121C.) Continuation of 11B.  
2-4 units, Spr (Salti, R)

AMELANG 11S. Intensive Intermediate Arabic, Part A  
(Formerly AMELANG 221A.) Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications. Stanford graduate students restricted to 9 units register for 11G.  
4 units, Sum (Aweiss, S)

AMELANG 12S. Intensive Intermediate Arabic, Part B  
Continuation of 11S. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications. Stanford graduate students restricted to 9 units register for 12G.  
4 units, Sum (Staff)

AMELANG 13S. Intensive Intermediate Arabic, Part C  
(Formerly AMELANG 221C.) Continuation of 12S. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications. Stanford graduate students restricted to 9 units register for 13G.  
4 units, Sum (Staff)

AMELANG 21A. Advanced Arabic, First Quarter  
(Formerly AMELANG 122A.) Language proficiency through use of complex and compound sentences. Media Arabic, literary works, the Arabic Internet, films, and cultural productions. Continuation of 11C.  
2-4 units, Aut (Aweiss, S)

AMELANG 21B. Advanced Arabic, Second Quarter  
(Formerly AMELANG 122B.) Continuation of 21A.  
2-4 units, Win (Aweiss, S)

AMELANG 21C. Advanced Arabic, Third Quarter  
(Formerly AMELANG 122C.) Continuation of 21B  
2-4 units, Spr (Aweiss, S)

AMELANG 22A. Readings in Arabic Literature, First Quarter  
(Formerly AMELANG 195A.) Short stories, poetry, literary criticism, Islamic texts, essays, and prose by notable Arab writers. Readings in Arabic. Prerequisite: two years of Arabic, native speaker, or equivalent.  
2-4 units, not given this year

AMELANG 23A. Reading Arabic, First Quarter  
For seniors and graduate students who need to acquire reading ability in Arabic for the Ph.D. of for advanced research in their own field.  
2-3 units, Aut (Barhoum, K)

AMELANG 23B. Reading Arabic, Second Quarter  
(Formerly AMELANG 196B.) Continuation of 23A  
2-3 units, Win (Obeid, K)

AMELANG 23C. Reading Arabic, Third Quarter  
(Formerly AMELANG 196C.) Continuation of 23B.  
2-3 units, Spr (Staff)

AMELANG 25A. Colloquial Arabic, First Quarter  
(Formerly AMELANG 198A.) Sources include authentic conversations with native speakers, videotaped conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic.  
2-4 units, Win (Barhoum, K)

AMELANG 25B. Colloquial Arabic, Second Quarter  
(Formerly AMELANG 198B.) Prerequisite: 25A  
2-4 units, not given this year

AMELANG 25C. Colloquial Arabic, Third Quarter  
(Formerly AMELANG 198C.) Continuation of 25B. Prerequisite: 25B  
2-4 units, not given this year

AMELANG 26A. Media Arabic, First Quarter  
(Formerly AMELANG 199A.) Arabic language used today in the printed and electronic media, including the Internet. Recurrent vocabulary and structures used in different modes of media coverage. Prerequisite: 2 years of Arabic.  
2-4 units, Spr (Barhoum, K)

AMELANG 26B. Media Arabic, Second Quarter  
(Formerly AMELANG 199B.) Continuation of 26A. Prerequisite: 26A.  
2-4 units, not given this year

AMELANG 26C. Media Arabic, Third Quarter  
(Formerly AMELANG 199C.) Continuation of 26B. Prerequisite: 26B.  
2-4 units, not given this year

AMELANG 31. The Contemporary Arab World and Culture through Literature  
(Formerly AMELANG 161.) Readings from prominent authors dealing with topics such as gender and women, kinship and social concepts, nationalism, and religion. Texts delineating the cultural uniqueness of the Arab world include works by Naguib Mahfouz, Nawal El-Saadawi, Ghassan Kanafani, Tayyeb Salih, Etel Adnan, and short stories and poetry. No knowledge of Arabic required; extra unit for readings in Arabic. Limited enrollment. GER:DB-Hum, EC-GlobalCom  
4 units, Aut (Barhoum, K)

AMELANG 32. Arab Women Writers and Issues  
(Formerly AMELANG 162.) Fiction and non-fiction work. The major cultural factors shaping their feminist attitudes. Readings: Fatima Mernissi, Nawal El-Saadawi, Etel Adnan, Fadia Faqir, Alifa Rifaat, and Sahar Khalifeh. No knowledge of Arabic required; extra unit for readings in Arabic. Limited enrollment. GER:DB-Hum, EC-Gender  
4 units, Win (Barhoum, K)

AMELANG 33. The Arab World through Travel Literature  
(Formerly AMELANG 163.) Popular colonialist and postcolonialist portrayals of Arab culture and Islam. Recent Western depictions of Arabs and Muslims in travel literature. Readings include Flaubert in Egypt, Guests of the Sheik, Justine, Covering Islam, Nine Parts of Desire, and Motoring with Mohammed. No knowledge of Arabic required; extra unit for readings in Arabic. Limited enrollment. (Barhoum) GER:DB-Hum, EC-GlobalCom  
4 units, Spr (Barhoum, K)

AMELANG 35. The West through Arab Eyes  
GER:EC-GlobalCom

AMELANG 36. The Arabic Language and Culture  
(Same as LINGUIST 170, LINGUIST 270) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson’s notion of diglossia. The main varieties of Arabic, differences among them, and when and why...
where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

3 units, not given this year

**AMELANG 50A. Reading Hebrew, First Quarter**
Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.

2-4 units, Win (Shemtov, V)

**AMELANG 50B. Reading Hebrew, Second Quarter**
Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.

2-4 units, not given this year

**AMELANG 51A. Reading Biblical Hebrew, First Quarter**

2 units, not given this year

**AMELANG 106A. Beginning Swahili, First Quarter**

4 units, Aut (Staff), Spr (Staff)

**AMELANG 106B. Beginning Swahili, Second Quarter**
Continuation of 106A.

4 units, Win (Staff)

**AMELANG 106C. Beginning Swahili, Third Quarter**
Continuation of 106B. Fulfills the University foreign language requirement.

4 units, Spr (Staff)

**AMELANG 107A. Intermediate Swahili, First Quarter**
Continuation of 106C.

2-4 units, Aut (Staff)

**AMELANG 107B. Intermediate Swahili, Second Quarter**
Continuation of 107A.

2-4 units, Win (Staff)

**AMELANG 107C. Intermediate Swahili, Third Quarter**
Continuation of 107B.

2-4 units, Spr (Staff)

**AMELANG 127. Land and Literature**
Israel has captured the imagination of writers throughout the generations. It has been portrayed as promised land, holy land, homeland, empty land, occupied land, and land of dreams. Ideological views and political events have shaped writers’ conception of Israel. Readings include poems, prose, and theoretical texts about place and literature. No knowledge of Hebrew required. GER:DB-Hum, EC-GlobalCom

4 units, Aut (Shemtov, V)

**AMELANG 128A. Beginning Hebrew, First Quarter**

5 units, Aut (Shemtov, V; Greif, E)

**AMELANG 128B. Beginning Hebrew, Second Quarter**

5 units, Win (Shemtov, V; Greif, E)

**AMELANG 128C. Beginning Hebrew, Third Quarter**

5 units, Spr (Porat, G)

**AMELANG 129A. Intermediate Hebrew, First Quarter**

4 units, Aut (Porat, G)

**AMELANG 129B. Intermediate Hebrew, Second Quarter**

4 units, Win (Porat, G)

**AMELANG 129C. Intermediate Hebrew, Third Quarter**

4 units, Spr (Shemtov, V)

**AMELANG 130A. Advanced Hebrew, First Quarter**

1-4 units, Aut (Porat, G)

**AMELANG 130B. Advanced Hebrew, Second Quarter**

1-4 units, not given this year

**AMELANG 130C. Advanced Hebrew, Third Quarter**

1-4 units, not given this year

**AMELANG 138A. Advanced Xhosa, First Quarter**
Continuation of 137C.

3 units, Aut (Sibanda, G)

**AMELANG 138B. Advanced Xhosa, Second Quarter**
Continuation of 138A.

3 units, Win (Sibanda, G)

**AMELANG 138C. Advanced Xhosa, Third Quarter**
Continuation of 138B.

3 units, Spr (Sibanda, G)

**AMELANG 140A. Beginning Yiddish, First Quarter**
Reading, writing, and speaking.

4 units, Aut (Levitow, J)

**AMELANG 140B. Beginning Yiddish, Second Quarter**
Reading, writing, and speaking.

2-4 units, Win (Levitow, J)

**AMELANG 140C. Beginning Yiddish, Third Quarter**
Reading, writing, and speaking.

4 units, Spr (Levitow, J)

**AMELANG 141A. Intermediate Yiddish, First Quarter**

4 units, Aut (Levitow, J)

**AMELANG 141B. Intermediate Yiddish, Second Quarter**

4 units, Win (Staff)

**AMELANG 141C. Intermediate Yiddish, Third Quarter**

4 units, Spr (Staff)

**AMELANG 144A. Beginning Persian, First Quarter**

3 units, Aut (Fahimi, S)

**AMELANG 144B. Beginning Persian, Second Quarter**
Continuation of 144A.

3 units, Win (Fahimi, S)

**AMELANG 144C. Beginning Persian, Third Quarter**

3 units, Spr (Fahimi, S)

**AMELANG 156A. Beginning Zulu, First Quarter**

3 units, Aut (Sibanda, G)

**AMELANG 156B. Beginning Zulu, Second Quarter**
Continuation of 156A.

3 units, Win (Sibanda, G)

**AMELANG 156C. Beginning Zulu, Third Quarter**
Continuation of 156B.

3 units, Spr (Sibanda, G)

**AMELANG 157A. Intermediate Zulu, First Quarter**
Continuation of 156C. Fulfills the University foreign language requirement.

3 units, Aut (Sibanda, G)

**AMELANG 157B. Intermediate Zulu, Second Quarter**
Continuation of 157A.

3 units, not given this year

**AMELANG 157C. Intermediate Zulu, Third Quarter**
Continuation of 157B.

3 units, Spr (Sibanda, G)

**AMELANG 158A. Advanced Zulu, First Quarter**

3 units, Aut (Sibanda, G)

**AMELANG 158B. Advanced Zulu, Second Quarter**

3 units, Win (Sibanda, G)

**AMELANG 158C. Advanced Zulu, Third Quarter**

3 units, Spr (Sibanda, G)

**AMELANG 170A. Biblical Hebrew, First Quarter**
The basic lexicon and grammar of Hebrew of the Tanakh or Old Testament.

2-4 units, Aut (Porat, G)

**AMELANG 170B. Biblical Hebrew, Second Quarter**
Continuation of 170A

2-4 units, Win (Porat, G)

**AMELANG 171. The Bible in Modern Hebrew Literature**
The role of biblical myths in shaping Israeli identity and the development of a secular Hebrew literature. Readings include modern Hebrew poems and novels which offer new meanings to the stories of Genesis, Exodus, David, and the Song of Songs and make them relevant to the context of modern and postmodern Israeli culture. Readings in Hebrew and English. Prerequisite: intermediate Hebrew. GER:DB-Hum

3-4 units, not given this year

**AMELANG 173. Politics and Poetics in Israeli Literature:**
Amos Oz and Other Contemporary Hebrew Writers
Offered in conjunction with Amos Oz’s visit as Stanford’s Writer
in Residence. Literature and political essays by Oz and contemporary Hebrew authors who address the Israeli-Palestinian conflict. Approaches that deal with the intersection of theory and practice and politics and poetics in Israeli literature. No knowledge of Hebrew required. GER:EC-GlobalCom

4-5 units, not given this year

AMELANG 176. Introduction to Ladino: Language, Literature, and Culture
Prerequisite: two quarters of Spanish.
1-4 units, not given this year

AMELANG 177. Middle Eastern Cities in Literature and Film
Sources include short stories, novels, and movies about Beirut, Tel Aviv, Jerusalem, Cairo, and Amman. Focus is on a cultural and intellectual history of each city. Issues such as the role that Middle Eastern cities play in the development of the modern Hebrew and Arabic novels, the city as a center of social and political life, and the city as a space of collective memory. GER:EC-GlobalCom

4-5 units, not given this year

AMELANG 184A. Beginning Turkish, First Quarter
3 units, Aut (Ozisik, N)

AMELANG 184B. Beginning Turkish, Second Quarter
Continuation of 184A.
3 units, Win (Ozisik, N)

AMELANG 184C. Beginning Turkish, Third Quarter
3 units, Win (Staff)

AMELANG 185A. Intermediate Turkish, First Quarter
Continuation of 184C. Fulfills the University foreign language requirement.
3 units, Aut (Ozisik, N)

AMELANG 185B. Intermediate Turkish, Second Quarter
Continuation of 185A.
3 units, Win (Ozisik, N)

AMELANG 185C. Intermediate Turkish, Third Quarter
Continuation of 185B.
3 units, Spr (Staff)

GRADUATE COURSES IN AFRICAN AND MIDDLE EASTERN LANGUAGES

AMELANG 11G. Intensive Intermediate Arabic, Part A
For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, Sum (Staff)

AMELANG 12G. Intensive Intermediate Arabic, Part B
Continuation of 11G. For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, Sum (Staff)

AMELANG 13G. Intensive Intermediate Arabic, Part C
Continuation of 12G. For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, Sum (Staff)

AMELANG 203A. Beginning Hausa, First Quarter
For grads only.
3 units, Sum (Staff)

AMELANG 203B. Beginning Hausa, Second Quarter
For grads only
3 units, Sum (Staff)

AMELANG 297. Directed Reading in African and Middle Eastern Languages
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AMELANG 395. Graduate Studies in African and Middle Eastern Languages
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAN STUDIES (AFRICAST)

UNDERGRADUATE COURSES IN AFRICAN STUDIES

AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa
(Same as AFRICAST 211) Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems. GER:EC-GlobalCom, EC-GlobalCom

5 units, Win (Samoff, J)

AFRICAST 112. AIDS, Literacy, and Land: Foreign Aid and Development in Africa
(Same as AFRICAST 212) Public policy issues, their roots, and the conflicts they engender. The policy making process: who participates, how, why, and with what results? Innovative approaches to contested policy issues. Foreign roles and their consequences. Case studies such as: a clinic in Uganda that addresses AIDS as a family and community problem; and strategies in Tanzania to increase girls’ schooling. GER:EC-GlobalCom

5 units, Win (Samoff, J)

AFRICAST 151. AIDS in Africa
Medical, social, and political aspects of the HIV epidemic in sub-Saharan Africa including: biology, transmission, diagnosis, and treatment of HIV; mother-to-child transmission and breastfeeding; vaccines; community and activist responses to the HIV epidemic; economics of HIV treatment; governance and health; ethics in research and program implementation.
3 units, not given this year

AFRICAST 199. Independent Study or Directed Reading
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAST 200. The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar
Goal is to prepare students for an HIV/AIDS prevention, service-learning experience in Tanzania. Topics include: history of HIV/AIDS epidemic globally and in Tanzania; social and economic impact of AIDS; national and societal responses; ethical issues in crosscultural service learning; teaching for prevention; biology of HIV transmission, disease progression, and prevention; introduction to Tanzanian history and politics; HIV/AIDS and development; social, cultural, and economic context of HIV risk; and strategies for HIV prevention in Tanzania.
1 unit, Spr (Katzenstein, D)

GRADUATE COURSES IN AFRICAN STUDIES

AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa
(Same as AFRICAST 111) Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems. GER:EC-GlobalCom, EC-GlobalCom

5 units, Win (Samoff, J)

AFRICAST 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa
(Same as AFRICAST 112) Public policy issues, their roots, and the conflicts they engender. The policy making process: who participates, how, why, and with what results? Innovative approaches to contested policy issues. Foreign roles and their consequences. Case studies such as: a clinic in Uganda that addresses AIDS as a family and community problem; and strategies in Tanzania to increase girls’ schooling.
5 units, Win (Samoff, J)
AFCRIST 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation
(Same as COMPLIT 278, FRENLT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and self-representation, with an emphasis on the evolution of modernity, new sensibilities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.
3-5 units, Aut (Boyi, E)

AFCRIST 299. Independent Study or Directed Reading
3 units, Aut (Staff), Win (Staff), Spr (Staff)

AFCRIST 300. Contemporary Issues in African Studies
Guest scholars present analyses of major African themes and topics. Brief response papers required. May be repeated for credit.
1 unit, Aut (Hubbard, L), Win (Hubbard, L), Spr (Hubbard, L)

AFCRIST 301A. The Dynamics of Change in Africa
(Same as HISTORY 346) Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Addresses critical issues in African Studies by exploring intersections of the organization of power, structure of the economy, and patterns of social stratification. Interpretive debates on Africa’s engagement with the slave trade, impact of colonialism, decolonization, democratization and civil wars, health and society, and Africa’s engagement with globalization. The process of knowledge production and its social location, and the current state of knowledge.
4-5 units, Aut (Roberts, R)

AFCRIST 302. Research Workshop
Required for African Studies master’s students. Student presentations.
1 unit, Spr (Roberts, R)

AMERICAN STUDIES (AMSTUD)

UNDERGRADUATE COURSES IN AMERICAN STUDIES

Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? GER:EC-AmerCul
3-5 units, Win (Mesa, C)

AMSTUD 114N. Visions of the 1960s
(S, Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books. GER:DB-Hum, EC-AmerCul
5 units, Aut (Gillam, R)

AMSTUD 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death
(Same as ENGLISH 123G) The vitality and versatility of a writer who has been called America’s Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain’s legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook. GER:DB-Hum
1-5 units, Spr (Fishkin, S; Obenzinger, H)

AMSTUD 137. Jefferson in Paris
Thomas Jefferson’s years in Paris (1784-1789). The historical, political, literary, aesthetic, domestic, romantic, and transformative aspects of the Paris sojourn, through an interdisciplinary approach to the facts and fictions Jefferson generated. Sources include letters, articles, books, histories, novels, and films.
3-5 units, Aut (Mesa, C)

AMSTUD 150. American Literature and Culture to 1855
(Same as ENGLISH 123) Sources include histories, poetry, autobiography, captivity and slave narratives, drama, and fiction. Authors include Mather, Bradstreet, Rowlandson, Franklin, Brookden Brown, Emerson, Douglass, Hawthorne, and Melville. GER:DB-Hum, EC-AmerCul
5 units, Spr (Richardson, J)

AMSTUD 156H. History of Women and Medicine in the United States
Women’s bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women’s bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing. GER:EC-Gender
5 units, Spr (Horn, M)

AMSTUD 179. Introduction to American Law
(Same as LAWGEN 106, POLISCI 122) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. GER:DB-SocSci
3-5 units, Win (Friedman, L)

AMSTUD 183. Border Crossings and American Identities
(Same as CSRE 183) How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa’s conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one’s own identity. GER:DB-Hum, EC-AmerCul
5 units, Aut (Duffy, C)

AMSTUD 184. Cityscapes of the Imaginary: The Urban World in Literature and Film
Experiences of the modernizing urban world through narratives of novelists, poets, and filmmakers who have charted the interior spaces of life in the city from historical, cultural, geographical, or transnational perspectives. Texts include: Zola’s account of capital expansion in Second Empire Paris, The Delights of Ladies; Edward Said’s diaporic Palestinian Cairo memoir, Out of Place; Sinan Anton’s anti-imperialist poetry of Baghdad; Edwidge Danticat’s Haitian New York and Port-au-Prince bicultural novel, The Dew Breaker; Pakistani British filmmaker Hanif Kureishi’s vision of immigrant dislocation, My Son the Fanatic; and stories of Baltimore streets from the HBO series, Wire.
5 units, Spr (Staff)

AMSTUD 185. American Studies Internship
Recommended to declared majors. Practical experience working in a field related to American Studies for six to ten weeks. Students make internship arrangements with a company or agency, under the guidance of a sponsoring faculty member, and with the consent of the director or a program coordinator of American Studies. Required paper focused on a topic related to the internship and the student’s studies. May be repeated for credit.
1-3 units, Win (Staff), Spr (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AMSTUD 195. Individual Work
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
AMSTUD 203A. Children in American History
Children as a subject of historical inquiry. The experience of children, ideas about childhood, and policies and institutions for children from the late 18th century to the present. How were children perceived and cared for within families, and what was growing up like for children? Variations in childhood experience based on class, race, ethnicity, gender, and geographic location. Discourses on the nature of childhood developed by experts and society. How society defined its responsibility to children, and how it treated those dependent on public care or defined as social problems. GER: DB-SocSci
5 units, Win (Horn, M)

AMSTUD 214. The American 1960s: Thought, Protest, and Culture
The meaning of the American 60s emphasizing ideas, culture, protest, and the new sensibility that emerged. Topics: black protest, the new left, the counterculture, feminism, the new literature and journalism of the 60s, the role of the media in shaping dissent, and the legacy of 60s protest. Interpretive materials from film, music, articles, and books. GER: DB-Hum, EC-AmerCul
5 units, Aut (Gillam, R)

AMSTUD 250. Senior Research
Research and writing of senior honors thesis under the supervision of a faculty member. The final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHROPOLOGY (ANTHRO)

UNDERGRADUATE COURSES IN ANTHROPOLOGY

ANTHRO 1. Introduction to Cultural and Social Anthropology
(Same as ANTHRO 201) Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films. GER: DB-SocSci, EC-GlobalCom
5 units, Win (Yamagasko, S)

ANTHRO 3. Introduction to Prehistoric Archaeology
(Same as ARCHILGY 1) Aims, methods, and data in the study of human society’s development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. GER: DB-SocSci, EC-GlobalCom
3-5 units, Aut (Rick, J)

ANTHRO 4. Language and Culture
Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethno-graphy of language; language change; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language). GER: DB-SocSci
4-5 units, not given this year

ANTHRO 6. Human Origins
(Same as ANTHRO 206, BIO 106, HUMBIO 6) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern human species Homo sapiens, between 100,000 and 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER: DB-NatSci
5 units, Win (Klein, R)

ANTHRO 7. Introduction to Forensic Anthropology
The application of anthropological and archaeological methods to forensics. Topics include the recovery and identification of individuals via skeletal and DNA analysis, reconstruction of premortem and postmortem histories of remains, analysis of mass graves, human rights issues, surveillance tape analysis, analysis of crime scene materials, and expert witness testimony. Legal and ethical dimensions. GER: DB-NatSci
4 units, Spr (DeGusta, D)

ANTHRO 12. Anthropology and Art
Modernity. How the concept of art appears timeless and common-sensical in the West, and with what social consequences. Histori-izing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art. GER: DB-Hum
5 units, Win (Malkki, L)

ANTHRO 14. Introduction to Anthropological Genet-ics
(Same as HUMBIO 14) How genetic methods address anthropo-logical questions. Examples include the evolutionary relationships between humans and the apes, the place of the Neanderthals in human evolution, the peopling of the New World, ancient DNA, the genetics of ethnicity, forensic genetics, genomics, behavioral genetics, and hereditary diseases. GER: DB-NatSci
3-5 units, not given this year

ANTHRO 15. Sex and Gender
Commonality and diversity of gender roles in crosscultural persp ective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, chang ing views about men’s and women’s roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics. GER: DB-SocSci, EC-Gender
3 units, Win (Bird, R)

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural col lapse, and assimilation, the relationships between Native Ameri cans and American society. Focus is on three themes leading to in class moot court trials: colonial encounters and colonizing dis courses; frontiers and boundaries; and sovereignty of self and na tion. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popu lar culture. GER: DB-SocSci, EC-AmerCul
5 units, Win (Wilcox, M)

ANTHRO 21N. The Anthropology of Globalization
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anthropological approach to how cultural change, economic re structuring, and political mobilization are bound up together in the process of globalization. GER: DB-SocSci
3-4 units, Aut (Ebron, P)

ANTHRO 22. Archaeology of North America
Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact. GER: DB-SocSci, EC-AmerCul
3-5 units, Win (Truncer, J)

ANTHRO 22N. Ethnographies of North America: An Intro-duction to Cultural and Social Anthropology
3-4 units, Win (Wilcox, M)

ANTHRO 30. Linguistic Field Methods
(Same as LINGUIST 174, 274A) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequi site: introductory course in linguistics.
3-5 units, not given this year
ANTHRO 31. Japanese Society and Culture
(Same as ANTHRO 277A) Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class; contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism. GER:DB-SocSci, EC-GlobalCom
5 units, not given this year

ANTHRO 31. Ecology, Evolution, and Human Health
Human adaptation and plasticity (the ability of an individual with a given genotype to change its phenotype), human environments, and their relationship to health and well-being. Environment in the broadest sense including not just the physical and biotic but the social and psychological. Topics include the evolution of plasticity and reaction norms, the physiology of stress and the inflammatory response, demography, reproductive decision making, urbanization, migration, infectious disease, social capital and social networks, nutrition, nutritional deficiencies, growth, metabolic syndrome, and social inequalities. No prior course work in ecological or medical anthropology required.
3-5 units, Spr (Jones, J)

ANTHRO 32. Theories in Race and Ethnicity
Concepts and theories of race and ethnicity in the social sciences and cultural studies. U.S. based definitions, ideas, and problems of race and ethnicity are compared to those that have emerged in other areas of the world. GER:DB-SocSci
5 units, not given this year

ANTHRO 82. Medical Anthropology
(Same as ANTHRO 282) Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Jain, S)

ANTHRO 90A. History of Archaeological Thought
(Same as ARCHLGY 103) Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.
5 units, Aut (Aldrich, C)

ANTHRO 90B. Theory of Cultural and Social Anthropology
Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies.
GER:DB-SocSci
5 units, Win (Ebron, P)

ANTHRO 90C. Theory of Ecological and Environmental Anthropology
(Same as HUMBIO 118) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. GER:DB-SocSci, WIM
5 units, Win (Bird, D)

ANTHRO 90D. Social Theory in the Anthropological Sciences
Required of majors. Foundational course in the history of social theory in anthropology from the late 19th century to the present. Major approaches to human culture and society: symbolic, social, material, and psychological. Questions about the role of theory in anthropology and how it can be applied to human issues. (HEF IV)
GER:DB-SocSci
5 units, not given this year

ANTHRO 91A. Archaeological Methods
(Same as ARCHLGY 102) Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline’s larger research questions.
5 units, Spr (Briault, C)

ANTHRO 91B. Method and Evidence in Sociocultural Anthropology
Characteristic ways of collecting evidence and supporting arguments in sociocultural anthropology. How to evaluate ethnographic claims. Research activities such as interviewing, participant observation, tracking extended cases, inspecting archives, and reading popular culture.
5 units, Win (Ferguson, J)

ANTHRO 91C. Anthropological Methods in Ecology, Environment, Evolution
(Same as ANTHRO 291C) The methodological and practical aspects of conducting anthropological investigation into human-environmental interactions. Tools for developing, asking, and evaluating anthropological questions in a systematic way. What can constitute an important question, how to frame a question that facilitates investigation, how to design a research project to begin investigating a question, hypothesis development, and experimental design. Approaches to ethnographic, behavioral, and ecological data collection, sampling strategies, observational methods, recording techniques and presentation style.
5 units, Win (Salkeld, D)

ANTHRO 92. Undergraduate Research Proposal Writing Workshop
Practicum. Students develop independent research projects and write research proposals. How to formulate a research question, how to integrate theory and field site, and step-by-step proposal writing.
1-3 units, Aut (Romain, T), Win (Romain, T)

ANTHRO 93. Prefield Research Seminar
For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnography, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.
5 units, Spr (Coll, K)

ANTHRO 93B. Prefield Research Seminar: Non-Majors
Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnography, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork.
5 units, Spr (Coll, K)

ANTHRO 94. Postfield Research Seminar
Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates’ work and revise their own writing in light of others’ comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.
5 units, Aut (McKay, R)

ANTHRO 95A. Research in Anthropology
Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 95B. Senior Paper
Taken in the final quarter before graduation. Independent study and work on senior paper for students admitted to the program. Prerequisite: consent of program adviser and instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 96. Directed Individual Study
Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
ATHRHO 98. Museum Methods
Individually directed work on anthropology collections. Introduction to the computerized storage and retrieval system, cataloging, exhibit techniques. May be taken for one or two quarters by arrangement with instructor.
1-4 units, Aut (Staff), Spr (Staff), Sum (Staff)

ATHRHO 98E. Catalhoyuk and Neolithic Archaeology
Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, livestock domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.
3-5 units, Spr (Love, S)

ATHRHO 100A. India’s Forgotten Empire: The Rise and Fall of Indus Civilization
How and why cities with public baths, long-distance trade, sophisticated technologies, and writing emerged, maintained themselves, and collapsed in the deserts of present-day Pakistan and India from 2500 to 1900 B.C.E. (GER:DB-SocSci, DB-SocSci, EC-GlobalCom
3 units, Spr (Truncer, J)

ATHRHO 100C. Chavin de Huantar Research Seminar
For participants in fieldwork at Chavin de Huantar. Archival research techniques, especially as applied at this site. Students work on data from the previous field season to produce synthetic written materials. Maybe repeated for credit.
2-5 units, Aut (Rick, J)

ATHRHO 101. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology
The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century. (GER:DB-SocSci, EC-GlobalCom
3 units, not given this year

ATHRHO 101A. Archaeology as a Profession
(Same as ARCHLGY 107A) Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.
5 units, Aut (Williams, B)

ATHRHO 102A. Ancient Civilizations: Complexity and Collapse
(Same as ANTHRO 202A) How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B) (GER:DB-SocSci, EC-GlobalCom
3-5 units, Aut (Truncer, J)

ATHRHO 103. The Archaeology of Modern Urbanism
(Same as ANTHRO 203) Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods. (GER:DB-SocSci
5 units, Spr (Staff)

ATHRHO 105. Ancient Cities in the New World
(Same as ANTHRO 205) Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.
3-5 units, not given this year

ATHRHO 106. Incas and their Ancestors: Peruvian Archaeology
(Same as ANTHRO 206A, ARCHLGY 102B) The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B) (GER:DB-SocSci, EC-GlobalCom
3-5 units, Win (Rick, J)

ATHRHO 109. Archaeology: World Cultural Heritage
(Same as ANTHRO 209) Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?
3 units, not given this year

ATHRHO 109A. The Origins of Food Production and Village Life: Prehistoric Archaeology of the Near East
(Same as ANTHRO 209A, ARCHLGY 116, ARCHLGY 316) Major transformations in human lifeways from ca 18,000 - 6,000 B.C.E. in the Near East, including the Levant, Anatolia, and Cyprus. The transition from hunting-gathering to agro-pastoralism, the emergence of sedentary lifeways, plant and animal domestication processes, the appearance of first villages and towns, and the social consequences of novel economic and settlement practices.
3-5 units, Win (Makarewicz, C)

ATHRHO 111. Archaeology of Sex, Sexuality, and Gender
(Same as ANTHRO 211) How anthropologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.
3 units, not given this year

ATHRHO 112. Ethnoarchaeology
(Same as ANTHRO 212) The study of relationships between observable human behavior and material consequences. How ethno graphic observation serves the primary goal of archaeology: to describe variability in past human behavior. The role of ethnoarchaeology in the history of anthropological inquiry, ethnoarchaeological studies of the use of space and subsistence, and future directions. (HEF II, IV; DA-B) (GER:DB-SocSci
3-5 units, Win (Bird, D)

ATHRHO 113. Factual Analysis: Animal Remains for the Archaeologist
(Same as ANTHRO 213, BIO 166, BIO 266) the analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric hunters, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.
3 units, Spr (Staff)

ATHRHO 114. Prehistoric Stone Tools: Technology and Analysis
(Same as ANTHRO 214) Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts. (GER:DB-SocSci
5 units, Spr (Staff)

ATHRHO 114A. The Archaeology of Ritual and Religion
(Same as ANTHRO 214A, ARCHLGY 114, ARCHLGY 314) The issues involved in interpreting past religious systems and ritual practices. Case studies drawn from both prehistoric and historic periods and from across the Old and New Worlds. The challenges inherent in interpreting specific types of archaeological contexts and in combining archaeological and textual sources. The relationship between ritual structures and sociopolitical organisation.
3-5 units, Win (Briault, C)

ATHRHO 115A. Environmental Crises and State Collapse: Lessons from the Past
(Same as HUMBIO 115) The effects and consequences of long-term human interaction with the environment. How and why past societies adapted, or failed to adapt, to changing environmental conditions and relevance to current environmental problems. Demographic, archaeological, and environmental data assessed using case studies from around the world since the late Pleistocene. De-
development of agriculture, societal collapse, sustainability, and policy response. Prerequisite: Human Biology core or equivalent or consent of instructor.
3 units, Aut (Truncer, J)

ANTHRO 120. Introduction to Language Change
(Same as LINGUIST 160) Principles of historical linguistics; the nature of language change. Kinds and causes of change, variation and diffusion of changes through populations, differentiation of dialects and languages, determination and classification of historical relationships among languages, rates of change, the reconstruction of ancestral languages and intermediate changes, parallels with cultural and genetic evolutionary theory, and implications of variation and change for the description and explanation of language in general. Prerequisite: introductory course in linguistics or evolutionary theory. GER:DB-SocSci
4-5 units, Spr (Williams, B)

ANTHRO 121. Language and Prehistory
(Same as ANTHRO 221) Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II, III) GER:DB-SocSci, EC-GlobalCom
3 units, Spr (Fox, J)

ANTHRO 122. Readings in Linguistic Anthropology
(Same as ANTHRO 223) One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.
2 units, Spr (Staff)

ANTHRO 124. Maya Mythology and the Popol Vuh
The mythology and folklore of the ancient Maya, emphasizing the relationship between the 16th-century Quiché Maya mythological epic Popol Vuh (Book of the Council) and classic lowland Maya art, architecture, religion, and politics. General Mesoamerican mythology. Anthropological and other theories of mythology. Class participates in the creation of a web.
3-5 units, Spr (Fox, J)

ANTHRO 126. Cities in Comparative Perspective
(Same as URBANST 114) Core course for Urban Studies majors. The city as interdisciplinary object. Discourses about cities such as the projects, practices, plans, representations, and sensibilities that combine to create what people know about urban spaces. Local, national, and transnational spatial scales. Conversations across regional boundaries; geographies of difference. Case studies. GER:DB-SocSci.
5 units, Aut (Inoue, M; Roque, A)

ANTHRO 130A. Interpreting Space and Place: An Introduction to Mapmaking
How mapmaking, geographical information systems (GIS), and spatial tools can be applied in social research. Qualitative and quantitative approaches in the use of geospatial information. Methodologies and case examples.
5 units, not given this year

ANTHRO 130B. Introduction to GIS in Anthropology
(Same as ANTHRO 230B) How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.
5 units, Win (Engel, C)

ANTHRO 131. The Politics of Humanitarianism
(Same as ANTHRO 231) Anthropological approaches to contemporary practices of humanitarian intervention. How social theory can inform the politics of humanitarianism, charity, and philanthropy. Focus is on Africa from the colonial era to the present. GER:DB-SocSci
5 units, Aut (Malkki, L)

ANTHRO 132A. Colonialism: From Prehistory to the Present
(Same as ARCHLGY 215) This seminar revolves around questions of colonialism. Why do societies practice colonialism? How do archaeologists and anthropologists study colonialism in the past? How do colonialism and imperialism differ? Is it accurate to speak of colonialism in the distant past? In the present? Case studies may include classical Greece and Rome, pre-modern China, pre-Columbian America, and European colonialism in Indonesia and North America.
3-5 units, Spr (Williams, B)

ANTHRO 134. Object Lessons
(Same as ANTHRO 234) Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.
5 units, Aut (Aldrich, C)

ANTHRO 135. Cultural Studies
(Same as ANTHRO 235) Identity, community, and culture; their interactions and formation. GER:DB-SocSci
5 units, not given this year

ANTHRO 135H. CSRE House Seminar: Race and Ethnicity at Stanford
Not open to freshmen. Race, ethnicity, gender, and religion using tools, analytical skills and concepts developed by anthropologists.
3-6 units, Aut (Wilcox, M), Win (Wilcox, M), Spr (Wilcox, M)

ANTHRO 139. Ethnography of Africa
(Same as ANTHRO 239) The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies. GER:DB-SocSci
3 units, not given this year

ANTHRO 142A. Introduction to Egyptian Archaeology
(Same as ARCHLGY 113) The culture of ancient Egypt, from the predynastic to the end of the New Kingdom (3500-1070 B.C.E.), using evidence from funerary and religious monuments, settlements, and mortuary records. Egyptian gods and myths, pyramids and mummies, defied kings and animals. Sources includes art, texts, and archaeology. The ancient Egyptian worldview and how the Egyptians created and contested all aspects of their daily lives, for eternity. Field trips to local museum exhibitions.
3-5 units, Aut (Staff)

ANTHRO 147. Nature, Culture, Heritage
(Same as ANTHRO 247) Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.
3 units, not given this year

ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia
Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rituals, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch Manas. The cultural universe of Central Asian peoples as a symbol of their modern outlook. GER:DB-SocSci
3-5 units, Spr (Kunanbaeva, A)

ANTHRO 148. Health, Politics, and Culture of Modern China
(Same as ANTHRO 248) One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the interactions of health, politics, and culture in contemporary China.
4-5 units, Spr (Kehrman, M)
ANTHRO 148A. Nomads of Eurasia: Culture in Transition (Same as ANTHRO 248A) Traditional peoples of Central and Inner Asia; their lifestyles and cultural history. Modern research approaches and recent fieldwork data published mainly in Russian and Central Asian languages. Audio-visual materials. 5 units, Win (Kurbanbaeva, A)

ANTHRO 150. Identity and Peoples of China Who is Chinese? Perspectives on being Chinese from Han and ethnic minorities in China, in Taiwan, and among overseas Chinese. Emphasis is on distinguishing forces contributing to identity formation from ideological rhetoric about identity. (HEF I, IV) GER:DB-SocSci, EC-GlobalCom 5 units, Win (Brown, M)

ANTHRO 151. Women, Fertility, and Work (Same as ANTHRO 251) How do choices relating to bearing, nursing, and raising children influence women’s participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places. GER:DB-SocSci, EC-Gender 5 units, Win (Brown, M)

ANTHRO 152A. Urban Poverty and Inequality in Contemporary China This course examines poverty and inequality in contemporary urban China. The goal of the course is to help students understand experiences of poverty and inequality in their complex relationships to gender, space development, post-socialism, and globalization. Students completing this course will achieve a better understanding of how processes of class-making in China’s cities are deeply bounded with a wide array of transformations underway in the country’s shaping sociopolitical landscape 5 units, Win (Cho, M)

ANTHRO 153A. Japan’s Postwar Cultural History (Same as ANTHRO 253A) Cultural and social history of Japan since WWII. Falling birth rates, changing family structure, decreasing and then increasing divorce rates, coping with societal aging, expansion of higher education, solving new educational problems, increasing variability of work situation, introduction of foreign workers. Attention to the legacy of Tokugawa and pre-war Japan as antecedent to postwar developments. 5 units, Spr (Staff)

ANTHRO 161B. Human Ecology of the Amazon (Same as ANTHRO 261B, LATINAM 202, LATINAM 302) The ecosystems of the Amazon and their human inhabitants. The biotic and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation. 5 units, Aut (Irvine, D)

ANTHRO 162. Indigenous Peoples and Environmental Problems (Same as ANTHRO 262) The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. GER:DB-Hum, EC-GlobalCom 3-5 units, not given this year

ANTHRO 163. Conservation and Evolutionary Ecology (Same as ANTHRO 263) Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, reclamation and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy. GER:DB-SocSci 3-5 units, not given this year

ANTHRO 164A. Anthropology of Ecotourism Ecotourism has been touted as a win-win scenario for both biodiversity conservation and the well-being of local residents. In practice, these lofty ideals of ecotourism have proven difficult to implement. The rapid development of ecotourism over the last two decades. Focus is on the scholarly literature relating to ecotourism from both supporting and critical perspectives. 5 units, Win (Staff)

ANTHRO 165. Parks and Peoples: The Benefits and Costs of Protected Area Conservation Seminar. Emphasis is on the social impact of parks and reserves. Integrated conservation and development projects (ICDPs) based on protected areas; alternative ways to derive local social benefits from them. Cases include Yellowstone, Manu, Galapagos, Ngoringoro, and Guanacaste. 5 units, not given this year

ANTHRO 165A. People and Parks: Management of Protected Areas As resources become scarcer, parks increasingly serve as ideological battlegrounds for contested core human values and often put livelihoods at stake. Their historical development and the complex array of present-day issues associated with the formal protection of biodiversity. The ideas behind parks and the evolution of these ideas. 5 units, Spr (Staff)

ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness (Same as ANTHRO 266) Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses? 3-5 units, Win (Curran, L)

ANTHRO 169. Communicating Science: Proposals, Talks, Articles (Same as ANTHRO 269) (Graduate students register for 269.) The principles and practice of effective communication in science. Grant proposals, conference presentations, and scientific journal articles. Focus is on writing and speaking skills in professional contexts. GER:DB-SocSci 4-5 units, Win (DeGusta, D)

ANTHRO 171. The Biology and Evolution of Language (Same as ANTHRO 271, HUMBIO 145L) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals; and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory. GER: DB-NatSci 4-5 units, Aut (Fox, J)

ANTHRO 173. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice (Same as HUMBIO 111) The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nations most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice. 3 units, Spr (Curran, L)

ANTHRO 174. Beginnings of Social Complexity (Same as ANTHRO 274) Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B) 5 units, not given this year

ANTHRO 175. Human Osteology (Same as ANTHRO 275, HUMBIO 180) The human skeleton. Focus is on identification of fragmentary human skeletal remains.
Analytical methods include forensic techniques, archaeological analysis, paleopathology, and age/sex estimation. Students work independently in the laboratory with the skeletal collection. GER: DB-NatSci
5 units, Win (DeGusta, D)

ANTHRO 175B. Advanced Human Osteology
(Same as ANTHRO 275B) Skeletal analytical methods such as paleopathology, taphonomy, osteometry, and functional and evolutionary morphology. Strategies for osteological research. Students conduct independent projects in their area of interest. GER: DB-NatSci
5 units, Spr (DeGusta, D)

ANTHRO 177. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 277, HUMBIO 114) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. GER:DB-SocSci
3-5 units, not given this year

ANTHRO 178. Introduction to Anthropological Genetics
For upper division undergraduates. The extent and pattern of variation among human genomes, the origin of these patterns in human evolution, and the social and medical impact of recent discoveries. Topics include: the Human Genome Project; human origins; ancient DNA; genetic, behavioral, linguistic, cultural, and racial diversity; the role of disease in shaping genetic diversity; DNA forensics; genes and reproductive technology. GER: DB-NatSci
3-5 units, Win (Jabin, M)

ANTHRO 179. Cultures of Disease: Cancer
History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.
5 units, not given this year

ANTHRO 180. Science, Technology, and Gender
Why is engineering often seen as a masculine profession? What have women’s experiences been in entering fields of science and technology? How has gender been defined by scientists? Issues: the struggles of women in science to negotiate misogyny and cultural expectation (marriage, children), reproductive issues (surrogate motherhood, visual representations of the fetus, fetal surgery, breast feeding, childbirth practices), how the household became a site of consumerism and technology, and the cultural issues at stake as women join the ranks of scientists. GER:DB-SocSci, EC-Gender
3-5 units, not given this year

ANTHRO 181. Culture and Madness: Anthropological Approaches to Psychiatric Illness
(Same as ANTHRO 281, HUMBIO 146) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology Core or equivalent or consent of instructor.
3 units, Spr (Lurie, T)

ANTHRO 182. An Anthropology of Annihilation: Tobacco at the Turn of the Millennium
The cigarette as the world’s greatest weapon of mass destruction: 100 million dead worldwide from cigarettes during the 20th century, one billion expected to die in the 21st century. How to understand this toll, its production, management, politicization, and depoliticization? What can anthropological and allied perspectives disclose? How does the catastrophe challenge key precepts within anthropology and other branches of the academy?
3-5 units, not given this year

ANTHRO 197. Internship in Anthropological Sciences
Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit
4-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 199. Senior and Master’s Thesis Writing Workshop
(Same as ANTHRO 299) Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master’s students register for 299.
1-2 units, not given this year

GRADUATE COURSES IN ANTHROPOLOGY

ANTHRO 201. Introduction to Cultural and Social Anthropology
(Same as ANTHRO 1) Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.
5 units, Win (Yanagisako, S)

ANTHRO 202A. Ancient Civilizations: Complexity and Collapse
(Same as ANTHRO 102A) How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B)
3-5 units, Aut (Trumner, J)

ANTHRO 203. The Archaeology of Modern Urbanism
(Same as ANTHRO 103) Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods.
5 units, Spr (Staff)

ANTHRO 205. Ancient Cities in the New World
(Same as ANTHRO 105) Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.
3-5 units, not given this year

ANTHRO 206. Human Origins
(Same as ANTHRO 6, BIO 106, HUMBIO 6) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.
5 units, Win (Klein, R)

ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology
(Same as ANTHRO 106, ARCHLGY 102B) The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B)
3-5 units, Win (Rick, J)

ANTHRO 209. Archaeology: World Cultural Heritage
(Same as ANTHRO 109) Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?
5 units, not given this year

ANTHRO 209A. The Origins of Food Production and Village Life: Prehistoric Archaeology of the Near East
(Same as ANTHRO 109A, ARCHLGY 116, ARCHLGY 316)
Major transformations in human lifeways from ca 18,000 - 6,000 B.C.E. in the Near East, including the Levant, Anatolia, and Cyprus. The transition from hunting-gathering to agro-pastoralism, the emergence of sedentary lifeways, plant and animal domestication processes, the appearance of first villages and towns, and the social consequences of novel economic and settlement practices. 3-5 units, Win (Makarewicz, C)
and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation.
5 units, Aut (Irvine, D)

ANTHRO 262. Indigenous Peoples and Environmental Problems
(Same as ANTHRO 162) The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.
3-5 units, not given this year

ANTHRO 263. Conservation and Evolutionary Ecology
(Same as ANTHRO 163) Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.
3-5 units, not given this year

ANTHRO 264. EcoGroup: Current Topics in Ecological, Evolutionary, and Environmental Anthropology
Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Must be taken for 5 units; may be repeated once for 2 units.
5 units, Aut (Bird, R)

ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
(Same as ANTHRO 166) Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?
3-5 units, Win (Curran, L)

ANTHRO 269. Communicating Science: Proposals, Talks, Articles
(Same as ANTHRO 169) (Graduate students register for 269.) The principles and practice of effective communication in science. Grant proposals, conference presentations, and scientific journal articles. Focus is on writing and speaking skills in professional contexts.
4-5 units, Win (DeGusta, D)

ANTHRO 271. The Biology and Evolution of Language
(Same as ANTHRO 171, HUMBIO 145L) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals, and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory.
4-5 units, Aut (Fox, J)

ANTHRO 274. Beginnings of Social Complexity
(Same as ANTHRO 174) Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B)
5 units, not given this year

ANTHRO 275. Human Osteology
(Same as ANTHRO 175, HUMBIO 180) The human skeleton. Focus is on identification of fragmentary human skeletal remains. Analytical methods include forensic techniques, archaeological analysis, paleopathology, and age/sex estimation. Students work independently in the laboratory with the skeletal collection.
5 units, Win (DeGusta, D)

ANTHRO 275B. Advanced Human Osteology
(Same as ANTHRO 175B) Skeletal analytical methods such as paleopathology, taphonomy, osteometry, and functional and evolutionary morphology. Strategies for osteological research. Students conduct independent projects in their area of interest.
5 units, Spr (DeGusta, D)

ANTHRO 277. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 177, HUMBIO 114) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.
3-5 units, not given this year

ANTHRO 277A. Japanese Society and Culture
(Same as ANTHRO 31) Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class, contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism.
3 units, not given this year

ANTHRO 281. Culture and Madness: Anthropological Approaches to Psychiatric Illness
(Same as ANTHRO 181, HUMBIO 146) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.
3 units, Spr (Luhmann, T)

ANTHRO 282. Medical Anthropology
(Same as ANTHRO 82) Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.
3 units, Spr (Jain, S)

ANTHRO 290A. Advanced Social Theory in the Anthropological Sciences
Social theories that have influenced anthropology including evolutionism, Marxism, interpretivism, and postmodernism. Implications of debates among theorists for anthropological research.
5 units, not given this year

ANTHRO 291C. Anthropological Methods in Ecology, Environment, Evolution
(Same as ANTHRO 91C) The methodological and practical aspects of conducting anthropological investigation into human-environmental interactions. Tools for developing, asking, and evaluating anthropological questions in a systematic way. What can constitute an important question, how to frame a question that facilitates investigation, how to design a research project to begin investigating a question, hypothesis development, and experimental design. Approaches to ethnographic, behavioral, and ecological data collection, sampling strategies, observational methods, recording techniques and presentation style.
3 units, Win (Saltkeld, D)

ANTHRO 292B. Master’s Thesis Writing Seminar
May be repeated for credit.
2-4 units, Win (Staff)

ANTHRO 295. Research in Anthropological Sciences
Supervised work with an individual faculty member on the student research project. May be taken for more than one quarter.
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
ANTHRO 299. Senior and Master’s Thesis Writing Workshop
(Same as ANTHRO 199) Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master’s students register for 299.
1-2 units, not given this year

ANTHRO 299. Directed Individual Study
Prerequisite: consent of instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 300. Reading Theory Through Ethnography
Required of and restricted to first-year CASA Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis.
5 units, Win (Malik, L)

ANTHRO 301. History of Anthropological Theory
Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.
5 units, Aut (Yanagisako, S)

ANTHRO 302. Theory and History of Evolution and Ecology
Evolutionary and ecological theory from the 19th century to present. Theory and concepts from evolution and ecology, emphasizing anthropological applications. Evolutionary theories of human behavior, culture, and societies. Ecological theory behind carrying capacity, sustainable yield, and population growth. Emphasis is on tools of analysis and formulating research questions in anthropology today. Upper division undergrads require consent of instructor.
5 units, Aut (Brown, M; Durham, W)

ANTHRO 303. Introduction to Archaeological Theory
The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues.
5 units, not given this year

ANTHRO 304. Data Analysis for Quantitative Research
Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra.
5 units, not given this year

ANTHRO 306. Anthropological Research Methods
Required of CASA Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Enrollment limited to 10.
5 units, Spr (Luhmann, T)

ANTHRO 307. Archaeological Methods and Research Design
Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques.
5 units, not given this year

ANTHRO 308. Proposal Writing Seminar
Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment.
5 units, Spr (Kohrman, M)

ANTHRO 309. Advanced Evolutionary Theory in Anthropological Sciences
History of evolutionary theory from the 19th century to present, emphasizing anthropological applications. Theory and concept in evolutionary biology; evolutionary theories of culture; and interactions of genetic, social, and cultural evolution and their implications. Emphasis is on tools of analysis and the value of evolutionary thinking for formulating research questions in anthropology today. Prerequisite: graduate standing or consent of instructor. (HEF II, III)
5 units, not given this year

ANTHRO 310C. Intersections
Themes of materiality and visuality, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.
5 units, not given this year

ANTHRO 310G. Introduction to Graduate Studies
Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline.
2 units, Aut (Fox, J)

ANTHRO 311. Ethnographic Writing
For graduate students writing or planning to write a dissertation using ethnographic methods. The choices made by the authors of ethnographies in constructing an argument, using data and speaking to an audience of readers. Readings include chapters written by class members currently writing dissertations.
3-5 units, not given this year

ANTHRO 311G. Introduction to Culture and Society Studies in Anthropology
Biomedical electronics and instruments based on electrical engineering for diagnostics and therapeutic treatments of biological systems, focusing on the theory and design principles in modern biomedical electronics using electromagnetic properties. Topics include circuit design for implanted medical devices, physics and signal processing for medical imaging systems, techniques for neural measurements and neuro-decoding, and electronics for drug delivery. Prerequisite: EE 214, 264, or 265.
1-3 units, Win (Ferguson, J), Spr (Ferguson, J)

ANTHRO 322. From Biopolitics to Necropolitics and Beyond
Scholarship produced and informed by Michel Foucault. Focus is on the final period of Foucault’s life; how his discussions of biopolitics, subjectification, governmentality, and death have served as touchstones for recent empirical research. Key interventions initially made under these rubrics; how anthropologists and others have applied, challenged, and extended them.
5 units, not given this year

ANTHRO 324. Political Anthropology
This course introduces an anthropological approach to politics by bringing anthropological ways of thinking and modes of analysis to bear on some of the key presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity will be critically interrogated, while ethnographic accounts will be used both to identify the limits of conventional analytical approaches, and to document the existence of vital forms of politics that such approaches either ignore or misunderstand.
5 units, Win (Ferguson, J)

ANTHRO 326. Postcolonial and Indigenous Archaeologies
The role of postcolonial and Indigenous archaeologies as emergent disciplinary activities within contemporary society. Community-based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context.
5 units, Spr (Wilcox, M)

ANTHRO 327. Language and Political Economy
Theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. The theorization of language in its linkages to power, social relations, and history. Prerequisites: Linguistics or Anthropology course work.
5 units, Aut (Inoue, M)

ANTHRO 328. Visual Culture
The politics of visuality, social imagination, and the ethics of visual production and consumption in the current moment. Sources include anthropology, art history, and philosophy
5 units, Spr (Malkki, L)

ANTHRO 331. The Anthropology of Technology
Iconic discipline-building works of the last three decades; readings that lay out and intervene in contemporary debates.
5 units, not given this year
ANTHRO 332. Transformative Design  
(Same as ENGR 231) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains.  
3-5 units, Win (Jain, S)

ANTHRO 333A. The Cultural Politics of Ambiguity  
Contemporary conceptual approaches to understanding the politics and production of certainty, ambiguity, and doubt. The seemingly ambiguous nature of the science of industrial pollution and contamination exonerate corporate and government polluters from rising rates of cancer, while the science of liberal economic models seems to create no alternative to massive economic subsidies of the financial sector. How culpability, exoneration, transformative action, institutional stasis, and political rely on the production of certainty, ambiguity, and doubt.  
5 units, Aut (Jain, S)

ANTHRO 336. Anthropology of Rights  
Ideas of rights at the center of contemporary politics around the world. An anthropological perspective on how rights are invoked, claimed, and translated into institutional policies in ethnographic cases. The limitations of liberal notions of rights and innovative forms of politics emerging within and against rights talk.  
5 units, not given this year

ANTHRO 338. Anthropological Approaches to Religion  
5 units, Spr (Malikai, L)

ANTHRO 340. Topics in Linguistic Anthropology  
Reading seminar; restricted to Anthropology graduate students. The anthropology of language and semiotics. Focus is on the limits of textualism, and alternative semiotic and epistemic bases for theorizing language and representation. No linguistic anthropology course work required.  
5 units, not given this year

ANTHRO 343. Culture as Commodity  
Focus is on theories of commodification, interests in tourism, national cultures as marketable objects, and how identities are constituted through production and consumption. The formation of global style and taste.  
5 units, Aut (Ebron, P)

ANTHRO 345. New Visions in Medical Anthropology  
Recent experimental histories of the field. Emphasis is on how, working within anthropology’s classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, often violent relationships between the body and social change. The authors’ expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields.  
5 units, Win (Kohrman, M)

ANTHRO 346A. Sexuality Studies in Anthropology  
Current research on sexuality from perspectives including paleoanthropology, archaeology, ethnography, and linguistic anthropology. Readings paired with case studies that explore theoretical and methodological issues.  
5 units, not given this year

ANTHRO 349. Anthropology of Capitalism  
Issues in cultural theory and methodology through research on people who have greater material and cultural resources than those usually studied by anthropologists. How ideas about ideology, hegemony, identity, power, and practice are altered in studying those considered to be agents of power rather than the subaltern. Topics: global capitalism, masculinity, white racial subjectivity. Enrollment limited to 20.  
5 units, Win (Tanagisaka, S)

ANTHRO 352. Foucault: The Question of Method  
Foucault as methodological exemplar for historical and social research. Emphasis is on his historical studies of clinical medicine, prisons, and sexuality, and on applying his methods to empirical studies of topics such as colonialism, race, and liberal governmental rationality.  
5 units, not given this year

ANTHRO 355. Cities in Global Perspective  
Interdisciplinary approach to examining global cities. The concept of the global city, and the interdependent processes that help produce urban spaces. Situating the transformation of urban spaces within globalization and its differential effects; current explanatory frameworks that pay attention to multiple scales of spatial and economic articulation. Prerequisite: graduate standing.  
5 units, not given this year

ANTHRO 356. The Anthropology of Development  
Multidisciplinary. Topics vary annually. Areas include Africa, S. Asia, and Latin America.  
5 units, not given this year

ANTHRO 357. Other Minds: Puzzles in Psychiatric and Psychological Anthropology  
Problems in the way anthropologists explore other minds anthropologically and the ways in which anthropologists seek to understand the models of other minds held by the people observed. Topics include theory of mind, witchcraft, belief, empathy, psychosis, trauma, Freud, Vygotsky, and cognitive dissonance.  
5 units, Win (Lurhmann, T)

ANTHRO 361. Human Behavioral Ecology  
(Same as HUMBIO 117) Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.  
3-5 units, Win (Bird, R)

ANTHRO 362A. Introduction to Human Evolution, Ecology, Genetics, and Culture  
Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student’s first year in the graduate program.  
5 units, not given this year

ANTHRO 370. Advanced Theory and Method in Historical Archaeology  
Current debates about theory and method.  
5 units, not given this year

ANTHRO 371. Proposal Writing for Archaeologists  
The craft of writing research and grant proposals. Focus is on proposals for archaeological fieldwork and laboratory research. Students prepare their own research proposals. Restricted to and required of second-year doctoral students in the Department of Anthropology, Archaeology concentration. Others require consent of instructor.  
5 units, Spr (Staff)

ANTHRO 374. Archaeology of Colonialism/Postcolonialisms  
Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and subaltern, postcolonial, and transnational feminist/queer theory.  
5 units, Aut (Voss, B)

ANTHRO 380. Practice and Performance: Bourdieu, Butler, Giddens, de Certeau  
Poststructuralist theories of iteration and mimesis used by social scientists to negotiate the tension between social structure and social practice; Giddens’ structuration theory; Bourdieu’s practice theory; Butler’s theories of gender performativity; and de Certeau’s analysis of tactics and strategies. Ethnographic and archaeological case studies that employ methodologies inspired by these approaches. Intersections and contradictions between these theorists’ work; their use in anthropological practice. Issues of gender, sexuality, and ethnicity.  
5 units, Win (Voss, B)

ANTHRO 380A. Topics in the Anthropology of China and Taiwan  
Topics vary. May be repeated for credit.  
3-5 units, not given this year

ANTHRO 393. Internship  
Prerequisite: consent of instructor.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
APPPHYS 216. X-Ray and VUV Physics
3 units, Aut (Shen, Z), alternate years, not given next year

APPPHYS 217. Estimation and Control Methods for Applied Physics
Recursive filtering, parameter estimation, and feedback control methods based on linear and nonlinear state-space modeling. Top ics in: dynamical systems theory; practical overview of stochastic differential equations; model reduction; and tradeoffs among performance, complexity, and robustness. Numerical implementations in MATLAB. Contemporary applications in systems biology and quantum precision measurement. Prerequisites: linear algebra and ordinary differential equations.
3 units, alternate years, not given next year

APPPHYS 219. Solid State Physics and the Energy Challenge
Technology issues for a secure energy future; role of solid state physics in energy technologies. Topics include the physics principles behind future technologies related to solar energy and solar cells, solid state lighting, superconductivity, solid state fuel cells and batteries, electrical energy storage, materials under extreme condition, nanomaterials.
3 units, alternate years, not given this year

APPPHYS 223. Stochastic and Nonlinear Dynamics
(Same as BIO 223) Theoretical analysis of dynamical processes; dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.
3 units, Spr (Fisher, D), alternate years, not given next year

APPPHYS 225. Probability and Quantum Mechanics
Structure of quantum theory emphasizing states, measurements, and probabilistic modeling. Generalized quantum measurement theory; parallels between classical and quantum probability; conditional expectation in the Schrödinger and Heisenberg pictures; covariance with respect to symmetry groups; reference frames and super-selection rules. Classical versus quantum correlations; non-local aspects of quantum probability; axiomatic approaches to interpretation. Prerequisites: undergraduate quantum mechanics, linear algebra, and basic probability and statistics.
3 units, alternate years, not given this year

APPPHYS 226. Physics of Quantum Information
3 units, alternate years, not given this year

APPPHYS 227. Quantum Device Physics of Atomic and Semiconductor Systems
3 units, alternate years, not given this year

APPPHYS 232. Advanced Imaging Lab in Biophysics
(Same as BIO 132, BIO 232, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommend ed: basic physics, Biology core or equivalent, and consent of instructor.
4 units, Spr (Block, S; Schnitzer, M; Smith, S; Stearns, T)

APPPHYS 270. Magnetism and Long Range Order in Solids
Cooperative effects in solids. Topics include the origin of magnetism in solids, crystal electric field effects and anisotropy, exchange, phase transitions and long-range order, ferromagnetism, antiferromagnetism, metamagnetism, density waves and superconductivity. Emphasis is on archetypal materials. Prerequisite: PHYSICS 172 or MATSCI 209, or equivalent introductory condensed matter physics course.
3 units, alternate years, not given this year

APPPHYS 272. Solid State Physics I
3 units, Win (Kivelson, S)

APPPHYS 273. Solid State Physics II
3 units, Spr (Kivelson, S)

APPPHYS 275. Probing the Nanoscale
Theory, operation, and applications of nanoprobes of interest in physics and materials science. Lectures by experts. Topics include scanning tunneling microscopy, spectroscopy, and potentiometry; atomic manipulation; scanning magnetic sensors and magnetic resonance; scanning field-effect gates; scanning force probes; and ultra-near-field optical scanning.
3 units, Win (Kirtley, J), alternate years, not given next year

APPPHYS 280. Phenomenology of Superconductors
Phenomenology of superconductivity viewed as a macroscopic quantum phenomenon. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, the Josephson effect, type I type II superconductivity, and the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation. Introduction to thermal fluctuation effects in superconductors and quantum superconductivity.
3 units, Aut (Beasley, M), alternate years, not given next year

APPPHYS 290. Directed Studies in Applied Physics
Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

APPPHYS 291. Practical Training
Opportunity for practical training in industrial labs. Arranged by student with research adviser’s approval. Summary of activities.
3 units, Sum (Staff)

APPPHYS 292. Introductory Biophysics
(Same as APPPHYS 192) For advanced undergraduates or beginning graduate students. Quantitative models used in molecular biophysics. The relation of structure to function. Chemical equilibria, cooperativity, and control: elementary statistical mechanics, affinity plots, allof sery, models of hemoglobin-oxygen binding, bacterial chemotaxis. Macromolecular conformations: polymer chain models, protein folding, taxonomy of globular proteins, general principles of sequence selection. Chemical kinetics. Multiple barriers. CO-
myoglobin kinetics, ion diffusion through channels and ion selectivity, spectroscopy of ion channels-acetylcholine receptor. Supramolecular kinetics; conversion of chemical energy to mechanical force, myosin and kinesin, actin polymers. Nerve impulse propagation: membrane potentials, voltage sensitive ion gates, Hodgkin-Huxley equations, propagation of the nerve impulse.

3 units, Spr (Doniach, S), alternate years, not given next year

APPPHYS 294. Cellular Biophysics
(4 units, S) Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

3 units, Aut (Fisher, D), alternate years, not given next year

APPPHYS 302. Experimental Techniques in Condensed Matter Physics
Cryogenics; low signal measurements and noise analysis; data collection and analysis; examples of current experiments. Prerequisites: PHYSICS 170, 171, and 172, or equivalents.

3 units, Spr (Kapitulnik, A; Moler, K), alternate years, not given next year

APPPHYS 304. Lasers Laboratory
Theory and practice. Theoretical and descriptive background for lab experiments, detectors and noise, and lasers (helium neon, helium-argon, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth and tuning, Q-switching and mode-locking. Limited enrollment. Prerequisites: EE 231 and 232, or consent of instructor.

3 units, Win (Byer, R)

APPPHYS 305. Nonlinear Optics Laboratory
Laser interaction with matter. Laser devices provide radiation to explore the linear and nonlinear properties of matter. Experiments on modulation, harmonic generation, parametric oscillators, mode-locking, stimulated Raman and Brillouin scattering, coherent anti-Stokes scattering, other four-wave mixing interactions such as wavefront conjugation and optical bistability. Optical pumping and spectroscopy of atomic and molecular species. Limited enrollment. Prerequisites: 304, EE 231 and 232, or consent of instructor.

APPPHYS 306. Advanced Phenomenology of Superconductors
Introduction to superconductivity, the effects of thermal fluctuations, vortex phases and dynamics, and superconductivity in the quantum limit.

1-15 units, Win (Beasley, M)

APPPHYS 483. Optics and Electronics Seminar
Current research topics in lasers, quantum electronics, optics, and photonics by faculty, students, and invited outside speakers. May be repeated for credit.

1 unit, Aut (Yuckovic, J), Win (Yamamoto, Y), Spr (Byer, R)

ARCHAEOLOGY (ARCHLGY)

UNDERGRADUATE COURSES IN ARCHAEOLOGY

ARCHLGY 1. Introduction to Prehistoric Archaeology
Same as ANTHRO 3 Aims, methods, and data in the study of human society’s development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. GER:DB-SocSci, EC-GlobalCom

3-5 units, Aut (Rick, J)

ARCHLGY 99A. Historical Archaeology in the Archive, Lab, and Underground: Methods
The practice of historical archaeology through methodologies including archival research, oral history, material culture analysis, and archaeological excavation. Students use these methods to analyze the history and archaeology of a local park, the Thornwood Open Space Preserve.

5 units, not given this year

ARCHLGY 102. Archaeological Methods
Same as ANTHRO 91A Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline’s larger research questions.

5 units, Spr (Briault, C)

ARCHLGY 102B. Incas and their Ancestors: Peruvian Archaeology
Same as ANTHRO 106, ANTHRO 206A The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental
COURSES OF INSTRUCTION

ARCHLGY 103. History of Archaeological Thought
(Same as ANTHRO 90A) Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.
3-5 units, Aut (Aldrich, C)

ARCHLGY 104C. The Archaeology of Ancient China
(Same as ARCHLGY 304C) Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.
5 units, not given this year

ARCHLGY 105A. Cultural Property and Global Heritage
(Same as ARCHLGY 305A) The historical, commercial, and intellectual contexts of the collection and misappropriation of cultural artifacts from the 18th century to the present; implications and what they reveal about human engagement with the material past. Emphasis is on contemporary legal and ethical issues of trade and repatriation.
3-5 units, Spr (Brodie, N)

ARCHLGY 106A. Museums and Collections
(Same as ARCHLGY 306A) Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.
3-5 units, Spr (Newble, L)

ARCHLGY 107A. Archaeology as a Profession
(Same as ANTHRO 101A) Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.
5 units, Aut (Williams, B)

ARCHLGY 113. Introduction to Egyptian Archaeology
(Same as ARCHLGY 142A) The culture of ancient Egypt, from the predynastic to the end of the New Kingdom (3500-1070 B.C.E.), using evidence from funerary and religious monuments, settlements, and mortuary records. Egyptian gods and myths, pyramids and mummies, defied kings and animals. Sources includes art, texts, and archaeology. The ancient Egyptian worldview and how the Egyptians created and contested all aspects of their daily lives, for eternity. Field trips to local museum exhibitions.
3-5 units, Aut (Staff)

ARCHLGY 114. The Archaeology of Ritual and Religion
(Same as ARCHLGY 314) The issues involved in interpreting past religious systems and ritual practices. Case studies from prehistoric and historic periods and from across the Old and New Worlds. Designed to illustrate the challenges inherent in interpreting specific types of archaeological contexts and in combining archaeological and textual sources. The relationship between ritual structures and sociopolitical organisation.
3-5 units, Win (Briault, C)

ARCHLGY 115. Introduction to Archaeological Geophysical Prospection
(Same as ARCHLGY 315) The use of subsurface geophysical survey techniques is a fast-growing area in archaeological field work. Geophysical techniques commonly used which provide fast and non-invasive imaging of archaeological features. Focus is on a conceptual understanding of the geophysical processes behind these techniques. Techniques applied during hands-on, field-based acquisition with electrical resistivity, magnetic, electromagnetic induction, and ground penetrating radar instruments at local archaeological sites.
2-5 units, Aut (Staff)

ARCHLGY 116. The Origins of Food Production and Village Life: Prehistoric Archaeology of the Near East
(Same as ANTHRO 109A, ANTHRO 209A, ARCHLGY 316) Major transformations in human lifeways from ca 18,000 - 6,000 B.C.E. in the Near East, including the Levant, Anatolia, and Cyprus. The transition from hunting-gathering to agro-pastoralism, the emergence of sedentary lifeways, plant and animal domestication processes, the appearance of first villages and towns, and the social consequences of novel economic and settlement practices.
3-5 units, Win (Makarewicz, C)

ARCHLGY 117. Ceramics: Art and Science
(Same as CLASSART 114) From clay to culture. Design, technology, manufacture, and consumption of ceramics. Guest lecturers, site visits, and hands-on studio work.
3-5 units, Spr (Shanks, M)

ARCHLGY 215. Colonialism: From Prehistory to the Present
(Same as ANTHRO 132A) This seminar revolves around questions of colonialism. Why do societies practice colonialism? How do archaeologists and anthropologists study colonialism in the past? How do colonialism and imperialism differ? Is it accurate to speak of colonialism in the distant past? In the present? Case studies may include classical Greece and Rome, pre-modern China, pre-Columbian America, and European colonialism in Indonesia and North America.
3-5 units, Spr (Williams, B)

GRADUATE COURSES IN ARCHAEOLOGY

ARCHLGY 304C. The Archaeology of Ancient China
(Same as ARCHLGY 104C) Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.
5 units, not given this year

ARCHLGY 305A. Cultural Property and Global Heritage
(Same as ARCHLGY 105A) The historical, commercial, and intellectual contexts of the collection and misappropriation of cultural artifacts from the 18th century to the present; implications and what they reveal about human engagement with the material past. Emphasis is on contemporary legal and ethical issues of trade and repatriation.
3-5 units, Spr (Brodie, N)

ARCHLGY 306A. Museums and Collections
(Same as ARCHLGY 106A) Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.
2-5 units, Aut (Staff)

ARCHLGY 314. The Archaeology of Ritual and Religion
(Same as ARCHLGY 114) The issues involved in interpreting past religious systems and ritual practices. Case studies from prehistoric and historic periods and from across the Old and New Worlds. Designed to illustrate the challenges inherent in interpreting specific types of archaeological contexts and in combining archaeologi-
Geophysical techniques commonly used which provide fast and non-invasive techniques is a fast-growing area in archaeological field work. The use of subsurface geophysical prospection is the relationship between ritual structures and sociopolitical organisation.

ARCHGY 314. The Archaeology of Ritual and Religion
(Same as ANTHRO 114A, ANTHRO 214A, ARCHGY 114) The issues involved in interpreting past religious systems and ritual practices. Case studies drawn from both prehistoric and historic periods and from across the Old and New Worlds. The challenges inherent in interpreting specific types of archaeological contexts and in combining archaeological and textual sources. The relationship between ritual structures and sociopolitical organisation.

3-5 units, Win (Briault, C)

ARCHGY 315. Introduction to Archaeological Geophysical Prospection
(Same as ARCHGY 115) The use of subsurface geophysical survey techniques is a fast-growing area in archaeological field work. Geophysical techniques commonly used which provide fast and non-invasive imaging of archaeological features. Focus is on a conceptual understanding of the geophysical processes behind these techniques. Techniques applied during hands-on, field-based acquisition with electrical resistivity, magnetic, electromagnetic induction, and ground penetrating radar instruments at local archaeological sites.

3-5 units, Win (Makarewicz, C)

ART HISTORY (ARTHIST)

UNDERGRADUATE COURSES IN ART HISTORY

ARTHIST 1. Introduction to the Visual Arts
Multicultural rather than historical approach. WIM GER:DB-Hum, WIM
3 units, Aut (Hansen, M)

ARTHIST 2. Asian Art and Culture
(Same as JAPANGEN 60) The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom
5 units, Win (Vinograd, R)

ARTHIST 3. Introduction to the History of Architecture
From antiquity to the 20th century, mostly Western with some non-Western topics. Buildings and general principles relevant to the study of architecture. GER:DB-Hum
5 units, not given this year

ARTHIST 99A. Student Guides at the Cantor Center for the Visual Arts
Open to all Stanford students. Introduction to museum administration; art registration, preparation, and installation; rights and reproductions of images; exhibition planning; and art storage, conservation, and security. Skill building in public speaking, inquiry methods, group dynamics, theme development, and art-related vocabulary. Students research, prepare, and present discussions on art works of their choice.
1 unit, Aut (Silver, L)

ARTHIST 101. Archaic Greek Art
(Same as ARTHIST 301, CLASSART 101, CLASSART 201) The development of Greek art and culture from pregeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum
5 units, Aut (Maxmin, J)

ARTHIST 102. Classical and 4th-Century Greek Art
(Same as ARTHIST 302, CLASSART 102) The formation of the classical ideal in 5th-century Athenian art, and its transformation and diffusion in the 5th and 4th centuries against changing Greek history, politics, and religion. GER:DB-Hum
4 units, not given this year

ARTHIST 105. Introduction to Medieval Art
(Same as ARTHIST 305) Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include: devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals. GER:DB-Hum
4 units, not given this year

ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.
(Same as ARTHIST 306) Art-historical developments, and monuments and works of art. Topics include: the transition from naturalism to abstraction; imperial art and court culture; pilgrimage and cult of saints; and secular art and luxury objects. GER:DB-Hum
4 units, not given this year

ARTHIST 106A. Art of Pilgrimage and Crusade
(Same as ARTHIST 306A) Focus is on the artistic production of Mediterranean 12th-13th centuries exploring the phenomena of pilgrimage and Crusade. The rise of the Normans; the establishment of the pilgrimage to Santiago de Compostella as part of the Reconquista of Spain; the Crusader capture of Jerusalem in 1099 and the subsequent formation of Crusader states in the eastern Mediterranean; the rise of the Ayyubids and the emergence of the Italian city-state trade. The interconnectedness between the rise of narrative and conquest; the emergence of monumental sculpture; and the clash between tactility and optical visuality.
4 units, Spr (Pentcheva, B)

ARTHIST 111. Introduction to Italian Renaissance, 1420-1580
(Same as ARTHIST 311) New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition. GER:DB-Hum
4 units, not given this year

ARTHIST 113. Western Art: Renaissance to Modern
(Same as ARTHIST 313) Currents of western European and N. American art from the Renaissance, baroque, rococo, neoclassical, romantic, and modern periods. Major works of painting, sculpture and architecture analyzed within their historical, sociopolitical, theological and cultural contexts; the evolution of styles and techniques. Masters examined in detail include Giotto, Brunelleschi, Masaccio, Van Eyck, Da Vinci, Michelangelo, Dürer, Caravaggio, Bernini, Rembrandt, Vermeer, David, Delacroix, and Monet.
4 units, Sum (Grossman, M)

ARTHIST 117. Picturing the Papacy: Renaissance to Neoclassicism
(Same as ARTHIST 317) Campaigns of renovations aimed at restoring Rome to its former legendary splendor. How artists and architects created spectacular, large-scale representations of and for Christ’s vicars on earth following the return of the papacy from Avignon in the early 15th century; how they negotiated papal nepotistic intentions from the 15th to the 18th century. GER:DB-Hum
4 units, not given this year

ARTHIST 118. Titian, Veronese, Tintoretto
(Same as ARTHIST 318) The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, disegno, and invention. Themes to be examined include civic piety; new kinds of mythological painting; the intersection between naturalism and eroticism; and the relationship between art and rituals of church and statecraft.
4 units, Spr (Hansen, M)

ARTHIST 120. Art and Culture of Northern Europe in the 17th Century
(Same as ARTHIST 320) Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and
religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied. GER:DB-Hum
4 units, not given this year

ARTHIST 121. 18th-Century Art in Europe, ca 1660-1780
(Same as ARTHIST 321) Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students. GER:DB-Hum
4 units, Win (Beischer, T)

ARTHIST 122. The Age of Revolution
(Same as ARTHIST 322) Painting in Europe during the French Revolution and the Napoleonic conquest. As political events altered social formations, practices in the visual arts were similarly affected by shifts in patronage, public, and the social function of image making. An attempt to align ruptures in the tradition of representation with the unfolding historical situation. The first manifestations of a romantic alternative to the canons of classical beauty and stylistic restraint. GER:DB-Hum
4 units, Win (Marrinan, M)

ARTHIST 124. The Age of Naturalism, ca 1830-1874
(Same as ARTHIST 324) The origins, development, and triumph of naturalist painting in Europe. The creative tensions that emerged between traditional forms of history painting and the challenge of modern subjects drawn from contemporary life. Emphasis is on the development of open-air painting as an alternative to traditional studio practice, and to the rise of new imaging technologies, such as lithography and photography, as popular alternatives to the hand-wrought character and elitist appeal of high art. GER:DB-Hum
4 units, not given this year

ARTHIST 126. Post-Naturalist Painting
(Same as ARTHIST 326) How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art. GER:DB-Hum
4 units, not given this year

ARTHIST 132. American Art and Culture, 1528-1860
(Same as ARTHIST 332) The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others. GER:DB-Hum
4 units, Win (Wolf, B)

ARTHIST 141. The Invention of Modern Architecture
(Same as ARTHIST 341) The creation and development of new architectural forms and theories, from the late 18th to the early 20th centuries, mainly in Europe but also in America. Emphasis is on the responses to new materials, technologies, and social conditions, and how they shaped the architecture of the present. Recommended as preparation for 142. GER:DB-Hum
4 units, not given this year

ARTHIST 142. Architecture Since 1900
(Same as ARTHIST 342) The development of competing versions of modern and postmodern architecture and design in Europe and America, from the early 20th century to the present. Recommended: 141. GER:DB-Hum
4 units, Win (Beischer, T)

ARTHIST 143A. American Architecture
(Same as ARTHIST 343A) A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today’s globalized world. GER:DB-Hum
4 units, Spr (Beischer, T)

ARTHIST 155. American Art Since 1945
(Same as ARTHIST 355) Major figures, movements, and concepts of American art with examples from Europe from WW II to the present. Topics: the ideology and aesthetics of high modernism, the relationship between art and popular culture, the death of painting, the question of postmodernism. Artists: Pollock, Newman, Stella, Johns, Warhol, Andre, Rainer, Smithson, Hesse, Serra, Kruger, Sherman. GER:DB-Hum
4 units, not given this year

ARTHIST 158A. History of Photography
(Same as ARTHIST 358A) From its invention in 1839 to the present. Emphasis is on the evolution of photography as a fine art. Photographs as a universal democratic art form to record familial events and express personal creativity. Development of photography as it relates to other art forms, journalism, architecture, portraiture, landscape, documentation, time, and personal expression. The technology of photography; photographic techniques. GER:DB-Hum
4 units, not given this year

ARTHIST 158B. Photography and Its Histories
(Same as ARTHIST 358B) Photography as a family of technologies and a range of cultural practices from 1839 to the present. The medium’s diverse social uses, its integration with everyday experience, and its complex relationships to the history of art and the history of modernity. Topics drawn from fields including science, politics, sociology, journalism, medicine, and art, with emphasis throughout on how the varying functions and contexts for the photograph allow us to understand its dual status as picture and trace.

ARTHIST 160A. Twentieth-Century African American Art
(Same as ARTHIST 360A) Paintings, sculptures, photography, and mixed media works. Styles, cultural and social histories, patronage, and critical reception. The problems of studying the production of artists of color as a separate field; alternatives to the category of African American art; and the outlook for new critical methodologies. GER:DB-Hum
4 units, not given this year

ARTHIST 173. Issues in Contemporary Art
(Same as ARTHIST 373) Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor. GER:DB-Hum
4 units, not given this year

ARTHIST 176. Feminism & Contemporary Art
(Same as ARTHIST 376) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, Bad Girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity. GER:DB-Hum
4 units, not given this year

ARTHIST 182. Arts of China, 900-1500: Cultures in Competition
(Same as ARTHIST 382) The era from the Five Dynasties and Song to the mid-Ming period was marked by competition in cultural arenas such as between Chinese and formerly nomadic regimes, or between official court art modes and scholar-official and literati groups. Topics include: innovations in architectural and ceramic technologies; developments in landscape painting and theory; the proliferation of art texts and discourses; the rise of educated artists; official arts and ideologies of the Song, Liao, Jin, Yuan, and Ming regimes; new roles for women as patrons and
cultural participants; and Chan and popular Buddhist imagery. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Vinograd, R)

ARTHIST 185. Art in China’s Modern Era
(Same as ARTHIST 385) From the late Ming period to contemporary arts. Topics: urban arts and print culture; commodification of art; painting theories; self-portrayals; court art, collection, and ideological programs; media and modernity in Shanghai; politics and art in the People’s Republic; and contemporary avant garde and transnational movements. GER:DB-Hum
4 units, not given this year

ARTHIST 185B. Contemporary Chinese Art: Sites and Strategies
(Same as ARTHIST 385B) Issues and developments in contemporary Chinese art over the past two decades. Questions of personal and national identity, politics and history, globalization and mass culture, consumerism and urban transformation, and the body, sexuality, and gender, as represented in formats including painting, photography, and installation and multimedia art. Museum visits. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

ARTHIST 187. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868
(Same as ARTHIST 387, JAPANGEN 87) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

ARTHIST 188A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism
(Same as ARTHIST 388A) The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today’s buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form. GER:DB-Hum
4 units, not given this year

ARTHIST 195. Introduction to Black Atlantic Visual Traditions
(Same as ARTHIST 395) African cultural expression in the Americas. How politics, religion, and culture influence the art of the Black Atlantic. Focus is on the period when cultures were brought from Africa to the Americas through the slave trade and came into contact with European colonial powers. GER:DB-Hum
4 units, not given this year

ARTHIST 203. Greek Art in and out of Context
(Same as CLASSART 109) The cultural contexts in which art served religious, political, commercial, athletic, symposiac, and erotic needs of Greek life.
4-5 units, Aut (Maximin, J)

ARTHIST 204A. Appropriations of Greek Art
(Same as CLASSART 110) The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Prerequisite: consent of instructor.
4-5 units, Spr (Maximin, J)

ARTHIST 242. Henri Matisse
Themes, methods, and media in the production of Matisse, the familiar yet enigmatic 20th-century master. The phases of his career; critical responses to his work. Research project and presentation. Recommended: reading knowledge of French.
5 units, not given this year

ARTHIST 256A. Critical Race Art History
Primer for the comparative study of the representation of race in Western art. Whiteness, a construction that has been dependent upon whiteness, blackness, and alterity from its beginnings. Stereotyped ethnicities, nationalities, and territories, such as the Red Indian, the Jew, and Orientalism. Style as an image making strategy shaped by patronage and reception.
5 units, not given this year

ARTHIST 259. The Fifties: Abstract Expressionism to Beat Culture
Abstract expressionism and beat culture as the two dominant models of art making in the U.S. in the 50s, conventionally if not exclusively associated with cultural production in New York and San Francisco. Compares and contrasts existential, ideological, and formal valences relative to the backdrop of postwar American affluence, and the Cold War and its rhetorics of individual freedom and expression. The politics and criticism of abstract expressionism and its relation to the New York Intellectuals in the 60s versus beat culture and the emergence of the counterculture in the 60s.
5 units, Spr (Lee, P)

ARTHIST 282A. Imagining the Imperial: Images of the Court in Late Ming Dynasty Public Culture
Themes of palace and court life popular in vernacular painting, print illustrated books, and fiction. Dimensions of the imperial palace and court in late Ming public imaginary, including strategies of historical displacement, disguised political critique, commerce in imperial objects, the taste for scandal, and mythologies of court life.
5 units, not given this year

ARTHIST 282B. Imagining the Imperial: Images of the Court in Late Ming Dynasty Public Culture ‘Part II’
Exploration in representations of palace and court life in Ming period vernacular painting, illustrated books, and fiction. Topics include the status of the court in the Ming public imaginary, strategies of historical displacement, disguised political critique, commerce in imperial objects, and scandals, rumors and myths surrounding court life.
5 units, Win (Vinograd, R)

ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture
(Same as JAPANLIT 287) Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188. GER:DB-Hum
5 units, not given this year

ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime
(Same as JAPANLIT 287A) The tea ceremony, a premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and treasured objects into a choreographed ritual wherein host, objects, and guests perform roles on a tiny stage. Aesthetic, philosophical, and political dimensions. The evolution of tea taste including its inception in Zen monasteries, use for social control during the 16th century, the development of a class of tea connoisseurs, and 20th-century manipulation by the emerging industrialist class.
3-5 units, Spr (Takewuchi, M)

ARTHIST 290. Mapping Africa: Cartography and Architecture
Visual forms of spatial representation of Africa and implications for understanding the cultures they depict. Examples include early Renaissance cartography and written accounts by explorers, travelers, geographers, and missionaries. African concepts of design, meaning in architecture, and spatial solutions. Case studies of African models.
5 units, not given this year

ARTHIST 292. African Art and Museum Display
African art and its intersection with art concepts, museum politics, art display, and colonialism. African art collections in major institutions around the world. Methodologies. Final class exhibition using art from the Cantor Arts Center collection.
5 units, SPR (Martinez-Ruiz, B)
### COURSES OF INSTRUCTION

**ARTHIST 292A. Researching Africa: Problem and Theory in African Art**
- 5 units, not given this year

**ARTHIST 294. Caribbean and Latin American Art**
- Visual culture from 1505 to 1889 and its relation to current debates on cultural identity, hybridity, syncretism, and creolization. Examination of paintings, travel books and printmaking by artists including De Bry, Bélisaire, Rugendas, Debret, and Landaluce. Close visual analysis of works at the Cantor Arts Center and the Green Library at Stanford University.
- 5 units, Win (Martinez-Ruiz, B)

**ARTHIST 296. Junior Seminar: Methods & Historiography of Art History**
- Historiography and methodology.
- 5 units, Aut (Penicheva, B)

**ARTHIST 297. Honors Thesis Writing**
- May be repeated for credit.
- 1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

**ARTHIST 298. Individual Work: Art History**
- For approved independent research with individual faculty members. Letter grades only.
- 1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

**ARTHIST 299. Research Project: Art History**
- 1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

### GRADUATE COURSES IN ART HISTORY

**ARTHIST 301. Archaic Greek Art**
- (Same as ARTHIST 101, CLASSART 101, CLASSART 201) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E.
- 5 units, Aut (Maxmin, J)

**ARTHIST 302. Classical and 4th-Century Greek Art**
- (Same as ARTHIST 102, CLASSART 102) The formation of the classical ideal in 5th-century Athenian art, and its transformation and diffusion in the 5th and 4th centuries against changing Greek history, politics, and religion.
- 4 units, not given this year

**ARTHIST 305. Introduction to Medieval Art**
- (Same as ARTHIST 105) Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include: devotion and culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.
- 4 units, not given this year

**ARTHIST 306. Byzantine Art and Architecture, 300-1453 C.E.**
- (Same as ARTHIST 106) Art-historical developments, and monumens and works of art. Topics include: the transition from naturalism to abstraction; imperial art and court culture; pilgrimage and cult of saints; and secular art and luxury objects.
- 4 units, not given this year

**ARTHIST 306A. Art of Pilgrimage and Crusade**
- (Same as ARTHIST 106A) Focus is on the artistic production of Mediterranean 12th-13th centuries exploring the phenomena of pilgrimage and Crusade. The rise of the Normans; the establishment of the pilgrimage to Santiago de Compostella as part of the Reconquista of Spain; the Crusader capture of Jerusalem in 1099 and the subsequent formation of Crusader states in the eastern Mediterranean; the rise of the Ayyubids and the emergence of the Italian city-state trade. The interconnection between the rise of narrative and conquest; the emergence of monumental sculpture; and the clash between tactile and optical visibility.
- 4 units, Spr (Penicheva, B)

**ARTHIST 307. Age of Cathedrals**
- (Same as ARTHIST 107) Gothic art and architecture in W. Europe, 1150-1500. The structuring of a modern visual discourse within the ideological framework of a new monarchical church and state, emerging towns and universities, the rise of literacy, the 4 units, not given this year

**ARTHIST 311. Introduction to Italian Renaissance, 1420-1580**
- (Same as ARTHIST 111) New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.
- 4 units, not given this year

**ARTHIST 313. Western Art: Renaissance to Modern**
- (Same as ARTHIST 113) Currents of western European and N. American art from the Renaissance, baroque, rococo, neoclassical, romantic, and modern periods. Major works of painting, sculpture and architecture analyzed within their historical, sociopolitical, theological and cultural contexts: the evolution of styles and techniques. Masters examined in detail include Giotto, Brunelleschi, Masaccio, Van Eyck, Da Vinci, Michelangelo, Dürer, Caravaggio, Bernini, Rembrandt, Vermeer, David, Delacroix, and Monet.
- 4 units, Sum (Grossman, M)

**ARTHIST 316. European Baroque Sculpture**
- (Same as ARTHIST 116) Characteristics of and innovations in sculpture in 17th-century Europe. The integration of sculpture with architecture in theatrical settings by Gian Lorenzo Bernini. Idealized images of statehood for mercantile republics, absolutist monarchs, and the papacy. Smaller works for private contemplation, ideas of classical versus modern style, and workshop practices.
- 4 units, not given this year

**ARTHIST 317. Picturing the Papacy: Renaissance to Neoclassicism**
- (Same as ARTHIST 117) Campaigns of renovations aimed at restoring Rome to its former legendary splendor. How artists and architects created spectacular, large-scale representations of and for Christ’s vicars on earth following the return of the papacy from Avignon in the early 15th century; how they negotiated papal neoplatonic intentions from the 15th to the 18th century.
- 4 units, not given this year

**ARTHIST 318. Titian, Veronese, Tintoretto**
- (Same as ARTHIST 118) The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, disegno, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.
- 4 units, Spr (Hansen, M)

**ARTHIST 320. Art and Culture of Northern Europe in the 17th Century**
- (Same as ARTHIST 120) Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.
- 4 units, not given this year

**ARTHIST 321. 18th-Century Art in Europe, ca 1660-1780**
- (Same as ARTHIST 121) Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.
- 4 units, Aut (Marrinan, B)

**ARTHIST 322. The Age of Revolution**
- (Same as ARTHIST 122) Painting in Europe during the French Revolution and the Napoleonic conquest. As political events altered social formations, practices in the visual arts were similarly affected by shifts in patronage, public, and the social function of...
image making. An attempt to align ruptures in the tradition of representation with the unfolding historical situation. The first manifestations of a romantic alternative to the canons of classical beauty and stylistic restraint.

4 units, Win (Marrinan, M)

ARTHIST 332. American Art and Culture, 1528-1860
(Same as ARTHIST 132) The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

4 units, Win (Wolf, B)

ARTHIST 341. The Invention of Modern Architecture
(Same as ARTHIST 141) The creation and development of new architectural forms and theories, from the late 18th to the early 20th centuries, mainly in Europe but also in America. Emphasis is on the responses to new materials, technologies, and social conditions, and how they shaped the architecture of the present. Recommended as preparation for 142.

4 units, not given this year

ARTHIST 342. Architecture Since 1900
(Same as ARTHIST 142) The development of competing versions of modern and postmodern architecture and design in Europe and America, from the early 20th century to the present. Recommended: 141.

4 units, Win (Beischer, T)

ARTHIST 343A. American Architecture
(Same as ARTHIST 143A) A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today’s globalized world.

4 units, Spr (Beischer, T)

ARTHIST 355. American Art Since 1945
(Same as ARTHIST 155) Major figures, movements, and concepts of American art with examples from Europe from WWII to the present. Topics: the ideology and aesthetics of high modernism, the relationship between art and popular culture, the death of painting, the question of postmodernism. Artists: Pollock, Newman, Stella, Johns, Warhol, Andre, Rainer, Smithson, Hesse, Serra, Kruger, Sherman.

4 units, not given this year

ARTHIST 358A. History of Photography
(Same as ARTHIST 158A) From its invention in 1839 to the present. Emphasis is on the evolution of photography as a fine art. Photography has a unique democratic art form to record familial events and express personal creativity. Development of photography as it relates to other art forms, journalism, architecture, portraiture, landscape, documentation, time, and personal expression. The technology of photography; photographic techniques.

4 units, not given this year

ARTHIST 358B. Photography and Its Histories
(Same as ARTHIST 158B) Photography as a family of technologies and a range of cultural practices from 1839 to the present. The medium’s diverse social uses, its integration with everyday experience, and its complex relationships to the history of art and the history of modernity. Topics drawn from fields including science, politics, sociology, journalism, medicine, and art, with emphasis throughout on how the varying functions and contexts for the photograph allow us to understand its dual status as picture and trace.

4 units, not given this year

ARTHIST 360A. Twentieth-Century African American Art
(Same as ARTHIST 160A) Paintings, sculptures, photography, and mixed media works. Styles, cultural and social histories, patrimony, and critical reception. The problems of studying the production of artists of color as a separate field; alternatives to the category of African American art; and the outlook for new critical methodologies.

4 units, not given this year

ARTHIST 373. Issues in Contemporary Art
(Same as ARTHIST 173) Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.

4 units, not given this year

ARTHIST 376. Feminism and Contemporary Art
(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

4 units, Aut (Lee, P)

ARTHIST 382. Arts of China, 900-1500: Cultures in Competition
(Same as ARTHIST 182) The era from the Five Dynasties and Song to the mid-Ming period was marked by competition in cultural arenas such as between Chinese and formerly nomadic regimes, or between official court art modes and scholar-official and literati groups. Topics include: innovations in architectural and ceramic technologies; developments in landscape painting and theory; the proliferation of art texts and discourses; the rise of educated artists; official arts and ideologies of the Song, Liao, Jin, Yuan, and Ming regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.

4 units, Spr (Vinograd, R)

(Same as ARTHIST 184) The changes marking the transition from medieval to early modern Japanese society generated a revolution in visual culture. This paradigm shift as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

4 units, not given this year

ARTHIST 385. Art in China’s Modern Era
(Same as ARTHIST 185) From the late Ming period to contemporary arts. Topics: urban arts and print culture; commodification of art; painting theories; self-portraiture; court art; collection and ideological programs; media and modernity in Shanghai; politics and art in the People’s Republic; and contemporary avant garde and transnational movements.

4 units, not given this year

ARTHIST 385B. Contemporary Chinese Art: Sites and Strategies
(Same as ARTHIST 185B) Issues and developments in contemporary Chinese art over the past two decades. Questions of personal and national identity; politics and history, globalization and mass culture, consumerism and urban transformation, and the body, sexuality, and gender, as represented in formats including painting, photography, and installation and multimedia art. Museum visits.

4 units, not given this year

ARTHIST 387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868
(Same as ARTHIST 187, JAPANGEN 87) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.

4 units, not given this year

ARTHIST 388A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism
(Same as ARTHIST 188A) The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today’s buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.

4 units, not given this year
ARTHIST 391. Afro-Atlantic Religion, Art, and Philosophy
(Same as ARTHIST 191) Afro-American graphic writing and other forms of visual communication including ancient rite, priest art and rock painting in Africa, and present-day forms in the Americas. The diversity of daily life, religion, social organization, politics, and culture with African origin in the diaspora. Focus is on major contemporary Afro-Atlantic religions including: Palo Monte and Abdual Kasa in Cuba; Gaia in the Dominican Republic; Revival, Obeah, and Kumina in Jamaica; Vodun in Haiti; and Candolle and Macumba in Brazil.
4 units, not given this year

ARTHIST 392. Introduction to African Art
(Same as ARTHIST 192) Form, space, media, medium, and visual expression in African art. Rock art to contemporary art production. Majors works and art expression in terms of function and historical context.
4 units, not given this year

ARTHIST 395. Introduction to Black Atlantic Visual Traditions
(Same as ARTHIST 195) African cultural expression in the Americas. How politics, religion, and culture influence the art of the Black Atlantic. Focus is on the period when cultures were brought from Africa to the Americas through the slave trade and came into contact and conflict with western colonial powers.
4 units, not given this year

ARTHIST 409. Iconoclasm
Iconoclasms, iconophobia, and aniconisms as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation.
4 units, not given this year

ARTHIST 410. Aesthetics of the Icon
How medieval objects were experienced through sight, touch, sound, smell, and taste; how this multisensory richness has been reduced to visual studies of medieval art. Focus is on the Byzantine icon to restore its synaesthetic power; how its performance is tied to culturally-specific modes of seeing. Byzantine liturgy, prayer, epigrams, and literary genres of description such as ekphrasis.
5 units, not given this year

ARTHIST 411. Animation, Performance, Presence in Medieval Art
Focus is on phenomenology and aesthetics. Rather than a mimetic understanding as pictorial naturalism, Medieval art promoted mimesis as simulation of divine presence expressed through phenomenal changes. The shadow, sound, smell, taste, and touch moved the viewer/participant in ways richer than a reductive regime of the eye. Concepts of representation, lifelikeness, performance, and presence in the Byzantine East, Latin West, and Islam.
5 units, Win (Pentcheva, B)

ARTHIST 412. Problems in Italian Mannerism
Questions of the bella maniera, anti-classicism, and center and periphery in mannerist art in light of developments in scholarship from the 70s to the present. Authors include Arasse, Cropper, Cole, Nova, Summers, and Vickers.
5 units, not given this year

ARTHIST 413. Michelangelo
Michelangelo’s long career in light of recent scholarship. Topics include the status of the cult image, the paragon between poetry and the pictorial arts, painting and questions of literary genre, and Counter Reformation reactions to his art.
5 units, not given this year

ARTHIST 414. Italian Mannerism
Questions of the bella maniera, anti-classicism, and center and periphery in mannerist art in light of developments in scholarship from the 70s to the present. Authors include Arasse, Cropper, Cole, Nova, Summers, and Vickers.
5 units, Win (Hansen, M)

ARTHIST 428. Eakins and Vermeer
Questions of gender, visuality, and power in two major realist painters of the 17th and 19th centuries. How Vermeer and Eakins confronted and sometimes evaded the central historical issues of their day: modernization, class, sexuality, nationality, and the status of the artist.
5 units, not given this year

ARTHIST 444. Photograph, Document, Archive
5 units, not given this year

ARTHIST 445A. Photography and Abstraction
Theories and strategies of abstraction and their reciprocal interchange with European and American photographic practices, c.1900-present. Primary emphasis on interwar and postwar avant-gardes and their treatment in critical and historical writing since the 1970s. Topics and themes include the equivalent, equivalence, and their reception; problems of composition and noncomposition; questions of materiality and intentionality; patterns of recurrence, obsession and anachronism; and the status of the index in contemporary scholarship.
5 units, Win (Staff)

ARTHIST 450. Globalization and the Visual Arts
Enrollment restricted to graduate students. Globalization as the most important paradigm for the production, circulation, and reception of contemporary art since the 1990s. The expanding terrain of the art world; biennial culture; new economies of scale and the art market along with its critique in the discourses of empire and multitudes. Debates on the themes of hybridity; post-Fordism; the flat world and capital flows; exteriority and site specificity; and new models of collectivism in recent art.
5 units, Spr (Lee, P)

ARTHIST 455. Media Cultures of the Cold War
(Same as COMM 386) The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and modern man discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory.
3-5 units, not given this year

ARTHIST 476. Postmodernism and the Visual Arts
Enrollment restricted to graduate students. The debates on postmodernism as a cultural dominant (Jameson) emerging in the criticism of the last half of the twentieth century. Theories of periodization and historicity; authorship, appropriation; allegory and narrative; simulation; difference; late capitalism and the postindustrial society; and cybercultures relative to the art of the 1970s-80s. Special attention paid to the culture wars and the importance of postmodernism for contemporary discussions of neoliberalism. Authors include Barthes, Baudrillard, Crimp, Foster, Foucault, Jameson, Habermas, Harvey, Krauss, Lyotard, Owens.
5 units, Aut (Lee, P)

ARTHIST 483. Shanghai Visual Culture: Contested Modernities
Held in conjunction with Modern Ink Painters exhibition at the Cantor Center and the Shanghai Visual Culture exhibition at the Asian Art Museum of San Francisco. Aspects of late 19th- and early 20th-century Shanghai visual culture and its historiography. Topics include the interplay and competition of ink painting with new media such as lithography, photography, illustrated periodicals, and film; images of gendered modernity, from courtesan to new woman; situating the national and the cosmopolitan; the cultural politics of painting; art institutions, education, and exhibitions. Museum visits; and individual or group research projects.
Open to undergraduates with consent of instructor.
5 units, Spr (Vinograd, R)
ART 484. Exhibition Seminar in East Asian Art: From the Bronze Age of China to Japan’s Floating World
Collaborative planning, research, text writing, and design for the summer 2009 exhibition of recent acquisitions of East Asian art at the Cantor Center. Topics include exhibition theory and organization, connoisseurship issues, and practices of display. Students may prepare papers for publication in the Cantor Center’s journal, and contribute introductory and label texts for the exhibition. Advanced undergraduates require consent of instructors.
5 units, not given this year

ART 502. Methods and Historiography of Art History
Restricted to graduate students. From the origins of the discipline in 19th-century Germany to recent debates on visual studies. Iconology, formalism, semiotics, psychoanalysis, and Marxist and feminist approaches to the work of art. Limited enrollment.
5 units

ART 600. Art History Bibliography and Library Methods
1 unit, Aut (Blank, P)

ART 610. Teaching Praxis
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ART 620. Area Core Examination Preparation
For Art History Ph.D. candidates. Prerequisite: consent of instructor.
5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ART 640. Dissertation Proposal Preparation
5 units, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)

ART 650. Dissertation Research
5 units, Aut (Staff), Winter (Staff), Spr (Staff), Summer (Staff)

ART 660. Independent Study
For graduate students only. Approved independent research projects with individual faculty members.
1-15 units, Aut (Staff 1; Martinez-Ruiz, B; Hansen, M; Lee, P; Marrinan, M; Pentcheva, B; Vinograd, R; Wolf, B), Win (Staff), Spr (Staff), Summer (Staff)

ART 660E. Extended Seminar
May be repeated for credit. (Staff)
4 units, Aut (Staff), Win (Staff), Spr (Staff)

ART 670. Dissertation Seminar
For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects.
3-5 units, not given this year

ART STUDIO (ARTSTUDI)

UNDERGRADUATE COURSES IN ART STUDIO

ARTSTUDI 10AX. Filmmaking
Production skills and project development in documentary filmmaking. The fundamentals of filmmaking using digital video production techniques focused on documentary story telling. Shooting in mini-DV format and editing with Final Cut Pro software, students actualize their ideas in an audiovisual medium from conceptualization through post-production and exhibition.
2 units, Aut (Staff)

ARTSTUDI 11. Conceptual Art and the Lens: Studio for Non-Majors
Video and photo as a means to document, construct, and perform. Foundation in the work of artists from the 70s, such as John Baldessari, Cindy Sherman, Vito Acconci, and Bruce Nauman. Individual and group projects. How these concepts have been a resurgence in contemporary art making.
2 units, Spr (Barber, J)

ARTSTUDI 14. Drawing for Non-Majors
2 units, Aut (Staff)

ARTSTUDI 14A. Drawing Comics for Non-Majors
Students learn basic comic book skills such as drawing, inking, panel production, and cover design. Emphasis is on characterization, storyline development, storyboarding, and comic book creation, including individual and group projects. Lectures on various topics and visiting comic book artists complement the studio work. Drawing I recommended.
2 units, Aut (Luna-Avin, J)

ARTSTUDI 17A. Digital Photography for Non-Majors
Critical, theoretical, and practical aspects of creative photography through digital technology. Image processing, editing, and printing. Prerequisites: students must have a digital camera with manual control over shutter speed and aperture.
2 units, Win (Helli, J)

ARTSTUDI 60. Design I: Fundamental Visual Language
Formal elements of visual expression (color, composition, space, and process) through hands-on projects. Two- and three-dimensional media. Emphasis is on originality and inventiveness. Content is realized abstractly. Centered in design; relevant to visual art study and any student seeking to develop visual perception. (lower level)
3-4 units, Win (Edmark, J), Spr (Edmark, J)

ARTSTUDI 70. Introduction to Photography
Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. 35mm camera required. (lower level)
4 units, Aut (Felzmann, L), Win (Felzmann, L), Spr (Felzmann, L), Sum (Francisco, J)

ARTSTUDI 80. Color
Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level)
3-4 units, Win (Edmark, J)

ARTSTUDI 130. Interactive Art I: Objects
The basics of sensors, processors, and actuators needed to create artworks that interact, record, and communicate. Emphasis is on the sculpture and interactive dimensions. (lower level)
4 units, not given this year

ARTSTUDI 131. Sound Art I
Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level)
4 units, Aut (DeMarinis, P)

ARTSTUDI 136, Future Media, Media Archaeologies
Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate. (lower level)
3-4 units, not given this year

ARTSTUDI 138. Sound and Image
Practices that combine audio and visual media. Topics include synesthesias, visual music, film soundtracks, and immersive multimedia practices that combine sound, music, still and moving images, projections, and performance. (lower level)
4 units, Win (Staff)

ARTSTUDI 139. INTERMEDIA WORKSHOP
(Same as MUSIC 155) Composers and visual artists collaborate to develop and produce intermedia works. Musical and visual approaches to the conceptualization and shaping of time-based art. Exploration of sound and image relationships. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARSTSTUDI 131, 136, 167, 177, 179, or MUSIC 123, or equivalent.
3-4 units, Win (Kapuscinski, J; Buchholz, E)

ARTSTUDI 140. Drawing I
Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual draw-
COURSES OF INSTRUCTION

ARTSTUDI 141. Drawing II
Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 140 or consent of instructor. (upper level)
4 units, Aut (Bean, K), Win (Chagoya, E), Spr (Bersamina, L)

ARTSTUDI 145. Painting I
Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure used as subject matter. Emphasis is on painting and drawing from life. (lower level)
4 units, Aut (Bean, K), Win (Bersamina, L), Spr (Staff)

ARTSTUDI 146. Painting II
Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Dürer, Rembrandt, Cézanne, Kahl, Beckmann, Schiele, and Munch. Students paint from life, memory, reproduction, and objects of personal significance to create a world in which they describe themselves. May be repeated for credit. Prerequisites: 140, 145, or consent of instructor. (upper level)
4 units, Aut (Staff), Spr (Chagoya, E)

ARTSTUDI 148A. Lithography
The classic technique of printing from limestones. Techniques to draw an image on the stone, etch and fix the image on the stone, and print it in numbered editions. Students work on a variety of stone sizes. Field trips to local publishers of lithography or lithography exhibitions. (lower level)
4 units, Win (Kain, K)

ARTSTUDI 148B. Introduction to Printmaking Techniques
Techniques such as monotype, monoprint, photocopy transfers, linocut and woodcut, intaglio etching. Demonstrations of these techniques. Field trips to local print collections or print exhibitions. (lower level)
4 units, Spr (Staff)

ARTSTUDI 149. Collage
The generative principles of this characteristic 20th-century art form. Along with assemblage (its three dimensional equivalent) and montage (its counterpart in photography, film, and video), collage introduced crucial aesthetic issues of the modern and postmodern eras. Historically, collage creates an expressive visual language through juxtaposition and displacement, and through materiality, difference, and event. Issues of location (where it happens), object (what it is), process (how it is realized), and purpose (why it is). Prerequisites: 140, 145, or consent of instructor. (upper level)
4 units, Win (Anderson, D)

ARTSTUDI 149A. Printmaking Relief
Various relief printmaking techniques explored with concentrated work in the processes of woodcut, linoleum cut and other related relief approaches. Students are exposed to contemporary practices in printmaking through visits to museums, print workshops, publishers, artists' studios, and other venues.
4 units, Spr (Etkakar, A)

ARTSTUDI 151. Sculpture I
Traditional and non-traditional approaches to sculpture production through working with materials including wood, metal, and plaster. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips, guest lecturers.
4 units, Aut (Arcega, M), Win (Berlier, T), Sum (George, V)

ARTSTUDI 152. Sculpture II
Builds upon 151. Installation and non-studio pieces. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for the studio work. Field trips; guest lecturers. (upper level)
4 units, Spr (Staff)

ARTSTUDI 153. Ecology of Materials
Studio-based sculpture course. Materials used in sculpture and environmental concerns surrounding them. Artists concerned with environmental impact and the interconnection of art with other fields. The impact of material and technique upon form and content; understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program, and visiting lecturers. (lower level)
4 units, Aut (Berlier, T)

ARTSTUDI 154. Kinetic Sculpture
This studio based sculpture course focuses on making sculptural works that embrace physical movement. Students will explore using both low and high technology approaches to creating motion. The class also addresses the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Group discussions, critiques, readings, slide/video presentations, field trips and visiting lecturers may augment this class. (lower level)
4 units, Spr (Berlier, T)

ARTSTUDI 155. Design II: The Bridge
The historical spectrum of design including practical and ritual. The values and conceptual orientation of visual fundamentals. Two- and three-dimensional projects sequentially grouped to relate design theory to application, balancing imaginative and responsible thinking. Prerequisite: 60. (upper level)
3-4 units, Win (Kahn, M), Spr (Edmark, J)

ARTSTUDI 161. Catalysts for Design
Nature and science as sources of design inspiration. Projects in natural pattern formation, biological growth and form. Fibonacci numbers and the golden section, planar and spatial symmetry, mechanics, chaos, and fractals. Emphasis is on importance of creative synthesis to the design process. Projects take the form of physical constructions as opposed to renderings or computer models. Field trips. (lower level)
3-4 units, not given this year

ARTSTUDI 163. Paper
Beyond conventional use of paper as a foundation for mark making to its potential as a medium in its own right. Students experiment with papers to develop facility with techniques of folding, scoring, curling, cutting, tearing, piercing, embossing, layering, and binding to create three-dimensional forms, patterned/textured surfaces, reliefs, interactive dynamic structures such as pop-ups, containers, and book forms. Field trips. (lower level)
3-4 units, not given this year

ARTSTUDI 166. Design in Motion
Design areas for which movement and transformation are essential. Experimentation with mechanical means such as linking, hinging, inflating, and rotating. Projects in lighting, automata, tools and utensils, chain reactions, toys and games, festival props, and quasi-architecture emphasize the creation of works in which motion is a significant agent for aesthetic gratification. No experience in mechanical engineering required. (lower level)
3-4 units, not given this year

ARTSTUDI 167. Introduction to Animation
Projects in animation techniques including flipbook, cut-out/collage, stop-motion such as claymation, pixilation, and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (lower level)
3-4 units, Aut (Edmark, J)

ARTSTUDI 169. Professional Design Exploration
Six to eight mature projects are stimulated by weekly field trips into significant areas of design activity or need. (upper level)
4 units, Spr (Staff)

ARTSTUDI 170. Projects in Photography
Students pursue a topic of their own definition. Further exploration of darkroom and other printing techniques; contemporary theory
ARTSTUDI 172. Alternative Processes
Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 70, 170, 270, or consent of instructor. (upper level)
4 units, Spr (Leivick, J)

ARTSTUDI 173. Introduction to Digital Photography and Visual Images
Students use Adobe Lightroom to organize and edit images, manipulate and correct digital files, print photographs, create slide shows, and post to the Internet. How to use digital technology to concentrate on visual thinking rather than darkroom techniques. (lower level)
4 units, Aut (Dawson, R), Spr (Dawson, J)

ARTSTUDI 175A. Light as a Sculptural Element
The application of light as a transformative medium in visual art practices. Artists such as Thomas Wilfred, Nam June-Paik, James Turrell, Ann Hamilton, Won Ju Lim, Diana Thater, Wolfgang Laib, Cai Guo-Qiang, Robert Irwin, Shirin Neshat, Bill Viola, and Olafur Eliasson. (upper level)
4 units, Win (Buckholz, E)

ARTSTUDI 177. Video Art I
Students create experimental video works. Conceptual, formal, and performance-based approaches to the medium. The history of video art since the 1970s and its influences including experimental film, television, minimalism, conceptual art, and performance and electronic art. Topics: camera technique, lighting, sound design, found footage, cinematic conventions, and nonlinear digital editing. (lower level)
4 units, Spr (Staff)

ARTSTUDI 177A. Video Art II
Advanced. Video, criticism, and contemporary media theory investigating the time image. Students create experimental video works, addressing the integration of video with traditional art media such as sculpture and painting. Nonlinearity made possible by Internet and DVD-based video. Prerequisite: 177 or consent of instructor. (upper level)
4 units, Win (Staff)

ARTSTUDI 178. Art and Electronics
Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (lower level)
4 units, Win (Wight, G)

ARTSTUDI 179. Digital Art I
Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the computer as interface and object. (lower level)
4 units, Win (Staff)

ARTSTUDI 179A. Digital Art II
Advanced. Interactive art works using multimedia scripting software. Experimental interfaces, computer installation work, and mobile technologies. Contemporary media art theory and practice. (upper level)
4 units, Spr (Staff)

ARTSTUDI 184. Art and Biology
The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists’ relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (upper level)
4 units, Spr (Wight, G)

ARTSTUDI 184A. Along the Track of the Yellowstone Hotspot: Fusion of Art and Science
(Same as BIO 122) follows the 20-million-year-old track of the Yellowstone Hotspot through western North America, using the field setting to investigate ecology, evolution, and geology through an aesthetic and documentary media lens. Taught by an interdisciplinary faculty, students will: (1) create new, experiential ways to learn about the natural world; (2) develop a scientific, yet personal, intimacy about how ecosystems work and how they will change in the future; and (3) explore creative ways to convey their observations to the public. Required trip Sept 4-19 to Yellowstone National Park.
4 units, Spr (Hadly, E; Wight, G; Wright-Dunbar, R)

ARTSTUDI 230. Interdisciplinary Art Survey
The diversity of artistic concepts and strategies; artists who use the different media taught in the department’s studio program such as painting, drawing, video and digital art, printmaking, photography, and sculpture. Field trips to local museums and collections, artists studios, and libraries. Student research. Priority to Art Studio majors and minors. (upper level)
4 units, Win (Miguelez, A)

ARTSTUDI 246. Individual Work: Drawing and Painting
Prerequisites: two quarters of painting or drawing and consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 249. Advanced Undergraduate Seminar
Capstone experience for majors in Studio Art. Interdisciplinary. Methods of research, crossmedia critiques, and strategies for staging and presenting work. Guest artists from the Bay Area. (upper level)
3-4 units, Win (Bell, C)

ARTSTUDI 250. Individual Work: Sculpture
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 260. Individual Work: Design
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 265A. Design for Exploration
A collaboration with the Exploratorium in San Francisco. Students investigate and experiment with all aspects of the creation of interactive museum exhibits. On-site exhibit floor sessions and prototyping workshops. Lectures from museum staff on exhibit design. Students design and construct exhibits for temporary placement on the floor of the Exploratorium. Prerequisites: ME 203 or consent of instructor. (upper level)
4 units, Aut (Edmark, J)

ARTSTUDI 268. Design Synthesis
Mature semi-elective problems in composite and multimedia design areas. May be repeated for credit. Prerequisites: two design courses above 160. (upper level)
4-6 units, Spr (Kahn, M)

ARTSTUDI 269. Advanced Creative Studies
Seminar based on elective design projects in areas of individual specialization. May be repeated for credit. Prerequisite: consent of instructor. (upper level)
1-15 units, Aut (Kahn, M)

ARTSTUDI 270. Advanced Photography Seminar
Student continues own work, showing it in weekly seminar critiques. May be repeated for credit. (upper level)
1-5 units, Win (Felzmann, L), Spr (Leivick, J)

ARTSTUDI 271. The View Camera: Its Uses and Techniques
For students of photography who wish to gain greater control and refine skills in image making, 4x5 view cameras provided. Enrollment limited to 8. (upper level)
4 units, Win (Leivick, J)

ARTSTUDI 272. Individual Work: Photography
Student continues own work, showing it in weekly seminar critiques. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 273. Individual Work: Digital Media
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)
ASIAN AMERICAN STUDIES (ASNAMST)

UNDERGRADUATE COURSES IN ASIAN AMERICAN STUDIES

ASNAMST 146S. Asian American Culture and Community
(Same as COMPLIT 146, CSRE 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the 1 Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco.

1-5 units, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ASNAMST 161. Asian American Immigration and Health
(Same as CSRE 161) Course draws upon ethnography, biomedical research, historical writing and film in focusing on the health and well-being of newly arrived Asian and Pacific Islander immigrants to the United States. Beginning with a historical study of Asian immigrants as feared sources of disease and contagion, this course addresses immigration status, language, health beliefs, gender, age, and definitions of community, disease prevention and health programs and practices and public policy. Topics include: refugeeism, cosmetic surgery, genetic screening, and health disparities.

1-5 units, Win (Lee, S)

ASNAMST 173S. Transcultural and Multiethnic Lives: Contexts, Controversies, and Challenges
(Same as AFRICAAM 173S, CSRE 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multiethnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in media and multicultural communities. What the lives of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.

5 units, Win (Murphy-Shigematsu, S)

ATHLETICS, PHYSICAL EDUCATION, AND RECREATION (ATHLETIC)

UNDERGRADUATE COURSES IN ATHLETICS, PHYSICAL EDUCATION, AND RECREATION

ATHLETIC 2. Abs and Glutes
Lower body workout to strengthen glutes and thighs, and abdominal training. Fee.
1 unit, Aut (McWherter, B), Win (McWherter, B), Spr (McWherter, B), Sum (Conniff, N)

ATHLETIC 3M. Aikido
1 unit, Aut (McWherter, T), Win (McWherter, T), Spr (McWherter, T)

ATHLETIC 4C. Archery Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 7. Badminton, Beginning/Intermediate
Skills, knowledge, and etiquette including fundamentals such as serving, forehand and backhand shots, drops, and smashes. Score keeping. Strategies for play in singles and doubles. Fee.
1 unit, Aut (Mack, K)

ATHLETIC 8C. Badminton Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 10. Band, Sports
1 unit, Aut (Aquilanti, G), Win (Aquilanti, G), Spr (Aquilanti, G)

ATHLETIC 12V. Baseball, Varsity Men
1-2 units, Aut (Marquess, M; Stotz, D), Win (Marquess, M; Stotz, D), Spr (Marquess, M; Stotz, D)

ATHLETIC 14V. Basketball, Varsity Men
1-2 units, Aut (Dawkins, J), Win (Dawkins, J)

ATHLETIC 15V. Basketball, Varsity Women
1-2 units, Aut (VanDerveer, T), Win (VanDerveer, T)

ATHLETIC 19C. Canoe and Kayak Club
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Staff)

ATHLETIC 20M. Capoeira Club
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 23. Core Training
Exercises to build muscular strength and body core endurance, focusing on balance and stability. Equipment includes stability and medicine balls. Fee.
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Reive, J), Sum (Mandell, M)

ATHLETIC 25V. Crew, Varsity Men
1-2 units, Aut (Amerkhanian, C), Win (Amerkhanian, C), Spr (Amerkhanian, C)

ATHLETIC 26V. Crew, Varsity Women
1-2 units, Aut (Farooq, Y), Win (Farooq, Y), Spr (Farooq, Y)

ATHLETIC 28V. Cross Country, Varsity Men
1-2 units, Aut (Dunn, J)

ATHLETIC 29V. Cross Country, Varsity Women
1-2 units, Aut (Dunn, J)

ATHLETIC 31C. Cycling Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 33. Diving, Springboard
Basic techniques and mechanics of springboard and platform diving. Five basic categories of dives will be introduced: front, back, inward, reverse and twist. Competitive aspects of diving. Fee.
1 unit, Aut (Schavone, R)
ATHLETIC 34V. Diving, Varsity Men
1-2 units, Aut (Schavone, R), Win (Schavone, R), Spr (Schavone)

ATHLETIC 35V. Diving, Varsity Women
1-2 units, Aut (Schavone, R), Win (Schavone, R), Spr (Schavone)

ATHLETIC 37C. Equestrian Club Team
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 38M. Eskrima
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 39. Fencing: Beginning
The sport of swordsmanship develops quick hands, strong legs, and a strategic mind. Footwork, handwork, and boutting. Emphasis is on foil technique. All equipment provided. Fee.
1 unit, Aut (Posthumus, E), Win (Posthumus, E)

ATHLETIC 40. Fencing, Intermediate
Continuation of 39; learn advanced footwork and handwork. Strategy and boutting. Introduction to epee and saber. All equipment provided. Prerequisite: 39. Fee.
1 unit, Win (Staff), Spr (Staff)

ATHLETIC 41V. Fencing, Varsity Men
1-2 units, Aut (Posthumus, E), Win (Posthumus, E), Spr (Posthumus, E)

ATHLETIC 42V. Fencing, Varsity Women
1-2 units, Aut (Posthumus, E), Win (Posthumus, E), Spr (Posthumus, E)

ATHLETIC 43. Functional Integrated Training
Functional Integrated Training (FIT) is a total body strength, endurance and flexibility workout with a focus on postural alignment and movement efficiency. Fee.
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Conniff, N)

ATHLETIC 44. Fitness for Life
For improving overall fitness level. Workouts include brief periods of high intensity exercise interspersed with lower intensity exercise or rest. Short duration agility runs, weight lifting, and cardiovascular improvement. Proper stretching techniques, warm-ups, cool-downs, and monitoring heart rate. Fee.
1 unit, Win (Irvine, L)

ATHLETIC 46. Field Hockey, Intermediate
For those with prior experience. Techniques, skills, and strategy. Scrimmages and game-like scenarios. Fee.
1 unit, Win (Irvine, L)

ATHLETIC 47V. Field Hockey, Varsity Women
1-2 units, Aut (Irvine, L), Spr (Irvine, L)

ATHLETIC 48V. Football, Varsity
1-2 units, Aut (Harbaugh, J), Spr (Harbaugh, J)

ATHLETIC 49. Golf for Women: Beginning
1 unit, Win (Staff)

ATHLETIC 50. Golf for Women: Intermediate/Advanced
Refine the golf swing and increase power, distance and accuracy. Emphasis on course management, mental preparation, strength and conditioning. Prerequisite: 49, 51, 52. Fee.
1 unit, Win (Staff)

ATHLETIC 51. Golf: Beginning
1 unit, Aut (Miller, J), Win (Miller, J), Spr (Marrone, P), Sum (Miller, J)

ATHLETIC 52. Golf: Advanced Beginning
Further development of the golf swing and short game. How to practice. Rules and etiquette. Prerequisite: 51 or golf experience. Fee.
1 unit, Aut (Flippo, K), Win (Miller, J), Spr (Shaw, D), Sum (Miller, J)

ATHLETIC 53. Golf: Intermediate
Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 52 or equivalent. Fee.
1 unit, Aut (Flippo, K), Win (Acosta, E), Spr (Coles, J), Sum (Miller, J)

ATHLETIC 54. Golf: Advanced
Goal is to refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 53 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee.
1 unit, Aut (Miller, J), Win (Ray, C), Spr (Monizteri, G)

ATHLETIC 55V. Golf, Varsity Men
1-2 units, Aut (Ray, C), Win (Ray, C), Spr (Ray, C)

ATHLETIC 56V. Golf, Varsity Women
1-2 units, Aut (O’Connor, C), Win (O’Connor, C), Spr (O’Connor, C)

ATHLETIC 58. Gymnastics: Beginning
Fundamental gymnastics movement for men and women, including flexibility and strength exercises taught on the Olympic apparatus including floor, balance beam, bars, and rings. Fee.
1 unit, Aut (Swirceck, C), Win (Lorenzen, M), Spr (Swirceck, C)

ATHLETIC 59. Gymnastics: Intermediate
For students who have completed 58 or have a background in gymnastics. Emphasis is on tumbling and somersaulting. Group work and individualized instruction for men and women. Limited apparatus work. Fee.
1 unit, Aut (Thompson, D), Win (Thompson, D), Spr (Thompson)

ATHLETIC 60V. Gymnastics, Varsity Men
1-2 units, Aut (Glielmi, T), Win (Glielmi, T), Spr (Glielmi, T)

ATHLETIC 61V. Gymnastics, Varsity Women
1-2 units, Aut (Smyth, K), Win (Smyth, K), Spr (Smyth, K)

ATHLETIC 63. Hip Hop
Funky, jazzy, hip hop dance for fun and cardiovascular fitness. Fee.
1 unit, Aut (Miller Bell, A), Win (Miller Bell, A), Spr (Miller Bell, A)

ATHLETIC 64. Hockey, Floor
Fast-paced game adapted from ice hockey. Basic passing and shooting, offensive and defensive play, game strategy, team play. All equipment provided, eye guards required. Fee.
1 unit, Aut (Kaeir, V)

ATHLETIC 65. Horsemanship: Beginning Riding
No experience needed. Basic horsemanship and riding at the walk, trot and canter. Fee.
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 66. Horsemanship: Advanced Beginning Riding
Horsemanship and horse care; the canter and basic jumping. Prerequisite: 65 or equivalent. Fee.
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 67. Horsemanship: Intermediate Riding
Basic veterinary skills and barn management. Riding at all gaits and completing horsemanship patterns (Western) or jumping basic courses (English). Fee. Prerequisite: 66 or equivalent.
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 68. Horsemanship: Student Assistant
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 70C. Horse Polo Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 71C. Ice Hockey Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P)

ATHLETIC 73M. JKA Shotokan Karate
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 74C. Judo Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 75M. Jujitsu Self Defense
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 76. Kickboxing
High intensity cardio workout incorporating kicks, punches, and elbow/knee and other combinations inspired by martial arts and boxing. Fee.
1 unit, Aut (Mandell, M), Win (Mandell, M), Spr (Mandell, M), Sum (Mandell, M)

ATHLETIC 77C. Lacrosse Club Team (Men)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)
ATHLETIC 78M. Kenpo Karate
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 78V. Lacrosse, Varsity Women
1-2 units, Aut (Bokker, A), Win (Bokker, A), Spr (Bokker, A)

ATHLETIC 80. Lifeguard Training
Priority to those wanting to guard at Stanford during the year. Lifeguard characteristics and responsibilities, recognition of hazards and emergencies, patron and facility surveillance, interaction with the public, rescue skills. Community first aid and CPR for the professional rescuer. Fee. Prerequisite: pass swim test (swimmer/advanced swimmer level).

ATHLETIC 81M, Muay Thai
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 82. Manager: Athletic Team
For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ATHLETIC 84. Outdoor Leadership
Skills needed to lead basic multi-day backpacking trips. Classroom sessions and wilderness trips. Topics include group dynamics and leadership, technical skills, and wilderness first aid. Class may require several quarters. See http://www.stanford.edu/group/spot/training/.
1 unit, Aut (Moore, S; Nash-Webber, C), Win (Moore, S; Nash-Webber, C), Spr (Moore, S; Nash-Webber, C)

ATHLETIC 87. Rock Climbing: Strength and Conditioning
For experienced climbers to improve climbing skills and overall fitness through rock climbing exercises that center on focus, endurance, power-endurance, and power. Prerequisite: intermediate climbing class or equivalent or consent of instructor.
1 unit, Aut (Sandlin, P), Win (Sandlin, P), Spr (Sandlin, P)

ATHLETIC 89. Rowing Ergometer
Introduction to aerobic based training utilizing rowing machines. Rowing, core, flexibility and VO2 expansion. Fee.
1 unit, Aut (Amerkhanian, C; Giese, P)

ATHLETIC 90. Pilates Mat
Balanced sequence of exercises emphasizing grace and balance. Breath work and precision separate Pilates from traditional conditioning methods. Fee.
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Philip, F), Sum (Conniff, N)

ATHLETIC 91C. Rugby Club Team (Men)
1 unit, Aut (Griffin, P), Win (Griffin, P), Spr (Griffin, P)

ATHLETIC 92C. Rugby Club Team (Women)
1 unit, Aut (Griffin, P), Win (Griffin, P), Spr (Griffin, P)

ATHLETIC 94C. Running Club
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 95. Running at Stanford
Develop a training plan to meet your running goals. Proper form, warm ups, cool downs. For all levels of ability. Fee.
1 unit, Aut (Vidal, D)

ATHLETIC 98. Sailing, Beginning
Skills, theory, and techniques to enable beginners to sail with confidence in small centerboard boats. Fee.
1 unit, Aut (Staff), Spr (Storch, E)

ATHLETIC 99. Sailing, Advanced Beginning
Continuation of ATHLETIC 98. For those with some sailing experience but not yet ready for intermediate sailing. Fee. May be repeated for credit. Prerequisites: ATHLETIC 98 or consent of instructor.
1 unit, Aut (Staff), Spr (O’Bryan, M)

ATHLETIC 100. Sailing, Intermediate
Refine skills. Introduction to racing. Prerequisite: ATHLETIC 99 or consent of instructor. Fee.
1 unit, Aut (O’Bryan, M), Spr (O’Bryan, M)

ATHLETIC 104V. Sailing, Varsity Men
1-2 units, Aut (Vandemoer, J), Win (Vandemoer, J), Spr (Vandemoer, J)

ATHLETIC 105V. Sailing, Varsity Women
1-2 units, Aut (Vandemoer, J), Win (Vandemoer, J), Spr (Vandemoer, J)

ATHLETIC 107C. Ski Club Team
1 unit, Win (Mahlow, P)

ATHLETIC 109. Social Dance, Beginning
Introduction to partner dancing. Steps, styling, and rhythms in popular social dances such as tango, salsa, waltz, cha-cha, and foxtrot. No experience or partner necessary. Fee.
1 unit, Aut (Staff), Win (Sun, R), Spr (Sun, R)

ATHLETIC 112. Soccer: Intermediate/Advanced
For the player with club or high school experience. Small group offensive and defensive tactics. Drills and small-sided games. Fee.
1 unit, Spr (Becerra; Cooney, J)

ATHLETIC 116. Soccer: Advanced for Women
Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee.
1 unit, Win (Simon, B)

ATHLETIC 116. Soccer: Advanced for Men
Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee.
1 unit, Win (Ratcliffe, P)

ATHLETIC 118V. Soccer, Varsity Men
1-2 units, Aut (Simon, B), Spr (Simon, B)

ATHLETIC 119V. Soccer, Varsity Women
1-2 units, Aut (Ratcliffe, P), Spr (Ratcliffe, P)

ATHLETIC 121V. Softball, Varsity Women
1-2 units, Aut (Rittman, J), Win (Rittman, J), Spr (Rittman, J)

ATHLETIC 122. Spin Bike Cross Training
Aerobic based expansion utilizing spin bikes. Emphasis on volume work rather than anaerobic training. Heart rate monitoring, core, flexibility and nutrition information for more efficient fueling. Fee.
1 unit, Win (Amerkhanian, C)

ATHLETIC 123. Squash, Beginning/Intermediate
1 unit, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 125C. Squash Club Team (Men)
1 unit, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 126V. Squash, Varsity Women
1-2 units, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 129. Swimming: Beginning
For non-swimmers or those who can swim about 10 yards but are not comfortable in deep water. Safety skills, front crawl, and back stroke. Additional strokes introduced as ability warrants. Fee.
1 unit, Aut (Staff), Spr (Vargas, J), Sum (Neuhold-Huber, Z)

ATHLETIC 130. Swimming: Advanced Beginning
For those with limited swimming and safety skills. Safety skills, crawl, and elementary backstroke or back crawl. Introduction to sidestroke and breaststroke. Increase time and distance of swim. Prerequisite: ability to swim 25-50 yards on front and back. Fee.
1 unit, Aut (Staff), Win (Neuhold-Huber, Z), Spr (Neuhold-Huber, Z), Sum (Neuhold-Huber, Z)

ATHLETIC 131. Swimming: Intermediate
Crawl, elementary backstroke, backstroke, and sidestroke. Safety skill work as needed. Introduction to or review of breaststroke. Open turns. Introduction to butterfly, flip turn, and conditioning. Prerequisites: crawl, elementary backstroke, backstroke, some sidestroke and breaststroke; ability to swim approximately 100-200 yards continuously by mixing strokes. Fee.
1 unit, Aut (Staff), Win (Neuhold-Huber, Z), Spr (Whildin, S), Sum (Neuhold-Huber, Z)
ATHLETIC 132. Swimming: Advanced
Review and refine all basic strokes and safety skills. Introduction to or review of butterfly and flip turn. Stroke drills and information on conditioning and designing individual workouts. Prerequisite: average to good strokes; ability to swim approximately 400-500 yards continuously. Fee.
1 unit, Aut (Tanner, J), Spr (Maurer, L)

ATHLETIC 133. Swim Conditioning
Improve cardio-respiratory endurance through directed swimming workouts. Technique corrections as needed. Prerequisite: advanced swimmer. Fee.
1 unit, Aut (Kenney, A), Win (Bokker, A), Spr (Knapp, T)

ATHLETIC 134. Synchronized Swimming, Beginning
Basic skills and techniques. Prerequisite: intermediate to advanced swimming skills. Fee.
1 unit, Aut (Olson, H), Spr (Bartosik, A)

ATHLETIC 135V. Synchronized, Varsity: Varies
1-2 units, Aut (Olson, H), Win (Olson, H), Spr (Olson, H; Bartosik, A)

ATHLETIC 136V. Swimming, Varsity Men
1-2 units, Aut (Kenney, A), Win (Kenney, A), Spr (Kenney, A)

ATHLETIC 137V. Swimming, Varsity Women
1-2 units, Aut (Maurer, L), Win (Maurer, L), Spr (Maurer, L)

ATHLETIC 139. Table Tennis
Basic counters, topspins, and chops with both the forehand and backhand. Serve and return, emphasizing game situations and match play. All equipment provided. Fee.
1 unit, Aut (Shodhan, S), Win (Shodhan, S)

ATHLETIC 141C. Tae Kwon Do Club
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 144. Tennis: Beginner Forehand, backhand, serve, and net play; rules and scoring.
1 unit, Aut (Coupe, B), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 145. Tennis: Low Intermediate Fundamental strokes and their use in a game situation. Prerequisites: 144, or knowledge of rules and scoring and average ability in fundamental strokes but limited playing experience. Fee.
1 unit, Aut (Gould, A), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 146. Tennis: Intermediate Fundamental stroke review. Singles and doubles tactics. Prerequisites: 145 or average ability in fundamental strokes, and regular playing experience; NTRP rating of 3.0 or equivalent.
1 unit, Aut (Brennan, F), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 147. Tennis: Advanced Drills emphasize footwork, serve and return, approach shots, volleys, lobs, and overheads. Strategy for competition in singles and doubles. Prerequisites: above average striking and game playing ability; NTRP rating above 4.0 or equivalent.
1 unit, Aut (Brennan, F), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 148V. Tennis, Varsity Men
1-2 units, Aut (Whitlinger, J), Win (Whitlinger, J), Spr (Whitlinger, J)

ATHLETIC 149V. Tennis, Varsity Women
1-2 units, Aut (Forood, L), Win (Forood, L), Spr (Forood, L)

ATHLETIC 151. Total Body Workout For all fitness levels; tone and strengthen the entire body. Different equipment used to target all major muscle groups.
1 unit, Aut (McWherter, B), Win (McWherter, B), Spr (McWherter, B)

ATHLETIC 153V. Track and Field, Varsity Men
1-2 units, Aut (Floreal, E), Win (Floreal, E), Spr (Floreal, E)

ATHLETIC 154V. Track and Field, Varsity Women
1-2 units, Aut (Floreal, E), Win (Floreal, E), Spr (Floreal, E)

ATHLETIC 156C. Triathlon Club Team
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 158C. Ultimate Frisbee Club Team (Men)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 159C. Ultimate Frisbee Club Team (Women)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 162. Volleyball Drills to improve skills and game playing strategy. As ability indicates, more emphasis on team play and strategy. Fee.
1 unit, Aut (Staff)

1 unit, Aut (Shibuya, K), Spr (Shibuya, K)

ATHLETIC 165. Volleyball: Advanced Sand Refine and improve skills and game playing strategy in two- and four-person sand volleyball. Prerequisite: 164 or consent of instructor. Fee.
1 unit, Aut (Shibuya, K), Spr (Shibuya, K)

ATHLETIC 166V. Volleyball, Varsity Men
1-2 units, Aut (Kosy, J), Win (Kosy, J), Spr (Kosy, J)

ATHLETIC 167V. Volleyball, Varsity Women
1-2 units, Aut (Dunning, J), Win (Dunning, J), Spr (Dunning, J)

ATHLETIC 169. Water Polo: Beginner Introduction to basic skills and game play. For those who have never played or have had limited experience. Fee.
1 unit, Spr (Barnea, J)

1 unit, Aut (Ortwein, S), Spr (Barnea, J)

ATHLETIC 171V. Water Polo, Varsity Men
1-2 units, Aut (Vargas, J), Win (Vargas, J), Spr (Vargas, J)

ATHLETIC 172V. Water Polo, Varsity Women
1-2 units, Aut (Tanner, J), Win (Tanner, J; Ortwein, S), Spr (Tanner, J; Ortwein, S)

1 unit, Aut (Staff), Spr (Blake, R)

ATHLETIC 176. Weight Training for Women All levels welcome, but designed for the beginner. Techniques and equipment for weight training. Emphasis is on stretching, proper form and progressions, and injury prevention. The physiology of strength training and planning individual programs. Fee.
1 unit, Win (Staff)

ATHLETIC 177. Circuit Aerobic Weight Training A full-body conditioning workout with weight lifting and aerobic components. Weight training equipment organized into a circuit to maximize workout intensity in a short amount of time. Fee.
1 unit, Aut (Nelson, D), Win (Nelson, D), Spr (Nelson, D)

ATHLETIC 178M. Wing Chun Kung Fu
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

1 unit, Spr (Gentry, M)

ATHLETIC 180V. Wrestling, Varsity
1-2 units, Aut (Borrelli, J), Win (Borrelli, J), Spr (Borrelli, J)

ATHLETIC 181M. Wushu
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley)

ATHLETIC 182. Yoga Mind, body, and spirit meet in yoga. Increase flexibility and restore health to the body. Fee.
1 unit, Aut (Carlow, A), Win (Carlow, A), Spr (Carlow, A), Sum (Conniff, N)

ATHLETIC 184. Yoga/Pilates Fusion Combination of power and restorative yoga with strength building Pilates exercises. Fee.
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Haley, L), Sum (Conniff, N)
ATHLETIC 186. Zumba
Zumba combines Latin rhythms with cardiovascular exercise to create an aerobic routine. Interval and resistance training to maximize caloric output, fat burning, and total body toning.
1 unit, Aut (Picollo, A), Win (Picollo, A), Spr (Picollo, A)

ATHLETIC 187. Analysis of Human Movement
Overview of skeletal and muscular anatomy. The mechanical principles of movement as related to efficient performance in aquatics, dance, and sports.
2-4 units, Win (Wilson, C)

ATHLETIC 189. Business Practices in Sport
Planning and management of intercollegiate sports and recreation. Elements of business contracts, finance, facility development, legal issues, risk management, human resources, security, and operations and event management. How an athletic and recreation department is organized. Career opportunities in sports and recreation administration.
2 units, Spr (Purpur, R)

ATHLETIC 190. Introduction to Nutrition
How to optimize nutrition for health and performance. Topics include macronutrients, fad diets, sugar addiction, low-calorie sweeteners, caloric restriction, disease prevention, and nutrition.
1-2 units, Aut (Wilson, C), Spr (Wilson, C), Sum (Wilson, C)

ATHLETIC 193. Lifestyle Fitness Challenge
Exploration and improvement of overall health. Wellness, physical fitness, nutrition, and disease prevention, muscular strength and endurance, flexibility, and stress management. Introductions to weight and cardio equipment, outdoor workouts, spinning, strength and tone workouts, and yoga.
2 units, Aut (Spanier, J), Win (Spanier, J), Spr (Spanier, J)

ATHLETIC 195. Mind, Body, Spirit
Spiritual features of everyday life primarily from a psychological perspective with a focus on health. Topics include cultivating gratitude, forgiveness, life purpose, and kindness; mind/body/spirit solutions to everyday problems. Meditation and other stress management practices.
2 units, Spr (Staff)

ATHLETIC 197. Sport Psychology
Basic theories in psychology which have the greatest influence on sport performance. Motivation, anxiety reduction, personality and self esteem, motor learning theories and sociological aspects and their influence on performance and learning.
2 units, Spr (Staff)

ATHLETIC 199. Sports Nutrition with Clinical Applications
Nutrition topics: Mechanisms by which nutrition positively impacts athletic performance and relates to the mechanisms of health and disease. Student presentations. Prerequisites: ATHLETIC 190 and HUMBIO 130 or 135, or consent of instructor.
1-3 units, Spr (Wilson, C)

BIOCHEMISTRY (BIOC)

UNDERGRADUATE COURSES IN BIOCHEMISTRY

BIOC 118Q. Genomics and Medicine
3 units, Aut (Brutlag, D)

BIOC 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN BIOCHEMISTRY

BIOC 200. Applied Biochemistry
Enrollment limited to MD candidates. Fundamental concepts of biochemistry as applied to clinical medicine. Topics include thermodynamics, enzyme kinetics, vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metabolic pathways. Clinical case studies discussed in small-group, problem-based learning sessions.
1 unit, Aut (Harbury, P; Theriot, J; Cowan, T)

BIOC 201. Advanced Molecular Biology
Literature-based lectures and discussion on rapidly developing frontiers in chromosome structure and function and modern insights into the control of gene expression. Emphasis is on experimental approaches and insights. Topics include the chromosome organization, novel modes of transcriptional control, RNA-based mechanisms for controlling gene expression and emerging translational regulatory mechanisms. Prerequisite: undergraduate molecular biology.
3 units, Spr (Staff)

BIOC 205. Molecular Foundations of Medicine
Topics include DNA structure, replication, repair, and recombination; chromosome structure and function; gene expression including mechanisms for regulating transcription and translation; and methods for manipulating DNA, RNA, and proteins. Patient presentations illustrate how molecular biology affects the practice of medicine.
3 units, Aut (Chu, G; Krasnow, M; Brown, P)

BIOC 210. Advanced Topics in Membrane Trafficking
Structure, function, and biosynthesis of cellular membranes and organelles. Current literature. Prerequisite: consent of instructor.
3 units, Sum (Staff)

BIOC 215. Frontiers in Biological Research
(Same as DBIO 215, GENE 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series hosted by Biochemistry, Developmental Biology, and Genetics in which distinguished investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker’s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.
1 unit, Aut (Harbury, P; Calos, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calos, M)

BIOC 218. Computational Molecular Biology
(Same as BIOMEDIN 231) For molecular biologists and computer scientists. Representation and analysis of genomes, sequences, and proteins. Strengths and limitations of existing methods. Course work performed on web or using downloadable applications. See http://biochem218.stanford.edu/. Prerequisites: introductory molecular biology course at level of BIOSCI 41 or consent of instructor. Autumn and spring offerings are via internet only.
3 units, Aut (Brutlag, D), Win (Brutlag, D), Spr (Brutlag, D)

BIOC 220. Chemistry of Biological Processes
(Same as CSB 220) The principles of organic and physical chemistry as applied to biomolecules. Goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Prerequisites: organic chemistry and biochemistry, or consent of instructor.
4 units, alternate years, not given this year

BIOC 221. The Teaching of Biochemistry
Required for teaching assistants in Biochemistry. Practical experience in teaching on a one-to-one basis, and problem set design and analysis. Familiarization with current lecture and text materials; evaluations of class papers and examinations. Prerequisite: enrollment in the Biochemistry Ph.D. program or consent of instructor.
2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 224. Advanced Cell Biology
(Same as BIO 214) For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization,
transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A, B, and consent of instructor.

2-5 units, Win (Kapito, R; Theriot, J; Pfeffer, S; Straight, A; Nachury, M)

BIOC 228. Computational Genomic Biology
(Same as BIOMEDIN 228) Application of computational genomics methods to biological problems. Topics include: assembly of genomic sequences, genome databases, comparative genomics; gene discovery; gene expression analyses including gene clustering by expression, transcription factor binding site discovery, metabolic pathway discovery, functional genomics, and gene and genome ontologies; and medical diagnostics using SNPs and gene expression. Recent papers from the literature and hands-on use of the methods.

Prerequisites: introductory course in computational molecular biology or genomics such as BIOC 218, BIOMEDIN 214 or GENE 211.

3 units, not given this year

BIOC 230. Molecular Interventions in Human Disease
For M.D. students who intend to declare a concentration in molecular basis of medicine, MSTP students, and Ph.D. students. Advanced medical biochemistry focusing on cases where molecular-level research has led to new medical treatments or changes in the understanding of important diseases. Different topics each week explore the underlying molecular basis of a variety of diseases and the reasons for success and failure in molecular approaches to treatment. Student-led discussions dissect papers from the primary medical and scientific research literature.

2-3 units, not given this year

BIOC 236. Biology by the Numbers
(Same as APPLIED PHYSICS 136) Skill building in biological quantitative reasoning. Topics include: biological size scales from proteins to ecosystems; biological time scales from enzymatic catalysis and DNA replication to evolution; biological energy, motion, and force from molecular to organismic scales; mechanisms of environmental sensing from bacterial chemotaxis to vision. Prerequisite: Physics 21, 41; or consent of instructor.

3 units, Win (Theriot, J; Fisher, D)

BIOC 241. Biological Macromolecules
(Same as BIOPHYSICS 241, SBIOL 241) The physical and chemical basis of macromolecular function. Forces that stabilize biopolymers with three-dimensional structures and their functional implications. Thermodynamics, molecular forces, and kinetics of enzymatic and diffusional processes, and relationship to their practical application in experimental design and interpretation. Biological function at the level of individual molecular interactions and at the level of complex processes. Case studies. Prerequisites: introductory biochemistry and physical chemistry or consent of instructor.

3-5 units, Aut (Herschlag, D; Garcia, K; Ferrell, J; Block, S; Weis, W)

BIOC 257. Currents in Biochemistry
Seminars by Biochemistry faculty on their ongoing research. Background, current advances and retreats, general significance, and tactical and strategic research directions.

1 unit, Aut (Spudich, J)

BIOC 278. Systems Biology
(Same as BIOE 310, CS 278, CSB 278) Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.

3 units, not given this year

BIOC 298. Biochemistry Consulting Service
Students are presented with requests for advice from faculty and students in the biological sciences and Medical School encountering experimental and analytical problems in their research. Students work with the instructor and other biochemistry faculty to propose solutions. May be repeated for credit.

3 units, Aut, Win, Spr, Sum (Brown, P)

BIOC 299. Directed Reading in Biochemistry
Prerequisite: consent of instructor. (Staff)

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 399. Graduate Research and Special Advanced Work
Allows for qualified students to undertake investigations sponsored by individual faculty members.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

BIOENGINEERING (BIOE)

UNDERGRADUATE COURSES IN BIOENGINEERING

BIOE 41. Physical Biology of Macromolecules
Principles of statistical physics and thermodynamics, with applications to molecular biology. Topics include entropy, temperature, free energy, chemical forces, self assembly, cooperative transitions in macromolecules, enzyme kinetics, molecular machines, and an introduction to genomic and proteomic technologies. Corequisite: BIO 41.

4 units, Aut (Quake, S)

BIOE 42. Physical Biology of Cells
Principles of transport, continuum mechanics, and fluids, with applications to cell biology. Topics include random walks, diffusion, Langevin dynamics, transport theory, low Reynolds number flow, and beam theory, with applications including quantitative models of protein trafficking in the cell, mechanics of the cell cytoskeleton, the effects of molecular noise in development, the electromagnetics of nerve impulses, and an introduction to cardiovascular fluid flow. Concurrent enrollment in BIO 42 is required.

4 units, Win (Huang, K)

BIOE 44. Synthetic Biology Lab
Introduction to next-generation techniques in genetic, molecular, biochemical, and cellular engineering. Lab modules build upon current research including: gene and genome engineering via decoupled design and construction of genetic material; component engineering focusing on molecular design and quantitative analysis of experiments; device and system engineering using abstracted genetically encoded objects; and product development based on useful applications of biological technologies. Limited enrollment. Priority given to majors.

4 units, Spr (Staff)

BIOE 70Q. Medical Device Innovation
(S, Sem) Stanford Introductory Seminar. Preference to sophomores. Commonly used medical devices in different medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. How to identify clinical needs and design device solutions to address these needs. Fundamentals of starting a company. Field trips to local medical device companies; workshops. No previous engineering training required.

3 units, Spr (Staff)
BIOE 222A. Multimodality Molecular Imaging in Living Subjects
(Same as RAD 222A) Focuses on instruments and chemistries for imaging of cellular and molecular processes in vivo. Basics of instrumentation physics, chemistry of molecular imaging probes, and an introduction to preclinical and clinical molecular imaging modalities.
4 units, Aut (Contag, C; Xing, L; Rao, J)

BIOE 222B. Chemistry of Molecular Probes for Imaging in Living Subjects
(Same as RAD 222B) Focuses on molecular probes that target specific disease mechanisms. The ideal characteristics of molecular probes; how to optimize their design for use as effective imaging reagents that target specific steps in biological pathways and reveal the nature of disease through noninvasive assays.
4 units, Win (Contag, C; Rao, J; Xing, L)

BIOE 222C. Topics in Multimodality Imaging in Living Subjects
(Same as RAD 222C) Focuses on emerging chemistries and instruments that address unmet needs for improved diagnosis and disease management in cancer, neurological disease, cardiovascular medicine and musculoskeletal disorders. Objective is to identify problems or controversies in the field, and to resolve them through understanding the relevant primary literature.
4 units, Spr (Contag, C; Xing, L; Rao, J)

BIOE 261. Principles and Practice of Stem Cell Engineering
(Same as NSUR 261) Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.
3 units, alternate years, not given this year

BIOE 280. Skeletal Development and Evolution
(Same as ME 280) The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: 80, or Human Biology core, or Biological Sciences core.
3 units, Spr (Carter, D)

BIOE 281. Biomechanics of Movement
(Same as ME 281) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.
3 units, Win (Delp, S)

BIOE 282. Performance, Development, and Adaptation of Skeletal Muscle
Fundamentals of skeletal muscle by study of classical and recent research articles. Emphasis on the interactions between mechanics, biology, and electrophysiology in skeletal muscle performance, development, adaptation, control, and disease. Lab activities explore research methods discussed in class. Limited Enrollment. Prerequisites: engineering or biology core coursework.
3 units, Aut (Delp, S)

BIOE 284A. Cardiovascular Bioengineering
(Same as ME 284A) Bioengineering principles applied to the cardiovascular system. Anatomy of human cardiovascular system, comparative anatomy, and allometric scaling principles. Cardiovascular molecular and cell biology. Overview of continuum mechanics. Form and function of blood, blood vessels, and the heart from an engineering perspective. Normal, diseased, and engineered replacement tissues.
3 units, Aut (Taylor, C)

BIOE 284B. Cardiovascular Bioengineering
(Same as ME 284B) Continuation of ME 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to
evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.
3 units, Win (Taylor, C)

**BIOE 291. Principles and Practice of Optogenetics for Optical Control of Biological Tissues**
Principles and practice of optical control of biological processes (optogenetics), emphasizing bioengineering approaches. Theoretical, historical, and current practice of the field. Requisite molecular-genetic, optoelectronic, behavioral, clinical, and ethical concepts, and completed analysis and presentation of relevant papers. Final projects of research proposals and a laboratory component in BioX to provide hands-on training. Contact instructor before registering.
3 units, Aut (Deisseroth, K)

**BIOE 300A. Molecular and Cellular Bioengineering**
The molecular and cellular bases of life from an engineering perspective. Analysis and engineering of biomolecular structure and dynamics, enzyme function, molecular interactions, metabolic pathways, signal transduction, and cellular mechanics. Quantitative primary literature. Prerequisites: CHEM 171 and BIO 41 or equivalents; MATLAB or an equivalent programming language.
3 units, Aut (Bryant, Z)

**BIOE 300B. Physiology and Tissue Engineering**
The interaction, communication, and disorders of major organ systems and relevant developmental biology and tissue engineering from cells to complex organs.
3 units, Win (Deisseroth, K; Covert, M)

**BIOE 301A. Molecular and Cellular Engineering Lab**
Preference to Bioengineering graduate students. Practical applications of biotechnology and molecular bioengineering including recombinant DNA techniques, molecular cloning, microbial cell growth and manipulation, library screening, and microarrays. Emphasis is on experimental design and data analysis. Limited enrollment. Corequisite: 300A.
2 units, Aut (Coehran, J)

**BIOE 301B. Clinical Needs and Technology**
Diagnostic and therapeutic methods in medicine. Labs include a pathology/histology session, pulmonary function testing, and the Goodman Simulation Center. Each student paired with a physician for observation of an operation or procedure. Limited enrollment. Corequisite: 300B.
1 unit, Win (Feinstein, J)

**BIOE 301C. Diagnostic Imaging Lab**
Biomedical instruments and diagnostic devices. Emphasis is on comparing measurements with theoretical predictions. Labs include ECG, MRI, microfluidics, CT, and EEG. Prerequisites: 300B and 301B.
2 units, Spr (Boahen, K)

**BIOE 310. Systems Biology**
(Same as BIOC 278, CS 278, CSB 278) Complex biological behaviors through the integration of computational modeling and molecular biological topics. Requisite: CHEMENG 181 (formerly 188) or BIOSCI 278. Computer modeling of biological networks at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.
3 units, not given this year

**BIOE 331. Protein Engineering**
The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial methodologies, rational design, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry.
3 units, alternate years, not given this year

**BIOE 332. Large-Scale Neural Modeling**
Emphasis is on modeling neural systems at the circuit level, ranging from feature maps in neocortex to episodic memory in hippocampus. Simulation exercises to explore the roles of cellular properties, synaptic plasticity, spike synchrony, rhythmic activity, recurrent connectivity, and noise and heterogeneity; quantitative techniques to analyze and predict network behavior. Work in teams of two; run simulations in real-time on neuromorphic hardware developed for this purpose.
3 units, Win (Boahen, K)

**BIOE 333. Interfacial Phenomena and Bionanotechnology**
Fundamental and applied study of interfacial phenomena and effects of surface-active molecules on behavior of important biologic, biochemical, environmental, and bioengineering systems. Discussion of central mathematical equations in surface science attributed to Laplace, Gibbs, Kelvin, and Young. Self-assembly of surfactants and biomolecules. Relevance of interfacial phenomena to protein folding/unfolding and microfluidics. Applications to recent research advances in bionano- and biomicrotechnology, using scientific literature.
3 units, Spr (Barron, A)

**BIOE 334. Engineering Principles in Molecular Biology**
The achievements and difficulties that exemplify the interface of theory and quantitative experiment. Topics include: bistability, cooperativity, robust adaptation, kinetic proofreading, analysis of fluctuations, sequence analysis, clustering, phylogenetics, maximum likelihood methods, and information theory. Sources include classic papers.
3 units, not given this year

**BIOE 335. Molecular Motors I**
Physical mechanisms of mechanochemical coupling in biological molecular motors, using F1 ATPase as the major model system. Applications of biochemistry, structure determination, single molecule tracking and manipulation, protein engineering, and computational techniques to the study of molecular motors. 3 units, alternate years, not given this year

**BIOE 341. Computational Neural Networks**
Distributed neural network implementations of algorithms for signal processing, function approximation, and control. Representation of information in networks of spiking neurons. Supervised and unsupervised learning algorithms. Radial basis functions, principal and independent components analysis, reinforcement learning, support-vector machines, self-organizing maps, auto-associative learning, hidden Markov models. Related methods from information theory, signal processing, bayesian estimation, and stochastic systems. Final project in software or programmable hardware. Prerequisites: linear algebra, dynamic systems, and probability theory as in MATH 103, EE 102A, and EE 178 or equivalent, and programming experience in C++ or Matlab.
3 units, not given this year

**BIOE 355. Advanced Biochemical Engineering**
(Same as CHEMENG 355) Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.
3 units, Win (Swartz, J)

**BIOE 361. Biomaterials in Regenerative Medicine**
(Same as MATSCI 381) Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.
3 units, Win (Heilshorn, S; Cochran, J), alternate years, not given next year

**BIOE 370. Microfluidic Device Laboratory**
Fabrication of microfluidic devices for biological applications. Photolithography, soft lithography, and micromechanical valves and pumps. Emphasis is on device design, fabrication, and testing.
2 units, Win (Quake, S; Melin, J)

**BIOE 374A. Biodesign Innovation Core: Needs Finding and Concept Creation**
(Same as ME 368A, MED 272A) Two quarter sequence. Inventing new medical devices and instrumentation, including: methods of validating medical needs; techniques for analyzing intellectual
property; basics of regulatory (FDA) and reimbursement planning; brainstorming and early prototyping. Guest lecturers and practical demonstrations. May be taken alone (2 units) or in combination with the project component (4 units).

2-4 units, Win (Yock, P; Zenios, S; Milroy, J; Britton, T)

BIOE 374B. Biodesign Innovation Core: Concept Development and Implementation
(Same as ME 368B, MED 272B) Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus startup); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: MED 272A, ME368A, or BIOE 374A.

2-4 units, Spr (Staff)

BIOE 381. Orthopaedic Bioengineering
(Same as ME 381) Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Aut (Carter, D)

BIOE 381. Orthopaedic Bioengineering
(Same as ME 381) Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Aut (Carter, D)

BIOE 386. Neuromuscular Biomechanics
(Same as ME 386) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year

BIOE 390. Introduction to Bioengineering Research
(Same as MED 289) Preference to medical and bioengineering graduate students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Topics include: imaging; molecular, cell, and tissue engineering; biomechanics; biomedical computation; biochemical engineering; biosensors; and medical devices. Limited enrollment.

1-2 units, Aut (Taylor, C), Win (Taylor, C)

BIOE 391. Directed Study
May be used to prepare for research during a later quarter in 392. Faculty sponsor required. May be repeated for credit.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 392. Directed Investigation
For Bioengineering graduate students. Previous work in 391 may be required for background; faculty sponsor required. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 393. Bioengineering Departmental Research Colloquium
Bioengineering department labs at Stanford present recent research projects and results. Guest lecturers. Topics include applications of engineering to biology, medicine, biotechnology, and medical technology, including devices and devices, molecular and cellular engineering, regenerative medicine and tissue engineering, biomedical imaging, and biomedical computation.

1 unit, Aut (Altman, R), Win (Altman, R), Spr (Altman, R)

BIOE 454. Synthetic Biology and Metabolic Engineering
(Same as CHEMENG 454) Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

3 units, Spr (Swartz, J)

BIOE 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: mathematics, biology, chemistry, physics.

1 unit, Aut, Win, Spr (Robertson, C)

BIOE 484. Computational Methods in Cardiovascular Bioengineering
(Same as ME 484) Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulated blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiological quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, Spr (Figueroa Alvarez, C)

BIOE 485. Modeling and Simulation of Human Movement
(Same as ME 485) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A, B, or equivalent.

3 units, not given this year

BIOE 500. Thesis (Ph.D.)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOLOGY (BIO)

UNDERGRADUATE COURSES IN BIOLOGY

BIO 1. Human Evolution and Environment
Human genetic and cultural evolution and how people interact with their environments, from the ancestors of Australopithecines to current events. Issues include race, gender, and intelligence; pesticide and antibiotic resistance; abortion and contraception; ecosystem services; environmental economics and ethics; the evolution of religion; climate change; population growth and overconsumption; origins and spread of ideas and technologies; and the distribution of political and economic power. GER: DB-NatSci

3 units, Spr (Ehrlich, P)

BIO 2. Current Research Topics in Biology
Primarily for sophomores interested in majoring in Biology. Weekly seminars by faculty: molecular biology and genetics; theory and mathematics in biology; ecology, physiology, and the environment; molecular and cellular aspects of neurobiology, immunology, and developmental biology; biological chemistry; behavioral biology; and evolution. May be repeated for credit.

1 unit, not given this year

BIO 3. Frontiers in Marine Biology
Contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

1 unit, Aut (Somero, G)
BIO 11N. Biotechnology in Everyday Life

BIO 13N. Environmental Problems and Solutions
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Students do independent investigations of current environmental problems, analyzing differing views of them and discussing possible solutions. Each student gives seminar presentations and leads seminar discussions. Short, documented position papers are written for policy makers. GER: DB-NatSci 3 units, Spr (Ehrlich, P)

BIO 14N. Plants and Civilization
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. The role of plants in the development of civilization. Topics: the use of forests, woodlands, and grazing lands; centers of origins and spread of crops; viticulture, and wine and beer making; the spice route and the age of exploration; the use of plants as medicine; the global spread of weeds; engineering plants for the future; the importance of tea, coffee, chocolate, sugar, potatoes, natural dyes, and rubber in societal affairs and change. GER: DB-NatSci 3 units, Win (Mooney, H)

BIO 16N. Island Ecology
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. How ecologists think about the world. Focus is on the Hawaiian Islands: origin, geology, climate, evolution and ecology of flora and fauna, and ecosystems. The reasons for the concentration of threatened and endangered species in Hawaii, the scientific basis for their protection and recovery. How knowledge of island ecosystems can contribute to ecology and conservation biology on continents. GER: DB-NatSci 3 units, Spr (Vitousek, P), alternate years, not given next year

BIO 20. Introduction to Brain and Behavior
(Same as HUMBIO 21) Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER: DB-NatSci 3 units, alternate years, not given this year

BIO 26N. Maintenance of the Genome
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Focus is on DNA repair systems that monitor the genome to ensure genomic stability in the face of natural endogenous threats to DNA and those due to radiation and genotoxic toxic environmental chemicals. Redundancy of the genetic message ensured by complementary DNA strands facilitates recovery of information by excision repair when one of the strands is damaged. Predispasion to cancer is often a consequence of defective DNA repair. Relevance for oncology, aging, developmental biology, environmental health, and neurobiology. GER: DB-NatSci 3 units, Spr (Hamavalt, P)

BIO 27N. Nature and Nurture in Brain Development
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. Examination of the roles of genes and the environment in shaping brain wiring and behavior, using readings of papers from the primary scientific literature as examples of how the developing nervous system integrates information from both the genetic blueprint and external experience in forming neural connections. 3 units, Spr (McConnell, S)

BIO 33N. Conservation Science and Practice
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth’s atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project. GER: DB-NatSci 3 units, Spr (Daily, G)

BIO 34N. Hunger
(F.Sem) Stanford Introductory Seminar. The biology of hunger and satiety, disease states that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth’s growing population, local and global efforts to alleviate hunger, and hunger in fiction. GER: DB-NatSci 3 units, Aut (Barton, K)

BIO 37N. Green Revolution and Plant Biotechnology
(F.Sem) Stanford Introductory Seminar. Feeding ever-growing populations is a constant challenge to mankind. In the second half of the 20th century, the breeding of improved varieties combined with the use of chemical fertilizers and pesticides led to crop yield increases labeled the Green Revolution. Modern technologies in genetic engineering are expected to bring the second green revolution. Meeting the current and future global food needs without further damaging the fragile environment requires innovative effort from scientists and the society. 3 units, Win (Wang, Z)

BIO 38N. Photosynthesis: From Basic Mechanisms to Biofuels
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Photosynthetic processes in terrestrial and aquatic environments. Biological and chemical ways that have been developed to capture the energy of sunlight; how this light energy can be converted to usable forms of energy, including biofuels; and potential impacts of anthropogenic energy generation on the health of the planet. 3 units, Aut (Grossman, A)

BIO 39N. Networks in Biology
(F.Sem) Stanford Introductory Seminar. Networks are everywhere, including friendship links on Facebook, airline routes, power grids, and the Internet. Biology is no exception. Examples include food chains, protein interaction maps, and metabolic pathways. Despite their ubiquitoussness, the study of networks in the real world only started about a decade ago. Exploration of the types of networks in biology and the approaches people use in studying them. Discussions and presentations of original research papers. 3 units, Spr (Staff), alternate years, not given next year

BIO 41. Genetics, Biochemistry, and Molecular Biology
Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35, GER: DB-NatSci 5 units, Aut (Bergmann, D); Winter

BIO 42. Cell Biology and Animal Physiology
Cell structure and function; principles of animal physiology (immunology, renal, cardiovascular, sensory, motor physiology, and endocrinology); neurobiology from cellular basis to neural regulation of physiology. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER: DB-NatSci 5 units, Win (Cyrct, M; Jones, P; Heller, C; Sapolsky, R)

BIO 43. Plant Biology, Evolution, and Ecology
Principles of evolution: macro- and microevolution and population genetics. Ecology: the principles underlying the exchanges of mass and energy between organisms and their environments; population, community, and ecosystem ecology; populations, evolution, and global change. Equivalent to BIOHOPK 43. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER: DB-NatSci 5 units, Spr (Petrov, D; Mudgett, M; Roughgarden, J)

BIO 44X. Core Experimental Laboratory
Two quarters of lab projects provide a working familiarity with the concepts, organisms, and techniques of modern biological research. Emphasis is on experimental design, analysis of data, and written and oral presentation of the experiments. Lab fee. Prerequisites: CHEM 31X, or 31A,B, and 33. Recommended: statistics, and concurrent enrollment in Biology or Human Biology core: 44X,Y should be taken sequentially in same year. 44Y equivalent to BIOHOPK 44Y. 4 units, Win (Malladi, S)
BIO 44Y. Core Experimental Laboratory
Two quarters of lab projects provide a working familiarity with the concepts, organisms, and techniques of modern molecular biology research. Emphasis is on experimental design, analysis of data, and written and oral presentation of the experiments. Lab fee. Prerequisites: CHEM 31X, or 31A,B, and 33. Recommended: statistics, and concurrent enrollment in Biology or Human Biology core; 44X,Y should be taken sequentially in same year. 44Y equivalent to BIOHOPK 44Y.
4 units, Spr (Dirzo, R; Wilber, C)

BIO 96A. Jasper Ridge Docent Training
First of two-quarter sequence training program to join the Jasper Ridge education program. Multidisciplinary environmental education; hands-on field research. Field ecology and the natural history of plants and animals, archaeology, geology, hydrology, land management, and research projects of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes, and attend continuing education classes open to members of the JRBP community after the course.
4 units, Win (Dirzo, R; Wilber, C)

BIO 96B. Jasper Ridge Docent Training
Second of two-quarter sequence training program to join the Jasper Ridge education program. Prerequisite: 96A.
4 units, Spr (Dirzo, R; Wilber, C)

BIO 101. Ecology
The principles of ecology. Topics: interactions of organisms with their environment, dynamics of populations, species interactions, structure and dynamics of ecological communities, biodiversity. Prerequisite: 43, or consent of instructor. Recommended: statistics. GER: DB-NatSci
3 units, Aut (Dirzo, R; Viousek, P)

BIO 102. Demography: Health, Development, Environment
(Same as HUMBIO 119) Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor. GER:DB-SocSci
3 units, Spr (Tuljapurkar, S)

BIO 104. Advanced Molecular Biology
(Same as BIO 200) Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Prerequisite: Biology core. GER:DB-NatSci
5 units, Win (Friedman, J; Gozani, O)

BIO 106. Human Origins
(Same as ANTHRO 6, ANTHRO 206, HUMBIO 6) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER: DB-NatSci
5 units, Win (Klein, R)

BIO 109A. The Human Genome and Disease
(Same as BIO 209A, HUMBIO 158) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. GER: DB-NatSci
3 units, Win (Heller, R)

BIO 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine
(Same as BIO 209B) Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and through Asia to Australia or through northern Russia to Alaska to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures. Prerequisite: Biology or Human Biology core. GER: DB-NatSci
3 units, Spr (Heller, R)

BIO 112. Human Physiology
(Same as BIO 212, HUMBIO 133) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Prerequisite: Biology or Human Biology core. GER: DB-NatSci
4 units, Win (Garza, J)

BIO 113. Fundamentals of Molecular Evolution
(Same as BIO 244) The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Prerequisites: Biology core or graduate standing in any department, and consent of instructor. GER: DB-NatSci
4 units, Spr (Petrov, D)

BIO 114. Field Course on Tropical Biogeochemistry: Amazon as Case Study
(Same as EARTHSYS 114) Post-field seminar for students who went on the two-week field trip to the Amazon. Land use changes over the last 30 years including the conversion of natural forest for cattle ranching and soy beans in the Amazon, the largest contiguous area of tropical forests on Earth with the greatest number of plant and animal species. Prerequisite: English.
3 units, not given this year

BIO 117. Biology and Global Change
(Same as EARTHSYS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER: DB-NatSci
4 units, Win (Vitousek, P; Arrigo, K)

BIO 118. Genetic Analysis of Biological Processes
(Same as BIO 218) Genetic principles and their experimental applications. The identification and use of mutations to study cellular function. Prerequisite: Biology core. GER: DB-NatSci
3 units, Spr (Staff)

BIO 121. Biogeography
Global distributions of organisms through the Panarozic, with emphasis on historical causes. Topics: plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity. GER: DB-NatSci
3 units, not given this year

BIO 122. Along the Track of the Yellowstone Hotspot: Fusion of Art and Science
(Same as ARTSTUDI 184A) The 20-million-year-old track of the Yellowstone Hotspot through western North America, using the field setting to investigate ecology, evolution, and geology through an aesthetic and documentary media lens. Students create: experiential ways to learn about the natural world; a scientific yet personal intimacy about how ecosystems work and how they change; and ways to convey their observations to the public. Required trip September 4-19 to Yellowstone National Park.
4 units, Spr (Haddy, E; Wight, G; Wright-Dunbar, R)

BIO 125. Ecosystems of California
The diversity and functioning of California ecosystems through time and how human beings have impacted and managed them. Prerequisite: 43, HUMBIO 2A, or EARTHSYS 10. GER: DB-NatSci
3 units, Spr (Mooney, H)

BIO 129A. Cellular Dynamics 1: Cell Motility and Adhesion
Cell motility emphasizing role of actin assembly and dynamics coupling actin organization to cell movement. Interaction of cells with extracellular matrix, and remodelling of extracellular matrix in development and disease. Directed cell migration by chemotaxis (neural path-finding) and haptotaxis (cell adhesive interactions). Cell-cell adhesion, formation of intercellular junctions and mechanisms regulating cell-cell interactions in development and diseases. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Prerequisite: Biology core. GER: DB-NatSci
4 units, Win (Nelson, W)
BIO 129B. Cellular Dynamics II: Building a Cell
Principles of cell organization; how common biochemical pathways are modified to generate diversity in cell structure and function. Roles of actin and microtubule cytoskeletons in cellular architecture. Mechanisms of protein sorting and trafficking, and protein modules and switches in regulating cell polarity. East to polarized epithelial cells and neurons. Emphasis is on experimental logic, methods, probability, statistical inference, and interpretation of results. Students present research papers. Prerequisite: Biology core. Recommended: 129A. GER: DB-NatSci
4 units, Spr (Nelson, W)

BIO 132. Advanced Imaging Lab in Biophysics
(Same as APPPHYS 232, BIO 232, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscopy optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. GER: DB-NatSci
4 units, Spr (Block, S; Schnitzer, M; Smith, S; Stearns, T)

BIO 133. Genetics of Prokaryotes
Genetic approaches for understanding cellular processes in bacteria, including metabolism, adaptive and stress responses, signal transduction, gene expression, genetic exchange and recombination, chromosome dynamics and evolution, cell division, motility, surface attachment, and developmental responses. Emphasis is on the power of effectively combining genetics with biochemistry, microscopy, and genomics. Prerequisite: Biology core. GER: DB-NatSci
4 units, not given this year

BIO 137. Plant Genetics
(Same as BIO 237) Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci
3-4 units, Spr (Walbot, V)

BIO 139. Biology of Birds
How birds interact with their environments and each other, emphasizing studies that had impact in the fields of population biology, community ecology, and evolution. Local bird communities. Emphasis is on field research. Enrollment limited to 20. Prerequisites: 43 or equivalent, and consent of instructor. Recommended: birding experience. GER: DB-NatSci
3 units, alternate years, not given this year

BIO 140. Population Biology of Butterflies
Field work on Euphydryas populations under study on campus and elsewhere in California. Course offered as participation in research when conditions permit; decisions not made until Winter Quarter. Prerequisites: 43 or consent of instructor.
2-3 units, not given this year

BIO 141. Biostatistics
(Same as STATS 141) Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Coarse content integrated with statistical computing in R. GER:DB-Math
4-5 units, Aut (Boik, J), Win (Feldman, M)

BIO 143. Evolution
(Same as BIO 243) Principles of the evolution of all life. The logic of and evidence for the correctness of Darwin’s argument for evolution by natural selection. How Mendelian genetics was integrated into evolutionary thinking. The integration of physiological and ecological perspectives into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales. GER:DB-NatSci
3 units, Aut (Watt, W)

BIO 144. Conservation Biology
(Same as HUMBIO 112) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape levels; reserve design and management; conflict mediation. 4 units if taken with a service learning component. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. GER: DB-NatSci
3-4 units, Win (Boggs, C; Launer, A)

BIO 145. Behavioral Ecology
(Same as BIO 245) Animal behavior from an evolutionary and ecological perspective. Topics: foraging, territoriality, reproductive behavior, social groups. Lecture/seminar format; seminars include discussion of journal articles. Independent research projects. Prerequisites: Biology or Human Biology core, or consent of instructor. Recommended: statistics. GER: DB-NatSci
4 units, not given this year

BIO 146. Population Studies
Series of talks by distinguished speakers introducing approaches to population and resource studies.
1 unit, Win (Feldman, M)

BIO 147. Controlling Climate Change in the 21st Century
(Same as BIO 247, EARTHSYS 147, EARTHSYS 247, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER:DB-NatSci
3 units, alternate years, not given this year

BIO 149. The Neurobiology of Sleep
(Same as BIO 249, HUMBIO 161) Graduate students register for 249.) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER: DB-NatSci
4 units, alternate years, not given this year

BIO 150. Human Behavioral Biology
(Same as BIO 250, HUMBIO 160) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER: DB-NatSci
3 units, Spr (Sapolsky, R), alternate years, not given next year

BIO 151. Mechanisms of Neuron Death
For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer’s), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson’s and ALS), triplet repeat diseases (Huntington’s), and AIDS-related dementia. Student presentations. Enrollment limited to 13; application required. GER: DB-NatSci
3 units, Aut (Sapolsky, R)

BIO 152. Imaging: Biological Light Microscopy
(Same as MCP 222) Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core. GER: DB-NatSci
3 units, Spr (Smith, S), alternate years, not given next year

BIO 153. Cellular Neuroscience: Cell Signaling and Behavior
(Same as PSYCH 120) Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology. GER: DB-NatSci
4 units, Aut (Wine, J)

BIO 154. Molecular and Cellular Neurobiology
(Same as BIO 254, NIBIO 254) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the or-
organism and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors. GER: DB-NatSci

4-5 units, alternate years, not given this year

BIO 157. Plant Biochemistry
(Same as BIO 257) The biochemistry of plants relevant to their physiology and cell biology. Topics include: the biosynthesis, assembly, function, and regulation of cell walls; lipids; pigments; photoreceptors; transporters; and the response of plants to pathogens and stresses. Prerequisite: Biology core or equivalent, or consent of instructors. GER: DB-NatSci

3-4 units, not given this year

BIO 158. Developmental Neurobiology
For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Prerequisite: BIO 42 or equivalent. GER: DB-NatSci

4 units, alternate years, not given this year

BIO 160A. Developmental Biology I
Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. Topics covered in this quarter include embryonic axis formation, morphogen signaling, cell type specification and stem cells. Experimental logic and methods of research in developmental biology. Discussions of research papers. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci

4 units, Aut (Simon, M)

BIO 160B. Developmental Biology II
Continuation of BIO 160A. Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. The topics include sexual control of development, tissue cell-cell communication in controlling key developmental decisions. Topics covered in this quarter include embryonic axis formation, morphogen signaling, cell type specification and stem cells. Experimental logic and methods of research in developmental biology. Discussions of research papers. Prerequisite: Biology core and BIO 160A, or consent of instructor. GER: DB-NatSci

4 units, Win (Simon, M)

BIO 161. Molecular Basis of Biological Communication
Across molecular, cellular, organismal and communal biological scales, communication among elements of a system is required for its function. The molecules and logic at the heart of communication at levels from the interactions between cells in a developing body to how organisms perceive and respond to their physical environment and the organisms around them; how these systems normally work and how failures in communication result in and from disease. Current research literature. Prerequisites: BIO 41, 42. Recommended: BIO 160A, 129A.

4 units, alternate years, not given this year

BIO 163. Neural Systems and Behavior
(Same as BIO 263, HUMBIO 163) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-specific behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Prerequisites: BIO 42, HUMBIO 4A. GER: DB-NatSci

4 units, Aut (Fernald, R), alternate years, not given next year

BIO 164. Biosphere-Atmosphere Interactions
(Same as BIO 264) Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor. GER: DB-NatSci

4 units, alternate years, not given this year

BIO 165. Cellular and Molecular Therapeutic Approaches to Neurological Disorders
(Same as BIO 265) Current therapeutic research for neurological conditions, including stroke, epilepsy, neurodegenerative disorders, depression, anxiety, and aging. Sources include primary literature. Guest lectures.

1 unit, Win (Sorrells, S)

BIO 166. Faunal Analysis: Animal Remains for the Archaeologist
(Same as ANTHRO 113,213, BIO 266) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

3 units, Spr (Staff)

BIO 170. Principles of Cell Cycle Control
(Same as BIO 271) Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature.

3 units, Aut (Skotheim, J)

BIO 175. Tropical Ecology and Conservation
Field trip to a field station at Los Tuxtlas, Mexico; lectures at Stanford. How to address scientific questions concerning ecology and conservation. Field trip includes natural history observations and group research projects. Symposium based on project results. Recommended: 43, 101, and 141 or STATS 60. GER: DB-NatSci

5 units, Spr (Dirzo, R)

BIO 177. Plant Microbe Interaction
(Same as BIO 277) Plant pathology and symbiosis. Topics include: prokaryotic and eukaryotic pathogens; molecular, genetic, and cellular basis for microbial pathogenicity and host defense; genetics and cell biology of nitrogen-fixing symbiosis and for mycorrhizal associations. Evolutionary context. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

3 units, Spr (Long, S; Mudgett, M), alternate years, not given next year

BIO 178. Microbiology Literature
(Same as BIO 278) For advanced undergraduates and first- or second-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; more recent literature on prokaryotic pathogens such as Salmonella, Vibrio, and Yersinia. Current papers cover research approaches including biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

3 units, Win (Long, S)

BIO 183. Theoretical Population Genetics
(Same as BIO 283) Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and the influence of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

3 units, Spr (Feldman, M)

BIO 185. Evolution of Reproductive Social Behavior
(Same as BIO 285) Seminar. Controversies surrounding theory and data for the evolution of sex, gender, and sexuality. Issues include the critique of Darwin’s theory of sexual selection, and the accuracy of the metaphor of universal selfishness and sexual conflict in biological nature. Readings include Evolution’s Rainbow and The Genital Gene, and primary literature. GER: DB-NatSci, EC-Gender, WIM

3 units, Aut (Roughgarden, J), alternate years, not given next year

BIO 186. Natural History of the Vertebrates
(Same as BIO 286) Broad survey of the diversity of vertebrate life.
Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and genetic analysis with our local vertebrate communities through field trips to several of California’s distinct biomes. Prerequisite: Biology core.

4 units, Spr (Hadly, E), alternate years, not given next year

BIO 188. Biochemistry I
(Same as BIO 288, CHEMENG 181, CHEMENG 281, CHEM 181) CHEMENG offerings formerly listed as 188/288.) Chemical principles of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Prerequisites: CHEM 135 or 171. GER: DB-NatSci

3 units, Win (Zare, R; Cegelski, L)

BIO 189. Biochemistry II
(Same as BIO 289, CHEMENG 183, CHEMENG 283, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). GER: DB-NatSci

3 units, Spr (Dunn, A)

BIO 190. Research in Bird Biology
Semi-independent field research in ornithology emphasizing ecological relationships. Projects involve research, planned and carried out by the student in consultation with the instructor. Results are written in publication format. Enrollment limited. Prerequisites: 43, concurrent or subsequent enrollment in 139, and consent of instructor.

1-4 units, Win (Root, T), Spr (Root, T)

BIO 198. Directed Reading in Biology
Individually arranged under the supervision of faculty members.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 198X. Out-of-Department Directed Reading
Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See http://biohonors.stanford.edu for information and petitions. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 199. Advanced Research Laboratory in Experimental Biology
Individual research taken by arrangement with in-department instructors. See http://biohonors.stanford.edu for information on research sponsors, units, and credit. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology
Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See http://biohonors.stanford.edu for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 200. Advanced Molecular Biology
(Same as BIO 104) Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Prerequisite: Biology core.

5 units, Win (Frydman, J; Gozani, O)

BIO 203. Advanced Genetics
(Same as DBIO 203, GENE 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Sidow, A; Barsh, G)

BIO 205. DNA Repair and Genomic Stability
Interactions of endogenous and environmental mutagens with cellular DNA. Cellular responses to damaged DNA including molecular mechanisms for DNA repair, translesion DNA synthesis, and genetic recombination. Inducible repair responses and error-prone mechanisms. Human hereditary diseases that predispose to cancer. Relationships of DNA repair to mutagenesis, carcinogenesis, aging, and human genetic disease. Current research literature. Prerequisites: 41 and 118, or consent of instructor.

3 units, Spr (Hanawalt, P; Ford, J)

BIO 206. Field Studies in Earth Systems
(Same as EARTHSYS 189) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original hypothesis in the functioning of natural ecosystems. Admission by application; see Axess. Prerequisites: BIO 141 or EESS 160 (formerly GES 160), or equivalent.

3 units, alternate years, not given this year

BIO 207. Life and Death of Proteins
How proteins are made and degraded in the cell. Discussion of primary literature. Case studies follow the evolution of scientific ideas, and evaluate how different experimental approaches contribute to our understanding of a biological problem. Emphasis on multidisciplinary approaches. Topics: protein folding and assembly, mechanisms of chaperone action, sorting into organelles, misfolding and disease, and the ubiquitin-proteasome pathway. Enrollment limited to 30.

3 units, Win (Frydman, J)

BIO 209A. The Human Genome and Disease
(Same as BIO 109A, HUMBIO 158) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers.

3 units, Win (Heller, R)

BIO 209B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine
(Same as BIO 109B) Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core.

3 units, Spr (Heller, R)

BIO 212. Human Physiology
(Same as BIO 112, HUMBIO 133) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Prerequisite: Biology or Human Biology core.

4 units, Win (Garza, D)
BIO 213. Biology of Viruses
Principles of virus growth, genetics, architecture, and assembly. The relation of temperate viruses and other epistememes to the host cell. Prerequisite: Biology core. Recommended: 118.
3 units, Win (Campbell, A)

BIO 214. Advanced Cell Biology
(Same as BIOC 224) For Ph.D. students. Current research on cell structure, cell function, and dynamics. Topics include complex cellular phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A, B, and consent of instructor.
2-5 units, Win (Kopito, R; Theriot, J; Pfeffer, S; Straight, A; Nachury, M)

BIO 215. Biochemical Evolution
Biochemical viewpoints on the evolutionary process. Topics: prebiotic biochemistry and the origins of life; adaptive organization of metabolism; enzyme polymorphisms and other biochemical aspects of population genetics; macromolecular physology and protein clocks. Prerequisites: Biology core or substantial equivalent.
3 units, Win (Watt, W)

BIO 216. Terrestrial Biogeochemistry
Nutrient cycling and the regulation of primary and secondary productivity in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.
3 units, alternate years, not given this year

BIO 217. Neuronal Biophysics
Biophysical descriptions and mechanisms of passive and excitable membranes, ion channels and pumps, action potential propagation, and synaptic transmission. Introduction to dynamics of single neurons and neuronal networks. Emphasis is on the experimental basis for modern research applications. Interdisciplinary aspects of biology and physics. Literature, problem sets, and student presentations. Prerequisites: undergraduate physics, calculus, and biology.
4 units, Win (Schnitzer, M)

BIO 218. Genetic Analysis of Biological Processes
(Same as BIO 118) Genetic principles and their experimental applications. Emphasis is on the identification and use of mutations to study cellular function. Prerequisite: Biology core.
5 units, Spr (Staff)

BIO 222. Exploring Neural Circuits
Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates with background in physical science, engineering, and biology may apply to enroll. Recommended: neuroscience.
3 units, not given this year

BIO 223. Stochastic and Nonlinear Dynamics
(Same as APPPHYS 223) Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatial-temporal patterns. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.
3 units, Spr (Fisher, D), alternate years, not given next year

BIO 230. Molecular and Cellular Immunology
For advanced undergraduate and graduate students. Components of the immune system and mechanisms of immune responses: structure, function, and genetics of antibody molecules; cellular basis of immunity and its regulation; molecular biology and biochemistry of antigen receptors and signaling pathways; genetic control of immunity and disease susceptibility. Emphasis is on key experimental approaches. Prerequisite for undergraduates: Biology or Human Biology core, or consent of instructor.
4 units, Aut (Jones, P)

BIO 230A. Molecular and Cellular Immunology Literature Review
Special discussion section for graduate students. Supplement to 230. Corequisite: 230.
1 unit, Aut (Jones, P)

BIO 231. Evolution of Life Histories
Life histories as descriptions of reproduction, survival, and growth over the lives of individuals. Theoretical approaches to the dynamics and evolution of life histories and of populations with different life histories. Experimental data on natural populations and methods for their analysis.
3 units, alternate years, not given this year

BIO 232. Advanced Imaging Lab in Biophysics
(Same as APPPHYS 232, BIO 132, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.
4 units, Spr (Block, S; Schnitzer, M; Smith, S; Stearns, T)

BIO 237. Plant Genetics
(Same as BIO 137) Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Prerequisite: Biology core or consent of instructor.
3-4 units, Spr (Wallbot, V)

BIO 243. Evolution
(Same as BIO 143) The basic facts and principles of the evolution of all life. The logic of and evidence for the correctness of Darwin’s argument for evolution by natural selection. How Mendelian genetics was integrated into evolutionary thinking. The integration of physiological and ecological perspectives into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales.
3 units, Aut (Watt, W)

BIO 244. Fundamentals of Molecular Evolution
(Same as BIO 113) The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.
4 units, Spr (Petrov, D)

BIO 245. Behavioral Ecology
(Same as BIO 145) Animal behavior from an evolutionary and ecological perspective. Topics: foraging, territoriality, reproductive behavior, social groups. Lecture/seminar format; seminars include discussion of journal articles. Independent research projects. Prerequisites: Biology or Human Biology core, or consent of instructor. Recommended: statistics.
4 units, not given this year

BIO 247. Controlling Climate Change in the 21st Century
(Same as BIO 147, EARTHSYS 147, EARTHSYS 247, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems.
3 units, alternate years, not given this year

BIO 249. The Neurobiology of Sleep
(Same as BIO 149, HUMBIO 161) (Graduate students register for 249.) Preference to seniors and graduate students. The neuroscience and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regula-
tion, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

4 units, alternate years, not given this year

BIO 250. Human Behavioral Biology
(Same as BIO 150, HUMBIO 160) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

5 units, Spr (Sapolsky, R), alternate years, not given next year

BIO 254. Molecular and Cellular Neurobiology
(Same as BIO 154, NBIO 254) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

4-5 units, alternate years, not given this year

BIO 257. Plant Biochemistry
(Same as BIO 157) The biochemistry of plants relevant to their physiology and cell biology. Topics include: the biosynthesis, assembly, function, and regulation of cell walls; lipids; pigments; photoreceptors; transporters; and the response of plants to pathogens and stresses. Prerequisite: Biology core or equivalent, or consent of instructor.

3-4 units, not given this year

BIO 258. Neural Development
For Ph.D. students. Seminar; students also attend BIO 158 lectures. Topics: neural induction and patterning, cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior.

4 units, alternate years, not given this year

BIO 263. Neural Systems and Behavior
(Same as BIO 163, HUMBIO 163) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Prerequisites: BIO 42, HUMBIO 4A.

4 units, Aut (Fernald, R), alternate years, not given next year

BIO 264. Biosphere-Atmosphere Interactions
(Same as BIO 164) Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor.

4 units, alternate years, not given this year

BIO 265. Cellular and Molecular Therapeutic Approaches to Neurological Disorders
(Same as BIO 165) Current therapeutic research for neurological conditions, including stroke, epilepsy, neurodegenerative disorders, depression, anxiety, and aging. Sources include primary literature. Guest lecturers.

1 unit, Win (Sorrells, S)

BIO 266. Faunal Analysis: Animal Remains for the Archaeologist
(Same as ANTHRO 113, ANTHRO 213, BIO 166) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

5 units, Spr (Staff)

BIO 267. Molecular Mechanisms of Neurodegenerative Disease
(Same as NENS 267) The epidemic of neurodegenerative disorders such as Alzheimer’s and Parkinson’s disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

4 units, Win (Kopito, R; Wyss-Coray, A; Reimer, R), alternate years, not given next year

BIO 271. Principles of Cell Cycle Control
(Same as BIO 171) Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature.

3 units, Aut (Skotheim, J)

BIO 274S. Hopkins Microbiology Course
(Same as BIOHOPK 274, CEE 274S, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret molecular sequence analysis and characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

BIO 277. Plant Microbe Interaction
(Same as BIO 177) Plant pathology and plant symbiosis. Topics include: prokaryotic and eukaryotic pathogens; molecular, genetic, and cellular basis for microbial pathogenicity and host defense; genetics and cell biology of nitrogen-fixing symbiosis and for mycorrhizal associations. Evolutionary context. Prerequisites: Biology core or two or more upper-division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

3 units, Spr (Long, S; Muddgett, M), alternate years, not given next year

BIO 278. Microbiology Literature
(Same as BIO 178) For advanced undergraduates and first- or second-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; more recent literature on prokaryotic pathogens such as Salmonella, Vibrio, and/or Yersinia. Current papers cover research approaches including biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

3 units, Win (Long, S)

BIO 283. Theoretical Population Genetics
(Same as BIO 183) Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

3 units, Spr (Feldman, M)

BIO 285. Evolution of Reproductive Social Behavior
(Same as BIO 185) Seminar. Controversies surrounding theory and data for the evolution of sex, gender, and sexuality. Issues include the critique of Darwin’s theory of sexual selection, and the accuracy of the metaphor of universal selfishness and sexual conflict in biological nature. Readings include Evolution’s Rainbow and The Genial Gene, and primary literature.

3 units, Aut (Roughgarden, J), alternate years, not given next year

BIO 286. Natural History of the Vertebrates
(Same as BIO 186) Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California’s distinct biomes.
Prerequisite: Biology core.
4 units, Spr (Hadly, E), alternate years, not given next year

BIO 288. Biochemistry I
(Same as BIO 188, CHEMENG 181, CHEMENG 281, CHEM 181) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: CHEM 188/288 or CHEMENG 181/281 (formerly 188/288).
3 units, Spr (Dunn, A)

BIO 289. Biochemistry II
(Same as BIO 189, CHEMENG 183, CHEMENG 283, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).
3 units, Spr (Dunn, A)

BIO 290. Teaching of Biology
Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

BIO 290X. Out-of-Department Teaching
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

BIO 291. Development and Teaching of Core Experimental Laboratories
Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Must be taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.
1-2 units, Aut (Malladi, S), Win (Malladi, S)

BIO 294. Cellular Biophysics
(Same as APPPHYS 294) Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.
3 units, Aut (Watt, W), Win (Watt, W), Spr (Watt, W)

BIO 298. Out-of-Department Graduate Research
Individual research by arrangement with out-of-department instructors. Master’s students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See http://biohonors.stanford.edu for more information. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 300. Graduate Research
For graduate students only. Individual research by arrangement with in-department instructors.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 300X. Out-of-Department Graduate Research
Individual research by arrangement with out-of-department instructors. Master’s students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See http://biohonors.stanford.edu for more information. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 301. Frontiers in Biology
Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department’s Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.
1-3 units, Aut (Skotheim, J; Morrison, A), Win (Skotheim, J; Morrison, A)

Required of first-year PhD students in population biology, ecology and evolution.
1 unit, Aut (Ehrlich, P)

Required of first-year PhD students in population biology, ecology and evolution. Major conceptual issues and developing topics.
1 unit, Win (Ehrlich, P)

Required of first-year PhD students in population biology, ecology and evolution.
1 unit, Spr (Ehrlich, P)

BIO 306. Current Topics in Integrative Organismal Biology
Limited to and required of graduate students doing research in this field. At Hopkins Marine Station.
1 unit, Aut (Heller, C; Sapolsky, R; Fernald, R)

BIO 312. Ethical Issues in Ecology and Evolutionary Biology
Focus is on ethical issues addressed in Donald Kennedy’s Academic Duty and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Disussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: PhD student in the ecology and evolutionary biology or marine program, or consent of instructor.
1 unit, Aut (Ehrlich, P)

BIO 315. Seminar in Biochemical Evolution
Literature review and discussion of current topics in biochemical evolution and molecular evolutionary genetics. Prerequisite: consent of instructor.
1-3 units, Aut (Watt, W), Win (Watt, W), Spr (Watt, W)

BIO 323. Detecting Climate-Driven Changes in California Plant Ranges
Seminar. For advanced undergraduates and graduate students. Future anthropogenic climate change will continue to alter plant communities, plant ranges, and ecosystems. Studies have already documented plant and animal range shifts across the globe, yet many questions remain as to how plants will respond to climate change. Which taxa and functional groups will be most sensitive to changes in climate? What will happen to ecological communities with differential response of plant species to climate? Focus is on analyzing trends in climate change and long-term plant distribution data in California. May be repeated for credit. Prerequisite: familiarity with statistical, spatial, or modeling analyses.
1-2 units, not given this year

BIO 324. Interpreting Ecological Data
Experimental design and the theory behind and appropriate use of parametric statistics including: student t-test; analysis of variance; linear regression and some variations including logistic regression and multiple regression; analysis of covariance; chi-squared similarity test; testing the independence of multiple tests; Monte Carlo and bootstrapping methods. Students encouraged to use data from their own research. Course does not fulfill undergraduate statistics requirement. Prerequisite: consent of instructor.
4 units, not given this year

BIO 326. Foundations in Biogeography
Focus on classic papers covering the global distribution and abundance of organisms through time. Topics include: phylogenetics, phylogeography, plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity, conservation and a history of the field.
2 units, Win (Hadly, E; Fukami, T), alternate years, not given next year

BIO 342. Plant Biology Seminar
Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See http://carnegiedpb.stanford.edu/seminars/seminars.php.
1-3 units, Aut (Walbot, V), Win (Walbot, V), Spr (Walbot, V)

BIO 344. Advanced Seminar in Cellular Biology
Enrollment limited to graduate students directly associated with...
BIO 346. Advanced Seminar on Prokaryotic Molecular Biology
Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.
1 unit, not given this year

BIO 383. Seminar in Population Genetics
Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. Prerequisite: consent of instructor.
1-3 units, Aut (Feldman, M), Win (Feldman, M), Spr (Feldman, M)

BIO 384. Theoretical Ecology
Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.
1-3 units, not given this year

BIO 388. Communication and Leadership Skills
(Same as IPER 210) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.
2 units, Spr (Staff)

BIO 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

BIOLOGICAL, HOPKINS MARINE STATION (BIOHOPK)

UNDERGRADUATE COURSES IN BIOLOGY, HOPKINS MARINE STATION

BIOHOPK 43. Plant Biology, Evolution, and Ecology

BIOHOPK 44Y. Core Experimental Laboratory
Laboratory and field projects provide working familiarity with the concepts, organisms, and techniques of plant and evolutionary biology, and ecology. Emphasis is on hands-on experimentation in the marine environment, analysis of data, and written and oral presentation of the experiments. Equivalent to BIO 44Y. Corequisite: BIOHOPK 43. GER: DB-NatSci, WIM 5 units, Spr (Denny, M; Palumbi, S; Watanabe, J)

BIOHOPK 161H. Invertebrate Zoology
(Same as BIOHOPK 261H) (Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lecture, lab, plus field trips. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci 5 units, Win (Watanabe, J)

BIOHOPK 162H. Comparative Animal Physiology
(Same as BIOHOPK 262H) (Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the core coursework with a more intensive research focus, with more units, if available. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci 5-8 units, Spr (Block, B), alternate years, not given next year

BIOHOPK 166H. Molecular Ecology
(Same as BIOHOPK 266H) (Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms. GER: DB-NatSci 5 units, Win (Palumbi, S)

BIOHOPK 170H. Topics in Marine Biology
(Same as BIOHOPK 270H) (Graduate students register for 270H.) A topic of current interest to marine science explored through primary literature. Prerequisite: Biology core or consent of instructor. May be repeated for credit. 1 unit, Win (Staff)

BIOHOPK 171H. Ecological and Evolutionary Physiology
(Same as BIOHOPK 271H) (Graduate students register for 271H.) The interplay between environmental factors, such as temperature, light, nutrient supply, salinity, and oxygen availability, and adaptive change at the physiological level. Emphasis is on marine species and the roles played by physiological adaptations in establishing their distribution and performance. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci 4 units, Spr (Somero, G)

BIOHOPK 172H. Marine Ecology
(Same as BIOHOPK 272H) (Graduate students register for 272H.) Focus is on quantitative approaches to questions in marine ecology and ecophysiology. Statistical methods, including multivariate statistical approaches and meta-analysis. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci 5 units, Win (Micheli, F)

BIOHOPK 174H. Experimental Design and Probability
(Same as BIOHOPK 274H) (Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci 3 units, Spr (Watanabe, J)

BIOHOPK 175H. Problems in Marine Ecology and Ecophysiology
Field-based, emphasizing individual and small group research for advanced undergraduates. Students learn field and laboratory techniques to address ecological, ecophysiological, and biomechanical problems faced by marine organisms. Original research projects may be integrated with ongoing research programs in the Hopkins Marine Life Refuge. Prerequisites: Biology core, consent of instructor. GER: DB-NatSci, WIM 3-10 units, Spr (Denny, M)

BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities
(Same as BIOHOPK 285H) Eight week course. Daily lectures, labs, and scuba dives focused on kelp forest communities. Physical environment, identification, and natural history of resident organisms; ecological processes that maintain biodiversity and community organization; field methods, data analysis, and research diving techniques. Field research component contribute to ongoing studies associated with Hopkins Marine Life Observatory. Training meets...
requirements for Stanford scientific diver certification. Prerequisites: BIO 42 and 43, or BIO 42 and BIOHOPK 43, or consent of instructor; and advanced scuba certification and scuba equipment.

12 units, Sum (Watanabe, J)

BIOHOPK 187H. Sensory Ecology
(Same as BIOHOPK 287H) (Graduate students register for 287H.)
Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature.
2 units, Win (Thompson, S)

BIOHOPK 188H. Experimental Sensory Ecology
(Same as BIOHOPK 288H) (Graduate students register for 288H.)
Experimental methods and findings related to animal sensory capability in the context of marine environments. Focus is on current literature and hands-on experiments. Laboratory component explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior. BIOHOPK 187H/287H is not a prerequisite. WIM
3 units, Spr (Thompson, S)

BIOHOPK 198H. Directed Instruction or Reading
May be taken as a prerequisite to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 199H. Undergraduate Research
Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 163H. Oceanic Biology
(Same as BIOHOPK 263H) (Graduate students register for 263H.)
How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor. GER: DB-NatSci
4 units, not given this year

BIOHOPK 164H. Marine Botany
(Same as BIOHOPK 264H) (Graduate students register for 264H.)
Introduction to plants in the sea. Phytoplankton and oceanic productivity; macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisite: Biology core or consent of instructor. GER: DB-NatSci
5 units, alternate years, not given this year

BIOHOPK 167H. Nerve, Muscle, and Synapse
(Same as BIOHOPK 267H) (Graduate students register for 267H.)
Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biological, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on ion recording and extracellular recording and patch clamping techniques. Lectures, discussions, and labs. Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor. GER: DB-NatSci
5 units, alternate years, not given this year

BIOHOPK 173H. Marine Conservation Biology
(Same as BIOHOPK 273H) (Graduate students register for 273H.)
The science of preserving marine diversity. Goal is to introduce students to major conservation issues associated with marine ecosystems. Topics include decline of open ocean fisheries, salmon conservation, bycatch issues in fisheries, use of marine reserves, marine invasions, marine pollution, and global warming. Includes five lectures from other universities who specialize in marine conservation.
1-3 units, Spr (Block, B; Gilly, W), alternate years, not given next year
Focus is on quantitative approaches to questions in marine ecology and ecophysiology. Statistical methods, including multivariate statistical approaches and meta-analysis. Prerequisite: Biology core or consent of instructor.

5 units, Win (Micheli, F)

**BIOHOPK 274. Hopkins Microbiology Course**
(Same as BIO 274S, CEE 274S, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Spr (Sporrman, A; Francis, C)

**BIOHOPK 274H. Experimental Design and Probability**
(Same as BIOHOPK 174H) (Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor.

3 units, Spr (Watanabe, J)

**BIOHOPK 275H. Synthesis in Ecology**
Introduction to frameworks and approaches to synthesizing large data sets, including meta-analysis and permutational multivariate analysis of variance. Hands-on data analysis sessions. May be repeated for credit.

2 units, Win (Micheli, F)

**BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities**
(Same as BIOHOPK 185H) Eight week course. Daily lectures, labs, and scuba dives focused on kelp forest communities. Physical environment, identification, and natural history of resident organisms; ecological processes that maintain biodiversity and community organization; field methods, data analysis, and research diving techniques. Field research component contribute to ongoing studies associated with Hopkins Marine Life Observatory. Training meets requirements for Stanford scientific diver certification. Prerequisites: BIO 42 and 43, or BIO 42 and BIOHOPK 43, or consent of instructor; and advanced scuba certification and scuba equipment.

12 units, Sum (Watanabe, J)

**BIOHOPK 287H. Sensory Ecology**
(Same as BIOHOPK 187H) (Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature.

2 units, Win (Thompson, S)

**BIOHOPK 288H. Experimental Sensory Ecology**
(Same as BIOHOPK 188H) (Graduate students register for 288H.) Experimental methods and findings related to animal sensory capability in the context of marine environments. Focus is on current literature and hands-on experiments. Laboratory component explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior. BIOHOPK 187H/287H is not a prerequisite.

3 units, Spr (Thompson, S)

**BIOHOPK 290H. Teaching of Biological Science**
Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor. (Staff)

1-15 units, Win (Staff), Spr (Staff), Sum (Staff)

**BIOHOPK 300H. Research**
Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelvic fishes, evolution of endothermy); M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neuromechanical analysis of giant axon systems in marine invertebrates from molecular to behavioral levels; F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); G. Somero: Ecological and Evolutionary Physiology (adaptations of marine organisms to the environment: temperature, pr

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**BIOHOPK 263H. Oceanic Biology**
(Same as BIOHOPK 163H) (Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor.

4 units, not given this year

**BIOHOPK 264H. Marine Botany**
(Same as BIOHOPK 164H) (Graduate students register for 264H.) Introduction to plants in the sea. Phytoplankton and oceanic productivity; macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisite: Biology core or consent of instructor.

5 units, alternate years, not given this year

**BIOHOPK 267H. Nerve, Muscle, and Synapse**
(Same as BIOHOPK 167H) (Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor.

5 units, alternate years, not given this year

**BIOHOPK 273H. Marine Conservation Biology**
(Same as BIOHOPK 173H) (Graduate students register for 273H.) The science of preserving marine diversity. Goal is to introduce students to major conservation issues associated with marine ecosystems. Topics include decline of open ocean fisheries, salmon conservation, bycatch issues in fisheries, use of marine reserves, marine invasions, marine pollution, and global warming. Includes five lecturers from other universities who specialize in marine conservation.

1-3 units, Spr (Block, B; Gilly, W), alternate years, not given next year

**BIOHOPK 284H. Holistic Biology: Monterey Bay and the Sea of Cortez**
(Same as BIOHOPK 184H) (Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems from complementary points of view, including scientific, historical, philosophical, and literary. The work and writings of Ed Ricketts and John Steinbeck and historical and contemporary works concerning marine ecology and fisheries. Field work, laboratory studies with living invertebrates, and an individual research project. Course includes a component in Baja California, Mexico. Only 6 units may count towards the Biology major.

16 units, Spr (Gilly, W), alternate years, not given next year

**BIOHOPK 323H. Stanford at Sea**
(Same as BIOHOPK 182H, EESS 323, EARTHSYS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, marine studies, conservation, and nautical science at Hopkins Marine Station, Stanford University,

STANFORD BULLETIN, 2009-10 | 427
BIOMEDICAL INFORMATICS (BIOMEDIN)

UNDERGRADUATE COURSES IN BIOMEDICAL INFORMATICS

BIOMEDIN 109Q. Genomics: A Technical and Cultural Revolution (S, Sem) (Same as GENE 109Q) Stanford Introductory Seminar. Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.
3 units, Win (Alman, R)

BIOMEDIN 156. Economics of Health and Medical Care (Same as BIOMEDIN 256, ECON 126, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 1. 5 units, Aut (Bhattacharya, J)

BIOMEDIN 200. Biomedical Informatics Colloquium Series of colloquia offered by program faculty, students, and occasional guest lecturers. May be repeated three times for credit.
1 unit, Aut (Musen, M), Win (Musen, M), Spr (Musen, M)

BIOMEDIN 201. Biomedical Informatics Student Seminar Participants report on recent articles from the Biomedical Informatics literature or their research projects. Goal is to teach presentation skills. May be repeated three times for credit.
1 unit, Aut (Musen, M), Win (Musen, M), Spr (Musen, M)

BIOMEDIN 204. Pharmacogenomics Via Internet. Genetically determined responses to drugs; applications focusing on the PharmGKB database, a publicly available Internet tool to aid researchers in understanding how genetic variation among individuals contributes to differences in reactions to drugs. Topics include: introduction to pharmacogenomics and pharmacology; the genome and genetics; human polymorphisms, frequencies, significance, and populations; informatics in pharmacogenomics; genotype to phenotype and phenotype to genotype approaches; drug discovery and validation; genome variation discovery and genotyping; adverse drug reactions and interactions; pathways of drug metabolism; and cancer pharmacogenomics. Prerequisites: two of BIOSCI 41, 42, 43, and 44X, Y or consent of instructor.
1 unit, Aut (Cheng, B; Fagan, L), Win (Cheng, B; Fagan, L), Spr (Staff), Sum (Cheng, B; Fagan, L)

BIOMEDIN 205. Biomedical Informatics for Medicine Primarily for M.D. students; open to other graduate students. Emphasis is on practical applications of bioinformatics and medical informatics for medicine, health care, clinicians, and biomedical research, focused on work at Stanford. Topics may include: methods to analyze genetic conditions’ integrative methods for microarray, proteomic, and genomic data to understand the etiology of disease, clinical information systems in local healthcare facilities, cellular and radiology imaging, and pharmacogenomics. Enrollment for 2 units includes weekly assignments. Non-M.D. students may enroll for 1 unit. May be repeated for credit. Prerequisite: background in biomedicine. Recommended: background in programming.
1-2 units, Aut (Butte, A; Liu, L), Spr (Butte, A)

BIOMEDIN 206. Informatics in Industry Effective management, modeling, acquisition, and mining of biomedical information in healthcare and biotechnology companies and approaches to information management adopted by companies in this ecosystem. Guest speakers from pharmaceutical/biotechnology companies, clinics/hospitals, health communities/portals, instrumentation/software vendors. May be repeated for credit.
1 unit, Spr (Kotecha, N; Shah, N)

BIOMEDIN 207. Digital Medicine: Promise and Peril in the Age of Electronic Health Records Topical discussions of the use of electronic health records in clinical care and clinical research. Lectures by faculty, students and guest speakers are augmented by site visits to local clinical institutions that have implemented electronic health records systems. Goal is exposure to practical challenges of system implementation and to research opportunities in clinical informatics.
1 unit, Sum (Das, A)

BIOMEDIN 210. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving (Same as CS 270) Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.
3 units, Aut (Musen, M)

BIOMEDIN 211. Effective Design in Clinical Informatics Systems (Same as CS 271) Methods of designing and engineering software systems in complex clinical environments. Case studies illustrate factors leading to success or failure of systems. Project assignments involve focused team-based design work. Topics: user and organizational requirements, data and knowledge modeling, component-based system design, system prototyping, and human-systems interaction. Prerequisite: BIOMEDIN 210 recommended, or database or object-oriented programming course.
3 units, Win (Das, A)

BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology (Same as BIOE 212, CS 272, GENE 212) Hands-on software building. Students teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.
3 units, Aut (Alman, R; Cheng, B; Klein, T)

BIOMEDIN 214. Representations and Algorithms for Computational Molecular Biology (Same as BIOE 214, CS 274, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.
3-4 units, Spr (Staff)
BIOMEDIN 216. Lectures on Representations and Algorithms for Molecular Biology
Lecture series for BIOMEDIN 214. Via internet. Prerequisite: familiarity with biology recommended. 1 unit, Spr (Altman, R)

BIOMEDIN 217. Translational Bioinformatics
(Same as CS 275) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology. 4 units, Win (Bates, A)

BIOMEDIN 218. Translational Bioinformatics
Same content as 217; for medical and graduate students who attend lectures and participate in limited assignments and final project. Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A; familiarity with statistics and biology. 4 units, Win (Bates, A)

BIOMEDIN 219. Mathematical Models and Medical Decisions
Analytic methods for determining the optimal diagnostic and therapeutic decisions for the care of individual patients and for the design of policies affecting the care of patient populations. Topics: utility theory and probability modeling, empirical methods for estimating disease prevalence, probability models for periodic processes, binary decision-making techniques, Markov models of dynamic disease problems, utility assessment techniques, parametric utility models, utility models for multidimensional outcomes, analysis of time-varying clinical outcomes, and the design of cost-contrained clinical policies. 2 units requires completion of a case study project. Prerequisites: introduction to calculus and basic statistics. 1-2 units, Win (Staff)

BIOMEDIN 228. Computational Genomic Biology
(Same as STAT 228) Application of computational genomics methods to biological problems. Topics include: assembly of genomic sequences; genome databases; comparative genomics; gene discovery; gene expression analyses including gene clustering by expression, transcription factor binding site discovery, metabolic pathway discovery, functional genomics, and gene and genome ontologies; and medical diagnostics using SNPs and gene expression. Recent papers from the literature and hands-on use of the methods. Prerequisites: introductory course in computational molecular biology or genomics such as BIOC 218, BIOMEDIN 214 or GENE 211. 3 units, not given this year

BIOMEDIN 231. Computational Molecular Biology
(Same as BIOC 218) For molecular biologists and computer scientists. Representation and analysis of genomes, sequences, and proteins. Strengths and limitations of existing methods. Course work performed on web or using downloadable applications. See http://biochem218.stanford.edu/. Prerequisites: introductory molecular biology course at level of BIOSCI 41 or consent of instructor. Autumn and spring offerings are via internet only. 3 units, Aut (Brudlag, D), Win (Brudlag, D), Spr (Brudlag, D)

BIOMEDIN 233. Intermediate Biostatistics: Analysis of Discrete Data
(Same as HRP 261, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher’s exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference. 3 units, Win (Sainani, K)

BIOMEDIN 251. Outcomes Analysis
(Same as HRP 252) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics. 3 units, Spr (Bhattacharya, J)

BIOMEDIN 256. Economics of Health and Medical Care
(Same as BIOMEDIN 156, ECON 126, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51. 5 units, Aut (Bhattacharya, J)

BIOMEDIN 263. Computational Genomics
(Same as CS 262) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation, protein families, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics. 3 units, Win (Batzoglou, S)

BIOMEDIN 273A. A Computational Tour of the Human Genome
(Same as CS 273A, DBIO 273A) Biology through an exploration of Human Genome. Key genomic and genetic concepts from an informatics perspective. Biomedical advances resulting from the Genomics revolution. Topics: genome sequencing: technologies, assembly, personalized sequencing. Functional landscape: genes, gene regulation, repeats, RNA genes. Genome evolution: comparative genomics, ultraconservation, co-option. Additional topics: population genetics, personalized genomics, and ancient DNA. Course starts with primer in biology and text processing languages. Ends with guest lectures from forefront of genomic research. 3 units, Aut (Batzoglou, S; Bejerano, G)

BIOMEDIN 299. Directed Reading and Research
For students wishing to receive credit for directed reading or research time. Prerequisite: consent of instructor. (Staff) 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOMEDIN 366. Computational Biology
(Same as STAT 366, STATS 366) Methods to understand sequence alignments and phylogenetic trees built from molecular data, and general genetic data. Phylogenetic trees, median networks, microarray analysis, Bayesian statistics. Binary labeled trees as combinatorial objects, graphs, and networks. Distances between trees. Multivariate methods (PCA, CA, multidimensional scaling). Combining data, nonparametric inference. Algorithms useful in branch and bound, dynamic programming, Markov chain approximation to combinatorial optimization (simulated annealing, Markov chain Monte Carlo, approximate counting, exact tests). Software such as Matlab, Phylip, Seq-gen, Arlequin, Puzzle, Splitstree, XGobi. 2-3 units, Spr (Zhang, N)

BIOMEDIN 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects. 4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
BIOMEDIN 374. Algorithms in Biology (same as CS 374) (Same as CS 374) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.
2-3 units, Spr (Batzoglou, S)

BIOMEDIN 390A. Curricular Practical Training Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.
1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 390B. Curricular Practical Training BIOMEDIN 390A, B, and C may each be taken only once.
1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 390C. Curricular Practical Training BIOMEDIN 390A, B, and C may each be taken only once.
1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 432. Analysis of Costs, Risks, and Benefits of Health Care (Same as HRP 392) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.
4 units, Aut (Garber, A; Owens, D)

BIOPHYS 227. Functional MRI Methods (Same as RAD 227) Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.
3 units, Aut (Glover, G)

BIOPHYS 228. Computational Structural Biology (Same as SBIO 228) Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.
3 units, not given this year

BIOPHYS 232. Advanced Imaging Lab in Biophysics (Same as APPPHY 232, BIO 132, BIO 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommend-
curriculum includes a sampling of recent biomedical research discoveries that led to the current cancer diagnosis and therapeutic treatments.

3 units, Spr (Giaccia, A)

CBIO 260. Teaching in Cancer Biology
Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

1-10 units, Aut (Giaccia, A), Win (Giaccia, A), Spr (Lipstick, J)

CBIO 275. Tumor Immunology
(Same as IMMUNOL 275) Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoeediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.

3 units, Aut (Engleman, E; Rothbard, J)

CBIO 280. Cancer Biology Journal Club
Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

1 unit, Aut (Giaccia, A), Win (Giaccia, A), Spr (Giaccia, A)

CBIO 299. Directed Reading in Cancer Biology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CBIO 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CENTER FOR TEACHING AND LEARNING (CTL)

UNDERGRADUATE COURSES IN CENTER FOR TEACHING AND LEARNING

CTL 53. Working Smarter
College-level strategies and skills in time management, reading, speaking, writing, and test preparation. Students explore learning preferences to develop strategies in different academic settings.

2 units, Sum (Townsend, L)

CTL 105. Voice and Articulation Intensive for Non-Native English Speakers
Workshop focusing on exercises designed to help foreign students improve their articulation and delivery in English. Work includes breath, sound, enunciation, melody, and colloquialism.

1-2 units, Win (Freeland, T)

CTL 115. Voice Workshop
(Same as CTL 215) Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with CTL 117.

1-2 units, Aut (Freeland, T), Spr (Freeland, T)

CTL 117. The Art of Effective Speaking
(Same as CTL 217) The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression.

3 units, Aut (Neuwirth, M), Win (Allen, D)

3 units, Spr (Staff)

CTL 118. Public Speaking: Romancing the Room
A practical approach to the art of public speaking. Emphasis is on developing skills in speech types including impromptu, personal experience, interviewing, demonstration, persuasive, and special occasion. Materials include videotape, texts of famous speeches, and a final dinner program of speeches. Students evaluate presentations by others. $55 materials fee.

3 units, Sum (Wagstaffe, J)

CTL 119. Oral Communication Tutor Teaching Practicum
Seminar. For students with a strong background in public speaking who wish to train as public speaking tutors for CTL’s Oral Communication Program. Readings, exercises, and supervised teaching refine speaking skills. Preparation to serve as a peer tutor in a variety of academic disciplines. Prerequisite: application and consent of instructor.

1-3 units, Spr (Allen, D; Hennings, J)

CTL 120. Peer Tutor Training
Goal is to help students become effective peer tutors for course material already mastered by articulating aims; developing practical tutoring skills including strategies for drop-in sessions; observing experienced tutors; discussing reading assignments; role playing; and reflecting on experiences as a peer tutor intern. Prerequisite: consent of instructor.

1 unit, Aut (Glickman, A; Chambers, A), Win (Glickman, A; Chambers, A)

CTL 125. From the Page to the Stage: The Performance of Literature
The oral interpretation of literature as performance art and mode of literary analysis. Focus on contemporary and local expression including topics such as the Spoken Word Collective at Stanford, the ensemble performance of short works of fiction by San Francisco’s Word for Word Performing Arts Company, and the storytelling art of Awele Makeba which combines theater, oral history, and music. No performance experience necessary.

3 units, not given this year

CTL 130. Beyond Stereotype Threat: Claiming a Rightful Place in an Academic Community
(Same as PSYCH 125) Stereotype threat as mitigating the quality of a student’s test performance; its impact on academic success at Stanford. How to reduce the impact of stereotype threat on Stanford students.

3 units, Win (Glickman, A)

CTL 175. Intertextuality, Interpretation, and Performance
Literary and performance theories from the late 20th century to the present. The performative link between writing and speech. Students apply theories in critical writings, performances, and intertextual assemblages. How to find and refine one’s own voices in writing and vocality.

4 units, not given this year

CTL 177. Performance of Power: Oratory and Authority from the Ancient World to the Postmodern
Speech as action has long been seen as essential to leadership. Theories and examples of oratory, from Aristotle to George W. Bush, assessing each as model of voice-activated authority. The impact of mass media technologies as they transform the public space of oratory.

4 units, not given this year

CTL 180. Interpersonal and Small Group Communication
(Same as CTL 280) Communication effectiveness in the contexts of dyads, the workplace, family, and society. Listening, conflict resolution, leadership, power and its implementation, group dynamics, emotions, and cultural influences on interactions. Sources include readings, videos, role playing, interviews, individual and group presentations, and group exercises.

3 units, not given this year

CTL 190. Persuasive Speaking
(Same as CTL 290) Persuasion is the act of influencing others to see, feel, think, believe, and/or act in a way that is consistent with what the speaker or sender advocates to engender power, and how that power is used can vary widely. How to effectively persuade others in interpersonal, family, workplace, and public spheres. How to be astute consumers of persuasive messages, including those from other individuals and from public sources such as media, advertising, and politics. In-class exercises and speeches to assist participants in developing and executing persuasive skills.

3 units, Spr (Staff)
CTL 199. Independent Study
Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CENTER FOR TEACHING AND LEARNING

CTL 215. Voice Workshop
(Same as CTL 115) Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with CTL 117.
1-2 units, Aut (Freeland, T), Spr (Freeland, T)

CTL 217. The Art of Effective Speaking
(Same as CTL 117) The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression.
3 units, Aut (Neuwirth, M), Win (Allen, D)

CTL 219. Oral Communication for Graduate Students
Graduate student speaking activities such as teaching (delivering lectures, guiding discussion, and facilitating small groups), professional presentations and conference papers, and preparing for oral exams and defenses. In-class projects, discussion, and individual evaluation assist students in developing effective techniques for improving oral communication skills.
1-3 units, Spr (Freeland, T), Sum (Freeland, T)

CTL 225. Teaching Development Series
Teaching and academic career topics from CTL’s workshops series. Documented participation in a minimum of 10 hours required for credit. Offerings vary quarterly. See http://ctl.stanford.edu for current information. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Clerici-Arias, M), Win (Clerici-Arias, M), Spr (Clerici-Arias, M)

CTL 226. College Teaching in the Humanities
For graduate students in the humanities interested in an academic career. Topics include latest research on teaching and learning, effective humanities teaching practices, designing courses and assignments, writing a teaching statement, disciplinary and interdisciplinary teaching, teaching with technology, and research on early career faculty.
1-3 units, Win (Denman, M)

CTL 230. Mentoring in Research
Knowledge, skills, and hands-on training to mentor undergraduate research assistants and to impact relationships with your own mentors and advisers. Topics include communication and project management skills, different learning styles, and cultural, ethnic and socioeconomic diversity. Case studies, scenarios, and small group activities. Five weeks.
1 unit, not given this year

CTL 231. Future Faculty Seminar
(Same as INDE 231) For graduate students from all disciplines who are considering faculty careers. Postdoctoral fellows, TGR students, and research/clinical trainees may audit by consent of instructor. Explores the broad spectrum of duties and opportunities presented through faculty positions beyond the research-related aspects. Develops awareness of resources and skills that lead to faculty success; answers field-specific and related faculty job questions through discussions with representatives of a variety of academic institutions and fellow course participants. Topics include: finding and obtaining faculty positions, negotiating and navigating the first year, and working toward tenure.
1 unit, Aut (Eberle, S; Wright-Dunbar, R)

CTL 280. Interpersonal and Small Group Communication
(Same as CTL 180) Communication effectiveness in the contexts of dyads, the workplace, family, and society. Listening, conflict resolution, leadership, power and its implementation, group dynamics, emotions, and cultural influences on interactions. Sources include readings videos/DVDs, role-playing, interviews, individual and group presentations, and group exercises.
3 units, not given this year

CTL 290. Persuasive Speaking
(Same as CTL 190) Persuasion is the act of influencing others to see, feel, think, believe, and/or act in a way that is consistent with what the speaker or sender advocates to engender power, and how that power is used can vary widely. How to effectively persuade others in interpersonal, family, workplace, and public spheres. How to be astute consumers of persuasive messages, including those from other individuals and from public sources such as media, advertising, and politics. In-class exercises and speeches to assist participants in developing and executing persuasive skills.
3 units, Spr (Staff)

CTL 299. Independent Study
Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CTL 312. Science and Engineering Course Design
(Same as ENGR 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.
2-3 units, Win (Wright-Dunbar, R; Sheppard, S)

CHEMICAL ENGINEERING (CHEMENG)

UNDERGRADUATE COURSES IN CHEMICAL ENGINEERING

CHEMENG 10. The Chemical Engineering Profession
Open to all undergraduates. Overview of and careers in chemical engineering; opportunities to develop networks with working professionals. Panel discussions on career paths and post-graduation opportunities available. Areas include biotechnology, electronics, energy, environment, management consulting, nanotechnology, and graduate school in business, law, medicine, and engineering.
1 unit, Aut (Jaramillo, T)

CHEMENG 20. Introduction to Chemical Engineering
(Same as ENGR 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci
3 units, Spr (Hwang, L)

CHEMENG 25. Biotechnology
(Same as ENGR 25) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibiotics, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent course. GER:DB-EngrAppSci
3 units, Spr (Wang, C)

CHEMENG 35N. Renewable Energy for a Sustainable World
3 units, Aut (Swartz, J)
CHEMENG 60Q. Environmental Regulation and Policy
(Sem) Stanford Introductory Seminar. Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public’s right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions.
GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 70Q. Masters of Disaster
(Sem) Stanford Introductory Seminar. Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products, presumably free from the potential for disastrous outcomes.
GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials
(Sem) Stanford Introductory Seminar. Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking.
GER:DB-EngrAppSci
3 units, Spr (Frank, C; Loesche-Frank, S)

CHEMENG 100. Chemical Process Modeling, Dynamics, and Control
Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53.
3 units, Aut (Fuller, G)

CHEMENG 110. Equilibrium Thermodynamics
Thermodynamic properties, equations of state, properties of nonideal systems including mixtures, and phase and chemical equilibrium. Prerequisite: CHEM 171 or equivalent.
3 units, Win (Bao, Z)

CHEMENG 120A. Fluid Mechanics
The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; 100 and CME 102 or equivalent.
4 units, Win (Fuller, G)

CHEMENG 120B. Energy and Mass Transport
General diffusive transport, heat transport by conduction, Fourier’s law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite 120A or consent of instructor.
4 units, Spr (Spakowitz, A)

CHEMENG 130. Separation Processes
Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes.
3 units, Spr (Jaramillo, T)

CHEMENG 140. Micro and Nanoscale Fabrication Engineering
(Same as CHEMENG 240) (Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55
3 units, Spr (Bao, Z)

CHEMENG 150. Biochemical Engineering
Systems-level combination of chemical engineering concepts with biological principles. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation. Prerequisites: CHEMENG 181 (formerly 188) or BIOSCI 41 or equivalent.
3 units, Aut (Hwang, L)

CHEMENG 160. Polymer Science and Engineering
(Same as CHEMENG 260) Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Recommended: CHEM 33 and 171, or equivalent.
3 units, Win (Hwang, L)

CHEMENG 170. Kinetics and Reactor Design
Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.
3 units, Aut (Bent, S)

CHEMENG 174. Environmental Microbiology I
(Same as CHEMENG 274, CEE 274A) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.
3 units, Aut (Spormann, A), Sum (Krieger, C)

CHEMENG 180. Chemical Engineering Plant Design
Open to seniors in chemical engineering by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.
3 units, Spr (Pavone, A)

CHEMENG 181. Biochemistry I
(Same as BIO 188, BIO 288, CHEMENG 281, CHEM 181)
CHEMENG 41, CHEMENG 181, or equivalent. Students. Additional laboratory times to be arranged. Prerequisite: 434 (Same as CHEMENG 160) Interrelationships among molecular and nanopatterning involving photolithography, unconventional doping, diffusion, thin film deposition, plasma processing. Micro and nanomaterials, electronic devices and chemical processes including semiconductor, biotechnology, and energy. Chemistry and biochemistry. The biochemical and biophysical principles of metabolic reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catalysis, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

3 units, Win (Hwang, L)

CHEMENG 274. Environmental Microbiology I
(Same as CHEMENG 174, CEE 274A) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biological reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catalysis, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

3 units, Aut (Spormann, A), Sum (Krieger, C)

CHEMENG 281. Biochemistry I
(Same as BIO 189, BIO 289, CHEMENG 181, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties and functions of biomolecules including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Prerequisites: CHEM 135 or 171.

3 units, Win (Zare, R; Cegelski, L)

CHEMENG 283. Biochemistry II
(Same as BIO 189, BIO 289, CHEMENG 183, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

4 units, Win (Wang, C)

CHEMENG 190. Undergraduate Research in Chemical Engineering
Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering
For department approved Chemical Engineering B.S. with honors majors who have obtained faculty approval for a research proposal. Research for at least 3 quarters, concluding thesis, and oral presentation of work. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 191H. Undergraduate Honors Seminar
For Chemical Engineering majors approved for honors research. May be repeated for credit. Corequisite: 190H.

1 unit, Aut (Hwang, L), Win (Hwang, L), Spr (Hwang, L), Sum (Hwang, L)

GRADUATE COURSES IN CHEMICAL ENGINEERING

CHEMENG 240. Micro and Nanoscale Fabrication Engineering
(Same as CHEMENG 140) (Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanomanufacturing involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55.

3 units, Spr (Bao, Z)

CHEMENG 260. Polymer Science and Engineering
(Same as CHEMENG 160) Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Application of polymers in biomedical devices and microelectronics. Recommended: CHEM 33 and 171, or equivalent.

3 units, Win (Hwang, L)

CHEMENG 274. Environmental Microbiology I
(Same as CHEMENG 174, CEE 274A) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biological reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catalysis, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

3 units, Win (Zare, R; Cegelski, L)

CHEMENG 281. Biochemistry I
(Same as BIO 189, BIO 289, CHEMENG 181, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties and functions of biomolecules including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Prerequisites: CHEM 135 or 171.

3 units, Win (Zare, R; Cegelski, L)

CHEMENG 283. Biochemistry II
(Same as BIO 189, BIO 289, CHEMENG 183, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

3 units, Spr (Dunn, A)

CHEMENG 300. Applied Mathematics in the Chemical and Biological Sciences
(Same as CME 330) Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalization of finite space techniques to operator eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B.

3 units, not given this year

CHEMENG 310. Microhydrodynamics
(Same as ME 451D) Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green’s functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

3 units, Aut (Shaqfeh, E)

CHEMENG 320. Chemical Kinetics and Reaction Engineering
Theoretical and experimental tools useful in understanding and manipulating reactions mediated by small-molecules and biological catalysts. Theoretical: first classical chemical kinetics and transition state theory; then RRKM theory and Monte Carlo simulations. Experimental approaches include practical application of modern spectroscopic techniques, stopped-flow measurements, temperature-jump experiments, and single-molecule approaches to chemical and biological systems. Both theory and application are framed with regard to systems of particular interest, including industrially relevant enzymes, organometallic catalysts, heteroge-
neous catalysis, electron transfer reactions, and chemical kinetics
within living cells.
3 units, Aut (Dunn, A)
CHEMENG 340. Molecular Thermodynamics
Classical thermodynamics and quantum mechanics. Development
of statistical thermodynamics to address the collective behavior of
molecules. Establishment of theories for gas, liquid, and solid
phases, including phase transitions and critical behavior. Applica-
tions include electrolytes, ion channels, surface adsorption, ligand
binding to proteins, hydrogen bonding in water, hydrophobicity,
polymers, and proteins.
3 units, Aut (Spakowitz, A)
CHEMENG 345. Fundamentals and Applications of Spectros-
copy
Development of theoretical approaches to spectroscopy, including
spectroscopic transitions, transition probabilities, and selection
rules. Application to photon and electron spectroscopies of the
gas and solid phases. Topics: rotational spectroscopy; infrared and
Raman vibrational spectroscopies; fluorescence spectroscopy;
Auger, x-ray and ultraviolet photoelectron spectroscopies. Prere-
quise: CHEM 271 or course in quantum mechanics.
3 units, Win (Jaramillo, T)
CHEMENG 355. Advanced Biochemical Engineering
(Same as BIOE 355) Combines biological knowledge and methods
with quantitative engineering principles. Quantitative review of
biochemistry and metabolism; recombinant DNA technology and
synthetic biology (metabolic engineering). The production of pro-
tein pharmaceuticals as a paradigm for the application of chemical
engineering principles to advanced process development within
the framework of business and regulatory requirements. Prerequisite:
CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.
3 units, Win (Swartz, J)
CHEMENG 442. Structure and Reactivity of Solid Surfaces
The structure of solid surfaces including experimental methods for
determining the structure of single crystal surfaces. The adsorption
of molecules on these surfaces including the thermodynamics of
adsorption processes, surface diffusion, and surface reactions.
Molecular structure of adsorbates. Current topics in surface struc-
ture and reactivity, including systems for heterogeneous catalysis
and electronic materials.
3 units, Spr (Swartz, J)
CHEMENG 450. Advances in Biotechnology
Guest academic and industrial speakers. Latest developments in
fields such as bioenergy, green process technology, production of
industrial chemicals from renewable resources, protein pharma-
ceutical production, industrial enzyme production, stem cell appli-
cations, medical diagnostics, and medical imaging. Biotechnology
ethics, business and patenting issues, and entrepreneurship in bi-
technology.
3 units, Spr (Swartz, J)
CHEMENG 451. Chemical Principles in Drug Discovery and
Development
Application of physical and organic chemistry to the discovery and
subsequent product development of small molecule and macromo-
olecular drugs. Course discusses key physical, chemical, and biolog-
ical properties of drug candidates and how to measure them, how
to engineer them. Discussion of principles of drug formulation and
delivery. Graduate-level background in physical and organic che-
metry recommended.
3 units, Aut (Khosla, C)
CHEMENG 454. Synthetic Biology and Metabolic Engineering
(Same as BIOE 454) Principles for the design and optimization of
new biological systems. Development of new enzymes, metabolic
pathways, other metabolic systems, and communication systems
among organisms. Example applications include the production of
central metabolic intermediates, amino acids, pharmaceutical proteins,
and isoprenoids. Economic challenges and quantitative assessment of
metabolic performance. Pre- or corequisite: CHEMENG 355 or
equivalent.
3 units, Spr (Swartz, J)
CHEMENG 456. Metabolic Biochemistry of Microorganisms
(Same as CEE 274B) Microbial metabolism, biochemical and me-
tabolic principles, unity and diversity of metabolic pathways, evo-
lution of enzymes and metabolic pathways, microbial degradation
of natural and anthropogenic organic compounds, predicting bio-
degradation, and metabolic origin of life.
3 units, Win (Spormann, A), alternate years, not given next year
CHEMENG 457. Microbial Ecology and Evolution
(Same as CEE 274C) Structure/function relationship of microbial
communities; metabolic and ecological basis of interactions in
microbial communities; microbial ecology and population biology
in natural and human host systems; and evolution of microbial life.
Prerequisite: CEE 274A, CHEMENG 281 (formerly 288), or
equivalent.
3 units, not given this year
CHEMENG 458. Recent Advances in Genetic, Cellular, and
Biomolecular Systems
Current topics, experimental methods, technologies, quantitative
analysis, and mathematical models.
3 units, not given this year
CHEMENG 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOE 459, BIOE 459, CHEM 459, PSYCH
459) Students register through their affiliated department; other-
wise register for CHEMENG 459. For specialists and non-
specialists. Sponsored by the Stanford BioX Program. Three sem-
nars per quarter address scientific and technical themes related to
interdisciplinary approaches in bioengineering, medicine, and the
chemical, physical, and biological sciences. Leading investigators
from Stanford and the world present breakthroughs and endeavors
that cut across core disciplines. Pre-seminars introduce basic con-
cepts and background for non-experts. Registered students attend
all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic
mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson,)
CHEMENG 460. Polymer Surfaces and Interfaces
Principles of interfacial thermodynamics and polymer physics
applied to polymer surfaces and interfaces. Treatments of intermo-
olecular forces; conformational statistics of macromolecular struc-
ture; models for polymer dynamics; tethering of polymers at dif-
ferent interfaces; techniques for chemical modification of surfaces;
methods for physical characterization of polymer surfaces and
interfaces. Applications in adhesion and biocompatibility. Prere-
quise: exposure to principles of polymer science or consent of
instructor.
3 units, alternate years, not given this year
CHEMENG 461. Polymeric Materials in Medical Devices
Polymer synthesis, characterization, and processing for polymer
properties of technological benefit in biomedical devices. Classes
of materials include ultra high molecular weight polyethylene,
silicone elastomers, block copolymer segmented polyurethanes,
highly oriented nylon fibers, hydrogels, and biodegradable poly-
mers. Applications include prosthetic orthopedic devices, oph-
thalmic devices, sutures, and drug delivery systems.
3 units, not given this year
CHEMENG 462. Complex Fluids and Non-Newtonian Flows
Division of complex fluids into suspensions, solutions, and melts.
Suspensions as colloidal and non-colloidal. Extra stress and rela-
tion to the stresslet. Suspension rheology including Browninan
and non-Browninan fibers. Microhydrodynamics and the Fokker-Plank
equation. Linear viscoelasticity and the weak flow limit. Polymer
solutions including single mode (dumbbell) and multimode mod-
eis. Nonlinear viscoelasticity. Intermolecular effects in nonludite
solutions and melts and the concept of reptation. Prerequisites: low
Reynolds number hydrodynamics or consent of instructor.
3 units, not given this year
CHEMENG 464. Polymer Chemistry
Polymer material design, synthesis, characterization, and applica-
tions. Examples include organic and inorganic polymerization tech-
techniques; structure and properties of bulk polymers for commercial
applications and emerging technologies.
3 units, Aut (Bao, Z)
CHEMENG 466. Polymer Physics
Concepts and applications in the equilibrium and dynamic behav-
ior of complex fluids. Topics include solution thermodynamics,
scaling concepts, semiflexibility, characterization of polymer size
(light scattering, osmotic pressure, size-exclusion chromatography,
CHEMENG 467. Physics of Biomacromolecules
Advanced topics in the equilibrium and dynamic behavior of biomacromolecules. Theoretical approaches addressed include path integral approaches to polymer Green function theory, polymer field theory, application of Smoluchowski and fractional Fokker Planck equations to biopolymer transport, and Brownian dynamics and Monte Carlo simulations. These methods will be applied to topics such as DNA/protein semiflexibility, DNA supercoiling, lyotropic polymer ordering, anomalous diffusion in crowded environments, motor-protein transport, and protein dynamics. Prerequisites: CHEMENG 340 and 466 or consent of the instructor. 3 units, not given this year

CHEMENG 500. Special Topics in Protein Biotechnology
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Swartz, J), Win (Swartz, J), Spr (Swartz, J), Sum (Swartz, J)

CHEMENG 501. Special Topics in Semiconductor Processing
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Bent, S), Win (Bent, S), Spr (Bent, S), Sum (Bent, S)

CHEMENG 504. Special Topics in Bioengineering
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson, C), Sum (Robertson, C)

CHEMENG 505. Special Topics in Microbiology
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Fuller, G), Win (Fuller, G), Spr (Fuller, G), Sum (Fuller, G)

CHEMENG 507. Special Topics in Polymer and Molecular Assemblies
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Frank, C), Win (Frank, C), Spr (Frank, C), Sum (Frank, C)

CHEMENG 518. Special Topics in Advanced Biophysics and Metabolism
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor. 1 unit, Aut (Spormann, A), Win (Spormann, A), Spr (Spormann, A), Sum (Spormann, A)

CHEMENG 519. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor. 1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 520. Chemistry of Biological Processes
(Same as BIOC 220) The principles of organic and physical chemistry as applied to biomolecules. Goal is knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Prerequisites: organic chemistry and biochemistry, or consent of instructor. 4 units, Win (Ferrell, J; Meyer, T)

CSB 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 210. Signal Transduction Pathways and Networks
The molecular mechanisms through which cells receive and respond to external signals. Emphasis is on principles of cell signaling, the systems-level properties of signal transduction modules, and experimental strategies through which cell signaling pathways are being studied. Prerequisite: biochemistry and genetics. 4 units, Win (Ferrell, J; Meyer, T)

CSB 220. Chemistry of Biological Processes
4 units, alternate years, not given this year

CSB 240A. A Practical Approach to Drug Discovery and Development
Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. 3 units, alternate years, not given this year

CSB 240B. A Practical Approach to Drug Discovery and Development
(Continuation of 240A) Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Prerequisite: 240A. 3 units, alternate years, not given this year
CSB 250. The Biology of Chromatin Templated Processes
Topics include mechanisms of DNA replication; gene expression; regulation; DNA damage sensing and DNA repair; chromatin structure and function; and epigenetics and nuclear reprogramming. Prerequisite: working knowledge of molecular biology, biochemistry and genetics, or instructor consent.
4 units, not given this year

CSB 260. Quantitative Chemical Biology
Current topics including protein and small molecule engineering, cell signaling sensors and modulators, molecular imaging, chemical genetics, combinatorial chemistry, in vitro evolution, and signaling network modeling. Prerequisites: undergraduate organic chemistry, and biochemistry or cell biology.
4 units, Spr (Staff), alternate years, not given next year

CSB 270. Research Seminar
Guest speakers on current research in pharmacology.
1-2 units, Aut (Cimprich, K; Wysoczka, J), Win (Staff), Spr (Staff)

CSB 278. Systems Biology
(Same as BIOC 278, BIOE 310, CS 278) Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.
3 units, not given this year

CSB 299. Directed Reading in Chemical and Systems Biology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students who have been approved.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMISTRY (CHEM)

UNDERGRADUATE COURSES IN CHEMISTRY

CHEM 24N. Nutrition and History
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.
2 units, Spr (Huestis, W)

CHEM 25N. Science in the News
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.
3 units, Aut (Andersen, H)

CHEM 25Q. Science-in-theatre: A New Genre?
(S,Sem) (Same as DRAMA 25N) Stanford Introductory Seminar. Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.
3 units, Win (Djerassi, C)

CHEM 26N. The What, Why, How, and Wow’s of Nanotechnology
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets. GER: DB-NatSci
3 units, Win (Dai, H)

CHEM 31A. Chemical Principles I
For students with moderate or no background in chemistry. Stoichiometry; periodicity; electronic structure and bonding; gases; enthalpy; phase behavior. Emphasis is on skils to address structural and quantitative chemical questions; lab provides practice. Recitation. GER: DB-NatSci
4 units, Aut (Chibsey, C; Dai, H; Schwartz, J), Sum (Schwartz)

CHEM 31B. Chemical Principles II
Chemical equilibrium; acids and bases; oxidation and reduction reactions; chemical thermodynamics; kinetics. Lab. Prerequisite: 31A. GER: DB-NatSci
4 units, Win (Fayer, M; Schwartz, J), Sum (Schwartz)

CHEM 31X. Chemical Principles
Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: AP chemistry score of 5 or passing score on chemistry placement test. Recommended: high school physics. GER: DB-NatSci
4 units, Aut (Moerner, W; Waymouth, R)

CHEM 33. Structure and Reactivity
Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31A,B, or 31X, or an AP Chemistry score of 5. GER: DB-NatSci
4 units, Win (Stack, T; Kanan, M), Spr (Schwartz, J; Wender, P), Sum (Kahl, S)

CHEM 35. Organic Monofunctional Compounds
Organic chemistry of oxygen and nitrogen aliphatic compounds. Recitation. Prerequisite: 33. GER: DB-NatSci
4 units, Aut (Huestis, W), Spr (Du Bois, J), Sum (Hua, Y)

CHEM 36. Organic Chemistry Laboratory I
Techniques for separations of compounds: distillation, crystallization, extraction, and chromatographic procedures. Lecture-treats theory; lab provides practice. Prerequisite: 33. GER: DB-NatSci
3 units, Aut (Safi, S), Spr (Hua, Y), Sum (Safi, S)

CHEM 110. Directed Instruction/Reading
Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may involve participation in lab. Prerequisites: superior work in 31A,B, 31X, or 33; and consent of instructor and the Chemistry undergraduate study committee.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 111. Exploring Chemical Research at Stanford
Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.
1 unit, Win (Kanan, M)

CHEM 130. Organic Chemistry Laboratory II
4 units, Aut (Hua, Y), Win (Hua, Y)

CHEM 131. Organic Polyfunctional Compounds
Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35. GER: DB-NatSci
3 units, Aut (Kool, E), Win (Trost, B)
COURSES OF INSTRUCTION

CHEM 134. Analytical Chemistry Laboratory
Methods include gravimetric, volumetric, spectrophotometric, and chromatographic. Writing instruction includes communications, full papers, research proposals, and referee papers. Lab. Prerequisite: 130. GER: DB-NatSci 5 units, Spr (Safi, S)

CHEM 135. Physical Chemical Principles
Introductory physical chemistry intended for students of the life sciences, geology and environmental engineering. Chemical kinetics: rate laws, integration of rate laws, reaction mechanisms, enzyme kinetics. Chemical thermodynamics: first, second and third laws, thermochemistry, entropy, free energy, chemical equilibrium, physical equilibrium, osmotic pressure, other colligative properties. Prerequisites: 31A,B, or 31X, calculus. GER: DB-NatSci
3 units, Aut (Pecora, R)

CHEM 136. Synthesis Laboratory
Advanced synthetic methods in organic and inorganic chemistry. Prerequisites: 35, 130. GER: DB-NatSci 3 units, Win (Safi, S)

CHEM 137. Special Topics in Organic Chemistry
(Formerly 181.) Chemical view of the biological processes of life. Topics include: structure and function of proteins, peptides, and nucleic acids; and how to use chemistry to mediate biological processes. GER: DB-NatSci 3 units, Win (Flygare, J)

CHEM 151. Inorganic Chemistry I
Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35. Recommended: 171. GER: DB-NatSci 3 units, Win (Stack, T)

CHEM 153. Inorganic Chemistry II
The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; applications of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173. GER: DB-NatSci 3 units, Spr (Solomon, E)

CHEM 155. Advanced Inorganic Chemistry
(Same as CHEM 255) Chemical reactions of organotransition metal complexes and their role in homogenous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry.
3 units, Spr (Waymouth, R)

CHEM 171. Physical Chemistry
Chemical thermodynamics; fundamental principles, Gibbssian equations, systematic deduction of equations, equilibrium conditions, phase rule, gases, solutions. Prerequisites: 31A,B, or 31X, 35; MATH 51. GER: DB-NatSci 3 units, Aut (Cui, B)

CHEM 173. Physical Chemistry
Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: MATH 51, 53; PHYSICS 41, 43. Recommended: PHYSICS 45. GER: DB-NatSci 3 units, Win (Boxer, S)

CHEM 174. Physical Chemistry Laboratory I
Experimental investigations in spectroscopy, thermodynamics, and electronics. Students take measurements on molecular systems, design and build scientific instruments, and computer-automate them with software that they write themselves. Prerequisites: 134, MATH 51, PHYSICS 44. Corequisite 173. GER: DB-NatSci 4 units, Win (Chidsey, C)

CHEM 175. Physical Chemistry

CHEM 176. Physical Chemistry Laboratory II
Use of chemical instrumentation to study physical chemical time-dependent processes. Experiments include reaction kinetics, fluorimetry, and nuclear magnetic and electron spin resonance spectroscopy. Lab. Prerequisite: 173. GER: DB-NatSci 3 units, Spr (Cui, B)

CHEM 181. Biochemistry I
(Same as BIO 188, BIO 288, CHEMENG 181, CHEMENG 281) (CHEMENG offerings formerly listed as 188/288) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Prerequisites: CHEM 135 or 171. GER: DB-NatSci 3 units, Win (Zare, R; Cegelski, L)

CHEM 183. Biochemistry II
(Same as BIO 189, BIO 289, CHEMENG 183, CHEMENG 283) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). GER: DB-NatSci 3 units, Spr (Dunn, A)

CHEM 185. Biochemistry III
Advanced biophysical chemistry. Topics include: protein and DNA structure, stability, and folding, membrane lateral organization and dynamics, and transmembrane transport. Prerequisites: 171, 173, 183. GER: DB-NatSci 3 units, Spr (Boxer, S)

CHEM 190. Introduction to Methods of Investigation
Limited to undergraduates admitted under the honors program or by special arrangement with a member of the teaching staff. For general character and scope, see 200. Prerequisite:130. Corequisite: 300. 1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CHEMISTRY

CHEM 200. Research and Special Advanced Work
Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200. 1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 221. Advanced Organic Chemistry
Molecular orbital theory and orbital symmetry. Thermochemistry and thermochemical kinetics. Unimolecular reaction rate theory. Methods of determining organic reaction mechanisms from a theoretical and experimental point of view. Prerequisites: 137, 175. 3 units, Aut (Du Bois, J)

CHEM 222. Advanced Organic Chemistry
Continuation of 221 with emphasis on physical methods. Prerequisite: 221 or consent of instructor. 3 units, Win (Trost, B)

CHEM 225. Advanced Organic Chemistry
Continuation of 223. Organic reactions, new synthetic methods, conformational analysis, and exercises in the syntheses of complex
CHEM 229. Organic Chemistry Seminar
Required of graduate students majoring in organic chemistry. Students giving seminars register for 231.
1 unit, Aut (Kool, E), Win (Kool, E), Spr (Kool, E)

CHEM 231. Organic Chemistry Seminar Presentation
Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.
1 unit, Aut (Waymouth, R), Win (Waymouth), Spr (Waymouth)

CHEM 233A. Creativity in Organic Chemistry
Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr
1 unit, Aut (Waymouth, R)

CHEM 233B. Creativity in Organic Chemistry
Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr
1 unit, Spr (Staff)

CHEM 235. Applications of NMR Spectroscopy
The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.
3 units, Win (Lynch, S)

CHEM 237. Electrochemistry
Principles of electrochemistry and their application to redox systems, electron transfer, electroanalysis, electrodeposition, electrolysis, batteries, and fuel cells. Prerequisite: 171 or equivalent.
3 units, not given this year

CHEM 251. Advanced Inorganic Chemistry
Chemical reactions of inorganic compounds with focus on mechanisms of reactions mediated by inorganic and organometallic complexes. The structural and electronic basis of reactivity including oxidation and reduction; kinetics and thermodynamics of inorganic reactions. Prerequisite: one year of physical chemistry.
3 units, not given this year

CHEM 253. Advanced Inorganic Chemistry
Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.
3 units, not given this year

CHEM 255, Advanced Inorganic Chemistry
(Same as CHEM 155) Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: two years of physical chemistry.
3 units, Spr (Waymouth, R)

CHEM 258A. Research Progress in Inorganic Chemistry
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 258B. Research Progress in Inorganic Chemistry
Required of second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 258C. Research Progress in Inorganic Chemistry
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 259. Inorganic Chemistry Seminar
Required of graduate students majoring in inorganic chemistry. Students presenting their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 271. Advanced Physical Chemistry
The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Time dependent methods including exactly solvable problems, time dependent perturbation theory, and density matrix formalism. Different representations of quantum theory including the Schrödinger, matrix, and density matrix methods. Absorption and emission of radiation, angular momentum. Atomic structure calculations and simple molecular structure methods. Prerequisite: 175.
3 units, Aut (Fayer, M)

CHEM 273. Advanced Physical Chemistry
Topics in advanced quantum mechanics: vibrations and rotations of polyatomic molecules (normal modes, anharmonicity, wave functions and energy levels of rigid rotors, vibration-rotation interaction), ab initio electronic structure theory (Hartree-Fock, configuration interaction, multi-configuration self-consistent-field, and many-body perturbation theory techniques), angular momentum theory (operators and wave functions, Clebsch-Gordan coefficients, rotation matrices), time-dependent quantum mechanics (time evolution operator, Feynman path integrals, scattering theory, Born approximation, Lipmann-Schwinger equation, correlation functions), interaction of radiation and matter (semiclassical and quantum theories of radiation, transition probabilities, selection rules). Prerequisite: 271 or PHYSICS 230.
3 units, Win (Martinez, T)

CHEM 275. Advanced Physical Chemistry
The principles and methods of statistical mechanics from the ensemble point of view, statistical thermodynamics, heat capacities of solids and polyatomic gases, chemical equilibria, equations of state of fluids, and phase transitions. Prerequisite: 271.
3 units, Spr (Pande, V)

CHEM 276. Advanced Physical Chemistry
The statistical mechanical basis for computer simulations of atomic and molecular liquids, Principles of the Monte Carlo method, Metropolis algorithm, and application to lattice models and continuum fluids. Principles of molecular dynamics calculations, methods for sampling equilibrium ensembles, algorithms for dynamics. Periodic boundary conditions, methods for dealing with long-range forces, construction of potential energy functions, estimation of statistical error in results of simulations. Prerequisite: 275.
3 units, Aut (Andersen, H)

CHEM 277. Topics in Physical Chemistry
Possible topics: structure elucidation using diffraction techniques, advanced statistical mechanical calculations, advanced quantum mechanics, magnetic relaxation, advanced thermodynamics, chemical applications of group theory. May be repeated for credit. Prerequisite: 275 or consent of instructor.
3 units, Spr (Pecora, R)

CHEM 278A. Research Progress in Physical Chemistry
Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written
CHEM 278B. Research Progress in Physical Chemistry
Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B).
1 unit, Win (Pecora, R)

CHEM 279. Physical Chemistry Seminar
Required of graduate students majoring in physical chemistry. May be repeated for credit.
1 unit, Aut (Chidsey, C), Win (Chidsey, C), Spr (Chidsey, C)

CHEM 280. Single-Molecule Spectroscopy and Imaging
Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy; interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.
3 units, not given this year

CHEM 285. Chemical Principles in Drug Discovery and Development
Application of physical organic chemistry to the discovery and subsequent product development of small molecule and macromolecular drugs. Key physical, chemical, and biological properties of drug candidates, how to measure them, and how to engineer them. Principles of drug formulation and delivery. Recommended: graduate-level background in physical and organic chemistry.
3 units, Aut (Khosla, C)

CHEM 297. Bio-Inorganic Chemistry
(Same as BIOPHYS 297) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein-ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.
3 units, Win (Solomon, E)

CHEM 299. Teaching of Chemistry
Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.
1-3 units, Aut (Hua, Y), Win (Hua, Y), Spr (Hua, Y)

CHEM 300. Department Colloquium
Required of graduate students. May be repeated for credit.
1 unit, Aut (Kool, E), Win (Kool, E), Spr (Kool, E)

CHEM 301. Research in Chemistry
Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axess.
2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 309. Navigating Career Options for Ph.D. Chemists
Planning a post-graduate career. Topics include career options, job search strategies, job application process, long-term career planning, and minority issues in science careers. Workshops focused on developing professional skills working with CDC and CTL, and panel discussions with chemistry Ph.D.s working in a range of fields. (Zare)
1 unit, Sum (Staff)

CHEM 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOC 459, BIOE 459, CHEMENG 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

CHICANA/O STUDIES (CHICANST)

UNDERGRADUATE COURSES IN CHICANA/O STUDIES

CHICANST 160N. Salt of the Earth: Docudrama in Latino America
(F,Sem) (Same as CSRE 160N) Stanford Introductory Seminar. Preference to freshmen. An introduction to docudrama as a form of factually based, politically-motivated, dramatic writing (film and theater), related to the Chicana/o and Latina/o experience. The 1954 blacklisted film Salt of the Earth. Students create a short original docudrama. GER:DB-Hum
3-5 units, Win (Moraga, C)

CHICANST 189W. Language and Minority Rights
(Same as CSRE 189W, EDUC 189X) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today’s societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom
3 units, Win (Valdes, G)

CHICANST 197. The Rite to Remember: Performance and Chicana Indigenous Thought
(Same as CSRE 197, NATIVEAM 197, DRAMA 355M) Indigenous thought and aesthetics as they pertain to the performance and ceremonial practices of Chicana and other indigenous African American women artists and spirit practitioners.
3-5 units, Spr (Staff)

CHICANST 200R. Directed Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHICANST 200W. Directed Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHICANST 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era
(Same as CSRE 201B) How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.
5 units, Aut (Hernandez, G)

CHINESE GENERAL (CHINGEN)

UNDERGRADUATE COURSES IN CHINESE GENERAL

CHINGEN 51. Chinese Calligraphy
Practice in writing Chinese characters with a brush, emphasizing standardized script and the composition of characters and improving handwriting. Limited enrollment. May be repeated for credit. Prerequisite: CHINLANG 3 or equivalent.
1-2 units, Spr (Chuang, Y)

CHINGEN 70N. Marvelous Creatures: Animals and Humans in Chinese Literature
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Read novels and short stories as well as view films that feature an array of marvelous creatures from late imperial times to the contemporary era. What animal imageries and metaphors can reveal about the Chinese and how they relate to the natural, supernatural, and human worlds across the centuries. GER:DB-Hum
3-4 units, Spr (Lee, H)
CHINGEN 91. Traditional East Asian Culture: China
Required for Chinese and Japanese majors. Introduction to Chinese culture in a historical context. Topics include political and socioeconomic institutions, religion, ethics, education, and art and literature. GER:DB-Hum, EC-GlobalCom
4 units, Aut (Lee, H)

CHINGEN 119. Popular Culture and Casino Capitalism in China
(Same as CHINGEN 219) Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.
3-4 units, Win (Festa, P)

CHINGEN 120. Soldiers and Bandits in Chinese Culture
(Same as CHINGEN 220) Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.
3-5 units, not given this year

CHINGEN 121. Classical Chinese Rituals
(Same as CHINGEN 221) Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.
3-5 units, not given this year

CHINGEN 131. Chinese Poetry in Translation
(Same as CHINGEN 231, CHINGEN 231) From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required. GER:DB-Hum, EC-GlobalCom
4 units, Win (Sargent, S)

CHINGEN 132. Chinese Fiction and Drama in Translation
(Same as CHINGEN 232) From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

CHINGEN 133. Literature in 20th-Century China
(Same as CHINGEN 233) (Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social, movement and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course. GER:DB-Hum, EC-GlobalCom
4-5 units, Win (Wang, B)

CHINGEN 134. Early Chinese Mythology
(Same as CHINGEN 234) The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts.
GER:DB-Hum
3-5 units, not given this year

CHINGEN 136. The Chinese Family
(Same as CHINGEN 236) History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change. GER:EC-GlobalCom
3-5 units, not given this year

CHINGEN 137. Tiananmen Square: History, Literature, Iconography
(Same as CHINGEN 237) Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. GER:DB-Hum, EC-GlobalCom
3-5 units, Spr (Lee, H)

CHINGEN 138. Passion and Love in Chinese Film
How films work as expressions of desire, impulse, emotional connection, and communal attachment during times of social upheaval and reconstruction. Film theory and aesthetics, and alternative paradigms about world and social relations. Chinese language not required. GER:DB-Hum
4-5 units, not given this year

CHINGEN 193E. Female Divinities in China
The role of powerful goddesses, such as the Queen Mother of the West, Guanyin, and Chen Jinggu, in Chinese religion. Imperial history to the present day. What roles goddesses played in the spirit world, how this related to the roles of human women, and why a civilization that excluded women from the public sphere granted them such a major, even dominant place, in the religious sphere. Readings in English-language secondary literature. GER:DB-Hum
3-5 units, Win (Lewis, M)

CHINGEN 198. Senior Colloquium in Chinese Studies
Students research, write, and present a capstone essay or honors thesis.
1 unit, Spr (Zhou, Y)

GRADUATE COURSES IN CHINESE GENERAL

CHINGEN 200. Directed Readings in Asian Languages
For Chinese literature. Prerequisite: consent of instructor. (Staff)
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINGEN 201. Teaching Chinese Humanities
Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.
1 unit, Aut (Wang, B)

CHINGEN 219. Popular Culture and Casino Capitalism in China
(Same as CHINGEN 119) Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.
3-4 units, Win (Festa, P)

CHINGEN 220. Soldiers and Bandits in Chinese Culture
(Same as CHINGEN 120) Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.
3-5 units, not given this year

CHINGEN 221. Classical Chinese Rituals
(Same as CHINGEN 121) Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.
3-5 units, not given this year

CHINGEN 231. Chinese Poetry in Translation
(Same as CHINGEN 131) From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required. GER:DB-Hum, EC-GlobalCom
4 units, Win (Sargent, S)

CHINGEN 232. Chinese Fiction and Drama in Translation
(Same as CHINGEN 132) From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

CHINGEN 233. Literature in 20th-Century China
(Same as CHINGEN 133) (Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social, movement and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course. GER:DB-Hum, EC-GlobalCom
4-5 units, Win (Wang, B)
out social movements and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course.

4-5 units, Win (Wang, B)

**CHINGEN 234. Early Chinese Mythology**
(Same as CHINGEN 134) The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts.

3-5 units, not given this year

**CHINGEN 236. The Chinese Family**
(Same as CHINGEN 136) History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change.

3-5 units, not given this year

**CHINGEN 237. Tiananmen Square: History, Literature, Iconography**
(Same as CHINGEN 137) Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required.

3-5 units, Spr (Lee, H)

**CHINGEN 239. Cultural Revolution as Literature**
(Same as CHINGEN 139) Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

4 units, not given this year

**CHINESE LANGUAGE (CHINLANG)**

**UNDERGRADUATE COURSES IN CHINESE LANGUAGE**

**CHINLANG 1. First-Year Modern Chinese, First Quarter**
Conversation, grammar, reading, elementary composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements.

5 units, Aut (Zeng, H)

**CHINLANG 1B. First-Year Modern Chinese for Bilingual Students, First Quarter**
For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition.

3 units, Aut (Rozelle, Y)

**CHINLANG 2. First-Year Modern Chinese, Second Quarter**
Continuation of 1. Daily sections may be set at the beginning of the quarter to suit schedule requirements.

5 units, Win (Zeng, H)

**CHINLANG 2B. First-Year Modern Chinese for Bilingual Students, Second Quarter**
Continuation of 1B.

3 units, Win (Rozelle, Y)

**CHINLANG 3. First-Year Modern Chinese, Third Quarter**
Continuation of 2. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Fulfills the University language requirement.

5 units, Spr (Zeng, H)

**CHINLANG 3B. First-Year Modern Chinese for Bilingual Students, Third Quarter**
Continuation of 2B.

3 units, Spr (Rozelle, Y)

**CHINLANG 5. Intensive First-Year Modern Chinese**
Equivalent to 1, 2, 3 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University.

8 units, Sum (Staff)

**CHINLANG 6. Beginning Conversational Chinese, 1st Quarter**
Three quarter sequence. Basic language skills in Mandarin to function abroad.

2 units, Aut (Rozelle, Y)

**CHINLANG 7. Beginning Conversational Chinese, Second Quarter**
Continuation of 6.

2 units, Win (Rozelle, Y)

**CHINLANG 8. Beginning Conversational Chinese, Third Quarter**
Continuation of 7.

2 units, Spr (Rozelle, Y)

**CHINLANG 9. Beginning Southern Min (Taiwanese) Conversation, First Quarter**
Three quarter sequence. Basic language skills for everyday life situations.

10: Aut, 11: Win, 12: Spr

2 units, Aut (Lin, N)

**CHINLANG 10. Beginning Southern Min (Taiwanese) Conversation, Second Quarter**
Continuation of 10.

2 units, Win (Lin, N)

**CHINLANG 11. Beginning Southern Min (Taiwanese) Conversation, Third Quarter**
Continuation of 11.

2 units, Spr (Lin, N)

**CHINLANG 12. Beginning Southern Min (Taiwanese) Conversation, Third Quarter**
Continuation of 11.

2 units, Spr (Lin, N)

**CHINLANG 12B. Intermediate Southern Min (Taiwanese) Conversation, Second Quarter**
Prerequisite: 12A or consent of instructor.

2 units, Win (Lin, N)

**CHINLANG 12C. Intermediate Southern Min (Taiwanese) Conversation, Third Quarter**
Prerequisite: 13A or consent of instructor.

2 units, Spr (Lin, N)

**CHINLANG 13. Beginning Conversational Cantonese, First Quarter**
Three quarter sequence. Basic language skills in Mandarin to function abroad.

15: Aut, 16: Win, 17: Spr

2 units, Aut (Dennig, S)

**CHINLANG 13M. Beginning Conversational Cantonese for Mandarin Speakers, First Quarter**
Three quarter sequence. Basic language skills in Mandarin to function abroad.

2 units, Win (Dennig, S)

**CHINLANG 13N. Beginning Conversational Cantonese for Mandarin Speakers, Second Quarter**
Continuation of 13M.

2 units, Win (Dennig, S)

**CHINLANG 13B. Intermediate Southern Min (Taiwanese) Conversation, Second Quarter**
Continuation of 13B. Prerequisite: 13B or consent of instructor.

2 units, not given this year

**CHINLANG 14. Beginning Conversational Cantonese, First Quarter**
Three quarter sequence. Basic language skills in Mandarin to function abroad.

15: Aut, 16: Win, 17: Spr

2 units, Aut (Dennig, S)

**CHINLANG 15. Beginning Conversational Cantonese, First Quarter**
Three quarter sequence. Basic language skills in Mandarin to function abroad.

15: Aut, 16: Win, 17: Spr

2 units, Aut (Dennig, S)

**CHINLANG 16. Beginning Cantonese Conversation, Second Quarter**
Continuation of 15.

2 units, Win (Dennig, S)

**CHINLANG 16B. Beginning Conversational Cantonese for Mandarin Speakers, Second Quarter**
Continuation of 16M.

2 units, Win (Dennig, S)

**CHINLANG 17. Beginning Conversational Cantonese, Third Quarter**
Continuation of 16.

2 units, Spr (Dennig, S)

**CHINLANG 17M. Beginning Conversational Cantonese for Mandarin Speakers, Third Quarter**
Continuation of 17M.

2 units, Spr (Dennig, S)

**CHINLANG 18. Intermediate Cantonese Conversation, First Quarter**
Continuation of CHINLANG 17.

2 units, Aut (Dennig, S)
CHINLANG 19. Intermediate Conversational Cantonese, Second Quarter
Continuation of 18 or 18M.
2 units, Win (Dennig, S)

CHINLANG 20. Intermediate Conversational Cantonese, Third Quarter
Continuation of 19 or 19M.
2 units, Spr (Dennig, S)

CHINLANG 20A. Advanced Conversational Cantonese, First Quarter
Viewing and discussion of authentic multimedia materials on cultural topics and current events: movies, video clips, radio, TV broadcasts, and Internet tools. Prerequisite 20 or consent of instructor.
2 units, Aut (Dennig, S)

CHINLANG 20B. Advanced Conversational Cantonese, Second Quarter
Prerequisite 20A or consent of instructor.
2 units, Win (Dennig, S)

CHINLANG 20C. Advanced Conversational Cantonese - Third Quarter
Continuation of 20B, Improving Cantonese through Hong Kong movies. Prerequisite 20B or consent of instructor.
2 units, Spr (Dennig, S)

CHINLANG 21. Second-Year Modern Chinese, First Quarter
Grammar, reading, conversation, composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: 3 or equivalent. 21: Aut, 22: Win, 23: Spr
3 units, Aut (Chung, M)

CHINLANG 21B. Second-Year Modern Chinese for Bilingual Students, First Quarter
Continuation of 21. Prerequisite 21 or equivalent.
3 units, Win (Chung, M)

CHINLANG 22. Second-Year Modern Chinese, Second Quarter
Prerequisite: 21 or equivalent.
3 units, Win (Chung, M)

CHINLANG 22B. Second-Year Chinese for Bilingual Students, Second Quarter
Continuation of 21B. Prerequisite 21B.
3 units, Win (Zhu, Q)

CHINLANG 23. Second-Year Modern Chinese, Third Quarter
Prerequisite: 22 or equivalent.
3 units, Spr (Chung, M)

CHINLANG 23B. Second-Year Chinese for Bilingual Students, Third Quarter
Continuation of 22B. Prerequisite 22B.
3 units, Spr (Zhu, Q)

CHINLANG 24A. Second-Year Comprehensive Cantonese, First Quarter
5 units, not given this year

CHINLANG 24B. Second-Year Comprehensive Cantonese, Second Quarter
Continuation of 24A.
5 units, not given this year

CHINLANG 24C. Second-Year Comprehensive Cantonese, Third Quarter
Continuation of 24B.
5 units, not given this year

CHINLANG 25. Intensive Second-Year Modern Chinese
Equivalent to 21,22,23 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 3 or equivalent.
8 units, Sum (Chung, M)

CHINLANG 27. Intermediate Chinese Conversation, First Quarter
Prerequisite: 3 or consent of instructor.
2 units, Aut (Zhang, Y)

CHINLANG 28. Intermediate Chinese Conversation, Second Quarter
Continuation of 27. Prerequisite: 27 or consent of instructor.
2 units, Win (Zhang, Y)

CHINLANG 29. Intermediate Chinese Conversation, Third Quarter
Continuation of 28. Prerequisite: 28 or consent of instructor.
1-2 units, Spr (Zhang, Y)

CHINLANG 99. Language Specials
Prerequisite: consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 101. Third-Year Modern Chinese, First Quarter
Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: 23 or equivalent.
101: Aut, 102: Win, 103: Spr
5 units, Aut (Wang, H)

CHINLANG 101B. Third-Year Modern Chinese for Bilingual Students, First Quarter
For students with advanced listening and speaking abilities, but lacking equivalent knowledge in writing and reading. Equivalent to 101.
3 units, Aut (Wang, H)

CHINLANG 102. Third-Year Modern Chinese, Second Quarter
Continuation of 101. Prerequisite: 101 or equivalent.
5 units, Win (Wang, H)

CHINLANG 102B. Third-Year Modern Chinese for Bilingual Students, Second Quarter
Continuation of 101B. Equivalent of 102.
3 units, Win (Wang, H)

CHINLANG 103. Third-Year Modern Chinese, Third Quarter
Continuation of 102. Prerequisite: 102.
3 units, Spr (Wang, H)

CHINLANG 103B. Third-Year Modern Chinese for Bilingual Students, Third Quarter
Continuation of 102B. Equivalent of 103.
3 units, Spr (Wang, H)

CHINLANG 105. Intensive Third-Year Modern Chinese
Equivalent to 101,102,103 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent.
8 units, Sum (Wang, H)

CHINLANG 121. Advanced Chinese Conversation, First Quarter
Prerequisite: 23 or equivalent.
2 units, Aut (Chung, M)

CHINLANG 122. Advanced Chinese Conversation, Second Quarter
Prerequisite: 122 or equivalent.
2 units, Win (Chung, M)

CHINLANG 123. Advanced Chinese Conversation, Third Quarter
Continuation of 122. Prerequisite: 122 or equivalent.
2 units, Spr (Chung, M)

CHINLANG 131. Business Chinese, First Quarter
Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: 23 or equivalent.
3-4 units, Aut (Wang, H)

CHINLANG 132. Business Chinese, Second Quarter
Continuation of 131. Prerequisite: 131 or equivalent.
3-4 units, Win (Wang, H)

CHINLANG 133. Business Chinese, Third Quarter
Continuation of 132. Prerequisite: 132 or equivalent.
3-4 units, Spr (Wang, H)
CHINLANG 200. Directed Reading
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 211. Fourth-Year Modern Chinese, First Quarter
Year-long sequence. Goal is to become functional speakers, readers, and writers of modern Chinese through articles and essays from newspapers, magazines, scholarly journals, and the Internet. Cultural and social science themes: students may take both themes for 5 units or one theme for reduced units. Prerequisite: 211: Aut, 212: Win, 213: Spr
2-5 units, Aut (Zhu, Q)

CHINLANG 212. Fourth-Year Modern Chinese, Second Quarter
Continuation of 211. Prerequisite: 211.
2-5 units, Win (Zhu, Q)

CHINLANG 213. Fourth-Year Modern Chinese, Third Quarter
Continuation of 212. Prerequisite: 212.
2-5 units, Spr (Zhu, Q)

CHINLANG 221. Fourth-Year Modern Chinese for Social Science Students, First Quarter
Goal is to become functional speakers, readers, and writers of modern Chinese through articles, essays, newspapers, magazines, and scholarly journals in social sciences. Prerequisite: three years of Chinese. 221.
3 units, not given this year

CHINLANG 222. Fourth-Year Modern Chinese for Social Science Students, Second Quarter
Continuation of 221. Prerequisite: 221.
3 units, not given this year

CHINLANG 223. Fourth-Year Modern Chinese for Social Science Students, Third Quarter
Continuation of 222. Prerequisite: 222.
3 units, not given this year

CHINLANG 231. Fifth-Year Modern Chinese: Cultural China, First Quarter
Year-long sequence. Rhetorical devices through essays about China’s cultural journey in relationship to geographical regions.
2-5 units, Aut (Zhu, Q)

CHINLANG 232. Fifth-Year Modern Chinese: Cultural China, Second Quarter
2-5 units, Win (Zhu, Q)

CHINLANG 233. Fifth-Year Modern Chinese: Cultural China, Third Quarter
2-5 units, Spr (Zhu, Q)

GRADUATE COURSES IN CHINESE LANGUAGE

CHINLANG 31E. Accelerated Beginning Mandarin for Engineering Students, First Quarter
Restricted to engineering students participating in the China Internship Program. Prerequisite: consent of instructor.
2-5 units, Spr (DiBello, M)

CHINLANG 31G. Accelerated Beginning Mandarin I
For GSB students only.
4 units, Win (Staff)

CHINLANG 32G. Accelerated Beginning Mandarin II
For GSB students only.
4 units, Spr (Staff)

CHINLANG 33G. Accelerated Beginning Mandarin III
For GSB students only.
4 units, Aut (DiBello, M)

CHINLANG 199. Individual Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 331E. Beginning Mandarin for Engineering Students, First Quarter
Restricted to engineering students participating in the China Internship Program. Prerequisite: consent of instructor.
2-5 units, Spr (Staff)

CHINLANG 394. Graduate Studies in Chinese Conversation
Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 395. Graduate Studies in Chinese
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINESE LITERATURE (CHINLIT)

UNDERGRADUATE COURSES IN CHINESE LITERATURE

CHINLIT 125. Beginning Classical Chinese, First Quarter
(Same as CHINLIT 205) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 23 or equivalent.
2-5 units, Aut (Sun, C)

CHINLIT 126. Beginning Classical Chinese, Second Quarter
(Same as CHINLIT 206, CHINLIT 206) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 125/205 or equivalent.
2-5 units, Win (Sun, C)

CHINLIT 127. Beginning Classical Chinese, Third Quarter
(Same as CHINLIT 207) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 125/205 or equivalent.
2-5 units, Spr (Zhou, Y)

CHINLIT 189A. Honors Research
Students accepted into the honors program enroll for 2 units in spring/autumn while researching thesis.
2-5 units, Aut (Staff), Spr (Staff)

CHINLIT 189B. Honors Research
Open to senior honors students to write thesis.
5 units, Win (Staff)

CHINLIT 191. The Structure of Modern Chinese
(Same as CHINLIT 291) Focus is on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor. GER:DB-SocSci
2-4 units, not given this year

CHINLIT 199. Individual Reading in Chinese
Asian Language majors only. Prerequisite: CHINLANG 103 or consent of instructor. Units by arrangement. (Staff)
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CHINESE LITERATURE

CHINLIT 200. Directed Reading in Chinese
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 201. Proseminar: Bibliographic and Research Methods in Chinese Studies
Bibliographic and research methods in Chinese studies. Prerequisite: 127/207 or equivalent.
5 units, Win (Zhou, Y)

CHINLIT 205. Beginning Classical Chinese, First Quarter
(Same as CHINLIT 125) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 23 or equivalent.
2-5 units, Aut (Sun, C)
CHINLIT 206. Beginning Classical Chinese, Second Quarter
(Same as CHINLIT 126) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 125/205 or equivalent.
2-5 units, Win (Sun, C)

CHINLIT 207. Beginning Classical Chinese, Third Quarter
(Same as CHINLIT 127) Goal is reading knowledge of classical Chinese. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Basic grammar and commonly used vocabulary. Prerequisite: CHINLANG 126/206 or equivalent.
2-5 units, Spr (Zhao, Y)

CHINLIT 221. Advanced Classical Chinese: Philosophical Texts
Prerequisite: 207 or equivalent.
3-5 units, Win (Lewis, M)

CHINLIT 222. Advanced Classical Chinese: Historical Narration
Prerequisite: 127/207 or equivalent.
2-5 units, Aut (Wang, J)

CHINLIT 223. Advanced Classical Chinese: Literary Essays
Readings and grammatical analyses of literary essays throughout imperial China. Prerequisite: CHINLIT 127/207 or equivalent.
2-5 units, given next year

CHINLIT 232. Chinese Biographies of Women
Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women’s history, intellectual history, historiography, and literary studies. Prerequisite: 127/207 or consent of instructor.
4 units, not given this year

CHINLIT 261. Sources of Chinese Poetry
The Book of Songs (ca. 1000-500 B.C.E.) and Songs of Chu (ca. 400 B.C.E.), the earliest anthologies of Chinese poetry.
4 units, not given this year

CHINLIT 263. Lyric (Shih) I
Han through Sui dynasties.
2-4 units, not given this year

CHINLIT 265. Major Figures in Classical Chinese Shi Poetry
Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year’s poet is Tao Yuanming. May be repeated for credit. Prerequisites: 201, 207.
2-4 units, Spr (Sargent, S)

CHINLIT 266. Chinese Tz’u Poetry (Song Lyrics)
Highlights from the Northern and Southern Sung periods. Patterns of generic development correlated to social changes in historical context. Prerequisite: classical Chinese.
4 units, not given this year

CHINLIT 271. Traditional Chinese Fiction: Short Stories
Early times to Qing. Prerequisite: 127/207 or consent of instructor.
2-4 units, not given this year

CHINLIT 272. Traditional Chinese Fiction: Novels
Major novels of late imperial China. Prerequisite: 127/207 or consent of instructor.
2-4 units, not given this year

CHINLIT 273. Chinese Drama
Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor.
2-5 units, not given this year

CHINLIT 289. The Poetics and Politics of Affect in Modern China
The role of affect in modern Chinese aesthetics and politics. Cultural and social theories of affect (love, hate, fear, grief, resentment, rage, sympathy, sincerity, shame, and nostalgia); affective discourses across agerences and media including fiction, poetry, film, journalism, and television; and mass social movements such as protest, uprising, revolution. Advanced undergraduates requires consent of instructor. Recommended: reading knowledge of Chinese.
3-5 units, Win (Lee, H)

CHINLIT 291. The Structure of Modern Chinese
(Same as CHINLIT 191) Focus is on on syntax and semantics. Prerequisite: CHINLIT 3 or equivalent, or consent of instructor.
2-4 units, not given this year

CHINLIT 299. Master’s Thesis or Translation
A total of 5 units taken in one or more quarters.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 371. Seminar in Chinese Literary Criticism
(Same as COMPLIT 371) How aesthetics and politics intertwine and break apart in Western and Eastern traditions. Aesthetics for understanding culture, morality, and power in crosscultural contexts. Readings include Hegel, Kant, Marx, Lukacs, and Adorno; and Chinese thinkers Wang Guowei, Lu Xun, Li Zehou, and Mao. Prerequisite: CHINLIT 127/207 or consent of instructor.
2-5 units, Aut (Wang, B)

CHINLIT 399. Dissertation Research
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 400. Advanced Language Training
For students in the Inter-University Program for Chinese Language Studies in Beijing or Taipei. For more information, contact the consortium office at UC Berkeley: (510) 642-3873. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

CIVIL AND ENVIRONMENTAL ENGINEERING (CEE)

UNDERGRADUATE COURSES IN CIVIL AND ENVIRONMENTAL ENGINEERING

CEE 31. Accessing Architecture Through Drawing
Prefer to Architectural Design and CEE majors; others by consent of instructor. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci
4 units, Aut (Lee, G)

CEE 31Q. Accessing Architecture Through Drawing
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci
4 units, Win (Barton, J)

CEE 44Q. Critical Thinking and Career Skills
3 units, Aut (Clough, R)

CEE 46Q. Fail Your Way to Success
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. How to turn failures into successes; cases include minor personal failures and devastating engineering disasters. How personalities and willingness to take risks influence the way students approach problems. Field trips, case studies, and guest speakers applied to students day-to-day interactions and future careers. Goal is to redefine what it means to fail. GER:DB-EngrAppSci
3 units, Spr (Clough, R)

STANFORD BULLETIN, 2009-10 | 445
CEE 48N. Organizing Global Projects
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Challenges associated with planning and managing both commercial and governmental/non-profit global projects; theory, methods, and tools to enhance global project outcomes. Students teams model and simulate crosscultural teams engaged in global projects. Opportunities to participate in research in the Collaboratory for Research on Global Projects involving faculty from Stanford departments and schools; see http://crgp.stanford.edu.
4 units, Win (Levitt, R)

CEE 63. Weather and Storms
(Same as CEE 263C) Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. GER: DB-NatSci
3 units, Aut (Jacobson, M)

CEE 64. Air Pollution: From Urban Smog to Global Change
(Same as CEE 263D) Survey of urban- through global-scale air pollution. Topics: the evolution of the Earth’s atmosphere, indoor air pollution, urban smog formation, history of discovery of atmospheric chemicals, visibility, acid rain, the greenhouse effect, historical climate, global warming, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of air pollution on ultraviolet radiation, and impacts of energy systems on the atmosphere. GER: DB-NatSci
3 units, Win (Jacobson, M)

CEE 70. Environmental Science and Technology
Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environment and engineering systems. GER:DB-EngrAppSci
3 units, Spr (Kopperud, R; Walton, K; Strickfaden, R)

CEE 100. Managing Sustainable Building Projects
Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; lifecycle assessment methods; individual writing assignment related to a real world project. GER:DB-EngrAppSci
4 units, Spr (Fischer, M)

CEE 101A. Mechanics of Materials
Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinate and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisites: ENGR 14. GER:DB-EngrAppSci
4 units, Win (Baker, J)

CEE 101B. Mechanics of Fluids
Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special cases associated with potential flows; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, estuaries, and wind turbines. Prerequisites: PHYSICS 41 (formerly 53), MATH 51. GER:DB-EngrAppSci
4 units, Spr (Koseff, J)

CEE 101C. Geotechnical Engineering
3-4 units, Aut (Borja, R)

CEE 101D. Computations in Civil and Environmental Engineering
(Same as CEE 201D) Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.
3 units, Aut (Kaitz, G)

CEE 102. Legal Aspects of Engineering and Construction
Introduction to the U.S. legal system as it applies to civil engineering and construction. Fundamental concepts of contract and tort law, claims, risk management, business formation and licensing, agency, insurance and bonding, and real property. (London)
3 units, Win (London, M)

CEE 110. Building Information Modeling
(Same as CEE 210) (Graduate students register for 210.) Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of buildings, components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment.
4 units, Aut (Katz, G)

CEE 111. Multidisciplinary Modeling and Analysis
(Same as CEE 211) (Graduate students register for 211.) Computer modeling, visualization, analysis, and graphical communication of building projects. Use of computer models in laser scanning, rendering, animation, daylight, energy, cost, structural, lighting analysis, and computer controlled fabrication. Underlying 3D computer representations, and analysis tools and their applications. Guest lectures, lab exercises, class project. Prerequisite: 110 or CAD experience. GER:DB-EngrAppSci
4 units, Win (Haymaker, J)

CEE 115. Goals and Methods of Sustainable Building Projects
(Same as CEE 215) (Graduate students register for 215.) Goals related to sustainability: water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, and economic and social sustainability. Methods to integrate these goals and enhance the economic, ecological, and equitable value of building projects. Industry and academic rating systems, project case studies, guest lecturers, and group project.
3 units, Spr (Haymaker, J)

CEE 122A. Computer Integrated Architecture/Engineering/Construction (A/E/C)
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222A. Apprentices participate in all activities of the AEC team, including the goals, objectives, constraints, tasks, and process of a multidisciplinary AEC team in the concept development phase of a comprehensive building project. Prerequisite: consent of instructor.
2 units, Win (Fruchter, R)

CEE 122B. Computer Integrated A/E/C
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222B. Project activity focuses on modeling, simulation, life-cycle cost, and cost benefit analysis in the project development phase. Prerequisite: CEE 122A.
2 units, Spr (Fruchter, R)

CEE 124. Sustainable Development Studio
(Graduate students register for 224A) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 129. Engineering and Policy responses to Climate Change Impacts on Seaports
(Same as CEE 229) Interdisciplinary. Exploration of impacts of climate change on major coastal seaports around the world. Assessment of the minimum necessary response to protect ports from a significant sea-levels rise in terms of costs, material, labor, and time. Consideration of economic and policy implications. Class projects, case studies, guest speakers. May be credited for credit.
2-4 units, Aut, Win, Spr, Sam (Staff)
CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process
Preference to Architectural Design majors; others by consent of instructor. Projects investigate conceptual approaches to the design of key architectural elements, such as wall and roof. Functional and structural considerations. Focus is on constructing 3-D models in a range of materials; 3-D computer modeling. Students keep a graphic account of the evolution of their design process. Final project entails design of a simple structure. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.
4 units, Win (Wal ters, P)

CEE 131. Architectural Design Process
Preference to Architectural Design and CEE majors; others by consent of instructor. Issues in the architectural profession including programming, site analysis, design process, and professional practice concerns. Building/landscape design case study project using architectural graphics and models. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.
4 units, not given this year

CEE 131A. Introduction to the Design Professions
Seminar. Paths to careers that contribute to the design and construction of the built environment, including architecture, landscape architecture, project management, construction management, civil engineering, urban planning, and sustainability coordination. Guest lecturers present their work, background, roles and relationships to the other disciplines. Field trips, written and oral presentations, and four Wednesday evening lectures of the Spring Architecture and Landscape Architecture series.
2 units, Spr (Blake, C)

CEE 132. Interplay of Architecture and Engineering
(Same as CEE 232) The range of requirements that drive a building’s design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work.
4 units, not given this year

CEE 134A. Site and Space
Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring the Stanford Green Dorm project. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130.
4 units, Spr (Blake, C)

CEE 134B. Architectural Studio: Special Topic
Preference to Architectural Design majors; others by consent of Instructor. Multi-view drawing and quick sketching. Drawings such as section cuts to enable development of designs. Functional, structural, site, and sustainable considerations. Final project entails design of a simple structure. Limited enrollment.
4 units, Spr (Barton, J)

CEE 135A. Parametrics: Applications in Architecture and Product Design
(Same as CEE 235A) Precedents in architecture and product design; methods for modeling, prototyping, and fabrication. How to combine design intentions and digital logics with physical and material constraints. Students develop a case study and small design projects using a parametric approach at the scales of architecture and product.
4 units, Win (Staff)

CEE 136. Green Architecture
(Same as CEE 236) Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring green design and green design processes. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130. GER:DB-EngrAppSci
4 units, Spr (Barton, J)

CEE 137A. Form and Structure
Preference to Architectural Design and CEE majors; others by consent of instructor. Intermediate architectural studio. The integration of structure, form, site, and program. Emphasis is on developing a schematic design in the context of site topography and structural systems. Limited enrollment. Prerequisites: 31 or 31Q, and 130.
4 units, not given this year

CEE 137B. Intermediate Architecture Studio
Studio design project focus is on a building of intermediate complexity, focusing on how design meets the requirements of economy, ecology and society. Taught by guest architects. May be repeated once for credit. Prerequisites: CEE 31 or 31Q, and CEE 110 and 130.
5 units, Win (Staff)

CEE 138A. Contemporary Architecture: Materials, Structures, and Innovations
Structural and material bases for contemporary architecture; its roots in modern innovations. Recent technological developments; new materials and structural expressions. Sources include specific buildings and construction techniques. How to think critically about design strategies, material properties, and structural techniques.
3 units, not given this year

CEE 139. Design Portfolio Methods
Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment. Prerequisites: two Art or Architecture studio courses, or consent of instructor.
2 units, Spr (Larimer, A)

CEE 140. Field Surveying Laboratory
(Same as CEE 225) Graduate students register for 225. Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools; introduction to the newest generation of digital measuring, positioning, and mapping tools. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions.
3 units, Spr (Redd, T)

CEE 141A. Infrastructure Project Development
(Same as CEE 241A) Infrastructure is critical to our economy, global competitiveness and quality of life. Course analyzes conditions of nation’s infrastructure and how infrastructure projects are planned and financed. Focus on public works projects in the US. Analyzes role of public and private sectors through a step-by-step study of the project development process. Extensive case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project development.
3 units, Aut (Staff)

CEE 141B. Infrastructure Project Delivery
(Same as CEE 241B) Builds on CEE241A to provide an understanding of public and private sector roles in delivery (design and construction) and operation of infrastructure projects. Primarily focuses on public works projects in the United States. Covers alternative project delivery approaches and organizational strategies. Extensive use of actual case studies and guest speakers from public and private sector. Field trips to organizations and projects engaged in design and construction of infrastructure projects.
3 units, Win (Staff)

CEE 142A. Negotiating Sustainable Development
(Same as CEE 242A, IPER 242) Learn how to negotiate and achieve sustainable development, assuming sustainability as a core value of stakeholders. Examine national and multinational negotiations with a variety of public and private stakeholders. Identify factors that improve or diminish success. Conduct stakeholder analysis, manage multi-party processes and achieve sustainable outcomes through implementation. Case studies. Field trips. Group project. Enrollment limited to 50.
3 units, Win (Christensen, S)

CEE 147. Cases in Personality, Leadership, and Negotiation
(Same as CEE 247) Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local
COURSES OF INSTRUCTION

COURSES OF INSTRUCTION

3 units, Spr (Clough, R)

CEE 151. Negotiation
(Same as CEE 251, ME 207, MS&E 285) Negotiation styles and processes to help students conduct and review negotiations. Workshop format integrating intellectual and experiential learning. Exercises, presentations, live and field examples, and individual and small group reviews. Application required before first day of class; see Coursework.

3 units, Aut (Christensen, S), Spr (Christensen, S)

CEE 154. Cases in Estimating Costs
(Same as CEE 254) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent or instructor and application downloaded from CourseWork prior to start of class.

GER:DB-EngrAppSci
3 units, Aut (Clough, R)

CEE 156. Building Systems
(Same as CEE 256) HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants. GER:DB-EngrAppSci
4 units, Spr (Kolderup, E)

CEE 159. Career Skills Seminar
(Same as CEE 259) (Graduate students register for 259.) Factors required for successful careers. Guest speakers. Case studies. Participation in real world corporate interviews, testing, and reviews conducted by industry trainers. Limited enrollment; no auditors. Prerequisite: application downloaded from CourseWork prior to start of class.

2 units, not given this year

CEE 160. Mechanics of Fluids Laboratory
Lab experiments/demonstrations illustrate conservation principles and flows of real fluids. Corequisite: 101B.
2 units, Spr (Fringer, O)

CEE 161A. Rivers, Streams, and Canals
(Same as CEE 264A) The movement of water through natural and engineered channels, streams, and rivers. Equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Students taking lab section register for 4 units. Prerequisites: 101B, 160. (Fong) GER:DB-EngrAppSci
3-4 units, Aut (Fong, D), Sum (Fong, D)

CEE 164. Introduction to Physical Oceanography
(Same as CEE 262D, EARTHSYS 164) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci
4 units, Win (Fong, D)

CEE 165D. Water and Sanitation in Developing Countries
(Same as CEE 265D) Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Case studies from Asia, Africa, and Latin America. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor.
3 units, Win (Davis, J)

CEE 166A. Watersheds and Wetlands
(Same as CEE 266A) Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg) GER:DB-EngrAppSci
3 units, Aut (Freyberg, D)

CEE 166B. Floods and Dams and Aqueducts
(Same as CEE 266B) Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg) GER:DB-EngrAppSci
3 units, Win (Freyberg, D)

CEE 166D. Water Resources and Water Hazards Field Trips
(Same as CEE 266D) Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities. Flows, reservoirs, dams, and rivers. Engineering principles (aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.
2 units, Win (Freyberg, D)

CEE 169. Environmental and Water Resources Engineering Design
Application of fluid mechanics, hydrology, water resources, environmental sciences, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B.
3 units, Spr (Freyberg, D)

CEE 171. Environmental Planning Methods
For juniors and seniors. Use of microeconomics and mathematical optimization theory in the design of environmental regulatory programs; tradeoffs between equity and efficiency in designing regulations; techniques for predicting adverse effects in environmental impact assessments; information disclosure requirements; and voluntary compliance of firms with international regulating norms. Prerequisites: MATH 51. Recommended: 70. GER:DB-EngrAppSci
3 units, Win (Ortolano, L)

CEE 172. Air Quality Management
Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51. GER:DB-EngrAppSci
3 units, Win (Hildemann, L)

CEE 172A. Indoor Air Quality
(Same as CEE 278C) Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Recommended: 172 or 278A.
3-2 units, not given this year

CEE 172P. Distributed Generation and Grid Integration of Renewables
(Same as CEE 272P) Renewable generation technologies and their use in the electric power system. Conventional electricity generation systems and the historical development of renewables. Development and operation of the electric power system for high penetrations of renewables and demand side participation. Wind energy and wind farms. Design of wind turbines. Photovoltaic systems
(grid connected), micro-hydro and marine renewables (wave and tidal stream devices). Analysis of the electric power system and the integration of renewable energy generators.

3-4 units, Win (Jenkins, N)

CEE 173A. Energy Resources
(Same as CEE 207A, EARTHSYS 103) Fossil and renewable energy resources and energy efficiency. Topics for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures to energy sectors: buildings, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. GER:DB-EngrAppSci

4-5 units, Aut (Woodward, J; Knapp, K)

CEE 175A. Law and Science of California Coastal Policy
(Same as CEE 275A, EARTHSYS 175, EARTHSYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California’s coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor.

3-4 units, not given this year

CEE 176A. Energy Efficient Buildings
Analysis and design. Thermal analysis of building envelope, heating and cooling requirements, HVAC, and building integrated PV systems. Emphasis is on residential passive solar design and solar water heating. Lab. GER:DB-EngrAppSci

3-4 units, Win (Masters, G)

CEE 176B. Electric Power: Renewables and Efficiency
Renewable and efficient electric power systems emphasizing analysis and sizing of photovoltaic arrays and wind turbines. Basic electric power generation, transmission and distribution, distributed generation, combined heat and power, fuel cells. End use demand, including lighting and motors. Lab. GER:DB-EngrAppSci

3-4 units, Spr (Masters, G)

CEE 176F. Energy Systems Field Trips
(Same as CEE 276F) Energy resources and policies in use and under development in China. 12-day field trip to China during Spring Break 2010. One unit for seminar and readings; one unit for field trip. Prerequisite: consent of instructor for field trip.

1-2 units, Win (Woodward, J; Knapp, K)

CEE 177. Aquatic Chemistry and Biology
Undergraduate-level introduction to the chemical and biological processes in the aquatic environment. Basic aquatic equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31. GER:DB-EngrAppSci

4 units, Aut (Criddle, C)

CEE 177P. Sustainability in Theory and Practice
The multidimensional concept of sustainable development. Students evaluate engineered systems using tools such as cost-benefit analysis, life-cycle analysis, and lifecycle analysis. How to make judgments about sustainable and unsustainable courses of action. Case studies dealing with contemporary environmental and economic challenges.

3 units, not given this year

CEE 177S. Design for a Sustainable World
(Same as CEE 277S) Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concepts, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See http://ese.stanford.edu for application.

(Staff)

1-5 units, Spr (Sandstrom, E; Bischof, H)

CEE 178. Introduction to Human Exposure Analysis
(Same as CEE 276) (Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. GER:DB-EngrAppSci

3 units, Sum (Kopperud, R)

CEE 179A. Water Chemistry Laboratory
(Same as CEE 273A) (Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.

3 units, Win (Robertson, A)

CEE 179C. Environmental Engineering Design
Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. Enrollment limited; preference to seniors in Civil and Environmental Engineering.

5 units, alternate years, not given this year

CEE 180. Structural Analysis

4 units, Aut (Law, K)

CEE 181. Design of Steel Structures
Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Prerequisite: 180. GER:DB-EngrAppSci

4 units, Aut (Law, K)

CEE 182. Design of Reinforced Concrete Structures
Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180. GER:DB-EngrAppSci

4 units, Win (Lepech, M)

CEE 183. Integrated Building Design
Studio format. Design concepts for building systems from schematic design through construction, taking into account sustainable engineering issues. Design exercises culminating in the design of a building project, emphasizing structural systems and materials and integration with architecture, construction, and building mechanical systems. Prerequisites: CEE 180, 181, 182; civil engineering major; architectural design majors require consent of instructor.

4 units, Spr (Deierlein, G)

CEE 195A. Fundamentals of Structural Geology
(Same as GES 111A) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 1, MATH 51, 52. GER:DB-NatSci

3 units, Aut (Pollard, D)

CEE 195B. Fundamentals of Structural Geology
(Same as GES 111B) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and plastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.

3 units, Win (Pollard, D)

CEE 196. Engineering Geology Practice
(Same as GES 115) The application of geology and global change
COURSES OF INSTRUCTION

GRADUATE COURSES IN CIVIL AND ENVIRONMENTAL ENGINEERING

CEE 200A. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem-solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A, Aut, 200B, Win, 200C, Spr
1 unit, Aut (Staff)

CEE 200B. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem-solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A, Aut, 200B, Win, 200C, Spr
1 unit, Aut (Staff)

CEE 200C. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem-solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A, Aut, 200B, Win, 200C, Spr
1 unit, Spr (Chui, T)

CEE 201D. Computations in Civil and Environmental Engineering
(Same as CEE 101D) Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style. 3 units, Aut (Kitanidis, P)

CEE 202. Construction Claims Analysis and Resolution
Concepts include cost overrun and schedule delay analysis, contracts and other legal topics, and resolution of construction disputes. Introduction to construction law. Requires attendance of the first five weeks of CEE 102 for basic legal background. 3-4 units, Win (Groves, R; Tucker, A; London, M)

CEE 203. Probabilistic Models in Civil Engineering
Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models used in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression. 3-4 units, Aut (Baker, J)

CEE 204. Structural Reliability
Procedures for evaluating the safety of structural components and systems. First-and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent. 3-4 units, Spr (Baker, J), alternate years, not given next year

CEE 206. Decision and Stochastic Processes Models in Civil Engineering
Current challenges in selecting an appropriate site, alternate design, or retrofit strategy based on environmental, economic, and social factors through applications of decision science. Basics of decision theory with examples from civil engineering problems. Theory and methods for modeling of loads, structural parameters, environmental effects, rainfall, and other processes in civil engineering. Stochastic models include Poisson, compound Poisson, filtered Poisson, non-homogeneous Poisson, and Markov processes. Prerequisite: CEE 203 or equivalent. 3-4 units, not given this year

CEE 206A. Decision Models in Civil Engineering
For advanced graduate students in CEE. Applications of decision science to address current challenges in selecting an appropriate site and appropriate design or retrofit strategy based on environmental, economic, and social factors. Examples from everyday civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent. 2 units, not given this year

CEE 207A. Energy Resources
(Same as CEE 173A, EARTHSYS 103) Fossil and renewable energy resources and energy efficiency. Topics for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. 4-5 units, Aut (Woodward, J; Knapp, K)

CEE 210. Building Information Modeling
(Same as CEE 110) (Graduate students register for 210.) Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment. 4 units, Aut (Katz, G)

CEE 211. Multidisciplinary Modeling and Analysis
(Same as CEE 111) (Graduate students register for 211.) Computer modeling, visualization, analysis, and graphical communication of building projects. Use of 3D models in laser scanning, rendering, animation, day-light, energy, cost, structural, lighting analysis, and computer controlled fabrication. Underlying 3D computer representations, and applications to their applications. Guest lectures, lab exercises, class projects. Prerequisite: 110 or CAD experience. 4 units, Win (Haymaker, J)

CEE 214. Introduction to Modeling and Analysis in CEE
Introduces students to modeling of products, processes and organizations in the AEC industry. Modeling and analysis purposes include support of technical, social, psychological and ethical decision making for different stakeholders. Different purposes and levels of detail for different models. CEM/DCI integrated approach to building using physical, mathematical, graphical and computer
models of products, organizations and processes.
3 units, Aut (Haymaker, J; Kunz, J)

CEE 215. Goals and Methods of Sustainable Building Projects
(Same as CEE 115) (Graduate students register for 215.) Goals related to sustainable sites, water efficiency, energy and atmos-
phere, materials and resources, indoor environmental quality, and
economic and social sustainability. Methods to integrate these
goals and enhance the economic, ecological, and equitable value of
building projects. Industry and academic rating systems, project
case studies, guest lecturers, and group project.
3 units, Spr (Haymaker, J)

CEE 222A. Computer Integrated Architecture/Engineering/Construc-
tion (AEC) Global Teamwork
AEC students engage in a crossdisciplinary, collaborative, geo-
graphically distributed, and multicultural project-based teamwork.
AEC teams exercise their domain knowledge and information
technologies in a multidisciplinary context focusing on the design
and construction concept development phase of a comprehensive
building project. Prerequisite: interview with Instructor in Autumn
Quarter.
3 units, Win (Fruchter, R)

CEE 222B. Computer Integrated Architecture/Engineering/Construc-
tion (AEC) Global Teamwork
Global AEC student teams continue their project activity focusing
on the most challenging concept developed in 222A and chosen
jointly with their client. Comprehensive team project focusing on
design and construction, including: project development and do-
cumentation; detailing, 3D and 4D modeling, simulation, sustaina-
ble concepts, cost benefit analysis, and life-cycle cost analysis; and
final project presentation of product and process. Prerequisite:
CEE 222A.
2 units, Spr (Fruchter, R)

CEE 223A. Design and Construction of Steel Structures
Using a 15-story steel building project, students analyze the impli-
cations of design decisions on structural performance, construction
cost and schedule. Topics include composite floor systems; col-
umns, braces, bolted and welded connections; innovative lateral
load resisting systems; fabrication and erection of steel structures.
Prerequisite: 181 or equivalent.
3-4 units, Aut (Miranda, E)

CEE 223B. Design and Construction of Concrete Structures
Introduction to prestressed concrete covering both pre-tensioning and
post-tensioning; strength and deformability of reinforced con-
crete elements; one and two-way slabs; post-tensioned slabs; cast-
in-place beam-to-column connections; structural walls; innovative lateral
resisting systems. Prerequisite: 182 or equivalent.
3-4 units, Win (Miranda, E)

CEE 224A. Sustainable Development Studio
(Undergraduates, see 124.) Project-based. Sustainable design, de-
velopment, use and evolution of buildings; connections of building
systems to broader resource systems. Areas include architecture,
structure, materials, energy, water, air, landscape, and food.
Projects use a cradle-to-cradle approach focusing on technical and
biological nutrient cycles and information and knowledge genera-
tion and organization. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 225. Field Surveying Laboratory
(Same as CEE 140) Graduate students register for 225. Friday
afternoon labor provides practical surveying experience. Ad-
ditional morning classes to prepare for the afternoon sessions.
Hands-on operation of common traditional field survey tools; intro-
duction to the newest generation of digital measuring, posi-
tioning, and mapping tools. Emphasis is on the concept of using
the data collected in the field as the basis for subsequent engineer-
ing and economic decisions.
2 units, Spr (Redd, T)

CEE 226. Life Cycle Assessment for Complex Systems
Life cycle modeling of products, industrial processes, and infrastruc-
ture/building systems; material and energy balances for large inter-
dependent systems; environmental accounting; and life cycle cost-
ing. These methods, based on ISO 14000 standards, are used to ex-
amine emerging technologies, such as biobased products, building
materials, building integrated photovoltaics, and alternative design
strategies, such as remanufacturing, de-materialization, LEED, and

Design for Environment: DfE. Student teams complete a life cycle
assessment of a product or system chosen from industry.
3-4 units, Aut (Lepech, M)

CEE 226E. Advanced Topics in Integrated, Energy-Efficient
Building Design
Innovative methods and systems for the integrated design and evalu-
ation of energy efficient buildings. Guest practitioners and research-
ers in energy efficient buildings. Student initiated final project.
2 units, Spr (Romsey, P)

CEE 227. Global Project Finance
Public and private sources of finance for large, complex, capital-
intensive projects in developed and developing countries. Benefits
and disadvantages, major participants, risk sharing, and challenges
of project finance in emerging markets. Financial, economic, polit-
ical, cultural, and technological elements that affect project struc-
tures, processes, and outcomes. Case studies.
3-5 units, Win (Orr, R)

CEE 228. Innovative Global Construction Technology
(Formerly 245T.) Five-week class. How innovative companies
invent new construction processes based on relative local labor, and
materials and equipment cost, availability, and capabilities, and
developed from experience and knowledge of construction
technology in bridge, tunnel, and high-rise building. The process of
generating new ideas. Industry guest speakers address the link
between product/process innovation and construction technology.
2 units, Win (Brockmann, C)

CEE 229. Engineering and Policy responses to Climate Change
Innovative Seaports
(Same as CEE 129) Interdisciplinary. Exploration of impacts of
climate change on major coastal seaports around the world. As-
essment of the minimum necessary response to protect ports from a
significant sea-levels rise in terms of costs, material, labor, and
time. Consideration of economic and policy implications. Class
projects, case studies, guest speakers. May be credited for credit.
2-4 units, Aut (Fischer, M), Win (Fischer, M), Spr (Fischer, M),
Sum (Staff)

CEE 232. Interplay of Architecture and Engineering
(Same as CEE 132) The range of requirements that drive a build-
ing’s design including architecture, engineering, constructability,
business codes, and budget. Case studies illustrate how structural
and mechanical systems are integrated into building types includ-
ing residential, office, commercial, and retail. In-class studio work.
4 units, not given this year

CEE 235A. Parametrics: Applications in Architecture and
Product Design
(Same as CEE 135A) Precedents in architecture and product de-
sign; methods for modeling, prototyping, and fabrication. How to
combine design intentions and digital logics with physical and
material constraints. Students develop a case study and small de-
sign projects using a parametric approach at the scales of architec-
ture and product.
4 units, Win (Staff)

CEE 236. Green Architecture
(Same as CEE 136) Preference to Architectural Design and CEE
majors; others by consent of instructor. An architectural design
studio exploring green design and green design processes. Initial
sessions develop a working definition of sustainable design and
strategies for greening the built environment in preparation for
design studio work. Enrollment limited to 14. Prerequisites: 31 or
31Q, and 110 and 130.
4 units, Spr (Barton, J)

CEE 240. Design and Management of Construction Operations
Designing on-site construction processes including: goals, roles,
responsibilities, performance metrics; inputs/outputs; labor and
capital intensive construction methods, task assignments and crew
instructions, safety management and site supervision, and produc-
tivity measurement; value stream modeling, materials manage-
ment, daily and weekly progress, and financial reports; site opera-
tions and management; observation methods for field operations;
construction process modeling and simulation methods; and digital
models for planning and executing site operations. Field and com-
puter lab work. Prerequisite: 100 or equivalent or consent of
instructor. Recommended corequisite: 241.
3 units, Win (Fischer, M)
CEE 241. Managing Fabrication and Construction
Methods to manage the physical production of construction projects through design, analysis, and computer simulation of the fabrication-assembly process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Prerequisites: 100 or consent of instructor. Recommended corequisite: 240.
3 units, Aut (Fischer, M)

CEE 241A. Infrastructure Project Development
(Same as CEE 141A) Infrastructure is critical to our economy, global competitiveness and quality of life. Course analyzes condition of nation’s infrastructure and how infrastructure projects are planned and financed. Focus on public works projects in the US. Analyzes role of public and private sectors through a step-by-step study of the project development process. Extensive case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project development.
3 units, Aut (Staff)

CEE 241B. Infrastructure Project Delivery
(Same as CEE 141B) Builds on CEE241A to provide an understanding of public and private sector roles in delivery (design and construction) and operation of infrastructure projects. Primarily focuses on public works projects in the United States. Covers alternative project delivery approaches and organizational strategies. Extensive use of actual case studies and guest speakers from public and private sector. Field trips to organizations and projects engaged in design and construction of infrastructure projects.
3 units, Win (Staff)

CEE 242. Organization Design for Projects and Companies
Introduction to organizational behavior. Information-processing theory and computer analysis tools to design organizations for projects and companies; practice facilitating 12-person case study discussion groups. Cases focus primarily on engineering and construction organizations, but applicable to project-based organizations in all industries. Focus on public works projects in the US. Analyzes role of public and private sectors through a step-by-step study of the project development process. Extensive case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project development.
3-4 units, Aut (Levitt, R)

CEE 242A. Negotiating Sustainable Development
(Same as CEE 142A, IPER 242) Learn how to negotiate and achieve sustainable development, assuming sustainability as a core value of stakeholders. Examine national and multinational negotiations with a variety of public and private stakeholders. Identify factors that improve or diminish success. Conduct stakeholder analysis, manage multi-party processes and achieve sustainable outcomes through implementation. Case studies. Field trips. Group project. Enrollment limited to 50.
3 units, Win (Christensen, S)

CEE 243. Predicting and Measuring Building Energy Use
Energy modeling has entered commercial use and can help evaluate the impact of potential energy-saving interventions in commercial building design. Methods to create building information models to enable energy analysis, use energy analysis tools and interpret their results for commercial buildings, analyze measured building performance and relate prediction to measurement, and develop guidance for owners on how to use these methods in practice. May be repeated for credit. Prerequisites: Revit or Digital Project competence or CEE 210, CEE 211, or CEE 135 with equivalent experience. Recommended: energy modeling experience, CEE 176A, CEE 226E, or CEE 256.
2-3 units, Spr (Kunz, J)

CEE 244. Fundamentals of Construction Accounting and Finance
2 units, Aut (Tucker, A; Meyer, P)

CEE 245A. Global Project Seminar
Issues related to large, complex, global development projects including infrastructure development, urban and rural development, and the development of new cities. Guest presentations by industry practitioners and academics, including: Sabeer Bhatia, founder of Hotmail and architect of NanoCity; Ian Bremmer, CEO of the Eurasia Group, and Greg Huger, managing director of AirliePartners. May be repeated for credit.
3 units, not given this year

CEE 246. Managing Engineering and Construction Companies
Management of design and construction companies in the architecture-engineering-construction industry. Focus is on management of risks inherent in the A/E/C industry: developing business strategies and organizations to cope with cyclical demand, alternative contracting approaches, managing receivables and cash flow, administration of human resources, safety, quality, insurance, and bonding. Students play different management roles in a computer simulation of a construction company. Prerequisites: introductory accounting course such as ENGR 60, CEE 244A, or MS&E 140.
4 units, Spr (Levitt, R)

CEE 246A. Engineering Economy Primer
Satisfies the engineering economy prerequisite for 246 or 253. Application of engineering economy concepts and principles to the construction industry. Equivalence concept; interest formulas; value of money across time; present value, annual cash flow, internal rate of return and benefit-cost methods; retirement and re-placement; depreciation; capital budgeting; and sensitivity and risk analysis. Construction finance concepts, loans, mortgages, and construction pro formas.
2 units, Aut (Koen Cohen, N)

CEE 246B. Real Estate Finance Seminar
1 unit, Spr (Koen Cohen, N)

CEE 247. Cases in Personality, Leadership, and Negotiation
(Same as CEE 147) Cases study personality issues, risk willingness, and life skills essential for real world success. FAILURES, successes, and risk willingness in individual and group tasks based on the professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors.
3 units, Spr (Koen Cohen, N)

CEE 248. Real Estate Development
Critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public roles, steps for project approval, project finance, contracting and construction, property management, and sales. Group projects focus on actual developments now in the planning stage. Enrollment limited to 24; priority to graduate majors in the department’s CEM and GSB programs. Prerequisites: 241, 244A or equivalent, ENGR 60.
3 units, Spr (Kroll, M)

CEE 248G. Certifying Green Buildings
Open to all disciplines. Goal is prepare students for the U.S. Green Building Council’s professional accreditation exam. Basic metrics for project certification via USGBC’s LEED rating system. Recommended: familiarity with design and construction terminology.
1 unit, Spr (Vermyntric, J)

CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution
Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.
2 units, Win (Walton, M)

CEE 251. Negotiation
(Same as CEE 151, ME 207, MS&E 285) Negotiation styles and
processes to help students conduct and review negotiations. Workshop format integrating intellectual and experiential learning. Exercises, presentations, live and field examples, and individual and small group reviews. Application required before first day of class; see Coursework.

3 units, Aut (Christensen, S), Spr (Christensen, S)

**CEE 252. Construction Methods for Concrete and Steel Structures**

3 units, Win (Tatum, C)

**CEE 253A. Earthwork Construction**

1 unit, Spr (Tatum, C)

**CEE 254. Cases in Estimating Costs**
(Same as CEE 154) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor’s experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent of instructor and application downloaded from CourseWork prior to start of class.

3 units, Aut (Clough, R)

**CEE 256. Building Systems**
(Same as CEE 156) HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

4 units, Spr (Kolderup, E)

**CEE 257. Building Systems Practice**
Technical fundamentals, major components, connecting elements, field operations for active building systems: HVAC, electric power, water and waste, fire protection, control and instrumentation and vertical transportation. Integration, coordination and commissioning of systems. Field trip to HVAC specialty contractor.

1 unit, Spr (Tatum, C)

**CEE 258. Donald R. Watson Seminar in Construction Engineering and Management**
Panel discussions with speakers from various segments of industry and government who clarify career options. Students interact with panelists in group discussions at dinner after class. Application: https://coursework.stanford.edu/portal/site/F08-CEE-258-01

1 unit, Aut (Clough, R)

**CEE 258B. Donald R. Watson Seminar in Construction Engineering and Management**
Weekly seminars and field trips focusing on technical aspects of concrete and steel construction. Submission of abstract and paper required.

1 unit, Win (Tatum, C)

**CEE 259. Career Skills Seminar**
(Same as CEE 159) (Graduate students register for 259.) Factors required for successful careers. Guest speakers. Case studies. Participation in real world corporate interviews, testing, and reviews conducted by industry trainers. Limited enrollment; no auditors. Prerequisites: application downloaded from CourseWork prior to start of class.

2 units, not given this year

**CEE 259A. Construction Problems**
Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, Aut (Staff)

**CEE 259B. Construction Problems**
Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, Win (Staff)

**CEE 259C. Construction Problems**
Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, Spr (Staff)

**CEE 260A. Physical Hydrogeology**
(Same as EESS 220) (Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S; Walker, K; Erban, L)

**CEE 260B. Surface and Near-Surface Hydrologic Response**
(Same as GES 237) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

3 units, Aut (Loague, K)

**CEE 260C. Contaminant Hydrogeology**
(Same as EESS 221) (Formerly GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisites: GES 230 or CEE 260A or equivalent.

4 units, not given this year

**CEE 262A. Hydrodynamics**
The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow, equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

3-4 units, Aut (Monismith, S)

**CEE 262B. Transport and Mixing in Surface Water Flows**

3-4 units, Win (Monismith, S)

**CEE 262C. Modeling and Simulation for Civil and Environmental Engineers**
Mathematical and computational methods for modeling and simulation. The use of Matlab for topics including predator-prey problems, buckling, transport and mixing, wave modeling, flow reactors, and traffic flow. Prerequisites: CME 102 and 104, or equivalents.

3 units, Spr (Fringer, O)
COURSES OF INSTRUCTION

CEE 262D. Introduction to Physical Oceanography
(Same as CEE 164, EARTHSYS 164) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).
4 units, Win (Fong, D)

CEE 262E. Lakes and Reservoirs
Physics and water quality dynamics in lakes and reservoirs. Implementation of physical and biogeochemical processes in 1-D models. Recommended: 262B.
2-3 units, not given this year

CEE 262F. Ocean Waves
The fluid mechanics of surface gravity waves in the ocean of relevance to engineers and oceanographers. Topics include irrotational waves, wave dispersion, wave spectra, effects of bathymetry (shoaling), mass transport, effects of viscosity, and mean currents driven by radiation stresses. Prerequisite: CEE 262A or a graduate class in fluid mechanics.
3 units, Win (Monismith, S)

CEE 263A. Air Pollution Modeling
The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear’s method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.
3-4 units, Spr (Jacobson, M), alternate years, not given next year

CEE 263B. Numerical Weather Prediction
Numerical weather prediction. Continuity equations for air and water vapor, the thermodynamic energy equation, and momentum equations derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic weather prediction model. Prerequisite: CS 106A or equivalent.
3-4 units, alternate years, not given this year

CEE 263C. Weather and Storms
(Same as CEE 63) Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics.
3 units, Aut (Jacobson, M)

CEE 263D. Air Pollution: From Urban Smog to Global Change
(Same as CEE 64) Survey of urban- through global-scale air pollution. Topics: the evolution of the Earth’s atmosphere, indoor air pollution, urban smog formation, history of discovery of atmospheric chemicals, visibility, acid rain, the greenhouse effect, historical climate, global warming, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of air pollution on ultraviolet radiation, and impacts of energy systems on the atmosphere.
3 units, Win (Jacobson, M)

CEE 264A. Rivers, Streams, and Canals
(Same as CEE 161A) The movement of water through natural and engineered channels, streams, and rivers. Equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Design of flood-control and canal systems. Flow controls such as weirs and gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Students taking lab section register for 4 units. Prerequisites: 101B, 160. (Fong)
3-4 units, Aut (Fong, D), Sum (Fong, D)

CEE 265A. Sustainable Water Resources Development
Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Influence of international aid agencies and NGOs on water projects. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.
3 units, Spr (Ortolano, L)

CEE 265C. Water Resources Management
Principles of surface and ground water resources management in the context of water scarcity and hydropower uncertainty. Topics include reservoir, river basin, and aquifer management, conjunctive use of surface and ground water, wastewater reuse, and demand management. Technical, economic, social, and political elements of water management.
3 units, Spr (Findikakis, A)

CEE 265D. Water and Sanitation in Developing Countries
(Same as CEE 165D) Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Case studies from Asia, Africa, and Latin America. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor.
3 units, Win (Davis, J)

CEE 266A. Watersheds and Wetlands
(Same as CEE 166A) Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrological processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg)
3 units, Aut (Freyberg, D)

CEE 266B. Floods and Droughts, Dams and Aqueducts
(Same as CEE 166B) Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg)
3 units, Win (Freyberg, D)

CEE 266C. Advanced Topics in Hydrology and Water Resources
Graduate seminar. Focus is on one or more hydrologic processes or water resources systems. Topics vary based on student and instructor interest. Examples include freshwater wetland hydrology, watershedscale hydrologic modeling, renaturalization of stream channels, reservoir sediment management, and dam removal. Enrollment limited. Prerequisites: 266A,B, or equivalents. Recommended: 260A or equivalent.
3 units, Spr (Freyberg, D), alternate years, not given next year

CEE 266D. Water Resources and Water Hazards Field Trips
(Same as CEE 166D) Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip precedes by an orientation lecture.
2 units, Win (Freyberg, D)

CEE 268. Groundwater Flow
Flow and mass transport in porous media. Applications of potential
flow theory and numerical modeling methods to practical ground-water problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics. 3-4 units, Win (Kitanidis, P), Sum (Cardiff, M)

**CEE 269. Environmental Fluid Mechanics and Hydrology Seminar**  
Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated for credit.  
1 unit, Spr (Monismith, S)

**CEE 270. Movement and Fate of Organic Contaminants in Waters**  
Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physicochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.  
3 units, Win (Kopperud, R)

**CEE 271A. Physical and Chemical Treatment Processes**  
4 units, Win (Criddle, C)

**CEE 271B. Environmental Biotechnology**  
Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.  
3 units, Win (Robertson, A)

**CEE 271M. Transport Phenomena: Momentum, heat and mass transport**  
(Same as CEE 371M) Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.  
3 units, Win (Boehm, A)

**CEE 272. Coastal Contaminants**  
Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens and nutrients. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates require consent of instructor.  
3-4 units, Aut (Boehm, A)

**CEE 272P. Distributed Generation and Grid Integration of Renewables**  
3-4 units, Win (Jenkins, N)

**CEE 273. Aquatic Chemistry**  
Chemical principles and their application to the analysis and solution of problems in aquatic geochemistry (temperatures near 25°C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.  
3 units, Aut (Leckie, J)

**CEE 273A. Water Chemistry Laboratory**  
(Same as CEE 179A) (Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.  
3 units, Win (Robertson, A)

**CEE 273C. Introduction to Membrane Technology for Water/Wastewater Treatment**  
Membrane separation processes focusing on their use for water and wastewater purification. Topics will include membrane types and materials; transport across and rejection by membranes; membrane fouling, cleaning and degradation; and design and operation of membrane systems.  
1 unit, Spr (Reinhard, M)

**CEE 274A. Environmental Microbiology I**  
(Same as CHEMENG 174, CHEMENG 274) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catalysis, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.  
3 units, Win (Spormann, A), Sum (Krieger, C)

**CEE 274B. Metabolic Biochemistry of Microorganisms**  
(Same as CHEMENG 456) Microbial metabolism, biochemical and metabolic principles, unity and diversity of metabolic pathways, evolution of enzymes and metabolic pathways, microbial degradation of natural and anthropogenic organic compounds, predicting biodegradation, and metabolic origin of life.  
3 units, Win (Spormann, A), alternate years, not given next year

**CEE 274C. Microbial Ecology and Evolution**  
(Same as CHEMENG 457) Structure/function relationship of microbial communities; metabolic and ecological basis of interactions in microbial communities; microbial ecology and population biology in natural and human host systems; and evolution of microbial life. Prerequisite: CEE 274A, CHEMENG 281 (formerly 288), or equivalent.  
3 units, not given this year

**CEE 274D. Pathogens and Disinfection**  
Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.  
3 units, Spr (Criddle, C), alternate years, not given next year

**CEE 274E. Pathogens in the Environment**  
Sources, fates, movement, and ecology of waterborne pathogens in the natural environment and disinfection systems; epidemiology and microbial risk assessment. No microbiology background required; undergraduates may enroll with consent of instructor.  
3 units, not given this year

**CEE 274P. Environmental Health Microbiology Lab**  
Microbiology skills including culture-, microscope-, and molecular-based detection techniques. Focus is on standard and EPA-approved methods to enumerate and isolate organisms used to assess risk of enteric illnesses, such as coliforms, enterococci, and coliphage, in drinking and recreational waters including lakes, streams, and coastal waters. Student project to assess the microbial water quality of a natural water. Limited enrollment; priority to CEE graduate students.  
3-4 units, Spr (Boehm, A)

**CEE 274S. Hopkins Microbiology Course**  
(Same as BIO 274S, BIOHOPK 274, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically hetero-
COURSES OF INSTRUCTION

geneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.
3-4 units, not given this year

CEE 275A. Law and Science of California Coastal Policy
(Same as CEE 175A, EARTHYS 175, EARTHYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California’s coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor.
9-12 units, Sum (Spormann, A; Francis, C)

CEE 275B. Process Design for Environmental Biotechnology
Alternates with 169. Preference to juniors and seniors in Civil or Environmental Engineering. The design of a water or wastewater treatment system using biological processes to remove contaminants. Student teams characterize contaminants in water or wastewater and design and operate bench- and pilot-scale units, and develop a full-scale design. Limited enrollment. Prerequisites: 177, 179A.
3 units, alternate years, not given this year

CEE 276. Introduction to Human Exposure Analysis
(Same as CEE 178) (Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51.
3 units, Sum (Kopperud, R)

CEE 276E. Environmental Toxics
Chemicals in the environment that pose toxicity risk. Introduction to environmental toxicology principles for identifying and characterizing toxics based on sources, properties, pathways, and toxic action. Past and present environmental toxicant issues.
2 units, Spr (Ong, C)

CEE 276F. Energy Systems Field Trips
(Same as CEE 176F) Energy resources and policies in use and under development in China. 12-day field trip to China during Spring Break 2010. One unit for seminar and readings; one unit for field trip. Prerequisite: consent of instructor for field trip.
1-2 units, Win (Woodward, J; Knapp, K)

CEE 277A. Teaching Science Literacy for a Sustainable Society
Teaching science to nontechnical audiences emphasizing technologies and science for the sustainable use of water. Guest lecturers. Learning styles, and the role of engineers and scientists in K-12 and media communication. Students develop teaching modules to be used in educational settings involving nontechnical audiences.
2-4 units, not given this year

CEE 277B. Knowledge Systems in Engineering and Management for Sustainable Development
Knowledge frameworks and systems dealing with large amounts of complex information from crossdisciplinary collaborative activities in sustainable development. Topics to include: domain information and knowledge representation and processing; knowledge management and integration in engineering and management domains; access to information for problem solving, planning, and decision making; knowledge management for environmentally friendly manufacturing and business activities; systematic assessment in management and engineering; and the use of IT and the Internet for collaboration and learning.
3 units, Spr (Staff), Sum (Staff)

CEE 277C. Environmental Governance
Interaction between private, public and civil sectors in decision making that affects environmental sustainability. Governance on global to local scales, US and international case studies. Theoretical concepts of environmental policy design and implementation: common property and collective action, social movements and locally unwanted land uses, sustainable cities, ecological modernization, shifts in corporate environmental norms, ISO 14001 and green supply chains, and global institutions for constraining carbon emissions. Limited enrollment.
3 units, Aut (Ortolano, L), alternate years, not given next year

CEE 277S. Design for a Sustainable World
(Same as CEE 177S) Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See http://esw.stanford.edu for application. (Staff)
1-3 units, Spr (Sandstrom, E; Bischel, H)

CEE 278A. Air Pollution Physics and Chemistry
3 units, Aut (Hildemann, L)

CEE 278B. Atmospheric Aerosols
3 units, alternate years, not given this year

CEE 278C. Indoor Air Quality
(Same as CEE 172A) Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, re-suspended dust, and airborne molds and fungi. Recommended: 172 or 278A.
2-3 units, not given this year

CEE 279. Environmental Engineering Seminar
Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, and may be accrued throughout the school year.
1 unit, Aut (Staff), Win (Hildemann, L), Spr (Hildemann, L)

CEE 280. Advanced Structural Analysis
Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.
3-4 units, Aut (Deierlein, G)

CEE 281. Finite Element Methods in Structural Engineering
Finite element formulation and implementation of frame, solid, plate, and shell elements for numerical methods. Modeling of structural systems, statics and dynamics, structural analysis. Prerequisites: 280, 283.
4 units, alternate years, not given this year

CEE 282. Nonlinear Structural Analysis
Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280, 286 or equivalent.
3-4 units, Win (Deierlein, G)
CEE 283. Structural Dynamics
Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.
3-4 units, Win (Law, K)

CEE 284. Finite Element Methods in Structural Dynamics
Methods of structural dynamics for discretized and continuous systems in free and forced vibration, modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283. (Law)
4 units, Spr (Law, K)

CEE 285. Behavior of Structural Systems for Buildings
Basic design concepts, performance criteria, loading, methods of design, types of structural systems, behavior under gravity and lateral loads, approximate methods of analysis, preliminary conceptual design, performance assessment, behavior of structural elements. Prerequisites: basic courses in design of steel and reinforced concrete structures.
3-4 units, Win (Krawinkler, H)

CEE 287. Earthquake Resistant Design and Construction
Evaluation, design, and construction of structures in seismic regions. Factors influencing earthquake ground motions, design spectra, design of linear and nonlinear single- and multiple-degree-of-freedom-system structures, design of structures to minimize damage, force-based and displacement-based design methods, capacity design, detailing and construction of steel and reinforced concrete structures, introduction to performance-based design, seismic isolation, and energy dissipation. Prerequisites: 283, 285. Recommended: 282, 288.
3-4 units, Spr (Miranda, E)

CEE 288. Earthquake Hazard and Risk Analysis
Earthquake phenomena, faulting, ground motion, earthquake hazard formulation, effects of earthquakes on manmade structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering problems. Prerequisites: 203, 283.
3-4 units, Win (Kiremidjian, A)

CEE 289. Random Vibrations
Introduction to random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Crossing rates, first-excitation probability, and distributions of peaks and extremes. Applications in earthquake, wind, and ocean engineering. Prerequisite: 203 or equivalent.
3-4 units, alternate years, not given this year

CEE 290. Structural Performance and Failures
Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources, and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.
2 units, Spr (Moncarz, P)

CEE 293. Foundation Engineering
Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by methods including search algorithms for the critical slip surface. Special seminars by guest speakers; computing assignment. Prerequisite: 101C or equivalent.
3 units, Win (Borja, R)

CEE 294. Computational Poromechanics
Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: ME 335A or equivalent.
3 units, Spr (Borja, R)

CEE 296. Special Topics in Fluid-Solid Interactions
Civil, mechanical, and biomedical engineering. Topics include surge and wave impact on structures, tsunami induced sediment transport and scour, wave- soil interactions, dam-reservoir- foundation interactions, shock and blast loads on composite structures, hydroelastic tailoring of composite structures, and blood-vessel interactions. Term project.
2 units, not given this year

CEE 297. Issues in Geotechnical and Environmental Failures
Causes and consequences of the failure of buildings, earth structures, waste storage, and high hazard facilities in contact with the environment; technical, ethical, economic, legal, and business aspects; failure analysis and forensic problems; prevention, liability, and dispute management. Case histories including earthquake, flood, and hazardous waste facilities. Student observation, participation in active lawsuits where possible.
3 units, Spr (Meehan, R; Borja, R)

CEE 297G. Structural Geology and Rock Mechanics
(Same as GES 215A) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth’s crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; mechanics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.
3-5 units, Au (Pollard, D)

CEE 297H. Structural Geology and Rock Mechanics
(Same as GES 215B) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.
3-5 units, Win (Pollard, D)

CEE 298. Structural Engineering and Geomechanics Seminar
Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.
1 unit, Win (Law, K)

CEE 299. Independent Study in Civil Engineering
Directed study for graduate students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 299S. Independent Project in Civil and Environmental Engineering
Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 300. Thesis (Engineer Degree)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 301. The Energy Seminar
(Same as ENERGY 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.
1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

CEE 305. Damage and Failure Mechanics of Structural Systems
Examine the mechanics and failure mechanisms of structural deterioration mechanisms and hazards. Overview of fracture mechanics concepts as a general basis for analyzing brittle failure modes in steel and concrete structures. Analysis and design theory for corrosion, fatigue, fire and other damage mechanisms in steel and concrete structures. New methods for mitigation of these failure modes and hazards will be introduced, including new construction materials, structural designs and protection methods.
3-4 units, Spr (Lepech, M)

CEE 310. Post-Master’s Seminar
For post-master’s students to serve as orientation to the selection of a research topic.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)
COURSES OF INSTRUCTION

CEE 316. Research Methods in Facility Engineering
For CEE Ph.D. students. Facility planning, design, management, and operation. Research philosophy and methods. Experimental design: ethnography, case study, survey, classical experiment (natural, synthetic, or computational). Data analysis: ANOVA, regression, correlation. Introduction to modeling social systems. Publication strategies. Final project to develop and refine research proposal and publication plan.
3-4 units, given next year

CEE 320. Integrated Facility Engineering
Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.
1 unit, Aut (Kunz, J; Fischer, M), Win (Kunz, J), Spr (Kunz, J)

CEE 321. Formal Models for Design
Theories, methods, and formal systems to support the design of buildings. Academic and industrial frameworks to represent and manage the products, organizations, and processes of building projects. May be repeated for credit.
3 units, Spr (Staff)

CEE 333. Water Policy Colloquium
(Same as GES 333) Student-organized interdisciplinary colloquium. Creation, implementation, and analysis of policy affecting the use and management of water resources. Weekly speakers from academia and local, state, national, and international agencies and organizations.
1 unit, Spr (Staff)

CEE 342. Computational Modeling of Organizations
For post-M.S. students interested in formal techniques for organization design. Computer simulations of organizations are used to conduct virtual experiments for developing organization theory or to analyze the performance of virtual organizations with different structures and decision support and communication technologies. Research on computational modeling and design of real-world organizations. Paper serves as a research proposal. Prerequisite: 242 or equivalent introductory organization design class.
4 units, not given this year

CEE 346. Numerical Modeling of Subsurface Processes
Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater invasion; upwelling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.
3-4 units, alternate years, not given this year

CEE 362G. Stochastic Inverse Modeling and Data Assimilation Methods
Stochastic methods for the solution of inverse problems that are algebraically underdetermined or have solutions that are sensitive to data. Emphasis is on geostatistical methods that, in addition to using data, incorporate information about structure such as spatial continuity and smoothness. Methods for real-time processing of new data. Prerequisite: consent of instructor.
3-4 units, Spr (Kitanidis, P), alternate years, not given next year

CEE 363A. Mechanics of Stratified Flows
The effects of density stratification on flows in the natural environment. Basic properties of linear internal waves in layered and continuous stratification. Flows established by internal waves. Internal hydraulics and gravity currents. Turbulence in stratified fluids. Prerequisites: 262A, B, CME 204.
3 units, Spr (Fong, D)

CEE 363C. Ocean and Estuarine Modeling
Advanced topics in modeling for ocean and estuarine environments, including methods for shallow water, primitive, and nonhydrostatic equations on Cartesian, curvilinear, and unstructured finite-volume grid systems. Topics include free-surface methods, nonhydrostatic solvers, and advanced Eulerian and Lagrangian advection techniques. Focus is on existing techniques and code packages, and their methodologies, including POM, ROMS, TRIM, ELCOM, and SUNTANS. Prerequisites: CME 200, 206, or equivalents.
3 units, Win (Fringer, O)

CEE 363F. Oceanic Fluid Dynamics
(Same as EESS 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or graduate class in fluid mechanics.
3 units, alternate years, not given this year

CEE 364Y. Advanced Topics in Coastal Oceanography
Dynamics and transport implications of features in estuaries and coastal oceans characterized by sharp gradients: fronts, interfaces, and layers. Analytic framework to describe formation, maintenance, and dissipation of such features. Examples include tidal mixing fronts, buoyant plume fronts and tidal intrusions, biological thin layers, and axial convergent fronts.
1-2 units, not given this year

CEE 365A. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Aut (Staff)

CEE 365B. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Win (Staff)

CEE 365C. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Spr (Staff)

CEE 365D. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Sum (Staff)

CEE 370A. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
3-6 units, Aut (Staff)

CEE 370B. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
3-6 units, Win (Staff)

CEE 370C. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literary survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
3-6 units, Spr (Staff)

CEE 370D. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literary survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
3-6 units, Sum (Staff)
CEE 371. Frontiers in Environmental Research
How to evaluate environmental research
1-2 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 371M. Transport Phenomena: Momentum, heat and mass transport
(Same as CEE 271M) Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.
3 units, Win (Boehm, A)

CEE 374A. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Aut (Staff)

CEE 374B. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Win (Staff)

CEE 374C. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Spr (Staff)

CEE 374D. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Sum (Staff)

CEE 374S. Advanced Topics in Microbial Pollution
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374T. Advanced Topics in Coastal Pollution
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374U. Advanced Topics in Submarine Groundwater Discharge
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374V. Advanced Topics in Microbial Source Tracking
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 375. Advanced Methods in Pathogen Detection
Molecular and culture-based techniques for pathogen detection in water.
2 units, not given this year

CEE 376. Investigating the Fate of Organic Contaminants in the Environment
Theory and practice of instrumental methods used in environmental engineering and sciences, emphasizing chromatographic separation and mass spectrometric detection. Study of instrument performance, design an investigation, case studies, written proposal.
2-3 units, Sum (Reinhard, M)

CEE 377. Research Proposal Writing in Environmental Engineering and Science
For first- and second-year post-graduate students preparing for thesis defense. Students develop progress reports and agency-style research proposals, and present a proposal in oral form. Prerequisite: consent of thesis adviser.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 378. Statistical Analysis of Environmental Data: Tools and Applications
Preference to Environmental Engineering and Science Ph.D. students. Practical data analysis techniques applicable to environmental engineering. The role of statistics in data collection, experimental design, data exploration, and effective communication of results. Use of statistical packages such as Excel, Matlab, and R.
Discussions partially based on student interest and available datasets. Topics may include summarizing data, hypothesis testing, nonparametric statistics, regression analysis, classification and regression trees, cluster analysis, and computationally intensive methods. Limited enrollment.
2-3 units, not given this year

CEE 378D. Seminar of Statistical Analysis of Multidisciplinary Primary Data
Practical management and analysis techniques for primary data collected in multidisciplinary projects. Selection of appropriate statistical tests, interpretation of results, and effective communication of findings to lay audiences. Univariate, bivariate and multivariate techniques, including hypothesis testing, nonparametric statistics, regression analysis and matching. Use of SPSS statistical package. Limited enrollment. Prerequisite: consent of instructor.
1-3 units, Aut (Davis, J)

CEE 381. Advanced Engineering Informatics
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 385. Performance-Based Earthquake Engineering
Synthesis and application of approaches to performance-based design and assessment that recently have been developed or are under development. Emphasis is on quantitative decision making based on life-cycle considerations that incorporate direct losses, downtime losses, and collapse, and the associated uncertainties. Hazard analysis, response simulation, damage and loss estimation, collapse prediction. Case studies. Prerequisites: 282, 287, and 288.
2-5 units, Aut (Krawinkler, H)

CEE 398. Report on Civil Engineering Training
On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 399. Advanced Engineering Problems
Individual graduate work under the direction of a faculty member on a subject of mutual interest. Student obtain faculty sponsor. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 400. Thesis (Ph.D. Degree)
For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSICS ART/ARCHAEOLOGY (CLASSART)

UNDERGRADUATE COURSES IN CLASSICS ART/ARCHAEOLOGY

CLASSART 20. Introduction to Classical Archaeology
The materials and practices of classical Archaeology, from the Bronze Age Aegean through classical Greece and the Roman Empire. Huts and palaces, tombs and temples, and the structuring roles of the environment, demography, religion, and power. Sites include: Troy, Thera, Athens, Rome, Pompeii. Techniques include stratigraphic excavation, art historical analysis, carbon dating, and osteoarchaeology. GER:DB-Hum
3-5 units, not given this year

CLASSART 21Q. Eight Great Archaeological Sites in Europe (S, Sem)
Stanford Introductory Seminar. Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study; geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs,
video, and publications, is the basis for exploring. GER:DB-Hum
3-5 units, Aut (Shanks, M)

CLASSART 42. Pompeii
The Roman town of Pompeii, buried by the eruption of Mt. Vesuvius in 79 C.E., provides information about the art and archaeology of ancient social life, urban technology and production, and ancient spatial patterns and experience. Its fame illustrates modern relationships to the ancient past, from Pompeii’s importance on the Grand Tour, to plaster casts of vaporized bodies, to debates about reconstruction, preservation, and archaeological methods. GER:DB-Hum
3-5 units, Win (Trimble, J)

CLASSART 61. Introduction to Greek Archaeology
The material remains of Greek civilization, including architecture, art, and written sources, and how to interpret them; what they reveal about the world of the Greeks and about current Western civilization. How has reception of the classical past influenced modern political and social development? Topics include: the palace societies of the Bronze Age, the archaic age of colonization and the rise of the polis; the beginnings of classical Athenian democracy; and the conquests of Alexander the Great.
3-5 units, not given this year

CLASSART 81. Introduction to Roman Archaeology
Methods and materials, from the 8th century B.C.E. to the 4th century C.E. The physical remains of the Roman world and their relationship to today. How did material culture reflect the Roman identity and memory? How to assign dates; techniques; how to interpret contexts and meanings. GER:DB-Hum
4-5 units, not given this year

CLASSART 101. Archaic Greek Art
(Same as ARTHIST 101, ARTHIST 301, CLASSART 201) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum
5 units, Aut (Maximin, J)

CLASSART 102. Classical and 4th-Century Greek Art
(Same as ARTHIST 102, ARTHIST 302) The formation of the classical ideal in 5th-century Athenian art, and its transformation and diffusion in the 5th and 4th centuries against changing Greek history, politics, and religion. GER:DB-Hum
4 units, not given this year

CLASSART 109. Greek Art in and out of Context
(Same as ARTHIST 203) The cultural contexts in which art served religious, political, commercial, athletic, sympotic, and erotic needs of Greco-Roman life.
4-5 units, Aut (Maximin, J)

CLASSART 110. Appropriations of Greek Art
(Same as ARTHIST 204A) The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Prerequisite: consent of instructor.
4-5 units, Spr (Maximin, J)

CLASSART 112. Ancient Urbanism
(Same as CLASSART 212) The nature and significance of ancient urbanism in the Mediterranean and western Asia, including Mesopotamia, Persia, Greece and Rome. Some comparative material from Chinese and Islamic cities will be included. Of special interest will be very large cities; why they grew up; how they worked; why they mattered; and how and why they stopped being very large; and how they affected human lives and historical developments.
4-5 units, Spr (Trimble, J)

CLASSART 113. Ten Things: An Archaeology of Design
(Same as CLASSART 213, STS 112) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison’s electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology. GER:DB-SocSci
3-5 units, Win (Shanks, M)

CLASSART 114. Ceramics: Art and Science
(Same as ARCHLGY 117) From clay to culture. Design, technology, manufacture, and consumption of ceramics. Guest lecturers, site visits, and hands-on studio work.
3-5 units, Spr (Shanks, M)

CLASSART 149. Roman Portraits and Persons
(Same as CLASSART 249) From Republican verism to imperial types to changes in the tetrarchy and late antiquity. Interactions of portrait heads with stock bodies, the physical setting, and visual culture more broadly. The role of ancient ideas about representation, including physiognomy, biography, social position, ethnic identity and memory. How to assign dates; techniques; how to interpret contexts and meanings. GER:DB-Hum
4-5 units, not given this year

GRADUATE COURSES IN CLASSICS ART/ARCHAEOLOGY

CLASSART 201. Archaic Greek Art
(Same as ARTHIST 101, ARTHIST 301, CLASSART 101) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum
5 units, Aut (Maximin, J)

CLASSART 212. Ancient Urbanism
(Same as CLASSART 112) The nature and significance of ancient urbanism in the Mediterranean and western Asia, including Mesopotamia, Persia, Greece and Rome. Some comparative material from Chinese and Islamic cities will be included. Of special interest will be very large cities; why they grew up; how they worked; why they mattered; and how and why they stopped being very large; and how they affected human lives and historical developments.
4-5 units, Spr (Trimble, J)

CLASSART 213. Ten Things: An Archaeology of Design
(Same as CLASSART 113, STS 112) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison’s electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.
3-5 units, Win (Shanks, M)

CLASSART 249. Roman Portraits and Persons
(Same as CLASSART 149) From Republican verism to imperial types to changes in the tetrarchy and late antiquity. Interactions of portrait heads with stock bodies, the physical setting, and visual culture more broadly. The role of ancient ideas about representation, including physiognomy, biography, social position, ethnic identity and memory. How to assign dates; techniques; how to interpret contexts and meanings.
4-5 units, not given this year

CLASSART 250. Cultural Heritage and Classical Antiquities
Comparative analysis of American and Italian cultural heritage practices concerning Greek and Roman antiquities. Themes include ethical, cultural, and legal situations of classical artifacts in American museums; constructions of the classical past in national contexts and the role of antiquities museums; and changing concepts of material relationships with the past. One-week field trip to Rome to compare installation and presentation practices in major museums.
5 units, not given this year

CLASSART 300. Early Greece: Social Archaeology, 1100-700 B.C.E.
Archaeological and textual evidence for the transformation of Greek society. Economic, social, political, and cultural changes from the world of Mycenaean palaces to the small city states of the archaic period.
4-5 units, not given this year
CLASSART 303. Visual Culture in the Roman Empire: Romanization, hybridity, globalization
Visual culture in the Roman Empire as a revealing place to examine colonial and postcolonial theories of cultural interaction. Concepts discussed include aesthetics, Romanization, resistance, hybridity, creolization, globalization/localization, identity, stigmatization. Theoretical readings will be balanced with case studies from Roman provinces and frontiers.
5 units, Aut (Trimble, A)

CLASSART 315. Mapping Rome
Spatial analysis of the city of Rome in the late republic and early empire, including work with the Severan marble plan. Themes include the nature and urban impact of religious, commercial and residential space; interactions of different kinds of space; movement through the city; organization of neighborhoods and their implications for social relations. May be repeated for credit.
5 units, not given this year

CLASSART 323. Archaeology of the Roman Economy
Recent developments. Focus is on changing frameworks, including Mediterraneanization and concepts of growth; differences between historians’ and archaeologists’ interests and methods; problems of scale and integration; relationships of models, fieldwork design, and archaeological data. Case studies may include the olive oil industry; the marble trade and connections of art and economics; and the Roman army and its economic workings and impact.
5 units, not given this year

CLASSICS GENERAL (CLASSGEN)

UNDERGRADUATE COURSES IN CLASSICS GENERAL

CLASSGEN 6N. Antigone: From Ancient Democracy to Contemporary Dissent
(F, Sem) (Same as DRAMA 12N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women’s and workers’ rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntsona, Paulin, Gluckavich, Gurney, and von Trotta. GER:DB-Hum, EC-Gender
3-5 units, Aut (Rehm, R)

CLASSGEN 9. Greek and Latin Roots of English
Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the English language. The course is open to freshmen. Readings include excerpts from medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.
3 units, Sum (Porta, F)

CLASSGEN 18. Greek Mythology
The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy.
GER:DB-Hum
3-5 units, Win (Martin, R)

CLASSGEN 22N. Technologies of Civilization: Writing, Number and Money
The technological keys to the growth of civilization that enabled the creation of complex societies and enhanced human cognition. The role of cognition in shaping history and the role of history in shaping cognition. Global perspective, emphasizing the Western tradition and its ancient Greek roots.
GER:DB-Hum
3-4 units, Aut (Netz, R)

CLASSGEN 24N. Sappho: Erotic Poetess of Lesbos
(F, Sem) Stanford Introductory Seminar. Preference to freshmen. Sappho’s surviving fragments in English; traditions referring to or inspired by her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.
GER:DB-Hum, EC-Gender
4-5 units, Spr (Pepono, A)

CLASSGEN 30N. The Spell of Orpheus
Singer, shaman, lover, and murder victim, Orpheus has fascinated creative artists and thinkers for more than two millennia. His magical power of song inspired composers from Monteverdi to Philip Glass, while the tale of this attempt to bring his wife back from the dead provided hope for ancient cult members and material for modern cinema. We will explore the Orpheus myth in detail, starting with the ancient sources, then follow his story throughout Western art, literature, music, dance, philosophy and film.
3-5 units, Aut (Martin, R)

CLASSGEN 35. Becoming Like God: An Introduction to Greek Ethical Philosophy
Why do Socrates, Plato, and Aristotle identify achieving wisdom as becoming like gods? How does godlike wisdom affect one’s ethical choices? Sources include Greek tragedies representing traditional Greek values. The Greek philosophers’ rejection of this tradition and their radically new ethical theories arguing that people should imitate the gods, who are ethically perfect. Socrates, Plato, and Aristotle offered different ethical theories, but they shared basic conceptions of goodness and happiness. Are their ethical philosophies operative in the modern day? GER:DB-Hum, EC-EthicReas
3-5 units, Spr (Nightingale, A)

CLASSGEN 81. Philosophy and Literature
(Same as COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Becke, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin.
GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

CLASSGEN 101. Stoics and Epicureans: Explorations in Embodied Philosophical Practice
Focus is on these philosophies as practices, especially bodily practices. Their shared emphasis on the body and the physical self as an inevitable concern in the quest for freedom from disturbance. The body and its needs as the central vehicle for demonstrating the success of each philosophy’s account of the natural world. Ancient bodily practices and modern receptions of these practices.
GER:DB-Hum
3-5 units, not given this year

CLASSGEN 113. Christianity and Homoerotics in the Roman Empire
Often seen as the first Christian ban on homosexuality, Emperor Justinian’s 533 C.E. legislation outlawing male sexual practices deemed contrary to nature exerted dogmatic influence on the church. Prior to the law, members of the early church held widely differing attitudes towards what is now called homosexuality, which reflected not just the precepts of the scripture, but pagan conceptions of sexuality and the multietnic and syncretistic religious makeup of the Roman empire alike. Goal is to understand these conceptions, assess Justinian’s ban in their context, and explore their appeal in a contemporary discourse that pits Christian religion and homosexuality against one another.
GER:EC-Gender
4-5 units, Aut (Kaesser, C)

CLASSGEN 119. Gender and Power in Ancient Rome
Ideals, norms, and transgressions of behavior. Masculinity and femininity in founding legends and public rituals; the ambiguous status of vestal virgins; the masculinity of the Roman Forum; the spatial logic of Roman prostitution; gendered accounts of good and bad emperors in ancient texts. Practices of gender and power in life and death, public and private space, religion, secrets, and sex in the urban landscape of ancient Rome.
GER:DB-Hum, EC-Gender
3-5 units, not given this year
CLASSGEN 123. Urban Sustainability: Long-Term Archaeological Perspectives
(Same as CLASSGEN 223, URBANST 115) Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas.
3-5 units, Win (Shanks, M)

CLASSGEN 124. Sappho, Plato, Proust: The Aesthetics of Desire
(Same as CLASSGEN 224) Seminar. Beauty and desire as represented in the poetry of Sappho, in Plato’s philosophy, and in the modernist novel of Marcel Proust, In Search of Lost Time. Differences in the social and historical context within which these works were generated. Focus is on the similar ways erotic desire is approached and aestheticized in these three major and influential authors. All texts in translation.
3-5 units, Win (Pepooni, A)

CLASSGEN 127. Byzantine Culture and Society: An Introduction
The social and cultural life of the Byzantine Empire, 4th-14th centuries. Byzantium’s place in time and space at the threshold between Asia and Europe; the state and its polity; the city and urban life; love, marriage, and sexuality; education and literature. Readings from Byzantine sources in English translation, visual materials, and secondary bibliography.
3-5 units, offered occasionally

CLASSGEN 129. Classical Epic and the English Renaissance
(Same as CLASSGEN 229) The reception of Greek and Latin epics in 16th- and 17th-century England. How were the ancient epics read and interpreted? What kinds of commentary were being used and written? The creative appropriation of the ancient epics in new poems: Spenser and Milton set against the background of less well-known epics of the period, with focus on civil war epics.
3-5 units, Win (Hardie, P)

CLASSGEN 130. Singers of Tales: Ancient and Contemporary Epic in Action
How epic reflects and models the thinking of its audiences and practitioners in many parts of the world today. The content and methods of epic performance in Egypt, Central Asia, north and central India, and among the Nyanga of Africa. Emphasis is on the aesthetic and ethnographic, that is, on the epic as crafted, meaning-rich performances, and on its role in the everyday life of common people in contemporary non-Western cultural areas. GER:DB-Hum, EC-GlobalCom
3-4 units, not given this year

CLASSGEN 133. Invention of Science
Does science have to be the way it is? Does it have to be at all? The creation of science in the ancient Greek world; its invention of concepts such as nature, rationality, and proof; and its invention of fields from biology to geometry. Comparison with the Chinese invention of a different kind of science. The extent to which contemporary science is still Greek science. GER:DB-Hum
3-5 units, Spr (Netz, R)

CLASSGEN 136. Ancient Ethics: The Pleasures of Life and the Good Life
Required for Classics majors. A survey of ancient literature in historical context. Thematic focus is ancient ethics and the question of how the pleasures of life can be part of the good life. Readings include texts from all major ancient genres, both Latin and Greek.
4 units, not given this year

CLASSGEN 147. Culture Wars in Epic Poetry
(Same as COMPLIT 147) Homer’s Iliad and Odyssey, Virgil’s Aeneid, Melville’s Moby Dick, and Walcott’s Omeros are epics that feature the clash of civilizations. We look at cultural values and social relations (including race, class, ethnicity, and gender) in Homeric Greece, the early Roman Empire, 19th-century America, and modern-day St. Lucia (a Caribbean island colonized by European empires and populated with African slaves; the island was later liberated). We also explore the literary aspects of epic and examine how each epic imitates and transforms earlier epics.
3-5 units, Spr (Nightengale, A)

CLASSGEN 154. Social Power: The Law and the State, a Comparative Study of Ancient Legal Systems
(Same as CLASSGEN 354) For ancient history majors and those interested in the history of law. Ancient Mediterranean legal systems, from ancient Egypt and the Near East to Greece and Rome. Focus is on ancient documents including the Code of Hammurabi, Egyptian sale contracts, as well as analysis of ancient Latin law such as Maine’s Ancient Law, and Weber. The development of the law; solutions in ancient societies to the common problems of crime, contract, inheritance, marriage, and the family; and the enforcement of property rights. GER:DB-SocSci
3-5 units, offered occasionally

CLASSGEN 160. Directed Readings (Undergraduate)
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 163. Texts in History: Classics from Greece to Rome
(Same as DRAMA 161R, HUMNTIES 161) Priority to students in the Humanities honors program. Ancient texts situated in their intellectual and cultural contexts. Readings include Homer’s Iliad and Odyssey, plays of Aeschylus, Sophocles’ Antigone, Euripides’ Medea, Thucydides Peloponnesian War., Plato’s Symposium, Aristotle’s Poetics, Virgil’s Aeneid, Seneca’s Trojan Women and Agamemnon, and Augustine’s On Christian Doctrine. GER:DB-Hum
3-5 units, Aut (Rehm, R)

CLASSGEN 174. Martyrdom in the Ancient World
(Same as RELIGST 174) Jewish, pagan and Christian groups under Roman rule all told tales of persecution and resistance. How did they use these stories, and the historical experiences behind them, to form group identity? Emphasis is on ancient documents in translation, and modern scholarly interpretations, to examine the competing agendas of parties involved, group dynamics, individual motivation, symbolic violence, and the body as a locus of power and control. GER:DB-Hum
4 units, Aut (Gleason, M)

CLASSGEN 175. Majors’ Seminar: The Iliad, the Aeneid, and the Ancient Art of Persuasion
Advanced skills course: close reading, critical thinking, writing. Students read and compare two epics, the Iliad and the Aeneid, with emphasis on the role of rhetoric in the epics and the role of the epics in rhetorical training.
5 units, Aut (Gleason, M)

CLASSGEN 176. Majors Seminar: Two Epics and Three Systems of Knowledge
Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, and writing. Students read and compare two epics, the Iliad and the Aeneid, with emphasis on the role of rhetoric in the epics and the role of the epics in rhetorical training.
5 units, Aut (Gleason, M)

CLASSGEN 199. Undergraduate Thesis: Senior Research
2-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CLASSICS GENERAL

2 units, Aut (Devine, A)
CLASSGEN 205B. The Semantics of Grammar
Supplements CLASSLAT/CLASSGRK 275. Introduction to the grammatical encoding of semantic and pragmatic meaning. 205A: morphology-semantics interface (gender, tense, aspect, case). 205B: syntax-pragmatics interface (Latin word order). Begins in Autumn Quarter and continues through 5th week of Winter Quarter.
2 units, Win (Devine, A)

CLASSGEN 207A. Survey of Greek and Latin Literature: Literature of the Roman Republic
First course in a required two-year sequence. Focus is on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.
3-5 units, alternate years, not given this year

CLASSGEN 207B. Survey of Greek and Latin Literature: Augustan Age Latin
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Texts of Augustan literature required by the graduate syllabus, emphasizing poetry and major authors.
3-5 units, alternate years, not given this year

CLASSGEN 207C. Survey of Greek and Latin Literature: Imperial Latin
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.
4-5 units, alternate years, not given this year

CLASSGEN 208A. Survey of Greek and Latin Literature: Archaic Greek
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.
4-5 units, Win (Nightingale, A)

CLASSGEN 208B. Survey of Greek and Latin Literature: Classical Greek
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.
4-5 units, Win (Nightingale, A)

CLASSGEN 208C. Survey of Greek and Latin Literature: Hellenistic and Late Greek
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.
3-5 units, Win (Nightingale, A)

CLASSGEN 210. Survey of Roman Historiography
Survey of historical writing in the Roman world via detailed readings, both of major authors (Sallust, Livy, Tacitus, Suetonius and Plutarch) and ones that survive in fragments. Evolution of Latin historiography in relation to other kinds of discourse about the past (priestly records, inscriptions) and to Greek historiography (Herodotus, Thucydides, Polybius). Narrative strategies of individual authors, and the role of rhetoric as a defining feature of literary genre(s); effects of the writer’s environment on the works themselves. Readings in English.
3-5 units, Spr (Parker, G)

CLASSGEN 220. Family, Gender, and Production in Ancient Rome
(Same as HISTORY 311A) Seminar. The household as the basic unit of production in Rome in the context of family relations and ideologies of gender. Methodological challenges of doing social and economic history from literary, epigraphic, and literary texts. Demography of family and kinship in ancient Rome. Ideologies of gender and family roles and their influence on economic production. Economic theories of the family and human capital.
4-5 units, not given this year

CLASSGEN 223. Urban Sustainability: Long-Term Archaeological Perspectives
(Same as CLASSGEN 123, URBANST 115) Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas.
3-5 units, Win (Shanks, M)

CLASSGEN 224. Sappho, Plato, Proust: The Aesthetics of Desire
(Same as CLASSGEN 124) Seminar. Beauty and desire as represented in the poetry of Sappho, in Plato’s philosophy, and in the modernist novel of Marcel Proust, In Search of Lost Time. Differences in the social and historical context within which these works were generated. Focus is on the similar ways erotic desire is approached and aestheticized in these three major and influential authors. All texts in translation.
3-5 units, Win (Peponi, A)

CLASSGEN 229. Classical Epic and the English Renaissance
(Same as CLASSGEN 129) The reception of Greek and Latin epics in 16th- and 17th-century England. How were the ancient epics read and interpreted? What kinds of commentary were being used and written? The creative appropriation of the ancient epics in new poems: Spenser and Milton set against the background of less well-known epics of the period, with focus on civil war epics.
3-5 units, Win (Hardie, P)

CLASSGEN 241. Words and Things in the History of Classical Scholarship
How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.
4-5 units, not given this year

CLASSGEN 243. Second Sophistic Science
(Same as CLASSGEN 143) Scientific works from the Roman Empire. Focus is on how such works can be understood within the wider context of the Graeco-Roman civilization of the Roman Empire, not only of Roman imperial science but also of Roman imperial civilization as a whole. Readings depend on student interests but may begin with Vitruvius, Nicomachus, Galen, and Ptolemy. Readings in translation.
3-4 units, not given this year

CLASSGEN 245. Roman Receptions of Hellenistic Poetry
The beginnings of Latin literature in Greek literature, primarily in texts transmitted through imperial courts of the Greek east such as Alexandria and Pergamum. Aesthetic, formal, and theoretical aspects of transmission; cultural contexts of reception, including Ennius and Lucilius, Catullus and Cicero, Horace and Vergil, and Propertius and Ovid.
4-5 units, not given this year

CLASSGEN 260. Directed Reading in Classics (Graduate Students)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 305. Pleasure in Greek Thought
The conceptualization of pleasure in Greek culture; the relationship between individual and public/political experiences and representations of pleasure; intersections among aesthetics, politics, and sexuality in Greek thought.
3-5 units, not given this year

CLASSGEN 310A. Inscribed Lives: Roman Epigraphy in Context
How to read Roman (mostly Latin) inscriptions. The use of inscriptions in studying Roman history. Sources include texts such as the Res Gestae Divi Augusti and the Tabula Siernensis. Archaeological contexts; electronic and other resources. Research projects on a theme for which inscriptions provide main evidence. Guest speakers include John Bodel, Brown University.
3-5 units, not given this year
CLASSGEN 310B. Inscribed Lives: Roman Epigraphy in Context
Continuation of 310A. Prerequisite: CLASSGEN 310A.
3-5 units, not given this year

CLASSGEN 315. The Written Text in Classical Athens
The status of the written text in the Athenian democracy in the 5th and 4th centuries B.C.E. Where and how was writing used? What was the extent of literacy in these periods? Sources include sophistic and philosophical texts that discuss and theorize the technology of writing and its cultural impact. Placing these thinkers’ views on writing in the context of Athenian cultural practices such as monuments, lawcodes, logography, law court texts, educational schools, and artistic performances.
4-5 units, Aut (Nightingale, A)

CLASSGEN 330. Word and Image: The Relationship Between the Verbal and the Visual in Greek Culture
How is the relationship between the verbal and the visual conceptualized in Greek culture? How and why are artifacts described in literary texts? How and why do visual arts incorporate the verbal? How do philosophers theorize about the relationship between language and verbal arts in relation to painting, sculpture and dance?
4-5 units, Spr (Pepom, A)

CLASSGEN 332. Pragmatogony: Archaeological Perspectives on the Origins of Things
Relationships with artifacts and the material world; design and making, innovation and cultural change. Design, manufacture, distribution, and consumption of goods. Sources include philosophy, design studies, sociology and history of technology, science studies, art history, and anthropological archaeology. Case studies from early agricultural societies and Graeco-Roman antiquity.
5 units, not given this year

CLASSGEN 360. Dissertation Research in Classics
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSICS GREEK (CLASSGRK)

UNDERGRADUATE COURSES IN CLASSICS GREEK

CLASSGRK 1. Beginning Greek
No knowledge of Greek is assumed. Classics majors and minors must take course for letter grade. Vocabulary and syntax of the classical language.
5 units, Aut (McCall, M)

CLASSGRK 2. Beginning Greek
Continuation of CLASSGRK 1. Classics majors and minors must take course for letter grade. Vocabulary and syntax of the classical language. Separate section for Biblical Greek.
3-5 units, Win (Martin, R)

CLASSGRK 3. Beginning Greek
Continuation of CLASSGRK 2. Classics majors and minors must take course for letter grade. Vocabulary and syntax of the classical language. Separate section for Biblical Greek. CLASSGRK 3 fulfills University language requirement.
3-5 units, Spr (Karachalios, F)

CLASSGRK 5. Introduction to New Testament Greek
Vocabulary, grammar, morphology, and syntax of koine Greek, the original language of the writings gathered in the New Testament. Students read selections from Luke, John, the Pauline epistles, and Acts. No previous knowledge of Greek required.
3-5 units, not given this year

CLASSGRK 101. Intermediate Greek: Plato on Poetry
Plato’s Ion and selections from the Republic. Focus is on grammar, syntax, style, and comprehension of a literary and philosophical text in its various contexts. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Aut (Karachalios, F)

CLASSGRK 102. Intermediate Greek: Aeschylius’ Eumenides
Aeschylius’ tragedy The Eumenides. Emphasis is on literary and historical analysis. Classics majors and minors must take course for letter grade. May be repeated for credit.
4-5 units, Win (McCall, M)

CLASSGRK 103. Intermediate Greek: Homer
The language and poetry of Homer. Readings in Greek and English. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Spr (Kierstead, J)

CLASSGRK 111. Advanced Greek: Scientific Writings
(Same as CLASSGRK 211) Reading texts from Greek mathematics, physics, and biology. The relationship between form and meaning in the presentation of scientific information. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Aut (Netz, R)

CLASSGRK 112. Advanced Greek: Lyric Poetry
Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Win (Pepom, A)

CLASSGRK 113. Advanced Greek Prose: Greek Storytelling
Classics majors and minors must take course for letter grade. Reading Greek for enjoyment: selections from Greek prose. Emphasis is on Greek storytelling: historiography, hagiography, and frank fiction from authors known and less well-known. Humor, paradox, and pathos; versimilitude and narrative techniques; the aesthetics of purple passages: ekphrasis and ekplexis. Attention to diction as a stylistic choice and development of reading strategies for longer sentences. May be repeated for credit.
4 units, Spr (Gleason, M)

CLASSGRK 175A. Greek Syntax: Prose Composition
(Same as CLASSGRK 275A) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
2 units, Win (Shearin, W)

CLASSGRK 175B. Greek Syntax: Prose Composition
(Same as CLASSGRK 275B) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
3-5 units, Spr (Shearin, W)

CLASSGRK 211. Advanced Greek: Scientific Writings
(Same as CLASSGRK 111) Reading texts from Greek mathematics, physics, and biology. The relationship between form and meaning in the presentation of scientific information. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Aut (Netz, R)

GRADUATE COURSES IN CLASSICS GREEK

CLASSGRK 275A. Greek Syntax: Prose Composition
(Same as CLASSGRK 175A) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
2 units, Win (Shearin, W)

CLASSGRK 275B. Greek Syntax: Prose Composition
(Same as CLASSGRK 175B) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
3-5 units, Spr (Shearin, W)
and why did it fail? Roman history, imperialism, politics, social and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.

3 units, Aut (Saller, R)

CLASSHIS 60. The Romans
How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. GER:DB-Hum
3-5 units, Spr (Scheidel, W)

CLASSHIS 101. The Greeks
Greek history from the rise of the city state through Alexander the Great's conquest of Persia. Economics, society, culture, and technology. Competition and cooperation within and between states; the emergence of strong forms of citizenship along with chattel slavery and gender inequality; the origins and practices of democracy; and relations with non-Greek peoples. Focus is on ancient sources and archaeological remains. GER:DB-Hum
4-5 units, Win (Ober, J)

CLASSHIS 133. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 333, HUMNTIES 321, PHIL 176A, PHIL 276A, POLISCI 230A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. GER:DB-Hum
5 units, Win (Ober, J; Simonton, M)

CLASSHIS 141. Ancient Justice: Trial and Judgment in Ancient Greece
(Same as CLASSHIS 141) Nature and mechanics of justice in Ancient Greece. Topics include the mythological origins of justice (Hesiod's Theogony, Aeschylus' Eumenides), the development of rhetoric and argumentation (Gorgias' Encomium of Helen, Isocrates' Helen, Aristotle's Rhetoric), court speeches (Lysias' Orations), aesthetic criticism (Aristophanes' Frogs), and figurations of afterlife judgment (the Orphic Gold Tablets, Plato's Republic and Gorgias). Readings in English for undergraduates, and ancient Greek for graduate students.
4-5 units, Aut (Horky, P)

CLASSHIS 305. Ancient Numismatics
Graduate proseminar. Basic skills course required for ancient history graduate students; others by consent of instructor. Focus is on Greek and Roman coinage and monetary history; related material from the ancient Near East and Europe.
4-5 units, not given this year

CLASSHIS 312. Big Ancient History
(Same as HISTORY 311G) How the shift away from thinking about European history in terms of a western civilization model toward embedding it in stories of how global history affects research and teaching on ancient Greece and Rome. Conventional, evolutionary, and global history narratives of the past 5,000 years and some new ideas about how Greco-Roman history might fit into different storylines.
4-5 units, not given this year

CLASSHIS 332. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests
(Same as POLISCI 231, POLISCI 331) Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.
4-5 units, Spr (Ober, J; Weingast, B)

CLASSHIS 333. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 333, HUMNTIES 321, PHIL 176A, PHIL 276A, POLISCI 230A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.
5 units, Win (Ober, J; Simonton, M)

CLASSHIS 365. The First Great Divergence: Late Antique and Early Medieval Europe and China
4-5 units, not given this year
CLASSICS LATIN (CLASSLAT)

UNDERGRADUATE COURSES IN CLASSICS LATIN

CLASSLAT 1. Beginning Latin: Vocabulary and Syntax
Vocabulary and syntax of the classical language, preparing students for readings including Cicero, Caesar, and Catullus. No previous knowledge of Latin is assumed. Classics majors and minors must take course for letter grade.
3-5 units, Aut (Lain, N)
CLASSLAT 2. Beginning Latin: Vocabulary and Syntax
Continuation of CLASSLAT 1. Classics majors and minors must take course for letter grade.
3-5 units, Win (Lain, N)
CLASSLAT 3. Beginning Latin: Vocabulary and Syntax
Continuation of CLASSLAT 2. Classics majors and minors must take course for letter grade. CLASSLAT 3 fulfills the University language requirement.
3-5 units, Spr (Lain, N)
CLASSLAT 10. Intensive Beginning Latin
Equivalent to CLASSLAT 1, 2, 3, or 51 and 52. Goal is to read easy Latin prose and poetry by the end of the quarter. Classics majors and minors must take course for letter grade. CLASSLAT 10 fulfills the University language requirement.
7-9 units, Sum (Janda, S)
CLASSLAT 101. Intermediate Latin: Introduction to Literature
Phonology, morphology, semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech.
3-5 units, Aut (Lain, N)
CLASSLAT 102. Intermediate Latin: Nepos and Catullus
Classics majors and minors must take this course for a letter grade. Translation of selections from Nepos’ Life of Atticus and poems of Catullus. Emphasis is on syntax and grammar; questions concerning place and function of Catullus’ erotic poetry and Nepos’ biography in the late Roman Republic.
3-5 units, Win (Kaesser, C)
CLASSLAT 103. Intermediate Latin: Cicero’s Orations against Catiline
Careful reading of Cicero’s orations against Catiline, with emphasis on syntax, rhetoric, rhyme, idiom, and the history and culture of the late Roman Republic. Classics majors and minors must take course for a letter grade. May be repeated for credit.
3-5 units, Spr (Lain, N; Bass, Z)
CLASSLAT 111. Advanced Latin: Cosmology in the Roman Epic
Classic majors and minors must take course for a letter grade. Passages from the epic poetry of Lucretius, Virgil, and Ovid which deal with the origins of the universe and the development of Roman civilization. Focus is on reading the original text and questions of interpretation using secondary literature. Style and vocabulary of the Roman epic and ancient ideas about cosmology. May be repeated for credit.
3-5 units, Aut (Kaesser, C)
CLASSLAT 112. Advanced Latin: Livy
Preface and selections of extant books, episodes, battle scenes, and speeches with stylistic analysis in relation to Livy’s practices of history and its reception. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Win (Ceserani, G)
CLASSLAT 113. Advanced Latin: Horace’s Odes
Close readings of Horace’s Odes, selected from all four books. Attention to aspects of literary style, intertextuality in relation to both Greek and Latin verse, social contexts including poet-patron relations, and Horace’s place in politics during the age of Augustus. Some consideration of scholarly trends. Readings in Latin, with the help of commentaries. May be repeated for credit.
3-5 units, Spr (Parker, G)
CLASSLAT 175A. Latin Syntax
(Same as CLASSLAT 275A) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
3-5 units, Aut (Devine, A)
CLASSLAT 175B. Latin Syntax
(Same as CLASSLAT 275B) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
2 units, Win (Devine, A)

GRADUATE COURSES IN CLASSICS LATIN

CLASSLAT 275A. Latin Syntax
(Same as CLASSLAT 175A) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
3-5 units, Aut (Devine, A)
CLASSLAT 275B. Latin Syntax
(Same as CLASSLAT 175B) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
2 units, Win (Devine, A)
CLASSLAT 314. Ovid’s Trojan and Roman Narratives: Metamorphoses 12-15
The last four books of the poem, including Ovid’s rewriting of the Iliad and Aeneid, and of Roman history down to his own times. To be studied with reference to the literary, political, and cultural contexts.
4-5 units, Win (Hardie, P)

COMMUNICATION (COMM)

UNDERGRADUATE COURSES IN COMMUNICATION

COMM 1A. Media Technologies, People, and Society
(Same as COMM 211) (Graduate students register for COMM 211.) Open to non-majors. Introduction to the concepts and contexts of communication. A topics-structured orientation emphasizing the field and the scholarly endeavors represented in the department. GER:DB-SocSci
4-5 units, Aut (Nass, C)
COMM 1B. Media, Culture, and Society
The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media’s shifting relationships to politics, commerce, and identity. GER:DB-SocSci
3 units, Win (Turner, F)
COMM 103S. Media Entertainment
The impact of media entertainment on individuals, social groups, and societies. Sources include a diverse cross-section of entertainment. Introduction to psychological and socio-psychological theories. Empirical findings relating to media entertainment as a stimulus and a reception phenomenon. What renders diverse genres of media content and format enjoyable? Why do individuals pursue entertainment experiences in ever-increasing numbers? What is the political impact of apolitical media entertainment?
3 units, offered occasionally
COMM 104. Reporting, Writing, and Understanding the News
Techniques of news reporting and writing. The value and role of
news in democratic societies. GER:DB-SocSci
5 units, Aut (Brinkley, J), Spr (Frankel, G)

COMM 106. Communication Research Methods
(Same as COMM 206) (Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. GER:DB-SocSci
4-5 units, Aut (Gaukhar, L)

COMM 107. The First Amendment in the Digital Age
(Same as COMM 207) (Graduate students register for COMM 207.) Interdisciplinary. Legal, institutional, sociological, and technological framework for free expression in democracy. History, values, and principles of the First Amendment. The challenge of new technology to old doctrine. Impact of the Internet on issues of free speech, such as political criticism, fair use, defamation, low value speech, professional privilege, and public forum in an era of private networks. How do new social networking technologies produce the expertise and accountability promoted by the First Amendment?
4-5 units, not given this year

COMM 108. Media Processes and Effects
(Same as COMM 208) (Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1. GER:DB-SocSci
4-5 units, Win (Kreiss, D)

COMM 111S. Digital Media and the Political Process
The impact of new media technologies on electoral campaigns, the political process, and democratic practice. Major theoretical perspectives on new media and collective action, political communication, the public sphere, and social movements. Are digital media altering the balance of political power in American democracy? Do digital networks reshape the way we elect presidents and contest public issues? Is the Internet undermining the ability of journalists and political elites to set the public agenda?
4 units, offered occasionally

COMM 116. Journalism Law
(Same as COMM 216) (Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.
4-5 units, Win (Wheaton, J)

COMM 117. Digital Journalism
(Same as COMM 217) (Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor.
4-5 units, Win (Rheingold, H)

COMM 118Q. Theories of Film Practice
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. How theory connects with practice in the production of film and television. Film and television from the perspectives of practitioners who have theorized about their work in directing, editing, screenwriting, cinematography, and sound, and social scientists whose research has explored similar issues empirically.
4 units, Win (Breitrose, H)

COMM 120. Digital Media in Society
(Same as COMM 220) (Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Restricted to Juniors and Seniors. GER:DB-SocSci, WIM
4-5 units, Spr (Turner, F)

COMM 125. Perspectives on American Journalism
(Same as COMM 225) (Graduate students register for COMM 225.) Issues, ideas, and concepts in the development of American journalism, emphasizing the role of the press in society, the meaning and nature of news, and professional norms that influence communication in and outside the newsroom. Prerequisite: 1 or junior standing. GER:DB-SocSci
4-5 units, Aut (Glasser, T)

COMM 131. Media Ethics and Responsibility
(Same as COMM 231) (Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism. GER:DB-SocSci
4-5 units, not given this year

COMM 136. Democracy and the Communication of Consent
(Same as COMM 236, POLISCI 134; Graduate students register for COMM 236.) Focus is on competing theories of democracy and the forms of communication they presuppose, combining normative and empirical issues, and historical and contemporary sources. Topics include representation, public opinion, mass media, small group processes, direct democracy, the role of information, and prospects for deliberative democracy. GER:DB-SocSci
4-5 units, not given this year

COMM 140. Digital Media Entrepreneurship
(Same as COMM 240) (Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley’s new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers.
3-5 units, Spr (Grimes, A)

COMM 147. Modern History and Future of Journalism
(Same as COMM 247) (Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?
4-5 units, not given this year

COMM 153. Internet, Politics, and Society
The Internet’s penetration into the fabric of daily lives, interpersonal and social interactions, political systems, and communication institutions. Key political and social domains where its impact is manifested.
5 units, Aut (Staff)

COMM 158. Free Expression and Intellectual Property in the Digital Age
(Same as COMM 258) (Graduate students register for COMM 258.) How intellectual property law fosters and hinders free speech. When does an author or inventor have a right to re-use someone else’s creative expression? Are appropriation of other people’s art, music sampling, and reverse engineering a theft of property or the basis of innovation? How technologies such as wikis, virtual worlds, youtube, and search engines challenge the balance between constitutional protection of intellectual property and the First Amendment. Fundamentals of trade secret, patent, copyright, and trademark law and policy. No prior legal knowledge required.
4-5 units, not given this year

COMM 160. The Press and the Political Process
(Same as COMM 260, POLISCI 323R) (Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes. GER:DB-SocSci
4-5 units, Spr (Iyengar, S)

COMM 162. Analysis of Political Campaigns
(Same as COMM 262, POLISCI 323S) (Graduate students register for COMM 262.) Seminar. The evolution of American political campaigns, and the replacement of the political party by the mass media as intermediary between candidates and voters. Academic literature and media strategies, the relationship between candidates and the press, the effects of campaigns on voter behavior, and inconsistencies between media campaigns and democratic norms. Do media-based campaigns enable voters to live up to their civic responsibility? Has the need for well-financed campaigns increased the influence of elites over nominations? Have citizens become disengaged? GER:DB-SocSci
4-5 units, Aut (Iyengar, S)
COMM 166. Virtual People  (Same as COMM 266) (Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.  4-5 units, not given this year

COMM 167. Advanced Seminar in Virtual Reality Research  Restricted to students with previous research experience in virtual reality. Experimental methods and other issues.  1-3 units, not given this year

COMM 168. Experimental Research in Advanced User Interfaces  (Same as COMM 268, COMM 368, ME 468) (Undergraduates register for 168; master’s students for 268; doctoral students for 368.) Project-based course involves small groups designing and implementing an experiment concerning voice and agent user interfaces. Each group is involved in a different, publishable research project. May be repeated for credit. Prerequisite: consent of instructor.  1-5 units, Win (Nass, C), Spr (Nass, C)

COMM 169. Computers and Interfaces  (Graduate students register for COMM 269.) Interdisciplinary. Use of responsive interfaces and design implications of those responses. Theories from different disciplines illustrate responses to textual, voice-based, pictorial, metaphorical, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of products or services for developing countries. GER:DB-SocSci  4-5 units, Win (Nass, C)

COMM 172. Media Psychology  (Same as COMM 272) (Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening. GER:DB-SocSci  4-5 units, Spr (Reeves, B)

COMM 177C. Specialized Writing and Reporting: Environmental Journalism  (Same as COMM 277C) (Graduate students register for COMM 277C.) Environmental Reporting is a practical, collaborative, writing-intensive course in environmental journalism. Science and journalism students will learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, and how to cover the environment and science beats effectively. In the process, we will build bridges between the worlds of journalism and science. Class size is limited: preference to journalism students and students in the natural and environmental sciences. Prerequisite: Consent of instructor.  4-5 units, Spr (Hayden, T)

COMM 177D. Specialized Writing and Reporting: Magazine Journalism  (Same as COMM 277D) (Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.  4-5 units, Aut (Frankel, G)

COMM 177G. Specialized Writing and Reporting: Covering Silicon Valley  (Same as COMM 277G) (Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley’s technology scene. Prerequisite: 104 or consent of instructor.  4-5 units, Win (Grinnes, A)

COMM 177K. Specialized Writing and Reporting: Human Rights Journalism  (Same as COMM 277K) (Graduate students register for COMM 277K.) The evolution of human rights law and enforcement, and the role of journalists in uncovering, pursuing, and publicizing political violence, detention, and torture. Case studies from S. Africa, Latin America, Israel and Palestine, N. Ireland, Bosnia, Rwanda, and Sudan and Darfur. Human rights issues in the U.S. in the aftermath of 9/11. Students conduct research and write journalistic reports on foreign and domestic issues. Prerequisite: 104 or consent of instructor.  4-5 units, Win (Frankel, G)

COMM 177S. Specialized Writing and Reporting: Sports Journalism  (Same as COMM 277S) (Graduate students register for COMM 277S.) Workshop. The history of sports writing from the 20s to present. Reporting, interviewing, deadline writing, and how to conceptualize and develop stories. Students write features and news stories for publication in a new sports section in The Cardinal Inquirer, an online publication of the graduate program in journalism. Prerequisite: 104 or consent of instructor.  4-5 units, Win (Pomerantz, G)

COMM 177Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East  (Same as COMM 277Y) (Graduate students register for COMM 277Y.) What’s involved in working as a journalist in one of the most important and dangerous parts of the world.  4-5 units, Spr (Brinkley, J)

COMM 182. Virtual Communities and Social Media  (Same as COMM 282) (Graduate students register for COMM 282.) Taught by the originator of the terms virtual community and smart mobs. How the concept of community has changed from agricultural to industrial to networked societies. Much class discussion takes place in social cyberspaces.  4-5 units, Aut (Rheingold, H)

COMM 190. Senior Project  Research project. Prerequisite: senior standing.  5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 195. Honors Thesis  Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.  5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 212. Models of Democracy  (Same as COMM 312, POLISCI 237, POLISCI 337) Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens’ Assembly, and controlled experiments.  3-5 units, Spr (Fishkin, J)

COMM 236G. Democracy, Justice, and Deliberation  (Same as COMM 336G) Decision processes that make a normative claim to resolve questions of public choice, at any of these levels of choice: first principles, constitutions, public policies, or particular outcomes. Topics include democratic theory, the theory of justice and issues of deliberation in small groups, public consultations, conventions, juries, and thought experiments popular in contemporary political theory. Readings include Madison, de Tocqueville, Mill, Marx, Rawls, Nozick, Ackerman, and Schudson. Preference to graduate students. Prerequisite: consent of instructor.  1-5 units, not given this year

COMM 244. Democracy, Press, and Public Opinion  (Same as COMM 344) The democratic tradition provides conflicting visions of what a democracy is or might be, offering different
views of the role of the press and citizens in engaging public issues. Focus is on democratic theory with empirical work on public opinion and the role of the media. Topics include campaigns, the effects of new technology, competing strategies of public consultation, public journalism, and possibilities for citizen deliberation. Prerequisite: consent of instructor.

1-4 units, not given this year

**GRADUATE COURSES IN COMMUNICATION**

**COMM 206. Communication Research Methods**
(Same as COMM 106) (Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor.

4-5 units, Aut (Gauthier, L)

**COMM 207. The First Amendment in the Digital Age**
(Same as COMM 107) (Graduate students register for COMM 207.) Interdisciplinary. Legal, institutional, sociological, and technological framework for free expression in democracy. History, values, and principles of the First Amendment. The challenge of new technology to old doctrine. Impact of the Internet on issues of free speech, such as political criticism, fair use, defamation, low value speech, professional privilege, and public forum in an era of private networks. How do new social networking technologies produce the expertise and accountability promoted by the First Amendment?

4-5 units, not given this year

**COMM 208. Media Processes and Effects**
(Same as COMM 108) (Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.

4-5 units, Win (Kreiss, D)

**COMM 211. Media Technologies, People, and Society**
(Same as COMM 11A) (Graduate students register for COMM 211.) Open to non-majors. Introduction to the concepts and contexts of communication. A topics-structured orientation emphasizing the field and the scholarly endeavors represented in the department.

4-5 units, Aut (Nass, C)

**COMM 216. Journalism Law**
(Same as COMM 116) (Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.

4-5 units, Win (Wheaton, J)

**COMM 217. Digital Journalism**
(Same as COMM 117) (Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor.

4-5 units, Win (Rheingold, H)

**COMM 220. Digital Media in Society**
(Same as COMM 120) (Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Restricted to Juniors and Seniors.

4-5 units, Spr (Turner, F)

**COMM 225. Perspectives on American Journalism**
(Same as COMM 125) (Graduate students register for COMM 225.) Issues, ideas, and concepts in the development of American journalism, emphasizing the role of the press in society, the meaning and nature of news, and professional norms that influence conduct in and outside the newsroom. Prerequisite: 1 or junior standing.

4-5 units, Aut (Glasser, T)

**COMM 231. Media Ethics and Responsibility**
(Same as COMM 131) (Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

4-5 units, not given this year

**COMM 236. Democracy and the Communication of Consent**
(Same as COMM 136, POLISCI 134) (Graduate students register for COMM 236.) Focus is on competing theories of democracy and the forms of communication they presuppose, combining normative and empirical issues, and historical and contemporary sources. Topics include representation, public opinion, mass media, small group processes, direct democracy, the role of information, and the prospects for deliberative democracy.

4-5 units, not given this year

**COMM 238. Democratic Theory: Normative and Empirical Issues**
(Same as COMM 338) Conflicting visions in terms of normative conflicts and empirical evidence. How citizens communicate with each other and their representatives, and how their representatives deliberate. Topics include theories of deliberation, how democracy is transformed when brought to the mass public, how informed a public is needed, and potential pathologies of small group communication in settings including juries, town meetings, and contemporary public consultations. Readings include Madison, Burke, Mill, Lippmann, Dewey, Schumpeter, Dahl, Sunstein, and Mansbridge.

1-3 units, not given this year

**COMM 239. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives**
The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don’t-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

4 units, not given this year

**COMM 240. Digital Media Entrepreneurship**
(Same as COMM 140) (Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley’s new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers.

3-5 units, Spr (Grimes, A)

**COMM 247. Modern History and Future of Journalism**
(Same as COMM 147) (Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?

4-5 units, not given this year

**COMM 257. Networked Governance: Democracy and New Technology**
(Same as COMM 357) Interdisciplinary seminar. The impact of technology on government institutions. How to use communications, law, and technology to engage experts and the broader public in decision making. Student teams develop implementation ready pilot projects for the next presidential administration.

1-5 units, not given this year

**COMM 258. Free Expression and Intellectual Property in the Digital Age**
(Same as COMM 158) (Graduate students register for COMM 258.) How intellectual property law fosters and hinders free speech. When does an author or inventor have a right to re-use someone else’s creative expression? Are appropriation of other people’s art, music sampling, and reverse engineering theft of someone else’s creative expression? Are appropriation of other people’s art, music sampling, and reverse engineering theft of someone else’s creative expression?
copyright, and trademark law and policy. No prior legal knowledge required.
4-5 units, not given this year

COMM 260. The Press and the Political Process  
(Same as COMM 160, POLSCI 323R) (Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.
4-5 units, Spr (Iyengar, S)

COMM 262. Analysis of Political Campaigns  
(Same as COMM 162, POLSCI 323S) (Graduate students register for COMM 262.) Seminar. The evolution of American political campaigns, and the replacement of the political party by the mass media as intermediary between candidates and voters. Academic literature on media strategies, the relationship between candidates and the press, the effects of campaigns on voter behavior, and inconsistencies between media campaigns and democratic norms. Do media-based campaigns enable voters to live up to their civic responsibility? Has the need for well-financed campaigns increased the influence of elites over nominations? Have citizens become disengaged?
4-5 units, Aut (Iyengar, S)

COMM 266. Virtual People  
(Same as COMM 166) (Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.
4-5 units, not given this year

COMM 268. Experimental Research in Advanced User Interfaces  
(Same as COMM 168, COMM 368, ME 468) (Undergraduates register for 168; master’s students register for 268; doctoral students for 368.) Project-based course involves small groups designing and implementing an experiment concerning voice and agent user interfaces. Each group is involved in a different, publishable research project. May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Win (Nass, C), Spr (Nass, C)

COMM 269. Computers and Interfaces  
(Same as COMM 169) (Graduate students register for COMM 269.) Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate responses to textual, voice-based, pictorial, metaphorical, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of products or services for developing countries.
4-5 units, not given this year

COMM 272. Media Psychology  
(Same as COMM 172) (Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.
4-5 units, Win (Nass, C)

COMM 273. Public Issues Reporting I  
Reporting and writing on government and public policies and issues; their implications for the people and the press. Required for journalism M.A. students.
3-4 units, Aut (Grimes, A)

COMM 274. Public Issues Reporting II  
Student teams study one major public policy issue that has broad societal impact. Students report and write individually, and as a team produce a body of journalism that advances the understanding of a new issue each year, published on a web site and offered for publication to newspapers and other media outlets. Prerequisites: 273, Journalism M.A. student.
3-4 units, Win (Brinkley, J)

COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video  
Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Journalism M.A. student.
Corequisite: COMM 273.
4 units, Aut (Staff)

COMM 277C. Specialized Writing and Reporting: Environmental Journalism  
(Same as COMM 177C) (Graduate students register for COMM 277C.) Environmental Reporting is a practical, collaborative, writing-intensive course in environmental journalism. Science and journalism students will learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, and how to cover the environment and science beats effectively. In the process, we will build bridges between the worlds of journalism and science. Class size is limited; preference to journalism students and students in the natural and environmental sciences. Prerequisite: Consent of instructor.
4-5 units, Spr (Hayden, T)

COMM 277D. Specialized Writing and Reporting: Magazine Journalism  
(Same as COMM 177D) (Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.
4-5 units, Win (Grimes, A)

COMM 277G. Specialized Writing and Reporting: Covering Silicon Valley  
(Same as COMM 177G) (Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley’s technology scene. Prerequisite: 104 or consent of instructor.
4-5 units, Win (Grimes, A)

COMM 277K. Specialized Writing and Reporting: Human Rights Journalism  
(Same as COMM 177K) (Graduate students register for COMM 277K.) The evolution of human rights law and enforcement, and the role of journalists in uncovering, pursuing, and publicizing political violence, detention, and torture. Case studies from S. Africa, Latin America, Israel and Palestine, N. Ireland, Bosnia, Rwanda, and Sudan and Darfur. Human rights issues in the U.S. in the aftermath of 9/11. Students conduct research and write journalistic reports on foreign and domestic issues. Prerequisite: 104 or consent of instructor.
4-5 units, Win (Pomerantz, G)

COMM 277S. Specialized Writing and Reporting: Sports Journalism  
(Same as COMM 177S) (Graduate students register for COMM 277S.) Workshop. The history of sports writing from the 20th to present. Reporting, interviewing, deadline writing, and how to conceptualize and develop stories. Students write features and news stories for publication in a new sports section in The Cardinal Inquirer, an online publication of the graduate program in journalism. Prerequisite: 104 or consent of instructor.
4-5 units, Win (Pomerantz, G)

COMM 277Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East  
(Same as COMM 177Y) (Graduate students register for COMM 277Y.) What’s involved in working as a journalist in one of the most important and dangerous parts of the world.
4-5 units, Spr (Brinkley, J)

COMM 282. Virtual Communities and Social Media  
(Same as COMM 182) (Graduate students register for COMM 282.) Taught by the originator of the terms virtual community and smart mobs. How the concept of community has changed from agricultural to industrial to networked societies. Much class discussion
COMM 298. Journalism Master’s Project
4 units, Spr (Staff)

COMM 299. Media Studies M.A. Project
Individual research for coterminal media Studies students.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 291. Graduate Journalism Seminar
Required of students in the graduate program in Journalism. Forum
for current issues in the practice and performance of the press. The
seminar frequently features Bay Area Journalists as guest speakers.
May be repeated for credit.
1 unit, Aut (Grimes, A), Win (Brinkley, J), Spr (Frankel, G)

COMM 299. Individual Work
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 301. Communication Curriculum Development and Pedagogy
Required of all Ph.D. students.
1 unit, Win (Gauthier, L)

COMM 308. Graduate Seminar in Political Psychology
(Same as POLISCI 324) For students interested in research in politi-
cal science, psychology, or communication. Methodological
approaches to social science research. May be repeated for credit.
1-3 units, Aut (Krosnick, J), Win (Krosnick, J), Spr (Krosnick, J)

COMM 310. Methods of Analysis Program in the Social Sciences (MAPSS) Workshop
(Same as POLISCI 402) Colloquium series. Creation and application
of new methodological techniques for social science research.
Presentations on methodologies of use for social scientists across
departments at Stanford by guest speakers from Stanford and else-
where. See http://mapss.stanford.edu. May be repeated for credit.
1 unit, Aut (Staff), Win (Jusko, K; Rodden, J), Spr (Jusko, K; Rodden, J)

COMM 311. Theory of Communication
Required of Communication doctoral students.
1-5 units, Aut (Reeves, B)

COMM 312. Models of Democracy
(Same as COMM 212, POLISCI 257, POLISCI 337) Ancient and
modern varieties of democracy; debates about their normative and
practical strengths and the pathologies to which each is subject. Focus
is on participation, deliberation, representation, and elite com-
petition, as values and political processes. Formal institutions,
political rhetoric, technological change, and philosophical critique.
Models tested by reference to long-term historical natural experi-
ments such as Athens and Rome, recent large-scale political experi-
ments such as the British Columbia Citizens’ Assembly, and
controlled experiments.
3-5 units, Spr (Fishkin, J)

COMM 314. Doctoral Research Methods II B
Part of the doctoral research methods sequence. Focus is on the
logic of qualitative research methods and modes of inquiry rele-
vant to the study of communication and meaning. Prerequisite:
Communication Ph.D. student, or consent of instructor.
1-3 units, Win (Glasser, T)

COMM 317. Doctoral Research Methods I
Approaches to social science research and their theoretical presup-
positions. Readings from the philosophy of the social sciences.
Research design, the role of experiments, and qualitative and
quantitative research. Cases from communication and related social
sciences. Prerequisite: consent of instructor.
1-5 units, Spr (Fishkin, J)

COMM 318. Doctoral Research Methods II
Prerequisite: consent of instructor.
1-5 units, Win (Krosnick, J)

COMM 320G. Advanced Topics in New Media and American Culture
Primarily for Ph.D. students. Prerequisite: 220 (formerly 219) or
consent of instructor.
1-5 units, Spr (Turner, F)

COMM 325G. Comparative Studies of News and Journalism
Focus is on topics such as the roles and responsibilities of journal-
ists, news as a genre of popular literature, the nexus between press
and state, and journalism’s commitment to political participation.
1-5 units, Win (Glasser, T)

COMM 326. Advanced Topics in Human Virtual Representation
Topics include the theoretical construct of person identity, the
history of human representation, and the development of virtual,
human representation. Prerequisite: consent of instructor.
1-5 units, not given this year

COMM 331G. Communication and Media Ethics
Limited to Ph.D. students. Advanced topics in press ethics and
responsibility. Prerequisite: 231 or consent of instructor.
1-3 units, not given this year

COMM 336G. Democracy, Justice, and Deliberation
(Same as COMM 236G) Decision processes that make a normative
claim to resolve questions of public choice, at any of these levels of
choice: first principles, constitutions, public policies, or particu-
lar outcomes. Topics include democratic theory, the theory of jus-
tice and issues of deliberation in small groups, public consultations,
conventions, juries, and thought experiments popular in con-
temporary political theory. Readings include Madison, de Tocque-
ville, Mill, Marx, Rawls, Nozick, Ackerman, and Schudson. Prefe-
rence to graduate students. Prerequisite: consent of instructor.
1-3 units, not given this year

COMM 338. Democratic Theory: Normative and Empirical Issues
(Same as COMM 238) Conflicting visions in terms of normative
and empirical evidence. How citizens communicate with each other
and their representatives, and how their representatives
influence. Topics include theories of deliberation, how democracy
is transformed when brought to the mass public, how informed a
public is needed, and potential pathologies of small group com-
unication in settings including juries, town meetings, and contem-
porary public consultations. Readings include Madison, Burke, Mill,
1-5 units, not given this year

COMM 344. Democracy, Press, and Public Opinion
(Same as COMM 244) The democratic tradition provides conflicting
views of what a democracy is or might be, offering different
views of the role of the press and citizens in engaging public is-
sues. Focus is on democratic theory with empirical work on pub-
lic opinion and the role of the media. Topics include campaigns,
the effects of new technology, competing strategies of public consulta-
tion, public journalism, and possibilities for citizen deliberation.
Prerequisite: consent of instructor.
1-4 units, not given this year

COMM 357. Networked Governance: Democracy and New Technology
(Same as COMM 257) Interdisciplinary seminar. The impact of
technology on government institutions. How to use communicati-
on, law, and technology to engage experts and the broader pub-
ic in decision making. Student teams develop implementation
projects frequently featuring Bay Area Journalists as guest speakers.
Limited to Ph.D. students. Advanced topics. Prerequisite: 260 or
consent of instructor.
1-3 units, not given this year

COMM 360G. Political Communication
Limited to Ph.D. students. Advanced topics. Prerequisite: 260 or
consent of instructor.
1-3 units, not given this year

COMM 361. Field Experimentation in Political Communication
Research
The design of large-scale field experiments. Recent developments
in analysis of experimental data including matching, propensity
scores, and other techniques that address the problem of selection
bias. Prerequisite: consent of instructor.
4 units, not given this year

COMM 368. Experimental Research in Advanced User Interfaces
(Same as COMM 168, COMM 268, ME 468) (Undergraduates register for 168; master’s students for 268; doctoral students for 368.) Project-based course involves small groups designing and
implementing an experiment concerning voice and agent user interfaces. Each group is involved in a different, publishable research project. May be repeated for credit. Prerequisite: consent of instructor. 1-5 units, Win (Nass, C), Spr (Nass, C)

COMM 372G. Seminar in Psychological Processing Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor. 1-5 units, Win (Reeves, B)

COMM 374G. Freedom and Control of Communication The meaning of freedom of public communication in democratic communities, focusing on the tensions between freedom and control, rights and opportunities, individual liberty and political equality. 1-5 units, not given this year

COMM 379. History of the Study of Communication The origins of communication/media theory and research emphasizing the rise of communication as a separate field of study. The influence of schools of thought concerning the scope and purpose of the study of communication. Readings include foundational essays and studies. Prerequisite: Ph.D. student or consent of instructor. 1-5 units, not given this year

COMM 380. Curriculum Practical Training Practical experience in the communication industries. Prerequisites: graduate standing in Communication, consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. 300 May be repeated four times for credit. (Staff) 1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 386. Media Cultures of the Cold War (Same as ARTHIST 475) The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and modern man discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory. 3-5 units, not given this year

COMM 397. Complementary Project Individual research for Ph.D. candidates. 1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 398. Major Research Project Individual research for Ph.D. candidates. 1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 399. Advanced Individual Work 1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE LITERATURE (COMPLIT)

UNDERGRADUATE COURSES IN COMPARATIVE LITERATURE

COMPLIT 110. Shakespeare, Playing, Gender (S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. Topics: transvestism inside and outside the theater, medical and other discussions of sex changes from female to male, hermaphrodites, and fascination with the monstrous. GER:DB-Hum, EC-Gender 3 units, Spr (Parker, P)

COMPLIT 410. Ethnicity and Literature (S,Sem) Stanford Introductory Seminar. Preference to sophomores. What is meant by ethnic literature? How is ethnic writing different from non-ethnic writing, or is there such a thing as either? How does ethnicity as an analytic perspective affect the way literature is read by ethnic peoples? Articles and works of fiction; films on ethnic literature and cultural politics. How ethnic literature represents the nexus of social, historical, political, and personal issues. GER:DB-Hum, EC-AmerCul 3-5 units, Aut (Palmombo-Liu, D)

COMPLIT 49. What is Nobel Literature? Reading, Assessing, and Interpreting the Nobel Novels on the World Stage Recent Nobel laureates in literature: Gabriel García Márquez, Nadine Gordimer, Toni Morrison, Kenzaburo Oe, and V.S. Naipaul. These writers come from different locations, yet each participates in a global conversation about the human condition. The impact of their identities upon their thought and writing. How the Nobel prize is awarded. The role of literature in the world, and analytical skills for reading literary texts. GER:DB-Hum, EC-GlobalCom 5 units, Sum (Palmombo-Liu, D)

COMPLIT 50Q. Is God Dead? (S,Sem) (Same as GERLIT 120Q) Stanford Introductory Seminar. A consideration of Nietzsche’s claim that God is dead in relation to other texts of German literature and philosophy. The status of religious faith in relation to modernity and secularization; religion and science; culture and faith. Readings in German include selections from sacred and liturgical texts; fictional depictions of religious experience; religion in poetry; German theories of religion. Authors to be studied include Rilke, Hesse, Weiss, Schöder, Buber, Sachs, Haeker, Weber, Taubes, Rattinger. GER:DB-Hum 3-5 units, Win (Berman, R)

COMPLIT 101. What is Literature? How critics and authors from different eras and different parts of the globe have considered how literature, as a traditional cultural form, can or cannot, help to sustain societies faced with concrete historical crises such as war, revolution, and colonization. How the aesthetic work of verbal art has been seen to offer the possibility of continuity in the face of change. What, if anything, can be continued? How does art perhaps aid in accommodating change? GER:DB-Hum 5 units, Win (Palmombo-Liu, D)

COMPLIT 119. Dostoevsky and His Times (Same as COMPLIT 219, SLAVGEN 151, SLAVGEN 251) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history. GER:DB-Hum 4 units, Win (Frank, J)

COMPLIT 121. Poems, Poetry, Worlds: An Introductory Course What is poetry? How does it speak in many voices to questions of history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. Readings include: medieval to modern poetry of western Europe and the Americas; contemporary poetry of Europe, Latin America, Africa, and the U.S.; and present-day experimental digital, sound, and visual poetry. GER:DB-Hum 5 units, Aut (Greene, R)

COMPLIT 122. Literature as Performance Theater as performance and as literature. The historical tension between performance and sexuality in the Western tradition since Greek antiquity. Non-European forms and conventions of performance and theatricality. The modern competition between theater and other forms of performance and media such as sports, film, and television. Sources include: classical Japanese theater; ancient Greek tragedy and comedy; medieval theater in interaction with Christian rituals and its countercultural horizons; the classical age of European theater including Shakespeare, Lope de Vega, and Molière. GER:DB-Hum 5 units, Win (Greenleaf, M)

COMPLIT 123. The Novel, The World Combining perspectives of the novels of the world as anthropological force with the sense of reality, and as prose form that has reshaped the literary universe. Readings from: ancient Greece; medieval Japan and Britain; and early modern Spain, China, and Britain; romantic theories of the novel; 19th-century realism and popular fiction; modernist experiments; and postmodern pastiches. 5 units, Spr (Cohen, M)
COMPLIT 124. Fait Divers and the Development of Modernist Writing
Felix Fénéon’s novels in three lines from 1906 turned a journalistic stop-gap into a literary genre highly influential for modernist writing. The history of the fait divers and its literary precursors and variations (Kleist, Hebel; its influence on authors such as Mallarmé, Kafka, and Kraus. Reading knowledge of German helpful, but not required.
3-5 units, Win (Goppelsroder, F)

COMPLIT 125A. The Gothic Novel
(Same as ENGLISH 125A) The Gothic novel and its relatives from its invention by Walpole in The Castle of Otranto of 1764. Readings include: Northanger Abbey, The Italian, The Monk, Frankenstein, Jane Eyre, Great Expectations, and Dracula. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types? GER:DB-Hum
5 units, Win (Bender, J)

COMPLIT 133. Salome, Modernity, and the Aesthetics of Transgression
The Salome theme in Europe and the U.S.: from the 1880s to the present, in literature, opera, dance, and film. Topics include representations of sexual and aesthetic excess, ecstasy, and transgression in the context of modernity. Historically associated with metabolism of cool, evil community, and discourses of perversity, the popularity of the Salome theme invites comparative treatments in fin de siècle and modernist studies, feminist studies, as well as queer theory. All readings in English.
3-5 units, Aut (Dierkes-Thrun, P)

COMPLIT 134. The Poetry of History in the Americas
Major long poems of the 20th century by: U.S. poets such as Williams and Olson; Latin America poets such as Neruda and Cardenal; and Caribbean poets such as Brathwaite and Walcott. The literary history of the long poem in the hemisphere sustaining a trans-american viewpoint. Topics include: claims for the autonomy of culture in the Americas after WW II; redefinitions of the role of poets under conditions of U.S. hegemony and the Cold War; and the legacies of modernism.
3-5 units, Spr (Feinsod, H)

COMPLIT 141. Literature and Society in Africa and the Caribbean
(Same as FRENRLIT 133) Major African and Caribbean writers. Issues raised in literary works which reflect changing aspects of the societies and cultures of Francophone Africa and the French Caribbean. Topics include colonization and change, quest for identity, tradition and modernity, and new roles and status for women. Readings in fiction and poetry. Authors include Laye Camara, Martin Mbarga, Ba, and Yannick Négy. In French. Prerequisites: FREN-LANG 126 or consent of instructor. GER:DB-Hum, EC-GlobalCom
4 units, Aut (Boyi, E)

COMPLIT 142. The Literature of the Americas
(Same as ENGLISH 172E) The intellectual and aesthetic problems of inter-American literature conceived as an entire. Emphasis is on continuities and crises relevant to N., Central, and S. American literatures. Issues such as the encounters between world views, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, 20th-century avant gardes, and distinctive modern episodes such as the Harlem Renaissance, the Beats, magical realism, and Noigandes in comparative perspective. GER:DB-Hum, EC-AmericaCul
5 units, Win (Greene, R; Saldivar, R)

COMPLIT 144. Gender and Modernism
3-5 units, Win (Dierkes-Thrun, P)

COMPLIT 146. Asian American Culture and Community
(Same as ASNAMST 146S, CSRE 146S) An examination of the history of Asians in America via one case history the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco.
5 units, Spr (Palumbo-Liu, D)

COMPLIT 147. Culture Wars in Epic Poetry
(Same as CLASSGEN 147) Homer’s Iliad and Odyssey, Virgil’s Aeneid, Melville’s Moby Dick, and Walcott’s Omeros are epics that feature the clash of civilizations. We look at cultural values and social relations (including race, class, ethnicity, and gender) in Homeric Greece, the early Roman Empire, 19th-century America, and modern-day St. Lucía (a Caribbean island colonized by European empires and populated with African slaves; the island was later liberated). We also explore the literary aspects of epic and examine how each epic imitates and transforms earlier epics.
3-5 units, Spr (Nightingale, A)

COMPLIT 151. Bodies and the Modern Uncanny
Theories of the uncanny through various critical traditions (e.g. psychoanalysis, structuralism, deconstruction) and their account of how modern authors engage with the problem of self-alienation, reimagined in response to questions of self, other, and identity; the body as a site of identity, confrontation, vulnerability, or power as a persistent image in uncanny literature. Critical texts include Freud, Todorov, Johnson, Derrida; authors include Hoffman, Kafka, Maupassant, Blanchot, Hemon, and Toni Morrison. Readings in original or translation; discussion in English.
3-5 units, Aut (Villarreal, L)

COMPLIT 153. Literature and Religion in Modernity
Literature that takes a skeptical view of religious belief while criticizing the cultural, social, and political conditions of the religious imagination in post-Enlightenment modernity. Readings from authors such as Blake, Goethe, Büchner, Baudelaire, Mallarmé, Flaubert, Nietzsche, Mew, Eliot, Brecht, Bataille, Sartre, Beckett, Ionesco, Celan, Winterson. Sources include visual artworks and philosophical and critical writings. Literary, ethical, and religious positions concerning central human questions: what is humanity; what is God; how does one avoid evil and adhere to good; how does one live after the death of God? Readings in English.
3-5 units, Spr (Dierkes-Thrun, P)

COMPLIT 181. Philosophy and Literature
(Same as CLASSGEN 81, ENGLISH 81, FRENGEN 181, ITALI-GEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

COMPLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLC 189.
5 units, Win (Staff)

COMPLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLC 189.
2 units, Spr (Staff)

COMPLIT 194. Independent Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
COMPLIT 199. Senior Seminar: Pleasures of Reading
Required of Comparative Literature seniors; others by consent of instructor. Different paradigms for the kind of enjoyment readers get from literature: entertainment, instruction; ideological comfort, critical distance; inspiration and incitatio to their own creativity. Works read may include Aristotle, Hegel, and Brecht on tragedy; Longinus and Burke on the sublime; Roland Barthes S/Z; sonnets by Mallarmé and Eliot’s Wasteland; Cixous on écriture féminine; Bakhtin’s book on Rabelais and carnival, and Rabelais and the French fabliaux; Adorno on kitsch and literature of entertainment; Benjamin’s essay on The Storyteller; Janice Radway’s Reading the Romance. GER:DB-Hum
3-5 units, Win (Cohen, M)

COMPLIT 217. Hölderlin’s Poetry
(Same as GERLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic “now”. The seminar also explores the relationship between the philosophy of history and poetic metaphor.
3-5 units, Spr (Bohrer, C)

COMPLIT 222. Time-Travel Literature
A study of narratives whose heroes travel physically from one historic period to another. Utopian and dystopian travel to the past and the future in works from the French, Spanish, British, American, German, Russian, Arabic, and Persian traditions. The appearance of time-travel literature in the 1770s, the development of such conventions as the time machine, and the depiction of past and future societies in writing and film. The relationship between temporality and historical imagination in Enlightenment, modern, postmodern, and postcolonial contexts. Supplemental session for those who can read the texts in Arabic.
3-5 units, Aut (Cooperson, M)

COMPLIT 223. Literary Diaries of Classic Modernity
(Same as GERLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne’s Essais and Rousseau’s Confessions, analysis of the self has been a central topic for modern literature. Texts include Baudelaire’s Intimate Journals, Kafka’s Diaries, Gide’s Journals, Woolf’s Moments of Being, Benjamin’s Berlin Childhood, and Pavese’s Diaries. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.
3-5 units, Spr (Bohrer, C)

COMPLIT 226. Narrative and Ethics
(Same as GERLIT 242) Major terms of narratology; how different literary, cinematic, and popular culture narratives raise ethical issues, stir public debates and contribute to understanding human values. Readings include Biblical texts, Antigone, Kleist, Kafka, Coetzee, V for Vendetta, South Park, Kant, Arendt, Nussbaum, Rorty, and Levinas.
3-5 units, Win (Eshel, A)

COMPLIT 227. Literature and Metamorphoses
Narratives of metamorphoses in relation to subjectivity and socialization; physical and psychological transformation, and the border between animal and human identity. Examples from antiquity to the present to explore the durability and transformation of metamorphosis accounts. Examples from the visual arts. Scientific, philosophical, and social implications. Metamorphosis in relation to intertextuality and narratology. Texts by authors such as Ovid, Shakespeare, Wordsworth, Keats, Stevenson, Wilde, Kafka, and Hughes.
3-5 units, Win (Staff)

COMPLIT 233. Baroque and Neobaroque
(Same as ENGLISH 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.
5 units, not given this year

COMPLIT 234. Conservative Revolution
(Same as GERGEN 201) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal, Rudolf Borchardt, Karl Haushofer, Konrad Weiss. Readings in either English or German. GER:DB-Hum
3-5 units, Win (Berman, R)

COMPLIT 246A. Literature and Film of Modern Iran
Iran’s social structures, political system, cultural tendencies, and modern artistic culture.
3-5 units, not given this year

COMPLIT 247. Modernism and the Jewish Voice in Europe
(Same as GERGEN 221A, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelshtam, Chebel, Schulz, Kafka, Celan; secondary readings in history, European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum
3-4 units, Spr (Eshel, A; Safran, G)

COMPLIT 248. Afghanistan: Literature and History
Sources include poetry, short stories, novels, film, and secondary sources.
3-5 units, Aut (Shamel, M)

GRADUATE COURSES IN COMPARATIVE LITERATURE

COMPLIT 216. Petrarch and Petrarchism
(Same as ITALGEN 264E) The works of Petrarch (1304-1374), the founder of Renaissance humanism, and a bibliophile, collector of manuscripts, and devotee of erudition. How he dedicated his life to harmonizing the Christian faith with classical learning. Sources include his Latin moral works, epistles, epics, and treatises on illustrious men, and the Triumphs and Canzoniere.
5 units, not given this year

COMPLIT 219. Dostoevsky and His Times
(Same as COMPLIT 119, SLAVGEN 151, SLAVGEN 251) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history.
4 units, Win (Frank, J)

COMPLIT 221. Memory, History, and the Contemporary Novel
(Same as GERLIT 246) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur Amishai Margaliot, and Walter Benn Michaels.
3-5 units, not given this year

COMPLIT 250. Literature, History, and Representation
(Same as FRENIT 248) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator; relation between individual and collective history; historical events and how they have shaped the narratives; master narratives; and alternative histories. Reading include Gissant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.
3-5 units, not given this year
COMPLIT 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation
(Same as AFRICAST 278, FRENFLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaigue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.
3-5 units, Aut (Boyi, E)

COMPLIT 303D. Thinking in Fiction
(Same as ENGLISH 303D) Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.
5 units, not given this year

COMPLIT 311. Shakespeare, Islam, and Others
(Same as ENGLISH 373D) Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. Othello, Twelfth Night, Titus Andronicus, The Merchant of Venice, and other Shakespeare plays. Kyd’s Soliman and Perseda, Dabourne’s A Christian Turned Turk, Massinger’s The Renegado, Marlowe’s The Jew of Malta, and literary and historical materials.
5 units, not given this year

COMPLIT 320A. Epic and Empire
(Same as ENGLISH 314) Focus is on Virgil’s Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.
5 units, Spr (Parker, P)

COMPLIT 322A. Theories of the Novel
(Same as FRENFLIT 356) The novel as the literary genre most closely identified with the development of modernity by literary historians and theorists. Critical models for defining the novel’s poetics and cultural work. Critical readings such as texts by Lukacs, Bakhtin, Auerbach, Barthes, Armstrong, Gallagher, Bourdieu, Macherey, Jameson, Said and Spivak. Tutor texts such as Defoe’s Robinson Crusoe, Flaubert’s Madame Bovary, and Woolf’s To the Lighthouse.
3-5 units, Spr (Cohen, M)

COMPLIT 332. The Transatlantic Renaissance
(Same as ENGLISH 310) The emergence of early modern transatlantic culture, emphasizing how canonical works of the Renaissance may be reimagined in a colonial context and how the productions of the colonial Americas make sense as Renaissance works. Topics: mestizaje and creole identity, gender and sexuality, law, religion, science, colonialism, and the church, government, and society by European and American authors: Thomas More, Phillip Sidney, Thomas Lodge, William Shakespeare, the Inca Garcilaso de la Vega, and lesser known figures.
5 units, Win (Greene, R)

COMPLIT 345. Modern Hebrew Literature Reading Circle
Discussion of literary texts written in Hebrew in a group of faculty, graduate students and visiting scholars. Advanced reading knowledge of Hebrew is required. May be repeated for credit.
2 units, Aut (Eshel, A; Shemtov, V), Win (Eshel, A; Shemtov, V)

COMPLIT 358. Reading, Otherness, Language
Empathy is considered useful as a key element in fostering moral sentiment and social equilibrium. The opposite is true with regard to literature, when dissimilarity rather than similarity becomes privileged and established as a key way of regarding fiction and its social and ethical role. Texts include: Badiou, Ethics; Caravaggio, Relating Narratives; Miller, Others; Barthes, The Pleasure of the Text; Johnson, The Jolly Corner; Shamas, Arabesques; Coetzee, Foe, Gordiner, My Son’s Story; Calvino, If on a Winter’s Night a Traveler...
5 units, Spr (Palumbo-Lite, D)

COMPLIT 359A. Philosophical Reading Group
(Same as FRENFLIT 395, ITALFLIT 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrich is required. May be repeated for credit.
1 unit, not given this year

COMPLIT 364. Style
(Same as ENGLISH 364) The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus is on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.
5 units, Spr (Moretti, F; Miller, D)

COMPLIT 369. Introduction to Graduate Studies: Criticism as Profession
(Same as FRENFLIT 369, ITALFLIT 369, GERFLIT 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamine, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.
5 units, Aut (Berman, R)

COMPLIT 371. Seminar in Chinese Literary Criticism
(Same as CHINLIT 371) How aesthetics and politics intertwine and break apart in Western and Eastern traditions. Aesthetics for understanding culture, morality, and power in crosscultural contexts. Readings include Hegel, Kant, Marcuse, Lukacs, and Adorno; and Chinese thinkers Wang Guowei, Lu Xun, Li Zehou, and Mao. Prerequisite: CHINLIT 127/207 or consent of instructor.
2-5 units, Aut (Wang, B)

COMPLIT 395. Research
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPLIT 396L. Pedagogy Seminar I
(Same as ENGLISH 396L) Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for serving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.
2 units, Aut (Vermeule, B)

COMPLIT 399. Dissertation
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE MEDICINE (COMPMED)

UNDERGRADUATE COURSES IN COMPARATIVE MEDICINE

COMPMED 81N. Comparative Anatomy and Physiology of Mammals
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Comparative approach to common mammals, laboratory, and domestic species. The unique adaptations of each species in terms of its morphological, anatomical, and behavioral characteristics. How these species interact with human beings and other animals. GER: DB-NatSci
3 units, Win (Bouley, D)

COMPMED 84Q. Globally Emerging Zoonotic Diseases
3 units, Spr (Felt, S)

COMPMED 87Q. Introduction to the Mouse in Biomedical Research
(S.Sem) Stanford Introductory Seminar. Preference to sophomores. The laboratory mouse, one of the most widely used models for biomedical research. The natural history and origin of the laboratory mouse, its relationship to its wild cousins, the history and uses of some common laboratory mice, widely used research models (transgenic mice, knock-out and knock-in mice, cloning, immunodeficient mice) and their uses in the understanding and treatment...
of human diseases. Reading and discussion of scientific papers; presentation of a paper that uses the mouse as a model for the study of a human disease.
3 units, Aut (Nagamine, C)

COMP MED 103. Horse Medicine
The most common equine diseases, ranging from colic to lameness. Equine anatomy and physiology relevant to topics in equine medicine. Equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. Laboratory sessions involve physical examination of the horse and review the basics of the neurological and lameness exam.
2 units, Win (Green, S)

COMP MED 107. Comparative Neuroanatomy
(Same as COMP MED 207) Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate fore-brains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.
4 units, not given this year

COMP MED 110. Pre-Vet Advisory
For students interested in a career in veterinary medicine. Guest speakers present career options in veterinary medicine. Networking with other pre-vet students. How to meet the academic and practical experience prerequisites for admission to veterinary school. Prerequisite: consent of instructor.
1 unit, Aut (Bouley, D), Win (Bouley, D), Spr (Bouley, D)

COMP MED 198. Undergraduate Directed Reading in Comparative Medicine
May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMP MED 199. Undergraduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN COMPARATIVE MEDICINE

COMP MED 207. Comparative Neuroanatomy
(Same as COMP MED 107) Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate fore-brains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.
4 units, not given this year

COMP MED 299. Directed Reading in Comparative Medicine
Prerequisite: consent of instructor. (Staff)
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMP MED 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMP MED 399. Graduate Research
Investigations sponsored by individual faculty members. Opportunities are available in comparative medicine and pathology, immuno-histochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE STUDIES IN RACE AND ETHNICITY (CSRE)

UNDERGRADUATE COURSES IN COMPARATIVE STUDIES IN RACE AND ETHNICITY

CSRE 109B. Indian Country Economic Development
(Same as NATIVEAM 109B) The history of competing tribal and Western economic models, and the legal, political, social, and cultural implications for tribal economic development. Case studies include mineral resource extraction, gaming, and cultural tourism. 21st-century strategies for sustainable economic development and protection of political and cultural sovereignty.
5 units, Aut (Biestman, K)

CSRE 123. American Indians and the Cinema
(Same as NATIVEAM 123) Hollywood and the film industry have had a major influence on American society for a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood’s Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. Cinematic interpretations and accurate portrayals of American Indians and of American history.
5 units, Aut (Shively, J)

CSRE 132. Friends, Enemies, and Lovers: Interracial Encounters in American Cultures
Representations of interracial encounters in American novels, films, and plays. How these works reflect, question, and reimagine relationships not only amongst minorities, but also between race and nation, individual and community, and art and politics. Topics: cultural appropriations; alternative histories of contact; cross-racial performances and social conflicts. Texts by Sherman Alexie, Luis Valdez, Anna Deveare Smith and Karen Tei Yamashita, and the films, Do the Right Thing and Crash.
5 units, Aut (Kim, J)

CSRE 133. Women and Race in the American West, 1849-1950
The western myth of the lone white cowboy gives little insight into women and people of color. Race and gender are crucial to the U.S. West’s history, creating complex identities and social structures. Course examines lives of women of diverse races, along with mythology surrounding such figures as Sacagawea. Using novels, memoir, artwork, and film, students analyze interesting race and gender identities, and the relation between history and myth.
5 units, Aut (Frink, B)

CSRE 145A. Poetics and Politics of Caribbean Women’s Literature
(Same as AFRICAAM 145A) Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization. GER:DB-SocSci, DB-SocSci, EC-Gender
5 units, Win (Duffy, C)

CSRE 146. Community Matters: Research and Service with Community Organizations
Methods and principles for academic research in community settings for students preparing to enter summer experiences with community organizations. Case studies and tools to help students conceptualize a research strategy. Students develop a memorandum of understanding in collaboration with the community agency to define the work, relationship, and mutual benefit of the research partnership.
2 units, Spr (Mitchell, T)
CSRE 146S. Asian American Culture and Community
(Same as COMPLIT 146, ASNAMST 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco.
5 units, Spr (Palumbo-Lite, D)

CSRE 160N. Salt of the Earth: Docudrama in Latino America
(F,Sem) (Same as CHICANST 160N) Stanford Introductory Seminar. Preference to freshmen. An introduction to docudrama as a form of factually based, politically-motivated, dramatic writing (film and theater), related to the Chicana/o and Latino/o experience. The 1954 blacklisted film Salt of the Earth. Students create a short original docudrama. GER:DB-Hum
3-5 units, Win (Moraga, C)

CSRE 161. Asian American Immigration and Health
(Same as ASNAMST 161) Ethnography, biomedical research, historical writing, and film to focus on the health and well being of newly arrived Asian and Pacific Islander immigrants to the U.S. Historical studies of Asian and immigrant experiences as feared sources of disease and contagion, immigration status, language, health beliefs, gender, age, and definitions of community, disease prevention, and health programs and practices, and public policy. Topics include: refugeesm, cosmetic surgery, genetic screening, and health disparities.
5 units, Win (Lee, S)

CSRE 173S. Transcultural and Multietnic Lives: Contexts, Controversies, and Challenges
(Same as ASIAAM 173S, ASNAMST 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multietnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in media and multicultural communities. What the lives of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.
5 units, Spr (Murphy-Shigematsu, S)

CSRE 177. Writing for Performance: The Fundamentals
(Same as DRAMA 177, DRAMA 277) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Stanley, August Wilson, Paula Vogel, Octavio Solís and others. Table readings of one-act length work required by quarter's end. GER:DB-Hum
5 units, Win (Moraga, C)

CSRE 183. Border Crossings and American Identities
(Same as AMSTUD 183) How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borders within multietnic literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity. GER:DB-Hum, EC-AmerCul
5 units, Aut (Duffy, C)

CSRE 189W. Language and Minority Rights
(Same as CHICANST 189W, EDUC 189X) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom
3 units, Win (Valdes, G)

CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity
(Same as ENGLISH 172D, PSYCH 155, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul
3 units, Spr (Moya, P; Markus, H)

CSRE 197. The Rite to Remember: Performance and Chicana/o Indigenous Thought
(Same as CHICANST 197, NATIVEAM 197, DRAMA 355M) Indigenous thought and aesthetics as they pertain to the performance and ceremonial practices of Chicana and other indigenous African American women artists and spirit practitioners.
3-5 units, Spr (Staff)

CSRE 198. Internship for Public Service
Restricted to CSRE comparative studies majors with a concentration in public service. Students consult with the CSRE graduate program director and CSRE affiliated faculty to develop an internship. Group meetings. May be repeated for credit.
1-5 units, Aut (Mitchell, T), Win (Mitchell, T), Spr (Mitchell, T)

CSRE 199. Pre-Honors Seminar
For students interested in writing a senior honors thesis. Conceptualizing and defining a manageable honors project, conducting interdisciplinary research, the parameters of a literature review essay, and how to identify a faculty adviser.
1-2 units, Aut (Quinn, R)

CSRE 200R. Directed Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CSRE 200W. Directed Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CSRE 200X. CSRE Senior Seminar
Required for CSRE-related students, including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper is under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing. WIM
3 units, Aut (Quinn, R)

CSRE 200Y. CSRE Senior Honors Research
1-10 units, Win (Staff)

CSRE 200Z. CSRE Senior Honors Research
1-10 units, Spr (Staff)

CSRE 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era
(Same as CHICANST 201B) How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.
5 units, Aut (Hernandez, G)

CSRE 203A. The Changing Face of America: Civil Rights and Education Strategies for the 21st Century
For students with leadership potential who have studied these topics in lecture format. Race discrimination strategies, their relation to education reform initiatives, and the role of media in shaping racial attitudes in the U.S.
5 units, Spr (Montoya, J; Steyer, J)

COMPUTATIONAL AND MATHEMATICAL ENGINEERING (CME)

UNDERGRADUATE COURSES IN CME
COURSES OF INSTRUCTION

CME 102. Ordinary Differential Equations for Engineers
(Same as ENGR 155A) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications. Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
5 units, Win (Darve, E)

CME 104. Linear Algebra and Partial Differential Equations for Engineers
5 units, Spr (Khayms, V)

CME 105. Introduction to Discrete Mathematics and Algorithms
Discrete mathematics and algorithms as used in modeling and problem solving technique emphasizing contemporary problems. Topics: introduction to set theory, logic, combinatorics, and graphs theory; formal proof techniques in induction, recursion, and contradiction; algorithms for sorting, shortest paths, minimum spanning trees, and bipartite matching. Applications to Internet advertising, viral marketing, routing, social networks and games of chance. Recommended: background in linear algebra/matrix theory.
3 units, not given this year

CME 106. Introduction to Probability and Statistics for Engineers
(Same as ENGR 155C) Probability; random variables, independence, conditional probability, discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
3-4 units, Win (Khayms, V), Sum (Khayms, V)

CME 108. Introduction to Scientific Computing
Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Prerequisites: CS106A or familiarity with MATLAB; MATH 51, 52, 53; inappropriate for students who have taken CME 102,104/ENGR 155A,B. GER:DB-EngrAppSci
3-4 units, Win (Staff)

CME 191. Special Studies or Projects
Independent work under faculty direction. Individual or team activities involving lab work or directed reading.
1 unit, Aut (Murray, W), Win (Staff), Spr (Staff)

CME 200. Linear Algebra with Application to Engineering Computations
(Same as ME 300A) Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH103, 130, or equivalent.
3 units, Aut (Moin, P)

CME 204. Partial Differential Equations in Engineering
(Same as ME 300B) Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.
3 units, Win (Staff)

CME 206. Introduction to Numerical Methods for Engineering
(Same as ME 300C) Numerical methods from a user’s point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations; stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.
3 units, Spr (Staff)

CME 211. Computer Programming in C++ for Earth Scientists and Engineers
(Same as ENERGY 211) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. Basic facilities of C++. Numerical problems from various science and engineering applications.
3 units, Win (Gerritsen, M)

CME 212. Introduction to Large-Scale Computing in Engineering
Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fft, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting, vi/emacs, gcc, make, gdb, gprof, version control systems and LaTeX. Prerequisites: CME 200/ME 300A, CME 211, and CS 106X or equivalent level of programming in C/C++.
3 units, Spr (Gerritsen, M)

CME 215A. Advanced Computational Fluid Dynamics
(Same as AA 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning; Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, Win (Jameson, A)

GRADUATE COURSES IN CME

CME 200. Linear Algebra with Application to Engineering Computations
(Same as ME 300A) Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH103, 130, or equivalent.
3 units, Aut (Moin, P)

CME 204. Partial Differential Equations in Engineering
(Same as ME 300B) Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.
3 units, Win (Staff)

CME 206. Introduction to Numerical Methods for Engineering
(Same as ME 300C) Numerical methods from a user’s point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations; stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.
3 units, Spr (Staff)

CME 211. Computer Programming in C++ for Earth Scientists and Engineers
(Same as ENERGY 211) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. Basic facilities of C++. Numerical problems from various science and engineering applications.
3 units, Win (Gerritsen, M)

CME 212. Introduction to Large-Scale Computing in Engineering
Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fft, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting, vi/emacs, gcc, make, gdb, gprof, version control systems and LaTeX. Prerequisites: CME 200/ME 300A, CME 211, and CS 106X or equivalent level of programming in C/C++.
3 units, Spr (Gerritsen, M)

CME 215A. Advanced Computational Fluid Dynamics
(Same as AA 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning; Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, Win (Jameson, A)
CME 215B. Advanced Computational Fluid Dynamics
(Same as AA 215B) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, Spr (Jameson, A)

CME 291. Master’s Research
Students require faculty sponsor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 300. Departmental Seminar Series
Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.
1 unit, Aut (Murray, W), Win (Murray, W)

CME 302. Numerical Linear Algebra
First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.
3 units, Aut (Gerritsen, M)

CME 303. Partial Differential Equations of Applied Mathematics
(Same as MATH 220) First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.
3 units, Aut (Vasy, A)

CME 304. Numerical Optimization
(Same as MS&E 315) Solution of nonlinear equations; unconstrained optimization, linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.
3 units, Win (Murray, W)

CME 305. Discrete Mathematics and Algorithms
(Same as MS&E 316) Topics: enumeration such as Cayley’s theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.
3 units, Win (Saberi, A)

CME 306. Numerical Solution of Partial Differential Equations
(Same as MATH 226) Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger’s equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.
3 units, Spr (Staff)

CME 308. Stochastic Methods in Engineering
(Same as MATH 228) Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability, background in real variables and analysis.
3 units, Spr (Papanicolaou, G)

Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.
1-2 units, not given this year

CME 326. Numerical Methods for Initial Boundary Value Problems
Initial boundary value problems are solved in different areas of engineering and science modeling phenomena, such as wave propagation and vibration, and fluid flow. Numerical techniques for such simulations in the context of applications. Emphasis is on stability and convergence theory for methods for hyperbolic and parabolic initial boundary value problems, and the development of efficient methods for these problems.
3 units, not given this year

CME 330. Applied Mathematics in the Chemical and Biological Sciences
(Same as CHEMENG 300) Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.
3 units, not given this year

CME 334. Advanced Methods in Numerical Optimization
(Same as MS&E 312) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.
3 units, not given this year

CME 335. Advanced Topics in Numerical Linear Algebra
Possible topics: Eigenvalue problems, including perturbation theory, algorithms, and related problems such as the SVD or generalized eigenvalue problems; iterative methods, including stationary and non-stationary methods; matrix functions, including applications of moments and quadrature; polynomial equations and Parallel implementation of matrix computations. May be repeated for credit.
3 units, offered occasionally

CME 336. Linear and Conic Optimization with Applications
(Same as MS&E 314) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.
3 units, alternate years, not given this year

CME 337. Information Networks
(Same as MS&E 337) Network structure of the Internet and the web. Modeling, scale-free graphs, small-world phenomenon. Algorithmic implications in searching and inter-domain routing; the effect of structure on performance. Game theoretic issues, routing games, and network creation games. Security issues, vulnerability, and robustness. Prerequisite: basic probability and graph theory.
3 units, Spr (Saberi, A), alternate years, not given this year

CME 338. Large-Scale Numerical Optimization
(Same as MS&E 318) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. Interior methods. The simplex method. Factorization and updates, The reduced-gradient, augmented Lagrangian, and SQP methods. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108 or 302.
3 units, Spr (Saunders, M)
CME 340. Large-Scale Data Mining
(Same as CS 345L) Focus is on very large scale data mining on the web and on social networks. Topics include network models, ranking algorithms, reputation, collaborative filtering, and supervised and unsupervised learning. Individual or group applications-oriented programming project. 1 unit without project; 3 units with final project. Prerequisites: programming at the level of CS 108; statistics at the level of MATH 103 and STATS 116. Recommended: machine learning at the level of CS 229; knowledge of Java.
1-3 units, not given this year

CME 342. Parallel Methods in Numerical Analysis
Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems and partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models, matrix computations, FFT, fast multiple methods, domain decomposition, and graph partitioning. Prerequisite: CME 302 or 200/ME300A, or consent of instructor. Recommended: differential equations and advanced programming language such as C or C++.
3 units, Spr (Alonso, J)
CME 352. Molecular Algorithms
Recent research in DNA and RNA based nanotechnology, mathematical models of DNA self-assembly, algorithmic techniques and stochastic analyses for efficient and robust DNA self-assembly, experimental advances in molecular motors and machines which use DNA migration/enzymes, and algorithmic issues in the design of molecular motors and machines. Prerequisite: consent of instructor.
3 units, alternate years, not given this year

CME 356. Engineering Functional Analysis and Finite Elements
3 units, Win (Lew, A)

CME 358. Finite Element Method for Fluid Mechanics
Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notes of mathematical analysis of non-coercive partial differential equations; the inf-sup and Babuška-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments. Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.
3 units, not given this year

CME 380. Constructing Scientific Simulation Codes
Practical methods for writing and combining software components to generate simulation applications. Practical methodologies for constructing simulation code applications. How to design, write, and combine software components to generate simulation applications. Steering: using a small driver language like Python to script or steer the progress of a code. Data models and formats: how data is represented and shared inside an application and its external representation on disk. Mixed language programming using C, C++, F77, F90, and Python. Rational software engineering including: design, configuration control, code generation and makefiles. Other technologies needed to create real world applications regardless of scientific discipline.
3 units, not given this year

CME 400. Ph.D. Research
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 444. Computational Consulting
Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.
1-3 units, Aut (Gerritsen, M), Win (Gerritsen, M), Spr (Gerritsen, M)

CME 500. Numerical Analysis and Computational and Mathematical Engineering Seminar
Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

CME 510. Linear Algebra and Optimization Seminar
Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.
1 unit, Aut (Saunders, M), Win (Saunders, M), Spr (Saunders)

COMPUTER SCIENCE (CS)

UNDERGRADUATE COURSES IN COMPUTER SCIENCE

CS 1C. Introduction to Computing at Stanford
For those with limited experience with computers or who want to learn more about Stanford’s computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.
1 unit, Aut (Staff)

CS 2C. Multimeda Production
Sound, image and video editing techniques and applications, including understanding file formats and publishing multimedia online. Topics: GarageBand, Photoshop, iMovie, Final Cut Pro, and iDVD. Weekly lecture followed by lab section. Second unit for additional creative production assignments completed out of class time and extensive Final Project. Not a programming course, but will use computer multimedia applications heavily for editing.
1-2 units, Aut (Chan, K), Win (Chan, K)

CS 21N. Can Machines Know? Can Machines Feel?
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Can mental attitudes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pooling robot or tax-preparation software have an intention? If not, why not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci
3 units, Aut (Shoham, Y)

CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Motion planning theory and computational approaches: how to represent, simulate, and plan motions in a computer. Intriguing algorithms, representations, and applications: terminology and concepts for reading motion planning research literature. Problems include: how a robot arm manipulates parts without colliding with its configuration environment; how many maneuvers are required to park a car in a tight spot; how characters in computer games avoid running into obstacles; how molecules change shapes to perform biological functions; how to assemble a product from individual parts; how a multi-limbed robot can navigate on rough terrain; how robots can multi-limbed robot can navigate on rough terrain; how robots can perform surgical procedures. Prerequisite: some computer programming experience in any language. GER:DB-EngrAppSci
3 units, Spr (Latombe, J)
CS 47N. Computers and the Open Society
(F,Sem) Stanford Introductory Seminar. How online technologies change our lives and the social structure that we live in. Course emphasizes critical analyses of current trends i.e. blogging, social networks, and instant mobile communication. Readings include case studies and analyses of basic principles i.e. privacy, equity and sustainability. Guest speakers who have participated in development of open source software and the Web will share their experiences and enter into debates on current issues. Students work individually and in small groups to research issues, develop the capacity for critical thinking about them, and use the results as the basis for writing and discussions both in class and on-line.

3 units, Aut (Winograd, T)

CS 73N. Business on the Information Highways

GER:DB-EngrAppSci
3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)

CS 74N. Digital Dilemmas
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues where policy decision making requires understanding of computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting.

GER:DB-EngrAppSci
3 units, Aut (Dill, D)

CS 103. Mathematical Foundations of Computing
Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applications. May not be taken by students who have completed 103A,B or 103X. Prerequisite: 106A or equivalent.

GER:DB-Math
3-5 units, Aut (Plummer, R), Spr (Plummer, R)

CS 105. Introduction to Computers
For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor.

Prerequisite: minimal math skills.

GER:DB-EngrAppSci
3-5 units, Aut (Young, P), Spr (Young, P)

CS 106A. Programming Methodology
(Same as ENGR 70A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required.

GER:DB-EngrAppSci
3-5 units, Aut (Sahami, M), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

CS 106B. Programming Abstractions
(Same as ENGR 70B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent.

GER:DB-EngrAppSci
3-5 units, Aut (Sahami, M), Win (Cain, G), Spr (Cain, G), Sum (Staff)

CS 106L. Standard C++ Programming Laboratory
Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor.

Corequisite: 106B or 106X.

1 unit, not given this year

CS 106X. Programming Abstractions (Accelerated)
(Same as ENGR 70X) Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor.

GER:DB-EngrAppSci
3-5 units, Aut (Cain, G)

CS 107. Computer Organization and Systems
Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, performance evaluation and optimization, memory organization and management, and concurrency and threading. Prerequisites: 106B or X, or consent of instructor.

GER:DB-EngrAppSci
3-5 units, Aut (Zelenski, J), Spr (Zelenski, J)

CS 108. Object-Oriented Systems Design
Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107.

GER:DB-EngrAppSci
3-4 units, Aut (Young, P), Win (Young, P)

CS 109. Introduction to Probability for Computer Scientists
Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, 109 and MATH 51 or equivalent.

GER:DB-EngrAppSci
3-5 units, Win (Sahami, M), Spr (Sahami, M)

CS 110. Principles of Computer Systems
Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107.

GER:DB-EngrAppSci
3-5 units, Win (Rosenblum, M), Spr (Rosenblum, M)

CS 121. Introduction to Artificial Intelligence
(Only one of 121 or 221 counts towards any CS degree program.) Concepts, representations, and techniques used in building practical computational systems (agents) that appear to display artificial intelligence (AI), through the use of adaptive information processing algorithms. Topics: history of AI, reactive systems, heuristic search, planning, constraint satisfaction, knowledge representation and uncertain reasoning, machine learning, classification, applications to language, and vision. Prerequisites: 103 or 103B, and facility with differential calculus, vector algebra, and probability theory.

GER:DB-EngrAppSci
3 units, Spr (Latombe, J), Sum (Staff)

CS 124. From Languages to Information
(Same as LINGUIST 180) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition.

GER:DB-EngrAppSci
3-4 units, Win (Jurafsky, D)

CS 140. Operating Systems and Systems Programming
Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110.

GER:DB-EngrAppSci
3-4 units, Win (Mazieres, D), Spr (Ousterhout, J)
CS 142. Web Applications
Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, javascript, and the document object model. Server-side technologies such as sessions, templates, relational databases, and object-relational mapping. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 with a grade of C- or higher. 3 units, Aut (Ousterhout, J)

CS 143. Compilers
Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107. GER:DB-EngrAppSci
3-4 units, Aut (Allen, A), Sum (Staff)

CS 144. Introduction to Computer Networking
3-4 units, Aut (Levis, P; Mazieres, D)

CS 145. Introduction to Databases
Database design and use of database management systems for applications. The relational model, relational algebra, and SQL, the standard language for creating, querying, and modifying relational databases. XML data including DTDs and XML Schema for validation, and the query and transformation languages XPath, XQuery and XSLT. UML database design, and relational design principles based on functional dependencies and normal forms. Indexes, views, transactions, authorization, integrity constraints, and triggers. Advanced topics may include data warehousing, data mining, web data management, and data integration. Prerequisites: 103 or 103B, and 107. GER:DB-EngrAppSci
3-4 units, Aut (Widom, J)

CS 147. Introduction to Human-Computer Interaction Design
Usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, human cognitive and physical ergonomics, information and interactivity structures, design tools and environments. Team project in interaction design. Prerequisite: 106B or X or equivalent programming experience.
3-4 units, Aut (Klemmer, S)

CS 147L. Human-Computer Interaction Technology Laboratory
1 unit, Aut (Krieger, M)

CS 148. Introduction Computer Graphics and Imaging
Topics: Image input and output devices such as cameras and displays, graphics hardware and software, input technologies and interactive techniques, typography and page layout, light and color representations, exposure and tone reproduction, image composition and imaging models, digital signal processing, sampling, aliasing and antialiasing, compression, two- and three-dimensional geometry and formations, modeling techniques including curves and surfaces, reflection models and illumination algorithms, and basic methods of animation. Programming assignments using C++ and OpenGL. Prerequisites: CS 107, MATH 51. GER:DB-EngrAppSci
3 units, Aut (Harrahan, P), Sum (Staff)

CS 149. Parallel Computing
Course is an introduction to parallelism and parallel programming. Most new computer architectures are parallel; programming these machines requires knowledge of the basic issues of and techniques for writing parallel software. Topics: varieties of parallelism in current hardware (e.g., fast networks, multicore, accelerators such as GPUs, vector instruction sets), importance of locality, implicit vs. explicit parallelism, shared vs. non-shared memory, synchronization mechanisms (locking, atomicity, transactions, barriers), and parallel programming models (threads, data parallel/streaming, futures, SPMD, message passing, SIMT, transactions, and nested parallelism). Significant parallel programming assignments will be given as homework. Course is open to students who have completed the introductory CS course sequence through 110 and have taken at least one of CS 140, 143, 144, or 145. GER:DB-EngrAppSci
3-4 units, Win (Aiken, A; Olukotun, O)

CS 154. Introduction to Automation and Complexity Theory
Regular sets: finite automata, regular expressions, equivalences among notations, methods of proving a language not to be regular. Context-free languages: grammars, pushdown automata, normal forms for grammars, proving languages non-context-free. Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook’s theorem, reducibilities among problems. Prerequisites: 103 or 103B. GER:DB-EngrAppSci
3-4 units, Aut (Dill, D), Spr (Ullman, J)

CS 154N. Introduction to NP Completeness
Turing-complete problems, properties, the class NP, complete problems for NP, Cook’s theorem, reducibilities among problems. Students participate in approximately the last half of 154. Prerequisite: formal languages and automata as in first part of 154.
2 units, Aut (Dill, D), Spr (Ullman, J)

CS 155. Computer and Network Security
For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system holes, application security (web, email, databases), viruses, social engineering attacks, privacy, and digital rights management. Course projects focus on building reliable code. Prerequisite: 140. Recommended: basic Unix. GER:DB-EngrAppSci
3 units, Spr (Boneh, D; Mitchell, J)

CS 156. Calculus of Computation
Decisions procedures with applications to analyzing and developing robust software. Logic review. Propositional and first-order logic; induction. Verification: methods for proving correctness of sequential programs using first-order reasoning; need for decision procedures. Decision procedures: algorithms that decide the validity of logical formulas for common theories including SAT, equality, arithmetic, recursive data structures, and arrays. Combination theorems and combination of decision procedures. Static analysis: algorithms for deducing program properties. Projects include writing verified programs. Prerequisites: 103, 106, or equivalents. GER:DB-EngrAppSci
3-4 units, Win (Manna, Z)

CS 157. Logic and Automated Reasoning
An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B. GER:DB-EngrAppSci
3 units, Aut (Gesereth, M)

CS 161. Design and Analysis of Algorithms
3-5 units, Aut (Plotkin, S), Win (Roughgarden, T), Sum (Staff)

CS 164. Computing with Physical Objects: Algorithms for...
Computational structures for shape and motion, shape fitting and matching, triangulations and other spatial subdivisions, and low-dimensional search and optimization. Examples relevant to computer graphics, computer vision, robotics and geometric computation emphasizing algorithmic paradigms applicable to multidimensional data. Prerequisites: CS 103 or 103B, or CS 109 or STATS 116, and CS 106B/X or consent of instructor. GER:DB-EngAppSci

3 units, Spr (Guibas, L)

CS 178. Digital Photography
Scientific, artistic, and computing aspects of digital photography. Topics: lenses and optics, light and sensors, optical effects in nature, perspective and depth of field, sampling and noise, the camera as a computer platform, image processing and editing, history of photography, computational photography. Counts as a CS elective in the Graphics track. Prerequisites: introductory calculus; students must have a digital camera with manual control over shutter speed and aperture. Loaner cameras may be available. No programming experience required. Enrollment limited; see cs178.stanford.edu on March 1 for enrollment procedure. GER:DB-EngAppSci

3-5 units, Spr (Levy, M)

CS 181. Computers, Ethics, and Public Policy
(Formerly 201) Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas; privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X. GER:EC-EthicReas

3-4 units, Win (Johnson, M)

CS 191. Senior Project
Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 191W. Writing Intensive Senior Project
Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member.

3-6 units, Aut (Staff), Win (Staff), Spr (Staff)

CS 192. Programming Service Project
Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 193C. Client-Side Internet Technologies
Client-side technologies used to create web sites such as sophisticated Web 2.0 interfaces similar to Google maps, XHTML, CSS, JavaScript, document object model (DOM), AJAX, and Flash. Prerequisite: programming experience at the level of 106A.

3 units, Sum (Staff)

CS 193D. Professional Software Development with C++
Programming techniques and methodologies. Language concepts including object-oriented design, memory management, and the standard library. Modern software development concepts such as design patterns, test-driven development, extreme programming, and XML. Prerequisites: basic C++ or significant experience in C or Java. GER:DB-EngAppSci

3 units, not given this year

CS 193P. iPhone Application Programming
Tools and APIs required to build applications for the iPhone platform using the iPhone SDK. User interface designs for mobile devices and unique user interactions using multitouch technologies. Object-oriented design using model-view-controller pattern, memory management, Objective-C programming language. iPhone APIs and tools including Xcode, Interface Builder and Instruments on Mac OS X. Other topics include: core animation, bonjour networking, mobile device power management and performance considerations. Prerequisites: C language and programming experience at the level of 106B or X. Recommended: UNIX, object-oriented programming, graphical toolkits.

3 units, not given this year

CS 194. Software Project
Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Prerequisites: CS 110 and CS 161.

3 units, Spr (Plummer, R)

CS 196. Computer Consulting
Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford’s computing environment. Not a programming course. Prerequisite: 1C or equivalent.

2 units, Win (Ly, J), Spr (Ly, J)

CS 198. Teaching Computer Science
Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see http://cs198.stanford.edu.

3-4 units, Aut (Sahami, M; Wang, L; Ruth, E), Win (Sahami, M; Wang, L), Spr (Sahami, M; Wang, L; Ruth, E)

CS 199. Independent Work
Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 199P. Independent Work
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 202. Law for Computer Science Professionals
Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

1 unit, Aut (Hansen, D)

CS 204. Computational Law
Legal informatics based on representation of regulations in computer form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. Prerequisite: basic concepts of programming.

1 unit, not given this year

CS 210A. Software Project Experience with Corporate Partners
Two quarter project course. Focus is on real world software development. Corporate partners provide loosely defined challenges from their R&D labs for which they are seeking innovative solutions and ideas. Student teams function as small startup companies with a technical advisory board comprised of the instructional staff. Exposure to: current practices in software engineering; exploration of the design space; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisite: CS
CS 209. Introduction to Functional Programming
Functional programming offers insights and advanced program-
ing techniques not found in other programming languages. Top-
ics: lambda calculus (an alternative to Turing machines), higher-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
tactic extension, and advanced control abstractions known as mo-
order functions, lazy evaluation, type-oriented programming, syn-
the number of R&D labs for which they are seeking innovative solu-
tions and ideas. Student teams function as a small startup compa-
nies with a technical advisory board comprised of the instruc-
tional staff. Exposure to: current practices in software engineering; ex-
ploration of the design space; significant development experience
with creative freedoms; working in groups; real world software en-
engineering challenges; public presentation of technical work;
creating written descriptions of technical work. Prerequisite: CS
210A.
1-4 units, Spr (Borenstein, J)

CS 226. Statistical Techniques in Robotics
Theory and practice of statistical techniques used in robotics and
large-scale sensor-based systems. Probabilistic state estimation,
Bayes, Kalman, information and particle filters. Simultaneous
localization and mapping techniques, and multi-robot sensor fu-
sion. Markov techniques for making decisions under uncertainty,
and probabilistic control algorithms and exploration.
3 units, Win (Thrun, S)

CS 228S. Speech Recognition and Synthesis
(Same as LINGUIST 285) Automatic speech recognition, speech
synthesis, and dialogue systems. Focus is on key algorithms in-
cluding noisy channel model, hidden Markov models (HMMs),
Viterbi decoding, N-gram language modeling, unit selection syn-
thesis, and roles of linguistic knowledge. Prerequisite: program-
ing experience. Recommended: CS 221 or 229.
2-4 units, not given this year

CS 224U. Natural Language Understanding
(Same as LINGUIST 188, LINGUIST 288) Machine understand-
ing of human language. Computational semantics (determination
of word sense and synonymy, event structure and thematic roles,
time, aspect, causation, compositional semantics, scopal opera-
tors), and computational pragmatics and discourse (coherence,
coreference resolution, information packaging, dialogue structure).
Theoretical issues, online resources, and relevance to applications
including question answering and summarization. Prerequisites:
one of LINGUIST 180 / CS 124 / CS 2224S; and logic such as
LINGUIST 130A or B, CS 157, or PHIL150).
3-4 units, Win (Juszczak, D), Spr (MacCartney, W)

CS 225A. Experimental Robotic
Hands-on: Topics: kinematic and dynamic control of motion, com-
pliant motion and force control, sensor-based collision avoidance,
motion planning, dynamic skills, and robot-human interfaces. Li-
mited enrollment. Prerequisite: 223A.
3 units, Spr (Khatib, O)

CS 222. Rational Agency and Intelligent Interaction
(Same as PHIL 358) For advanced undergraduates, and M.S. and
beginning Ph.D. students. Logic-based methods for knowledge
representation, information change, and games in artificial intel-
lence and philosophy. Topics: knowledge, certainty, and belief;
time and action; belief dynamics; preference and social choice;
games; and desire and intention. Prerequisite: propositional and
first-order logic. Recommended: modal logic; game theory.
3 units, Win (Shoham, Y)

CS 223A. Introduction to Robotics
Topics: robotics foundations in kinematics, dynamics, control,
motion planning, trajectory generation, programming and design.
Recommended: matrix algebra.
3 units, Win (Khatib, O)

CS 222B. Introduction to Computer Vision
Fundamental issues and techniques of computer vision. Image
formation, edge detection and image segmentation, stereo, motion,
shape representation, recognition.
3 units, Win (Li, F)

CS 224M. Multi-Agent Systems
For advanced undergraduates, and M.S. and beginning Ph.D. stu-
dents. Topics: logics of knowledge and belief, other logics of men-
tal state, theories of belief change, multi-agent probabilities, essen-
tials of game theory, social choice and mechanism design, multi-
agent learning, communication. Applications discussed as appro-
priate; emphasis is on conceptual matters and theoretical founda-
tions. Prerequisites: basic probability theory and first-order logic.
3 units, Aut (Shoham, Y)

CS 224N. Natural Language Processing
(Same as LINGUIST 280) Methods for processing human lan-
guage information and the underlying computational properties of
natural languages. Syntactic and semantic processing from linguis-
tic and algorithmic perspectives. Focus is on modern quantitative
techniques in NLP: using large corpora, statistical models for ac-
quision, translation, and interpretation; and representative sys-
tems. Prerequisites: CS124 or CS121/221.
3-4 units, Spr (Manning, C)

CS 224U. Natural Language Understanding
(Same as LINGUIST 188, LINGUIST 288) Machine understand-
ing of human language. Computational semantics (determination
of word sense and synonymy, event structure and thematic roles,
time, aspect, causation, compositional semantics, scopal opera-
tors), and computational pragmatics and discourse (coherence,
coreference resolution, information packaging, dialogue structure).
Theoretical issues, online resources, and relevance to applications
including question answering and summarization. Prerequisites:
one of LINGUIST 180 / CS 124 / CS 2224S; and logic such as
LINGUIST 130A or B, CS 157, or PHIL150).
3-4 units, Win (Juszczak, D), Spr (MacCartney, W)

CS 225A. Experimental Robotic
Hands-on: Topics: kinematic and dynamic control of motion, com-
pliant motion and force control, sensor-based collision avoidance,
motion planning, dynamic skills, and robot-human interfaces. Li-
mited enrollment. Prerequisite: 223A.
3 units, Spr (Khatib, O)
CS 225B. Robot Programming Laboratory
For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabilistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.
3-4 units, Aut (Konolige, K)

CS 227. Reasoning Methods in Artificial Intelligence
Technical presentation of logical algorithmic techniques for problem solving in AI. Combines formal algorithmic analysis with a description of applications. Topics: representation and modeling, propositional satisfiability, constraint satisfaction, planning and scheduling, advanced topics. Focus is on recent results. Prerequisites: familiarity with basic notions in data structures and with techniques in algorithm design and analysis. Recommended: previous or concurrent course in AI.
3 units, Spr (Staff)

CS 227B, General Game Playing
A general game-playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.
3 units, Spr (Genesereth, M)

CS 228. Structured Probabilistic Models: Principles and Techniques
Probabilistic modeling languages for representing complex domains, algorithms for reasoning and decision making using these representations, and learning these representations from data. Focus is on probabilistic graphic models, including Bayesian and Markov models and dynamic Bayesian networks, and extensions to decision making such as influence diagrams. Basic techniques and their applications to domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.
3 units, Win (Koller, D)

CS 228T, Structured Probabilistic Models: Theoretical Foundations
For students interested in advanced methods in machine learning and probabilistic AI. Theoretical foundations and extension for the ideas and algorithms covered in CS 228. Topics include theory and advanced algorithms for approximate inference in graphical models, representation and inference in continuous processes, and theory and algorithms for learning with missing data and hidden variables. Pre-or corequisites: CS 228; strong mathematical foundation.
3 units, Win (Koller, D)

CS 229. Machine Learning
Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics.
3 units, Aut (Ng, A)

CS 240. Advanced Topics in Operating Systems
Recent research. Classic and new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent.
3-4 units, Win (McKeown, N)

CS 240A. Advanced Operating Systems Implementation
Operating system techniques for meeting the performance, security, flexibility, and robustness needs of demanding applications. Review of hardware/software interface and traditional operating system concepts. Recent operating systems research. Lab to apply concepts. Students work with a minimal operating system capable of running on standard PC hardware. Operating system written in C with some assembly. Prerequisite: 140 or consent of instructor.
3 units, not given this year

CS 240B. Distributed Systems
Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.
3 units, Spr (Cheriton, D)

CS 240C. Advanced Operating Systems Implementation
Operating system techniques for meeting the performance, security, flexibility, and robustness needs of demanding applications. Review of hardware/software interface and traditional operating system concepts. Recent operating systems research. Lab to apply concepts. Students work with a minimal operating system capable of running on standard PC hardware. Operating system written in C with some assembly. Prerequisite: 140 or consent of instructor.
3 units, not given this year

CS 240D. Distributed Storage Systems
File system implementation, low-level database storage techniques, and distributed programming. File system structures, journaling and logging, I/O system performance, RAID (redundant arrays of inexpensive disks), remote procedure call abstraction, and systems illustrating these concepts. File systems, distributed computing, replication and consistency, fault tolerance, and crash recovery. Programming assignments. Final project to build a functioning Unix file system. Prerequisites: C++ and familiarity with Unix; 140 or consent of instructor.
3 units, not given this year

CS 240E. Low Power Wireless System Software
The structure and implementation of software systems for low power embedded sensors; how to build software that can run unattended for years on small batteries. Topics: hardware trends, energy profiles, execution models, aggregation, storage, application requirements, allocation, power management, resource management, scheduling, time synchronization, programming models, software design, and fault tolerance. Students build working systems on TinyOS, a low-power embedded operating system.
3 units, not given this year

CS 240X. Advanced Operating Systems II
Same content as 240, with expanded topics focusing on more difficult and specialized papers. Recent topics in systems research.
3 units, not given this year

CS 242. Programming Languages
Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.
3 units, Aut (Mitchell, J)

CS 243. Program Analysis and Optimizations
Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.
3-4 units, Win (Lam, M)

CS 244. Advanced Topics in Networking
Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent.
3-4 units, Win (McKeown, N)

CS 244B. Distributed Systems
Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.
3 units, Spr (Cheriton, D)
CS 244C. Readings and Projects in Distributed Systems
Companion project option for 244B. Corequisite: 244B. 3-6 units, Spr (Cheriton, D)

CS 244E. Wireless Networking
Challenges of low power wireless networking protocols and applications. Topics: the OSI model, 802.11, Bluetooth, 802.15.4, WiMAX, hardware considerations, media access, radio propagation models, flooding, dissemination, gossip, link behavior, opportunistic reception, network coding, modulation, TCP. Students read papers and build working protocols on the 100-mode Stanford wireless testbed. 3 units, Spr (Levis, P)

CS 245. Database Systems Principles
File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161. 3 units, Win (Garcia-Molina, H), Sum (Staff)

CS 247. Human-Computer Interaction Design Studio
Project-based. Methods used in interaction design including needs analysis, user observation, idea sketching, concept generation, scenario building, storyboards, user character stereotypes, usability analysis, and market strategies. Prerequisites: 147 and 106A or equivalent background in programming. 3-4 units, Win (Winograd, T)

CS 247L. Human-Computer Interaction Technology Lab
Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247. 1 unit, Win (Winograd, T)

CS 248. Three-Dimensional Computer Graphics
Rendering, animation and modeling for interactive computer graphics. Rasterization, graphics pipeline, graphics hardware; texture mapping and its applications; lighting and surface shading; rendering optimization; keyframing; physics simulation. Programming projects and final project. Prerequisite: CS148. 3-5 units, Win (Koltun, V)

CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective
Topics: large-scale software development approaches, encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, design patterns, minimalizing dependencies and value-oriented programming. The role of programming/programming conventions/styles and tools in surviving object-oriented programming for class libraries, frameworks, and programming-in-the-large; general techniques for object-oriented programming. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D. 3 units, Aut (Cheriton, D)

CS 249B. Advanced Object-Oriented Programming
How to produce reasonable-cost, high-quality software such as next-stage, large-scale systems that handle life-critical systems. Software process, people, practice, and audit: integrating invariant checks with production software; collection implementation; generic programming and templates; design of value types; named descriptions for large value types; memory management; control flow: placement; locality and consumption; concurrency with modular object-oriented programming. Inheritance: when and why multiple inheritance naming, directories, manager, and other design patterns. 3 units, Win (Cheriton, D)

CS 255. Introduction to Cryptography
For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (single and double key), digital signatures, pseudo-random bit generation, authentication, electronic commerce (anonymous cash, micropayments), key management, PKI, zero-knowledge protocols. Prerequisite: basic probability theory. 3 units, Win (Boneh, D)

CS 256. Formal Methods for Reactive Systems

CS 256L. Formal Methods for Reactive Systems Laboratory
Practical application of CS 256. Individual projects include implementation of verification methods, verification case studies, or tool evaluation, depending on student preference. Not offered this year. 2 units, not given this year

CS 257. Human-Computer Interaction Technology Lab
Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247. 1 unit, Win (Winograd, T)

CS 258. Introduction to Programming Language Theory
Syntactic, operational, and semantic issues in the mathematical analysis of programming languages. Type systems and non-context-free syntax. Universal algebra and algebraic data types. Operational semantics given by rewrite rules; confluence and termination. Denotational semantics and elementary domain theory for languages with higher-type functions and recursion. Treatment of side effects. Prerequisites: 154, 157 or PHIL 160A. 3 units, not given this year

CS 259. Security Analysis of Network Protocols
Hands-on experience in formal methods to verify and evaluate the security of network protocols and other systems. Common security protocols and their properties including secrecy, authentication, key establishment, and fairness. Topics: standard formal models and tools used in security protocol analysis; their advantages and limitations. Fully automated, finite-state, model-checking techniques. Constraint solving, process algebras, protocol logics, probabilistic model checking, and game theory. Students select a protocol or secure system to analyze, specify it in the chosen model, use a formal analysis tool to verify its properties, and present findings. 3 units, not given this year

CS 261. Optimization and Algorithmic Paradigms
Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent. 3 units, Win (Piotkin, S)

CS 262. Computational Genomics
(Same as BIOMEDIC 262) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignment, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics. 3 units, Win (Batzoglou, S)

CS 268. Geometric Algorithms
Techniques for design and analysis of efficient geometric algorithms for objects in 2-, 3-, and higher dimensions. Topics: convexity, triangulations and simplicial complexes, sweeping, partitioning, and point location. Voronoi/Delaunay diagrams and their properties. Arrangement of curves and surfaces. Intersection and visibility problems. Geometric searching and optimization. Random sampling methods. Impact of numerical issues in geometric computation. Example applications to robotic motion planning, visibility preprocessing and rendering in graphics, model-based recognition in computer vision, and structural molecular biology. Prerequisite: discrete algorithms at the level of 161. Recommended: 164. 3 units, not given this year
CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
(Same as BIOMEDIN 210) Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.
3 units, Aut (Musen, M)

CS 271. Effective Design in Clinical Informatics Systems
(Same as BIOMEDIN 211) Methods of designing and engineering software systems in complex clinical environments. Case studies illustrate factors leading to success or failure of systems. Project assignments involve focused team-based design work. Topics: user and organizational requirements, data and knowledge modeling, component-based system design, system prototyping, and human-systems interaction. Prerequisite: BIOMEDIN 210 recommended, or database or object-oriented programming course.
3 units, Win (Das, A)

CS 272. Introduction to Biomedical Informatics Research Methodology
(Same as BIOE 212, BIOMEDIN 212, GENE 212) Hands-on software building. Student teams conceive, design, specify, implement, and evaluate a report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.
3 units, Aut (Altman, R; Cheng, B; Klein, T)

CS 273A. A Computational Tour of the Human Genome
(Same as BIOMEDIN 273A, DBIO 273A) Biology through an exploration of Human Genome. Key genomic and genetic concepts from an informatics perspective. Biomedical advances resulting from the Genomics revolution. Topics: genome sequencing: technologies, assembly, personalized sequencing. Functional landscape: gene function, expression, protein-DNA. Genome evolution: comparative genomics, ultraconservation, co-option. Additional topics: population genetics, personalized genomics, and ancient DNA. Course starts with primer in Biology and text processing languages. Ends with guest lectures from forefront of genomic research.
3 units, Aut (Batzoglou, S; Bejerano, G)

CS 274. Representations and Algorithms for Computational Molecular Biology
(Same as BIOE 214, BIOMEDIN 214, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.
3-4 units, Spr (Staff)

CS 275. Translational Bioinformatics
(Same as BIOMEDIN 217) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.
4 units, Win (Butte, A)

CS 276. Information Retrieval and Web Search
(Same as LINGUIST 286) Text information retrieval systems; efficient text indexing: Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 140 or 161.
3 units, Aut (Manning, C; Raghavan, P)

CS 277. Experimental Haptics
Haptics as it relates to creating touch feedback in simulated or virtualized environments. Goal is to develop virtual reality haptic simulators and applications. Theoretical topics: psychophysical issues, performance and design of haptic interfaces, haptic rendering methods for 3-D virtual environments, and haptic simulation and rendering of rigid and deformable solids. Applied topics: the CHAI haptic library; implementation of haptic rendering algorithms; collision detection in 3-D environments; design of real-time models for deformable objects. Guest speakers. Lab/programming exercises; a more open-ended final project. Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.
3 units, Win (Barbagli, F; Salisbury, K)

CS 278. Systems Biology
(Same as BIOC 278, BIOE 310, CSB 278) Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.
3 units, not given this year

CS 279. Computational Methods for Analysis and Reconstruction of Biological Networks
Types of interactions, including: regulatory such as transcriptional, signaling, and chromatin modification; protein-protein interactions; and genetic. Biological network structure at scales such as single interaction, small subgraphs, and global organization. Methods for analyzing properties of biological networks. Techniques for reconstructing networks from biological data, including: DNA/protein sequence motifs and sequence conservation; gene expression data; and physical binding data such as protein-DNA, protein-RNA, and protein-protein. Network dynamics and evolution. Prerequisites: biology at the level of BIOSCI 41; computer science and data structures at the level of CS 103 and 106; and probability and statistics at the level of STATS 116 or CS 109.
3 units, not given this year

CS 294. Research Project in Computer Science
Student teams work under faculty supervision on research and implementation of a large project in some major sub-discipline in computer science. Lectures on state-of-the-art methods related to the particular problem domain. Prerequisites: consent of instructor.
3 units, not given this year

CS 294A. Research Project in Artificial Intelligence
Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.
3 units, Aut (Koller, D); Win (Ng, A)

CS 294H. Research Project in Human-Computer Interaction
Many of the most successful web applications are social, from personalized homepages to social networks. Students will learn the fundamental interface design, systems, and algorithms concepts in designing social software. The case-based syllabus will cover insights from both research and industry. As a student, you will contribute to this burgeoning field through a quarter-long, team-based project. Students are required to enter the class with an initial project idea.
3 units, Win (Heer, J)

CS 294S. Research Project in Software Systems and Security
Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, oper-
CS 294W. Writing Intensive Research Project in Computer Science
Restricted to computer science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen. 3 units, Aut (Staff)

CS 295. Software Engineering
Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145. 2-3 units, Spr (Atken, A)

CS 298. Seminar on Teaching Introductory Computer Science
Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor. 1-3 units, not given this year

CS 300. Departmental Lecture Series
For first-year Computer Science Ph.D. students. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole. 1 unit, Aut (Staff)

CS 302. Tech Law with Progressive Minds
How the advent of computing technologies is reflected in the constitution of law, public policy, and technology. Issues relating to civil liberties, consumer protection, e-voting, copyright law, patent law, international patent law, trade secrets, political processes, and litigation. 1 unit, not given this year

CS 303. Designing Computer Science Experiments
Introduction to empirical research in computer science. Learn how to design, execute, interpret, and report on computer science experiments. Conducting empirical work and using experiments to build theory is one of the major ways to move computer science forward, but these issues are often omitted from computer science curricula. Course features case studies drawn from artificial intelligence, systems, and human-computer interaction. Emphasizes the decision-making aspects of research and the logic behind research procedures. 3 units, Spr (Klemmer, S; Levis, P; Manning, C)

CS 309. Industrial Lectureships in Computer Science
Guest computer scientist. By arrangement. May be repeated for credit. (Staff)

CS 309A. Software as a Service
For technology and business students. The shift from traditional software model of disconnected development and CD-ROM deployment to engineering and delivery on the Internet as a service. Guest industry experts give first-hand view of changes in the software industry. 1 unit, Aut (Chow, T)

CS 315A. Parallel Computer Architecture and Programming
The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience. 3 units, Spr (Oluokun, O)

CS 315B. Parallel Computing Research Project
Advanced topics and new paradigms in parallel computing including parallel algorithms, programming languages, runtime environments, library debugging/tuning tools, and scalable architectures. Research project. Prerequisite: consent of instructor. 3 units, not given this year

CS 319. Topics in Digital Systems
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit. 3 units, offered occasionally

CS 322. Network Analysis
The emergence of the web and large online computing applications can be seen as a convergence of social and technological networks, with systems such as the World Wide Web, blogging platforms and Facebook that can be characterized by the interplay between rich information content, the millions of individuals and organizations who create it, and the technology that supports it. Course will cover recent research on the structure and analysis of such large social and information networks and on models and algorithms that abstract their basic properties. Topics: probabilistic models for network structure and evolution, methods for link analysis and network community detection, search algorithms, diffusion and information propagation on the web, virus outbreak detection in networks, and connections with work in the social sciences and economics. 3 units, Aut (Leskovec, J)

CS 323. Understanding Images and Videos: Recognizing and Learning High-Level Visual Concepts
Field of computer vision has seen an explosive growth in past decades. Much of recent effort in vision research is towards developing algorithms that can perform high-level visual recognition tasks on real-world images and videos. With development of Internet, this task becomes particularly challenging and interesting given the heterogeneous data on the web. Course will focus on recent research papers that are focused on solving high-level visual recognition, problems such as object recognition and categorization, scene understanding, human motion understanding, etc. Project required. Prerequisite: some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning. 3 units, Aut (Staff)

CS 326A. Motion Planning
Computing object motions in computer graphics, geometrical computing, robotics, and artificial intelligence for applications such as design, manufacturing, robotics, animated graphics, surgical planning, drug design, assembly planning, graphic animation of human figures, humanoid robots, inspection and surveillance, simulation of crowds, and biology. Path planning methods to generate collision-free paths among static obstacles. Extensions include uncertainty, mobile obstacles, manipulating moveable objects, maneuvering with kinematic constraints, and making and breaking contacts. Configuration space, geometric arrangements, and random sampling. Theoretical methods. 3 units, not given this year

CS 327A. Advanced Robotics
Emerging areas of human-centered robotics and interactive haptic simulation of virtual environments. Topics: redundancy, task-oriented dynamics and control, whole-body control-task and posture decomposition, cooperative robots, haptics and simulation, haptically augmented teleoperation, human-friendly robot design. Prerequisites: 223A or equivalent. 3 units, Spr (Khatib, O)

CS 329. Topics in Artificial Intelligence
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit. 3 units, offered occasionally

CS 339. Topics in Numerical Analysis
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit. 3 units, offered occasionally

CS 340. Topics in Computer Systems
Topics vary every quarter, and may include advanced material being taught for the first time. May be repeated for credit. 3-4 units, not given this year

CS 340V. Networked Systems for Virtual Worlds
Open to graduate students and advanced undergraduates. Systems and networking aspects of building large, distributed virtual 3D...
environments, with a focus on scalability, consistency, security, fairness, and federation. Topics include existing architectures, naming, routing, caching, migration, interoperability, and attribution. Open-ended research project. Prerequisite: some systems and networking background. May be repeated for credit.

3-4 units, not given this year

CS 342. Programming Language Design
Tools for analysis and optimization of iterative coding systems. LDPC codes, Turbo codes, RA codes, optimized ensembles, message passing algorithms, density evolution, analytic techniques. Prerequisite: 376A.

3 units, not given this year

CS 343. Advanced Topics in Compilers
Topics change annually. May be repeated for credit. Prerequisite: 243.

3 units, Spr (Engler, D)

CS 344. Build an Internet Router
High-performance embedded system design. Student teams of two software engineers (C experience required) and one hardware engineer (Verilog experience required) build a fully functioning Internet router. Work in team of three. How router interoperates with others in class. Open-ended design challenge judged by panel of industry experts. Prerequisites: CS 144, 244A, or network programming experience.

3 units, given next year

CS 344B. Advanced Topics in Distributed Systems
Continuation of 244B. The use of distributed systems research in practical systems. New applications due to the growth in high-bandwidth connections. Distributed systems knowledge and techniques from research and system implementations, and active research topics. Readings include research publications.

2 units, not given this year

CS 345. Advanced Topics in Database Systems
Content varies. May be repeated for credit with instructor consent. Prerequisite: 145. Recommended: 245.

3 units, offered occasionally

CS 345A. Data Mining
Algorithms for mining large-scale data, including data from the web and data maintained by web-based enterprises. Finding frequent itemsets; finding similar sets using minhashing, locality-sensitive hashing, and index-based methods; finding important web pages by PageRank; link-scan detection; collaborative filtering; stream mining; clustering; optimizing ad selection; virtual databases and extraction of relations from the web.

3 units, Win (Rajaraman, A; Ullman, J)

CS 345C. Data Integration
Techniques for integrating data from multiple heterogeneous data sources. Topics: semantic heterogeneity; languages for mediating between disparate data sources; techniques for automatic schema reconciliation and reference reconciliation; adaptive query processing; basics of XML and its relevance to data integration; peer-to-peer data sharing data exchange; combining structured and unstructured data; and dataspaces. Recommended: 145.

3 units, not given this year

CS 345L. Large-Scale Data Mining
(Same as CME 340) Topics include network models, ranking algorithms, reputation, collaborative filtering, and supervised and unsupervised learning. Individual or group applications-oriented programming project. i unit without project; 3 units with final project. Prerequisites; programming at the level of CS 108; statistics at the level of MATH 103 and STATs 116. Recommended: machine learning at the level of CS 229; knowledge of Java.

1-3 units, not given this year

CS 346. Database System Implementation
A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245, programming experience in C++. 3-5 units, Spr (Agrawal, P; Park, H)

CS 347. Transaction Processing and Distributed Databases
The principles and system organization of distributed databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Distributed algorithms for data management: clocks, deadlock detection, and mutual exclusion. Heterogeneous and federated distributed database systems. Overview of commercial systems and research prototypes. Prerequisites: 145, 245.

3 units, Spr (Garcia-Molina, H)

CS 348A. Computer Graphics: Geometric Modeling

3-4 units, Aut (Galba, L)

Intermediate level, emphasizing the sampling, shading, and display aspects of computer graphics. Topics: local and global illumination methods including radiosity and distributed ray tracing, texture generation and rendering, volume rendering, strategies for anti-aliasing and photo-realism, human vision and color science as they relate to computer displays, and high-performance architectures for graphics. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

3-4 units, Spr (Hanrahan, P)

CS 349. Topics in Programming Systems
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, offered occasionally

CS 349C. Topics in Programming Systems: Readings in Distributed Systems
Discussion of research publications that are of current interest in distributed systems. Students are expected to read all papers, and sign up for presentation of one paper. The course itself is 1 unit. Those interested in working on a project along with the readings should enroll for 3 units.

1-3 units, Aut (Cao, P; Danzig, P)

CS 355. Advanced Topics in Cryptography
Topics: pseudo-random generation, zero knowledge protocols, elliptic curve systems, threshold cryptography, security analysis using random oracles, lower and upper bounds on factoring and discrete log. May be repeated for credit. Prerequisite: 255.

3 units, not given this year

CS 357. Advanced Topics in Formal Methods
Topics vary annually. Possible topics include automata on infinite words, static analysis methods, runtime analysis methods, verification of real-time and hybrid systems, and formalization of middleware services. May be repeated for credit. Prerequisite: 256.

3 units, offered occasionally

CS 359. Topics in the Theory of Computation
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, offered occasionally

CS 359D. Hardness of Approximation
Results on and proof techniques for ruling out good approximation algorithms for NP-hard optimization problems. Topics: the PCP theorem; parallel repetition theorem; the unique games conjecture; applications to set cover, clique, max cut, network design, and problems. Prerequisites: 154 and 261, or equivalents.

3 units, not given this year

CS 361A. Advanced Algorithms
Advanced data structures: union-find, self-adjusting data structures
and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, online algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. May be repeated for credit. Prerequisite: 161 or 261, or equivalent.

3 units, not given this year

CS 361B. Advanced Algorithms
Topics: fundamental techniques used in the development of exact and approximate algorithms for combinatorial optimization problems such as generalized flow, multicommodity flow, sparsest cuts, generalized Steiner trees, load balancing, and scheduling. Using linear programming, emphasis is on LP duality for design and analysis of approximation algorithms; interior point methods for LP. Techniques for development of strongly polynomial algorithms.

3 units, Spr (Plotkin, S)

CS 364A. Algorithmic Game Theory
Topics at the interface of theoretical computer science and game theory such as: algorithmic mechanism design; combinatorial and computational auctions; congestion and potential games; cost sharing; existence, computation, and learning of equilibria; game theory and the Internet; network games; price of anarchy; and selfish routing. Prerequisites: 154N and 161, or equivalents.

3 units, not given this year

CS 364B. Topics in Algorithmic Game Theory
Topics on the interface of theoretical computer science and game theory. May be taken prior to 364A; may be repeated for credit. Prerequisites: 154N and 161, or equivalents.

3 units, not given this year

CS 365. Randomized Algorithms
Design and analysis of algorithms that use randomness to guide their computations. Basic tools, from probability theory and probabilistic analysis, that are recurrent in algorithmic applications. Randomized complexity theory and game-theoretic techniques. Algebraic techniques. Probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, parallel and distributed algorithms, online algorithms, number-theoretic algorithms. Prerequisites: CS 161 or 261, STATS 116 or CS 109, or equivalents.

3 units, not given this year

CS 369. Topics in Analysis of Algorithms
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, offered occasionally

CS 369A. Advanced Geometric Algorithms
Approximate, randomized, and high-dimensional geometric algorithms. Topics of current interest: clustering; nearest-neighbor search; shortest paths; geometric random walks; shape fitting; geometric embeddings; coresets; geometric TSP; and linear programming. Prerequisites: 368 or equivalent.

3 units, not given this year

CS 369F. Topics in Analysis of Algorithms
Focus is on combinatorial optimization with emphasis on online algorithms.

3 units, not given this year

CS 369M. Algorithms for Modern Massive Data Set Analysis
Algorithmic and statistical methods for large-scale data analysis: matrix and graph algorithms; strengths and weaknesses of theoretical techniques for practical scientific and internet data analysis; tools and challenges associated with related problems in statistics, optimization, numerical analysis, and machine learning. Representative topics: Matrix problems (numerical and statistical perspectives; algorithmic approaches, including Johnson-Lindenstrauss lemma and randomized projection and sampling algorithms; novel matrix factorizations); Graph problems (graph partitioning algorithms, including spectral methods, flow-based methods, and recent geometric methods; local graph algorithms and approximate eigenvector computation); and applications to machine learning and statistical data analysis (motivating applications; algorithmic basis of the RKHS method; geometric data analysis, regularization, and statistical inference; boosting and its relationships to conjugate gradient methods, duality, convexity, online

3 units, Aut (Mahoney, M)

CS 369N. Novel Paradigms for Algorithmic Analysis
May be repeated for credit.

3 units, Aut (Roughgarden, T)

CS 374. Algorithms in Biology (same as CS 374)
(List as BIOMEDIN 374) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.

2-3 units, Spr (Batzoglou, S)

CS 376. Research Topics in Human-Computer Interaction
Interactive systems, research areas in interaction techniques, and the design, prototyping, and evaluation of user interfaces. Topics: computer-supported cooperative work; audio, speech, and multimodal interfaces; user interface toolkits; design and evaluation methods; ubiquitous and context-aware computing; tangible interfaces, haptic interaction; and mobile interfaces.

3 units, Spr (Klemmer, S)

CS 377. Topics in Human-Computer Interaction
Contents change each quarter. May be repeated for credit. See http://hci.stanford.edu/academics for offerings.

2-3 units, offered occasionally

CS 377L. Learning in a Networked World
(Same as EDUC 298) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, life-wide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.

3 units, Spr (Pea, R)

CS 377V. Persuasive Online Video: Methods and Metrics for Changing Behaviors
New methods for creating persuasive video, with a focus on metrics in guiding iterative design. Small teams create videos to achieve target behaviors of their own choosing. Goals go beyond viral distribution, which is just one potential target behavior (sharing the video with others). May be repeated for credit.

2 units, not given this year

CS 377W. Create Engaging Web Applications Using Metrics and Learning on Facebook
Experimental course. Students work in small, interdisciplinary teams to create, launch, and optimize web-based applications for social networks such as Facebook. Tools include Google Analytics. Online experiments and user responses to learn how to iterate and improve applications. Guest experts.

3-4 units, not given this year

Critical analysis of theoretical foundations of the cognitive approach to language, thought and computation. Contrasts of the rationalistic assumptions of current linguistics and artificial intelligence with alternatives from phenomenology, theoretical biology, critical literary theory, and socially-oriented speech act theory. Emphasis is on the relevance of theoretical orientation to the design, implementation, and impact of computer systems as it affects human-computer interaction.

3-4 units, Aut (Wongwandee, T)

CS 379L. Designing Liberation Technology
(Same as POL/SCI 377T) Small project teams work with NGOs to design new technologies for promoting development and democracy. Students conduct observations to identify needs, generate concepts, create prototypes, and test their appropriateness. Some
projects may continue past the quarter towards full-scale implementation. Taught through the Hasso Plattner Institute of Design at Stanford (http://dschool.stanford.edu). Enrollment limited. Prerequisites: consent of instructors; application.

3 units, Spr (Cohen, J; Winograd, T)

CS 390A. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C each may be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 390B. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 390C. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 393. Computer Laboratory
For CS graduate students. A substantial computer program is designed and implemented, written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 395. Independent Database Project
For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 399. Independent Project
Letter grade only.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 399P. Independent Project
Graded satisfactory/no credit.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 402. Beyond Bits and Atoms: Designing Technologies for Thinking and Learning
(Same as EDUC 236X) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban schools in the US and abroad. The constructionist learning design perspective, critical pedagogy, and the application of complexity sciences in education.

3-5 units, not given this year

CS 447. Software Design Experiences
Small teams develop technology prototypes combining product and interaction design. Focus is on software and hardware interfaces, interaction, design aesthetics, and underpinnings of successful design including a reflective, interactive design process, group dynamics of interdisciplinary teamwork, and working with users. Prerequisite: CS 247A.

3-4 units, alternate years, not given this year

CS 448. Topics in Computer Graphics
Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See http://graphics.stanford.edu/courses for offerings and prerequisites. May be repeated for credit.

3-4 units, offered occasionally

CS 448A. Computational Photography
Sensing strategies and algorithmic techniques that extend traditional digital photography. Topics: high dynamic range imaging, flash-no-flash, coded aperture, coded exposure, multi-perspective, panoramic stitching, digital photomontage, all-focus, and light field imaging. Lectures, readings, and project. Prerequisite: 148 or equivalent.

3-4 units, Win (Levoy, M)

CS 448B. Topics in Computer Graphics: Data Visualization
Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, readings, and project. Prerequisite: one of 147, 148, or equivalent.

3 units, Aut (Heer, J)

CS 448E. Research Topics in Computer Graphics: Virtual Worlds
Selected topics in current computer graphics research. Analysis of research publications, class discussions, quarter-long research project. Topics change each offering. Sample topics: procedural modeling, character animation, multimodal interfaces, perception and cognition. May be repeated for credit. Prerequisite: CS248.

1-4 units, Spr (Koltun, V)

CS 448F. Image Processing for Photography and Vision
Image processing with a focus on implementation of new techniques from the literature. Topics: sampling and reconstruction, linear and non-linear filters, features and alignment, compositing, gradient-domain techniques, and recent techniques from conferences such as SIGGRAPH and Eurographics. Prerequisites: Students should be comfortable coding in C++. An introductory graphics course such as CS148 is helpful but not necessary.

3 units, Aut (Adams, A)

CS 450. Introduction to Biotechnology
Academic and industrial experts discuss latest developments in fields such as bioenergy, green process technology, the production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Discussions of biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

3 units, not given this year

CS 468. Topics in Geometric Algorithms: Computational Topology
Focus on the connectivity of spaces (and ignoring, for example, metric information) one arrives at the study of topology. Concentrating mostly on the invariants arising from algebraic topology, course presents techniques for designing efficient algorithms to compute them. Alongside the algorithms, course presents the necessary background tools, both in topology and computer science, for their analysis. Topics: graphs, surfaces, simplicial complexes, (co)homology, topological data analysis, Morse functions.

3 units, Aut (Morozov, D)

CS 499. Advanced Reading and Research
For CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 523. The Future of the Automobile
(Same as ME 302) The concept of this course is to present, discuss and envision the future of the automobile in terms of sustainability, safety, performance, and enjoyment. Invited speakers from academia and industry share their own visions, explain challenges, and present solutions regarding individual transportation. After each session the students research specific questions related to the lectures and present their findings in the following week. This course is offered by Stanford’s Automotive Program with
COURSES OF INSTRUCTION

CS 545. Database and Information Management Seminar
Current research and industrial innovation in database and information systems. 
1 unit, Win (Widom, J)

CS 546. Seminar on Liberation Technologies
(Same as POLISCI 337S)
1 unit, Aut (Winograd, T; Cohen, J; Diamond, L)

CS 547. Human-Computer Interaction Seminar
Weekly speakers. May be repeated for credit.
1 unit, Aut (Winograd, T), Win (Winograd, T), Spr (Winograd)

CS 571. Surgical Robotics Seminar
Surgical robots developed and implemented clinically on varying scales. Goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. Engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role.
1 unit, Aut (Barbagli, F)

DANCE (DANCE)

UNDERGRADUATE COURSES IN DANCE

DANCE 26. Performing Bodies
(Same as DRAMA 26) Bodily are both concept and physical medium in live performance. How do bodies materialize onstage as spectacular and authentic? In what ways do they represent art, while recalling social and cultural information? What about the audience’s bodies? Readings include Kuppers on disability, Garner on theater phenomenology, and Grosz on somatophobia. Physicality in performances by artists including Streb Extreme Action, Complicite, Pina Bausch, and Big Art Group. Written and performed assignments.
3-5 units, Spr (Staff)

DANCE 40. Introduction to Dance and Movement
Body expression, articulation, and anatomical basics through contemporary art dance. Emphasis is on development of awareness of the body in space. Exploration of improvisation and creativity. May be repeated for credit.
2 units, Aut (Moses, R)

DANCE 43. Liquid Flow: Introduction to Dance and Movement
Body expression, articulation, and anatomical basics through contemporary art dance. Emphasis is on development of awareness of the body in space. Exploration of improvisation and creativity. May be repeated for credit.
2 units, Win (Hayes, A)

DANCE 46. Social Dances of North America I
Introduction to the partner dances found in American popular culture: waltz, swing, tango, club two step, cha cha, merengue, and salsa. Fee. May be repeated for credit.
1 unit, Aut (Powers, R), Win (Powers, R), Spr (Powers, R)

DANCE 48. Beginning Ballet
Fundamentals of ballet technique including posture, placement, and the foundation steps of classical ballet. Emphasis is on the development of coordination, strength, and flexibility. May be repeated for credit.
2 units, Aut (Staff), Win (Moore, A)

DANCE 53. Laboratory of Creative Practice: Ann Carlson
A creative laboratory. Structures, strategies, and methods for making movement-based art work in collaboration with a wide variety of people, animals, and situations. Guest presentations, daily prompts assignments, and field trips. Students investigate aspects of research, communication, process, and production. Designed to liberate practice and to sharpen creative problem solving skill. Student projects of their choosing based upon experiences during the class.
2 units, Spr (Ross, J)

DANCE 58. Beginning Hip Hop
Steps and styling in one of America’s 21st-century vernacular dance forms. May be repeated for credit.
2 units, Aut (Reddick, R)

DANCE 59. Intermediate-Advanced Hip-Hop
Steps and styling in one of America’s 21st-century vernacular dance forms. May be repeated for credit.
2 units, Aut (Reddick, R)

DANCE 60. The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV
The repertory of Hip Hop history through steps and choreography. May be repeated for credit.
2 units, Spr (Reddick, R)

DANCE 100. Student Choreography: Studio to Stage
Student choreography is mentored to develop composition and performance skills, particularly for presentation in The American College Dance Festival. May be repeated for credit.
2 units, Win (Frank, D)

DANCE 105. Contemporary Afro Styles and Dancemaking: Technique, Rhythm, Architecture
Current and traditional African diaspora styles. African polyrhythms, body percussion, and geometric forms, fused with postmodern concepts of composition and space. May be repeated for credit.
2 units, Aut (Hayes, A)

DANCE 106. Essence of Contemporary Dance Performance: African Styles on Stage
Contemporary dance technique and repertory based on African diaspora movement styles. Focus is on articulation of expression, enhancement of stage presence, and awareness of individual movement strengths. May be repeated for credit.
2 units, Win (Hayes, A)

The historical context of contemporary African American artistic expression; how it is informed by cultural and vernacular activities of the Black community such as club dance, fashion shows, hair shows, balls, Black funerals, and vocal style. The compositional strategies and cultural artifacts of African Americans. Students research and write short papers. Guest speakers. Sources includes articles and videos about what constitutes the Black aesthetic from the points of view of artists, cultural critics, and historians.
2 units, Aut (Hayes, A)

DANCE 108. Portraiture and Performance: Representations of the Family in Performance
Students create movement material and choreographic motifs which are related to the presentation, development, and future of representations of the changing family in performance. Material in class is used to develop original performance works. Students critique performance works and approaches to representation.
2 units, Win (Moses, R)

DANCE 117. The Body and The Camera
The interconnectedness among bodies, moving images, and technologies. Their shifting meanings through the use of tools that extend the body, from movement-based performance to the Internet to video art. How digital moving images of the body circulate and produce meaning in our culture. Goal is to produce two moving picture projects; students encouraged to design projects with the potential to become social networking sites to video installations in galleries to performance in public spaces. Topics include the history of artists’ subjectivity and the camera, the critiques of pointing the camera at other bodies, and the politics of display.
2 units, Spr (Ross, J)

DANCE 133. History of the Waltz
From Vienna in 1800. Redowa and mazurka, waltz variations, the 20th-century hesitation waltz, Parisian valse musette, and 30s Boston and waltz swing. Studio technique with performance practice for stage. May be repeated for credit two times.
2 units, Spr (Powers, R)

DANCE 139. Liquid Flow: Intermediate Modern Dance
Contemporary dance technique incorporating internal energy forms drawn from martial arts, improvisation, composition, pedestrian and everyday movement, and critical thought in the contemporary dance art. May be repeated for credit.
2 units, Aut (Hayes, A)
DANCE 140. Intermediate Modern Dance
Intermediate technique. Improvisation and composition in directed studies. May be repeated for credit.
2 units, Spr (Frank, D)

DANCE 141. Advanced Modern Dance
Intermediate/advanced technique. Complex movement combinations emphasizing performance demands. May be repeated for credit.
2 units, Aut (Frank, D), Win (Frank, D), Spr (Moses, R)

DANCE 142. Social Dances of North America II
Intermediate survey of dances in American popular culture: Lindy hop, Viennese waltz, cross-step waltz, foxtrot, and hustle. May be repeated for credit.
2 units, Aut (Powers, R), Spr (Powers, R)

DANCE 147. Living Traditions of Swing
Swing dancing: the early Lindy of the 20s; 6- and 8-count Lindy hop, shag, Big Apple. Partnering and improvisation. Swing’s crosscultural influences and personal creativity. May be repeated for credit.
2 units, Win (Powers, R)

DANCE 148. Intermediate Ballet
Continuation of 48, repeating the fundamentals with increased complexity and introducing additional movement vocabulary. May be repeated for credit.
2 units, Win (Elliott, K), Spr (Staff)

DANCE 149. Advanced Ballet
Professional-level class in a supportive environment. Comprehensive classical ballet technique including pointe work if the student desires. May be repeated for credit.
2 units, Aut (Elliott, K), Win (Elliott, K), Spr (Elliott, K)

DANCE 151. The Cinderella Theory: Representations of the Family in Performance
The presentation, development, and future of representations of the changing family in performance. The limits of the socially constructed families. Guest lecturers. Students critique current media works and approaches to representation.
3 units, Win (Moses, R)

DANCE 155. Pointe and Variations
All levels of pointe technique, from beginners to professionals. Barre warm-up series to strengthen deep muscles in the legs and feet, center work, and variation practice. Different pieces of classical and contemporary ballet repertoire. Alignment and correct foot placement in the shoes are emphasized for a solid, healthy approach to pointe work.
2 units, Aut (Maffre, M), Win (Staff)

DANCE 156. Social Dances of North America III
Advanced survey of the partner dances found in American popular culture: hustle, waltz, redowa, tango, cha cha, salsa, samba. May be repeated for credit. Prerequisite: 146 or equivalent experience.
2 units, Win (Staff)

DANCE 160. Performance, Dance, and History: The Ballerina
(Same as DRAMA 160, DRAMA 260) Transitional periods in the history of theatrical and popular dance from the 19th through the 21st centuries; how the dancing body and choreography have been constructed in relation to social, aesthetic, and cultural agendas. This year, focus is on ballet migrations and the ballerina.
GER:DB-Hum, EC-Gender
4 units, Win (Ross, J)

DANCE 171. Conversing Across Dance History: Ralph Lemon Traces
An intimate view of dance history built as a dialogue between the postmodern choreographer and dancer Ralph Lemon, and dance historian, Janice Ross. The stylistic and aesthetic influences from the legacy of early 20th-century modern dance as influences and antecedents for present-day dance. Topics include early German modern dance, Mary Wigman, Gret Palucca, Nancy Hauser, Martha Graham, Merce Cunningham, Meredith Monk, Bebe Miller, Maya Deren’s films, Haitian trance and possession, and dance and the chemical body and neural psychology.
4 units, Aut (Ross, J)

DANCE 190. Special Research
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DANCE 191. Independent Research
Individual supervision of off-campus internship. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN DANCE

DANCE 290. Special Research
Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DEVELOPMENTAL BIOLOGY

UNDERGRADUATE COURSES IN DEVELOPMENTAL BIOLOGY

DBIO 156. Human Developmental Biology and Medicine
(Same as HUMBIO 141) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of humans. Limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.
4 units, not given this year

DBIO 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN DEVELOPMENTAL BIOLOGY

DBIO 201. Development and Disease Mechanisms
Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, multiparity, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging.
4 units, Aut (Porzig, E; Kingsley, D; Kim, S)

DBIO 202. Assisted Reproductive Technologies
(Same as OBGYN 202) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
1-3 units, Aut (Porzig, E; Behr, B)

DBIO 203. Advanced Genetics
(Same as DBIO 203, GENE 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.
4 units, Aut (Stein, T; Sidow, A; Barsh, G)
COURSES OF INSTRUCTION

DBIO 210. Developmental Biology
Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, induction events, cell lineage, maternal inheritance, cell-cell communication, and hormonal control in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics. 5 units, Spr (Beachy, P; Fuller, M)

DBIO 215. Frontiers in Biological Research
(Same as BIOC 215, GENE 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker’s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research. 1 unit, Aut (Harbury, P; Calox, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calox, M)

DBIO 221. Current Issues in Aging
(Same as GENE 221, NENS 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203. 2 units, Spr (Staff)

DBIO 257. The Biology of Stem Cells
(Same as HUMBIO 15?) The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A,B, or consent of instructor. 3 units, not given this year

DBIO 273A. A Computational Tour of the Human Genome
(Same as BIOMEDIN 273A, CS 273A) Biology through an exploration of Human Genome. Key genomic and genetic concepts from an informatics perspective. Biomedical advances resulting from the Genomics revolution. Topics: genome sequencing; technologies, assembly, personalized sequencing. Functional landscape: genes, gene regulation, repeats, RNA genes. Genome evolution: comparative genomics, ultraconservation, co-option. Additional topics: population genetics, personalized genomics, and ancient DNA. Course starts with primer in Biology and text processing languages. Ends with guest lectures from forefront of genomic research. 3 units, Aut (Batzoglou, S; Bejerano, G)

DBIO 296. Stem Cell Biology and Regenerative Medicine
(Same as PATH 296) For graduate and medical students. Embryonic and adult stem cells, including origin, regulation, self-renewal, differentiation, fate, and relationship to cancer; biological mechanisms and methods to translate findings to therapeutic applications. Medical students must enroll for 5 units; graduate students may choose to take only the basic science part for 3 units. Prerequisites: DBIO 201 and 210, or consent of instructor. 3-5 units, Win (Weissman, I; Nunse, R; Fuller, M)

DBIO 299. Directed Reading in Developmental Biology
Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DBIO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects. 4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DBIO 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DIVISION OF LITERATURES, CULTURES, AND LANGUAGES (DLCL)

UNDERGRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

DLCL 70N. From Vampires to Bathroom Walls: Folklore and Literature
(F, Sem) Stanford Introductory Seminar. In the early 19th century, some Europeans started seeing the stories and songs of illiterate peasants as folklore to be collected, preserved, and perhaps transformed into new literature, art, and music. These folktales, such as legends of vampires, continue to inspire artists. The idea of folklore has expanded to include the shared practices or utterances of any group with at least one linking factor, including latrina (wall writings in a public bathroom). Sources include folklore from German, English, Russian, and Yiddish sources, and theoretical essays. Students collect living folklore, and analyze and present it. 4 units, Spr (Saffran, G)

DLCL 99. Multimedia Course Lab
Designed to supplement the literature curriculum of existing undergraduate courses in DLCL departments in which a multimedia component may benefit collaborative or individual research projects. Taken for credit at the discretion of the instructor of the departmental literature course. 1 unit, Aut (Chandler, Z), Win (Chandler, Z), Spr (Chandler, Z)

DLCL 189. Honors Thesis Seminar
For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies. 5 units, Aut (Barletta, V)

GRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

DLCL 200. Teaching of Second Language Literatures
Focus is on literacy development in a second language, emphasizing literary texts, and assessing the learners’ second-language linguistic level and requisite background knowledge with regard to particular literary texts. Instructional strategies and feedback techniques for written and oral work. 3 units, Spr (Bernhardt, E)

DLCL 201. The Learning and Teaching of Second Languages
Learning perspective rather than traditional teaching methods. Instructional decision making within the context of student intellectual and linguistic development in university settings to different populations. Readings in second-language acquisition. 3 units, Spr (Bernhardt, E)

DLCL 308. Comparative Literature Colloquium
Participants discuss and critique work presented by graduate students and faculty in the DLCL. Work may include conference or seminar papers, thesis chapters, or works-in-progress. Feedback focuses on writing and argumentation, and more general responses to the subject matter. Meetings open to the public. May be repeated for credit. 1-2 units, Aut (Berman, R), Win (Berman, R), Spr (Berman, R)

DLCL 309. The Teaching of Literature
Prepares graduate students in DLCL departments to teach literature at the undergraduate level. Topics include: the opportunities and problems of transposing a research project into a feasible course; the logic of syllabi and reading lists; the structuring of a course from week to week; and other matters relevant to first-time teachers of literature. Supervised by the graduate affairs committee of the DLCL. 2 units, Aut (Springer, C), Spr (Fleishman, L)
DLCL 310, The Development of a Dissertation from Prospe-
tus to Defense
Meets regularly throughout the year to advise and support disserta-
tion-level students as they prepare a prospectus, begin writing, 
submit chapters, and complete their projects. Focus of the work-
shop shifts from term to term as appropriate to the participants. 
Supervised by the graduate affairs committee of the DLCL.  
2 units, Aut (Greene, R), Win (Schnapp, J)  

DLCL 311. Professional Workshop
Meets regularly throughout the year to discuss issues in the profes-
sional study of literature. Topics include the academic job market 
and the challenges of research and teaching at different types of 
institutions. Supervised by DLCL graduate affairs committee. 
2 units, Win (Surwillo, L)  

DRAMA (DRAMA)

UNDERGRADUATE COURSES IN DRAMA

DRAMA 10AX. Acting Intensive
Goal is to develop physical and language creativity through an 
exploration of contemporary and 19th-century play texts. Lan-
guage and the process of bringing dramatic literature to life on 
stage. Readings include contemporary playwrights as well as writ-
ers at the turn of the 19th century such as Anton Chekhov, Henrik 
Ibsen, and August Strindberg.  
2 units, Aut (Kostopoulos, K)  

DRAMA 11AX. Set Design
How ideas in film, architecture, and installation inform the prac-
tice of theatre set design. Traditional techniques of stage sce-
nery design, basic drafting and model making guide the process 
of designing a set for an opera or play in this hands-on workshop.  
2 units, Aut (Gambatese, E)  

DRAMA 11N. Dramatic Tensions: Theater and the Market-
place  
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. 
Tension between artistic and commercial forces in modern theater; 
the conflicted state of the art form. Sources include major and 
emerging contemporary figures in commercial, fringe, and non-
profit theater in the U.S. and UK. Visits with writers, directors, and 
dramaturges. GER:DB-Hum  
4 units, Aut (Freed, A)  

DRAMA 12AX. Body (Landscape) That Remembers and For-
gets: Tracing the Body at Risk
Material and designs of artists include painters, sculptors, fashion 
photographers, and music video directors. Field trips to museums 
and theater productions.  
2 units, Aut (Staff)  

DRAMA 12N. Antigone: From Ancient Democracy to Con-
temporary Dissent  
(F,Sem) (Same as CLASSGEN 6N) Stanford Introductory Semi-
nar. Preference to freshmen. Tensions inherent in the democracy 
of ancient Athens; how the character of Antigone emerges in later 
drama, film, and political thought as a figure of resistance against 
illigimate authority; and her relevance to contemporary struggles 
for women’s and workers’ rights and national liberation. Readings 
and screenings include versions of Antigone by Sophocles, 
Anouilh, Brecht, Fugard/Kanti/Ntshona, Paulin, Glouwaci, Gurney, 
and von Trotta. GER:DB-Hum, EC-Gender  
3-5 units, Aut (Rehm, R)  

DRAMA 15N. Screening the Stage  
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. 
Stage plays that have been adapted for film and the differences in 
narrative, scene, character, the effects of star actors, audiences, and 
expectations in each medium. Play texts include: Look Back in 
Anger, A Streetcar Names Desire, A Raisin in the Sun, Who’s 
Afraid of Virginia Woolf?, Mel Gibson’s 1990 Hamlet, Closer, 
and Doubt.  
4 units, Spr (Rayner, A)  

DRAMA 17N. Salt of the Earth: The Docudrama in America  
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. 
Docudrama as a form of dramatic writing which provides a social 
critique of current or historical events through creative documenta-
tion and dramatization. Sources include Chicana/o and Latino/o 
texts, Brecht, Teatro Campesino, and Culture Clash. Students pro-
duce a short docudrama. GER:DB-Hum, EC-AmerCul  
3 units, Win (Moraaga, C)  

DRAMA 20. Acting for Non-Majors
Creative play and ensemble work. Skills including group improvi-
sation to partner work. Freeing the natural voice and physical 
relaxation. Emphasis is on imaginative and creative impulses. 
Movement improvisation, listening exercises, and theater games. 
How to take risks that are the essence of free and powerful perfor-
mance.  
2 units, Aut (Kostopoulos, K), Win (Kostopoulos, K), Spr (Kos-
topoulos, K)  

DRAMA 22. Scene Work
For actors who complete substantial scene work with graduate 
directors in the graduate workshop.  
1-2 units, Aut (Staff), Win (Staff), Spr (Staff)  

DRAMA 24. Shared Experience and the Experimental Actor
This course will investigate what theorists concerned with shared 
experience and collective action can learn from actors, especially 
those who work in experimental theatre, and vice versa. The 
course will combine practical work in acting and discussion ses-
sions. Topics will focus on different kinds of shared awareness, 
e.g., cooperation, collaborative movement, object transformation, 
and ultimately text work. Readings drawn from philosophy, dra-
matic literature, and dramatic theory, e.g., Zarinli, Bogart, Schech-
ner, Merleau-Ponty, Heidegger, Ionesco. No experience necessary. 
4 units, Spr (Scotland-Stewart, L), offered only once  

DRAMA 25N. Science-in-Theatre: A New Genre? 
(S,Sem) (Same as CHEM 25Q) Stanford Introductory Seminar. 
Preference to sophomores. How scientists acquire their rules, 
mores, and idiosyncrasies through a form of intellectual osmosis in 
a mentor-disciple relationship. Scientists represented as Frankens-
teins or nerds, rather than normal. Why more intellectually chal-
kening plays have appeared on the Anglo-American theatre scene 
where scientific behavior and even science are presented accurate-
ly. Students engage in a playwriting experiment.  
3 units, Win (Djerassi, C)  

DRAMA 26. Performing Bodies
(Bodies are both concept and physical me-
dium in live performance. How do bodies materialize onstage as 
spectacular and authentic? In what ways do they represent art, 
while recalling social and cultural information? What about the 
audience’s bodies? Readings include Kuppers on disability, Garner 
on theater phenomenology, and Grosz on somatophobia. Physicali-
ty in performances by artists including Streb Extreme Action, 
Complicite, Pina Bausch, and Big Art Group. Written and per-
formed assignments.  
3-5 units, Spr (Staff)  

DRAMA 28. Makeup for the Stage
Techniques of makeup application for the artist and actor: aging, 
prosthetics, stylization, characterization, animals, and fantasy 
make-up.  
2 units, Aut (Strayer, C)  

DRAMA 29. Theater Performance: Acting
Students cast in department productions receive credit for their 
participation as actors; 1-2 units for graduate directing workshop 
projects and 1-3 units for major productions (units determined by 
instructor). May be repeated for credit. Prerequisite: consent of 
instructor.  
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)  

DRAMA 30. How Theater is Designed
Team-taught. An introduction to theatrical set, costume and light-
design. Emphasis on balancing practical skill with conceptual 
ideas for live stage performance. Hands-on projects.  
1-4 units, Aut (Gambatese, E; Ramsaur, M), Sum (Staff)  

DRAMA 31. Introduction to Lighting and Production
How light contributes to the creation of mood and atmosphere and 
different kinds of visibility in theatrical storytelling. The use of 
controllable qualities of light including color, brightness, angle, 
and movement in the theatrical process of creative scenography. 
Hands-on laboratory time.  
4 units, Win (Ramsaur, M)  

STANFORD BULLETIN, 2009-10 | 495
COURSES OF INSTRUCTION

DRAMA 32F. History of Costume and Fashion from 1500 to the Present
The evolution of fashion and costume with an emphasis on the relationship between social, cultural, and political events and clothing style. Attention to major designers and creators and their shaping of resultant fashion and artistry in clothing.
4 units, Win (Strayer, C)

DRAMA 34. Stage Management Techniques
The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.
4 units, Aut (Apperson, L)

DRAMA 35. Introduction to Sound for the Theater
Lecture/lab. The practical handling of sound equipment, acoustics, and editing. Analysis, creation, and implementation of theatrical sound effects, live and recorded.
3-4 units, not given this year

DRAMA 39. Theatre Crew
Under faculty guidance, working backstage on Drama Department productions. Open to any student interested in gaining back stage experience. Night and weekend time required.
1-3 units, Aut (Apperson, L; Ramsaur, M), Win (Apperson, L; Ramsaur, M), Spr (Apperson, L; Ramsaur, M), Sum (Staff)

DRAMA 39D. Theater Performance: Prosser Stage Management
1-3 units, Aut (Apperson, L), Win (Apperson, L), Spr (Apperson, L)

DRAMA 42. Costume Construction
Lecture/lab.
2-3 units, alternate years, not given this year

DRAMA 77. Playwriting Workshop
Individual or small group work in play development extending from earlier classes. May be repeated for credit.
2-4 units, not given this year

DRAMA 101H. How Theater Thinks: Introduction to Theater and Performance
Gateway course for majors and students considering the Drama major. Theater practices and techniques such as space, actor, language, props, and composition: what is unique about them and how they address the spectator. Sources include plays and theoretical texts.
3-4 units, Aut (Menon, J)

DRAMA 101P. How Practice Practices
(Same as DRAMA 341) Tools of theater making from thinking, to sketching, to composing theater and performance.
3-5 units, Aut (Goulish, M)

DRAMA 103. Beginning Improvising
The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment.
3 units, Win (Klein, D)

DRAMA 110. The Nature of Individual Art Practice: Ralph Lemon
The inner workings and questions posed in the Lemon’s current performance/installation project for the stage. Films include Alphaville (Jean-Luc Godard) and Solaris (Andrei Tarkovsky); these faux science fiction stories in relation to the creative work of the instructor. Students conduct research as creative collaborators, dramaturges, and interrogators. GER:DB-Hum
3-5 units, Aut (Elam, H), Win (Elam, H; Hernandez, G)

DRAMA 120A. Fundamentals of Acting
For students who intend to begin serious actor training; 120A,B must be taken in sequence. The basic vocabulary of objective and action. Theater games and improvisation develop the ability to act with focus, intention, and energy. Basics of characterization and transformation. Outside rehearsal time required.
3 units, Aut (Freed, A), Win (Kostopoulos, K), Sum (Kostopoulos, K)

DRAMA 120B. Fundamentals of Acting
For students who intend to begin serious actor training; 120A,B must be taken in sequence. The actor’s spontaneity and imagination are used to reveal the life of a play, working with dramatic texts. Approaches to the actor’s craft include character biography and moment-to-moment truthful playing. Exercises including from Strasberg, Meisner, Chaikin, and Linklater. Scene and monologue work from primarily naturalistic plays. Outside rehearsal time required. Prerequisite: 120A or consent of instructor.
3 units, Spr (Kostopoulos, K)

DRAMA 120D. Studio Performance
Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.
1-5 units, not given this year

DRAMA 120V. Vocal Production and Audition
(Same as DRAMA 210V) The vocal mechanism with development of voice and articulation for the stage. The actor’s tools of phonetics, verbal action, and text analysis. Voice in preparation for audition. Emphasis is on relaxation, selection of appropriate material, and versatility to show contrast and range.
3 units, Aut (Kostopoulos, K), Spr (Staff)

DRAMA 121S. Acting Shakespeare Project
Work on a shortened Shakespeare play leading to a studio performance project. Skills in understanding and performing Shakespeare, conducted as series of rehearsals, and culminating in group performance. Development of voice, movement, and speaking skills necessary for classical theater work. Prerequisites: DRAMA120A,B, or consent of instructor.
3 units, Win (Bihr, J)

DRAMA 122. Contemporary Vernacular Dance in New Musical Theater
Emphasis for this workshop will be on the fusion of current dance and gestural styles including hip hop, contemporary modern, afro-can and ballet as seen through the lens of new musical theater. Students will also study musicals such as Spring Awakening choreographed Bill T. Jones to inform the choreographic process .
1-2 units, Win (Hayes, A)

DRAMA 122P. Our Country’s Good
Studio production of Timberlake Wertenbaker’s 1988 play Our Country’s Good. Project culminates in three end-of-quarter public performances in the Nitery. Roles for 7 men and 6 women, of any ethnicity. This is a contemporary drama about the ability of the theater to dignify human lives. Attention to the history and social context of a significant work. Prerequisite: audition.
2-9 units, Spr (Freed, A; Murphy, C)

DRAMA 122P. Undergraduate Performance Project
By Audition: Studio Production of Timberlake Wertenbaker’s 1988 play “Our Country’s Good.” A significant contemporary work about the ability of art to dignify human lives, the drama is set in a penal colony in New South Wales in the late 18th century. This project also involves a concentrated study of relevant historical and cultural themes.
2-9 units, Spr (Staff)

DRAMA 131. Lighting Design
Hands-on laboratory projects in lighting and designing stage productions and other live performances. The content and format of lighting plots. Prerequisite: DRAMA 31.
4 units, Spr (Ramsaur, M)

DRAMA 132. Costume Design
A visual analysis of the historical styles of costume design, interpreted for the modern theater and developed by the student in various presentational media. Prerequisite: 30 or consent of instructor.
4 units, Spr (Strayer, C)

DRAMA 133. Stage Scenery Design
Creations of increasing complexity involve text analysis, historical and artistic style, visual research, spatial organization, drafting, sketching, model building, and director-designer collaboration. Prerequisite: 30, or consent of instructor.
3-4 units, Win (Gambatese, E)

DRAMA 133P. Scenic Painting
Techniques of painting for the stage. May be repeated for credit.
2-3 units, not given this year

STANFORD BULLETIN, 2009-10
DRAMA 134. Stage Management Project
For students stage managing a Department of Drama production.
2-9 units, Aut (Apperson, L), Win (Apperson, L), Spr (Apperson)

DRAMA 137. Hand Drafting for Designers
Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications. May be repeated for credit.
3 units, Spr (Gambatese, E)

DRAMA 139. Stage Management Production Crew
May be repeated for credit.
1-9 units, Sum (Staff)

DRAMA 140. Projects in Theatrical Production
(Same as DRAMA 240) Assistant directing; stage, costume, lighting, and sound design; technical production, stage managing, or other work in connection with Department of Drama productions. Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 141A. Stages on Screen
The interrelationship between theatre and film by looking at the role of the actor. Differences between acting on stage versus film, with attention to the role of fame and stardom in Hollywood. The evolution of film performance from the vaudeville of Chaplin and Keaton to the emergence of method acting and the rise of celebrity culture.
3-5 units

DRAMA 150T. Racial Erotics
(Same as DRAMA 350) Issues in postcolonial studies; the shifting erotics of race and nation; and the management of sexuality within geopolitical contexts in colonialism, nationalism, and globalization. The historicity of these categories; how race, gender, and nation continue to shape the world.
3-5 units, Aut (Menon, J)

DRAMA 151T. Great Books: Dramatic Traditions
(Same as DRAMA 351) The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts, Questions about the power dynamics involved in the formation of canons.
3-5 units, Spr (Menon, J)

DRAMA 152. Beckett
(Same as DRAMA 358C, ENGLISH 389B) Beckett’s plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.
3-5 units, not given this year

DRAMA 156H. History of Performance Art and Live Art
(Same as DRAMA 256H) From 1950 to the present, emphasizing the U.S. Precedents in visual arts, modern dance, and experimental theater. Modes include happenings, fluxus, body art, everyday performance, solo monologue, and bio art. Sources include surveys, essays, and artists’ writings, and visual documentation.
3 units, not given this year

DRAMA 157T. Performance and Ethnography
(Same as DRAMA 257T) Performance as a mode of engagement in fieldwork, as conceptual framework, and as a mode of representing cultural data. Readings from Clifford Geertz, Smadar Lavie, Dwight Conquergood, Richard Schechner, Barbara Meyerhoff, Diana Taylor, Ruth Wilson Gilmore, Antonin Artaud, Soyini Madison, E. Patrick Johnson, Renato Rosaldo, Jon van Maanen, and Diane Wolfe.
5 units, not given this year

DRAMA 160. Performance, Dance, and History: The Ballerina
(Same as DANCE 160, DRAMA 260) Transitional periods in the history of theatrical and popular dance from the 19th through the 21st centuries; how the dancing body and choreography have been constructed in relation to social, aesthetic, and cultural agendas. This year, focus is on ballet migrations and the ballerina. GER:DB-Hum, EC-Gender
4 units, Win (Ross, J)

DRAMA 161R. Texts in History: Classics from Greece to Rome
(Same as CLASSGEN 163, HUMNTIES 161) Priority to students in the Humanities honors program. Ancient texts situated in their intellectual and cultural contexts. Readings include Homer’s Iliad and Odyssey, plays of Aeschylus, Sophocles’ Antigone, Euripides’ Medea, Thucydides Peloponnesian War, Plato’s Symposium, Aristotle’s Poetics, Virgil’s Aeneid, Seneca’s Trojan Women and Agamemnon, and Augustine’s On Christian Doctrine. GER:DB-Hum
3 units, Aut (Relm, R)

DRAMA 164S. Introduction to Queer Theory
(Same as DRAMA 364, FEMST 120) Major readings in the development of queer theory in literature, art, and science. Readings include: Sedgwick, Butler, Roughgarden, Freeman, and Foucault. Cultural texts ranging from Mapplethorpe’s photographs to “Queer Eye for the Straight Guy” will be included.
3-5 units, Spr (Phelan, M)

DRAMA 165M. Musical Theatre
(Same as DRAMA 365M, ENGLISH 265M) Major innovations in the musical from South Pacific to High School Musical. Concentration on American classics with forays into film adaptations and licensing, marketing, and cast recordings. Attention to issues of race and gender.
3-5 units, Win (Phelan, M)

DRAMA 166H. Historiography of Theater
(Same as DRAMA 304, FRENGEN 252) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.
3-5 units, Win (Apostolides, J)

DRAMA 170A. Concepts of Directing
(Same as DRAMA 370) Directorial definitions of time, space, movement, and the performer/spectator relationship. Experimentation with texts from literary and other sources, including works from the realistic tradition in drama, using a multi-form performance space.
5 units, Aut (Hixson, L)

DRAMA 170B. Advanced Directing
Deconstructing and constructing. Tools for analyzing text and developing directorial concepts, and putting them into practice. Class exercises culminate in a short theater piece written and directed by the student. Prerequisite: 170A or consent of instructor.
4 units, Spr (Staff)

DRAMA 171. Undergraduate Theater Workshop
Undergraduate directors present one act plays in workshop performances. Credit available for actors and directors. Prerequisite: 170A/170B or consent of instructor.
1-4 units, not given this year

DRAMA 172H. Women and Theatre in 20th-Century France
Historical tools to explore the contributions of female artists in 20th-century French theatre, emphasizing perspectives and themes that were neglected or silenced in theatre. How the aesthetics and ideology of 20th-century theatre in France were broadened due to a greater participation of women.
3-5 units, not given this year

DRAMA 174H. The Performance of Memory: Dark Tourism
Contemporary and historical approaches to tourism at sites of trauma including WW II memorials, prisons, cemeteries, and other sites of loss. Focus is on interrogating the practice of cultural tourism as a performative act of public remembering and the de facto transformation of urban spaces into participatory public theatres of choreographed memory.
4 units, not given this year

DRAMA 176P. Wasteland Practical
Creation and development of The Wasteland Project in collaboration with writers, actors, and directors.
1-2 units, Win (Staff)

DRAMA 177. Writing for Performance: The Fundamentals
(Same as CSRE 177, DRAMA 277) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Shanley, August Wilson, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter’s end. GER:DB-Hum
5 units, Win (Moraga, C)
DRAMA 178. Page to Stage: Playwriting and Solo Performance
(Same as DRAMA 278) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.
3-5 units, Spr (Freed, A)

DRAMA 179D. Imagine Freedom: Dramatizing the Undocumented
(Same as DRAMA 279D) The docudrama (plays and films) as an art practice of political transgression. Focus is on texts in which a socially marginalized community serves as the main character of the drama. Texts include Salt of the Earth; Chavez Ravine by Culture Clash; Canadian First Nation playwright Marie Clements’ The Unnatural and Accidental Women; and Doris Pilkington Garimara’s Rabbit Proof Fence. Script analysis and scriptwriting. GER:DB-Hum
5 units, alternate years, not given this year

DRAMA 180Q, Noam Chomsky: The Drama of Resistance
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Chomsky’s ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and South America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance. GER:DB-Hum
3-5 units, Aut (Rehn, R)

DRAMA 189Q. Mapping and Wrapping the Body
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The concepts behind gender boundaries and clothing systems. GER:DB-Hum
3 units, Aut (Eddelman, W)

DRAMA 190. Special Research
Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 191. Independent Study
Individual supervision of off-campus internship. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 200. Senior Project
See “Undergraduate Programs” for description.
2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 201A. Honors Colloquium
See “Undergraduate Programs” for description.
1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201B. Honors Colloquium
See “Undergraduate Programs” for description.
1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201C. Honors Colloquium
See “Undergraduate Programs” for description.
1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201D. Honors Colloquium
See “Undergraduate Programs” for description.
1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 202. Honors Thesis
See “Undergraduate Programs” for description. May be repeated for credit. (Staff)
2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 203. Advanced Improvisation
Further development of improvisational skills.
3 units, not given this year

DRAMA 205. Senior Project: Acting
Collaborative work on a project culminating in a production.
2-5 units, not given this year

DRAMA 210A. Actor in Performance
Preference to Drama majors and minors and to students interested in further training in the performing arts. Taught in the professional conservatory tradition, with the creation of an acting ensemble. Skill building in acting, movement, voice, and speech. How to analyze and play the dramatic action of the text. Guest teachers from professional theater complement and expand the work of the ensemble. Limited enrollment. Prerequisite: interview with instructor.
4-5 units, alternate years, not given this year

DRAMA 210B. Actor in Performance
Preference to Drama majors and minors and to students interested in further training in the performing arts. Taught in the professional conservatory tradition, with the creation of an acting ensemble. Skill building in acting, movement, voice, and speech. How to analyze and play the dramatic action of the text. Guest teachers from professional theater complement and expand the work of the ensemble. Limited enrollment. Prerequisite: interview with instructor.
4-5 units, alternate years, not given this year

DRAMA 210C. Actor in Performance: Ensemble Workshop in Today’s Theater
Actors apply themselves to performance challenges of plays from the U.S. and UK theater today: Stephen Adly Guirgis, Richard Greenberg, Philip Ridley, Kia Cothron, Diana Son, Winsome Pincock, and emerging student playwrights. Final presentation of an adapted contemporary script chosen to suit the casting needs of the ensemble.
4-5 units, alternate years, not given this year

DRAMA 210V. Vocal Production and Audition
(Same as DRAMA 120V) The vocal mechanism with development of voice and articulation for the stage. The actor’s tools of phonetics, verbal action, and text analysis. Voice in preparation for audition. Emphasis is on relaxation, selection of appropriate material, and versatility to show contrast and range.
3 units, Aut (Kostopoulos, K), Spr (Staff)

DRAMA 213. Stanford Improv Ensemble
By audition only, for members of the improvisation troupe. Special project work. Prerequisite: 103.
1-2 units, Aut (Klein, D), Win (Klein, D), Spr (Klein, D)

DRAMA 224. Introduction to the Profession
Audition technique, material selection, and graduate school and MFA program guidance. Guest theater professionals. Selection and delivery of classical and contemporary audition material. Techniques for a confident approach to the audition situation.
3-5 units, given next year

DRAMA 231. Advanced Stage Lighting Design
Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.
1-5 units, Aut (Ramsaur, M), Win (Ramsaur, M), Spr (Ramsaur, M), Sum (Staff)

DRAMA 232. Advanced Costume Design
Individually structured tutorial for costume designers. May be repeated for credit. Prerequisite: 132 or consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 233. Advanced Scene Design
Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 234. Advanced Stage Management Project
For students stage managing a Department of Drama production. Prerequisite: 134.
2-9 units, Aut (Staff), Win (Staff), Spr (Apperson, L), Sum (Staff)

DRAMA 235. Advanced Sound Design
Individually structured tutorial for sound designers. May be repeated for credit. Prerequisite: 135 or consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN DRAMA

DRAMA 240. Projects in Theatrical Production
(Same as DRAMA 140) Assistant directing: stage, costume, lighting, and sound design; technical production, stage managing, or
other work in connection with Department of Drama productions. Prerequisite: consent of instructor.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

**DRAMA 256H. History of Performance Art and Live Art**

(Same as DRAMA 156H) From 1950 to the present, emphasizing the U.S. precedents in visual arts, modern dance, and experimental theater. Modes include happenings, fluxus, body art, everyday performance, solo monologue, and bio art. Sources include surveys, essays, and artists’ writings, and visual documentation.

3 units, not given this year

**DRAMA 257T. Performance and Ethnography**

5 units, not given this year

**DRAMA 260. Performance, Dance, and History: The Ballerina**

(Same as DANCE 160, DRAMA 160) Transitional periods in the history of theatrical and popular dance from the 19th through the 21st centuries; how the dancing body and choreography have been constructed in relation to social, aesthetic, and cultural agendas. This year, focus is on ballet migrations and the ballerina.

4 units, Win (Roy, J)

**DRAMA 277. Writing for Performance: The Fundamentals**

(Same as CSRE 177, DRAMA 177) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Shanley, August Wilson, Paula Vogel, Octavio Solis and others. Table readings of one-act length work.

5 units, Win (Moraga, C)

**DRAMA 278. Page to Stage: Playwriting and Solo Performance**

(Same as DRAMA 178) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

3-5 units, Spr (Freed, A)

**DRAMA 279D. Imagine Freedom: Dramatizing the Undocumented**

(Same as DRAMA 179D) The docudrama (plays and films) as an art practice of political transgression. Focus is on texts in which a socially marginalized community serves as the main character of the drama. Texts include Salt of the Earth; Chavez Ravine by Culture Clash; Canadian First Nations playwright Marie Clements’ The Unnatural and Accidental Women; and Doris Pilkington Garimara’s Rabbit Proof Fence. Script analysis and scriptwriting.

5 units, alternate years, not given this year

**DRAMA 290. Special Research**

Individual project on the work of a playwright, period, or genre.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 300A. Critical Styles I**

Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.

3-5 units, Aut (Rayner, A)

**DRAMA 300B. Critical Styles II**

Notions of performance as they relate to gender, race, and globalization in critics such as Derrida, Butler, and Phelan. How style reveals context. Students write in the style of authors discussed.

3-5 units, Win (Rayner, A)

**DRAMA 301. Performance and Perfomativity**

5 units, Win (Menon, J)

**DRAMA 302. Racial Erotics**

(Same as DRAMA 150T) Issues in postcolonial studies; the shifting erotics of race and nation; and the management of sexuality within geopolitical contexts in colonialism, nationalism, and globalization. The historicity of these categories; how race, gender, and nation continue to shape the world.

3-5 units, Aut (Menon, J)

**DRAMA 303. Race and Performance**

3-5 units, Spr (Staff)

**DRAMA 303A. Theory/Theater**

How theater has provided the ground for epistemological concerns with questions of being, events, human action, and ethics, from classical Greek thought to postcolonialism. Theoretical work including Aristotle, Artaud, Anzaldúa, Brecht, Bhabha, DuBois, and Derrida. Theater practices including perspectival staging and postmodern performance.

3 units, not given this year

**DRAMA 304. Historiography of Theater**

(Same as DRAMA 166H, FREGEN 252) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

3-5 units, Win (Apostolides, J)

**DRAMA 320. Basic Approaches to Teaching Acting**

Workshop. The pedagogy of acting to prepare graduate student teachers for introductory classes in acting.

1-3 units, alternate years, not given this year

**DRAMA 341. How Practice Practices**

(Same as DRAMA 101P) Tools of theater making from thinking, to sketching, to composing theater and performance.

3-5 units, Aut (Goulish, M)

**DRAMA 351. Great Books: Dramatic Traditions**

(Same as DRAMA 151T) The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

3-5 units, Spr (Menon, J)

**DRAMA 355M. The Rite to Remember: Performance and Chicana Indigenous Thought**

(Same as CHICANST 197, CSRE 197, NATIVEAM 197) Indigenious thought and aesthetics as they pertain to the performance and ceremonial practices of Chicana and other indigenous African American women artists and spirit practitioners.

3-5 units, Spr (Staff)

**DRAMA 356T. Intro to Psychoanalysis as a Critical Method**

(Same as ENGLISH 356T) Primary reading in Freud, Lacan, Laplanche, Irigaray and Kristeva. Secondary readings in film theory (Mulvey to Silverman), art history (Bryson, Bersani) and poststructuralism (Derrida, Foucault, Butler).

3-5 units, Aut (Phelan, M)

**DRAMA 358C. Beckett**

(Same as DRAMA 152, ENGLISH 389B) Beckett’s plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.

3-5 units, not given this year

**DRAMA 364. Introduction to Queer Theory**

(Same as DRAMA 164S, FEMST 120) Readings in the development of queer theory in literature, art, and science including Sedgwick, Butler, Roughgarden, Freeman, and Foucault. Cultural texts from Mapplethorpe’s photographs to Queer Eye for the Straight Guy.

3-5 units, Spr (Phelan, M)

**DRAMA 365M. Musical Theatre**

(Same as DRAMA 165M, ENGLISH 265M) Major innovations in the musical from South Pacific to High School Musical. Concentration on American classics with forays into film adaptations and
licensing, marketing, and cast recordings. Attention to issues of race and gender.
3-5 units, Win (Phelan, M)

DRAMA 370. Concepts of Directing
(Same as DRAMA 170A) Directorial definitions of time, space, movement, and the performer/spectator relationship. Experimentation with texts from literary and other sources, including works from the realistic tradition in drama, using a multi-form performance space.
5 units, Aut (Hixson, L)

DRAMA 372. Projects in Directing
3-5 units, Spr (Staff)

DRAMA 372B. Projects in Directing
3-5 units, not given this year

DRAMA 373. Directing and Dramaturgy
Dramaturgy, directorial methods, and visual concepts in the production of plays from the Elizabethan tradition to postmodernist texts. Work on the text is tested in the staging of scenes.
3-5 units, not given this year

DRAMA 374. Graduate Directing Workshop: The Actor- Director Dialogue
Students work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.
3-5 units, Win (Rehm, R)

DRAMA 375. Main Stage Production
Production of a full-length play as part of the Department of Drama season. Public performance.
3-5 units, Win (Staff)

DRAMA 377. Graduate Directors’ Staged Reading Project
Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.
2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 390. Tutorial
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 399. Dissertation Research
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes
(Same as ENERGY 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today’s technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER:DB-EngrAppSci
3 units, Spr (Kovscek, A; Gerritsen, M)

EARTHSYS 103. Energy Resources
(Same as CEE 173A, CEE 207A) Fossil and renewable energy resources and energy efficiency. Topics for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. GER:DB-EngrAppSci
4-5 units, Aut (Woodward, J; Knapp, K)

EARTHSYS 104. The Water Course
(Same as GEOPHYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water, taste tests of water from around the world. Current U.S. and world water supply issues. GER:DB-NatSci
3 units, Spr (Knight, R)

EARTHSYS 108. Coastal Wetlands
(Same as EARTHSYS 208) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A. GER:DB-NatSci
3 units, alternate years, not given this year

EARTHSYS 111. Biology and Global Change
(Same as BIO 117) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER:DB-NatSci
4 units, Win (Vitousek, P; Arrigo, K)

EARTHSYS 112. Human Society and Global Change
Introduction to the interdisciplinary concepts of human dimensions of global change. Focus areas include economics, policy, culture, and history. Prerequisite: ECON 1A
4 units, Spr (Staff)

EARTHSYS 113. Earthquakes and Volcanoes
(Same as GEOPHYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER:DB-EngrAppSci
3 units, Spr (Beroza, G; Segall, P)

EARTHSYS 123. From Local to Global: Collaborations for International Environmental Education
(Same as EDUC 122X) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.
2 units, not given this year

EARTHSYS 132. Energy Cooperation in the Western Hemisphere
(Same as EARTHSYS 232, IPS 263) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the
Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

4 units, not given this year

EARTHSYS 133. California Climate Change Law and Policy
(Same as EARTHSYS 233) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and appliance standards. The draft scope plan to outline California’s policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California’s efforts as platforms to delve into larger legal issues.

3 units, Spr (Staff)

EARTHSYS 141. Remote Sensing of the Oceans
(Same as EESS 141, EESS 241, EARTHSYS 241) How to observe and interpret biological and physical change in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, Win (Arrigo, K)

EARTHSYS 143. Climate Change in the West: A History of the Future
(Same as HISTORY 243J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaptation to harsh environments. How can history help us think more clearly about the current crisis and our choices for the future? Examines the long history of climate change in the West, as well as recent warming through scientific reconstruction of historical sources, environmental histories, and visions for the future, including plans for mitigation and adaptation, scientific predictions, and science fiction.

5 units, Spr (Christensen, J)

EARTHSYS 144. Fundamentals of Geographic Information Science (GIS)
(Same as EESS 164) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER: DB-NatSci

4 units, Aut (Staff)

EARTHSYS 147. Controlling Climate Change in the 21st Century
(Same as BIO 147, BIO 247, EARTHSYS 247, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER: DB-NatSci

3 units, alternate years, not given this year

EARTHSYS 148. Copenhagen Climate Protocol: Interpreting the Chaos
(Same as EARTHSYS 248) Topics include the United Nations Framework Convention on Climate Change (UNFCCC) process from 1992 Rio meeting, Article 2 of the UNFCCC to avoid dangerous anthropogenic interference with the climate system, the Conference of the Parties (COP) system, the history of earlier COPs including the Kyoto Protocol, the non-governmental organizations side events at each COP, the media presence, and the mainstream players and their likely positions. Small student groups represent the main players and debate the Copenhagen Protocol from the point of view of those groups. Lectures on the legal, historical, political, and media aspects of COPs.

2 units, Aut (Root, T; Schneider, S)

EARTHSYS 164. Introduction to Physical Oceanography
(Same as CEE 164, CEE 262D) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci

4 units, Win (Fong, D)

EARTHSYS 165. Promoting Behavior Change
(Same as HUMBIO 165) How to apply principles of behavioral change to a real world public health problem: climate change and environmental sustainability. Sources include theory, research, and practice from perspectives such as social and cognitive psychology, media and communication, education, behavioral medicine, social marketing, and consumer behavior. Student groups create an intervention to help elementary school students reduce their environmental footprint. Research performed in local high schools to develop optimally feasible, acceptable, and effective interventions. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Spr (Robinson, T)

(Same as EARTHSYS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical cases (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, Win (Klinger, D; Naylor, R; Gerhart, A)

EARTHSYS 175. Law and Science of California Coastal Policy
(Same as CEE 175A, CEE 275A, EARTHSYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California’s coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor.

3-4 units, not given this year

EARTHSYS 180. Fundamentals of Sustainable Agriculture
(Same as EARTHSYS 280, EESS 180, EESS 280) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER: DB-NatSci

3 units, alternate years, not given this year

EARTHSYS 180B. Local Sustainable Agriculture
Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

2 units, Aut (Wiederkehr, S), Spr (Wiederkehr, S)

EARTHSYS 181. Concepts of Urban Agriculture
(Same as EARTHSYS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Prerequisite: application.

2 units, Win (Matson, P)
EARTHSYS 182. Current Issues in Sustainable Agriculture
(Same as EARTHSYS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers. 2 units, alternate years, not given this year

EARTHSYS 183. Food Matters: Agriculture in Film
(Same as EARTHSYS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit. 1 unit, alternate years, not given this year

EARTHSYS 184. Climate and Agriculture
(Same as EARTHSYS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate change on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206, and consent of instructor. 3 units, Spr (Lobell, D)

EARTHSYS 189. Field Studies in Earth Systems
(Same as BIO 206) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics include biotic and abiotic components of terrestrial ecosystems, biogeography, and ecosystem function. Prerequisites: BIO 141 or EESS 160 (formerly GES 160), or equivalent; AXESS. May be repeated for credit. 5 units, alternate years, not given this year

EARTHSYS 199. Honors Program in Earth Systems
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN EARTH SYSTEMS

EARTHSYS 208. Coastal Wetlands
(Same as EARTHSYS 108) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A. 3 units, Win (Kennedy, J)

EARTHSYS 210. Senior Seminar
Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Prerequisite: EARTHSYS 260. 3 units, Win (Staff)

EARTHSYS 220. Energy Cooperation in the Western Hemisphere
(Same as EARTHSYS 132, IPS 263) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biodiesels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership. 4 units, not given this year

EARTHSYS 233. California Climate Change Law and Policy
(Same as EARTHSYS 133) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and decoupling. The draft scoping plan to outline California’s policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California’s efforts as platforms to delve into larger legal issues. 3 units, Spr (Staff)

EARTHSYS 241. Remote Sensing of the Oceans
(Same as EESS 141, EESS 241, EARTHSYS 141) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. 3-4 units, Win (Arrigo, K)

EARTHSYS 247. Controlling Climate Change in the 21st Century
(Same as BIO 147, BIO 247, EARTHSYS 147, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. 3 units, alternate years, not given this year

EARTHSYS 248. Copenhagen Climate Protocol: Interpreting the Chaos
(Same as EARTHSYS 148) Topics include the United Nations Framework Convention on Climate Change (UNFCCC) process from 1992 Rio meeting, Article 2 of the UNFCCC to avoid dangerous anthropogenic interference with the climate system, the Conference of the Parties (COP) system, the history of earlier COPs including the Kyoto Protocol, the non-governmental organizations side events at each COP, the media presence, and the mainstream players and their likely positions. Small student groups represent the main players and debate the Copenhagen Protocol from the point of view of those groups. Lectures on the legal, historic, political, and media aspects of COPs. 2 units, Aut (Root; T. Schneider; S)

EARTHSYS 250. Directed Research
Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participate in one of several off-campus Stanford programs, or an approved non-Stanford program relevant to the student’s Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision. (WIM) 1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 260. Internship
2 units, Aut (Root; T. Schneider; S)

EARTHSYS 272. Antarctic Marine Geology
(Same as EESS 242) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostatigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter. 3 units, Aut (Dunbar, R)

(Same as EARTHSYS 173) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Medi-
EARTHSYS 275. Law and Science of California Coastal Policy
(Same as CEE 175A, CEE 275A, EARTH(SYS 175) Interdisciplinary.
The legal, science, and policy dimensions of managing Cali-
ifornia’s coastal resources. Coastal land use and marine resource
decision making. The physics, chemistry, and biology of the coastal-
zone tools for exploring data from the coastal ocean, and the
institutional framework that shapes public and private decision
making. Field work: how experts from different disciplines work
to resolve coastal policy questions. Primarily for graduate students;
upper-level undergraduates may enroll with consent of instructor.
3-4 units, not given this year

EARTHSYS 280. Fundamentals of Sustainable Agriculture
(Same as EARTHSYS 180, EESS 180, EESS 280) Ecological,
economic, and social dimensions of sustainable agriculture in the
context of a growing world population. Focus is on management
and technological approaches, and historical context of agricultural
growth and change, organic agriculture, soil and water resource
management, nutrient and pest management, biotechnology, eco-
system services, and climate change.
3 units, alternate years, not given this year

EARTHSYS 281. Concepts of Urban Agriculture
(Same as EARTH SYS 181) For advanced undergraduates and
graduate students from all fields. Seminar: Current status of and
potential for global urban agriculture. Topics include: environmen-
tal and economic dimensions of urban food production and sourcing;
city policy and land-use planning; and an ecosystem services
approach to urban agriculture. Developed and developing world
contexts. Two field trips to nearby cities; guest lectures; case stud-
ies; group projects. Prerequisite: application.
2 units, Win (Matson, P)

EARTHSYS 282. Current Issues in Sustainable Agriculture
(Same as EARTH SYS 182) Sustainability and ethics of animal
production in the U.S. Demystification of the marketing of agricul-
tural products. The past, present, and future of small family farms.
Farming issues. Students lead discussions and write response
papers.
2 units, alternate years, not given this year

EARTHSYS 283. Food Matters: Agriculture in Film
(Same as EARTH SYS 183) Film series presenting historical and
contemporary issues dealing with food and agriculture across the
globe. Students discuss reactions and thoughts in a round table
format. May be repeated for credit.
1 unit, alternate years, not given this year

EARTHSYS 284. Climate and Agriculture
(Same as EARTH SYS 184) The effects of climate change on glob-
al food and agricultural systems. Climate assessment and socio-
economic modeling approaches to quantify the impacts of climate
on agro-ecosystems and society. Enrollment limited to 25; priority
to graduate students, seniors, and juniors. Prerequisites: ECON
106/206, and consent of instructor.
3 units, Spr (Lobell, D)

EARTHSYS 290. Master’s Seminar
Open to Earth Systems master’s students only. Independent re-
search, oral presentation of results, and preparation of an original
proposal for innovative Earth Systems science/policy research.
2 units, Aut (Kennedy, J)

EARTHSYS 297. Directed Individual Study in Earth Systems
Under supervision of an Earth Systems faculty member on a sub-
ject of mutual interest.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 298. Advanced Topics in Earth Systems
For Earth Systems master’s students only. Continuation of EARTH SYS 290. May be repeated for credit.
2 units, Spr (Kennedy, J)

EARTHSYS 299. M.S. Thesis
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 323. Stanford at Sea
(Same as BIOHOPK 182H, BIOHOPK 323H, EESS 323) (Gradu-
ate students register for 323H.) Five weeks of marine science in-
cluding oceanography, marine physiology, policy, maritime stu-
dies, conservation, and nautical science at Hopkins Marine Station,
followed by five weeks at sea aboard a sailing research vessel in the
Pacific Ocean. Shore component comprised of three multidiscip-
inary courses meeting daily and continuing aboard ship. Stu-
dents develop an independent research project plan while ashore,
and carry out the research at sea. In collaboration with the Sea
Education Association of Woods Hole, MA. Only 6 units may
count towards the Biology major.
16 units, alternate years, not given this year

EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES

GRADUATE COURSES IN EARTH,
ENERGY, AND ENVIRONMENTAL
SCIENCES

EES 302. Challenges and Practices in Crossdisciplinary Re-
search and Teaching
Required EES core course. Presentations by Earth Sciences facult-
Ary. Pedagogical tools to present interdisciplinary concepts to a
non-specialist audience.
1 unit, Spr (Staff)

EES 400. Research in Earth, Energy, and Environmental
Sciences
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EAST ASIAN STUDIES (EASTASN)

UNDERGRADUATE COURSES IN EAST
ASIAN STUDIES

EASTASN 5. East House Seminar
May be repeated for credit.
1 unit, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K)

EASTASN 117. Health and Healthcare Systems in East Asia
(Same as EASTASN 217) China, Japan, and both Koreas. Health-
care economics as applied to East Asian health policy, including
economic development, population aging, infectious disease out-
breaks (SARS, avian flu), social health insurance, health service
delivery, payment incentives, competition, workforce policy,
pharmaceutical industry, and regulation. No prior knowledge of
conomics or healthcare required.
3-5 units, Aut (Eggelston, K)

EASTASN 127. Economics of Health and Health Care in Asia-
Pacific
(Same as EASTASN 227) This course offers economic insights
into the challenges significant demographic and epidemiological
changes have created for the health systems of Asian-Pacific coun-
tries by providing an overview of the regional health situation and
health system development, before focusing on topics such as de-
terminants of the demand for health care and the effect of incen-
tives on supplier behavior. Characteristics common to most Asian-
Pacific countries, such as population aging and health inequity,
will be emphasized. Prerequisite: ECON 1 or consent of instructor.
3-5 units, Spr (Staff), offered once only

EASTASN 180C. Shanghai as Model, Measure, and Metaphor
for China’s Modernization, 1840-2010
(Same as EASTASN 280C) As a primary point of contact between
China and the world, Shanghai holds a strong grip on both the
Chinese and foreign imagination. Though famed for its wealth,
intrigues, and entertainments, Shanghai stands as much for a
process: the translation of foreign ideas, goods, and practices into a
Chinese setting. This course focuses on the historical circum-
tances surrounding the emergence of a possible Shanghai model,
describe its key characteristics, and study its relevance to China’s
modernization, from Shanghai’s days as a treaty port through the 2010 World Expo.

3-5 units, Win (Staff), offered once only

EASTASN 181K. Korean Economy: Achievements and Problems to be Solved
(Same as EASTASN 281K) Historic overview of the Korean economy, emphasizing turning points, crises, and policies to tackle issues. Analysis of success elements by industries such as agriculture, manufacturing, service industries, and finance, and by input factors such as human resources, land supply, social overhead capital, and open door policy including FTAs with the U.S. and EU. Focus on problems facing the Korean economy and ways to solve them. One session will be on the North Korean economy and South-North economic cooperation.

3-5 units, Win (Staff), offered occasionally

EASTASN 191. Journal of East Asian Studies
1 unit, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K)

EASTASN 199. Directed Reading
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EASTASN 281K. Korean Economy: Achievements and Problems to be Solved
(Same as EASTASN 181K) Historic overview of the Korean economy, emphasizing turning points, crises, and policies to tackle issues. Analysis of success elements by industries such as agriculture, manufacturing, service industries, and finance, and by input factors such as human resources, land supply, social overhead capital, and open door policy including FTAs with the U.S. and EU. Focus on problems facing the Korean economy and ways to solve them. One session will be on the North Korean economy and South-North economic cooperation.

3-5 units, Win (Staff), offered occasionally

GRADUATE COURSES IN EAST ASIAN STUDIES

EASTASN 217. Health and Healthcare Systems in East Asia
(Same as EASTASN 117) China, Japan, and both Koreas. Health-care economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

3-5 units, Aut (Eggleston, K)

EASTASN 227. Economics of Health and Health Care in Asia-Pacific
(Same as EASTASN 127) This course offers economic insights into the challenges significant demographic and epidemiological changes have created for the health systems of Asia-Pacific countries by providing an overview of the regional health situation and health system development, before focusing on topics such as determinants of the demand for health care and the effect of incentives on supplier behavior. Characteristics common to most Asian-Pacific countries, such as population aging and health inequality, will be emphasized. Prerequisite: ECON 1 or consent of instructor.

3-5 units, Spr (Staff), offered once only

EASTASN 280C. Shanghai as Model, Measure, and Metaphor for China’s Modernization, 1840-2010
(Same as EASTASN 180C) As a primary point of contact between China and the world, Shanghai holds a strong grip on both the Chinese and foreign imagination. Though famed for its wealth, intrigues, and entertainments, Shanghai stands as much of a process: the translation of foreign ideas, goods, and practices into a Chinese setting. This course focuses on the historical circumstances surrounding the emergence of a possible Shanghai model, describes its key characteristics, and study its relevance to China modernization, from Shanghai’s days as a treaty port through the 2010 World Expo.

3-5 units, Win (Staff), offered once only

EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies
For East Asian Studies M.A. students only.
1 unit, Aut (Wigen, K)

EASTASN 390. Practicum Internship
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 1A. Introductory Economics A
The economic way of thinking and the functioning of a market economy. The behavior of consumers and firms, markets for goods and inputs, and principles of international exchange. Applications and policy issues in economics. GER:DB-SocSci

5 units, Aut (Taylor, J), Win (Wright, G), Spr (Wong, J)

ECON 1B. Introductory Economics B
Aggregate economic relationships, including output, employment, inflation, interest rates, and exchange rates. Short-run fluctuations and long-run growth. Issues in monetary and fiscal policy. Prerequisite: 1A. GER:DB-SocSci

5 units, Win (Clerici-Arias, M), Spr (Boskin, M), Sum (Leeeson, R)

ECON 11N. Understanding the Welfare System

2 units, Win (MacCrate, C)

ECON 17N. Energy, the Environment, and the Economy
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of non-renewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally-friendly energy sources.

2 units, Spr (Wolak, F)

ECON 20N. Economy and Economics of Ancient Greece

2 units, Win (Ameniya, T)

ECON 50. Economic Analysis I
Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Mono-poly in partial equilibrium. Economic tools developed from multivariate calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites: 1A and MATH 51. GER:DB-Math

5 units, Aut (Abramitzky, R), Spr (Tendall, M), Sum (Stein, L)

ECON 51. Economic Analysis II
Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, intertemporal choice and asset markets, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariable calculus is used. Prerequisite: 50.

5 units, Aut (Clerici-Arias, M), Win (Tendall, M), Sum (Ciojoc, D)
ECON 52. Economic Analysis III
Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy and their effect on growth, employment, and inflation. Prerequisites: 1B, 50.
5 units, Win (Jaimovich, N), Spr (Klenow, P), Sum (Desmet, K)

ECON 90. Introduction to Financial Accounting
(Same as ECON 190) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.
5 units, Aut (Ogneva, M), Win (Guttman, I)

ECON 91. Introduction to Cost Accounting
(Same as ECON 191) The use of internal financial data for managerial decision making.
5 units, Spr (Stanton, F)

ECON 101. Economic Policy Analysis
Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: 51 and 52, 102B, and two field courses. Some sections require additional prerequisites. WIM
5 units, Aut (Pieschacon, A), Win (Steiner, F), Spr (Steiner, F)

ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists
Description and examples of the use of statistical techniques relevant to economics. Basic rules of probability, conditional probability, discrete and continuous probability distributions. Point estimation, tests of hypotheses, confidence intervals, and linear regression model. Prerequisite: MATH 41 or equivalent. GER:DB-Math
5 units, Aut (Steiner, F), Win (Steiner, F)

ECON 102B. Introduction to Econometrics
5 units, Win (Harding, M), Spr (Hansen, P)

ECON 102C. Advanced Topics in Econometrics
Identification and estimation of the effect of human capital variables on earnings (such as the return to education, tenure), and identification and estimation of labor supply models, focusing on microeconomic data. Topics: instrumental variable estimation, limited dependent variable models (probit, logit, and Tobit models), and panel data techniques (fixed effect and random effect models, dynamic panel data models).
5 units, Spr (Postaferrri, L)

ECON 103. Applied Econometrics
The construction and use of econometric models for analyzing economic phenomena. Students complete individual projects and core material. Topics vary with the instructor. Enrollment restricted to Juniors and Seniors. Limited enrollment. Prerequisites: 52, 102B.
5 units, Win (Bloom, N)

ECON 104. Econometrics Applied to Macroeconomics and Finance
Seminar in quantitative analysis of issues relating to the overall performance of the American and global economies. Emphasis on the recent economic crisis. Requires the execution and presentation of an original research paper using econometric techniques. Prerequisites: Econ 51, 52, 102B. Recommended: Econ 140. Limited enrollment.
5 units, Win (Hall, R)

ECON 106. World Food Economy
The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.
5 units, Win (Naylor, R; Falcon, W)

ECON 111. Money and Banking
Money, interest rates, banks and other financial institutions at both micro and macro levels. Micro: alternative financial instruments, the determinants of interest rates, the yield curve, and the role of banks and other capital market institutions in the intermediation process. Supply of money, regulation, and supervision. Macro: the choice of monetary policy by the central bank, the impact of monetary policy making institutions on this choice and the various channels through which monetary policy affects inflation and real variables in the economy. Emphasis is on the institutional structure of Federal Reserve System and the conduct of monetary policy in the U.S. Prerequisites: 50, 52.
5 units, Win (Schneider, K), Sum (Lessee, R)

ECON 113. Economics of Innovation
The modern, knowledge-based economy characterized by: rapid innovation; a dramatic increase in the rate of production of information and decline in the cost of producing it; and pervasive network externalities or increasing returns to scale. Emphasis is on the role of patents and alternative mechanisms for creating incentives for firms to innovate. Topics include: why there may be too much innovative activity; how patent laws may slow rather than help innovation; and the interaction between public and private sector innovation.
5 units, Spr (Moser, P)

ECON 115. European Economic History
Economic changes and growth in W. Europe from antiquity to the present. The transformation of Europe from an economically and culturally backward part of the world to the center of the pre-WW I world economy. Topics: the role of techniques and sciences, variations of the extent of market activities, institutional changes, international politics, demography. Prerequisites: 51, 52. GER:DB-SocSci
5 units, not given this year

ECON 116. American Economic History
The American economy from colonial times to the present. Application of economic analysis to historical issues; the role of history in economic life. Topics: U.S. economic development in global and comparative context; origins and consequences of the American system of technology and business organization; economies of the Great Depression and New Deal; recent U.S. economic performance in historical perspective. Prerequisite: 1A. GER:DB-SocSci, EC-AmerCul
5 units, Spr (Wright, G)

ECON 117. Economic History and Modernization of the Islamic Middle East
From the rise of Islam to the present. Transformation of region from economically advanced to underdeveloped. Role of religion in economic successes and failures. Current obstacles to development. Topics: Islamic economic institutions; innovation and change; political economy of modernization; interactions with other regions; and economic consequences of Islamism. Prerequisites: ECON 51, 52, 102B.
5 units, not given this year

ECON 118. Development Economics
The economic problems and policy concerns of developing countries. Theories of growth and development; inequality and poverty; credit and labor markets; health and education; politics and corruption. Emphasis is on economic models and econometric evidence rather than case studies. Prerequisites: 50, 52, 102B. GER:ECGlobalCom
5 units, Aut (Jayachandran, S)

ECON 120. Socialist Economies in Transition
Privatization, restructuring, and institutional change in E. Europe and the former Soviet Union. Analysis of property rights, corporate governance, incentives, and resource allocation in socialist and transitional economies. Emphasis is on liberalization and privatization policies (including mass and voucher programs) as the primary instruments to induce changes in behavior. Prerequisite: 50. Recommended: 51.
5 units, not given this year

ECON 123. Regulation and Competition in Less Developed Countries
The economics and workings of public intervention, control and liberalization of markets in less developed countries. Topics: natural monopoly regulation; institutions and regulatory commitment; infrastructure concessions; regulation and competition in network industries such as telecoms and electricity; liberalization of markets and competition policy; competition and efficiency; antitrust with a weak judiciary. Prerequisite: 51.
5 units, given next year

STANFORD BULLETIN, 2009-10 | 505
COURSES OF INSTRUCTION

ECON 124. Contemporary Japanese Economy
Comparative and historical perspective. Micro and institutional aspects, such as firms, the employment system, corporate governance and financial institutions, and the macro economy. Elementary applications of macro- and microeconomics. Prerequisite: 50. GER:EC-GlobalCom
5 units, not given this year

ECON 126. Economics of Health and Medical Care
(Same as BIOMEDIN 156, BIOMEDIN 256, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.
5 units, Aut (Bhattacharya, J)

ECON 127. Economics of Health Improvement in Developing Countries
(Same as MED 262) Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and 102B, and consent of instructor.
5 units, not given this year

ECON 135. Finance for Non-MBAs
(Same as MS&E 245G) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.
3-5 units, Aut (Admati, A)

ECON 136. Market Design
Use of economic theory, experiments, and empirical analysis to design market rules and institutions. Topics include: competitive bidding and auction design; matching algorithms to allocate resources in the absence of prices; organization of regulated exchanges. Applications may include auctions for natural resources, sponsored search advertising, the medical residency match, and carbon trading markets. Recommended: 51.
5 units, Win (Levin, J)

ECON 137. Information and Incentives
Incentives in situations where one part has more information than another. A part may have better information about things that it controls (moral hazard), or about things that are outside of its control (adverse selection). The general structure of incentive problems and the design of contracts and institutions to deal with such problems. Applications: executive and employee compensation, sponsored search advertising, the medical residency match, and carbon trading markets. Recommended: 51.
5 units, Win (Gonzalez de Lara, Y)

ECON 138. Risk and Insurance
5 units, Spr (Piazzesi, M; Tong, K)

ECON 139D. Directed Reading
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 140. Introduction to Financial Economics
Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: 51, 102A.
5 units, Win (Kurz, M), Spr (Piazzesi, M), Sum (Harding, M)

ECON 141. Public Finance and Fiscal Policy
(Same as PUBLPOL 107) What role should and does government play in the economy? What are the effects of government expenditure, borrowing, and taxation? Policy topics: budget surplus/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: 51, 52.
5 units, Spr (Boskin, M)

ECON 144. Family Economics
Topics at the intersection of economics and demography. Causes and consequences of historical trends such as the demographic transition, the increase in female labor force participation and its macroeconomic implications, the connection between economic development and family laws (child labor laws, women’s rights), and policies affecting families and children (such as parental leave policies, social security policy, education subsidies). Economic models of household bargaining, fertility choice, and intergenerational transfers. Prerequisites: 51.
5 units, Spr (Tertilt, M)

ECON 145. Labor Economics
5 units, Aut (DeGeorgi, G), Win (Pencavel, J)

ECON 146. Economics of Education
How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: 50, 102B.
5 units, Win (Levin, J)

ECON 147. Economics of Human Resources
Investments in human capital including education, on-the-job training, government training, and health. The effects of human capital accumulation on wages and wage growth and on wage differentials by gender and race. Sample selections and experimental data. Poverty and inequality. Optional research project for public policy organization on labor market/human resources issues. Prerequisite: 51.
5 units, Win (DeGeorgi, G; Pistaferri, L)

ECON 150. Economic Policy Analysis
(Same as PUBLPOL 104, PUBLPOL 204) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics...
and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisite: ECON 50.

5 units, Win (Jones, A)

ECON 151. Path Dependence in Private Action and Public Policy: Decision Making in the Shadow of History
(Same as PUBLPOL 130) The historically contingent development of economic, social, and political behaviors at micro and macro levels. The study of individual and organizational decision making. When can extraneous events have persisting effects upon public institutions, private organizations, and government agencies? Science and technology policy making; precedent-based judicial and administrative proceedings; and institutional reforms and regulatory initiatives illustrate positive feedback dynamics; self-organization and emergent properties in complex systems; conditions of lock-in to and escapes from sub-optimal equilibria in economic and social arrangements. Prerequisite: ECON 50, 51. Recommended: Completion of at least one upper level economics course.

3-5 units, Win (David, P)

ECON 153. Economics of the Internet
Applications of microeconomic theory to Internet businesses: auctions, online transactions, entry barriers, valuation, pricing of facilities, policy for broadband communications, network economics, standards, economics of information. Prerequisites: 51 and one of 102B, 103, 104, 113, 135, 137, 140, 149, 157, or 160.

5 units, not given this year

ECON 154. Economics of Legal Rules and Institutions
(Same as PUBLPOL 106, PUBLPOL 206) Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law’s effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.

5 units, Aut (Owen, B)

ECON 155. Environmental Economics and Policy
Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50. GER: DB-NatSci

5 units, Win (Kerr, S)

ECON 156. Cooperative and Regulatory Approaches to Environmental Policy
Economic, political, and institutional frameworks for understanding the causes and potential solutions to environmental problems. Environmental policy formation, implementation and evaluation; environmental markets and taxes. Applications include: mitigating climate change, protecting biodiversity, managing fisheries, and maintaining water and air quality. Prerequisite: Econ 50 or consent of instructor.

5 units, Spr (Kerr, S)

ECON 157. Imperfect Competition
The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: 51.

5 units, Win (Kastl, J)

ECON 158. Regulatory Economics
The history, economics, and legal background of the institutions under which U.S. industry is subject to government control. Topics: economics and practice of public utility regulation in the communications, television, transportation, energy, and postal delivery sectors and health and safety regulation. Emphasis on the application of economic concepts in evaluating the performance and policies of government agencies. Antitrust law will be introduced and discussed where necessary. Prerequisite: 51 or equivalent intermediate microeconomics course.

5 units, Win (Wolak, F)

ECON 160. Game Theory and Economic Applications
Mathematical introduction to game theory and its applications to economics. Topics: strategic and extensive form games, Nash equilibrium, subgame-perfect equilibrium, Bayesian equilibrium, and perfect Bayesian equilibrium. The theory is applied to repeated games, auctions, and bargaining. Examples from economics and political science. Prerequisites: 51 and course in calculus, or consent of instructor.

3 units, not given this year

ECON 162. Monetary Economics
Dynamic analysis of the role of money and monetary policy in the macro economy, using calculus. Topics: the exchange process and the role of money; inside and outside money; inflation and the inflation tax; international monetary systems; the indeterminacy of floating exchange rates; policies to fix the exchange rate and inflationary incentives; currency crises and speculative attacks; money and interest-bearing government debt; the government’s budget constraint and the coordination of monetary and fiscal policies; hyperinflations and stabilizations; the effect of the national debt on consumption, savings, investment and output; time consistency of government policies. Prerequisite: 52.

5 units, not given this year

ECON 164. Law, Economics and Politics of International Trade
(Same as POLISCI 216) Taught by an economist, a lawyer and a political scientist. Examines aspects of the WTO system from legal, economic and political perspectives. Integrates a careful examination of topical legal issues with theoretical and empirical research in economics and political science to develop both positive and normative themes regarding the WTO as an international institution. Overview of the economics and politics of international cooperation on trade, and an introduction to the WTO as an institution and its core obligations. Topics may include: the dispute resolution system; the choice between multilateral and regional or bilateral trade agreements; the role of developing countries in the WTO; and the relationship between WTO law, domestic regulation and national sovereignty. Prerequisite: ECON 51 or equivalent undergraduate microeconomics.

5-7 units, Win (Goldstein, J; Sykes, A)

ECON 165. International Finance
Introduction to international macroeconomics. Topics: intertemporal approach to the current account, international investment patterns, sovereign debt, crises in international financial markets, real and nominal exchange rate determination and exchange rate policy. Prerequisite: ECON 52.

5 units, Aut (Fitzgerald, D), Sum (Desmet, K)

ECON 166. International Trade
Comparative advantage in production and trade among nations; increasing returns, imperfect competition, and trade; the nature of the gains from trade, winners, and losers; international migration and multinational companies; trade policy and international trade agreements; theory and evidence. Prerequisite: 51.

5 units, Win (Staiger, R)

ECON 167. European Monetary and Economic Integration
The economics of the European Community and the internal market. Analysis of current competition, transportation, and factor market policies, including the problems of agriculture and unemployment. Fiscal harmonization and mercantilist rivalry. European Monetary Union (EMU): genesis, implementation, and consequences of a common currency and central bank. Foreign exchange and foreign trade. Prerequisites: 51, 52, or equivalents.

5 units, not given this year

ECON 168. Topics in International Finance
(Same as ECON 268) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relation-
ECON 202. Core Economics: Modules 1 and 2
(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.
2-5 units, Aut (Segal, I)

ECON 202N. 202 For Non-Economics Ph.D. Students
Core Economics modules 1 and 2 for non-Economics Ph.D. students.
2-5 units, Aut (Staff)

ECON 203. Core Economics: Modules 5 and 6
2-5 units, Win (Bernheim, D)

ECON 203N. 203 For Non-Economics Ph.D. Students
Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: 202N or consent of instructor.
2-5 units, Win (Staff)

ECON 204. Core Economics: Modules 9 and 10
The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. The theory of resource allocation over time, competitive equilibrium, and intertemporal efficiency. Limited enrollment. Prerequisite: 203.
2-5 units, Spr (Jackson, M)

ECON 210. Core Economics: Modules 3 and 7
2-5 units, Aut (Amador, M; Jaimovich, N)

ECON 211. Core Economics: Modules 11 and 12
Capital asset pricing models, equilibrium with securities, pricing of securities, and arbitrage. Overlapping generations models with incomplete market structure and sunspots. Foundations of Bayesian dynamic learning. Investment theory and empirics, including adjustment costs and the q theory; consumption theory and empirics, focusing on the life-cycle model, and the labor market. Limited enrollment. Prerequisite: 210.
2-5 units, Win (Tertilt, M; Schneider, K)

ECON 212. Core Economics: Modules 4 and 8
Monetary theory: economic fluctuations, the role of money (overlapping generations, cash in advance, money in the utility function), dynamic impact of changes in money on the economy, natural rate of unemployment and job creation/destruction, exchange rate determination, international transmission of money, dynamic stochastic general equilibrium models. Macroeconomic policy rationale for central bank independence, time inconsistency, the impact of public debt, rules versus discretion, interest rate versus money rules, international monetary policy coordination, rational expectations, econometric policy evaluation. Limited enrollment. Prerequisites: 203, 211.
2-5 units, Spr (Taylor, J; Piazzesi, M)

ECON 214. Development Economics I
Microeconomic analysis of markets and institutions in developing countries. Topics: the role of the household; health and nutrition; education; property rights; governance; and technology. Emphasis is on empirical tests of and evidence for theoretical models. Prerequisites: 202 or 202N, 270.
2-5 units, Aut (Jayachandran, S)

ECON 216. Development Economics III
Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women’s and children’s rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.
2-5 units, Spr (Tertilt, M)
ECON 220. Political Economy I
Positive and normative theories of political economy. Positive topics include direct democracy, electoral competition, legislative policy making, agenda setting, lobbying, comparative constitutions, and intergenerational politics, with applications to income taxation, redistribution, and the size of government. Normative topics include social choice theory with and without interpersonal comparisons, Pareto inefficiency with public goods, potential Pareto improvements, welfare measurement, cost benefit analysis, and analysis of economic policy reform.
2-5 units, not given this year

ECON 221. Political Economy II
Continuation of 220. Preparation for advanced research in applied political economy. Focus is on econometric methods (panel data, IV, treatment estimation, nonlinear models, random coefficients, duration models, factor analysis) with applications to economic and political development, economic voting, war and economic interdependence, corruption, legislative behavior, and social networks.
2-5 units, not given this year

ECON 224. Science, Technology, and Economic Growth
Upper-division undergraduates may enroll with consent of instructor. The roles played by the growth of scientific knowledge and technological progress in the development of industrial societies. Emphasis is on the interactions between science and technology, and the organizational factors which have influenced their effectiveness in contributing to productivity growth.
2-5 units, not given this year

ECON 225. Economics of Technology and Innovation
Theoretical and empirical analysis of innovation. Topics include optimal design of patents laws and alternative mechanisms to create incentives for innovation, such as technology transfer to developing countries, (compulsory) licensing, and patent pools. Emphasis on empirical analyses of both historical and contemporary data.
2-5 units, Spr (Moser, P)

ECON 226. U.S. Economic History
The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the origins and character of national systems of technology; the Great Depression of the 30s.
2-5 units, Aut (David, P)

ECON 227. European Economic History
European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.
2-5 units, Aut (Abramitzky, R)

ECON 228. Institutions and Organizations in Historical Perspective
Emphasis is on the formative period from the 11th to 18th centuries. Formation, function, and evolution of institutions; alternative conceptual frameworks such as neoclassical, transaction cost economics, institutionalism, and Marxism and neo-Marxism; game theory, mechanism design, and contract theory. Institutions related to trade organization, the organization of production, feudalism, mercantilism, and the state.
2-5 units, Win (Greif, A)

ECON 229. Topics in Economic History
Emphasis is on institutions and organizations, such as risk-sharing organizations, and property rights, such as patent laws and their effects on technological change and economic growth. Topics include: competing hypotheses for cross-country differences in long-term growth; the importance of institutions to economic growth; formation, function, and persistence of institutions and organizations; role of patent laws in creating incentives for innovation; informal networks as a mechanism to trade property rights; causes and effects of institutional change; tests of contract theory in history; and long-term migration and its effect on economic development.
2-5 units, not given this year

ECON 233. Advanced Macroeconomics I
Recent research on the theory and empirical analysis of economic fluctuations, with emphasis on the recent crisis. Coverage and applications of modern numerical tools that are used in this literature. Study of different micro datasets that enhance our understanding of economic fluctuations.
2-5 units, Aut (Hall, R; Jaimovich, N)

ECON 234. Advanced Macroeconomics II
Current research in growth and development. Classic growth models (e.g. Romer, Lucas); recent models by Acemoglu, Aghion, and others. Covers diverse mix of evidence across industries and firms (not just countries) to test and quantify theoretical predictions. Topics: role of physical capital, human capital, technological change, allocative efficiency and openness in explaining long run growth and development facts.
2-5 units, Win (Klenow, P)

ECON 235. Advanced Macroeconomics III
Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.
2-5 units, Spr (Amador, M)

ECON 239D. Directed Reading
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 241. Public Finance and Taxation I
Optimal taxation and design of tax/income transfer systems, including incidence and efficiency. Social welfare. Externalities and public goods. Local public economics. Fiscal federalism, and education finance. Prerequisites: 202-204, 210, 270, 271, or equivalent with consent of instructor.
2-5 units, Aut (Hoxby, C)

ECON 242. Public Finance and Taxation II
Topics concerning capital income taxation, including taxation and saving, taxation and risk taking, and the effects of corporate income taxation. Public expenditures, including social insurance programs and education. Prerequisites: 202, 203, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.
2-5 units, Win (Bernheim, D; Fitzpatrick, M)

ECON 244. Psychology and Economics
Experimental and field evidence related to the psychological mechanisms behind static choice, intertemporal choice, choice under risk and uncertainty, choice in social situations, and hedonics. Models of economic choice based on these findings, and how they improve the explanatory and predictive value of standard theories. Prerequisites: 204, 271, or consent of instructor.
2-5 units, not given this year

ECON 246. Labor Economics I
2-5 units, Aut (Pencavel, J)

ECON 247. Labor Economics II
Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.
2-5 units, Win (Pistaferri, L)

ECON 250. Environmental Economics
Sources of environmental problems in market economies; policy
options for addressing these problems. Topics include: alternative environmental policy instruments such as taxes, standards, and tradable permits; valuation of non-marketed commodities such as environmental amenities and biodiversity; and environmental policy making under uncertainty. Applications include global climate change and green tax reform. Prerequisites: 202, 203, 204, and 271, or equivalents with consent of instructor.

2-5 units, Aut (Gouldier, L; Wolak, F; Kerr, S)

ECON 251. Natural Resource and Energy Economics
Issues in provision and management of non-renewable and renewable natural resources, and energy products and services. Theory and empirical methods related to: market structure, pricing, and performance of important energy and resource industries; sources of market failure in these industries; and alternative regulatory approaches. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

2-5 units, Win (Gouldier, L; Wolak, F; Kerr, S)

ECON 257. Industrial Organization 1
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

2-5 units, Aut (Levin, J; Kastl, J)

ECON 258. Industrial Organization 2
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

2-5 units, Win (Kastl, J; Bagwell, K)

ECON 260. Industrial Organization III
Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: 257, 258.

2-5 units, Spr (Staff)

ECON 265. International Economics I
International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

2-5 units, Aut (Fitzgerald, D)

ECON 266. International Economics II
Theory and empirics of the determinants of trade and comparative advantage, income distribution and gains from trade. Firm-level theories of trade and trade with imperfectly competitive markets. Commercial policies, the political economy of trade policy and the economics of trade agreements.

2-5 units, Win (Staiger, R)

ECON 267. Topics in International Trade
Core theoretical and empirical topics in international trade. Classic general equilibrium including comparative advantage, gains from trade. Ricardian, Heckscher-Ohlin and monopolistic competition models, and accompanying evidence. Theory and empirics of trade policy with emphasis on economics of trade agreements.

2-5 units, not given this year

ECON 268. Topics in International Finance
Same as ECON 268 (Graduate students register for 268.) Money matters of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 52; recommended: 165.

5 units, Win (McKinnon, R)

ECON 269. International Financial Markets and Monetary Institutions
(Same as ECON 169) (Graduate students register for 269.) How nations are linked financially through money, capital, and exchange markets, emphasizing policy issues including the role of the International Monetary Fund, monetary and exchange rate policy, prevention and resolution of financial crises in emerging markets, current account imbalances, and capital mobility. Development and use of macroeconomic models of international financial linkages and microeconomic models of hedging, optimal selection of currences for invoice and trade credit, and parity relationships in futures, swaps, and options markets. Prerequisite: 165. 5 units, not given this year

ECON 270. Intermediate Econometrics I
Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

2-5 units, Aut (Romano, J; Hong, H)

ECON 271. Intermediate Econometrics II
Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

2-5 units, Win (Wolak, F)

ECON 272. Intermediate Econometrics III
Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

2-5 units, Spr (MacCurdy, T)

ECON 273. Advanced Econometrics I

2-5 units, Aut (Hong, H)

ECON 274. Advanced Econometrics II
(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; local polynomial regression; spline regression; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality.

2-5 units, Spr (Romano, J)

ECON 276. Limited Dependent Variables
(Formerly 274.) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches and MCMC. Estimation of discrete choice models with endogeneity, simulation methods and computationally intensive approaches. Estimation of social network models. Random matrix theory. Prerequisite: 273 or consent of instructor.

2-5 units, Win (Harding, M)

ECON 279. Experimental Economics
An introduction to experimental economics, its methods, and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another, and allow researchers with different theoretical dispositions to narrow the range of potential disagreement. Prerequisites: 202, 203, 204, or consent of instructor.

2-5 units, Aut (Niederle, M)

ECON 281. Normative Decision Theory and Social Choice

2-5 units, not given this year
ECON 282. Contracts, Information, and Incentives
Issues and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, role of commitment and renegotiation in long-term relationships, incomplete contracts and applications to the theory of the firm.
2-5 units, not given this year

ECON 283. Advanced Topics in Contracts and Organization
Recent developments and promising research. Topics change from year to year, and may include: reputational concerns and implicit contracts in long-term relationships, property rights and the hold-up problem, multilateral contracting, communication requirements of allocation problems, communication without full commitment. Prerequisite: 282 or consent of instructors.
2-5 units, not given this year

ECON 285. Auctions, Bargaining, and Pricing
(Same as MGTECON 602.) Theory of auctions and related literature in bargaining and pricing. Key papers include Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. How markets with complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders decisively impair the performance of simple market rules. Emphasis on matching markets such as the National Resident Matching Program, asset auctions such as the spectrum auctions. Literature on dynamic bargaining.
2-5 units, Aut (Kojima, F; Niederle, M)

ECON 286. Game Theory and Economic Application
Solution concepts for non-cooperative games, repeated games, games of incomplete information, reputation, and experiments. Standard results and current research topics. Prerequisite: 203 or consent of instructor.
2-5 units, not given this year

ECON 287. General Equilibrium Theory
Existence, efficiency, and Walrasian equilibrium in exchange economies. Production, financial markets, incomplete markets, sequence economies with infinitely-lived agents. Prerequisites: 204 or consent of instructor.
2-5 units, not given this year

ECON 290. Multiperson Decision Theory
Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.
4 units, not given this year

ECON 291. Social and Economic Networks
Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.
2-5 units, Spr (Jackson, M)

ECON 299. Practical Training
Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 300. Third-Year Seminar
Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.
1-10 units, Aut (Bernheim, D; Jayachandran, S), Spr (Bernheim, D; Hansen, P)

ECON 301. Microeconomic Workshop
1-10 units, not given this year

ECON 305. Economic Applications Workshop
1-10 units, Aut (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Bloom, N), Win (Pistaferri, L; MaCurdy, T; Pencavel, J; Wolak, F; Pistaferri, L; McClellan, M), Spr (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; McClellan, M; Bloom, N)

ECON 310. Macroeconomic Workshop
1-10 units, Aut (Hall, R; Klenow, P; Taylor, J; Amador, M; Jaimovich, N; Bloom, N; Tertilt, M; Kurz, M; Piazzesi, M; Schneider, K), Win (Hall, R; Klenow, P; Taylor, J; Jaimovich, N; Tertilt, M; Amador, M; Kurz, M; Piazzesi, M; Schneider, K), Spr (Hall)

ECON 315. Development Workshop
1-10 units, Aut (DeGiorgi, G; Jayachandran, S; Mahajan, A), Win (Jayachandran, S; Mahajan, A; DeGiorgi, G), Spr (DeGiorgi, G; Mahajan, A; Jayachandran, S)

ECON 320. Political Economy Workshop
May be repeated for credit.
1-10 units, Aut (Bernheim, D; Harding, M; Jackson, M), Win (Bernheim, D; Harding, M; Jackson, M), Spr (Bernheim, D; Harding, M; Jackson, M)

ECON 325. Economic History Workshop
May be repeated for credit.
1-10 units, Aut (Greif, A; Wright, G; Abramitzky, R; Moser, P), Win (Greif, A; Wright, G; Moser, P; Abramitzky, R), Spr (Wright, G; Greif, A; Moser, P; Abramitzky, R)

ECON 341. Public Economics and Environmental Economics Seminar
Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies, their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: 241 or consent of instructor.
1-10 units, Aut (Boskin, M; Shoven, J; Goulder, L; Hoxby, C), Win (Boskin, M; Shoven, J), Spr (Boskin, M; Shoven, J)

ECON 345. Applications Workshop
1-10 units, Aut (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Bloom, N), Win (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Bloom, N; McClellan, M), Spr (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Bloom, N; McClellan, M)

ECON 354. Workshop in Law and Economics
2-6 units, Aut (Staff)

ECON 355. Industrial Organization Workshop
Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research paper, make a formal presentation, and lead a structured discussion.
1-10 units, Aut (Bresnahan, T; Einav, L; Kastl, J; Levin, J), Win (Bresnahan, T; Einav, L), Spr (Bresnahan, T; Einav, L)

ECON 365. International Trade Workshop
1-10 units, Aut (Lau, L; Fitzgerald, D; Manova, K; Staiger, R), Win (Lau, L; Staiger, R; Wright, M; Fitzgerald, D), Spr (Lau, L; Wright, M; Fitzgerald, D; Staiger, R)

ECON 370. Econometrics Workshop
1-10 units, Aut (Hong, H; Hansen, P; Mahajan, A; Harding, M), Win (Hansen, P; Mahajan, A; Han, L; Harding, M), Spr (Hansen, P; Mahajan, A; Hong, H; Harding, M)

ECON 385. Mathematical Economics Workshop
1-10 units, not given this year

ECON 391. Microeconomic Theory Seminar
Game theoretic (classic and evolutionary analysis of institutions as multiple equilibria). Norms, social embeddedness, organizations as conventions, contract enforcement and corporate governance mechanisms, and states. Institutional complementarities and diachronic institutional linkage. May be repeated for credit.
1-10 units, Aut (Segal, I; Levin, J; Milgrom, P; Niederle, M; Bernheim, D; Kurz, M; Jackson, M), Win (Bernheim, D; Levin, J; Milgrom, P; Niederle, M; Segal, I; Jackson, M; Kurz, M), Spr (Bernheim, D; Levin, J; Milgrom, P; Niederle, M; Segal, I; Jackson)

ECON 400. Ph.D. Dissertation
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STANFORD BULLETIN, 2009-10 | 511
EDUC 110. Sociology of Education: The Social Organization of Schools
(Same as EDUC 310, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.
GER:DB-SocSci
4 units, Win (Adams, J)

EDUC 111. The Young Adult Novel: A Literature For and About Adolescents
For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.
5 units, Spr (Wolf, J)

EDUC 112X. Urban Education
(Same as EDUC 212X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X) Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
GER:DB-SocSci
3-4 units, Spr (Krumholz, J)

EDUC 116X. Service Learning as an Approach to Teaching
History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning. (Cotterman)
3 units, not given this year

EDUC 117. Research and Policy on Postsecondary Access
(Same as EDUC 417) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. (Antonio)
3 units, Spr (Antonio, A)

EDUC 122X. From Local to Global: Collaborations for International Environmental Education
(Same as EARTHSYS 123) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.
2 units, not given this year

EDUC 123X. Contexts that Promote Youth Development: Understandings of Effective Interventions
How psychology, medicine, public health, sociology, education, and public policy define and promote youth development. How to build the resilience and competencies of youth through safe, supportive environments for building social, emotional, and intellectual skills. How to design settings that best promote youth development.
2-4 units, not given this year

EDUC 124. Collaborative Design and Research of Technology-integrated Curriculum
Design models for the development of educational materials through a studio-based, curriculum development project. Teams work with a teacher or non-school educator to design and test technology-integrated curricula. Focus is on the role that technologies can play in teaching and learning in school and out-of-school contexts. Open to all.
3-4 units, Win (Goldman, S)

EDUC 126X. Introduction to Public Service Learning
Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.
1-2 units, not given this year

EDUC 130. Introduction to Counseling
The theories and techniques of counseling, emphasizing clients’ individual and cultural differences, and construction of one’s own theory of the counseling process and outcome. Two psychotherapeutic theories, cognitive-behavioral and existential-humanistic, supplemented with a third theory of student’s choice. Experiential, problem-based focus on how to develop self-awareness and conceptual understandings of the counseling process in culturally diverse contexts. (PSE)
3 units, Win (Krumholz, J)

EDUC 131. Mediation for Dispute Resolution
(Same as PSYCH 152) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.
3 units, Aut (Krumholz, J)

EDUC 134. Career and Personal Counseling
(Same as EDUC 234, PSYCH 192) Methods of integrating career and personal counseling with clients and counselors from differing backgrounds. Practice with assessment instruments. Case studies of bicultural role conflict. Informal experience in counseling. (PSE)
3 units, Spr (Krumholz, J)

EDUC 137X. Social Justice in Education
(Same as EDUC 237X) (Formerly 320X) Recent work in political theory to address questions about social justice in educational policy and practice: equality in education, language rights, race and multiculturalism, educational choice. GER:EC-EthicReas
3 units, not given this year

EDUC 143. Boys’ Psychosocial Development
(Same as HUMBIO 144) From early childhood through adoles-
EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners
Theoretical issues of foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.
3 units, Spr (Valdés, G)

EDUC 149. Theory and Issues in the Study of Bilingualism
(Same as EDUC 249) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP) GER:DB-Hum
3-5 units, Aut (Valdés, G)

EDUC 150. Introduction to Data Analysis and Interpretation
Primarily for master’s students with little or no experience. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.
4 units, Aut (Porteus, A), Win (Porteus, A)

EDUC 151. Introduction to Qualitative Research Methods
Primarily for master’s students. Issues, ideas, and methods.
3-4 units, Aut (Pope, D), Win (Wolf, J)

EDUC 160. Introduction to Statistical Methods in Education
(Master’s students register for 150.) Describing measured, count, and categorical data. Statistical inference procedures for comparisons of group outcomes and for associations among variables. Course content integrated with statistical computing in R. Students cannot also receive credit for PSYCH 60 or for STATS 60/160.
3-4 units, Aut (Hakuta, K)

EDUC 165. History of Higher Education in the U.S.
(Same as EDUC 265, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)
3-5 units, Aut (Gordon, L)

EDUC 166. The Centrality of Literacies in Teaching and Learning
Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)
3 units, Sum (Aukenman, M)

EDUC 167. Educating for Equity and Democracy
Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP)
2 units, Sum (McDermott, R)

EDUC 171. Early Childhood Education Practicum
Year-long seminar; restricted to students who participate in JumpStart, a service learning program. Training for activities in preschool classrooms. Background on issues related to: young children’s cognitive, language, and social development; classroom management; literacy, math, science teaching; cultural diversity; and early childhood education programs. May be repeated for credit.
2-4 units, Aut (Stipek, D), Win (Stipek, D), Spr (Stipek, D)

EDUC 177. Education of Immigrant Students: Psychological Perspectives
(Same as EDUC 277) Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curricular, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)
4 units, Win (Padilla, A)

EDUC 178X. Latino Families, Languages, and Schools
The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling. (SSPEP) (Valdés)
3-5 units, Spr (Valdés, G)

EDUC 179. Urban Youth and Their Institutions: Research and Practice
(Same as EDUC 279) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Aut (McLaughlin, M)

EDUC 179B. Youth Empowerment and Civic Engagement
(Same as EDUC 279B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.
2-4 units, not given this year

EDUC 180. Directed Reading in Education
For undergraduates and master’s degree students. (All Areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 181. Multicultural Issues in Higher Education
(Same as EDUC 381) The problem of multicultural issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.
4 units, Win (Antonio, A)

EDUC 189X. Language and Minority Rights
(Same as CHICANST 189W, CSRE 189W) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today’s societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom
3 units, Win (Valdes, G)

EDUC 190. Directed Research in Education
For undergraduates and master’s students. May be repeated for credit. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 191X. Introduction to Survey Research
(Same as EDUC 291X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.
3-4 units, Win (Adams, J)

EDUC 193A. Listen Up! Core Peer Counseling Skills
Topics: verbal and non-verbal skills, open and closed questions,
paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.

EDUC 193B. Peer Counseling in the Chicano/Latino Community
Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.
1 unit, Aut (Martinez, A)

EDUC 193C. Peer Counseling in the African American Community
Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.
1 unit, Aut (Adams, C), Spr (Adams, C)

EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives
Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.
1 unit, Spr (Lin, O)

EDUC 193N. Peer Counseling in the Native American Community
Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.
1 unit, Win (Simms, W)

EDUC 193P. Peer Counseling at the Bridge
Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.
1 unit, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)

EDUC 193S. Peer Counseling on Comprehensive Sexual Health
Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC). 1 unit, Aut (Yisrael, D), Win (Yisrael, D), Spr (Yisrael, D)

EDUC 197. Education, Gender, and Development (Same as SOC 134)
Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. (SSPEP GER:EC-Gender)
4 units, Spr (Wotipka, C)

EDUC 199A. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
1 unit, Aut (Stevens, M)

EDUC 199B. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
1 unit, Win (Stevens, M)

EDUC 199C. Undergraduate Honors Seminar
Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.
1 unit, Spr (Stevens, M)

EDUC 219E. The Creative Arts in Elementary Classrooms
For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.
1 unit, Aut (Malin, H)

EDUC 245. Understanding Racial and Ethnic Identity Development
African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and experiences of white racial consciousness.
3-5 units, Win (LaFromboise, T)

GRADUATE COURSES IN EDUCATION

EDUC 113X. Gender and Sexuality in Schools
Issues at the intersection of queer theory and educational practice. Experiences, rights, and responsibilities of lesbian, gay, bisexual, transgender, intersex, queer, and questioning students and teachers as members of marginalized or majority cultures.
1-3 units, Spr (Haertel, E)

EDUC 136. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 306D, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Ramirez, F)

EDUC 144. Child Development In and Beyond Schools
How schools form a context for children’s social and cognitive development. Focus is on typical and atypical childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.
2 units, Aut (Black, J), Miles, S

EDUC 153X. School Choice: The Role of Charter Schools
Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.
3 units, not given this year

EDUC 180S. Pre-field Course for Alternative Spring Break
Limited to students participating in the Alternative Spring Break program. See http://ash.stanford.edu for more information.
1 unit, Win (Staff), Spr (Geiser, K)
EDUC 185. Master’s Thesis
(all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 201. History of Education in the United States
(Same as HISTORY 158B) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)
3-5 units, Win (Gordon, L), Spr (Gordon, L)

EDUC 202. Introduction to Comparative and International Education
Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students’ abilities to make cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)
4-5 units, Aut (Adams, J)

EDUC 202A. Applied Research Methods in International and Comparative Education
For students in International and Comparative Education. Practical introduction to issues in educational policy making, educational planning, implementation, and the role of foreign expertise/consultants in developing country contexts. (SSPEP/ICE)
3-4 units, not given this year

EDUC 203. The Anthropology of Education
Learning across situations, organizations, institutions, and cultures. How and when people learn and where, with whom and for what and how answers to these questions change across the lifespan. Schools in relation to other settings in which learning takes place for children, adolescents, and adults. Apprenticeship, mentorship, and learning through observation and imitation. 3-5 units, not given this year

EDUC 203A. Tutoring: Seeing a Child through Literacy
(Same as EDUC 103A, SOC 103A, SOC 203A) Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll.
4 units, Aut (Juel, C)

EDUC 204. Introduction to Philosophy of Education
How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. (SSPEP)
3 units, Aut (Callan, E)

EDUC 205X. The Impact of Social and Behavioral Science Research on Educational Issues
Ways in which research intersects with educational policy and practice. Emphasis is on behavioral, social, and cognitive traditions. Topics include early childhood education, early reading, science education, bilingual education, school desegregation, class size reduction, classroom organization, violence and juvenile crime, and affirmative action in higher education. Policy debates and how research informs or fails to inform deliberations and decisions in these areas.
3 units, Spr (Hakuta, K; Linguanti, R)

EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction
Required for M.A. students in ICE and IEAPA. Orientation to the M.A. program and research project; exploration of resources for study and research. (SSPEP/ICE)
1 unit, Aut (Wotipka, C)

EDUC 206B. Applied Research Methods in International and Comparative Education II: Master’s Monograph Proposal
Required for M.A. students in ICE and IEAPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph. (SSPEP/ICE)
1-3 units, Win (Wotipka, C)

EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis
Required for M.A. students in ICE and IEAPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph. (SSPEP/ICE)
1 unit, Spr (Wotipka, C)

EDUC 206D. Applied Research Methods in International and Comparative Education III: Master’s Monograph Workshop
Conclusion of the M.A. program in ICE and IEAPA; required of M.A. students. Reviews of students’ research in preparation for their master’s monograph. (SSPEP/ICE)
3 units, Sum (Wotipka, C)

EDUC 207X. School: What Is It Good For?
(Same as HISTORY 258D) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.
3-4 units, Win (Pape, D)

EDUC 208B. Curriculum Construction
The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. (CTE)
3-4 units, Win (Labaree, D)

EDUC 208C. Curriculum: In Theory and Policy
Focus is on key works on the organization and structuring of learning in formal and informal educational settings in light of contemporary issues in curriculum theory, relation of theory and practice, and strategies of curriculum policy development and implementation.
4 units, not given this year

EDUC 209X. Policy, Organization, and Leadership Studies Seminar
Focus is on orienting students to educational topics such as elementary and high school instruction and school administration, higher education access and administration, and issues of equity and management. Workshops to teach interpersonal influence, leadership, and effective communication skills.
1 unit, Spr (Salinas, N)

EDUC 210X. Policy, Organization, and Leadership Studies Internship Workshop
Forum for POLS students to link their academic learning to real world experience in-class discussions and presentations. Winter Quarter is outward looking with a focus on understanding the fields of students’ organizations and looking for commonalities. Spring Quarter focus is on students learning from and being prepared to teach others.
1-3 units, Aut (Salinas, N), Win (Salinas, N), Spr (Salinas, N)

EDUC 212X. Urban Education
(Same as EDUC 112X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X.) Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
3-4 units, Spr (Carter, P)

EDUC 213X. Introduction to Teaching
Key concepts in teaching and learning. Student prior knowledge and preconceptions; facts, concepts, and the organization of knowledge; active learning; behavior and cognition; constructing knowledge; metacognition; motivation and affect; transfer; goals and objectives; zone of proximal development; input; organizing learning; modeling; feedback; practice; individual and group differences among students; and pedagogical content knowledge.
3-4 units, Aut (Goldenberg, C)

EDUC 214X. Social Entrepreneurship
(Same as STRAMGT 309.) The efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. New opportunities for applying business skills in the social sector. Concepts, practices, and challenges of social entrepreneurship in the U.S. and around the world. Frameworks
and tools to be more effective in socially entrepreneurial.

EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990
(Same as HISTORY 255E) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.
3-5 units, Spr (Gordon, L)

EDUC 217. Philosophical and Methodological Issues in Educational Research
The role causation in educational phenomena, and how to determine causal factors. Is educational research based on a positivistic paradigm? Randomized controlled experimental designs. Criteria for judging the rigor of qualitative modes of inquiry. Do Popperian or Deweyan approaches hold key to solving contentious issues? Does a postpositivist perspective hold promise?
3 units, not given this year

EDUC 218. Topics in Cognition and Learning: Innovation and Discovery
Psychological and social processes of discovery and innovation. Applications to science, education, design, business, and philosophy. May be repeated for credit.
3 units, not given this year

EDUC 220A. Introduction to the Economics of Education
The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit. (SSPEP/APA)
4 units, Win (Loeb, S)

EDUC 220B. Introduction to the Politics of Education
The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementation of policy. Applications to policy analysis, implementation, and politics of reform. (APA)
4 units, Spr (Nettinger, E)

EDUC 220C. Education and Society
(Same as SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schools.
4-5 units, Aut (Ramirez, F)

EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as HISTORY 258E) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3-5 units, Aut (Ramirez, F)

EDUC 220Y. Introduction to the Economics of Education: Economics Section
For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)
1-2 units, Win (Loeb, S)

EDUC 221A. Policy Analysis in Education
Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Win (McLaughlin, M)

EDUC 222. Resource Allocation in Education
Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions. (SSPEP/APA)
4-5 units, Spr (Carnoy, M)

EDUC 223. Good Districts and Good Schools: Research, Policy, and Practice
Recent studies of districts and schools that exceed expectations in producing desired results for students. Research methodologies, findings of studies, theories of change in reforming schools and districts and efforts to implement results. Components of good schools and districts. Required project studies a school or district to determine goodness. (SSPEP/APA, CTE)
3-4 units, Win (Cuban, J)

EDUC 225X. Business Skills and Concepts for the Non-Business Student
For non-business students. Knowledge and tools for operating effectively in an organizational management capacity. Focus is on concepts developed for use in the business world in the areas of strategy, organizational behavior, financial accounting, and marketing. Case studies, podcasts, video, guest speakers, and team-based projects.
3-4 units, Aut (Joung, J)

EDUC 226X. Empirical Analysis of Education Governance
Emphasis is on strategies for empirical evaluation. Topics include: school board, superintendent, and principal decision making; the state role in education policy and budgeting; the impact of teacher unionization; and the growing influence of private foundations and parent associations. Students participate in an original data collection effort for an ongoing research project.
3 units, not given this year

EDUC 228E. Becoming Literate in School I
First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.
3-4 units, Sum (Juel, C)

EDUC 228F. Becoming Literate in School II
Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.
2 units, Aut (Juel, C)

EDUC 228G. Becoming Literate in School III
Third in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.
3 units, Win (Juel, C)

EDUC 228H. Literacy, History, and Social Science
How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.
1 unit, Spr (Staff)

EDUC 229A. Learning Design and Technology Seminar
Four quarter seminar core of the LDT master’s program. Designs for learning with technology. Issues and processes relating to internships and careers. Major learning, design, and technology project. Student navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)
1 unit, Aut (Forssell, K)

EDUC 229B. Learning Design and Technology Seminar
Four quarter seminar core of the LDT master’s program. Designs for learning with technology. Issues and processes relating to internships and careers. Major learning, design, and technology project. Student navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)
1 unit, Aut (Forssell, K)
and careers. Major learning, design, and technology project. Student navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)

1 unit, Win (Forssell, K)

EDUC 229C. Learning Design and Technology Seminar
Four quarter seminar core of the LDT master’s program. Designs for learning with technology. Issues and processes relating to internships and careers. Major learning, design, and technology project. Student navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)

1 unit, Spr (Forssell, K)

EDUC 229D. Learning Design and Technology Seminar
Four quarter seminar core of the LDT master’s program. Designs for learning with technology. Issues and processes relating to internships and careers. Major learning, design, and technology project. Student navigate design sequences in learning environments rooted in practical problems. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (all areas)

2-5 units, Sum (Forssell, K)

EDUC 230X. Social Enterprise
(Same as STRAMGT 341.) Approaches for creating social value through a social enterprise. Cases including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funders, and board member. Topics include undertaking the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; engaging for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise

4 units, not given this year

EDUC 231X. Education Schools: Historical and Sociological Perspectives
(Same as HISTORY 258F) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration of the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.

3-4 units, Spr (Labaree, D)

EDUC 232B. Introduction to Curriculum
What should American schools teach? How should school programs be organized? How can schools determine whether their goals have been achieved? What kind of school organization helps teachers improve their teaching? Historical and contemporary perspectives on the curriculum of American schools. Interactions among curriculum, the organizational structure of schools, the conception of the teacher’s role, and teaching and student learning assessment. Text, video analysis of teaching, and small group discussions. (CTE)

4 units, not given this year

EDUC 233A. Counseling Theories and Interventions fro a Multicultural Perspective
Students engage in an ongoing mentoring relationship with an adolescent from a youth-serving organization. The impact of culture on mentoring. Intervention with children and adolescents, forming positive connections, demonstrating empathy, learning culturally specific caring norms, participating in activities promoting positive youth development. Students are expected to maintain this relationship for at least one additional quarter.

3-5 units, Spr (LaFromboise, T)

EDUC 233B. Adolescent Development and Mentoring in the Urban Context
Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers’ motivations; attributions about poverty, and the problem of prejudice.

3 units, not given this year

EDUC 234. Career and Personal Counseling
(Same as EDUC 134, PSYCH 192) Methods of integrating career and personal counseling with clients and counselors from differing backgrounds. Practice with assessment instruments. Case studies of bicultural role conflict. Informal experience in counseling. (PSE)

3 units, Spr (Krumbolltz, J)

EDUC 235X. The Creative Arts in Schools and Classrooms
Students work alongside teachers and performing artists to plan and implement classroom activities with elementary school children to prepare them for a Lively Arts performance. Background theory in education and arts education. Students develop a follow-up classroom activity for children in their own art form.

2 units, not given this year

EDUC 240. Adolescent Development and Learning
How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP)

3 units, Aut (Padilla, A)

EDUC 241S. Organizational Learning
(Same as OB 586.) How firms learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and Moneyball by Michael Lewis who discusses market-level mistakes in professional baseball.

2 units, not given this year

EDUC 241X. Organizational Learning
Why firms do not learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and Moneyball by Michael Lewis who discusses market-level mistakes in professional baseball.

4 units, not given this year

EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction
Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

3-5 units, not given this year

EDUC 244. Classroom Management
Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.

2 units, Aut (Alston, C; Gray, S)

EDUC 244E. Elementary Classroom Culture and Management
How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.

1 unit, Sum (Staff)

EDUC 244F. Elementary Classroom Culture and Management
Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.

1 unit, Aut (Bikle, K)

EDUC 246A. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter.
quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
3 units, Sam (Lotan, R)

EDUC 246B. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
5 units, Aut (Lotan, R)

EDUC 246C. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP)
5 units, Win (Staff)

EDUC 246D. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
2-7 units, Spr (Lotan, R)

EDUC 246E. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
3 units, Sum (Lit, I)

EDUC 246F. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
5-7 units, Aut (Lit, I)

EDUC 246G. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
2 units, Win (Lit, I)

EDUC 246H. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.
5 units, Spr (Lit, I)

EDUC 247. Moral Education
Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today’s schools; and contending theories concerning the goals of moral education. (PSE)
3 units, Spr (Damon, W)

EDUC 249. Theory and Issues in the Study of Bilingualism
(Same as EDUC 149) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)
3-5 units, Aut (Valdes, G)

EDUC 250A. Inquiry and Measurement in Education
Part of doctoral research core. The logic of scientific inquiry in education, including identification of research questions, selection of qualitative or quantitative research methods, design of research studies, measurement, and collection, analysis and interpretation of evidence.
3 units, Aut (Stevens, M; Loeb, S)

EDUC 250B. Statistical Analysis in Education: Regression
Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.
4 units, Win (Bettinger, E)

EDUC 250C. Qualitative Analysis in Education
Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.
4 units, Spr (Goldman, S; Barron, B)

EDUC 251B. Statistical Analysis in Educational Research: Analysis of Variance
Primarily for doctoral students. ANOVA models as widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA; factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models); analysis of covariance; and multiple comparison procedures. Prerequisite: 250A or equivalent. (all areas)
4 units, not given this year

EDUC 251C. Statistical Analysis in Educational Research: Applied Multivariate Analysis
1-4 units, not given this year

EDUC 252. Introduction to Test Theory
Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: STATS 190 or equivalent. (PSE)
3-4 units, Win (Haertel, E)

EDUC 254S. Leadership in Diverse Organizations
Goal is improve students’ capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. What social and psychological obstacles limit people’s ability to work effectively across identity-based differences? What can someone do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Students experiment with conceptual and analytic skills inside and
outside of the classroom.

EDUC 254X. Leadership in Diverse Organizations
How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people’s ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

EDUC 255A. Experimental Research Designs in Educational Research
The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

EDUC 255B. Causal Inference in Quantitative Educational Research and Social Science Research
(Same as SOC 257) Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression. 3-5 units, Win (Staff)

EDUC 255C. Applied Quasi-Experimental Research in Education
Hands-on practice in analysis of data from experimental and quasi-experimental research designs, including instrumental variables estimators; regression discontinuity estimators; difference-in-difference estimators; matching estimators; fixed effects estimators; and panel data methods (including individual fixed effects models, lagged covariate adjustment models, and growth models). Prerequisites: EDUC 255A and EDUC 255B.

EDUC 256. Psychological and Educational Resilience Among Children and Youth
(Same as HUMBIO 149) Psychological and educational theories of resilience as they relate to children and youth. Emphasis is on family, school, and community assets as they relate to protective factors that create conditions of resilience. How protective factors can be used to create healthy communities that enhance the life qualities of at-risk children and youth. 4 units, Spr (Padilla, A)

EDUC 257A. Statistical Methods for Behavioral and Social Sciences
For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

EDUC 257B. Statistical Methods for Behavioral and Social Sciences
For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through
EDUC 263G. Quantitative Reasoning in Mathematics III  
Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and case studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.  
2-3 units, Aut (Dieckmann, J)

EDUC 264A. Curriculum and Instruction in World Languages  
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)  
2 units, not given this year

EDUC 264B. Curriculum and Instruction in World Languages  
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.  
3 units, not given this year

EDUC 264C. Curriculum and Instruction in World Languages  
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)  
3 units, not given this year

EDUC 264E. Methods and Materials in Bilingual Classrooms  
Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.  
2 units, Aut (Staff)

EDUC 265. History of Higher Education in the U.S.  
(Same as EDUC 165, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)  
3-5 units, Aut (Gordon, L)

EDUC 266X. Workshop in Practical Quantitative Research on Educational Policy and Inequality  
Conceptual and technical skills for analyzing data concerning educational policy and inequality. How to design analytic strategies using available data sources. Interpreting and presenting results. Prerequisite: 250A.  
3 units, not given this year

EDUC 267A. Curriculum and Instruction in Science  
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)  
2 units, Sum (Brown, B; Lythcott, J)

EDUC 267B. Curriculum and Instruction in Science  
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)  
3 units, Aut (Brown, B)

EDUC 267C. Curriculum and Instruction in Science  
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)  
3 units, Win (Murata, A)

EDUC 267E. Development of Scientific Reasoning and Knowledge  
For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.  
2 units, Aut (Lythcott, J)

EDUC 268A. Curriculum and Instruction in History and Social Science  
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.  
2 units, Sum (Wineburg, S)

EDUC 268B. Curriculum and Instruction in History and Social Science  
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.  
3 units, Aut (Osborne, J)

EDUC 268C. Curriculum and Instruction in History and Social Science  
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.  
3 units, not given this year

EDUC 269. Analysis of Teaching  
Student learning and the epistemology of school subjects as related to the planning and implementation of teaching, analysis of curriculum, and evaluation of performance and understanding. Readings and activities are coordinated with student teaching activities of participants. Prerequisite: STEP student or consent of instructor.  
3 units, not given this year

EDUC 269X. The Ethics in Teaching  
Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.  
1 unit, Win (Callan, E), Spr (Callan, E)

EDUC 270A. Learning to Lead in Public Service Organizations  
For Haas Center student service organization leaders. (Davis)  
3-5 units, not given this year

EDUC 271X. Education Policy in the United States  
The broad educational policy context. Topics include: school finance systems; policies defining and shaping the sectors and institutional forms of schooling; school governance; educational human-resource policy; school accountability policies at the feder-
and state levels; and school assignment policies and law, including intra- and inter-district choice policies, and desegregation law and policy.

5 units, Spr (Staff)

EDUC 273. Gender and Higher Education: National and International Perspectives
(Same as SOC 273) The effects of interactions between gender and the structures of higher education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.
4 units, not given this year

EDUC 276. Educational Assessment
Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.
3 units, Spr (Haertel, E)

EDUC 277. Education of Immigrant Students: Psychological Perspectives
(Same as EDUC 177) Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)
4 units, Win (Padilla, A)

EDUC 278. Introduction to Issues in Evaluation
Open to master's and doctoral students with priority to students from education. Focus is on the basic literature and major theoretical and practical issues in evaluation. Introduction to basic concepts and intellectual debates in the field: knowledge construction, purpose of evaluation, values in evaluation, knowledge utilization, professional standards of evaluation practice. Enrollment limited to 18. (SSPEP)
1-3 units, Spr (Porteous, A)

EDUC 279. Urban Youth and Their Institutions: Research and Practice
(Same as EDUC 179) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, Aut (McLaughlin, M)

EDUC 279B. Youth Empowerment and Civic Engagement
(Same as EDUC 179B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.
2-4 units, not given this year

EDUC 284. Teaching and Learning in Heterogeneous Classrooms
Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP)
3 units, Aut (Lotan, R)

EDUC 285. Supporting Students with Special Needs
For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.
2-3 units, Spr (Fur, E)

EDUC 288. Organization Studies: Theories and Analyses
(Same as SOC 366) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.
5 units, Spr (Staff)

EDUC 290. Leadership: Research, Policy, and Practice
Conceptions of leadership that include the classroom, school, district office, and state capitol. The role of complexity; organizational leaders outside of schools past and present, and how that complexity permitted leadership to arise. Case studies. (SSPEP/APA)
4 units, not given this year

EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium
Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other’s work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.
1-3 units, Aut (Pea, R), Win (Staff), Spr (Barron, B)

EDUC 291X. Introduction to Survey Research
(Same as EDUC 191X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.
3-4 units, Win (Adams, J)

EDUC 293X. American Philosophy of Education
A century of classical writers in American philosophy, focusing on work on education, democracy, learning, and culture. Texts by Emerson, Peirce, James, Dewey, and Mead.
3-4 units, not given this year

EDUC 295. Learning and Cognition in Activity
(Same as PSYCH 261A) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.
3 units, not given this year

EDUC 298. Learning in a Networked World
(Same as CS 377L) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, lifewide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.
3 units, Spr (Pee, R)

EDUC 305X. Deprivation and Alienation in Fiction and Education
3-4 units, Spr (McDermott, R)

EDUC 306A. Education and Economic Development
Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development. (SSPEP/ICE)
5 units, Aut (Carnoy, M)

EDUC 306B. Politics, Policy Making, and Schooling Around the World
Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.
3-4 units, Spr (Adams, J)

EDUC 306C. Political Economy of the Mind
Theories of political economy related to theories of the learning
EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 136, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Ramirez, F)

EDUC 306Y. Economic Support Seminar for Education and Economic Development
Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy)
1 unit, Aut (Carnoy, M)

EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations
Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises; students experiment with conceptual and analytic skills inside and outside of the classroom.
3-4 units, not given this year

EDUC 308X. Mobile Empowerment Design in the Context of the Underserved Communities
Learning design principles as a basis for developing and evaluating mobile learning systems to address educational inequalities in underserved communities. Students analyze mobile learning scenarios, prototypes, and authoring tools while collaborating with research teams to develop a small-scale mobile empowerment scenario addressing education needs such as language, math, health, and civic and life skills in developing countries.
1 unit, Spr (Kim, H)

EDUC 309X. Educational Issues in Contemporary China
(Same as EDUC 109X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.
3 units, Spr (Adams, J)

EDUC 310. Sociology of Education: The Social Organization of Schools
(Same as EDUC 110, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.
4 units, Win (Carter, P)

EDUC 311X. Designing Learning for Development: Learning Theories, Technohlogy Design and Social Change
Perspectives on learning and human development as they relate to prior technological interventions in the development sphere. Case studies in the international development context; historical perspectives on learning and development. Methods of inquiry useful in a design process engaging technology within a development framework.
3 units, Spr (Staff)

EDUC 314. Workshop in Economics of Education
Research by students and faculty engaged in problems in the economics of education. Prerequisites: advanced graduate training in economics theory and methodology; current ongoing research. May be repeated for credit. (SSPEP)
1-2 units, not given this year

EDUC 315X. Race and Ethnicity in Society and Institutions
(Same as SOC 347) Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.
3-4 units, not given this year

EDUC 316. Social Network Analysis
(Same as SOC 369) Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms. (SSPEP)
4-5 units, Aut (McFarland, D)

EDUC 319. Research on Teaching
Introduction and historical perspective to theory, methods, and substantive findings of research on teaching.
1-4 units, Aut (Borko, H)

EDUC 320X. Sociology of Knowledge Creation
(Same as SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view “reality.” The objective of this course is to explain how knowledge is socially constructed, patterned, and used, and how our everyday and tacit forms of knowledge are achieved. The course will place special emphasis on the creation and patterning of scientific paradigms, social science disciplines, and the field of education itself.
3-4 units, Aut (McFarland, D)

EDUC 321A. Emerging Conceptions of Qualitative and Ethnographic Research
Issues of knowing via forms through which human beings have historically represented the world and how they care about it, including narrative, visual images, and poetry. How to see and represent the educational worlds. Sources include videotaped classrooms in action, film excerpts that reveal human relations, and literary forms that describe classroom situations. Materials and procedures used by researchers, film makers, and fiction writers.
4.5 units, not given this year

EDUC 321B. Analysis of Social Interaction
Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student. (SSPEP/ICE)
4 units, Win (McDermott, R)

EDUC 321X. Leading Social Change: Educational and Social Entrepreneurship
4 units, not given this year

EDUC 323A. The Practice of Education Policy Analysis
Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education. (SSPEP)
3 units, Win (Kelemen, M)

EDUC 325A. Proseminar 1
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized? how are educational systems organized; and what are the roles of education in society?
3 units, Aut (Carnoy; Willsinsky, J)

EDUC 325B. Proseminar 2
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized? how are educational systems organized; and what are the roles of education in society?
3 units, Win (Borko, H; Barron, B)

EDUC 325C. Proseminar 3
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized? how are educational systems organized; and what are the roles of education in society?
3 units, Spr (Labarée, D; Ramirez, F)
EDUC 328X. Topics in Learning and Technology: Interactivity and Feedback
Content changes each year. Interactivity including manipulation of an object, talking to another person, or clicking on a mouse. Proposals for the active learning ingredient of interactivity, and how different technologies capitalize on these ingredients.
3 units, not given this year

EDUC 329X. Seminar on Teacher Professional Development
For master’s and doctoral students. Theories, principles, and models of professional development. Issues include: different conceptions of teacher, practice, and development; what gets developed in professional development; pedagogies of professional development; structures to support teacher learning; evaluating professional development; and policy issues. Field observation.
1-4 units, not given this year

EDUC 331A. Introduction to Research Design in Administration and Policy Analysis
Required for first-year APA doctoral students; SSPEP first-year doctoral students with consent of instructor. How to conduct literature reviews. How to use literature to frame and formulate problem statements, research questions, and conceptual frameworks. (APA)
3 units, not given this year

EDUC 332X. Theory and Practice of Environmental Education
Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.
3 units, Spr (Ardoin, N)

EDUC 333A. Understanding Learning Environments
Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.
3 units, Win (McDermott, R; Pea, R)

EDUC 333B. Imagining the Future of Learning
How to understand and forecast social, educational, technological trends; how to develop concepts and ideas for engaging learning and technology. Presentations of scenarios for future learning concepts from education, government, technology, business and leisure sectors. Experiments with the research and visioning processes.
3 units, not given this year

EDUC 334X. Education Advocacy Clinic
(Same as LAW 660.) For students enrolled in the Education (M.A.) and Law (J.D.) joint degree program and those who already possess Law degrees only. Students participate in educational rights and reform work with clients and communities, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. May be repeated for credit. Prerequisite: consent of instructor.
2-10 units, Win (Koski, W)

EDUC 336X. Language, Identity, and Classroom Learning
As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.
1-3 units, Aut (Brown, B)

EDUC 337. Sociocultural Theory and Practices: Race, Ethnicity, and Linguistic Diversity in Classrooms
(Same as EDUC 103B) Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.
3-5 units, not given this year

EDUC 338X. No Teacher Left Behind: Rethinking the Traditional Teaching Career
Immersive experiences and real world projects focused around issues facing the teaching profession. Human capital as a top priority for the U.S. and other educational systems. Topics include teacher career ladders, induction, retention, and teacher knowledge sharing.
3-4 units, Spr (Goldman, S)

EDUC 339X. Advanced Topics in Quantitative Policy Analysis
For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.
1-2 units, Aut (Reardon, S; Loeb, S), Win (Reardon, S; Loeb, S), Spr (Reardon, S; Loeb, S)

EDUC 340. Psychology and American Indian Mental Health
Western medicine’s definition of health as the absence of sickness, disease, or pathology; Native American cultures’ definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.
3-5 units, not given this year

EDUC 341X. Urban School System Reform
Strategies for large-scale reform of complex school systems. Case studies of urban school systems. Sources include approaches developed in management studies, organizational behavior, and school reform. Political and community contexts; the role of urban superintendents and administrators in creating reform strategies. Factors such as labor relations and the regulatory environment. Guest speakers.
4 units, Spr (Darling-Hammond, L)

EDUC 342. Child Development and New Technologies
Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.
1-3 units, not given this year

EDUC 343X. Navigating the Academic Profession
For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.
1-2 units, Aut (Staff)

EDUC 344. Child Development and Schooling
How the practices and activities of schooling influence the social, emotional, and cognitive development of children. Metatheoretical approaches (mechanistic, organicism, developmental contextualist metamodels) and methods of conducting research on schooling and development (experimental, survey, ethnographic, intervention). Topics: how teaching practices influence cognitive growth in academic domains; how the organizational structures of schools (grade related transitions, class organizations) fit or fail to fit developmental needs; how friendship groups create contexts for learning and can lead to different trajectories of development; and how grading and other evaluative practices influence motivational orientations. Focus is on elementary school years. (PSE)
3-4 units, not given this year

EDUC 346. Research Seminar in Higher Education
Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups. (APA)
4 units, Aut (Antonio, A)

EDUC 347. The Economics of Higher Education
Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access
COURSES OF INSTRUCTION

EDUC 348X. Policy and Practice in Science Education
Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.
3-4 units, not given this year

EDUC 349X. Accountability and Assessment in Higher Education
Organizational report cards and accountability mechanisms; demand for and problems with them. Report cards as policy instruments; how they address information asymmetries; as alternatives to direct regulation; and current policy conditions that support them such as education standards and reform. Politics including interested audiences and organizational responses. An attempt to redesign an education report card.
3 units, Spr (Shavelson, R)

EDUC 350A. Psychological Studies in Education
Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)
2 units, not given this year

EDUC 350B. Psychological Studies in Education
Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)
2-3 units, Win (Staff)

EDUC 350C. Psychological Studies in Education
Individual research projects in a group context. (PSE)
1-2 units, not given this year

EDUC 353A. Problems in Measurement: Item Response Theory
Alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item response theory (latent trait theory) to measurement problems, including estimation of item parameters and person abilities, test construction and scoring, tailored testing, mastery testing, vertical and horizontal test equating, and detection of item bias. Prerequisites: 252 and 257, or PSYCH 248 and 252, or equivalent. (PSE)
3 units, not given this year

EDUC 353C. Problems in Measurement: Generalizability Theory
Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications. (PSE)
3 units, Aut (Haeriel, E)

EDUC 354X. School-Based Decision Making
Leadership and organizational issues. Emphasis is on building capacity for individual schools to make decisions, establishment of an inquiry process at the school level, use and availability of information, implementation and evaluation of decisions, parental involvement, and support of school-based decisions by districts. (SSPEP/APA)
3-4 units, not given this year

EDUC 355X. Higher Education and Society
For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.
3 units, Spr (Stevens, M)

EDUC 356. Memory, History, and Education
(Same as HISTORY 337C) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds; history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?
3-5 units, not given this year

EDUC 357X. Learning Science in Informal Contexts
There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.
3-4 units, Win (Staff)

EDUC 358X. Developments in Access to Knowledge and Scholarly Communication
Scholarly and educational implications of new academic communication systems. New dissemination methods in light of longstanding issues of epistemology, intellectual property, propriety, access, value, and responsibility within the scholarly community. Contexts include publishing, archiving, indexing, and networking.
1-4 units, not given this year

EDUC 359A. Research in Science and Mathematics Education: Assessment and Evaluation
Historical and international perspectives. Emphasis is on trends and issues in contemporary American research and policy. Opportunity to develop and discuss dissertation plans. (CTE) (Shavelson)
2-4 units, not given this year

EDUC 359B. Research in Science and Mathematics Education
For doctoral students interested in science education and literacy in school subjects.
2-3 units, Win (Brown, B)

EDUC 359C. Research in Science Education: Research in Science Teaching
The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.
2-3 units, not given this year

EDUC 359E. Research on Mathematics Education
Comparative and cultural perspectives on mathematics teaching and learning practices in the U.S. mathematics education in the context of cultural and educational systems. Teaching and learning as an interactive system, classroom discourse and math talk, teacher professional development, classroom culture and norms, educational equity, and issues of curriculum and standards.
2-4 units, not given this year

EDUC 360. Action Research in Education
Introduction to the theory and practice of action research. Basic concepts and methods. The historical and ideological influences on this form of inquiry by teachers. Participants analyze action research reports and engage in a small-scale action-research project. (CTE)
3 units, not given this year

EDUC 361. Workshop: Networks and Organizations
(Same as SOC 361W) For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.
1-3 units, Aut (McFarland, D; Powell, W), Win (McFarland, D; Powell, W), Spr (McFarland, D; Powell, W)

EDUC 362X. The Science Curriculum: Values and Ideology in a Contested Terrain
The issue of what should be taught in schools is a site of contention where issues of beliefs, values, and ideologies emerge. The school science curriculum and the history of its development to explore the common positions adopted and argued for in approach-
ing curriculum development. Curriculum reform in school science and the arguments that have shaped its present form and their historical antecedents.

3-5 units, Spr (Staff)

EDUC 363X. Research and Practice on Organizing Urban Schools for Improvement
(Same as OB 367) Bass Seminar. For masters’ and doctoral students in Education and GSB. Empirical research on urban school reform efforts, theoretical frameworks on student and adult learning, the sociology of work in schools, and social organization theory. How community context affects instructional coherence. Dynamics between school professionals and with parents. Authentic instruction and its effects. Case studies.

4 units, not given this year

EDUC 364. Cognition and Learning
Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

3-4 units, not given this year

EDUC 365. Social, Emotional, and Personality Development
Limited to doctoral students in PSE and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

3 units, Win (Damon, W)

EDUC 366X. Learning in Formal and Informal Environments
How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

3 units, not given this year

EDUC 367. Cultural Psychology
(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, cross-cultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

3-5 units, Aut (LaFromboise, T)

EDUC 368. Cognitive Development in Childhood and Adolescence
Traditional and current research in cognitive development: changes within the individual from infancy through adolescence. Theoretical and empirical perspectives on research processes that explain developmental changes affecting how a human being thinks about the world, how they perceive and document a non-school learning environment.

3-4 units, Spr (Ob radovic, J)

EDUC 369. Human Cognitive Abilities
(Same as PSU 133) Psychological theory and research on human cognitive abilities: their nature, development, and measurement; and their importance in society. Persistent controversies and new areas of research, recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE)

3 units, Win (Shavelson, B)

EDUC 370X. Theories of Cognitive Development
The contributions of Jean Piaget and Lev Vygotsky to the study of the developing mind of the child. Their theories, concepts, perspectives, empirical work, and lives. Topics: Piaget’s genetic epistemology, constructivism, and idea of sensorimotor through formal operational stages; Vygotsky’s cultural-historical approach, egocentric speech, and the relation between learning and development.

3 units, not given this year

EDUC 373X. Teaching in the Humanities-Research into Adolescent Literacy
Relatively little attention has been paid to the role of humanities courses in teaching both general and disciplinary skills in reading and writing. With the growth of small schools, more middle and high school teachers find themselves teaching ‘Humanities’ courses. This seminar will explore what it means to teach the humanities, with special attention to how children can develop disciplinary reading and writing skills. Course will investigate how we develop tools to assess teaching and learning in the humanities.

3-5 units, Spr (W ineburg, S; Grossman, P)

EDUC 374. Philanthropy and Civil Society
(Same as POLISCI 334, SOC 374) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuing research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

1-3 units, Aut (Powell, W; Reich, R), Win (Powell, W; Reich, R), Spr (Powell, W; Reich, R)

EDUC 375A. Seminar on Organizational Theory
(Same as MS&E 389, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

EDUC 375B. Seminar on Organizations: Institutional Analysis
(Same as SOC 363B) Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

3-5 units, not given this year

EDUC 376. State Theory and Educational Policy
The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)

4 units, Win (Staff)

EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit
(Same as GSBGEN 346, SOC 377) Seminar. For students interested in the nonprofit sector, and those in the joint Business and Education program. The missions, functions, and capabilities of nonprofit, public, and private organizations. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Advanced undergraduates require consent of instructor.

4 units

EDUC 377B. Strategic Management of Nonprofits
Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and large, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.

4 units, Win (Staff)

EDUC 377C. Strategic Issues in Philanthropy
Operational and strategic distinctions between traditional philanthropic entities, such as community, private, and corporate foundations, and contemporary models, such as funding intermediaries and venture philanthropy partnerships. Philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, and board governance. Guest speakers include philanthropists, foundation presidents, and Silicon Valley business leaders. Group project in which students solicit a grant proposal from a local nonprofit organization and make a funding recommendation to a Silicon Valley-based foundation.

4 units, Aut (Arrillaga, L)
EDUC 377D. Strategic Leadership of Nonprofits
(Same as STRAMGT 378) Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.
1-5 units

EDUC 378X. Seminar on Social Change Processes and Organizations
Theories of social change and influence processes within and through organizations. Social change organizations. The interaction of philanthropic institutions and other social change organizations within civil society. Meso-level theories of change.
3-4 units, not given this year

EDUC 380. Supervised Internship
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 381. Multicultural Issues in Higher Education
(Same as EDUC 181) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.
4 units, Win (Antonio, A)

EDUC 382. Student Development and the Study of College Impact
The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.
4 units, not given this year

EDUC 384. Advanced Topics in Higher Education
Topics vary each year and may include faculty development, legal issues, curricular change, knowledge production, professional socialization, management of organizational decline, leadership and innovation, authority and power, diversity and equity, and interactions with government and industry. May be repeated for credit. Prerequisites: 346, consent of instructor. (APA)
3-5 units, Aut (Peterson, M)

EDUC 386X. Leadership and Administration in Higher Education
Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today’s higher education administrators.
4 units, Spr (Peterson, M)

EDUC 387A. Workshop: Comparative Studies of Educational and Political Systems
(Same as SOC 311A) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)
1-5 units, Aut (Ramirez, F)

EDUC 387B. Workshop: Comparative Systems of Educational and Political Systems
(Same as SOC 311B) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)
1-5 units, Win (Ramirez, F)

EDUC 387C. Workshop: Comparative Studies of Educational and Political Systems
(Same as SOC 311C) Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. May be repeated for credit. (SSPEP/ICE)
1-5 units, Spr (Ramirez, F)

EDUC 388A. Language Policies and Practices
For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners’ growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP)
2 units, Win (Goldenberg, C)

EDUC 391X. Web-Based Technologies in Teaching and Learning
Project-based. Overview of instructional design theories and educational technologies to evaluate and develop a web-based educational application or system. Web-based applications and technologies designed for online interactions and collaborations. Instructional systems strategies to develop online environments that support and facilitate interactive learning. Students create a small-scale, web-based learning system.
3 units, Aut (Kim, H)

EDUC 393. Proseminar on Research in Education
Overview of the field of education for joint degree (M.B.A./M.A.) students. (SSPEP) (Strober)
4 units, Spr (Meyerson, D)

EDUC 395. Scholarly Writing in Education and the Social Sciences
Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.
3-5 units, Win (Wineburg, S)

EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences
Statistical analysis using SPSS, including descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.
1 unit, not given this year

EDUC 401B. Mini Courses in Methodology: Stata
The computer as research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.
1 unit, Win (Winston, D)

EDUC 405X. The Teaching of Literature: How We Teach and Why
(Same as ENGLISH 397X) For graduate students in English and English Education. Questions surrounding the teaching of literature at both the secondary and collegiate level. Theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create; investigation of pedagogical practices.
2-4 units, Aut (Grossman, P; Summit, J)

EDUC 410. Second-Year Research Workshop
For second-year doctoral students in APA and ICE. Issues in conceptualizing and designing research in the social sciences: methodology and epistemology; research proposals; and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalents. (APA/ICE)
2-5 units, Aut (Antonio, A), Win (Antonio, A)

EDUC 412X. Organization Studies Research Workshop
For graduate students whose research is rooted in organization theory. Participants to present and receive feedback on their work including paper drafts, proposals and dissertation chapter. Sources include recent scholarship. May be repeated for credit.
1-2 units, Win (Meyerson, D), Spr (Meyerson, D)

EDUC 417. Research and Policy on Postsecondary Access
(Same as EDUC 117) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. (Antonio)
3 units, Spr (Antonio, A)
EDUC 419X. Academic Achievement of Language Minority Students
Emphasis is on the current state of knowledge in the research literature and comparisons to students’ experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods. Required literature review in an area students expect to explore for their qualifying paper. (Darling-Hammond)
3 units, Spr (Goldenberg, C)

EDUC 424. Introduction to Research in Curriculum and Teacher Education
Limited to second-year doctoral students in CTE. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper. (Darling-Hammond)
2-5 units, Spr (Borko, H)

EDUC 435X. Research Seminar in Applied Linguistics
(Same as LINGUIST 293) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)
1-4 units, not given this year

EDUC 453. Doctoral Dissertation
For doctoral students only. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 465. Seminar in the Pedagogy of Teacher Education
For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.
3 units, not given this year

EDUC 466. Doctoral Seminar in Curriculum
Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review. (CTE)
2-4 units, Aut (Darling-Hammond, L), Spr (Staff)

EDUC 470. Practicum
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 480. Directed Reading
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 490. Directed Research
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 493. Workshop in Design and Analysis of Non-Experimental Research
For second-year and later students with data analysis or research design activities including in dissertation planning or analysis. Readings and exercises developed around participating student research. Topics may include: multilevel data analysis; usefulness of structural equation models (path analysis); and implementation of matching methods and regression adjustments for comparing non-equivalent groups. Various computing customs accommodated. See http://www-stat.stanford.edu/~rag/ed493/. Prerequisite: intermediate statistical methods course work.
1-3 units, Spr (Rogosa, D)

EDUC 496. Research in History and Social Science Education
For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.
3-5 units, not given this year

ELECTRICAL ENGINEERING (EE)

UNDERGRADUATE COURSES IN ELECTRICAL ENGINEERING

EE 14N. Things about Stuff
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Most engineering curricula present truncated, linear histories of technology, but the stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves. How these stories elucidate broadly applicable scientific principles. Focus is on studying consumer devices; optional projects to build devices including semiconductors made from pocket change. Students may propose topics of interest to them. GER:DB-EngrAppSci
3 units, Aut (Lee, T)

EE 20N. Hacking Stuff
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The design of a complete system by combining electrical engineering disciplines such as control theory, circuit design, microprocessors, and semiconductor devices. Based on radio-controlled toy cars, the design and construction of a robot capable of autonomously following a track. Teams compete in a race against the clock in a version of the DARPA Grand Challenge. GER:DB-EngrAppSci
3 units, Aut (Peumans, P)

EE 21N. What is Nanotechnology?
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Possibilities and impossibilities of nanotechnology. Sources include Feynman’s There’s Plenty of Room at the Bottom, Drexler’s Engines of Creation: The Coming Era of Nanotechnology, and Crichton’s Prey. Assumptions and predictions of these classic works; what nano machinery may do; scenarios of a technology that may go astray. Prerequisites: high school math, physics and chemistry. GER:DB-EngrAppSci
3 units, Aut (Wong, P)

EE 23N. Imaging: From the Atom to the Universe
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Forms of imaging including human and animal vision systems, atomic force microscope, microscope, digital camera, holography and three-dimensional imaging, telescope, synthetic aperture radar imaging, nuclear magnetic imaging, sonar and gravitational wave imaging, and the Hubble Space telescope. Physical principles and exposure to real imaging devices and systems. GER:DB-EngrAppSci
3 units, Spr (Hesselink, L)

EE 24N. Incentive Mechanisms for Societal Networks
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Examples of societal networks include: transportation networks; electricity, water, and gas networks; recycling systems. The efficient operation of such networks and their dependence on their use of technology and on human actions.
3 units, Spr (Prabhakar, B)

EE 41. Physics of Electrical Engineering
How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and basic EM waves are essential in all high-speed communication systems. How to propagate energy in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. GER:DB-EngrAppSci
3 units, Win (Solgaard, O)

EE 60N. Man versus Nature: Coping with Disasters Using Space Technology
(F,Sem) (Same as GEOPHYS 60N) Stanford Introductory Semi-
EE 100. The Electrical Engineering Profession
Lectures/discussions on topics of importance to the electrical engineering profession. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

EE 101A. Circuits I
First of two-course sequence. Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. GER:DB-EngrAppSci

EE 101B. Circuits II
Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: 101A. GER:DB-EngrAppSci

EE 102A. Signal Processing and Linear Systems I

EE 102B. Signal Processing and Linear Systems II

EE 106. Planetary Exploration
The other worlds of the solar system as revealed by their electromagnetic emissions and recent space missions. Comparative properties of the terrestrial and Jovian planetary atmospheres; surfaces, interiors, and rings; planetary and satellite orbits and spacecraft trajectories; properties of interplanetary gas, dust, comets, and meteorites. Blackbody radiation and the basis for global warming. What the planets reveal about potential terrestrial catastrophes such as runaway greenhouse effect or collision with an asteroid or large comet. Origin and evolution of planetary systems. Remote sensing from spacecraft at radio, infrared, light, and ultraviolet wavelengths. Stanford EE department radio experiments. Prerequisite: one year of college engineering. GER:DB-EngrAppSci

EE 108A. Digital Systems I

EE 108B. Digital Systems II
The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Prerequisite: 108A, CS 106B. GER:DB-EngrAppSci

EE 109. Digital Systems Design Lab
The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X. GER:DB-EngrAppSci

EE 114. Fundamentals of Analog Integrated Circuit Design

EE 116. Semiconductor Device Physics
The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photodetectors). Introduction to quantum effects and band theory of solids. Prerequisite: ENGR 40. Corequisite: 101B. GER:DB-EngrAppSci

EE 118. Introduction to Mechatronics
Technologies involved in mechatronics (intelligent electromechanical systems) and techniques to integrate these technologies into mechatronic systems. Topics: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design (event-driven programming, state machine based design); DC and stepper motors; basic sensing; mechanical design (machine elements and mechanical CAD). Lab component of structured assignments combined with large, open-ended team project. Limited enrollment. Prerequisites: ENGR 40, and CS 106A or 106X (preferred).

EE 122A. Analog Circuits Laboratory
Practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Design skills, computer-aided design, and circuit fabrication and debugging. The design process through proposing, designing, simulating, building, debugging, and demonstrating a project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: ENGR 40 or equivalent. GER:DB-EngrAppSci

EE 122B. Introduction to Biomedical Electronics
Key components of modern systems, their application in physiological measurements, and reduction to practice in labs. Fundamentals of analog/digital conversion and filtering techniques for biosignals; typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), and interfacing circuits. Issues of

| COURSES OF INSTRUCTION | 528 | STANFORD BULLETIN, 2009-10 |
biomedical electronics (safety, isolation, noise). Prerequisite: EE122A
3 units, Spr (Giovangrandi, L)

EE 124. Introduction to Neuroelectrical Engineering
Fundamental properties of electrical activity in neurons, technology
for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical sys-
tems. Topics: action potential generation and propagation, neuro-
MEMS and measurement systems, experimental design and statisti-
cal data analysis, information encoding and decoding, clinical
diagnostic systems, and fully-implantable neural prosthetic sys-
tems design.
3 units, Win (Shenoy, K)

EE 133. Analog Communications Design Laboratory
Design, testing, and applications. Amplitude modulation (AM)
using multiplier circuits. Frequency modulation (FM) based on
discrete oscillator and integrated modulator circuits such as vol-
tage-controlled oscillators (VCOs). Phase-locked loop (PLL) tech-
niques, characterization of key parameters, and their applications.
Practical aspects of circuit implementations. Labs involve building
and characterization of AM and FM modulation/demodulation
circuits and subsystems. Enrollment limited to 30 undergraduates
and caterminal EE students. Prerequisite: 101B. GER:DB-
EngrAppSci
4 units, Win (Dutton, R)

EE 134. Introduction to Photonics
Photonics, optical sensors, and fiber optics. Conceptual and ma-
thematical tools for design and analysis of optical communication
and sensor systems. Experimental characterization of semiconduc-
tor lasers, optical fibers, photodetectors, receiver circuitry, fiber
optic links, optical amplifiers, and optical sensors. Class project
aimed at confocal microscopy for biomedical applications. Labo-
atory experiments. Prerequisite: 41 or equivalent. GER:DB-
EngrAppSci
4 units, Spr (Solgaard, O)

EE 136. Introduction to Nanophotonics and Nanostructures
Electromagnetic and quantum mechanical waves and semiconduc-
tors. Confining these waves, and devices employing such confine-
ment. Localization of light and applications: metallic mirrors, pho-
tonic crystals, optical fibers, waveguides, microcavities, plasmonics,
Localization of quantum mechanical waves: quantum wells, wires,
and dots. Generation of light in semiconductors: spontaneous and
stimulated emission, lasers, and light emitting diodes. Devices
incorporating localization of both electromagnetic and quantum
mechanical waves such as resonant cavity quantum well lasers and
microcavity-based single photon sources. System-level applica-
tions such as optical communications, biochemical sensing, and
quantum cryptography. Prerequisite: familiarity with electromag-
etic and quantum mechanical waves and semiconductors at the
level of EE 41 or equivalent. GER:DB-EngrAppSci
3 units, Aut (Vuckovic, J)

EE 140. The Earth From Space: Introduction to Remote Sensing
(Also as GEOPHYS 140) Global change science as viewed using
space remote sensing technology. Global warming, ozone deple-
tion, the hydrologic and carbon cycles, topographic mapping, and
surface deformation. Physical concepts in remote sensing. EM
waves and geophysical information. Sensors studied: optical, near
and thermal IR, active and passive microwave. GER:DB-
EngrAppSci
3 units, not given this year

EE 141. Engineering Electromagnetics
Lumped versus distributed circuits. Transient response of trans-
mision lines with resistive and reactive loads. Reflection, trans-
mission, attenuation and dispersion. Steady-state waves on trans-
mision lines. Standing wave ratio, impedance matching, and pow-
er flow. Coulomb’s law, electrostatic field, potential and gradient,
electric flux and Gauss’s Law and divergence. Metallic conduc-
tors, Poisson’s and Laplace’s equations, capacitance, dielectric
materials. Electromagnetic energy and forces. Steady electric currents,
Ohm’s Law, Kirchoff’s Laws, charge conservation and the contin-
uity equation, Joule’s Law. Biot-Savart’s law and the static mag-
netic field. Ampere’s Law and curl. Vector magnetic potential and
magnetic dipole. Magnetic materials, forces and torques. Faraday’s
Law, magnetic energy. Displacement current and Maxwell’s equa-
tions. Uniform plane waves. Prerequisites: 102A, MATH 52.
GER:DB-EngrAppSci
3 units, Aut (Harris, S)

EE 168. Introduction to Digital Image Processing
Computer processing of digital 2-D and 3-D data, combining theo-
etical material with implementation of computer algorithms. Top-
ics: properties of digital images, design of display systems and
algorithms, time and frequency representations, filters, image for-
mation and enhancement, imaging systems, perspective, morphing,
torques, Poisson’s and Laplace’s equations, capacitance, dielectric
materials. Electromagnetic energy and forces. Steady electric currents,
Ohm’s Law, Kirchoff’s Laws, charge conservation and the contin-
uity equation, Joule’s Law. Biot-Savart’s law and the static mag-
netic field. Ampere’s Law and curl. Vector magnetic potential and
magnetic dipole. Magnetic materials, forces and torques. Faraday’s
EE 204. Business Management for Electrical Engineers and Computer Scientists
For graduate students with little or no business experience. Leading computer, high-tech, and Silicon Valley companies and their best practices. Tools and frameworks for analyzing decisions these companies face. Corporate strategy, new product development, marketing, sales, distribution, customer service, financial accounting, outsourcing, and human behavior and business organizations. Case studies. Prerequisite: graduate standing.
3 units, Spr (Gibbons, F)

EE 212. Integrated Circuit Fabrication Processes
For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford’s Nanofabrication laboratory. Process simulators illustrate concepts and provide a virtual lab experience. Principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and backend processing. Required for 410.
3 units, Aut (Plummer, J)

EE 214. Advanced Analog Integrated Circuit Design
Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in the context of circuit simulations needed for design. Emphasis is on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisite: EE 114.
3 units, Win (Murrell, B)

EE 216. Principles and Models of Semiconductor Devices
Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LED, and related optoelectronic devices such as LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.
3 units, Aut (Staff), Win (Saraswat, K; Howe, R)

EE 216S. Principles and Models of Semiconductor Devices
For advanced undergraduates and graduate students. The fundamentals of carrier transport and recombination generation in semiconductors. The physical principles of the operation of the p-n junctions, metal-semiconductor contacts, MOS capacitors, MOSFETs. Overview of BJTs and silicon devices such as LEDs, lasers, photodiodes, solar cells. Prerequisite: EE 116 or equivalent
2 units, Sum (Janjua, A)

EE 222. Applied Quantum Mechanics I
Emphasis is on applications in modern devices and systems. Topics include: Schrödinger’s equation, eigenfunctions and eigenvalues, operator approach to quantum mechanics, Dirac notation, solutions of simple problems including quantum wells and tunneling. Quantum harmonic oscillator, coherent states. Calculation techniques including matrix diagonalization, perturbation theory, and variational method. Time-dependent perturbation theory, applications to optical absorption, nonlinear optical coefficients, and Fermi’s golden rule. Quantum mechanics in crystalline materials. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45).
3 units, Aut (Miller, D)

EE 223. Applied Quantum Mechanics II
Continuation of 222, including more advanced topics: angular momentum in quantum mechanics, spin, hydrogen atom, systems of identical particles (bosons and fermions), methods for one-dimensional problems, introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.
3 units, Win (Miller, D)

EE 228. Basic Physics for Solid State Electronics
Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.
3 units, Aut (Fan, S)

EE 231. Introduction to Lasers
How lasers work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherent optical oscillation, laser resonators, and optical beams. Limited primarily to steady-state behavior; classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to the level of 142, preferably 241, and some atomic or modern physics such as PHYSICS 70 or 130, 131.
3 units, Win (Digonnet, M)

EE 232. Laser Dynamics
Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231.
3 units, Spr (Fan, S)

EE 233. Analog Design Communications Laboratory
Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and co-terminal EE students. Prerequisite: 101B. Recommended: 122.
3 units, Win (Dutton, R)

EE 234. Photonics Laboratory
 photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 142.
3 units, Win (Vuckovic, J)

EE 235. Guided Wave Optical Devices
3 units, not given this year

EE 237. Solar Energy Conversion
3 units, Win (Staff)

EE 242. Electromagnetic Waves
3 units, Win (Fraser-Smith, A)

EE 243. Semiconductor Optoelectronic Devices
Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductors, optoelectronic materials and heterostructures. Devices include:
optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 and 228 or equivalents. Recommended: basic quantum mechanics and lasers such as EE 216 and 231 or equivalents.

3 units, Win (Harris, J)

EE 247. Introduction to Optical Fiber Communications

3 units, Aut (Kahn, J)

EE 248. Fundamentals of Noise Processes

3 units, not given this year

EE 249. Introduction to the Space Environment
The environment through which space probes and vehicles travel and orbit, and which moderates solar gases and radiation. Experimentation in this environment, tools used; regions into which it is divided including ionosphere, magnetosphere, heliosphere, and interplanetary space. The role of the Sun, the effects of changes in solar activity on the Earth; radiation belts, solar wind, particle motion which in combination with the Earth’s magnetic field leads to auroras and the Van Allen belts. Prerequisites: electromagnetics at the level of 242 and senior or graduate standing.

3 units, not given this year

EE 252. Antennas for Telecommunications and Remote Sensing

3 units, not given this year

EE 256. Numerical Electromagnetics

3 units, not given this year

EE 261. The Fourier Transform and Its Applications
The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Fourier series at the level of 102A, and linear algebra.

3 units, Aut (Osgood, B), Win (Nishimura, D), Sum (Bhatnagar, R)

EE 262. Two-Dimensional Imaging
Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: 261. Recommended: 278, 279.

3 units, Win (Zekker, H)

EE 263. Introduction to Linear Dynamical Systems

3-4 units, Win (Meng, T)

EE 264. Digital Signal Processing

3 units, Aut (Schafer, R), Sum (Aragon, J)

EE 265. Digital Signal Processing Laboratory
Applying 102A,B to real-world signal processing applications. Lab exercises use a programmable DSP to implement signal processing tasks. Topics: A/D conversion and quantization, sampling theorem, Z-transform, discrete-time Fourier transform, digital filter design and implementation, spectral analysis, rate conversion, wireless data communication, and OFDM receiver design. Prerequisites: 102A,B. Recommended: 261.

3-4 units, Win (Meng, T)

EE 268. Introduction to Modern Optics
Geometrical optics: ray matrices, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell’s equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.

3 units, Aut (Byer, R)

EE 271. Introduction to VLSI Systems
Large-scale MOS design. Topics: MOS transistors, static and dynamic MOS gates, MOS circuit fabrication, design rules, resistance and capacitance extraction, power and delay estimation, scaling, MOS combinational and sequential logic design, registers and clocking schemes, memory, data-path, and control-unit design. Elements of computer-aided circuit analysis, synthesis, and layout techniques. Prerequisites: 101A and 108B; familiarity with transistors, logic design, Verilog, and digital system organization.

3 units, Aut (Horowitz, M)

EE 273. Digital Systems Engineering
Electronic issues in the design of high-performance digital systems,
including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: 102B and 108A, or equivalents. Recommended: 214.

3 units, Win (Weaver, J)

EE 276. Introduction to Wireless Personal Communications
Frequency reuse, cellular concepts, cochannel interference, handoff. Radio propagation in and around buildings: Friis equation, multipath, narrow-band and wide-band channels, small scale and large-scale statistics, space and time signal variation. Diversity. Receive sensitivity, sources of noise, range. Performance statistics: coverage, margin, digital modulation, adjacent channel interference, and digital error rates. Wide band channels: maximum transmission rates. Multi-server queuing and traffic: Erlang formulas. Multiple access, FDMA, TDMA, CDMA; duplexing, FDD and TDD; multipath mitigation, OFDM, equalization, spread spectrum. Prerequisites: 242 and 278 or equivalent. Corequisite: 279 or equivalent. 3 units, Spr (Cox, D)

EE 278. Introduction to Statistical Signal Processing
Random variables, vectors, and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Prerequisites: 178 or STATS 116, and linear systems and Fourier transforms at the level of 102A,B or 261.

3 units, Aut (Prabhakar, B), Spr (Gill, J), Sum (Su, H)

EE 279. Introduction to Communication Systems
Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis; probability of error in digital systems, spread spectrum. Prerequisites: 179 or 261, and 178 or 278.

3 units, Win (Cox, D)

EE 282. Computer Systems Architecture
Advanced system-level architecture techniques for devices such as personal computers, servers, and embedded or portable systems. Topics such as cache hierarchies, memory systems, storage and I/O systems, virtualization, clusters, fault-tolerance, and low-power design. Interactions between hardware and software layers in such systems. Performance analysis and optimization techniques for small- and large-scale systems. Principles such as locality, coarse-grain parallelism, overlapping communication and computation, performance/power trade-offs, and reliability. Prerequisite: 108B. Recommended: CS 140.

3 units, Spr (Kozyrakis, C)

EE 284. Introduction to Computer Networks
Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

3 units, Aut (Medapalli, K)

EE 290A. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 290C. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 290D. Curricular Practical Training for Electrical Engineers
For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 292E. Analysis and Control of Markov Chains
Finite-state and countable-state Markov chains. Controlled Markov chains and dynamic programming algorithms. Application to modeling and analysis of engineering systems. Prerequisites: 263, 278.

3 units, not given this year

EE 292G. Power Electronics
Power conversion fundamentals including linear/shunt regulators, charge pumps, Buck, Boost, Buck-Boost, SEPIC, Cuk, and Flyback converters, magnetic components, vlt second balance, continuous/discontinuous mode, synchronous/non-synchronous operation, voltage/current mode control, fixed frequency PWM and constant on or off time control, control loop analysis, compensator design, RMS/average value calculations for PWM current waveforms, inductor, capacitor, and MOSFET parasitics, output ripple, transient response, gate drive strategies, efficiency prediction, start, current limit, efficiency and power loss plots.

3 units, Aut (Staff)

EE 293A. Fundamentals of Energy Processes
For seniors and graduate students. Thermodynamics, heat engines, thermoelectrics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45

3-4 units, Aut (da Rosa, A)

EE 293B. Fundamentals of Energy Processes

3-4 units, Win (da Rosa, A)

EE 300. Master’s Thesis and Thesis Research
Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade ‘N’ is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 302. Biomedical Electronics
Biomedical electronics and instruments based on electrical engineering for diagnostics and therapeutic treatments of biological systems, focusing on the theory and design principles in modern biomedical electronics using electromagnetic properties. Topics include circuit design for implanted medical devices, physics and signal processing for medical imaging systems, techniques for neural measurements and neuro-decoding, and electronics for drug delivery. Prerequisites: EE 214, 264, and 265.

3 units, Win (Poon, A)

EE 303. Autonomous Implantable Systems
How implantable systems can revolutionize health care in the coming decades. Potential applications include implantable sensors and monitoring devices for preventive and post-surgery monitoring; drug delivery systems that can be placed closer to cancer cells and are able to administer dosage automatically; medical robots that perform surgery inside patients with greater precision and less pain; and neural implants for brain-machine interface. Focus is on
the analysis and design of remotely-powered, miniature implantable devices for those applications.

3 units, Spr (Poon, A)

EE 309. Semiconductor Memory Devices and Technology
Memory devices: SRAM, DRAM, NVRAM (non-volatile memory). Functionality and performance of ULSI systems. Semiconductor memories, device design considerations, device scaling, device fabrication, addressing, and readout circuits. Cell structures (1T-1C, 6T, 4T, 1T-1R, 0T-1R, floating gate FLASH, SONOS, NROM), and memory organization (open bit-line, folded bit-line, NAND, NOR, cross-point). New memory concepts such as nanocrystal memory, single-electron memory, magnetic tunnel junction memory (MRAM), ferroelectric memory (FRAM), phase change memory (PRAM), T-RAM, polymer memory, metal oxide memory, nanoconductive bridge memory). Prerequisite: 216. Recommended: 212, 311, 316.

3 units, Aut (Wong, P)

EE 310. Integrated Circuits Technology and Design Seminar
State-of-the-art micro- and nanoelectronics, nanotechnology, advanced materials, and nanoscience for device applications. Prerequisites: 216, 316.

1 unit, Win (Nishi, Y; Wong, P; Saraswat, K)

EE 311. Advanced Integrated Circuits Technology
Practical and fundamental limits to the evolution of the technology of modern MOS devices. Modern device and circuit fabrication and likely future changes. Advanced techniques and models of device and back-end (interconnect and contact) processing. Use of TSUPREM4 and MEDI CI for process and device modeling. MOS process integration. Prerequisites: 212, 216.

3 units, Spr (Saraswat, K)

EE 312. Micromachined Sensors and Actuators
Solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators include biological, chemical, mechanical, optical, and thermal. Mechanisms of transduction, fabrication techniques, and relative merits of different technologies. Micromaching techniques for monolithic integration of active circuits with sensors or actuators. Directions for future research. Prerequisite: 212 or equivalent.

3 units, Win (Giovanardi, L)

EE 313. Digital MOS Integrated Circuits
Development of different models for MOS transistors and how to use them to analyze circuit performance. Use of computer-aided circuit analysis. Logic styles include static, dynamic and pass logic, pulse-mode gates, and current-mode logic. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues. Prerequisites: 101B, 108A. Recommended: 271.

3 units, Win (Kim, J)

EE 314. RF Integrated Circuit Design
Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, passive and active filters, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: 214.

3 units, Spr (Lee, T)

EE 315A. VLSI Signal Conditioning Circuits
Design and analysis of integrated circuits for active filters, precision gain stages, and sensor interfaces in CMOS VLSI technology. Operational transconductance amplifiers; sampled-data and continuous-time analog filters. Analysis of noise and amplifier imperfections; compensation techniques such as correlated double sampling. Sensor interfaces for micro-electromechanical and biomedical applications. Layout techniques for analog integrated circuits.

3 units, Spr (Murmann, B)

EE 315B. VLSI Data Conversion Circuits
Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS VLSI technology. Circuit elements such as sample-and-hold circuits and voltage comparators. Circuits and architectures for Nyquist-rate and oversampling analog-to-digital and digital-to-analog conversion; digital decimation and interpolation filters. Examples of calibration and digital enhancement techniques. Prerequisite: EE 214. Recommended: EE 315A.

3 units, Aut (Murmann, B)

EE 316. Advanced VLSI Devices
In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.

3 units, Win (Wong, P)

EE 317. Micropatterning for Integrated Circuits
Focus is on the device physics and operation principles of nanoelectronic devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see http://www.itrs.net. Non-silicon-based devices such as carbon nanotubes, graphene, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices. Prerequisites: undergraduate device physics, EE 222, 216. Recommended: EE 223, 228, or 316.

3 units, not given this year

EE 319. Advanced Nanoelectronic Devices and Technology
Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

3 units, Spr (Nishi, Y; Sze, S)

EE 320. Nanoelectronics
Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

3 units, not given this year

EE 321. Nanoelectronic Devices
EE 322. Molecular Electronics and Photonics
Physics of charge and energy transfer in molecular systems and connection with traditional mesoscopic transport theories. Analysis of molecular organic light-emitting diodes, photovoltaic cells and transistors. Technology and applications of molecular semiconductors. Prerequisite: 228 or equivalent.

3 units, not given this year

EE 327. Properties of Semiconductor Materials
Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semiclassical transport theory, semiconductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination. Prerequisites: 216, 229.

3 units, not given this year

EE 328. Physics of Advanced Semiconductor Devices
Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in ana-
EE 329. The Electronic Structure of Surfaces and Interfaces
Physical concepts and phenomena for surface science techniques probing the electronic structure of surfaces and interfaces. Microscopic and atomic models of microstructures; applications such as within semiconductor device technology and catalysis. Physical processes of low energy electron energy diffraction, Auger electron spectroscopy, UV and X-ray photoemission spectroscopy, electron/ photon stimulated ion desorption, inelastic tunneling spectroscopy, ion scattering, surface EXAFS, and energy loss spectroscopy; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor.
3 units, not given this year

EE 330. Micro and Nano Optical Device Design
Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: 242 or equivalent
3 units, Aut (Solgaard, O)

EE 335. Introduction to Information Storage Systems
State-of-the-art data storage technologies, including magnetic disk drive storage, optical data storage (CD-ROM, DVD, magneto-optic recording), solid state memory (flash memory, ferro-electric memory), and emerging technologies (magnetic random access memory, probe-based storage). Magnetic disk recording and comparisions among data storage technologies. Related nanotechnologies. Final presentation. Prerequisites: electromagnetism, optics, transistors, binary algebra, probability, and Fourier transform.
3 units, not given this year

EE 336. Nanophotonics
3 units, Win (Fan, S; Brongersma, M)

EE 340. Advanced Topics in Optics and Quantum Optics
Optical microcavities and their device applications. Types of optical microcavities (microdisks, microspheres, and photonic crystal cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical microcavities, including low-threshold lasers, resonant cavity light-emitting diodes, and single-photon sources. Prerequisites: advanced undergraduate or basic graduate-level knowledge of electromagnetics, quantum mechanics, and physics of semiconductors.
3 units, Spr (Vuckovic, J)

EE 343. Advanced Optoelectronic Devices
Semiconductor quantum well structures; superlattices and coupled quantum wells; optical properties of quantum wells; valence band structure; effects of strain; quantum well lasers; intersubband detectors; excitons in quantum wells; absorption saturation; electroabsorption; quantum well modulators and switches. Prerequisites: 222 or equivalent quantum mechanics, 243. Recommended: 223.
3 units, Spr (Miller, D)

EE 344. High Frequency Laboratory
Lecture/lab emphasizing lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. High frequency measurement techniques including s-parameter measurements, amplifier noise figure, and oscillator phase noise. Guest speakers from Lucent and Hewlett-Packard. Enrollment limited to 25. Prerequisites: transmission lines, Smith charts. Recommended: 314.
3 units, Aut (Scherer, D; Swain, H; Cox, D)

EE 345. Optical Fiber Communication Laboratory
Experimental investigation of optical fiber communications. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Key optical communications systems techniques: eye diagrams and BER measurements. Prerequisites: undergraduate physics and optics.
3 units, not given this year

EE 346. Introduction to Nonlinear Optics
Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric dipole susceptibilities. Free and forced waves-phase-matching; slowly varying envelope approximation-dispersion, diffraction, space-time analog; harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation; nonlinear processes in optical fibers. Prerequisites: 141, 242.
3 units, Spr (Harris, S)

EE 347. Optical Methods in Engineering Science
Design and understanding of modern optical systems. Topics: geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 268 or 366, or equivalent.
3 units, Win (Hesselink, L)

EE 348. Advanced Optical Fiber Communications
3 units, Win (Kahn, J)

EE 349. Nano Optics and Grating Photonics
Coupled wave analysis of periodic structures, gratings structures for optical communications, wave-matter interactions with periodic media and photonic crystals, applications of periodic structures. Prerequisite: 268 or 366, or equivalent.
3 units, not given this year

EE 350. STARlab Seminar
Research topics from space science, planetary exploration, ionospheric and magnetospheric physics, radar and remote sensing of the environment, applied electromagnetics, waves in optical fibers, and information systems with space applications. Applied research areas include wireless personal communications, high bandwidth wired and wireless transmission, optical communication systems, sensor networks, and related underlying and advancing technologies.
1 unit, not given this year

EE 354. Introduction to Radio Wave Scattering
Integral and differential equations of radio wave scattering; exact, approximate, and numerical solutions of single particle scattering for spheres, edges, points, and cylinders. Scattering from rough surfaces with large and small roughness scales, as time permits. Multiple scattering; formulation and solution techniques for equation of transfer in discrete media and scattering by continuous media in weak and strong regimes. Applications to radar, radar astronomy, remote sensing, and biological media. Prerequisites: electromagnetic theory through standard graduate engineering topics; partial differential equations, boundary value problems in rectangular and spherical coordinates; and consent of instructor.
3 units, not given this year

EE 355. Imaging Radar and Applications
(Same as GEOPHYS 265) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: polarime-
try and target discrimination, topographic mapping surface displacements, velocities of ice fields.

EE 356. Elementary Plasma Physics: Principles and Applications

EE 359. Wireless Communication
Design, performance analysis, and performance limits of wireless systems. Topics include: current wireless systems, path loss and shadowing, statistical multipath channel models, capacity of wireless channels, digital modulation and its performance in fading and intersymbol interference, adaptive modulation, diversity, multiple antenna systems (MIMO), equalization, multicarrier modulation, and spread spectrum and RAKE receivers. Possible additional topics: multiuser system design issues such as multiple access, frequency reuse in cellular systems, and ad hoc wireless network design. Prerequisite: 279.

EE 360. Multiuser Wireless Systems and Networks
Design, analysis, and fundamental limits. Possible topics include multiuser detection and interference cancellation, multiple access, cellular system design and optimization, Shannon capacity and achievable rate regions of wireless multiuser channels and networks, ad hoc wireless network design, sensor and energy-constrained networks, and cross-layer design. Prerequisite: 359.

EE 363. Linear Dynamic Systems
Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. Lyapunov theory and methods. Linear estimation and the Kalman filter. Perron-Frobenius theory. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent; basic probability.

EE 364A. Convex Optimization I
Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as 263.

EE 364B. Convex Optimization II
Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Alternating projections. Exploiting problem structure in implementation. Convex relaxations of hard problems, and global optimization via branch and bound. Robust optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.

EE 366. Introduction to Fourier Optics
Applications of Fourier theory to the analysis and synthesis of optical imaging and optical data processing systems. Propagation and diffraction of light, Fresnel and Fraunhofer approximations, Fourier transforming properties of lenses, image formation with coherent and incoherent light, transform functions of imaging systems, optical data processing, and holography. Prerequisite: familiarity with Fourier analysis. Recommended: 261.

EE 368. Digital Image Processing
Image sampling and quantization, color, point operations, segmentation, linear image filtering and correlation, image transforms, eigenimages, multidimensional signals and systems, multiresolution image processing, wavelets, morphological image processing, noise reduction and restoration, simple feature extraction and recognition tasks, image registration. Students write and investigate image processing algorithms in Matlab. Competitive term project. Prerequisites: 261, 278.

EE 369A. Medical Imaging Systems I
Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: 261.

EE 369B. Medical Imaging Systems II
Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: 261.

EE 369C. Medical Image Reconstruction
Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

EE 371. Advanced VLSI Circuit Design
Issues in high performance digital CMOS VLSI design from a system perspective. Topics: wire modeling, logic families, latch design and clocking issues, clock distribution, RAMs, ALUs, I/O and I/O noise issues. Final project involves the design of a subsystem for a high-speed processor. Extensive use of SPICE. Prerequisites: 271 and 313, or consent of instructor.

EE 373A. Adaptive Signal Processing

EE 373B. Adaptive Neural Networks

EE 375. Quantization Noise
EE 376A. Information Theory
Extreme points of communication theory: data compression to the entropy limit, and communication at the channel capacity limit. Shannon entropy. Rate distortion theory. Huffman coding. Kolmogorov complexity. Unified treatment based on the asymptotic equipartition theorem. Prerequisite: 178 or 278 or STATS 116, or equivalent. 3 units, Win (Weissman, I)

EE 376B. Information Theory

EE 378. Statistical Signal Processing

EE 379. DIGITAL COMMUNICATION
Modulation methods and bandwidth requirements, baseband and passband system analysis, minimum-probability-of-error and maximum-likelihood detection, error-probability analysis, intersymbol interference, maximum-likelihood sequence detection, equalization methods, orthogonal frequency-division multiplexing. Prerequisite: EE102A, EE278 3 units, Spr (Weissman, I)

EE 380. Seminar on Computer Systems
Current research in the design, implementation, analysis, and use of computer systems from integrated circuits to operating systems and programming languages. 1 unit, Aut (Allison, D; Freeman, J), Win (Allison, D; Freeman, J), Spr (Allison, D; Freeman, J), Sum (Allison, D)

EE 382A. Advanced Processor Architecture
Topics include advanced instruction-set design and pipelining, wide instruction fetch, branch prediction, out-of-order and speculative execution, memory disambiguation, vector processors, simultaneous multithreading, multi-core systems, memory hierarchies, and low-level compiler optimizations for processor efficiency. Trade-offs among performance, power, and complexity, and techniques for addressing them. Design or research project in processor architecture. Prerequisites: 108B, Recommended: 282. 3 units, Aut (Kozyrakis, C)

EE 382C. Interconnection Networks
The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282. 3 units, not given this year

EE 382D. Advanced Computer Arithmetic
Number systems, floating point representation, state of the art in arithmetic algorithms, problems in the design of high speed arithmetic units. Prerequisite: 282. 3 units, not given this year

EE 384A. Internet Routing Protocols and Standards
Local area networks: MAC addressing; IEEE 802.1 bridging protocols (transparent bridging, virtual LANS). Internet routing protocols: Internet protocol (IPv-4, IPv-6, ICMP); interior gateways (RIP, OSPF) and exterior gateways (BGP, policy routing); IP multicast (IGMP, DVMRP, CBT, MOSPF, PIM); multiprotocol label switching (MPLS). Prerequisite: 284 or CS 244A. 3 units, not given this year

EE 384B. Multimedia Communication over the Internet
Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264); TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and virtual LANs (802.1Q). Prerequisite: 284 or CS 244A. Recommended: 384A. 3 units, not given this year

EE 384C. Wireless Local Area Networks
Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: Carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. Current research papers in the open literature. Prerequisite: 284 or CS 244A. 3 units, not given this year

EE 384M. Network Science
Theory and practice of designing and analyzing algorithms arising in networks. Topics include: designing algorithms for load balancing, switching, congestion control, network measurement, the web infrastructure, and wireless networks; and analyzing the performance of algorithms via stochastic network theory. Algorithm design using randomization, probabilistic sampling, and other approximation methods. Analysis methods include the use of large deviation theory, fluid models, and stochastic comparison. Research project. Prerequisite: 278 or CS 365. 3 units, not given this year

EE 384P. Projects: The Programmable Open Mobile Internet (POMI)
A new Stanford research program in EE and CS to define the next generation of mobile computing: from the handheld device and its operating system to the network, radios, and cloud computing that supports the user. Small student teams prototype part of the next Internet architecture. Emphasis is on how the Internet can support billions of mobile users. Prerequisite: EE 284, CS 244A, CS 144, or equivalents, and programming skills. 3 units, not given this year

EE 384S. Network Architectures and Performance Engineering
Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queuing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability. 3 units, Spr (Bambos, N)

EE 384X. Packet Switch Architectures I
Bernoulli and Poisson processes, graph matching algorithms, urn problems, stability analysis using Lyapunov functions, fluid models. Prerequisites: 284 or CS 244A, 178 or 278 or STAT 116. 3 units, Spr (McKeown, N)

EE 384Y. Packet Switch Architectures II
Second of two-semester course. Theory and practice of designing packet switches and routers. Address lookup: exact matches, longest prefix matches, performance metrics, hardware and software solutions. Packet classifiers; for firewalls, QoS, and policy-based routing; graphical description and examples of 2-D classification, examples of classifiers, theoretical and practical considerations. 3 units, not given this year

EE 385A. Robust and Testable Systems Seminar
Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.
1-4 units, Aut (McCluskey, E; Mitra, S), Win (McCluskey, E; Mitra, S), Spr (McCluskey, E; Mitra, S), Sum (McCuskey, E)

EE 386. Robust System Design
Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282. 3 units, Spr (Mitra, S)

EE 387. Algebraic Error Control Codes
Algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, Fire codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra. 3 units, not given this year

EE 388. Modern Coding Theory
Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A. 3 units, Spr (Montanari, A)

EE 390. Special Studies or Projects in Electrical Engineering
Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading. 1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)

EE 391. Special Studies and Reports in Electrical Engineering
Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390. 1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Summer (Staff)

EE 392B. Introduction to Imaging Sensors
Design and analysis: silicon photodetectors; CCD and CMOS passive and active sensor operation; noise and FPN analysis; spatial resolution and MTF; SNR and dynamic range; high dynamic range architectures; A/D conversion approaches. Analysis of the signal path in a digital camera starting from the optics, through the sensor, the A/D converter, to the different color processing steps. MATLAB camera simulator is used to explore various tradeoffs in camera design. Prerequisites: undergraduate level device, circuit, and system background equivalent to 102A, 101A,B; and familiarity with noise analysis. 3 units, not given this year

EE 392F. Logic Synthesis of VLSI Circuits
Solving logic design problems with CAD tools for VLSI circuits. Exact and heuristic algorithms for logic synthesis. Representation and optimization of combinational logic functions (encoding problems, binary decision diagrams) and of multiple-level networks (algebraic and Boolean methods, don’t-care set computation, timing verification, and optimization) and modeling and optimization of sequential functions and networks (reoding), semicustom libraries, and library binding. Prerequisites: familiarity with logic design, algorithm development, and programming. 3 units, not given this year

EE 392G. Terahertz Technologies and Applications
Principles of THz wave generation, detection, and applications. Sources and systems that provide access to the THz region of the spectrum include ultrafast time-domain systems, direct generation using terahertz lasers as well as nonlinear optical frequency conversion. Terahertz measurement techniques include detector technologies, terahertz waveguides, terahertz measurements using surface plasmons, near-field effects and nonlinear optical methods of detection. Applications of terahertz radiation including spectroscopy, sensing, and imaging, holography, terahertz communications concepts and systems, photonic crystals, and metamaterials. 3 units, not given this year

EE 392H. Coding for Wireless Channels
Theoretical foundations of modern coding theory, with applications to wireless transmission systems. State-of-the-art coding techniques (soft (maximum-likelihood) decoding. Topics include channel models (independent fading, block fading, MIMO); information-theoretic performance limits; coding on signal spaces; optimization criteria for code design; factor-graphical models of codes including block, convolutional, turbo, LDPC, and concatenated codes; trellis-coded modulation and bit-interleaved modulation; iterative (turbo) receivers for coded signals; memoryless, intersymbol-interference, MIMO, and multiuser channels; EXIT-chart analyses of performance. Prerequisites: EE 278, 279. Recommended: EE 376A. 3 units, not given this year

EE 392M. Fault Diagnosis Systems
Overview of current diagnostic systems engineering practices, emphasizing approaches that are usually referred to as advanced in industry. Real life implementation constraints. Guest lectures by experts from various sectors, including aerospace, automotive, semiconductor manufacturing, networking, and enterprise computing industries. May be repeated for credit. Recommended: STATS 116; EE 263 or ENGR 207A; EE 278 or ENGR 207B. 1 unit, not given this year

EE 392R. Charged Particle Optics
Electron optics of charged particle instruments including transmission electron microscope, scanning electron microscope and related tools, mass and energy spectrometers, electron beam lithography tools, focused ion beam systems, electron diffraction, proximal probe tools such as the scanning tunneling microscope. Topics include sources, first-order focusing of electrons and ions, third-order aberrations, space-charge effects and diffraction. Goal is to compute the optical parameters of axially-symmetric magnetic and electric lenses and to be familiar with the optical design and testing of the above charged-particle systems and the factors limiting their performance. Prerequisites: undergraduate geometrical optics and vector calculus or 217. 3 units, Spr (Pease, R)

EE 392T. Seminar in Chip Test and Debug
Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371). 1 unit, Aut (Stinson, J)

EE 395. Electrical Engineering Instruction: Practice Teaching
Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course in parallel by an experienced instructor. Enrollment limited. 1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S)

EE 398A. Image and Video Compression
Replicates EE398. The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fx compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding, JPEG, Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: 261, 278. 3 units, Win (Girod, B)

EE 398B. Image Communication II
Second of two-semester course. Digital video communication techniques. Interframe coding. Conditional replenishment. Motion-
COURSES OF INSTRUCTION

EE 400. Thesis and Thesis Research
Limited to candidates for the degree of Engineer or Ph.D.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 402A. Topics in International Technology Management
Theme for Autumn 2009 is: Technology Strategies in Asian Business. Surveys distinctive practices of major corporations and start-up companies in Japan and Asia. Open and closed innovation, tech licensing, R&D portfolio management, M&A for technology positioning and more. Distinguished speakers from industry and government.
1 unit, Aut (Dashar, R)

EE 402S. Topics in International Advanced Technology Research
Theme for 2006-07 is advanced technologies for biomedical applications. Photonic and electronic systems and components for imaging, microarray drug delivery, artificial organs, and robot-assisted surgery. Guest speakers from industry, government, and universities. May be repeated for credit. Recommended: basic electronics.
1 unit, Spr (Dashar, R)

EE 402T. Entrepreneurship in Asian High Tech Industries
Patterns and challenges of entrepreneurship in Asia. Business and technology issues in start-up companies in Asian economies. Guest speakers from industry, government, and universities. May be repeated for credit.
1 unit, Spr (Dashar, R)

EE 410. Integrated Circuit Fabrication Laboratory
Fabrication, simulation, and testing of a highly simplified 1.5 micron CMOS process developed for this course. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and wafer testing. Students perform simulations of the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow in the lab. Taught in the Stanford Nanofabrication Facility (SNF) in the Center for Integrated Systems (CIS). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: 212, 216, course in computer engineering.
3-4 units, Win (Saraswat, K)

EE 414. RF Transceiver Design Laboratory
Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: 314, 344.
3 units, Win (Lee, T)

EE 418. Topics in Neuroengineering
Neuroscience and electrical engineering, focusing on principles and theory in modern neural prosthetic systems (brain-computer or brain-machine interfaces). Electrical properties of neurons, information encoding, neural measurement techniques and technology, processing electronics, information decoding and estimators, and statistical data analysis. Prerequisites: 214, 278.
3 units, not given this year

EE 453. Geomagnetically Trapped Radiation
Research on the radiation belts of Earth and other planets. Physical processes which lead to magnetic trapping of electrons and ions. Analytical tools for trapped radiation research. The nature of radiation belts, source and loss mechanisms, and the relation of radiation belts to other geophysical phenomena.
3 units, not given this year

EE 469B. RF Pulse Design for Magnetic Resonance Imaging
Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.
3 units, Aut (Pauly, J)

EE 471. Internet and Multi-user Information Theory
Topics in multiple user source and channel coding; multiple access channel, correlated source coding, broadcast channel, interference channel, relay channel, and channels with feedback; asymptotic capacity of networks; source coding with side information, multiple descriptions, channels with state, MIMO channels. Prerequisite: 376A.
3 units, not given this year

EE 479. Multiuser Digital Transmission Systems
Multiuser communications design, modulation, and reception. Capacity regions and fundamentally optimum designs for multiple access, broadcast, and interference channels. Iterative waterfilling, optimum spectrum balancing, band preference methods, vectoring, and multi-user generalized decision feedback equalization (GDFE) as used for vector broadcast and multiple access. Prerequisite: 379C.
3 units, not given this year

EE 492M. How Cyberspace Works
3 units, Win (Paulraj, A)

EMMETT INTERDISCIPLINARY PROGRAM IN ENVIRONMENT AND RESOURCES (IPER)

GRADUATE COURSES IN EMMETT INTERDISCIPLINARY PROGRAM IN ENVIRONMENT AND RESOURCES

IPER 200. Sustaining Action: Research, Analysis and Writing for the Public
Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an “eco advice column”, by choosing, researching and answering questions about sustaina-
IPER 290. Capstone Project in Environment and Resources
Required for E-IPER Joint M.S. students; optional for E-IPER Ph.D. students. Complete and present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required.

3 units, Spr (Staff)

IPER 310. Environmental Forum Seminar
Required core course for first year E-IPER Ph.D. students; optional for joint M.S. students; other graduate students with consent of instructor. Conceptual frameworks, analytical approaches, validity of conclusions from an interdisciplinary perspective. Participants attend the Woods Institute’s Environmental Forum seminar series or other seminars on campus selected by faculty and students, followed by student-facilitated discussions.

1-2 units, Aut (Staff)

IPER 315. Environmental Research Design Seminar
Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor’s permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in IPER 320. Designing Environmental Research. Topics parallel the IPER 320 syllabus. Corequisite: IPER 320.

1-2 units, Win (Srinivasan, V)

IPER 320. Designing Environmental Research
Required E-IPER core course restricted to first year E-IPER Ph.D. students. Research design options for environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Evaluation of strengths and weaknesses of alternative research designs, emphasizing methods, data, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

4 units, Win (Davis, J)

IPER 330. Research Approaches for Environmental Problem Solving
Core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: IPER 398 with the faculty member chosen to explore a possible dissertation topic.

3 units, Spr (Vitousek, P; Ardoin, N)

IPER 335. Environmental Entrepreneurship
The potential of markets for solving environmental problems, and for environmental entrepreneurs to invent those solutions. How to apply business principles of finance, marketing, economics, operations, and accounting to the provision of environmental goods and services. Case studies include innovation in materials and energy, conservation of land and wildlife, environmental product differentiation and supply chain management, investing under regulatory risk, and partnerships between nonprofit and for-profit organizations. Guest speakers include environmental entrepreneurs, venture capitalists, corporate executives, and nonprofit leaders. Students develop their own business plans in environmental entrepreneurship.

4 units, not given this year

IPER 338. Environmental Science for Managers and Policy Makers
(Same as OIT 338) (Same as LAW 608, OIT 338.) Core course for joint J.D., M.B.A., or M.D. with M.S. in Environment and Resources; open to Law and GSB students; recommended for those who plan to apply to the joint degree program. Fundamentals of ecosystem services, climate change and energy systems. Spreadsheet modeling and Monte Carlo simulation applied to resource management and policy analysis.

4 units, Win (Plambeck, E; Daily, G; Field, C; Masters, G; Patalano, L; Patz, J)

IPER 339. Advanced Environmental Science for Managers and Policymakers
(Same as OIT 339) (Same as LAW 619 and OIT 339). Accelerated version of IPER 338. Covers more environmental science by
spending less class time on fundamentals of modeling. Students with background in modeling and environmental science should take IPER 339 rather than IPER 338.

4 units, Win (Staff)

IPER 398. Directed Individual Study in Environment and Resources
Under supervision of an E-IPER faculty member on a subject of mutual interest.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IPER 399. Directed Research in Environment and Resources
For advanced graduate students. Under supervision of an E-IPER faculty member.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IPER 410. Ph.D. Qualifying Tutorial
For Ph.D. students only. Under supervision of an E-IPER faculty member.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IPER 460. Proposal Writing Tutorial
Practical training in proposal writing methods. Students draft research proposals relevant to individual interests with supervision from E-IPER faculty member.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff)

IPER 480. Dissertation Writing Tutorial in Environment and Resources
For students who have completed the oral qualifying examination. Under supervision of an E-IPER faculty member. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY RESOURCES ENGINEERING (ENERGY)

UNDERGRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

ENERGY 101. Energy and the Environment
(Same as EARTHSYS 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42, ENGR 30. GER:DB-EngrAppSci 3 units, Win (Kovacek, A; Durlofsky, L)

ENERGY 102. Renewable Energy Sources and Greener Energy Processes
(Same as EARTHSYS 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible, but the rate at which energy can be drawn from them with today’s technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER:DB-EngrAppSci 3 units, Win (Kovacek, A; Gerritsen, M)

ENERGY 104. Technology in the Greenhouse
Technologies that might be employed to reduce emissions of greenhouse materials, such as carbon dioxide, methane, nitrous oxide, and black soot, produced by the generation and use of energy. Sources of greenhouse materials in the current energy mix and evidence for global geochemical and climate changes. Advantages and limitations of technologies to reduce emissions. Examples include renewable sources such as wind and solar energy, more efficient use of energy, hydrogen, capture and storage of carbon dioxide, and nuclear power.
3 units, Spr (Benson, S)

ENERGY 120. Fundamentals of Petroleum Engineering
(Same as ENGR 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. GER:DB-EngrAppSci 3 units, Aut (Horne, R; Wilcox, J)

ENERGY 121. Fundamentals of Multiphase Flow
(Same as ENERGY 221) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy’s law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. GER:DB-EngrAppSci 3 units, Win (Tchelepi, H)

ENERGY 125. Modeling and Simulation for Geoscientists and Engineers
Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.
3 units, alternate years, not given this year

ENERGY 130. Well Log Analysis I
For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.
3 units, Aut (Lindblom, R)

ENERGY 141. Practice of Geostatistics and Seismic Data Integration
(Same as GEOPHYS 241A, ENERGY 241I) Students build a synthetic 3D fluvial channel reservoir model with layer depths, channel geometry, and facies-specific petrophysics and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for an actual reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLIB and SRBtools). Prerequisite: ENERGY 240. Recommended: experience with Unix, MATLAB/C++/Fortran programming.
3-4 units, Spr (Mukerji, T)

ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as GES 246, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geological reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Week-end field trip.
3 units, Aut (Graham, S; Tchelepi, H; Boucher, A)

ENERGY 153. Carbon Capture and Sequestration
(Same as ENERGY 253) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.
3 units, Aut (Wilcox, J; Benson, S)

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 160. Modeling Uncertainty in the Earth Sciences
(Same as ENERGY 260) Issues, techniques, and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. Focus is on practical breadth rather than theoretical depth. Topics include the process of building models, sources of
uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate). Software use with SGEMS and Petrel. Prerequisites: algebra (CME 104 or equivalent), introductory statistics.

ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties
(Same as ENERGY 267) Appraisal of development and remedial work on oil and gas wells; appraisals of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. GER: DB-EngrAppSci
3 units, Win (Kourt, W; Pande, K)

ENERGY 175. Well Test Analysis
3 units, not given this year

ENERGY 180. Oil and Gas Production Engineering
(Same as ENERGY 280) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130. GER: DB-EngrAppSci
3 units, not given this year

ENERGY 192. Undergraduate Teaching Experience
Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 193. Undergraduate Research Problems
Original and guided research problems with comprehensive report. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Durlofsky, L; Gerritsen, M; Horne, R; Kovscek, A; Tchelepi, H), Sum (Staff)

ENERGY 194. Special Topics in Energy and Mineral Fluids
May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 199. Senior Project and Seminar in Energy Resources
Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.
1-4 units, Aut (Staff), Win (Staff), Spr (Kovscek, A; Horne, R), Sum (Staff)

GRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

ENERGY 211. Computer Programming in C++ for Earth Scientists and Engineers
(Same as CME 211) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. The basic facilities of the programming language C++. Numerical problems from various science and engineering applications.
3 units, Win (Gerritsen, M)

ENERGY 221. Fundamentals of Multiphase Flow
(Same as ENERGY 121) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy’s law for multiphase flow, fractional flow equation, effects of gravity, Buckley–Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones Rozelle determination of relative permeability. Frontal advance equation, Buckley–Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.
3 units, Win (Tchelepi, H)

ENERGY 222. Advanced Reservoir Engineering
Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Inj ectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit. Prerequisite: 221. 3 units, Spr (Durlofsky, L)

ENERGY 223. Reservoir Simulation
Fundamentals of petroleum reservoir simulation. Equations for multi component, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.
3-4 units, Win (Durlofsky, L; Tchelepi, H; Gerritsen, M)

ENERGY 224. Advanced Reservoir Simulation
Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.
3 units, Aut (Durlofsky, L; Tchelepi, H; Aziz, K; Nakashima, T)

ENERGY 225. Theory of Gas Injection Processes
3 units, alternate years, not given this year

ENERGY 226. Thermal Recovery Methods
3 units, alternate years, not given this year

ENERGY 227. Enhanced Oil Recovery
The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.
3 units, Spr (Kovscek, A)

ENERGY 230. Advanced Topics in Well Logging
State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.
3 units, Spr (Lindblom, R)

ENERGY 240. Geostatistics for Spatial Phenomena
(Same as GES 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.
3-4 units, Win (Journel, A)
ENERGY 241. Practice of Geostatistics and Seismic Data Integration
(Same as GEOPHYS 241A, ENERGY 141) Students build a synthetic 3D fluvial channel reservoir model with layer depths, channel geometry, and facies-specific petrophysical and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for a real reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLIB and SRBtools). Prerequisite: ENERGY 240. Recommended: experience with Unix, MATLAB/C++/Fortran programming.
3-4 units, Spr (Mueller, T)

ENERGY 242. Topics in Advanced Geostatistics
(Same as EESS 263) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upsampling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.
3-4 units, not given this year

ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as GES 246, ENERGY 146) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.
3 units, Aut (Graham, S; Tchelepi, H; Boucher, A)

ENERGY 247. Stochastic Simulation
Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.
3 units, not given this year

ENERGY 251. Thermodynamics of Equilibria
Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.
3 units, Aut (Staff)

ENERGY 252. Chemical Kinetics and Modeling
Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab approaches.
3 units, Spr (Wilcox, J)

ENERGY 253. Carbon Capture and Sequestration
(Same as ENERGY 153) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.
3 units, Aut (Wilcox, J; Benson, S)

On-the-job training for master’s degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.
1-3 units, Sum (Staff)

ENERGY 259. Presentation Skills
For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, test design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.
1 unit, Spr (Gerritsen, M)

ENERGY 260. Modeling Uncertainty in the Earth Sciences
(Same as ENERGY 160) Issues, techniques, and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. Focus is on practical breadth rather than theoretical depth. Topics include the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate). Software use with SGEEM and Petrel. Prerequisites: algebra (CME 104 or equivalent), introductory statistics.
3 units, Win (Caers, J)

ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties
(Same as ENERGY 167) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.
3 units, Win (Kourt, W; Pande, K)

ENERGY 269. Geothermal Reservoir Engineering
Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.
3 units, not given this year

ENERGY 273. Special Topics in Petroleum Engineering
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 280. Oil and Gas Production Engineering
(Same as ENERGY 180) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130.
3 units, not given this year

ENERGY 281. Applied Mathematics in Reservoir Engineering
The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green’s functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.
3 units, alternate years, not given this year

ENERGY 284. Optimization: Deterministic and Stochastic Approaches
Deterministic and stochastic methods for optimization in earth sciences and engineering. Linear and nonlinear regression, classification and pattern recognition using neural networks, simulated annealing and genetic algorithms. Deterministic optimization using non-gradient-based methods (simplex) and gradient-based methods (conjugated gradient, steepest descent, Levenberg-Marquardt, Gauss-Newton), eigenvalue and singular value decomposition. Applications in petroleum engineering, geostatistics, and geophysics. Prerequisite: CME 200 or consent of instructor.
3 units, Aut (Caers, J)

ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery
Focused study in research areas within the department. Graduate
students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation
Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne)

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 285G. Geothermal Reservoir Engineering Research Seminar
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 285H. SUPRI-HW Research Seminar: Horizontal Well Technology
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-HW (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media
How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing fluid flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.

3 units, not given this year

ENERGY 301. The Energy Seminar
(Same as CEE 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.

1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.

1-3 units, Sum (Staff)

ENERGY 359. Teaching Experience in Petroleum Engineering
For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

1 unit, Spr (Gerritsen, M)

ENERGY 360. Advanced Research Work in Petroleum Engineering
Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 361. Master’s Degree Research in Petroleum Engineering
Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff)

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 362. Engineer’s Degree Research in Petroleum Engineering
Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 363. Doctoral Degree Research in Petroleum Engineering
Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 365. Special Research Topics in Petroleum Engineering
Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 369. Practical Energy Studies
Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
ENGR 15. Dynamics
The application of Newton’s Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, and rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Prerequisites: MATH 23 or 43, PHYSICS 41. GER:DB-EngAppSci
3 units, Aut (Mittag), Spr (Lew, A)

ENGR 20. Introduction to Chemical Engineering
(Same as CHEMENG 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngAppSci
3 units, Spr (Hwang, L)

ENGR 25. Biotechnology
(Same as CHEMENG 25) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. GER:DB-EngAppSci
3 units, Spr (Wang, C)

ENGR 30. Engineering Thermodynamics
Concepts of energy and entropy from elementary considerations of the microscopic nature of matter. Use of basic thermodynamic concepts in the solution of engineering problems. Methods and problems in socially responsible economic generation and utilization of energy in central power stations, solar systems, gas turbine engines, refrigeration devices, and automobile engines. Prerequisites: MATH 19, 20, 21, or 41, 42, and PHYSICS 45 (formerly 51) or equivalent high school physics. GER:DB-EngAppSci
3 units, Aut (Zheng, X), Win (Pitzch, H)

ENGR 31. Chemical Principles with Application to NanoScale Science and Technology
Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: high school or college chemistry background and more challenging projects. GER:DB-EngAppSci
4 units, Aut (McIntyre, P)

ENGR 40. Introductory Electronics
Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistors, capacitors, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Enrollment limited to 200. Lab. Prerequisite: PHYSICS 43. GER:DB-EngAppSci
5 units, Aut (Wong, S), Spr (Howe, R)

ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis
The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials. GER:DB-EngAppSci
4 units, Win (Melosh, N), Spr (Sinclair, R)

ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis
Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite. GER:DB-EngAppSci
4 units, Aut (Heilshorn, S)

ENGR 60. Engineering Economy
Fundamentals of economic analysis. Interest rates, present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Decisions under uncertainty and utility theory. Prerequisite: MATH 41 or equivalent. Recommended: sophomore or higher class standing; knowledge of elementary probability. GER:DB-EngAppSci
3 units, Aut (Chiu, S), Win (Weber, T)

ENGR 62. Introduction to Optimization
(Same as MS&E 111) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngAppSci
4 units, Spr (Van Roy, B)

ENGR 70A. Programming Methodology
(Same as CS 106A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented programming, fundamental data structures (such as stacks, queues), and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngAppSci
3-5 units, Aut (Sahami, M), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

ENGR 70B. Programming Abstractions
(Same as CS 106B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. GER:DB-EngAppSci
3-5 units, Aut (Roberts, E), Win (Cain, G), Spr (Cain, G), Sum (Staff)

ENGR 80. Introduction to Bioengineering
(Same as BIOE 80) Overview of biological engineering focused on engineering analysis and design of biological processes. Topics include overall material and energy balances, rates of biochemical reactions and processes, genetic programming of biological systems, links between information and function, and technologies to probe and manipulate biological systems. Applications of these concepts to areas of current technological importance, including biotechnology, biosynthesis, molecular/cellular therapeutics, and personalized medicine and gene therapy. GER:DB-EngAppSci
3 units, Spr (Scott, M; Smolka, C)

ENGR 100. Teaching Public Speaking
The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor. (Lougee, Staff)
5 units, Aut (Eisele, M), Win (Eisele, M), Spr (Eisele, M)
ENGR 102E. Technical/Professional Writing for Electrical Engineers
Required of Electrical Engineering majors. The process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Corequisite for WIM: EE 108A.
1 unit, Aut (Sullivan, E), Win (Sullivan, E)

ENGR 102M. Technical/Professional Writing for Mechanical Engineers
Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Corequisite for WIM: ME 203.
1 unit, Aut (McDevitt, M), Win (McDevitt, M)

ENGR 103. Public Speaking
Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.
3 units, Aut (Eisele, M), Win (Eisele, M), Spr (Eisele, M)

ENGR 105. Feedback Control Design
Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent. GER:DB-EngrAppSci
3 units, Win (Gerdes, C), Sum (Staff)

ENGR 110. Perspectives in Assistive Technology
(Same as ENGR 210) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and device users. 1 unit for seminar attendance only. 3 units for students who prepare a background and preliminary design report for an assistive technology project that can be further designed and fabricated by team members in ME 113 or CS 194 or as independent study in Spring Quarter. See http://www.stanford.edu/class/engr110.
1-3 units, Win (Jaffe, D; Nelson, D)

ENGR 115. Design the Tech Challenge
(Same as ENGR 215) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at techchallenge.thetech.org. May be repeated for credit.
2 units, Win (Staff)

ENGR 120. Fundamentals of Petroleum Engineering
3 units, Aut (Horne, R; Wilcox, J)

ENGR 130. Science, Technology, and Contemporary Society
(Same as STS 101, STS 201) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as socio-technical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice, social shaping and management of contemporary science and technology. GER:DB-SocSci
4-5 units, Aut (McGinn, R)

ENGR 131. Ethical Issues in Engineering
(Same as STS 115) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum
4 units, alternate years, not given this year

ENGR 140A. Leadership of Technology Ventures
First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MISE 140, ECON 90, or ENGR 60).
3-4 units, Spr (Byers, T)

ENGR 140B. Leadership of Technology Ventures
Open to Mayfield Fellows only; taken during the summer internship at a technology firm. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.
2 units, Aut (Byers, T)

ENGR 140C. Leadership of Technology Ventures
Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.
2 units, Aut (Byers, T)

ENGR 145. Technology Entrepreneurship
For juniors, seniors, and coterminal students of all majors who seek to understand the formation and growth of a technology-based enterprise. The entrepreneurial process, and the role of the individual. Case studies; projects. Attendance in first class required. GER:DB-SocSci
4 units, Aut (Byers, T), Win (Blank, S), Sum (Kosnik, T)

ENGR 150. Social Innovation and Entrepreneurship
(Same as ENGR 250) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sic.stanford.edu.
1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

ENGR 154. Vector Calculus for Engineers
(Same as CME 100) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green’s, divergence, and Stokes’ theorems. Examples and applications drawn from various engineering fields. Prerequisites: Math 41 and 42, or 10 units AP credit. GER:DB-Math
4 units, Aut (Khayms, V)

ENGR 155A. Ordinary Differential Equations for Engineers
(Same as CME 102) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
5 units, Win (Darve, E)

ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers
(Same as CME 104) Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, underdetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with
courses of instruction

5 units, Spr (Khayms, V)

ENGR 155C. Introduction to Probability and Statistics for Engineers

(Same as CME 106) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. GER:DB-Math

3-4 units, Win (Khayms, V), Spr (Khayms, V)

ENGR 159Q. Japanese Companies and Japanese Society

(S,Sem) (Same as MATSCI 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SoSci

3 units, Spr (Sinclair, R)

ENGR 192. Engineering Public Service Project

Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. http://soe.stanford.edu/publicservice. May be repeated for credit. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Spr (Staff), Sum (Sheppard, S)

ENGR 199. Special Studies in Engineering

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGR 199W. Writing of Original Research for Engineers

Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

Graduate Courses in Engineering

ENGR 202S. Writing: Special Projects

Writing tutorial for students working on non-course related materials, including theses, journal articles, and conference papers. Weekly individual meetings. May be repeated for credit.

1-3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard)

ENGR 202W. Technical Writing

How to write clear, concise, and well-ordered technical prose. Drafting strategies and principles of editing for structure and style. Applications to a variety of genres in engineering and science.

3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard, C)

ENGR 205. Introduction to Control Design Techniques

Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

3 units, Aut (Rock, S)

ENGR 206. Control System Design

Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order, linearization by differential action and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.

3-4 units, not given this year

ENGR 207A. Linear Control Systems I

Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.

3 units, not given this year

ENGR 207B. Linear Control Systems II

Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: 207A or EE 263.

3 units, Win (Lall, S)

ENGR 207C. Linear Control Systems III

Continuation of 207B. Introduction to stochastic control. Markov decision processes and stochastic dynamic programming. Separation of control and estimator design. Stochastic optimal control. Prerequisite: 207B.

3 units, not given this year

ENGR 209A. Analysis and Control of Nonlinear Systems

3 units, Win (Rock, S)

ENGR 210. Perspectives in Assistive Technology

(Same as ENGR 110) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and device users. 1 unit for seminar attendance only. 3 units for students who prepare a background and preliminary design report for an assistive technology project that can be further designed and fabricated by team members in ME 113 or CS 194 or as independent study in Spring Quarter. See http://www.stanford.edu/class/engr110.

1-3 units, Win (Jaffe, D; Nelson, D)

ENGR 210A. Robust Control

Analysis and design techniques for multivariable feedback systems. Stability and robustness of feedback loops, passivity, and the small-gain theorem. Prerequisite: 207A or EE 263.

3 units, not given this year

ENGR 210B. Advanced Topics in Computation for Control

Recent developments in computational techniques for feedback control systems. The use of convex optimization to solve problems in control. Prerequisites: Background in convex optimization, such as EE 364, and background in control, such as ENGR 207B.

3 units, not given this year

ENGR 215. Design the Tech Challenge

(Same as ENGR 115) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at http://techchallenge.thetech.org. May be repeated for credit.

2 units, Win (Staff)

ENGR 231. Transformative Design

(Same as ANTHRO 332) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains.

3-5 units, Win (Jain, S)

ENGR 240. Introduction to Micro and Nano Electromechanical Systems (MNEMS)

For first-year graduate students and seniors. The role of miniaturization technologies in materials, mechanical, biomedical engineer-
ENGR 250. Social Innovation and Entrepreneurship  
(Same as ENGR 150) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sie.stanford.edu.  
1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman)  

ENGR 251. Work Seminar  
Students participate in the Creating Research Examples Across the Teaching Enterprise (CREATE) writing program. Goal is for students to produce, through a peer reviewed process, 1,000 word statements describing their research in ways that are understandable and compelling to undergraduates and other novices in the field. Unit credit when the final approved statements appear on the CREATE web site.  
1 unit, not given this year  

ENGR 280. From Play to Innovation  
Project-based and team-centered. Enhancing the innovation process with playfulness. The human state of play and its principal attributes and importance to creative thinking. Play behavior, and its development and biological basis. Students apply those principles through design thinking to promote innovation in the corporate world with real-world partners on design projects with widespread application.  
2-4 units, Spr (Boyle, B; Brown, S; Thompson, S)  

ENGR 281. Designing Media that Matters  
Design practicum; project-based. The shift from a consumer culture to a creative society as old media institutions are collapsing while participatory media frameworks are emerging. Opportunity and responsibility for media designers to make this change positive. Frameworks of the new media landscape; applications to design media experiences that have a positive social impact. Topics include: roots of social media, game design, communication design, and digital storytelling.  
3 units, Spr (Doorley, S; Baggegroer, D)  

ENGR 290. Graduate Environment of Support  
For course assistants (CAs) and tutors in the School of Engineering, tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.  
1 unit, Aut (Oxgood, B; Lozano, N)  

ENGR 298. Seminar in Fluid Mechanics  
Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.  
1 unit, Aut (Moin, P), Win (Fringier, O), Spr (Shaqfeh, E)  

ENGR 299. Special Studies in Engineering  
Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)  

ENGR 310B. Project-Based Engineering Design, Innovation, and Development  
(Same as ME 310B) Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.  
4 units, Win (Leifer, L)  

ENGR 311A. Women’s Perspectives: Where the Sidewalk Ends  
Master’s and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.  
1 unit, Win (Sheppard, S)  

ENGR 311B. Designing the Professional: Inventing Your Life Continuation of ENGR 311A.  
1 unit, Spr (Sheppard, S; Evans, D)  

ENGR 312. Science and Engineering Course Design  
(Same as CTL 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.  
2-3 units, Win (Wright-Dunbar, R; Sheppard, S)  

ENGR 341. Micro/Nano Systems Design and Fabrication Laboratory  
Theory and fundamentals. Hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.  
3-5 units, Spr (Pratt, B)  

ENGR 342. MEMS Laboratory II  
Emphasis on tools and method strategies for designing and fabricating N/MEMS-based solutions. Student interdisciplinary teams collaborate to invent, develop, and integrate N/MEMS solutions. Design alternatives fabricated and tested with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.  
3-4 units, Aut (Solgaard, O)  

ENGLISH (ENGLISH)  

UNDERGRADUATE COURSES IN ENGLISH  

ENGLISH 1D. Writing and Rhetoric  
Development of critical reading, writing, and research skills applicable to any area of study. Emphases include close reading, analysis of varied texts, development of strong theses, revision strategies, and introduction to research-based argument. Small classes facilitate interaction between students and instructors. Each section has a thematic emphasis developed by the instructor; students choose sections based on individual interests.  
3 units, Sum (Brawn, S)  

(Same as ENGLISH 109) (English majors and others taking 5 units, register for 109.) A survey of English literature from Beowulf through Paradise Lost. Readings from Chaucer, the Gawain-poet, Margery Kempe, Langland, Shakespeare, Spenser, Donne, and Milton. GER:DB-Hum  
3-5 units, Win (Karnes, M)  

ENGLISH 20. Masterpieces of English Literature II: From the Enlightenment to the Modern Period  
(Same as ENGLISH 120) (English majors and others taking 5 units, register for 120.) British literature from the 18th to the 20th centuries. Topics include the rise of the novel, Romanticism, realism, naturalism, genre, modernism and narration. Authors include Austen, M. Shelley, Dickens and Woolf. GER:DB-Hum  
3-5 units, Win (Jarvis, C)  

ENGLISH 21. Masterpieces of American Literature  
(Same as ENGLISH 121) (English majors and others taking 5 units, register for 121.) An exploration of the diverse political, racial, cultural, and sexual questions that inform these outstanding works of American literature, ranging from the early Republic to the late-twentieth century. GER:DB-Hum  
3-5 units, Win (Jones, G; Richardson, J)
ENGLISH 43. Introduction to African American Literature (Same as ENGLISH 143) (English majors and others taking 5 units, register for 143.) The slave narrative and representative genres (poetry, short stories, essays, novels). Works by Douglass, Jacobs, Chesnutt, Du Bois, Dunbar, Toomer, Hurston, Wright, Baldwin, and Morrison. GER:DB-Hum, EC-AmerCul
3-5 units, Aut (Rampersad, A)

ENGLISH 43C. Introduction to Asian American Literature (Same as ENGLISH 143C) (English majors and others taking 5 units, register for 143C.) Asian American literature as an interdisciplinary field, combining history, politics, and literature to articulate changing group and individual identity. Themes include aesthetics, colonialism, immigration, transnationalism, globalization, gender, and sexuality. GER:DB-Hum, EC-AmerCul
3-5 units, Win (Sohn, S)

ENGLISH 45. Another Way to Be: Writings by Women of Color (Same as ENGLISH 145) (English majors and others taking 5 units, register for 145.) Themes include family relations, identity formation, racism and colorism, gender and sexuality, spirituality, and globalization. Rhetorical and aesthetic strategies and the associated development of a method of cultural analysis. Authors may include the following: Gloria Anzaldúa, Cherrie Moraga, Toni Cade Bambara, Leslie Marmon Silko, Maxine Hong Kingston, Toni Morrison, Maria Viramontes, Sandra Cisneros, among others. GER:DB-Hum, EC-Gender
3-5 units, Spr (Moya, P)

ENGLISH 47. Masterpieces of Contemporary Literature (Same as ENGLISH 147) Focus on novels spanning the 19th/20th centuries in order to interrogate the meaning of contemporary. How do writers think about the literary past in their works? How and why do contemporary texts echo, rewrite, reinvent, or renounce their forebears? Authors include novels that speak to one another across time, place, and cultural difference by grouping older and newer works by Charlotte Bronte, jean Rhys, Mary Shelley, Margaret Atwood, Virginia Woolf, Ian McEwan, and Michael Cunningham. Sources include clips from film adaptations. GER:DB-Hum
3-5 units, Aut (Staveley, A)

ENGLISH 53N. Aesthetic Taste and Gastronomy (F,Sem) Stanford Introductory Seminar. Preference to freshmen. A sampling of aesthetics and gastronomy as defined by 18th-century British essayists and their heirs from England and France. Focus is on the development of middle class taste, figurative as well as food-oriented, and manners, snobbery, and sensibility. GER:DB-Hum
3 units, Spr (Gigante, D)

ENGLISH 60. Poetry and Poetics (Same as ENGLISH 160) (English majors and others taking 5 units, register for 160.) Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse. GER:DB-Hum
3-5 units, Aut (Gigante, D), Win (Jenkins, N), Spr (Boland, E)

ENGLISH 61N. British Romanticism and Poetic Form (F,Sem) Stanford Introductory Seminar. The major romantics emphasizing their innovations in poetic forms including sonnet, elegy, ode, hymn, and dramatic lyric. GER:DB-Hum
3 units, Aut (Rovee, C)

ENGLISH 62N. Eros in Modern American Poetry (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson’s poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum
3 units, Aut (Fields, K)

ENGLISH 64N. Growing Up in America (F,Sem) Stanford Introductory Seminar. Preference to freshmen. How do race, class, gender, sexuality, and geography affect a person’s experience of belonging to this country? The diversity of childhood and young adult experiences of people who have grown up in America. Fictional and autobiographical narratives and their rhetorical and aesthetic strategies. GER:DB-Hum
3 units, Aut (Moya, P)

ENGLISH 65N. Contemporary Women Fiction Writers (F,Sem) Stanford Introductory Seminar. Preference to freshmen. Novels and story collections by women writers whose work explores: domestic and global politics; love, sexuality, and orientation; and spirituality and its meanings. Readings include Danticat, Eisenberg, Munro, Morrison, O’Brien, and Erdrich. GER:DB-Hum
3 units, Aut (Tallent, E)

ENGLISH 75N. Poetry and Environmental Awareness (F,Sem) Stanford Introductory Seminar. Can Poetry Save the Earth? It can help, because the nature of poetry interacts vitally with the poetry of nature. Poems display a human presence, and human presence, for better or worse, stands at the core of our environmental, ecologic predicament. Native American song-prayers, the Bible, the Wordsworths, Coleridge, Keats, Clare, Whitman, Dickinson, Hardy, Hopkins, Yeats, Frost, Williams, D.H. Lawrence, Jefferies, Roethke, Lowell, Millay, Swenson, Bishop, Leverto, and later poets on through Hughes, Walcott, Snyder, and others.
3 units, Win (Felstiner, J)

ENGLISH 80Q. All the World’s a Stage: Dramatic Realism on the Threshold of the Modern World (S,Sem) Stanford Introductory Seminar. The relationship between heightened dramatic realism and historical, scientific, and cultural changes occurring in the early modern world, a defining moment in explorations of uncharted realms of the self, the world, the universe, and artistic form. Readings include Shakespeare’s Othello, John Donne’s dramatic poetry, and Marlowe’s Doctor Faustus. How these, and other texts, point their readers and viewers toward the modern world through experiments in the art of perspective.
4-5 units, Win (Brooks, J)

ENGLISH 81. Philosophy and Literature (Same as CLASSGEN 81, COMPLIT 181, FRENCH 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

ENGLISH 84Q. Charles Dickens' David Copperfield: A Victorian Reading (S,Sem) Stanford Introductory Seminar. Preference to sophomores. Dickens’ favorite child, David Copperfield, has been a classic of the Victorian novel since its serial publication began in 1849. The comic masterpiece of the most popular novelist of his time, the sentimental favorite of Queen Victoria and of the author himself, this fictionalized autobiography tells the story of a difficult coming of age in the threatening world of early industrialized England. Work to be read in serial numbers, replicating as closely as possible the experience of Victorian readers. Primary publications and secondary sources on political, cultural, and historical surroundings.
4 units, Win (Paulson, L)

ENGLISH 86N. American Hauntings (F,Sem) Stanford Introductory Seminar. Exploration of the cultural, psychological, social, and political dynamics of haunting in American literature, ranging from the early national period to the late twentieth century, looking at ghost stories as well as other instances of supernatural, emotional, or mental intervention. Authors include Charles Brockden Brown, Washington Irving, Edgar Allan Poe, Nathaniel Hawthorne, Charlotte Perkins Gilman, Charles Chesnutt, Henry James, Edith Wharton, Toni Morrison, Stephen King.
3 units, Win (Richardson, J)
ENGLISH 87N. The Graphic Novel: Word, Image, Sound, Silence (S, Sem) Stanford Introductory Seminar. Preference to sophomores. The evolution of funnies to comics and graphic novels. How definitions and representations of this genre have changed over the last century. The controversy over the status of the graphic novel. GER:DB-Hum 4-5 units, Win (Lunsford, A)

ENGLISH 90. Fiction Writing The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1. 5 units, Aut (Antopol-Johnson, M), Win (Tanaka, S), Spr (O’Keeffe, J), Sum (Tanaka, S)

ENGLISH 91. Creative Nonfiction (Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content. 5 units, Aut (Frisch, S), Win (Frisch, S), Spr (Frisch, S)

ENGLISH 92. Reading and Writing Poetry Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit. 5 units, Aut (Snider, B), Win (McGriff, M), Spr (McGriff, M)

ENGLISH 94. Introduction to Creative Writing: Form and Structure For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92. 5 units, Win (Ekiss, K), Spr (Ekiss, K)

ENGLISH 102. Chaucer An introduction to Chaucer’s writings, including The Canterbury Tales, The Book of the Duchess, and The House of Fame. Readings in Middle English. GER:DB-Hum 5 units, Aut (Karnes, M)

ENGLISH 104C. Arthurian Literature and Medieval Romance An introduction to Arthurian literature and the larger genre of medieval romance. Readings include the Lais of Marie de France, the romances of Chrétien de Troyes, Yvain, and Enide, Sir Orfeo, Chaucer’s Wife of Bath’s Tale, Sir Gawain and the Green Knight, and Malory’s Morte d’Arthur. GER:DB-Hum 5 units, Win (Karnes, M)

ENGLISH 105. The Renaissance English literature from Sir Thomas More’s Utopia to Milton’s Paradise Lost. The good state, the good man, and the good poem. Major literary genres of the period: lyric, romance, comedy, tragedy, and epic. GER:DB-Hum 5 units, Spr (Orgel, S)

ENGLISH 107. High Life and Low Life: Polite and Popular Forms of Eighteenth-Century Literature The relationship between elite and popular forms in the 18th-century literary imagination. How new popular or “low” genres—the criminal biography, travel literature, political tracts, newspapers, cartoons, broadsheets, conduct books and the like—shaped so-called mainstream Augustan literature. Ideological implications of the contemporary imaginative split between “high life” and “low life.” Focus is on describing the significance of the high-low dialectic in classic 18th-century literary works, and the underlying system of social, philosophical and ideological relations that gave rise to it by examining literary representations of various subcultures, and exemplary types like the Criminal, the Hack, the Whore, and the Madman. GER:DB-Hum 5 units, Win (Castle, T)

ENGLISH 109. Masterpieces of English Literature I: Chaucer, Shakespeare, Milton, and their Contemporaries (Same as ENGLISH 9) (English majors and others taking 5 units, register for 109.) A survey of English literature from Beowulf through Paradise Lost. Readings from Chaucer, the Gawain-poet, Margery Kempe, Langland, Shakespeare, Spenser, Donne, and Milton. GER:DB-Hum 3-5 units, Win (Karnes, M)

ENGLISH 115A. Shakespeare and Modern Critical Developments Approaches include gender studies and feminism, race studies, Shakespeare’s geographies in relation to the field of cultural geography, and the importance of religion in the period. GER:DB-Hum 5 units, Spr (Parker, P)

ENGLISH 116A. The Poetry of John Milton A study of Milton’s poems, from The Death of a Fair Infant and Nativity Ode to Paradise Regained and Samson Agonistes. Focus not only on the texts but also on the various contexts that are relevant to Milton’s writings: earlier examples of the genre, earlier treatments of the same theme, the political and religious situation at the time of the works’ composition, and Milton’s own career. GER:DB-Hum 5 units, Aut (Evans, M)

ENGLISH 120. Masterpieces of English Literature II: From the Enlightenment to the Modern Period (Same as ENGLISH 20) (English majors and others taking 5 units, register for 120.) British literature from the 18th to the 20th centuries. Topics include the rise of the novel, Romanticism, realism, naturalism, genre, modernism and narration. Authors include Austen, M. Shelley, Dickens and Woolf. GER:DB-Hum 3-5 units, Win (Jarvis, C)

ENGLISH 121. Masterpieces of American Literature (Same as ENGLISH 21) (English majors and others taking 5 units, register for 121.) An exploration of the diverse political, racial, cultural, and sexual questions that inform these outstanding works of American literature, ranging from the early Republic to the late-twentieth century. GER:DB-Hum 3-5 units, Win (Jones, G; Richardson, J)

ENGLISH 123. American Literature and Culture to 1855 (Same as AMSTUD 150) Sources include histories, poetry, autobiography, captivity and slave narratives, drama, and fiction. Authors include Mather, Bradstreet, Rowlandson, Franklin, Brodhead, Brown, Emerson, Douglass, Hawthorne, and Melville. GER:DB-Hum, EC-AmerCul 5 units, Spr (Richardson, J)

ENGLISH 123B. The Literature of Abolition Focus on writings for and against the abolition of American slavery in the colonial through antebellum periods. How race was construed by white and African-diasporic writers across literary and non-literary genres, particularly in relation to the question of authentic selfhood, one’s own and the racial other’s. Comparative assessment of two major abolitionist writers, Frederick Douglass and Harriet Beecher Stowe. Other writers include Woolman, Wheatley, Equiano, Jefferson, Craft, Hildreth, Child, Walker, Harper, Grimke, C. Beecher, Bouicicaut, Pike, Thoreau, Sojourner Truth, Byrd, Hentz. 5 units, Spr (Ruttenburg, N)

ENGLISH 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years After His Death (Same as AMSTUD 123G) The vitality and versatility of a writer who has been called America’s Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain’s legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook. GER:DB-Hum 1-5 units, Spr (Fishkin, S; Obenzinger, H)

ENGLISH 125A. The Gothic Novel (Same as COMPLIT 125A) The Gothic novel and its relatives from its invention by Walpole in The Castle of Otranto of 1764. Readings include: Northanger Abbey, The Italian, The Monk, Franklin, Jane Eyre, Great Expectations, and Dracula. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types? GER:DB-Hum 5 units, Spr (Bender, J)

ENGLISH 126D. Victorian Sex Was there a preoccupation with or repression of sexuality in Victorian England? Depictions of sex in Victorian literary and cultural
texts, including poems, novels, essays and diaries. How did the Victorians imagine sex beyond marriage, homosexuality, and fetishes? What is the relationship between the sexual sphere and the public sphere? Authors include Collins, Dickens, Cullwick, Munby, Besant, Walter, Swinburne, and Caseament, augmented by theoretical and critical readings. GER:DB-Hum
5 units, Aut (Jarvis, C)

ENGLISH 134. The Marriage Plot
The centrality of the marriage plot in the development of the British novel beginning in the 18th century with Samuel Richardson's Pamela and ending with Woolf’s modernist novel Mrs. Dalloway. The relationship between novelistic plotting and the development of female characters into marriageable women. What is the relationship between the novel and feminine subjectivity? What aspects of marriage make it work as a plotting device? What kinds of marriages do marriage plots allow? Is the development of women’s political agency related to their prominence in the novel form? GER:DB-Hum, WIM
5 units, Aut (Jarvis, C)

ENGLISH 135C. The Fiction of Dickens and Carroll
Close reading of works by Charles Dickens and Lewis Carroll; their continuing significance, and responses to their work. Emphasis is on their black humor and comedy, social criticism, representation of children, and the visual imagery. Texts are The Old Curiosity Shop, David Copperfield, Great Expectations, Little Dorrit by Dickens, and Alice’s Adventures in Wonderland. Through The Looking-Glass by Carroll. GER:DB-Hum
5 units, Aut (Rovee, C)

ENGLISH 136C. Wordsworth
Focus is on the poet’s great decade of 1797-1807 and questions about lyric and society, poetic inspiration and historical upheaval, poetic manifestoes and revolutions, mass society, and the valorization of the contemplative.
5 units, Spr (Rovee, C)

ENGLISH 139. Antebellum American Literature
An examination of the rich tradition of American writing in the decades leading up to the Civil War. Short stories, novels, poems, autobiographies, and philosophical essays in the context of major social and political crises during an era of intense debates over slavery, national identity, sexual equality, democracy, and industrial growth. Authors include Poe, Hawthorne, Melville, Whitman, Douglass, Dickinson, Emerson, Thoreau, and Stowe.
5 units, Win (Jones, G)

ENGLISH 139B. American Women Writers, 1850-1920
How female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Sue Sin Far, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman. GER:DB-Hum
5 units, Spr (Rovee, C)

ENGLISH 142G. 20th-Century American Fiction
Major works of fiction by American writers, focusing on race, place and identity, which may include Patricia Powell, Charles Johnson, Mary Yukari Waters, Linda Hogan, and Alejandro Morales. The exploration of the genre relation to discourses of mobility, place and racial identity. GER:DB-Hum
5 units, Aut (Sohn, S)

ENGLISH 143. Introduction to African American Literature
(Same as ENGLISH 43) (English majors and others taking 5 units, register for 143.) The slave narrative and representative genres (poetry, short stories, essays, novels). Works by Douglass, Jacobs, Chesnutt, Du Bois, Dunbar, Toomer, Hurston, Wright, Baldwin, and Morrison. GER:DB-Hum, EC-AmerCul
3-5 units, Aut (Rampersad, A)

ENGLISH 143C. Introduction to Asian American Literature
(Same as ENGLISH 43C) (English majors and others taking 5 units, register for 143C.) Asian American literature as an interdisciplinary field, combining history, politics, and literature to articulate changing group and individual identity. Themes include aesthetics, colonialism, immigration, transnationalism, globalization, gender, and sexuality. GER:DB-Hum, EC-AmerCul
3-5 units, Win (Sohn, S)

ENGLISH 144. British Modernism
The history and theory of modernism, with particular focus on literature written in Britain from 1890 to 1950. Major authors include James, Conrad, Yeats, Joyce, Woolf, Eliot, Pound, and Beckett. Why was it necessary to “make it new”? What were the ambitions, strategies, and limitations of modernism as a project? GER:DB-Hum
5 units, Spr (Sullivan, H)

ENGLISH 144E. The Novels of Virginia Woolf
Focus on six Woolf major novels: The Voyage Out, Jacob’s Room, Mrs. Dalloway, To the Lighthouse, Orlando, and The Waves. Topics include Woolf’s family history, the evolution of her pioneering literary style, her views on sexuality, women, literature, and society, and her complex personal and intellectual relationships with other writers and artists. GER:DB-Hum
5 units, Spr (Castle, T)

ENGLISH 145. Another Way to Be: Writings by Women of Color
(Same as ENGLISH 45) (English majors and others taking 5 units, register for 145.) Themes include family relations, identity formation, racism and colorism, gender and sexuality, spirituality, and globalization. Rhetorical and aesthetic strategies and the associated development of a method of cultural analysis. Authors may include the following: Gloria Anzaldua, Cherrie Moraga, Toni Cade Bambara, Leslie Marmon Silko, Maxine Hong Kingston, Toni Morrison, Helena Maria Viramontes, Sandra Cisneros, among others. GER:DB-Hum, EC-Gender
3-5 units, Spr (Moya, P)

ENGLISH 146. Development of the Short Story: Continuity and Innovation
The dual concepts of continuity and innovation. The illumination of love, death, desire, violence, and empathy. Texts include Maupassant, Babel, Chopin, D.H. Lawrence, Woolf, and Flannery O'Connor. Required for Creative Writing emphasis. GER:DB-Hum
5 units, Spr (Tallent, E)

ENGLISH 146C. Hemingway, Hurston, Faulkner, Fitzgerald
While Hemingway and Fitzgerald were flirting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America’s coming-of-age as a literary nation, with their multifarious experiments in regionalism, the national and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished. GER:DB-Hum, EC-AmerCul
5 units, Aut (Jones, G)

ENGLISH 147. Masterpieces of Contemporary Literature
(Same as ENGLISH 47) Focus on novels spanning the 19th-21st centuries in order to interrogate the meaning of contemporary. How do writers think about the literary past in their works? How and why do contemporary texts echo, rewrite, reinvent, or renounce their forebears? Readings include novels that speak to one another across time, place, and cultural difference by grouping older and newer works by Charlotte Bronte, Jean Rhys, Mary Shelley, Margaret Atwood, Virginia Woolf, Ian McEwan, and Michael Cunningham. Sources include clips from film adaptations. GER:DB-Hum
3-5 units, Aut (Staveley, A)

ENGLISH 150. Modern Poetry and the Visual Arts
The relationship between photography, painting, and sculpture, and poetry in the 20th century. GER:DB-Hum
5 units, Win (Di Pierro, S)

ENGLISH 150F. Yeats
A single author study, looking at the intersection between a national poet and the powerful currents of international modernism. GER:DB-Hum
5 units, Spr (Boland, E)
ENGLISH 151. American Imaginations
An in-depth study of modern American poets, Robert Frost, William Carlos Williams, Marianne Moore, Lorine Niedecker, Robert Hayden, James Schuyler, and how their individual achievements contributed to the shaping and progress of “an American project,” that is, the invention of a modern nationalistic poetic sensibility. GER:DB-Hum
5 units, Win (Di Piero, S)

ENGLISH 151A. T. S. Eliot
An intensive introduction to the full range of Eliot’s work in poetry, prose, and drama. The formal properties of Eliot’s writing—his metrics, syntax, use of allusion, and wit—alongside its recurring preoccupation with history, landscape, death, and redemption. How and why did he become the most influential poet-critic of the twentieth century?
5 units, Spr (Sullivan, H)

ENGLISH 152. Introduction to Caribbean Literature
Survey of some of the major works of literature, including fiction and poetry, published by writers from the Caribbean over the last hundred years. Although emphasis is on writing in English, selected French and Spanish texts will be read in translation. Writers to be studied include Derek Walcott, V.S. Naipaul, Jamaica Kincaid, Alejo Carpentier, Aime Cesaire, Ralph de Boissiere, Edward Kamau Brathwaite, Erma Brodber, Wilson Harris, and Merle Hodge.
5 units, Aut (Rampersad, A)

ENGLISH 152D. DaBois and American Culture
(Same as AFRICAAM 152) His life and career. Focus on first half of his life from his Harvard doctoral dissertation to the end of the Harlem Renaissance in which he played a crucial role. Sources include his books on history and sociology, scholarly essays, novels, and journals that he edited. GER:DB-Hum, EC-AmerCul
5 units, Spr (Elam, M)

ENGLISH 153C. British Literature of the 1910s
The diverse literature of a decade interrupted by war, including fiction by E.M. Forster, James Joyce, Virginia Woolf, and Katherine Mansfield, and poetry by Rupert Brooke, Wilfred Owen, W.B. Yeats, and T.S. Eliot. Major themes will include the threat of violence, both aesthetic and actual, imperialism, surrealism, experiments in autobiography, and the relationship between past and present time. GER:DB-Hum
5 units, Win (Sullivan, H)

An experiment in examining the global phenomenon of the late 20th-century novel in English through the most naive possible lens: the Nobel Prize in Literature. Works by the five English-language novelists to win the Nobel since the Cold War: Nadine Gordimer, Toni Morrison, V.S. Naipaul, J.M. Coetzee, and Doris Lessing. Topics include world literature, postcolonial writing and race, realism and novelistic form, the relation to American and British canons, and the sociology and politics of the Nobel. GER:DB-Hum
5 units, Spr (Goldstone, A)

ENGLISH 153F. The Moment in Modernism
Examines modernist obsession with time (looking at texts by Borges, Benjamin, Ricoeur, Doane and Mulvey) and emergence of moments of epiphany and revelation as pressing category in modernist aesthetics, philosophy, and race, realism and novelistic form, the relation to American and British canons, and the sociology and politics of the Nobel. GER:DB-Hum
5 units, Win (Goldstone, A)

ENGLISH 154. Expats and Cosmopolitan Fiction, 1900-1940
If there is an international republic of letters, writers who leave their home countries are among the prime candidates for citizenship. What is the relationship between writers’ cosmopolitan lifestyles and their writings? How does fiction address issues of political internationalism, rootlessness, nostalgia, touristic adventure? Study of the fiction of the golden era of expatriates and exiles, 1890-1940, with a special emphasis on historical contexts from the founding of Cosmopolitan magazine to the Great Depression. Readings include works by Henry James, James Joyce, Claude McKay, E.M. Forster, Elizabeth Bowen, Djuna Barnes, and Christopher Isherwood.
5 units, Aut (Goldstone, A)

ENGLISH 154A. The Modernist Novel
The innovations in artistic form and the representation of consciousness in the British modernist novel.Canonical modernists’ concerns with identity, sexuality, cultural tradition, gender, race, imperialism, the country/city divide, time and memory as each writer strove to reinvent the realist novel to express the modern moment. Authors include Conrad, Ford, Forster, Joyce, Lawrence, West and Woolf. GER:DB-Hum
5 units, Aut (Staveley, A)

ENGLISH 154F. Question and Quest, Riddle and Resolution in Modernism
Examines modernist difficulty in terms of secular modernist masterpiece’s attraction to mysticism and quest narratives. Texts chosen from among works by such modernist authors as Conrad, Joyce, Woolf, Eliot, Yeats, Kafka, Beckett and Borges will be read alongside those of philosophers who engage riddle and enigma (Wittgenstein, Benjamin, Adorno) and examples of more traditional quest narratives (Arthurian Legend, Paul, Augustine, Tolstoy).
5 units, Aut (Zamhagen-Yekple, K)

ENGLISH 160. Poetry and Poetics
(Same as ENGLISH 60) (English majors and others taking 5 units, register for 160.) Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through dictionary imagery, and technical elements of verse. GER:DB-Hum, WIM
5-3 units, Aut (Gigante, D), Win (Jenkins, N), Spr (Boland, E)

ENGLISH 163. Shakespeare
GER:DB-Hum
5 units, Aut (Riggs, D), Win (Orgel, S)

ENGLISH 170. Literary Criticism and Literary Texts
Historical study of literary critical theorizing from classical times to the present. Issues such as subjectivity, originality, gender, evaluation, and canonicity. GER:DB-Hum
5 units, Aut (Evans, M)

ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity
(Same as CSRE 196C, PSYCH 155, SOOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul
5 units, Spr (Moya, P; Markus, H)

ENGLISH 172E. The Literature of the Americas
(Same as COMPLIT 142) The intellectual and aesthetic problems of inter-American literature conceived as an entirety. Focus on continuities and crises relevant to N., Central, and S. American literatures. Issues such as the encounters between world views, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, 20th-century avant garde, and distinctive modern episodes such as the Harlem Renaissance, the Beats, magical realism, and Noigandres in comparative perspective. GER:DB-Hum, EC-AmerCul
5 units, Win (Greene, R; Saldivar, R)

ENGLISH 176. Science Fiction: Techno Dreams and Nightmares
Science fiction from Frankenstein to graphic novels and Japanese anime. How have modern information and biotechnologies changed our notion of the human? In what ways are bodies and minds transformed? How do transformations change our ideas about what it means to be an individual, a citizen, a man or woman? In what ways are boundaries between humans, machines and animals redrawn through technology? How do cultures and societies change when boundaries shift? How do technology, art, writing relate to each other. Novels, films, comic books by Shelley, Wells, Bloy Casares, Dick, Scott, Gibson, Sterling, Atwood, Oshii, Morrison and Quitely.
GER:DB-Hum
5 units, Win (Heise, U)

ENGLISH 178. Stanford Writers
A consideration of authors associated with Stanford’s Creative Writing Program, both poets and fiction writers including Wallace Stegner, Yvor Winters, Janet Lewis, Tiffie Olsen, J.V. Cunningham-
COURSES OF INSTRUCTION

ENGLISH 183F. Introduction to Critical Theory
An introduction to critical theory, beginning with some of the defining moments of its history in the 20th century, to current developments in the field in the context of the contemporary global skepticism of humanistic critique, both in its institutional capacity and within the larger public sphere. Texts by Louis Althusser, Michel Foucault, Helene Cixous, Michael Hardt and Antonio Negri, Edward Said, David Lodge and others. GER:DB-Hum 3 units, Spr (Majumdar, S)

ENGLISH 184B. Text and Context in Humanities: Oedipus and His Vicissitudes
(Same as HUMNTIES 100) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud’s Totem and Taboo (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georg Simmel, Norbert Elias, Karl Schorske, John Murray Cuddy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum 3 units, Win (Freidin, G; Staveley, A)

ENGLISH 184C. Texts in History: Medieval to Early Modern
(Same as HUMNTIES 162) The impact of change from the Middle Ages to the early modern world; how such historical pressures along with developments in mathematical perspective and science challenged earlier conceptions of space, artistic form, the self, and the universe. The textual development of the Oedipus complex, and the physical universe on the threshold of the modern era. Interdisciplinary methods of interpretation. Texts include: Aristotle, Dante, Chaucer, Canterbury Tales; Christine de Pizan, Letters of Columbus; Machiavelli, The Prince; Luther, Montaigne, Marlowe, Doctor Faustus; Wroth, Galileo, Donne, Shakespeare, Othello; and works of art and music. GER:DB-Hum 3 units, Spr (Brooks, H)

ENGLISH 184D. Texts in History: Enlightenment to the Modern
(Same as HUMNTIES 163) Priority to students in the Humanities honors program and English majors. The relationship between intellectual, political, and cultural history, and imaginative literature in the modern period. Rousseau, Kant, Austen, Mary Wollstonecraft, Marx, Dostoevsky, Nietzsche, Mill, Virginia Woolf, T.S. Eliot, Beckett. GER:DB-Hum 3 units, Win (Staveley, A)

ENGLISH 185. Sex, Sacrifice, and Civilization: Baroque Opera and Tragedy
(Same as HUMNTIES 185, MUSIC 190H) The revival of ancient tragedy in the Baroque opera house. The central mysteries of tragedy: knowledge of suffering, necessity of sacrifice, pleasure of pathos. How tragic drama and opera used poetry, dance, and music to sway the passions and prompt reflection. Greek myths of Medea, Iphigenia, Alcestis, Idomeneo. Plays by Euripides and Racine; operas by Mozart, Gluck, and Charpentier. GER:DB-Hum 4-5 units, Aut (Hoxby, B; Hadlock, H)

ENGLISH 187H. Lady Sings the Blues: Blues, Literature, and Black Feminism
Examination of a long tradition of feminist articulations in black women’s blues expressed in sound and literature over the course of the twentieth century. Familiarity with the recurrent tropes of black women’s blues and how these coalesce in a feminism based on the intersections of race, gender, class, and sexuality by bringing together black women writers, thinkers, and songstresses such as Gayl Jones, Bessie Smith, Zora Neale Hurston, Alice Walker, Nina Simone, and Billie Holiday. Supplemental readings from cultural theorists such as Angela Davis, Hazel Carby, Farah Jasmine Griffin, and others in order to build a critical framework for interpreting, historicizing, and theorizing black women’s blues. 3 units, Autom (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 187T. Funny Negro: Literature and Culture of the Black Comic Absurd
What Colson Whitehead has referred to as freaky postwar black literature and culture, or a body of black cultural texts that confront racism through the black comic absurd. African American humor that directly confronts the absurdity of racism, and especially racial stereotypes forged at the very origins of American popular culture, the blackface minstrel show. Artists such as Ralph Ellison, William Melvin Kelley, Dick Gregory, Suzan-Lori Parks, Ishmael Reed, Wendell Harris, Jr., Paul Beatty, Spike Lee, and others who tap into the formal and aesthetic sensibilities of black comic traditions and simultaneously confront the vexed history of black people as sources of humor, the funny negro, in literature, music, films, plays, autobiographies, and live performances. 5 units, Spr (Heard, D)

ENGLISH 190. Intermediate Fiction Writing
May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91. 5 units, Aut (Antopol-Johnson, M), Win (Horack, B), Spr (Hutchins, S)

ENGLISH 190F. Fiction Writing for Film
Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90. 3 units, Win (Tyree, J)

ENGLISH 190G. The Graphic Novel
Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor. 4-5 units, Win (Johnson, A; Kealey, T), Spr (Johnson, A; Kealey, T)

ENGLISH 190H. Reading for Writers
Taught by the Stein Visiting Fiction Writer. Prerequisite: 90. 3 units, Win (Powers, R)

ENGLISH 191. Intermediate Creative Nonfiction
Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90. 5 units, Win (Tyree, J), Spr (Frisch, S)

ENGLISH 192. Intermediate Poetry Writing
May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92. 5 units, Aut (McGriff, M), Win (McGriff, M), Spr (Hummel, M)

ENGLISH 192V. The Occasions of Poetry
Taught by the Mohr Visiting Poet. Prerequisite: 92. 5 units, Win (Ryan, K)

ENGLISH 194. Individual Research
See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research. 5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 196A. Honors Seminar: Critical Approaches to Literature
Required of students in the English honors program. Reading and writing advanced literary criticism. Critical writings and approaches. Goal is to support the development of students’ honors theses. 3 units, Aut (Woloch, A)

ENGLISH 196B. Honors Essay Workshop
Required of English honors students. 2 units, Aut (Oenbrenzer, H)

ENGLISH 197. Seniors Honors Essay
In two quarters. 1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 198. Individual Work
Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without
ENGLISH 198L. Individual Work: Levinthal Tutorial
Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.
5 units, Win (Staff)

ENGLISH 199. Senior Independent Essay
Open, with department approval, to seniors majoring in English who wish to work throughout the year on a 10,000 word critical or scholarly essay; see note under “Honors Program” above. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 233. Baroque and Neobaroque
(Same as COMPLIT 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.
5 units, not given this year

ENGLISH 253. Literary Studies and the Digital Library
Ways of reading, interpreting, and understanding literature at the macro scale as an aggregate system. Theoretical issues, landmark essays in the field; how digital libraries and literary corpora invite new types of literary research that challenge conventional approaches.
5 units, Aut (Jockers, M)

ENGLISH 265M. Musical Theatre
(Same as DRAMA 165M, DRAMA 365M) Major innovations in the musical from South Pacific to High School Musical. Concentration on American classics with forays into film adaptations and licensing, marketing, and cast recordings. Attention to issues of race and gender.
3-5 units, Win (Phelan, M)

ENGLISH 290. Advanced Fiction Writing
Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop.
5 units, Aut (MacDonald, D), Win (Tallent, E)

ENGLISH 292. Advanced Poetry Writing
Focus is on generation and discussion of student poems, and seeking published models for the work.
5 units, Spr (McGriff, M)

GRADUATE COURSES IN ENGLISH

ENGLISH 223E. Whitman and Dickinson and 20th Century Poets
Their poetry and other readings which may include Thoreau’s Walden, the philosopher Stanley Cavell’s book on Walden, and writers in the Whitman-Dickinson traditions such as Hart Crane and Ronald Johnson.
5 units, Spr (Fields, K)

ENGLISH 228. The Rise of the American Novel, 1790-1820
The early American novel, including the work of Rowson, W. H. Brown, Brackenridge, Burroughs, Crèvecoeur, Tyler, Tenney, Sansom, and C. B. Brown. In conjunction with current theories on the rise and generic specificity of the novel, what, if anything, distinguishes the emergence and development of the American novel considered historically, sociologically, and formally? Early American thought on the relationship of nationhood to artistic expression in order to analyze Americanness as a property of the novel and to evaluate the concept of a national novelistic tradition.
5 units, Win (Ruttenburg, N)

ENGLISH 230A. The Novel in Europe: The Age of Compro- mise, 1800-1848
The novel after the French revolution and the industrial take-off. Novelistic form and historical processes ‘nation-building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletarian...’ focusing on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors will include Austen, Scott, Shelley, Stendhal, Pushkin, Balzac, Bronte.
5 units, Spr (Moretti, F)

ENGLISH 230C. Entre Deux Guerres: The Novel in Europe between the Wars
Nine novels published between 1929 and 1939, an epoch self-consciously aware of itself as situated between two wars. The memory of WW I and the anticipation of WW II. Central concern, focused on a decade which manifested nationalist and internationalist energies, is the institution of national literatures. Novels by Hemingway, Nabokov, Woolf, Joseph Roth, Céline, Djuna Barnes, Beckett, Bowen, and Isherwood.
5 units, Spr (Jenkins, N)

ENGLISH 236. Victorian Literature and Photography
How issues raised by birth of photography and photography’s pre-history are manifested in Victorian literature. Readings in photographic theory include Benjamin, Barthes, Sontag. Novels, stories, and poems by Dickens, Tennyson, Carroll, Browning, Wilde.
5 units, Win (Rovee, C)

ENGLISH 241. Eighteenth-Century Women Writers
Focus is on novelists, but also poets, critics, and playwrights. Authors include relatively well-known writers such as Behn and Wollstonecraft, and lesser-known authors such as Sarah Scott, Elizabeth Inchbald, and Anna Seward. Recent feminist scholarship on eighteenth-century women’s writing, generic issues, and the question of a women’s literary tradition, the material conditions of female authorship in the period, and the history of the eighteenth-century literary marketplace.
5 units, Spr (Castle, T)

ENGLISH 260. Frederick Douglass
The essays, journalism, autobiographies, and fiction of Frederick Douglass (1818-1895). Starting from the representation of his initial state of non-being in the 1845 Narrative, examination of the ideas, convictions, and expressive conventions from which Douglass drew in constructing his image of public and private selfhood. How that self-representation evolved across the 19th century, with attention to the antebellum years. How to construe the relationship of the charismatic individual to the larger life of a nation he is assumed to represent.
5 units, Spr (Ruttenburg, N)

ENGLISH 261B. East Goes West: Transnational Asia/Pacific Spatial Geographies
East goes west as a metaphor to invoke the conceptions of fantasy and desire that play out in transnational scope. What attracts diasporic Asian/American subjects to the locations that they travel to, whether it be an identified homeland with which a character attaches a strong affinity, or to a new country where the promise of economic possibilities await?
5 units, Win (Sohn, S)

ENGLISH 261D. Globalization and Contemporary Fiction
(Same as HUMNTIES 194M) The globalization of the contemporary Anglophone novel. How the English language novel relates to recent models of archiving world literature. How novels from Nigeria, India, Guyana and Australia foreground the socio-political implications of colonialism and decolonization, the amorphous relationship of the public and private spheres, the contended fates of human rights and territorial sovereignty. Texts by Sinha, Kembu, Shangvi, Greenville, M. etti, Cásanova, Slaughter and others.
5 units, Aut (Majumdar, S)

ENGLISH 262B. Biography and Life Writing
Study of the psychological, moral and legal issues surrounding the representation of an individual’s life experience, achievement, and cultural situation. Insight into ways in which psychoanalysis, feminist theory and post-colonial studies affect understanding biographies and life writing. Study of key texts in the genre like Na- bokov’s Speak Memory, Cellini’s Autobiography, Nissim Rei-
COURSES OF INSTRUCTION

ENGLISH 279D. James Joyce and Ulysses
Close reading of Ulysses as one of the most significant literary works of modernism and 20th-century literary history. The nature and variety of its significance, and the meanings that Joyce’s epic of modernism generates.
5 units, Win (Shloss, C)

ENGLISH 280. Art, Religion, and the Quest for Faith: Four Great Modern Novels
Focused readings of masterpieces of the last two decades by four of the world’s most influential modern novelists. Emphasis is on the nature of the emerging global culture, the place of art, and the quest for faith in modern times. Texts are My Name is Red, Pamuk; The Satanic Verses, Rushdie; Disgrace, Coetzee; and 2666, Bolano.
5 units, Win (Polhemus, R)

ENGLISH 293. Literary Translation
Seminar and workshop. For undergraduates and graduate students. The art and practice of literary translation; its tradition, principles, and questions. Final project is a translation and commentary on work of the student’s choosing. Recommended: knowledge of a foreign language and experience in imaginative writing.
3-5 units, Win (Felsstiner, J)

ENGLISH 293A. The Tasks of the Translator: Theory and Practice
An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator’s tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project.
3-5 units, Win (Felstiner, J)

ENGLISH 303D. Thinking in Fiction
(Same as COMPLIT 303D) Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lonnox, Sterne, Adam Smith, Wollstonecraft, and Bentham.
5 units, not given this year

ENGLISH 304. The Great Age of the English Essay: Addison to DeQuincey
How this characteristic form of 18th-century literature was responsible for the making of the middle class and forging its taste and values through personal reflections, social critique, and a multiplicity of styles including the confessional and the parodic. The context of Enlightenment and Romantic culture including politics, print culture, social life, and manners.
5 units, Spr (Gigante, D)

ENGLISH 308A. Mark Twain
Journalism, travel books, fiction, drama, sketches, and essays by Mark Twain; critical and creative responses to his work from the 19th century to the present (including pieces originally published in Argentina, China, Cuba, Denmark, France, Germany, Italy, Japan, Russia, Spain, etc. not translated until 2009); how Twain and his critics engaged such issues as race and racism, satire and social justice, imperialism, personal and national identity, gender, performance, travel, and technology. What are Twain’s legacies in 2010, the centennial of his death? Guest will include actor Hal Holbrook and novelist David Bradley. Field trip to Mark Twain Papers at Berkeley.
5 units, Spr (Fishkin, S)

ENGLISH 310. The Transatlantic Renaissance
(Same as COMPLIT 332) The emergence of early modern transatlantic culture, emphasizing how canonical works of the Renaissance may be reimagined in a colonial context and how the productions of the colonial Americas make sense as Renaissance works. Topics: mestizaje and creole identity, gender and sexuality, law, religion and the church, mining, commerce, and government. European and American authors: Thomas More, Philip Sidney, Thomas Lodge, William Shakespeare, the Inca Garcilaso de la Vega, and lesser known figures.
5 units, Win (Green, S)

ENGLISH 311A. Modernism and Literature of the First World War
Focus on British and American novels, poems, and memoirs written during or in the decade following the Great War (1914-1918). Major texts include works by Robert Graves, Wilfred Owen, Siegfried Sassoon, Vera Brittain, Ernest Hemingway, and Virginia Woolf. Viewings of classic films on the subject: Renoir’s Grand Illusion, Attenborough’s Oh What a Lovely War (starring John Lennon) and Tavernier’s Life and Nothing But.
5 units, Win (Castle, T)

ENGLISH 314. Epic and Empire
(Same as COMPLIT 320A) Focus is on Virgil’s Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.
5 units, Spr (Parker, P)

ENGLISH 319. Realisms and Anti-Realisms
The strategies and aesthetics of representation in fiction and film. Foundational articulations of a realist aesthetic crossing political and generic divides. Georg Lukács, Erich Auerbach, and André Bazin, in relation to polemics against realism developed since the 60s. The significance of returning to these theories and to the idea of realism itself in the wake of poststructuralism and deconstruction.
3 units, Aut (Woloch, A)

ENGLISH 334A. Concepts of Modernity 1: Philosophical Foundations
(Same as MTL 334A) Preference to first-year graduate students in Modern Thought and Literature and English. Kant’s 18th-century development of the critique of reason; how it set the stage for the themes and problems that have preoccupied Western thinkers. Focus is on texts that extend and problematize the critique of reason. Writers include Kant, Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger.
5 units, Aut (Moya, P)

ENGLISH 334B. Concepts of Modernity 2: The Study of Culture in the Age of Globalization
(Same as MTL 334B) 20th-century theory with focus on the concept of culture and methods of studying it from diverse disciplines including sociology, anthropology, history, literary and cultural studies. Modernization, postmodernization, and globalization in their relations to culture broadly understood, cultures in their regional, national, and diasporic manifestations, and cultures as internally differentiated such as high and low culture, subcultures, and media cultures. Readings include Gramsci, Adorno, Horkheimer, Williams, Hall, Gilroy, Hebdige, Jameson, Garcia Canclini, Foucault, Bourdieu, Geertz, Clifford, Said, Appadurai, and Appiah.
5 units, Win (Heise, U)

ENGLISH 342. Elizabethan and Jacobean Tragedy
Eight tragedies by Christopher Marlowe, Thomas Kyd, Elizabeth Cary, Thomas Middleton, John Webster and John Ford. Portrayals of sexual transgression followed by violent retribution. Exploration of the criminalization of sex in Renaissance England from the perspectives of early modern gender systems, performance practices, theories of representation, institutional settings, and cultural critiques. Why Elizabethan and Jacobean playwrights depict extreme forms of sociopathic behavior: murder, rape, infanticide, incest, necrophilia. Why are these plays still read and performed in the twenty-first century? What can be learned from them?
5 units, Aut (Riggs, D)

ENGLISH 343A. Comedy and Tragedy in Early Modern English Theater I
Enrollment restricted to graduate students. First quarter of two quarter sequence. The parameters of the genres of comedy and tragedy on the early modern English stage. Focus is on dramatic texts; some attention to classical and later theoretical formulations. The prevalence of hybridity in the drama of Shakespeare and his contemporaries, with plays such as Doctor Faustus, Measure for Measure, Sejanus, and The Winter’s Tale serving as guides to generic practice. Audience.
5 units, Win (Orgel, S)
ENGLISH 334B. Comedy and Tragedy in Early Modern English Theater II
Enrollment restricted to graduate students. Second quarter of two quarter sequence. The parameters of the genres of comedy and tragedy on the early modern English stage. Focus is on dramatic texts; some attention to classical and later theoretical formulations. The prevalence of hybridity in the drama of Shakespeare and his contemporaries, with plays such as Doctor Faustus, Measure for Measure, Sejanus, and The Winter’s Tale serving as guides to generic practice. Audience.
5 units, Spr (Orgel, S)

ENGLISH 345. Eighteenth-Century Satire
A study of the masterpieces of satire from eighteenth-century Brit ain with some attention to classical sources and contemporary analogues. What role does satire play in contemporary American culture: when does speech become too hot to handle? Do we have a requirement that people mean what they say? What is the role of invective in public discourse? Authors include: Horace, Juvenal, Jonathan Swift, Alexander Pope, Samuel Johnson, Frances Burney, Voltaire, George Orwell.
5 units, Aut (Vermeule, B)

ENGLISH 356T. Intro to Psychoanalysis as a Critical Method
(Same as DRAMA 356T) Primary reading in Freud, Lacan, Laplanche, Irigaray and Kristeva. Secondary readings in film theory (Mulvey to Silverman), art history (Bryson, Bersani) and poststructuralism (Derrida, Foucault, Butler).
3-5 units, Aut (Phelan, M)

ENGLISH 357. Bishop, Plath, Rich
The work of three female poets from the second half of the 20th century. Focus is on close readings of their books and consideration of broader historical and theoretical debates about modern poetry, poetry by women, American poetry.
5 units, Spr (Jenkins, N)

ENGLISH 362B. Black to the Future: The End(s) of African American Literary Theory
Study of race theory in the Obama era: why and how to study race in literary and cultural study in the post-civil rights, post-race era.
5 units, Spr (Elam, M)

ENGLISH 362D. G/local Colors: Race, Regionalism, and Its Afterlife in American Literature
Intricacies and problematicas of American literatures in relation to different spatial and geographical scales centered within and beyond the United States. Authors include Sarah Orne Jewett, Alexander Chee, Kate Chopin, Edward P. Jones, Toni Morrison, Willa Cather, Leslie Marmon Silko, Ana Castillo, Brian Ascalon Raley, and Paul Yoon.
5 units, Aut (Sohn, S)

ENGLISH 363G. American Transnational Novel
Aesthetic visions of an American imaginary in terms of transna tional forces. In what ways America has been invented as a category in sociocultural terms and the form the American novel has taken from late 19th to early 21st centuries. Readings from Cather, Faulkner, Asturias, Paredes, McCarthy, Silko, Díaz, and Plessenc ia.
5 units, Spr (Saldivar, R)

ENGLISH 364. Style
(Same as COMPLIT 364) The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus is on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.
5 units, Spr (Moretti, F; Miller, D)

ENGLISH 365A. Forms of Selfhood and Subjectivity in Early America, 1630-1800
Exploration of the formation of models of selfhood and subjectivity, both individual and corporate, in colonial through postrevolutionary America. Readings encompass both literary and non-literary expressive forms. Categories of selfhood and subjectivity drawn from political, religious, social, and metaphysical thought, including the concepts of sainthood and election; republican and democratic subjectivity; the now-competing, now-contiguous notions of inherent right and conscience; and the processes of conversion and secularization. Current theoretical attempts to frame the subject, predominantly the work of Foucault on the hermeneutics of subjectivity.
5 units, Win (Ruttenburg, N)

ENGLISH 370. Literature and Wisdom
Study of the pursuit of wisdom in and through literature. Readings include Job, Proverbs, Ecclesiastes, Boethius, Pseudo-Dionysius, Abelard, Alan of Lille, Bonaventure, Aquinas, Thomas Gallus, Langland, Chaucer, Julian of Norwich, and the Cloud-author.
5 units, Aut (Karnes, M)

ENGLISH 372A. Sixteenth-Century Poetry and Poetics
Sixteenth-century English poetry in a continental context. Generic experimentation from several distinctive standpoints: e.g. Petrarchism; the plain style; psalters, religious lyrics, and contrafacta; and Puritan voices. Attention to questions of gender, politics, and religion. Poets include Petrarch, Skelton, Wyatt, Surrey, Gascoigne, Philip and Mary Sidney, Spenser, Shakespeare, and several minor figures.
5 units, Spr (Greene, R)

ENGLISH 373D. Shakespeare, Islam, and Others
(Same as COMPLIT 311) Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. Othello, Twelfth Night, Titus Andronicus, The Merchant of Venice, and other Shakespeare plays. Kyd’s So- lyman and Perseda, Daborne’s A Christian Turned Turk, Massin ger’s The Renegado, Marlowe’s The Jew of Malta, and literary and historical materials.
5 units, not given this year

ENGLISH 384A. Romanticism in Ruins
The idea of the ruin. Romanticism in theory. Literary treatments of fragments, remnants and remains. The problem of post-romantic reception and a tradition in ruins.
5 units, Spr (Rovee, C)

ENGLISH 384C. Thomas Hardy and D.H. Lawrence
Topics include Hardy’s and Lawrence’s views of modernization, urbanization, sexual politics, desire, and the novelistic project. Works studied include Far from the Madding Crowd, Tess of the D’Urbervilles, Jude the Obscure, The Rainbow, Women in Love, and Lady Chatterley’s Lover. Augmented by critical readings.
5 units, Win (Jarvis, C)

ENGLISH 389. Modernism’s Everyday
An approach to literary modernism’s commitment to everyday life. Topics include emergent aesthetic implications of the ordinary, its relationship with late 19th- and early 20th-century developments in ethnography, art, emergent landscapes of urban modernity, flanerie and the poetics of space, advertising, consumerism, representations of domesticity, and boredom. Texts include James Joyce, Virginia Woolf, William Carlos Williams, T.S. Eliot, Katherine Mansfield, Michel De Certeau, Henry Lefebvre, Giorgio Agamben, Patricia Meyer Spacks, Elizabeth Goodstein.
5 units, Spr (Majumdar, S)

ENGLISH 390. Beckett
(Same as DRAMA 152, DRAMA 358C) Beckett’s plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.
3-5 units, not given this year

ENGLISH 390. Graduate Fiction Workshop
For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.
3 units, Aut (Tallent, E), Win (Powers, R), Spr (Wolff, T)

ENGLISH 392. Graduate Poetry Workshop
For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.
3 units, Aut (Fields, K), Win (Boland, E), Spr (Di Piero, S)

ENGLISH 394. Independent Study
Preparation for first-year Ph.D. qualifying examination. 1-10 units, Sum (Staff)

ENGLISH 395. Ad Hoc Graduate Seminar
Three to more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)
ENGLISH 396. Introduction to Graduate Study for Ph.D. Students
For incoming Ph.D. students. The major historical, professional, and methodological approaches to the study of literature in English.
5 units, Aut (Gigante, D)

ENGLISH 396L. Pedagogy Seminar I
(Same as COMPLIT 396L) Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature classes. Focus is on leading discussions and grading papers.
2 units, Aut (Vermeule, B)

ENGLISH 397A. Pedagogy Seminar II
Apprenticeship for second-year graduate students in English, Modern Thought and Literature, and Comparative Literature who teach in the Program in Writing and Rhetoric. Each student is assigned as an apprentice to an experienced teacher and sits in on classes, conferences, and tutorials, with eventual responsibility for conducting a class, grading papers, and holding conferences. Meetings explore rhetoric, theories and philosophies of composition, and the teaching of writing. Each student designs a syllabus in preparation for teaching PWR I.
1 unit, Aut (Lunsford, A; Diogenes, M)

ENGLISH 397X. The Teaching of Literature: How We Teach & Why
(Same as EDUC 405X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.
2-4 units, Aut (Grossman, P; Summit, J)

ENGLISH 398. Research Course
A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398R. Revision and Development of a Paper
Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.
4-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398W. Orals and Dissertation Workshop
For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.
2 units, Aut (Vermeule, B), Win (Vermeule, B), Spr (Vermeule, B)

ENGLISH 399. Thesis
For M.A. students only. Regular meetings with thesis advisers required.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH FOR FOREIGN STUDENTS (EFSLANG)

UNDERGRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

EFSLANG 197. Directed Study
1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

EFSLANG 397. Directed Study
1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

EFSLANG 688A. Intensive Spoken English
For current graduate students. Includes work on listening, oral presentation, discussion, and conversational interaction. May fulfill any two of the following EFS requirements, subject to approval by the EFS Director: EFSLANG 690A, 690B, 691, 693B.
3 units, Sum (Rylance, C)

EFSLANG 688B. Intensive Academic Writing
For current graduate students. Focus on academic writing, with some work in reading and vocabulary development. Engineering, science, humanities, and social science students prepare a research paper; business students write one or more case studies. Fulfills requirement for EFSLANG 697 or 698A, subject to approval by the EFS Director.
3 units, Sum (Rylance, C)

EFSLANG 689T. Interacting in California’s Vineyard Culture
Focuses on communicative skills in the context of California’s renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.
1 unit, Sum (Staff)

EFSLANG 690A. Interacting in English
Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.
1-3 units, Aut, Win, Spr (Lockwood, R)

EFSLANG 690B. Academic Discussion
Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communicative style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 690A or consent of instructor.
1-3 units, Aut (Streichler, S), Win (Rylance, C), Spr (Rylance, C)

EFSLANG 690C. Advanced Interacting in English
Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: 690B or consent of instructor. Enrollment limited to 14.
1-3 units, Win (Streichler, S), Spr (Streichler, S)

EFSLANG 691. Oral Presentation
For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Streichler, S), Win (McPherron, P), Spr (McPherron, P), Sum (McPherron, P)

EFSLANG 692. Speaking and Teaching in English
For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.
1-3 units, Aut (Rylance, C), Win (McPherron, P), Spr (Rylance)

EFSLANG 693A. Listening Comprehension
Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.
1-3 units, Aut (Lockwood, R)

EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development
Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpreta-
tion of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: 693A or consent of instructor.

1-3 units, Aut (Hubbard, P), Win (Streicher, S), Spr (Hubbard)

EFSLANG 694. Communication Strategies in Professional Life
For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: 693A, or consent of instructor. Enrollment limited to 14.

1-3 units, Aut (Rylance, C), Spr (Rylance, C)

EFSLANG 695A. Pronunciation and Intonation

1-3 units, Aut (Mawson, C), Win (Rylance, C), Spr (Mawson, C)

EFSLANG 695B. Advanced Pronunciation and Intonation
Continuation of 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: 695A.

1-3 units, Aut (Oman, A), Win (Mawson, C), Spr (Oman, A)

EFSLANG 696. Understanding American Humor
Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisites: 690B, 693B or consent of the instructor. Enrollment limited to 14.

1-3 units, Win (Streicher, S)

EFSLANG 697. Writing Fundamentals
Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.

1-3 units, Aut (Rylance, C), Win (Rylance, C), Spr (Lockwood, R)

EFSLANG 698A. Writing Academic English
Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Revech, A), Win (Shabrami, C), Spr (Streicher, S), Sum (Shabrami, C)

EFSLANG 698B. Advanced Graduate Writing
Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: 698A. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Hubbard, P), Win (McPherron, P), Spr (Rylance, C), Sum (Hubbard, P)

ENVIRONMENTAL EARTH SYSTEM SCIENCE (EESS)

UNDERGRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE

EESS 2. Earth System History
The evolution of Earth’s systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER: DB-NatSci

3 units, Win (Chamberlain, P)

EESS 8. The Oceans: An Introduction to the Marine Environment
For non-majors and majors in earth science or environmental science. Students will learn about the major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis will be placed on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems discussed will include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones, etc. The course will incorporate a mix of lectures, multi-media presentations, and group activities.

4 units, Spr (Staff)

EESS 37N. Energy and the Environment on the Back of an Envelope
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. How does an intuitive understanding of the Earth helps inform decisions about energy supply. How can enough energy be provided to support future growth and development throughout the world without damaging the natural environment? Focus is on simple quantitative observations and calculations that facilitate evaluation of potential solutions to this problem; algebra only, no calculus. GER: DB-NatSci

3 units, Aut (Staff)

EESS 39N. The Carbon Cycle: Reducing Your Impact
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interactions between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm. GER: DB-NatSci

3 units, Spr (Chamberlain, P)

EESS 57Q. Climate Change from the Past to the Future
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth’s history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Spr (Staff)

EESS 101. Environmental and Geological Field Studies in the Rocky Mountains
(Same as GES 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aquatic geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

3 units, Aut (Chamberlain, P; Graham, S)

EESS 134. Stable Isotopes in Biogeochemistry
(Same as EESS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systems of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER: DB-NatSci

3 units, not given this year

EESS 141. Remote Sensing of the Oceans
(Same as EESS 241, EARTHSYS 141, EARTHSYS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, Win (Arrigo, K)
EESS 143. Marine Biogeochemistry (Same as EESS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER: DB-NatSci 3-4 units, Spr (Arrigo, K)

EESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (Same as EESS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41. 3 units, Win (Staff)

EESS 156. Soil Chemistry (Same as EESS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER: DB-NatSci 4 units, Win (Fendel, S)

EESS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER:DB-Math 3 units, Spr (Switzer, P)

EESS 162. Remote Sensing of Land Use and Land Cover (Same as EARTHSYS 142, EARTHSYS 242) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires. 4 units, not given this year

EESS 164. Fundamentals of Geographic Information Science (GIS) (Same as EARTHSYS 144) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER: DB-NatSci 4 units, Aut (Staff)

EESS 180. Fundamentals of Sustainable Agriculture (Same as EARTHSYS 180, EARTHSYS 280, EESS 280) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER: DB-NatSci 3 units, alternate years, not given this year

EESS 211. Fundamentals of Modeling Simulation models are a powerful tool for environmental research, if used properly. This course covers the major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis will be placed on gaining hands-on experience using the R programming language. Basic knowledge of statistics is required. 3 units, Aut (Lobell, D)

EESS 217. Climate of the Cenozoic For upper-division undergraduate and graduate students. The paleoclimates of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth’s climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations. 3 units, not given this year

EESS 220. Physical Hydrogeology (Same as CEE 260A) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus. 4 units, Aut (Gorelick, S; Walker, K; Erban, L)

EESS 221. Contaminant Hydrogeology (Same as CEE 260C) (Formerly GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent. 4 units, not given this year

EESS 234. Stable Isotopes in Biogeochemistry (Same as EESS 134) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. 3 units, not given this year

EESS 240. Advanced Oceanography For upper-division undergraduates and graduate . Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute. 3 units, not given this year
antropogenic carbon budget. Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3 units, Aut (Dunbar, R)

EESS 243. Marine Biogeochemistry
(Same as EESS 143) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3-4 units, Spr (Arrigo, K)

EESS 244. Marine Ecosystem Modeling
Practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Computer programming, model design and parameterization, and model evaluation. Students develop and refine their own multi-component marine ecosystem model.

3 units, Spr (Staff)

EESS 245. Advanced Biological Oceanography
Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. Hands-on laboratory and computer activities, and field trips into local waters. May be repeated for credit.

3-4 units, not given this year

EESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
(Same as EESS 146A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Staff)

EESS 250. Elkhorn Slough Microbiology
(Formerly GES 270.) The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

3 units, Sum (Staff)

EESS 253S. Hopkins Microbiology Course
(Same as BIO 274S, BIOHOPK 274, CEE 274S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A/B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

EESS 256. Soil Chemistry
(Same as EESS 156) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

4 units, Win (Fendorf, S)

EESS 259. Environmental Microbial Genomics
The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.

1-3 units, Win (Francis, C)

EESS 263. Topics in Advanced Geostatistics
(Same as ENERGY 242) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, not given this year

EESS 280. Fundamentals of Sustainable Agriculture
(Same as EARTHYS 180, EARTHYS 280, EESS 180) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, and biotechnology, ecosystem services, and climate change.

3 units, alternate years, not given this year

EESS 301. Topics in Environmental Earth System Science
Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.

1 unit, Aut (Thomas, L), Win (Thomas, L), Spr (Thomas, L)

EESS 322A. Seminar in Hydrogeology
Current topics. May be repeated for credit. Autumn Quarter has open enrollment, For Winter Quarter, consent of instructor is required.

1 unit, not given this year

EESS 322B. Seminar in Hydrogeology
Current topics. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Win (Gorelick, S)

EESS 323. Stanford at Sea
(Graduate students register for 323H.) Five weeks of marine science, including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, alternate years, not given this year

EESS 330. Advanced Topics in Hydrogeology
Topics; questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.

1-2 units, Aut (Gorelick, S), Win (Gorelick, S), Spr (Gorelick, S)
ELESS 342, Geostatistics  
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.  
1-2 units, Aut (Boucher, A)

ELESS 342B, Geostatistics  
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.  
1-2 units, not given this year

ELESS 342C, Geostatistics  
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.  
1-2 units, not given this year

ELESS 363F, Oceanic Fluid Dynamics  
(Same as CEE 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or graduate fluid mechanics.  
3 units, alternate years, not given this year

ELESS 385, Practical Experience in the Geosciences  
On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.  
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ELESS 400, Graduate Research  
May be repeated for credit. Prerequisite: consent of instructor.  
1-15 units, Aut (Staff), Win (Staff), Spr (Staff, Sum (Staff)

ETHICS IN SOCIETY (ETHICSOC)

UNDERGRADUATE COURSES IN ETHICS IN SOCIETY

ETHICSOC 20, Introduction to Moral Philosophy  
(Same as PHIL 20) What is the basis of moral judgment? What makes right actions right and wrong actions wrong? What makes a state of affairs good or worth promoting? What is it to have a good or virtuous character? Answers to classic questions in ethics through the works of traditional and contemporary authors.  
GER:DB-Hum, EC-EthicReas  
5 units, Win (Schapiro, T)

ETHICSOC 30, Introduction to Political Philosophy  
(Same as PHIL 30, POLISCI 3, PUBLPOL 103A) State authority, justice, liberty, and equality through major works in political philosophy. Topics include human nature and citizenship, the obligation to obey the law, democracy and economic inequality, equality of opportunity and affirmative action, religion, and politics.  
GER:DB-Hum, DB-Hum, EC-EthicReas  
5 units, Spr (Hussain, N)

ETHICSOC 78, Medical Ethics  
(Same as PHIL 78) Introduction to moral reasoning and its application to problems in medicine: informed consent, the requirements and limits of respect for patients' autonomy, surrogate decision making, euthanasia and physician-assisted suicide, and abortion.  
GER:DB-Hum, DB-Hum, EC-EthicReas  
4 units, not given this year

ETHICSOC 133, Ethics and Politics of Public Service  
(Same as PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.  
GER:DB-SocSci  
5 units, Win (Reich, R)

ETHICSOC 136R, Introduction to Global Justice  
(Same as INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.  
5 units, Spr (McLeod, A)

ETHICSOC 137R, Justice at Home and Abroad: Civil Rights in the 21st Century  
(Same as EDUC 261X, POLISCI 137R, POLISCI 337R) Focus is on theories of justice. How the core ideals of freedom, equality, and security animate theories which John Rawls considers the first virtue of social institutions. Topics include the U.S. Constitution as a legal framework for the operation of these ideals, civil rights legislation and litigation as the arena of tensions between those ideals, and how ideas of justice function both at home and abroad to impact civil liberties in today's war on terror.  
5 units, not given this year

ETHICSOC 157, Moral Foundations of Capitalism  
(Same as ETHICSOC 257) An interdisciplinary examination of alternative and largely incompatible twentieth century defenses of the morality of capitalism, with a concentration on economic, Objectivist, and Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Michael Novak, and George Gilder. A reading of Ayn Rand's Atlas Shrugged. A concluding application of studied theories to a few recent public policy issues.  
GER:DB-Hum  
5 units, Win (McCaskey, J)

ETHICSOC 170, Ethical Theory  
(Same as PHIL 170) Major strands in contemporary ethical theory. Readings include Bentham, Mill, Kant, and contemporary authors.  
GER:DB-Hum, EC-EthicReas  
4 units, Spr (Kim, T)

ETHICSOC 171, Justice  
(Same as IPS 208, PHIL 171, PHIL 271, POLISCI 136S, PUBLPOL 103C) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.  
GER:DB-Hum, EC-EthicReas  
4-5 units, Aut (Cohen, J)

ETHICSOC 174A, Moral Limits of the Market  
(Same as PHIL 174A, PHIL 274A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Tintmors, and empirical cases.  
GER:DB-Hum  
4 units, Win (Satz, D)

ETHICSOC 185M, Contemporary Moral Problems  
(Same as PHIL 72) As individuals and as members of societies we make choices that can be evaluated from a moral point of view. Sometimes such evaluations are relatively easy but often it is unclear, or subject to fierce disagreement, what morality requires of us. For example, if we are relatively affluent, how far must we assist those who are poor? Are we behaving wrongly if we buy expensive sunglasses or MP3 players when the money could instead be given to Oxfam to help fight malnutrition in the developing world? This course will provide an introduction to several of these problems focusing, in particular, on obligations to the global poor, though it will also consider different perspectives on overpopulation, human rights, foreign aid, and patents on life-saving medication.  
GER:EC-EthicReas  
4 units, Aut (Staff)
ETHICSOC 190. Ethics in Society Honors Seminar
(Same as PHIL 178) For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.
  3 units, Win (Reich, R)

ETHICSOC 198. Community Engagement Internship
Restricted to Ethics in Society minors with the citizenship option. Opportunities for students to engage in community work via the Haas Center for Public Service. Students work with Haas Center staff to design an internship involving community-based research or supported by a Haas Center fellowship or community service work/study, or to serve for an academic year as a tutor in one of the Haas Center’s several K-12 programs in East Palo Alto. May be repeated for credit.
  3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 199. Independent Studies in Ethics in Society
May be repeated for credit.
  1-13 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200A. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.
  1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200B. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.
  1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 257. Moral Foundations of Capitalism
(Same as ETHICSOC 157) An interdisciplinary examination of alternative and largely incompatible twentieth century defenses of the morality of capitalism, with a concentration on economic, Objectivist, and Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Michael Novak, and George Gilder. A reading of Ayn Rand’s Atlas Shrugged. A concluding application of studied theories to a few recent public policy issues.
  GER:DB-Hum
  5 units, Win (McCaskey, J)

FEMINIST STUDIES (FEMST)

UNDERGRADUATE COURSES IN FEMINIST STUDIES

FEMST 101. Introduction to Feminist Studies
What is feminism and why does it matter today? Debates over the status and meaning of feminism in the 21st century. Feminist theories and practices across topics that intersect with gender inequality such as race, health, socioeconomics, sexual orientation, international perspectives, new media, civil rights, and political change. Perspectives from philosophy, education, visual culture, literary and ethnic studies, performance and expressive arts, and social sciences.
  GER:DB-SocSci, EC-Gender
  5 units, Aut (Coll, K)

FEMST 103. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 203, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research.
  GER:EC-Gender
  4-5 units, Win (Longino, H)

FEMST 104A. Junior Seminar and Practicum
Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.
  1 unit, Win (Coll, K)

FEMST 104B. Senior Seminar and Practicum
Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.
  2 units, Aut (Coll, K)

FEMST 105. Honors Work
  1-13 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 108. Internship in Feminist Studies
For non-majors. Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Prerequisites: course in Feminist Studies, consent of program office, written consent of faculty sponsor, application.
  1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 120. Introduction to Queer Studies
(Same as DRAMA 164S, FEMST 120) Readings in the development of queer theory in literature, art, and science including Sedgwick, Butler, Roughgarden, Freeman, and Foucault. Cultural texts from Mapplethorpe’s photographs to Queer Eye for the Straight Guy.
  GER:EC-Gender
  4-5 units, Spr (Phelan, M)

Interdisciplinary feminist perspective. Causes of abuse, approaches to ending violence against women, and its relationship to other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Institutional barriers maintaining this violence; individual, community, political, legal, national, and global dimensions of possible solutions. Limited enrollment. Prerequisite: consent of instructor.
  2-4 units, Aut (Baran, N)

FEMST 139. Rereading Judaism in Light of Feminism
During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.
  4-5 units, given next year

FEMST 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender & Sexual Identities
Examination of sex, gender, sexual identities & expressions through studying the LGBTQI community using a sociological lens. Readings in feminist and queer theory, films, class presentations, and discussion. Thematic focus in valuing the diversity of human experience. Students will develop their skills in critical reading, writing and thinking about gender and sexuality.
  5 units, Win (Fogarty, A)

FEMST 140B. Making of the Modern Woman: Robots, Aliens & the Feminine in Science Fiction
Feminist analysis of gender in popular science fiction literature and visual media from 19th through 21st centuries. Texts range from Shelley’s Frankenstein to Joss Whedon’s Dollhouse. How are women represented by themselves and others? Who are women? What is gender and how is it constructed and performed? What is the relationship between man and machine? Between women and machine? How is gender represented through narratives of literal alien others?
  5 units, Spr (Staff)

FEMST 153. Women and the Creative Imagination
(Same as FEMST 253) Interdisciplinary. The lives of women artists in different cultures and generations. Students write about art forms, the role of artists in the academy, and their social responsibilities. Similarities and differences among artists.
  GER:DB-Hum, EC-Gender
  4-5 units, Aut (Miner, V)

FEMST 166. Feminist Theories of Knowledge
(Same as PHIL 184F, PHIL 284F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth,
the knowing subject, knowledge and values, knowledge and pow-
er. GER:DB-Hum, EC-Gender
4 units, not given this year

FEMST 188N. Imagining Women: Writers in Print and in Person
(Sem) Stanford Introductory Seminar. Gender roles, gender rela-
tions and sexual identity explored in contemporary literature and
conversation with guest authors. Poetry and narrative examining
relationships between race and gender set in 19th-21st centuries in
The Philippines, Jamaica, Japan, China and various parts of the
U.S. Expository writing and oral skills are emphasized. Writing
experience not necessary. GER:DB-Hum, EC-Gender
4-5 units, Win (Miner, V)

FEMST 191Q. Writing Women’s Lives
(F,Dial) Stanford Introductory Dialogue. Creative writing through
dialogue focusing on prose about the lives of women in different
cultures and generations. Novels, short stories, and micro-narrative
including fiction and memoir. Students produce work using re-
search, memory, imagination, and metaphor.
2 units, Aut (Miner, V)

FEMST 195. Directed Reading
May be repeated for credit. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 260. Seminar in Women’s Health: Women and Dis-
abilities
(Same as FEMST 360) Explores visible and invisible disabilities,
women’s psychological as well as physical health, issues of access,
caretaking, self-definition and the diversity of disabled women’s
identities. Prerequisite: consent of instructor. GER:DB-SocSci,
EC-Gender
5 units, Spr (Krieger, S)

GRADUATE COURSES IN FEMINIST STUDIES

FEMST 203. Feminist Theories and Methods Across the Disci-
plines
(Same as FEMST 103, PHIL 153, PHIL 253) The interdiscipli-
ary foundations of feminist thought. The nature of disciplines and of
interdisciplinary work. Challenges of feminism for scholarship and
research.
4-5 units, Win (Longino, H)

FEMST 253. Women and the Creative Imagination
(Same as FEMST 153) Interdisciplinary. The lives of women art-
ists in different cultures and generations. Students write about art
forms, the role of artists in the academy, and their social responsi-
bilities. Similarities and differences among artists.
4-5 units, Aut (Miner, V)

FEMST 360. Seminar in Women’s Health: Women and Dis-
abilities
(Same as FEMST 260) Explores visible and invisible disabilities,
women’s psychological as well as physical health, issues of access,
caretaking, self-definition and the diversity of disabled women’s
identities. Prerequisite: consent of instructor.
5 units, Spr (Krieger, S)

FILM STUDIES (FILMSTUD)

UNDERGRADUATE COURSES IN FILM STUDIES

FILMSTUD 4. Introduction to Film Study
Formal, historical, and cultural issues in the study of film. Classic-
ical narrative cinema compared with alternative narrative structures,
documentary films, and experimental cinematic forms. Issues of
 cinematic language and visual perception, and representations of
gender, ethnicity, and sexuality. Aesthetic and conceptual analytic
skills with relevance to cinema. GER:DB-Hum
5 units, Win (Oeler, K)

FILMSTUD 6. Introduction to Digital Media
Media beyond the horizon of cinema and television present unique
problems of definition and analysis. Taking the digital information
represented as discrete values as a reasonable approximation of the
mechanics and fantasies of computation, course surveys theoretical
approaches to code, networks, and cybertulture. Familiar forma-
tions such as web sites and video games as objects from which to
learn how thinkers have understood and envisioned emerging me-
dia from the mid-20th century to the present. Students develop
their own methodological tools for becoming more critical users of
digital media.
4 units, Win (Staff)

FILMSTUD 100A. History of World Cinema I, 1895-1929
(Same as FILMSTUD 300A) From cinema’s precursors to the advent
of synchronized sound. GER:DB-Hum
4 units, Aut (Oeler, K)

FILMSTUD 100B. History of World Cinema II, 1930-1959
(Same as FILMSTUD 300B) The impact of sound to the dissolu-
tion of Hollywood’s studio system. GER:DB-Hum
4 units, not given this year

FILMSTUD 100C. History of World Cinema III, 1960-Present
(Same as FILMSTUD 300C) From the rise of the French New
Wave to the present. GER:DB-Hum
4 units, Spr (Ma, J)

FILMSTUD 101. Fundamentals of Cinematic Analysis
(Same as FILMSTUD 301) The close analysis of film. Emphasis is
on formal and narrative techniques in structure and style, and de-
tailed readings of brief sequences. Elements such as cinematogra-
phy, mise-en-scène, composition, sound, and performance. Films
from various historical periods, national cinemas, directors, and
generes. Prerequisites: FILMSTUD 4 or equivalent. Recommended:
ARTHIST 1 or FILMSTUD 102. GER:DB-Hum, WIM
4 units, Win (Oeler, K)

FILMSTUD 102. Theories of the Moving Image
(Same as FILMSTUD 302) Major theoretical arguments and de-
bates about cinema: realism, formalism, poststructuralism, femin-
ism, postmodernism, and phenomenology. Prerequisites: AR-
THIST 1, FILMSTUD 4. GER:DB-Hum
4 units, Spr (Ma, J)

FILMSTUD 111. The Body in American Genre Film: From
Chaplin to The Matrix
(Same as FILMSTUD 311) The American genre film as a mass
form that shares elements with a carnivalesque, folk culture such
as a rejection of politeness and piety, and an emphasis on the phys-
ical. Genres include comedy, western, war, science fiction, musi-
cal, horror, melodrama, gangster, and cult, exploitation, and blax-
ploration films. The place of the body onscreen. How does the
body exist in relation to the world, other bodies, and the act of
perception? What meaning does bodily movement have in relation
to narrative? GER:DB-Hum
4 units, not given this year

FILMSTUD 114. Comics
(Same as FILMSTUD 314) The modern medium of comics, a his-
tory that spans 150 years. The flexibility of the medium encour-
aged through the genres of humorous and dramatic comic strips,
superheroes, undergrounds, independents, journalism, and autobi-
ography. Innovative creators including McCay, Kirby, Barry,
Ware, and critical writings including McCloud, Eisner, Greenste.
Topics include text/image relations, panel-to-panel relations, the
page, caricature, sequence, seriality, comics in the context of the
fine arts, and relations to other media. GER:DB-Hum
4 units, Spr (Bukatman, S)

FILMSTUD 115. Documentary Issues and Traditions
(Same as FILMSTUD 315) Issues include objectivity/subj ectivity,
ethics, censorship, representation, reflectivity, responsibility to the
audience, and authorial voice. Parallel focus on form and content.
GER:DB-SocSci
4 units, Aut (Krawitz, J)

FILMSTUD 116. International Documentary
(Same as FILMSTUD 316) Historical, aesthetic, and formal develop-
ments of documentary through nonfiction films in Europe, Asia,
Latin America, and Africa. GER:DB-Hum
4 units, not given this year

FILMSTUD 122. Kubrick
(Same as FILMSTUD 322) Thematic and stylistic richness of the
cinema of Stanley Kubrick. Methodological approaches to the
subject. Emphasis is on questions of close textual analysis, authorship and genre, and critique of ideology. Focus is on *A Clockwork Orange*. Other films include: 2001: A Space Odyssey, Barry Lyndon, *Killer’s Kiss*, and *The Shining*.

4 units, Win (Levi, P)

FILMSTUD 130. Italian Cinema: Neorealism and Beyond
(Same as FILMSTUD 330) The post-WW II era. Aesthetic and sociopolitical dimensions of neorealism; 60s cinema of economic miracle; and Italian variations on popular film genres such as the spaghetti western. Filmmakers include Rossellini, De Sica, Visconti, Pasolini, and Antonioni. GER:DB-Hum
4 units, not given this year

FILMSTUD 132. East Asian Cinema
(Same as FILMSTUD 332) Social, historical, and aesthetic dimensions of the cinemas of China, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Kim Kwon-taek.

4 units, not given this year

FILMSTUD 134A. Poetic Cinema: The Soviet School
(Same as FILMSTUD 334A) The poetic or arcaic school of Soviet cinema which emerged primarily in the non-Russian Soviet Republics in the 60s and 70s and traced its aesthetic to the films of Aleksandr Dovzhenko. Films by Dovzhenko, Andrei Tarkovsky, Krzysztof Zanussi, and Tiney Tarkovsky; Sergei Parajanov, Tengiz Abuladze, and Otar Ioseliani. GER:DB-Hum
4 units, Spr (Staff)

FILMSTUD 135. History of Video Art
(Same as FILMSTUD 335) Focus is on artists who have contributed to the history of video art. Topics include: theoretical analyses of the medium; challenges to the performer-spectator dynamic (Dan Graham and Vito Acconci); feminist culture critique (Martha Rosler and Daro Birnbaum); closed-circuit installations and performances (Peter Campus and Joan Jonas); combinations of linguistic and bodily investigations (Bruce Nauman and Gary Hill); representations of girl culture (Sadie Benning); guerrilla television (TVTV and Ant Farm); image processing (Woody and Steina Vasulka); the turn toward cinematic installations (Stan Douglas and Douglas Gordon); and more recent trends (Cory Arcangel and Ryan Tercartin).
4 units, not given this year

FILMSTUD 136. Gender and Sexuality in East Asian Cinema
(Same as FILMSTUD 336) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required. GER:EC-Gender
4 units, Aut (Ma, J)

FILMSTUD 138A. The Films of Arturo Ripstein
(Same as FILMSTUD 338A) Mexican director Arturo Ripstein offers a course on the creative process through an examination of several of his feature films. His films derive from Mexican melodrama, a genre known for its aesthetic plasticity and its roots in Mexican culture and society.
4 units, Win (Staff)

FILMSTUD 145. Politics and Aesthetics in East European Cinema
(Same as FILMSTUD 345) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Janosco, Forman, and Kusturica. GER:DB-Hum
4 units, Spr (Levi, P)

FILMSTUD 150. Cinema and the City
(Same as FILMSTUD 350) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Chang-
FILMSTUD 297. Honors Thesis Writing
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FILMSTUD 299. Independent Study: Film and Media Studies
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

FILMSTUD 338A. The Films of Arturo Ripstein
(Same as FILMSTUD 138A) Mexican director Arturo Ripstein offers a course on the creative process through an examination of several of his feature films. His films derive from Mexican melodrama, a genre known for its aesthetic plasticity and its roots in Mexican culture and society.
4 units, Win (Staff)

4 units, Aut (Ma, J)

FILMSTUD 345. Politics and Aesthetics in East European Cinema
(Same as FILMSTUD 145) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.
4 units, Spr (Levi, P)

FILMSTUD 350. Cinema and the City
(Same as FILMSTUD 150) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions,
industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.
4 units, not given this year

FILMSTUD 353A. Transmedia TV
(Same as FILMSTUD 153A) Beginning from theoretical questions about the structure of media texts and their production, distribution, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online ties, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.
4 units, Spr (Staff)

FILMSTUD 406. Montage
Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include: D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.
4 units, Aut (Levi, P)

FILMSTUD 407. The Still Moving Image
Tension and overlap between cinema and photography as technological media, beginning with Frankfurt school critiques of media theory, classical film, and photography theory through recent considerations of the post-cinematic age of digital and virtual images. How ideas of intimacy, medium specificity, memory, duration, narrativity, chance, stasis, repetition have informed accounts of the relationship of these media.
5 units, not given this year

FILMSTUD 410A. Documentary Perspectives I
Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.
4 units, Win (Meltzer, J)

FILMSTUD 410B. Documentary Perspectives II
Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.
4 units, not given this year

FILMSTUD 411. Animation
The fantasy of an image coming to life dates back centuries but it was not until the onset of the cinema that the fantasy was actualized. The implications of animation, considering its underlying fantasies in art and literature, its particular phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style including realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, and live/animation hybrids.
5 units, Spr (Bukatman, S)

FILMSTUD 440. Sound Technology
Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listenings.
5 units, Win (Ma, J)

FILMSTUD 660. Independent Study
For graduate students only. Approved independent research projects with individual faculty members.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)
FILMPROD 406A. Documentary M.F.A. Thesis Seminar I
Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor. 4 units, Win (Meltzer, J)

FILMPROD 406B. Documentary M.F.A. Thesis Seminar II
Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor. 4 units, Spr (Krawitz, J)

FRENCH GENERAL (FRENGEN)

UNDERGRADUATE COURSES IN FRENCH GENERAL

FRENGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, ITAL-GEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; cross-listed in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
3-5 units, Win (Apostolides, J)

FRENGEN 192E. Images of Women in French Cinema: 1930-1990
The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles.
GER:DB-Hum, EC-Gender
4-5 units, Win (Anderson, L; Landy, J)

FRENGEN 192E. Images of Women in French Cinema: 1930-1990
The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles.
GER:DB-Hum, EC-Gender

The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles.
GER:DB-Hum, EC-Gender
4-5 units, Win (Anderson, L; Landy, J)

FRENGEN 192E. Images of Women in French Cinema: 1930-1990
The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles.
GER:DB-Hum, EC-Gender
4-5 units, Win (Anderson, L; Landy, J)

GRADUATE COURSES IN FRENCH GENERAL

FRENGEN 204. Songs of Love and War: Gender, Crusade, Politics
Medieval love, satirical and Crusade lyrics in the Old Occitan, and Old French traditions. Focus on deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Also modern translation and reception of the troubadour tradition. Poets include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Sordello, Dante, Pound, and Neruda.
3-5 units, Win (Galvez, M)

FRENGEN 219. The Renaissance Body
The body as locus for desire, pleasure, disease, mortality, sexuality, and gender, and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at shaping a new self and redraw the boundaries between reason and belief. Classes in English, readings in French (most also available in translation). Works by Constant, Staal, Chateaubriand, Maistre, religious, and linguistic crises that mark the first decades of the sixteenth century. Rabelais’ fiction puts into question former modes of reading (Scholasticism, allegorism) and any accepted interpretative authorities (religious and classical intertexts; authorial presence, common wisdom; superstitions).
3-5 units, Spr (Alduy, C)

FRENGEN 228E. Getting Through Proust
Seminars. Selections from In Search of Lost Time. Themes: habit, heredity, constitution of the self; language, names, metaphor, and metonymy; aesthetics, music, photography, and painting; truth, lies, belief, and disenchantment; sleep, dreams, memory, time, modernity, and technology; friendship, love, homosexuality, jealousy, and mediated desire. Readings in French or English.
3-5 units, Aut (Landy, J)

FRENGEN 233. The Afterlife of the Middle Ages (Same as ITALGEN 233) Literary works that evade a medieval past in contrast to a historical present, and critical texts that treat aspects of the medieval or medievalism. How does the concept of medievalism emerge and evolve through the ages? The impact of the Reformation and romanticism, the study of Gothic architecture, and the use of the term medieval in modern political discourse. Authors include Hugo, Grimm brothers, Flaubert, Mâle, Pound, de Rougemont, Eco, Bataille, and Holsinger; films by Bresson and Pasolini.
3-5 units, Aut (Galvez, M)

FRENGEN 242. Women Mystics from the Middle Ages to the Present
(Same as ITALGEN 242) This course explores the predominantly female mystical experience or direct embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Through a variety of European texts from the Middle Ages to the present, by women and men, we will explore attempts to convey the experience metaphorically, to interpret it theologically and philosophically, and finally, to transmit it actively to others.
3-5 units, Win (Wittman, L)

FRENGEN 252. Historiography of Theater
(Same as DRAMA 166H, DRAMA 304) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.
3-5 units, Win (Apostolides, J)

FRENGEN 265. The Problem of Evil in Literature, Film, and Philosophy
(Same as POLISCI 338E) Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau’s response to the 1755 Lisbon earthquake; Hannah Arendt’s interpretation of Auschwitz; Günther Anders’ reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebeck, Girard. Films by Lang, Bergman, Losey, Hitchcock.
3-5 units, Win (Dupay, J)

FRENGEN 267. French and Italian Literary Theory
(Same as ITALGEN 267) This course considers major French and Italian authors essential in the creation of contemporary Literary Theory. Many belong to the intellectual movement known as Structuralism, even if they may disagree with some of its fundamental concepts. Introduction of post-structuralist works which permit a different approach to Literature. Among the authors considered, special attention is given to Jacques Lacan, Luce Irigaray, Jacques Derrida, Michel Foucault, Guy Debord and Umberto Eco.
3-5 units, Win (Apostolides, J)

FRENGEN 273. Post-Revolutionary Passions
Coming to terms with the Enlightenment, the French Revolution and the collapse of the political and spiritual authority that grounded the old regime, post-revolutionary thinkers confronted critically the responsibility of the intellectual and the nature of ideological violence; they reinvented the sacred in an attempt to shape a new self and redraw the boundaries between reason and belief. Classes in English, readings in French (most also available in translation). Works by Constant, Stael, Chateaubriand, Maistre,
Quinet, Ballanche, Musset, Tocqueville, Michelet, Taine.

3-5 units, Aut (Russo, E)

FRENGEN 289. French and Italian Women Writers
(Same as ITALGEN 289) How does women’s writing evolve from the very early twentieth-century, when women’s liberation movements first began, and World War One brought major social changes, all the way to the big flowering of “feminine writing” in the 1970s and beyond? What is the relationship between women writers, women filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors/filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cavani.

3-5 units, Aut (Wittman, L)

FRENGEN 301E. New Methods and Sources in French and Italian Studies
(Same as ITALGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries’ gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students’ knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, Spr (Sussman, S)

FRENGEN 325. Modern Seminar
(Same as HUMANITIES 325) Modern anxieties about the place of human concerns within a disenchanted natural world, focusing on texts of philosophy, social theory, and imaginative literature. Cultural and psychological consequences of perceived decline in and threats to religious faith. Authors may include Schiller, SchOPENHauER, ColERIDGE, KierKEgaard, Marx, BaudelaIRE, Darwin, NIEtZSCHe, WEBER, Eliot, WOOLF, Sartre, and CAMUS.

3-5 units, Aut (APOSTOLides, J)

FRENGEN 328. Literature, Narrative and the Self
(Same as ITALGEN 328) The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Plato, Aristotle, Montaigne, SchOPENHauER, NIETZSCHe, CAMUS, MACINTyre, G. STRAWSON; Shklovsky, Genette, Ricoe ure, BROOKs; Boccaccio, LAzARILLO de Tormes, Shakespere, NerVAL, MusIL, Bckett, NabOKov, Morrison; film.

5 units, Spr (Landy, J)

FRENGEN 356. Theories of the Novel
(Same as COMPLIT 322A) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel’s poetics and cultural work. Critical readings such as texts of philosophy, social theory, and imaginative literature. Cultural and psychological consequences of perceived decline in and threats to religious faith. Authors may include Schiller, SchOPENHauER, COLERIDGE, KierKEgaard, Marx, BaudelaIRE, Darwin, NIEtZSCHe, WEBER, Eliot, WOOLF, Sartre, and CAMUS.

3-5 units, Aut (APOSTOLides, J)

FRENGEN 356. Theories of the Novel
(Same as COMPLIT 322A) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel’s poetics and cultural work. Critical readings such as texts of philosophy, social theory, and imaginative literature. Cultural and psychological consequences of perceived decline in and threats to religious faith. Authors may include Schiller, SchOPENHauER, COLERIDGE, KierKEgaard, Marx, BaudelaIRE, Darwin, NIEtZSCHe, WEBER, Eliot, WOOLF, Sartre, and CAMUS.

5 units, Spr (Landy, J)

FRENGEN 361. Theories of Resistance
A critique of theories of resistance developed by Agamben, Althusser, Butler, Deleuze, Foucault, Latour, Mouffe, Rancière by testing their assumptions and methodologies against concrete practices of resistance drawn from postcolonialism, postsocialism and postapartheid sites and embodied in the works of scholarship, art, and literature produced mainly by natives as analysts of their own condition. How to build theory from the bottom-up based on student’s own research material.

3-5 units, Spr (Domanska, E)

FRENGEN 369. Introduction to Graduate Studies: Criticism as Profession
(Same as COMPLIT 369, ITALGEN 369, GERLIT 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamin, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.

3-5 units, Aut (Berman, R)

FRENGEN 395. Philosophical Reading Group
(Same as COMPLIT 359A, ITALGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

1 unit, not given this year

FRENCH LANGUAGE (FRENLANG)

UNDERGRADUATE COURSES IN FRENCH LANGUAGE

FRENLANG 1. First-Year French, First Quarter
Proficiency-based. Development of discourse appropriate in French and Francophone contexts.

3 units, Aut (Staff), Win (Shashko, T), Spr (Howard, H)

FRENLANG 1A. Intensive First-Year French, Part A
Complements first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 5A on the placement test. 2A fulfills the University foreign language requirement. Prerequisite: French placement test and consent of instructor. Win, Spr

5 units, Aut (Howard, H), Win (Lasnier, M)

FRENLANG 2. First-Year French, Second Quarter
Continuation of 1. Prerequisite 1 or equivalent.

5 units, Aut (Shashko, T), Win (Staff), Spr (Shashko, T)

FRENLANG 2A. Intensive First-Year French, Part B
Continuation of 1A. Fulfills the University foreign language requirement. Prerequisite: 1A, or French placement test and consent of instructor.

5 units, Win (Howard, H), Spr (Dozer-Rabedeau, J)

FRENLANG 3. First-Year French, Third Quarter
Continuation of 2. Prerequisite: 2 or equivalent. Fulfills the language requirement.

5 units, Aut (Dozer-Rabedeau, J), Win (Shashko, T), Spr (Staff)

FRENLANG 5A. Intensive First-Year French, Part A
Accelerated. Written exercises, compositions, conversational practice, and daily work.

5 units, Sum (Calefas-Strebelle, A)

FRENLANG 5B. Intensive First-Year French, Part B
Continuation of 5B.

5 units, Sum (Tamas, J)

FRENLANG 5C. Intensive First-Year French, Part C
Continuation of 5B. Fulfills the University language requirement.

5 units, Sum (Conroy, M)

FRENLANG 10. Beginning French Oral Communication
For students who have completed 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.

2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)

FRENLANG 15. Intermediate French Oral Communication
For students who have completed the first-year language requirement. May be repeated once for credit.

2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)

FRENLANG 15S. Intermediate Conversation: French in Everyday Life
Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.

3 units, Sum (Lasnier, M)

FRENLANG 20A. France and Francophonie
Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include tra-
### COURSES OF INSTRUCTION

#### FRENLANG 20B. French Cinema
Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: 22 or equivalent.

2 units, Win (Staff)

#### FRENLANG 20C. Contemporary French Language
Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: 22 or equivalent.

2 units, Win (Staff)

#### FRENLANG 22. Second-Year French, Part A
Proficiency-based. Advanced-level skills including past, present, and future narration, description, and defending points of view on social and cultural issues. Topics from cultural comparisons with French and Francophone contexts. Prerequisite: 3 or consent of coordinator.

4-5 units, Aut (Staff), Win (Howard, H), Spr (Howard, H)

#### FRENLANG 23. Second-Year French, Part B
Continuation of 22. Prerequisite: FRENLANG 22 or consent of coordinator.

4-5 units, Aut (Howard, H), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)

#### FRENLANG 24C. Second-Year French: Literary Texts
Proficiency oriented. Discussion, writing, reading, and listening comprehension based on literary texts. Prerequisite: 23.

3-4 units, not given this year

#### FRENLANG 24R. Second-Year French: International Relations, Political Science, and Economics Emphasis
Proficiency-based. Discussion, writing, reading, and listening comprehension based on political, economic, and social topics. Prerequisite: 23.

3-4 units, not given next year

#### FRENLANG 50. Reading French
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of "B." Prerequisite: one year or reading proficiency in another Romance language.

4 units, Aut (Gilleland, J)

#### FRENLANG 50S. Reading French
Same content as 50.

2-4 units, Sum (Gilleland, J)

#### FRENLANG 60A. Beginning French Conversation
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

#### FRENLANG 60B. Intermediate French Conversation
(Staff)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

#### FRENLANG 60C. Advanced French Conversation
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

#### FRENLANG 60D. French Viticulture
See [http://www.stanford.edu/class/frenlang60d/](http://www.stanford.edu/class/frenlang60d/). Prerequisite: 21 or older.

1 unit, Aut (de Castries, P), Win (Staff), Spr (de Castries, P)

#### FRENLANG 60E. French Cooking
1 unit, Aut (de Castries, P), Win (Staff), Spr (de Castries, P)

#### FRENLANG 60F. French Cinema
May be repeated for credit.

1 unit, Win (de Castries, P)

#### FRENLANG 60K. Thought for the 21st Century
1 unit, not given this year

#### FRENLANG 60N. French Drama
1 unit, Aut (Staff)

#### FRENLANG 60P. French House Projects
Prerequisite: consent of instructor.

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

#### FRENLANG 60T. Teaching French Conversation
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

#### FRENLANG 120. Advanced French Oral Communication
Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: 23 or equivalent, and consent of instructor.

3 units, Aut (Staff), Win (Staff), Spr (Staff)

#### FRENLANG 121. Introduction to French Texts
Readings of major literary figures and themes from medieval times to the present. Prerequisite: 23 or consent of coordinator. Recommended: 124.

3-4 units, not given this year

#### FRENLANG 122. Introduction to French Culture and Civilization
Discussion of French art, geography, history, political change, and social institutions. Prerequisite: 23 or equivalent.

3-4 units, not given this year

#### FRENLANG 123. French Creative Writing
Advanced. Model texts introduce students to genres and styles; review of grammar and vocabulary. Discussion of original writing by students. Prerequisite: 23 or equivalent.

3-4 units, not given this year

#### FRENLANG 124. Advanced French Grammar
Required for students majoring or minoring in French; recommended for students planning to take literature courses. Review of difficulties in French. Grammatical and logical analysis. Prerequisite: 23 or equivalent.

3-4 units, Aut (Howard, H), Win (Howard, H)

#### FRENLANG 125. French Phonetics
For majors and other students who plan to enroll in advanced courses. Study and practice of the French language sound system. Language lab. Prerequisite: 23 or equivalent.

3-4 units, not given this year

#### FRENLANG 126. French Stylistics and Textual Analysis
For majors and minors. Writing intensive. Control of grammar and syntax in research and argumentative papers. Prerequisite 124 or placement.

3-4 units, Spr (Staff)

#### FRENLANG 199. Language Specials
Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### GRADUATE COURSES IN FRENCH LANGUAGE

#### FRENLANG 33G. Business French III
For GSBS students only. Enrollment limited to 18. (Staff)

4 units, Spr (Howard, H)

#### FRENLANG 205A. Intensive First-Year French
Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C courses for a total of 9 units.

3-5 units, Sum (Staff)

#### FRENLANG 205C. Intensive First-Year French - Part C
Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take both courses for a total of 9 units.

3-5 units, Sum (Staff)

#### FRENLANG 250S. Reading French
For graduate students only. Same content as 50.

2-4 units, Sum (Staff)
FRENLANG 394. Graduate Studies in French Conversation
Prerequisite: consent of the instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENLANG 395. Graduate Studies in French
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENCH LITERATURE (FRENLIT)

UNDERGRADUATE COURSES IN FRENCH LITERATURE

FRENLIT 130. Authorship, Book Culture, and National Identity in Medieval and Renaissance France
Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (La Chanson de Roland), medieval romances (Tristan, Chrétién de Troyes’ Yvain), post-Petrarchan poetics (Du Bellay, Ronsard, Labé), and prose humanists (Rabelais, Montaigne). Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM
4 units, Aut (Galvez, M)

FRENLIT 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France
The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include Corneille, Molière, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM
4 units, Win (Pichichero, C)

FRENLIT 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France
Major literary genres, and social and cultural contexts. Focus is on the emergence of new literary forms such as surréalisme, nouveau roman, and nouveau théâtre. Topics of colonization, decolonization, and feminism. Readings include Balzac, Baudelaire, Césaire, Colette, and Ionesco. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM
4 units, Win (Boyi, E)

FRENLIT 133. Literature and Society in Africa and the Caribbean
(Same as COMPLIT 141) Major African and Caribbean writers. Issues raised in literary works which reflect changing aspects of the societies and cultures of Francophone Africa and the French Caribbean. Topics include colonization and change, quest for identity, tradition and modernity, and new roles and status for women. Readings in fiction and poetry. Authors include Laye Camara, Mariama Ba, and Joseph Zobel. In French. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, EC-GlobalCom, WIM
4 units, Aut (Boyi, E)

The emergence of new social types in nineteenth-century fiction. Questions: How do groups differentiate themselves? Which groups are heroized and which are villainized? Who belongs and who doesn’t? Topics include social climbers, dandies, philosophers, the poor, students, criminals, actresses, crowds, and the bourgeoisie. Authors include Balzac, Stendhal, Sue, Nerval, Vigny, Flaubert, Zola. Taught in French. GER:DB-Hum
3-5 units, Spr (Conroy, M)

FRENLIT 167. The Essayistic Tradition in 20th-Century France
The essay, whose tradition is firmly rooted in France, resists conventional taxonomies and tests the plasticity of genre. Not only does the essay borrow from all Aristotelian categories, it also merges disciplines, conflating art and science while constructing its own system of logic and its own codes. With exemplary works by 20th-century French essayists, issues include generic hybridity, open-endedness, voice, form, rhetorical devices and style, and political engagement. Montaigne, Apollinaire, Proust, Valéry, Beckett, Artaud, Ponge, Yourcenar, Sartrre, Camus, Robbe-Grillet, Barthes, and Cixous. GER:DB-Hum
3-5 units, Spr (Wampole, C)

FRENLANG 150. Graduate Studies in French
Prerequisite: consent of instructor. GER:DB-Hum
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM
4 units, Aut (Galvez, M)

FRENLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.
5 units, Win (Staff)

FRENLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Spr (Staff)

FRENLIT 199. Individual Work
Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN FRENCH LITERATURE

FRENLIT 202. Inventing the Enlightenment
How the idea of the Enlightenment emerged in French intellectual circles, and how it evolved over the course of the eighteenth century. Focus in particular on the articulation between the Enlightenment and its two most illustrious precursors: the Scientific Revolution and the grand siècle. Readings include texts by Montesquieu, Voltaire, Diderot, d’Alembert, Rousseau, Hume, and Kant.
3-5 units, Spr (Edelstein, D)

FRENLIT 222. The Political Unconscious of the Ancien Régime
The lasting influence in Europe of absolutism. Topics include political theories, the importance of court life, art as a political tool, modifications in human sensibility, literature, and social transformations.
3-5 units, not given this year

FRENLIT 225. Multicultural Molière
Molière’s life and work as a point of departure for the notion of multiculturalism. Born in a bourgeois family, Molière was in contact with social milieux including the French peasantry for whom he wrote farces, and the court of Louis XIV for whom he provided spectacles at Versailles. Major plays, including Tartuffe, Le bourgeois gentilhomme, and Le malade imaginaire as the expression of the new court culture. Sociohistorical and contemporary literary approaches: Molière as the unifying artistic figure in a multicultural France.
3-5 units, not given this year

FRENLIT 248. Literature, History, and Representation
(Same as COMPLIT 250) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator; relation between individual and collective history; historical events and how they have shaped the narratives; master narratives; and alternative histories. Reading include Gissiant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.
3-5 units, not given this year

FRENLIT 250. When Poets Write Prose: 20th-Century French Poetry
Liberated from traditional forms and rhythms in the 19th century, poetry as an open field for exploration and self-redifinition in the 20th century. The poem as a fixed form, obsolete or artificial, endangers poetry as a privileged gate to truth, presence, ethics, or an authentic relation to the world. How in times of suspicion over the powers and failures of language, prose becomes the only truthful medium to approach a poetic essence beyond poetry. Readings include Mallarmé, René Char, Yves Bonnefoy, Philippe Jaccottet, Jacques Dupin, Jacques Réda, and literary critics.
3-5 units, Spr (Staff)

STANFORD BULLETIN, 2009-10 | 569
FRENLIT 252. Theater of the Absurd
The theater of the absurd as an evolving commentary on modern alienation and attempt to make a humorous yet philosophical peace with it through the concreteness of performance. Authors include Jarry, Marinetti, Pirandello, Salacrou, Cocteau, Camus, and Sartre.
3-4 units, Win (Wittman, L)

FRENLIT 256. Mind and Body in 20th-Century French Fiction
How fiction articulates the tensions among the sensuous, the sensuous, the embodied, and the aspiration to purity, abstraction, and transcendence. Focus is on questioning dichotomies such as nature/culture, masculine/feminine, sacred/profane, and written word/voice. Authors include Gide, Camus, Butor, Duras, and Tournier.
3-5 units, not given this year

FRENLIT 278. Special Topics (Francophone Literature):
From Exoticism to a Discourse of Auto-Representation
(Same as AFRICAST 278, COMPLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.
3-5 units, Aut (Boy, E)

FRENLIT 293A. Topics in French Literature and Philosophy
Five-week course. May be repeated for credit.
2 units, Aut (Serres, M)

FRENLIT 293B. Topics in French Literature and Philosophy
Five-week course. May be repeated for credit.
2 units, Spr (Serres, M)

FRENLIT 299. Individual Work
May be repeated for credit.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FRENLIT 399. Individual Work
For students in French working on special projects or engaged in predissertation research.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENETICS (GENE)

UNDERGRADUATE COURSES IN GENETICS

GENE 109Q. Genomics: A Technical and Cultural Revolution
(S,Sem) (Same as BIOMEDIN 109Q) Stanford Introductory Seminar. Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.
3 units, Win (Altman, R)

GENE 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GENETICS

GENE 202. Human Genetics
Theoretical and experimental basis for the genetics of human health and disease. Molecular, chromosomal, biochemical, developmental, cancer, and medical genetics, emphasizing the last. Clinical cases. Prerequisites: biochemistry; basic genetics.
4 units, Aut (Ormond, K; Hudgins, L)

GENE 203. Advanced Genetics
(Same as BIO 203, DBIO 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.
4 units, Aut (Stearns, T; Sidow, A; Barsh, G)

GENE 206. Epigenetics
(Same as PATH 206) For graduate students; undergraduates by consent of instructor. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42, or GENE 203, or consent of instructor.
2 units, Spr (Lipsick, J; Gozani, O), alternate years, not given next year

GENE 211. Genomics
Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a beginning working knowledge of PERL.
3 units, Win (Cherry, J; Sherlock, G)

GENE 212. Introduction to Biomedical Informatics Research Methodology
(Same as BIOE 212, BIOMEDIN 212, CS 272) Hands-on software building. Students teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.
3 units, Aut (Altman, R; Cheng, B; Klein, T)

GENE 214. Representations and Algorithms for Computational Molecular Biology
(Same as BIOE 214, BIOMEDIN 214, CS 274) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.
3-4 units, Spr (Staff)

GENE 215. Frontiers in Biological Research
(Same as BIOC 215, DBIO 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker’s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.
1 unit, Aut (Harbury, P; Calos, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calos, M)

GENE 218. Computational Analysis of Biological Images
(Same as PATH 218) Physical and computational tools for acquisition, processing, interpretation, and archiving of biological images. Emphasis is on digital microscopy.
2 units, alternate years, not given this year

GENE 221. Current Issues in Aging
(Same as DBIO 221, NENS 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.
2 units, Spr (Staff)
GENE 222. Method and Logic in Experimental Genetics
For graduate students only. How experimental strategies are applied to biological questions irrespective of discipline boundaries. Examples include purifying activities from complex mixtures, localizing molecules in space and time, discovering macromolecular interactions, inferences from sequence similarity, using structure to elucidate function, and applying genomics to biological problems. Weekly discussion of two representative papers selected by faculty and a student presentation of a third paper which illustrate principles of biochemistry and cell and molecular biology, and the historical context of important scientific advances. 3 units, Win (Baker, J; Calos, M)

GENE 233. The Biology of Small Modulatory RNAs
(Same as MI 233, PATH 233) Open to graduate and medical students. How recent discoveries of miRNA, RNA interference, and short interfering RNAs reveal potentially widespread gene regulatory mechanisms mediated by small modulatory RNAs during animal and plant development. Required paper proposing novel research. 2 units, Aut (Fire, A; Chen, C), alternate years, not given this year

GENE 234. Fundamentals of RNA Biology
(Same as MI 234, PATH 234) For graduate or medical students and (if space permits) participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students. 2 units, Aut (Chen, C; Fire, A; Sarnow, P)

GENE 235. C. Elegans Genetics
Genetic approaches to C. elegans, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis. How experiential strategies are applied to biological questions irrespective of discipline boundaries. Principles of medical genetics including the CLIA process. An additional paper is required for 3 units. 2 units, Win (Staff), alternate years, not given next year

GENE 238. Current Concepts and Dilemmas in Genetic Testing
(Same as INDE 238) For M.D., biomedical graduate, and genetic counseling students. Issues arising from the translational process from research to commercialization. Diagnostic inventions and applications, community implications, newborn screening, cancer genetics, and pharmacogenomics. Guest experts. 2 units, Spr (Tobin, S; Schrijver, I; Cowan, T; Magnus, D)

Open to clinical MD and graduate students. How to explain science to judge and jury; how litigators determine which legal issues to argue. Patent and expert testimony law. Student teams choose patents for final simulation projects, prepare claim charts, devise a design-around, and present oral arguments. Prerequisite: Graduate students must have completed all coursework in their departments for the PhD degree. 3 units, Aut (Morris, R)

GENE 244. Introduction to Statistical Genetics
Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor. 3 units, alternate years, not given this year

GENE 245. Computational Algorithms for Statistical Genetics
(Same as STATS 345) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationales and techniques illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor. 2-3 units, alternate years, not given this year

GENE 260. Supervised Study
Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor. 1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 271. Human Molecular Genetics
For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and health and human disease; population based genetics; approaches to the study of complex genetic conditions, and gene therapy, proteomics, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course. 4 units, Aut (Ormond, K; Francke, U)

GENE 272. Introduction to Medical Genetics
For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics including taking a family history, modes of inheritance, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional paper is required for 3 units. 2-3 units, Aut (Hudgins, L; Ormond, K)

GENE 273. Introduction to Clinical Genetics Testing
For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows; undergraduates with consent of instructor. Principles of cytogenetic, molecular, and biochemical laboratory analysis. How to select the appropriate laboratory for testing and laboratory quality assurance, including the CLIA process. An additional paper is required for 3 units. 2-3 units, Aut (Ormond, K; Cowan, T; Cherry, J; Schrijver, I)

GENE 274A. A Case Based Approach to Clinical Genetics
For genetic counseling students, graduate students in genetics, medical students, residents, and post-doctoral fellows. Case-based scenarios and guest expert lectures. Skills in case preparation, management, and presentation. 2 units, Win (Hudgins, L; Ormond, K)

GENE 274B. A Case Based Approach to Clinical Genetics
For genetic counseling students, graduate students in genetics, medical students, residents, and post-doctoral fellows. Case-based scenarios and guest expert lectures. Skills in case preparation, management, and presentation. 2 units, Spr (Hudgins, L; Ormond, K)

GENE 275. Role Play and Genetic Counseling Observations
Observation includes genetic counseling sessions in prenatal, pediatric, and cancer settings, and medical genetics procedures and testing settings. 2 units, Aut (Ormond, K)

GENE 276. Genetic Counseling Clinical Rotations
For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275. 4-7 units, Aut (Staff), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

GENE 278. Prenatal Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening. 1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

GENE 279. Pediatric and Adult Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions; assessment of child develop-
ment and medical history in the context of a genetic workup; dysmorphology; development of a differential diagnosis; and resources for case management and family support.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 280. Metabolic Genetic Counseling**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 281. Cancer Genetic Counseling**

Internet-based course for cancer genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer cytogenetics and genetic principles; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 282. Genetic Counseling Research Seminar**

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects. Corequisite: GENE 299.

2 units, Win (Staff)

**GENE 282. Genetic Counseling Research Seminar**

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects. Corequisite: GENE 299.

2 units, Win (Ormond, K)

**GENE 283. Genetic Counseling Research**

Investigations sponsored by individual faculty members. Students complete an approved research project. May be repeated for credit. Prerequisite: GENE 282.

1-8 units, Aut (Staff), Win (Ormond, K), Spr (Ormond, K), Sum (Staff)

**GENE 284. Medical Genetics Seminar**

Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

1-2 units, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K)

**GENE 285A. Genetic Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

2-3 units, Aut (Ormond, K)

**GENE 285B. Genetics Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: GENE 285A.

2-3 units, Win (Ormond, K)

**GENE 285C. Genetic Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: 285 A/B.

2-3 units, Spr (Ormond, K)

**GENE 286A. Advanced Genetic Counseling Seminar**

Continuation of GENE 286A. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases through cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Staff)

**GENE 286B. Advanced Genetic Counseling Seminar**

Continuation of GENE 286A/B. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases through cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Staff)

**GENE 286C. Advanced Genetic Counseling Seminar**

Continuation of 286A/B. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases through cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Staff)

**GENE 289. Directed Reading in Genetics**

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GENE 399. Graduate Research**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GENE 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GENE 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GEOLOGICAL AND ENVIRONMENTAL SCIENCES (GES)**

**UNDERGRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES**

**GES 1A. Introduction to Geology: The Physical Science of the Earth**

For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GES 1A, 1B, or 1C may be taken for credit. Prerequisites: Math 19 or equivalent.

5 units, Aut (Hilley, G)

**GES 1B. Introductory to Geology: California Desert Field Geology**

California’s Death Valley and Owens Valley are used as natural laboratories for studying active geologic processes and a billion
years of earth history: ancient ocean sediments, mountain building, earthquake faulting, glacial landscapes, volcanic eruptions, hot springs and ore deposits, prehistoric climate changes, and historic human impacts. The course culminates in a 6-day field trip to these areas during Spring Break. Class lectures provide the basics of plate tectonics and physical geology. Laboratory exercises involve rock identification and interpreting topographic and geologic maps and remote sensing imagery. Camping and moderate hiking required. Limited enrollment. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry. GER: DB-NatSci
4 units, Win (Mahood, G)

GES 1C. Introduction to Geology: Dynamic Earth
For non-majors or prospective majors in the Earth Sciences. Activity-based; field trips. Focus is on reading the dynamic geological landscapes of California, with an emphasis on California geology. Plate tectonics, earthquakes and volcanoes, earth materials, geologic time, stream processes, erosion, climate change, and natural resources. Only one of GES 1A, 1B, or 1C may be taken for credit. GER: DB-NatSci
4 units, Spr (Egger, A)

GES 4. Evolution and Extinction: Introduction to Historical Geology
Focus is on the end-Cretaceous mass extinction. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories to explain the mass extinction event. Two half-day field trips. GER: DB-NatSci
4 units, Win (Payne, J)

GES 7A. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.
1 unit, Aut (Bird, D)

GES 7B. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.
1 unit, Win (Bird, D)

GES 7C. Advanced Wilderness Skills
For students with prior backcountry experience. Backcountry skiing, mountaineering, climbing, first aid, and trip planning. Focus is on outdoor leadership experience and trip management techniques. Food, group, and major personal gear provided. Four mandatory weekend trips. See http://www.stanford.edu/class/ges7/ for information or contact oep-teachers@lists.stanford.edu. Prerequisite: application.
1 unit, Spr (Bird, D)

GES 8. Oceanography: An Introduction to the Marine Environment
For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents. GER: DB-NatSci
3 units, Sum (Ingle, J)

GES 39N. Forensic Geoscience: Stanford CSI
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER: DB-NatSci
3 units, Spr (Mao, W)

GES 40N. Diamonds
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Topics include the history of diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth’s deep interior and the origins of the solar system. Diamond’s unique materials properties and efforts in synthesizing diamonds. GER: DB-NatSci
3 units, Spr (Loague, K)

GES 43Q. Environmental Problems
(Sem) Stanford Introductory Seminar. Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Emphasis on interdisciplinary approaches to environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER: DB-NatSci
3 units, Win (Loague, K)

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact
(Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER: DB-NatSci
3 units, Win (Bird, D)

GES 90. Introduction to Geochemistry
The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry. GER: DB-NatSci
3-4 units, Win (Siebbins, J)

GES 101. Environmental and Geological Field Studies in the Rocky Mountains
(Same as EESS 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordilleran geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.
3 units, Aut (Chamberlain, P; Graham, S)

GES 102. Earth Materials
The minerals, rocks, soils, and liquids that comprise the earth. How to identify, classify, and interpret rock-forming minerals and igneous, metamorphic, and sedimentary rock types. Emphasis is on information provided by common minerals and rocks about the earth’s major processes including magmatism, metamorphism, weathering, erosion, and deposition; the relationship of these processes to plate tectonics and earth cycles. Prerequisite: introductory geology course. Recommended: introductory chemistry. GER: DB-NatSci
5 units, Aut (Brown, G; Mahood, G)
COURSES OF INSTRUCTION

GES 103. Rocks in Thin Section
Use of petrographic microscope to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. Crystalization histories, mineral growth and reaction relations, deformation textures in metamorphic rocks, and provenance of siliciclastic rocks. Prerequisite: 102.
3 units, Win (Miller, E)

GES 105. Introduction to Field Methods
Two-week, field-based course in the White Mountains of eastern California. Introduction to the techniques for geologic mapping and geologic investigation in the field: systematic observations and data collection for lithologic columns and structural cross-sections. Interpretation of field relationships and data to determine the stratigraphic and deformational history of the region. Prerequisite: GES 1. Recommended: GES 102.
3 units, Aut (Miller, E; Grove, M)

GES 107. Journey to the Center of the Earth
(Same as GES 207, GEOPHYS 107, GEOPHYS 207) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth’s formation and evolution.
3 units, Win (Lawrence, J; Mao, W)

GES 110. Structural Geology and Tectonics
Topics, principles, and practical methods to measure, describe, analyze, and interpret deformation-related structures on Earth. Collection of fault and fold data in the field followed by lab and computer analysis; interpretation of geologic maps and methods of cross-section construction; structural analysis of fault zone and metamorphic rocks; measuring deformation; regional structural style and related landforms related to plate tectonic convergence, rifting, and strike-slip faulting; the evolution of mountain belts and formation of sedimentary basins. Prerequisite: GES 1, calculus. Recommended: 102. GER: DB-NatSci
5 units, Spr (Miller, E)

GES 111A. Fundamentals of Structural Geology
(Same as CEE 195A) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurements and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52. GER: DB-NatSci
3 units, Aut (Pollard, D)

GES 111B. Fundamentals of Structural Geology
(Same as CEE 195B) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.
3 units, Win (Pollard, D)

GES 112. Mapping the Geological Environment
Geological mapping tools and techniques. Field training with GPS and laser ranging tools. Data sets from modern surveying and mapping campaigns employing lab and field-based laser scanning, field-based total stations, airborne photography and laser swath mapping (ALSM), the satellite Global Positioning System (GPS), and 3D seismic reflection surveys. These data analyzed using elementary differential geometry. MATLAB introduced as the computational and graphics engine. Prerequisites: GES 1, MATH 51, 52. GER: DB-NatSci
3 units, Win (Staff), alternate years, not given next year

GES 115. Engineering Geology Practice
(Same as CEE 196) The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER: DB-NatSci
3 units, Spr (Holzer, T)

GES 120. Planetary and Early Biological Evolution Seminar
(Same as GES 220) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.
2-3 units, not given this year

GES 121. What Makes a Habitable Planet?
(Same as GES 221) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.
3 units, Aut (Staff), alternate years, not given next year

GES 122. Planetary Systems: Dynamics and Origins
(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.
3-4 units, Aut (Marley, M; Lissauer, J)

GES 123. Paleobiology
Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER: DB-NatSci
4 units, alternate years, not given this year

GES 130. Soil Physics and Hydrology
3 units, Aut (Loague, K)

GES 131. Hydrologically-Driven Landscape Evolution
3 units, Win (Loague, K)

GES 150. Senior Seminar: Issues in Earth Sciences
Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.
3 units, Aut (Bird, D; Egger, A)

GES 151. Sedimentary Geology and Petrography: Depositional Systems
Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diageneis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103. GER: DB-NatSci
4 units, Win (Graham, S; Lowe, D)

GES 163. Introduction to Isotope Geochemistry
(Same as GES 263) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes
to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, Aut (Maher, K)

GES 170. Environmental Geochemistry
Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER: DB-NatSci

4 units, Win (Brown, G)

GES 171. Geocological Thermodynamics
Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GES 102. GER: DB-NatSci

3 units, Aut (Bird, D)

GES 172. Nontraditional Stable Isotope Geochemistry
(Same as GES 272) Elements other than C, N, O, S, and H that exhibit mass-dependent and non mass-dependent isotopic fractionation; examples include Mg, Ca, Sr, Fe, Cr, Mo, Cu, Zn, and Hg. These systems represent a new frontier in isotope geochemistry and Earth Sciences as new tools for understanding geochemical, environmental, and biological cycles. The theoretical calculations that form the basis for predicting fractionation, as well as the current state and applications of non-traditional isotope systems. Prerequisite: GES 102. GER: DB-NatSci

3 units, Win (Staff), alternate years, not given next year

GES 173. Isotope Geochemistry Seminar
Current topics including new analytical techniques, advances in isotope measurements, and new isotopic approaches and systems.

1-3 units, Spr (Maher, K)

GES 180. Igneous Processes
For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. May be taken for 3 units without lab. Prerequisite 102, 103, or consent of instructor.

4 units, Spr (Siebbins, J)

GES 183. California Desert Geology
Field seminar. For upper division undergraduates and graduate students in the earth sciences and archaeology. Six-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, obidian lava flows and the deposits of major explosive eruptions, hot springs and ore deposits, and desert landscapes. Camping and moderate hiking. May be repeated for credit.

1 unit, Win (Staff)

GES 185. Volcanology
For juniors, seniors and beginning graduate students in Earth Sciences and Archaeology. How volcanic landforms and deposits relate to the composition and physical properties of magmas and the modes of emplacement. Labs emphasize recognizing types of lavas and products of explosive eruptions. Volcanic hazards and the effects of eruptions on climate and the atmosphere; volcanic-hosted geothermal systems and mineral resources. Required four-day field trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range province. Prerequisite: 1, 102 or equivalent. GER: DB-NatSci

3-4 units, Spr (Staff), alternate years, not given next year

GES 190. Field Research
Two-week field research projects. Written report required. May be repeated three times.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 191. GES Field Trips
Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See http://pangea.stanford.edu/GES/undergraduates/courses/.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 192. Undergraduate Research in Geological and Environmental Sciences
Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 197. Senior Thesis
For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.

3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 198. Special Problems in Geological and Environmental Sciences
Reading and instruction under faculty supervision. Written reports. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 199. Honors Program
Research on a topic of special interest. See “Undergraduate Honors Program” above. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 207. Journey to the Center of the Earth
(Same as GES 107, GEOPHYS 107, GEOPHYS 207) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth’s formation and evolution.

3 units, Win (Lawrence, J; Mao, W)

GES 209. Microstructures
Microstructures in metamorphic rocks reveal temperature, pressure, and rates of deformation in the crust and variations in its thermo-mechanical behavior. Topics include the rheology of rocks and minerals, strain partitioning, shear zones and brittle-ductile transition in the crust, mechanisms of foliation and lineation development, preferred crystallographic fabrics, and geochronologic methods useful for dating deformation. Labs involve microstructural analysis of suites of rocks from classic localities. 5 units for extra project.

3-5 units, not given this year

GES 210. Geologic Evolution of the Western U.S. Cordillera
The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.

2-3 units, Aut (Staff), alternate years, not given this year

GES 211. Topics in Regional Geology and Tectonics
May be repeated for credit.

2-3 units, Aut (Miller, E)

GES 212. Topics in Tectonic Geomorphology
For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process
response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.

2 units, Aut (Hilley, G)

GES 213. Topics in Sedimentary Geology
For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.

2 units, by arrangement

GES 214. Topics in Paleobiology
For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.

2 units, offered occasionally

GES 215A. Structural Geology and Rock Mechanics
(Same as CEE 297G) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth’s crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

3-5 units, Aut (Pollard, D)

GES 215B. Structural Geology and Rock Mechanics
(Same as CEE 297H) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation mechanics of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodological models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.

3-5 units, Win (Pollard, D)

GES 216. Rock Fracture Mechanics
Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth’s crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent.

3-5 units, Spr (Staff), not given next year

GES 217. Faults, Fractures, and Fluid Flow
Process-based approach to rock fracture; the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in aquifers, oil and gas reservoirs, and waste repository sites. Guest speakers; weekend field trip. Prerequisite: first-year graduate student in Earth Sciences.

3 units, Win (Staff), alternate years, not given next year

GES 220. Planetary and Early Biological Evolution Seminar
(Same as GES 120) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

2-3 units, not given this year

GES 221. What Makes a Habitable Planet?
(Same as GES 121) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

3 units, Aut (Staff), alternate years, not given next year

GES 222. Planetary Systems: Dynamics and Origins
(For students with a strong background in mathematics and the physical sciences; other should register for 122.) Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.

3-4 units, Aut (Staff)

GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors
Physical processes, such as radiation transport, atmospheric dynamics, thermal convection, and volcanism, shaping the interiors, surfaces, and atmospheres of the major planets in the solar system. How these processes manifest themselves under various conditions in the solar system. Case study of the surface and atmosphere of Mars. Application of comparative planetary science to extrasolar planets and brown dwarfs. In-class presentation of student papers.

3 units, by arrangement

GES 224. Modeling Environmental Transformations
Quantitative overview of chemical and physical transport and transformation processes that govern elemental and contaminant concentrations in solids, fluids, and gases. Topics include the kinetics of mass transfer across environmental interfaces, formulation of reactor models, and elementary transport phenomena. Emphasis is on reactive transport modeling of fluid-mineral, isotopic, and microbial processes in the context of water-rock systems. Quantitative techniques for conceptualizing environmental processes from simple finite difference approaches to more sophisticated numerical reactive transport models.

3 units, Win (Staff), alternate years, not given next year

GES 237. Surface and Near-Surface Hydrologic Response
(Same as CEE 260B) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

3 units, Aut (Loague, K)

GES 238. Soil Physics
Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

3 units, Aut (Staff), alternate years, not given next year

GES 240. Geostatistics for Spatial Phenomena
(Same as ENERGY 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

3-4 units, Win (Journal, A)

GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as ENERGY 146, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S, Tchelepi, H; Boucher, A)

COURSES OF INSTRUCTION
GES 249. Petroleum Geochemistry in Environmental and Earth Science
How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinement processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude and oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

3 units, Win (Moldovan, J)

GES 250. Sedimentation Mechanics
The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

4 units, Aut (Lowe, D)

GES 251. Sedimentary Basins
Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

3 units, Aut (Graham, S)

GES 252. Sedimentary Petrography
Siliciclastic sediments and sedimentary rocks. Research in modern and ancient rock sequences considered as material for analysis. Recommended: 151 or equivalent.

4 units, Aut (Staff), alternate years, not given next year

GES 253. Petroleum Geology and Exploration
The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GÉOPHYS 184.

3 units, Spr (Staff), alternate years, not given next year

GES 254. Carbonate Sedimentology
Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans; genesis and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections.

3–4 units, Spr (Payne, J)

GES 255. Basin and Petroleum System Modeling
For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, palaeontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

3 units, Win (Staff), alternate years, not given next year

GES 257. Clastic Sequence Stratigraphy
Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of geophysical, geologic, and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

3 units, Spr (Staff), alternate years, not given next year

GES 258. Introduction to Depositional Systems
The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

3 units

GES 260. Laboratory Methods in Organic Geochemistry
Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantitatively quantify components of these mixtures. Methods for separation and analysis of organic compounds in geochemical samples; extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Recommended: 249.

2-3 units, Spr (Moldovan, J)

GES 261. Physics and Chemistry of Minerals and Mineral Sources
The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

4 units, Spr (Brown, G)

GES 262. Thermodynamics and Disorder in Minerals and Melts
The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geochemistry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

3 units, Win (Staff), alternate years, not given next year

GES 263. Introduction to Isotope Geochemistry
(Same as GES 163) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, Aut (Maher, K)

GES 267. Solution-Mineral Equilibria: Theory
Procedures for calculating and evaluating the thermodynamic properties of reversible and irreversible reactions among rock-forming minerals and aqueous solutions in geologic systems. Emphasis is on the generation and utility of phase diagrams depicting solution-mineral interaction relevant to phase relations associated with weathering diagenetic, hydrothermal, and metamorphic processes, and the prediction of temperature, pressure, and the chemical potential of thermodynamic components compatible with observed mineralogic phase relations in geologic outcrops. Individual research topics. Prerequisite: 171.

3 units, alternate years, not given this year

GES 272. Nontraditional Stable Isotope Geochemistry
(Same as GES 172) Elements other than C, N, O, S, and H that exhibit mass-dependent and non mass-dependent isotopic fractionation; examples include Mg, Ca, Si, Fe, Cr, Mo, Cu, Zn, and Hg. These systems represent a new frontier in isotope geochemistry and Earth Sciences as new tools for understanding geochemical
environmental and biological cycles. The theoretical calculations that form the basis for predicting fractionation, as well as the current state and applications of non-traditional isotope systems.

GES 273. Isotope Geochemistry Seminar
(Same as GE S173) Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems.

GES 275. Electron Probe Microanalytical Techniques
The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.

GES 277. Flood Basalts and Mass Extinctions
Recent work in geochronology and paleobiology supports the temporal coincidence of the eruption of continental flood basalts with mass extinction in the terrestrial and marine realms. The mechanisms and timescale of flood basalt eruptions, their likely environmental and biological consequences, and the evidence for flood basalt eruptions as the triggers of many mass extinction events. Sources include recent primary literature.

GES 283. Thermochronology and Crustal Evolution
Thermochronology analyzes the competition between radioactive in-growth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. The underpinning concepts and key developments in thermochronology, focusing upon analytical and interpretative innovations developed over the past decade.

GES 284. Field Seminar on Eastern Sierran Volcanism
For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range province: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, post-caldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, volcanism of the Mono Basin with subaqueous basaltic eruptions, floating perimeters and cryptodomes punching up lake sediments. If snow-level permits, silicic volcanism associated with the Bodie gold district. Prerequisite: 1, 102 or equivalent.

GES 285. Igneous Petrogenesis
Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.

GES 290. Departmental Seminar in Geological and Environmental Sciences
Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.

GES 291. GES Field Trips
Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.

GES 292. Directed Reading with Geological and Environmental Sciences Faculty
May be repeated for credit.

GES 299. Field Research
Two-three week field research projects. Written report required. May be repeated three times.

GES 310. Climate Change, Climate Variability, and Landscape Development
The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events. May be repeated for credit.

GES 314. Structural Geology and Geomechanics
Research seminar. May be repeated for credit.

GES 315. Literature of Structural Geology
Class studies and current journal articles. May be repeated for credit.

GES 328. Seminar in Paleobiology
For graduate students. Current research topics including paleontology, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.

GES 333. Water Policy Colloquium
(Same as CEE 333) Student-organized interdisciplinary colloquium. Creation, implementation, and analysis of policy affecting the use and management of water resources. Weekly speakers from academia and local, state, national, and international agencies and organizations.

GES 336. Stanford Alpine Project Seminar
Seminar on Iceland geology. Weekly student presentations on Icelandic hot-spot and mid-ocean ridge volcanism, geothermal power, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip in summer 2009. May be repeated for credit.

GES 355. Advanced Stratigraphy Seminar and Field Course
Student-led presentations; poster-sized display on assigned topic; field trip.

GES 381. Igneous Petrology and Petrogenesis Seminar
Topics vary by quarter. May be repeated for credit.

GES 384. Volcanology Seminar
Specialized and advanced topics vary by offering. May be repeated for credit.

GES 385. Practical Experience in the Geosciences
On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USICIS requirements for F-1 curricular practical training. (Staff)

GES 399. Advanced Projects
Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.

GES 400. Graduate Research
Faculty supervision. On registration, students designate faculty member and agreed-upon units.

578 | STANFORD BULLETIN, 2009-10
GEOPHYSICS (GEOPHYS)

UNDERGRADUATE COURSES IN GEOPHYSICS

GEOPHYS 25. Hands-on Introduction to Astrobiology
Are human beings alone; are microbes common in the universe? Historical development and modern status of topics such as: the vastness of space and time; star evolution; planetary climate; effects of geological processes and asteroid impacts on life; other habitable places in the solar system with updates on Mars; the Earth as a biological organism; maintenance of society for a geologically long time; and the search for intelligent extraterrestrials. Outdoor lab exercises designed to work in K-12 science classes. Non-science majors welcome.
3 units, Aut (Sleep, N)

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology
(F.Sem) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliter- rate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge and technology can help mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci
4 units, Win (Zebker, H)

GEOPHYS 100. Directed Reading
(Staff)
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 104. The Water Course
(Same as EARTHSYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER: DB-NatSci
3 units, Spr (Knight, R)

GEOPHYS 107. Journey to the Center of the Earth
(Same as GES 107, GES 207, GEOPHYS 207) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth’s formation and evolution.
3 units, Win (Lawrence, J; Mao, W)

GEOPHYS 112. Exploring Geosciences with MATLAB
How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regression, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications.
1-3 units, Aut (Mukerji, T)

GEOPHYS 113. Earthquakes and Volcanoes
(Same as EARTHSYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER:DB-EngrAppSci
3 units, Spr (Beroza, G; Segall, P)

GEOPHYS 140. The Earth From Space: Introduction to Remote Sensing
(Same as EE 140) Global change science as viewed using space remote sensing technology. Global warming, ozone depletion, the hydrologic and carbon cycles, topographic mapping, and surface deformation. Physical concepts in remote sensing. EM waves and geophysical information. Sensors studied: optical, near and thermal IR, active and passive microwave. GER:DB-EngrAppSci
3 units, not given this year

GEOPHYS 150. General Geophysics and Physics of the Earth
Elementary study of gravitational, magnetic, seismic, and thermal properties of the Earth. Earth’s crust, mantle, core. Plate tectonics and mantle convection. Probing Earth structure with seismic waves. Measurements, interpretation, and applications to Earth structure and exploration. Prerequisites: calculus, first-year college physics. GER: DB-NatSci
3 units, Win (Klemperer, S)

GEOPHYS 160. Waves
Topics: derivations of wave equations and their solutions in 1-D, 2-D, and 3-D; amplitude, polarization, phase and group velocities, attenuation, and dispersion; reflection and transmission at single and multiple interfaces; ray theory. Applications from acoustics, elastodynamics, and electromagnetics. Prerequisites: differential/integral calculus and complex functions. GER: DB-NatSci
3 units, not given this year

GEOPHYS 162. Laboratory Methods in Geophysics
Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research.
2-3 units, Win (Vanorio, T)

GEOPHYS 170. Global Tectonics
(Formerly 220.) The architecture of the Earth’s crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies.
3 units, alternate years, not given this year

GEOPHYS 171. Tectonics Field Trip
Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province.
3 units, alternate years, not given this year

GEOPHYS 180. Geophysical Inverse Problems
(Same as GEOPHYS 281) Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103. GER:DB-Math
3 units, alternate years, not given this year

GEOPHYS 185A. Reflection Seismology
(Same as GEOPHYS 385A) Research in reflection seismology and petroleum prospecting. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Biondi, B; Clapp, R), Win (Biondi, B; Clapp, R), Spr (Biondi, B; Clapp, R), Sum (Staff)

GEOPHYS 185B. Environmental Geophysics
(Same as GEOPHYS 385B) Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Knight, R), Win (Knight, R), Spr (Knight, R), Sum (Staff)

GEOPHYS 185E. Tectonics
(Same as GEOPHYS 385E) Research on the origin, major structures, and tectonic processes of the Earth’s crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Klemperer, S; Sleep, N; Thompson, G), Win (Klemperer, S; Sleep, N; Thompson, G), Spr (Klemperer, S; Sleep, N; Thompson, G), Sum (Staff)
**GEOPHYS 185J. Global Seismic Techniques, Theory, and Application**
(Same as GEOPHYS 385J) Topics chosen from surface wave dispersion measurement, 3D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Lawrence, J), Win (Lawrence, J), Spr (Lawrence, J), Sum (Lawrence, J)

**GEOPHYS 185K. Crustal Mechanics**
(Same as GEOPHYS 385K) Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Zoback, M), Win (Zoback, M), Spr (Zoback, M)

**GEOPHYS 185L. Earthquake Seismology, Deformation, and Stress**
(Same as GEOPHYS 385L) Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Harris, J), Win (Harris, J), Spr (Harris, J)

**GEOPHYS 185V. Poroelasticity**
(Same as GEOPHYS 385V) Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Marko, G), Win (Marko, G), Spr (Marko, G)

**GEOPHYS 185Z. Radio Remote Sensing**
(Same as GEOPHYS 385Z) Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Zebker, H), Win (Zebker, H), Spr (Zebker, H)

**GEOPHYS 187. Introduction to SES Computing (ISESC)**
For beginning undergraduates and graduate students in the School of Earth Sciences. Computer concepts. What are computers and networks, and how do they work? Web page authoring. Introduction to scientific programming. Free computing tools for plotting data. Computer resources available to students in the school. An online repository of source codes useful for and developed by SES students, faculty, and staff. Specialists from around the school present reports on research and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. 1 unit, Aut (Beroza, G)

**GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures**
Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. 1 unit, Aut (Beroza, G)

**GEOPHYS 202. Reservoir Geomechanics**
Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon reservoirs and geothermal resources. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability.
3 units, Win (Zoback, M)

**GEOPHYS 205. Honors Program**
Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.
1-3 units, Aut (Staff), Win (Staff), Spr (Sum, Staff)

**GEOPHYS 207. Journey to the Center of the Earth**
(Same as GES 107, GES 207, GEOPHYS 107) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth’s formation and evolution.
3 units, Win (Lawrence, J; Mao, W)

**GEOPHYS 210. Basic Earth Imaging**
3-4 units, Aut (Claerbout, J; Clapp, R)

**GEOPHYS 211. Environmental Soundings Image Estimation**
Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/.
3 units, Aut (Claerbout, J)

**GEOPHYS 222. Reflection Seismology**
(Formerly 182.) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.
3 units, Aut (Klemperer, S)

**GEOPHYS 223. Reflection Seismology Interpretation**
(Formerly 183.) The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor.
1-4 units, Spr (Klemperer, S)

**GEOPHYS 224. Seismic Reflection Processing**
(Formerly 184.) Workshop in computer processing of seismic ref-
lecion data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.
3 units, alternate years, not given this year

GEOPHYS 240. Crosswell Seismic Profiling
Seismic imaging between boreholes for applications to subsurface characterization, reservoir imaging, and reservoir monitoring. Topics include data acquisition, data analysis, data processing and imaging. Inversion models for transmitted, reflected, and diffracted waves for imaging velocity, attenuation, and anisotropy in heterogeneous media. Use of field datasets and field applications. Prerequisites: 160 or equivalent; familiarity with Matlab or other programming language.
3 units, alternate years, not given this year

GEOPHYS 241A. Practice of Geostatistics and Seismic Data Integration
(Same as GEOPHYS 241) Students build a synthetic 3D (fluvis channel reservoir model with layer depths, channel geometry, and facies-specific petrophysics and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for an actual reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLIB and SRTools). Prerequisite: ENERGY 240. Recommended: experience with Unix, MATLAB/C++/Fortran programming.
3-4 units, Spr (Makervi, T)

On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, key results. May be repeated for credit. Prerequisite: written consent of adviser.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 257. Techniques for Mapping Numerically Intensive Algorithms to Modern High Performance Computers
(Same as GEOPHYS 265) Basics of programming language.
3 units, alternate years, not given this year

GEOPHYS 260. Rock Physics for Reservoir Characterization
How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios.
3 units, Spr (Staff)

GEOPHYS 262. Rock Physics
Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results.
3 units, not given this year

GEOPHYS 265. Imaging Radar and Applications
(Same as EE 355) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields.
3 units, not given this year

GEOPHYS 270. Electromagnetic Properties of Geological Materials
Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability.
3-2 units, Win (Knight, R)

GEOPHYS 280. 3-D Seismic Imaging
The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometries of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units.
2-3 units, Win (Biondi, B)

GEOPHYS 281. Geophysical Inverse Problems
(Same as GEOPHYS 180) Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103.
3 units, alternate years, not given this year

GEOPHYS 287. Earthquake Seismology
Theorems in elastodynamics, Green's functions, attenuation, wave propagation in layered media, ray theory, seismic moment tensors, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology.
3 units, Win (Berzoz, G)

GEOPHYS 288A. Crustal Deformation
Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including silts, dikes, and magma chambers.
3-5 units, Aut (Segall, P)

GEOPHYS 288B. Crustal Deformation
Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.
3-5 units, Win (Segall, P)

GEOPHYS 289. Global Positioning System in Earth Sciences
The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.
3-5 units, alternate years, not given this year

GEOPHYS 290. Tectonophysics
The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms.
3 units, alternate years, not given this year

GEOPHYS 385A. Reflection Seismology
(Same as GEOPHYS 185A) Research in reflection seismology and petroleum prospecting. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Biondi, B; Clapp, R), Win (Biondi, B; Clapp, R), Spr (Biondi, B; Clapp, R), Sum (Staff)

GEOPHYS 385B. Environmental Geophysics
(Same as GEOPHYS 185B) Research on the use of geophysical
methods for near-surface environmental problems. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Knight, R), Win (Knight, R), Spr (Knight, R), Sum (Staff)

GEOPHYS 385E. Tectonics
(Same as GEOPHYS 185E) Research on the origin, major structures, and tectonic processes of the Earth’s crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Klemperer, S; Sleep, N; Thompson, G), Win (Klemperer, S; Sleep, N; Thompson, G), Spr (Klemperer, S; Sleep, N; Thompson, G), Sum (Staff)

GEOPHYS 385J. Global Seismic Techniques, Theory, and Application
(Same as GEOPHYS 185J) Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Lawrence, J), Win (Lawrence, J), Sum (Lawrence, J)

GEOPHYS 385K. Crustal Mechanics
(Same as GEOPHYS 185K) Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Zoback, M), Win (Zoback, M), Spr (Zoback, M)

GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress
(Same as GEOPHYS 185L) Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Zoback, M; Segall, P; Beroza, G), Win (Beroza, G; Segall, P; Zoback, M), Spr (Beroza, G; Segall, P; Zoback, M)

GEOPHYS 385S. Wave Physics
(Same as GEOPHYS 185S) Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Harris, J), Win (Harris, J), Spr (Harris, J)

GEOPHYS 385V. Poroelasticity
(Same as GEOPHYS 185V) Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Mavko, G), Win (Mavko, G), Spr (Mavko, G)

GEOPHYS 385Z. Radio Remote Sensing
(Same as GEOPHYS 185Z) Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit. WIM at 3-unit level.
1-3 units, Aut (Zebker, H), Win (Zebker, H), Spr (Zebker, H)

GEOPHYS 399. Teaching Experience in Geophysics
On-the-job training in the teaching of geophysics. An opportunity to develop problem sets and lab exercises, grade papers, and give occasional lectures under the supervision of the regular instructor of a geophysics course. Regular conferences with instructor and with students in the class provide the student teacher with feedback about effectiveness in teaching.
2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 400. Research in Geophysics
1-15 units, Aut (Staff), Win (Lawrence, J), Spr (Staff), Sum (Staff)

STANFORD BULLETIN, 2009-10

GERMAN GENERAL (GERGEN)

UNDERGRADUATE COURSES IN GERMAN GENERAL

GERGEN 38A. Introduction to Germanic Languages
(Same as GERLIT 138) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum 4 units, not given this year

GERGEN 104N. Resistance Writings in Nazi Germany
(F, Sem) Stanford Introductory Seminar. Preference to sophomores. The letters and diaries of individuals who resisted Nazi oppression and paid with their lives. Readings include the Scholl diaries, Bonhoeffer’s letters and his Ethics, and letter exchanges from other crucial figures. No knowledge of German required; students may read texts in original if able. GER:DB-Hum 3 units, Win (Bernhardt, E)

GERGEN 122Q. The Culture of Pessimism in 19th- and 20th-Century Europe
(S, Sem) Stanford Introductory Seminar. European culture long relied on a narrative of inexorable human progress. Starting in the 19th century, this triumphalist narrative was shadowed by another tradition that rejected such trust in progress. The pessimistic tradition in philosophy, literature, political philosophy, and popular culture, the study of history, anthropology, and psychology: the distinction between pessimism in the fields of morality, culture, and intellectual life. Authors include Giacomo Leopardi, Arthur Schopenhauer, Lautréamont, T. S. Eliot, and Sigmund Freud. GER:DB-Hum 3-5 units, Spr (Daub, A)

GERGEN 125. Varieties of freedom in German culture
For undergraduates. Changing ideas of human self-determination in works by Luther, Goethe, Kant, Kleeist, Hegel, Heine, Marx, Keller, Nietzsche, Adorno, and Horkheimer. Students may read assignments in English or in German. Discussion in English. GER:DB-Hum 5 units, not given next year

GERGEN 141. Fables of Retreat
Modern anti-heroes who assert themselves through feats of reduction and retreat. Writers include Rousseau, Tieck, Emerson, Thoreau, Melville, Dostoevsky, and Kafka. 3-5 units, not given this year

GERGEN 148. A Brief History of Misogyny
(Same as GERGEN 248) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Spinoza, Nietzsche, Weimar, and the French circle. In English. GER:DB-Hum, EC-Gender 3-5 units, not given this year

GERGEN 160. Interiors and Interiority in the 19th Century
(Same as GERGEN 229) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political values, and social potential as portrayed in film. 5 units, not given next year

GERGEN 161. Wagnerian Echos: A Cultural History from Modernism to Popular Culture
(Same as HUMNTIES 192T, MUSIC 150G) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum 3-5 units, Spr (Daub, A; Grey, T)
GERGEN 170A. Postwar: German Culture after World War II
(Same as GERGEN 270A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.

3-5 units, not given this year

GERGEN 177. Culture and Politics in Modern Germany
Germany’s troubled transition to modernity in literature and theory. Themes include romanticism and an emerging national identity, pietism and the Bildungsbürgertum, the Marxist intervention, life and strife in the Weimar Republic, the Third Reich as reactionary modernism, 1968, really-existing socialism in the GDR, and unification and its discontents. The articulation of gender in shifting historical contexts. Fifth unit for reading literary texts in German. GER:EC-Gender

4-5 units, Aut (Kramer, K)

GERGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FREN-GEN 181, ITALGEN 181) Required gateway course for philosophical and Literary Thought; crosslisted in departments sponsoring the literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analysis of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthès, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

GERGEN 183. Scenarios of Dissolution in the Modern Novel
(Same as GERGEN 283) How do novels capture chaos? 20th-century novels respond to catastrophes such as: the dissolution of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai).

GER:DB-Hum

4 units, not given this year

GERGEN 201. Conservative Revolution
(Same as COMPLIT 234) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal, Rudolf Borchardt, Karl Haushofer, Konrad Weiss. Readings in either English or German. GER:DB-Hum

3-5 units, Win (Berman, R)

GERGEN 205. Technologies of the Self
Important moments in the history of the discursive and rhetorical construction of the subject. Emphasis is on tensions between uniqueness and exemplariness, chronology and repetition, narrative and archive, and aesthetics and ethics of retrospection. Works by Augustine, Teresa of Avila, Montaigne, Rousseau, Goethe, Nietzsche, Joyce, Gide, Sartre, Leiris, and Barthes. Theoretical and critical essays including by Lejeune, Starobinski, De Man, Derrida, Marin, Koerner, Foucault, and Beaujour. GER:DB-Hum

3-5 units, not given this year

GERGEN 212. The Invention of Experience
Experience viewed as a source of orientation irredicible to discursive knowledge in the 19th century. The encounter with art as the paradigm of experience; lived vs. cumulative experience; the modern crisis of experience; experiential openness and the authority conferred by experience. If it is neither pleasure nor knowledge sought, could it be experience? Role of Goethe in the cult of experience (Faust I, Elective Affinities). Montaigne, Hegel, Emerson, Rilke, Benjamin, Koselleck, and Gadamer. GER:DB-Hum

3-5 units, Spr (Dornbach, M)

GERGEN 221. Memory in the Modernist Novel
Preference to freshmen. The art of memory as one of the main characteristics of modernity. The relationship between memory and modernism through major narrative texts: Rainer Maria Rilke’s The Notebooks of Malte Laurids Brigger, James Joyce’s A Portrait of the Artist as a Young Man; and Marcel Proust’s Com- bray. How memory is represented in the novels, and its role in the perception of external reality. How memory helps to constitute personal identity. The metaphors used to define memory. Readings include theoretical and critical essays, and primary texts. GER:DB-Hum, DB-Hum

4 units, Spr (Douwaltci, C)

GERGEN 221A. Modernism and the Jewish Voice in Europe
(Same as COMPLIT 247, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandels- dam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum

3-4 units, Spr (Eshel, A; Saffran, G)

GERGEN 267. Freud and the Apostle Paul
(Same as GERGEN 367) Intersections between Freud’s psychoa-nalysis of society and Paul’s political theology. Emphasis is on the issues of law, love, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin.

GER:DB-Hum

3-5 units, not given this year

GRADUATE COURSES IN GERMAN GENERAL

GERGEN 206. Narrative, Visuality, Memory
(Same as GERGEN 306) Moments in the history of the relationship between the verbal and the visual: the classical ars memoriae; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.

3-5 units, not given this year

GERGEN 211. Theodor W. Adorno
Adorno’s work; his philosophical development from the 30s to the posthumous works of the late 60s. Focus is on his late works Negative Dialectics and Aesthetic Theory Attention to waypoints of his earlier development, such as his engagement with Heideggerian ontology, his developing thinking about Wagner, and his attitude to mass culture.

3-5 units, Aut (Daub, A)

GERGEN 229. German Cinema
(Same as GERGEN 129) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. Ger-man thought, political valences, and social potential as portrayed in film.

5 units, not given next year

GERGEN 230. Truth in Art
Does art disclose an ultimate truth or does it help people avoid, endure, or affirm a truth which would otherwise be hard to bear? How modern thinking about art is defined by the tension between the idea that pleasure in art is disinterested and outside striving for true knowledge or ethical orientation and the idea that art offers some kind of deeper insight into people’s place in the world. How these tensions play out in Kant, Schopenhauer, Nietzsche, Heidegger, and Adorno. In English.

3-5 units, not given this year

GERGEN 246. Being at Home in the World: Kant’s Critique of the Power of Judgment
Close reading of Kant’s influential attempt to show that humans...
GERMAN LANGUAGE (GERLANG)

UNDERGRADUATE COURSES IN GERMAN LANGUAGE

GERLANG 1. First-Year German, First Quarter
Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.
3-5 units, Aut (Strachota, K), Win (Staff), Spr (Nissler, P)

GERLANG 2. First-Year German, Second Quarter
Continuation of 1. Prerequisite 1 or equivalent.
3-5 units, Aut (Petig, W), Win (Strachota, K), Spr (Staff)

GERLANG 3. First-Year German, Third Quarter
Continuation of 2. Fulfills the University language requirement. Prerequisite 2 or equivalent.
5 units, Aut (Staff), Win (Staff), Spr (Petig, W)

GERLANG 5A. Intensive First-Year German, Part A
Equivalent of 1,2,3 combined. Stanford graduate students restricted to 9 units register for 205A,B.
5 units, Sum (McQueen, K)

GERLANG 5B. Intensive First-Year German, Part B
Continuation of 5A. Fulfills the University language requirement. Prerequisite 5A or equivalent. Stanford graduate students restricted to 9 units register for 205B.
5 units, Sum (Tsui, C)

GERLANG 10. Elementary German for Seniors and Graduate Students
Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 52 fulfills Ph.D. reading exam.
4 units, Win (Petig, W), Sum (Petig, W)

GERLANG 11P. Individually Programmed Beginning German
For those who wish to complete more or fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently. Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit.
1-12 units, Aut (Strachota, K), Win (Strachota, K), Spr (Petig, W)

GERLANG 20A. Beginning German Conversation
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 20B. Intermediate German Conversation
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 20C. Advanced German Conversation
1 unit, Aut (McQueen, K), Win (Staff), Spr (McQueen, K)

GERLANG 20E. Fun Facts about Europe
1 unit, Win (Staff)

GERLANG 20K. Kuche Mitt (German Cooking Class)
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 20M. Mitt Movie Series
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 20P. Theme Projects
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 20T. Teaching German Conversation
1 unit, Aut (McQueen, K), Win (Staff), Spr (Staff)

GERLANG 21. Intermediate German I
Reading short stories, and review of German structure. Discussions in German, short compositions, videos.
4 units, Aut (Petig, W)

GERLANG 21S. Intermediate German
Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.
4 units, Sum (Petig, W)

GERLANG 21W. Intermediate German I: German for Business and International Relations
Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students
GERLANG 22. Intermediate German II
Continuation of 21, with greater emphasis on reading and writing skills. Literary texts of major 20th-century writers in historical context.
4 units, Win (Petig, W)

GERLANG 22W. Intermediate German II: German for Business and International Relations
Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: 21 or 21W.
4 units, alternate years, not given this year

GERLANG 52. Readings in Humanities
For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Prerequisite: one year of German, or 10, or equivalent.
4 units, Spr (Petig, W)

GERLANG 99. Language Specials
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 100. Hundert Deutsche Jahre: One Hundred German Years
Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and democracy, money, Hitler, books, the Wall, and food. Video series, parallel readings, discussion in German. Extra listening, reading, or speaking for fourth unit.
3-4 units, Win (Strachota, K)

GERLANG 101. Advanced Language Study I
Short fictional and expository readings, discussions, compositions. Review of grammatical structures. Vocabulary building with emphasis on common idiomatic expressions and troublesome lexical distinctions.
3-4 units, Aut (Staff)

GERLANG 102. Advanced Language Study II
Continuation of 101.
3-4 units, Spr (Staff)

GERLANG 105. Advanced Business German
For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: 22 or equivalent.
4 units, Spr (Petig, W)

GERLANG 110. German Newspapers
For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit
3-4 units, not given this year

GERLANG 111. Television News from Germany
For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.
3-4 units, Aut (Strachota, K)

GERLANG 199. Individual Reading
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GERMAN LANGUAGE

GERLANG 205A. Intensive First-Year German
Equivalent of 1,2,3 combined. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 210. Elementary German for Graduate Students
Restricted to Stanford graduate students. Prerequisite: consent of instructor.
3-4 units, Sum (Staff)

GERLANG 395. Graduate Studies in German
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

GERLANG 399. Independent Study
Prerequisite: consent of instructor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAN LITERATURE (GERLIT)

UNDERGRADUATE COURSES IN GERMAN LITERATURE

GERLIT 16N. Music, Myth, and Modernity: Wagner's Ring Cycle and Tolkien's Lord of the Rings
(F,Sem) (Same as MUSIC 16N) Stanford Introductory Seminar. Preference to freshmen. Roots of Wagner's operatic cycle and Tolkien's epic trilogy in a common core of Norse, Germanic, and Anglo-Saxon mythology. The role of musical motive and characterization in Wagner's music dramas and the film version of Tolkien's trilogy. Music as a key element in the psychological, political, and cultural revision of ancient myth in modern opera and film. GER:DB-Hum, EC-GlobalCom
3 units, Spr (Grey, T)

GERLIT 120Q. Is God Dead?
(S,Sem) (Same as COMPLIT 50Q) Stanford Introductory Seminar. A consideration of Nietzsche's claim that God is dead in relation to other texts of German literature and philosophy. The status of religious faith in relation to modernity and secularization; religion and science; culture and faith. Readings in German include selections from sacred and liturgical texts; fictional depictions of religious experience; religion in poetry; German theories of religion. Authors to be studied include Rilke, Hesse, Weiss, Schöder, Buber, Sachs, Haecker, Weber, Taubes, Ratzinger. GER:DB-Hum
3-5 units, Win (Berman, R)

GERLIT 121. The Viennese Coffeehouse
Cultural and literary significance of fin de siècle Vienna's enduring symbol, the coffeehouse. What was the function of the café in aesthetic, literary, and political debates central to Vienna at the turn of the century? How did coffeehouse and newspaper culture influence developments in modernist prose? Texts by Hermann Bahr, Arthur Schnitzler, Karl Kraus, Peter Altenberg, Felix Salten, Sigmund Freud, Egon Friedell and Alfred Polgar, in English translation; German texts available.
3-5 units, Aut (McQueen, K)

GERLIT 123N. The Brothers Grimm and Their Fairy Tales
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Historical, biographical, linguistic, and literary look at the Kinder- und Hausmärchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Small group performances of dramatized fairy tales. In German. Prerequisite: GERLANG 3 or equivalent. GER:DB-Hum, WIM
4 units, Spr (Robinson, O)

GERLIT 127. Uncanny Literature in the Nineteenth Century
From ghost children and animated statues, the walking dead to machine women and doppelgangers, 19th-century German literature teems with things that go bump in the night. The history of this tradition of fantastic literature in Germany, its origins, main authors, and defining features. Authors include E.T.A. Hoffmann, Wilhelm Hauff, Friedrich Schiller, Joseph von Eichendorff and Jeremias Gotthelf. Readings and writing in German. GER:DB-Hum
4 units, not given this year

GERLIT 127A. The German Ballad
This course charts the history of the German ballad, from Goethe and Schiller, to Romantic and Realist poets - additional reading will attempt to contextualize the German ballad in the European context. Musical ballads and song arrangements will also be considered. WIM
3-4 units, Aut (Daub, A)
COURSES OF INSTRUCTION

GERLIT 129. The German Novella
Authors such as Kleist, Eichendorff, F. T. A. Hoffmann, Goethe, Keller, Fontane, and Thomas Mann. Focus is on structural-textual elements such as event, situation, conflict, symbol, and turning point as well as questions concerning order, chaos, contingency, the relation between fiction and reality, and ostracism. Readings in German include novels such as Das Erdbeken in Chili, Das Marmorbild, Mario und der Zauberer, Traummovelre, Die Taube, Im Krellbsgang.
3-5 units, Aut (Shamel, M)

GERLIT 130. Brecht and Modern Aesthetics
Bertolt Brecht’s poetic and dramatic works, and analysis of his contribution to modern paradigms of poetic and dramatic practice. Readings in German include poetry, dramas such as Baal, Im Dickicht der Staedte, Die Dreigroschenoper, Aufstieg und Fall der Stadt Mahagonny, Mutter Courage und ihre Kinder, and theoretical writings on lyric poetry and drama.
3-3 units, Spr (Shamel, M)

GERLIT 131. Goethe: Poetic Vision and Vocation in the Age of Reason
Introduction to Goethe’s major works, reading across genres of poetry, drama, the novel, and autobiography; critical writings on art, nature, and aesthetics. Central trends in Goethe’s thought; the interrelatedness of poetic vision and philosophical thinking in his works. Goethe in relation to other intellectual and philosophical movements of the period, including romanticism. GER:DB-Hum
3-5 units, not given this year

GERLIT 131A. Immigrant/Minority Literature and the Emergence of Multiculturalism in Germany
Immigrant culture and literature in Germany across genres, including stories, drama, memoirs, and film. What do immigrants in Germany write about? What role does immigrant literary culture play in the formation of notions of cultural difference and dialogue? How do the dynamics of ethnic and cultural diversity influence concepts and notions of culture and nationhood in Germany?
GER:DB-Hum
3 units, not given this year

GERLIT 131B. German Lyric and the Oriental Tradition
German lyric and Oriental models: German poets’ encounter with Persian and Arab literary culture; adaptation and transformation of poetic form and stories; theories of lyric. Readings include poems such as Goethe (West-oestlicher Divan), Ruckert (Oestliche Rosen), Platen (Ghaselen), and Heine (selected poems in German translation). The course will focus on the development of informed reading skills through close analysis of poems and will explore the idea of lyric poetry as a transcultural and trans-national phenomenon as well as lyric’s relationship to music both in the context of Germany and the Orient. GER:DB-Hum
3-5 units, Win (Shamel, M)

GERLIT 133Q. Modernism and Fiction
Preference to sophomores. Innovative ideas and narrative forms in German modernism. International and specifically German features. Problems of narration. Texts such as Musil’s Torless, Mann’s Tod in Venedig, Kafka’s Die Verwandlung, and Broch’s Pasenow. Close reading technique. Prerequisite: reading knowledge of German. GER:DB-Hum
4 units, not given this year

GERLIT 135. Outsiders and Outcasts: introduction to German Prose Fiction
Close reading and discussion of literary works by Hebel, Tieck, Kleist, Hoffmann, Heine, Keller, Storm, R. Walser, and Kafka. Attention paid to writers’ divergent responses to the artistic, ethical, and political challenges of modernity. Readings, discussion, and writing assignments in German; length of assignments adjusted to students’ linguistic competence. Prerequisite: German language sequence at Stanford or equivalent. GER:DB-Hum, WIM
4 units, Win (Dornbach, M)

GERLIT 136. Berlin Topographies in the 20th Century
Development of Berlin’s spatial imaginaries from the boulevards of the late 19th century to the Weimar Republic’s urban agendas, and to the repeated reconstructions by the Nazis, the GDR and Berlin Republic. Sources: Walter Benjamin, Siegfried Kracauer, Berthold Brecht, Peter Weiss, Mascha Kalerto, Peter Schneider, Blixa Bargeld, Wolf Biermann, Christoph Hein, Monika Maron, Thomas Hettche, and Wim Wenders. In German. GER:DB-Hum
4 units, not given this year

GERLIT 137. Introduction to German Poetry
4 units, not given this year

GERLIT 138. Introduction to Germanic Languages
(Same as GERGEN 38A) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum
4 units, not given this year

GERLIT 139. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries
(Same as GERLIT 339) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German. GER:DB-Hum
3-5 units, not given this year

GERLIT 148. Heart to Heart: Theories of Expression at the Turn of Two Centuries
(Same as GERLIT 248) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English. GER:DB-Hum
3-5 units, not given this year

GERLIT 151. German Underworlds
(Same as GERLIT 251) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Nietzsche, Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.
3-5 units, not given this year

GERLIT 163. Readings in 19th-Century German Literature
(Same as GERLIT 263) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German. GER:DB-Hum
4 units, not given this year

GERLIT 177. Downright DEFA: Films from the German Democratic Republic
Against the backdrop of the 20th anniversary of the opening of the Berlin Wall on November 9, this film series will be an exercise in projected memory, conjuring the ‘First Workers’ and Farmers’ State on German Soil’ through the images of its state film production agency, the DEFA. The films selected are a diverse and telling sampling of DEFA’s best.
1 unit, Aut (Kramer, K)

GERLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189. 3-5 units, Win (Staff)

GERLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189. 2 units, Spr (Staff)

GERLIT 197. Theories of Art after Idealism
(Same as GERLIT 297) Key responses to the failure of idealism to
integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

GERLIT 199. Independent Reading

36 hours of reading per unit, weekly conference with instructor. May be repeated for credit. Prerequisite: consent of instructor.

I–10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 206. Narrative, Visuality, Memory

(Same as GERLIT 306) Moments in the history of the relationship between verbal and visual: the classical ars memoriae; the ephiphanies of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelman, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust. GER:DB-Hum

3-5 units, not given this year

GERLIT 223. Literary Diaries of Classic Modernity

(Same as COMPLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne’s Essais and Rousseau’s Confessions, analysis of the self has been a central topic for modern literature. Texts include Baudelaire’s Intimate Journals, Kafka’s Diaries, Gide’s Journals, Woolf’s Moments of Being, Benjamin’s Berlin Childhood, and Pavese’s Diaries. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.

3-5 units, Spr (Bohrer, C)

GERLIT 241. Deutsche Geistesgeschichte I: German Aesthetic Thought, 1790-1872

The seminal tradition of writing about art including the German idealists (Kant, Schelling, Hegel, and Schiller), romanticists (Schlegel, Novalis, and Hoffmann), and Schopenhauer, Kierkegaard, and Nietzsche. In English. GER:DB-Hum

4 units, not given this year

GERLIT 242. Narrative and Ethics

(Same as COMPLIT 226) Major terms of narratology; how different literary, cinematic, and popular culture narratives raise ethical issues, stir public debates and contribute to understanding human values. Readings include Biblical texts, Antigone, Kleist, Kafka, Coetzee, V for Vendetta, South Park, Kant, Arendt, Nussbaum, Rorty, and Levinas.

3-5 units, Win (Eshel, A)

GRADUATE COURSES IN GERMAN LITERATURE

GERLIT 217. Hölderlin’s Poetry

(Same as COMPLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic “now”. The seminar also explores the relationship between the philosophy of history and poetic metaphor.

3-5 units, Spr (Bohrer, C)

GERLIT 219. German Utopias and Dystopias in the 20th Century

This course investigates the fraught relationship of Geist and politics in 20th century visions of a utopian republic of letters, mostly from Germany’s conservative intellectuals: The George-circle’s idea of a ‘secret Germany,’ the ‘conservative revolution’ of Hugo von Hofmannsthal, Mann’s Reflections of a Non-Political Man are the most influential such attempts at an aesthetic politics. Other texts instead interrogate and at times parody their attempts, for instance Hesse’s Glass Bead Game and Arno Schmidt’s Egghead Republic.

3-5 units, Win (Daub, A)

GERLIT 246. Memory, History, and the Contempory Novel

(Same as COMPLIT 221) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur, and Walter Benn Michaels.

3-5 units, not given this year

GERLIT 248. Heart to Heart: Theories of Expression at theTurns of Two Centuries

(Same as GERLIT 148) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and self, and self and art. Discussion in English.

3-5 units, not given this year

GERLIT 250A. Modern Drama

Problems of drama as genre, especially in relationship to problems of modernism. Transitions from classical and popular theater. New structures of action and conflict; epic theater; competition with film; transformed theatrical practices. Authors: Nestroy, Hauptmann, Hofmannsthal, Brecht, and Horvath. (Satisfied by enrollment in GERLIT 369 in 2008-09.)

3-5 units, not given this year

GERLIT 250B. German Romanticism and Its Repercussions

Works by Novalis, the Schlegel brothers, Tieck, Wackenroder, Hoffmann, and Klingemann. Theory of the subject; transformative politics and conservative-religious retreat into inwardness; the fragment form and the novel; reflection, play, irony; the productive self-movement of language; the hieroglyph of nature; animating effects of Romantic desire and its impasses; interactions among literature, music, and painting. Ambivalent and critical responses to Modernism (Hegel, Heine, Nietzsche) and recent revivals (Benjamin, Lacoue-Labarthe, Nancy, and Frank). Readings in German, discussion in English.

3-5 units, not given this year

GERLIT 250C. Postwar German Culture and Thought: 1945 to the Present

How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).

3-5 units, Spr (Eshel, A)

GERLIT 251. German Underworlds

(Same as GERLIT 151) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.

3-5 units, not given this year

GERLIT 255. Middle High German

Introduction to medieval German language and culture. Readings include Hartmann von Aue and Gottfried von Straßburg; genres include Minnesang, epic, and romance. Grammar review, emphasis is on rapid and accurate reading.

3-5 units, not given this year

GERLIT 256. Old High German

Introduction to the grammar and the texts of the earliest attested stage of high German

3-4 units, not given this year

GERLIT 257. Gothic

Introduction to the grammar, texts, and history of this earliest extensively documented Germanic language, a relative of German and English. Issues surrounding the Germanic parent language.

4 units, not given this year

GERLIT 258. German Dialects

Linguistic characteristics of dialect areas. History of the study of language variation in Germany; traditional dialect grammars; dialect-geographical revolution; and insights of modern sociolinguistics.
HEALTH RESEARCH AND POLICY

UNDERGRADUATE COURSES IN HEALTH RESEARCH AND POLICY

**HRP 89Q. Introduction to Cross Cultural Issues in Medicine**
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

3 units, Win (Corso, I)

**HRP 199. Undergraduate Research**
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN HEALTH RESEARCH AND POLICY**

**HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I**
Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

2 units, Aut (Haberland, C)

**HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II**
Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

2 units, Win (Haberland, C)

**HRP 209. FDA’s Regulation of Health Care**
(Same as LAW 458) Open to law and medical students; other graduate students by consent of instructor. The FDA’s regulatory authority over drugs, biologies, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

2-3 units, not given this year

**HRP 210. Health Law and Policy**
(Same as LAW 313) Open to law or medical students; other graduate students by consent of instructor. Focus this term is on the American health care financing system and its reform, how the present system works, diagnosing where it does not work, and exploring how it might be improved.

3 units, Aut (Greely, H)

**HRP 211. Law and the Biosciences**
(Same as LAW 368) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, cognitive enhancement.

3 units, not given this year

**HRP 212. Crosscultural Medicine**
Developing interviewing and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.

3 units, Spr (Corso, I)

**HRP 214. Scientific Writing**
Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly. Preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course.

2-3 units, Win (Sainani, K)

**HRP 215. Scientific Writing for Basic and Translational Scientists**
How to write clearly, concisely, and effectively. Focus is on the process of writing and publishing a scientific manuscript. Not intended for Epidemiology graduate students.

2-3 units, Sum (Sainani, K)

**HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research**
Topics include: advanced aspects of study design and data analyses; development of health measurement instruments; methods of summarizing literature and quantifying effect sizes; and multivariable nature of health events in human populations. 3 units requires a term paper. Prerequisites: 225, and 258 or 261, or consent of instructor.

2-3 units, Spr (Staff)
HRP 220. Biotechnology Law and Policy
(1 unit) Open to law or medical students; other graduate students by consent of the instructor. Focus is on the biotechnology industry, with some discussion of the med tech and medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. Group project making law and business recommendations about a biotech firm.
3 units, Spr (Greely, H)

HRP 221. Law and the Biosciences: Genetics
(1 unit) Open to all law or medical students; other graduate students by consent of the instructor. Ethical, legal, and social issues arising primarily from advances in knowledge of human genetics. May also include a section on stem cell research.
3 units, Spr (Greely, H)

HRP 223. Epidemiologic Analysis: Data Management and Statistical Programming
The skills required for management and analysis of biomedical data. Topics include importing and exporting data from multiple database systems, visualizing and cleaning data, data management for multicenter projects, and data security. Introduction to applied statistical programming relevant to epidemiologic and clinical research. No previous programming experience required.
3 units, Aut (Balise, R)

HRP 225. Design and Conduct of Clinical and Epidemiologic Studies
Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, estimating sample size, questionnaire design, and the effects of measurement error. Prerequisite: A basic/introductory course in statistics or consent of instructor.
3 units, Win (Nelson, L)

HRP 226. Advanced Epidemiologic and Clinical Research Methods
Principles of measurement, measures of effect, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor.
3 units, Aut (Popat, R)

HRP 228. Genetic Epidemiology
Reading of seminal papers in genetic epidemiology. Topics include human genetic variation, genetics of complex diseases, genome-wide association studies, and new genomic technologies. Provides a background for clinicians, epidemiologists, and other scientists to incorporate the study of genetic factors into human disease research. Prerequisite: HRP 225 or consent of instructor.
2 units, Spr (Staff)

HRP 229. Methods in Chronic Disease Epidemiology
Descriptive epidemiology and sources of incidence and mortality data; biological bases of neurological, musculoskeletal, cardiovascular, and other chronic diseases except cancer; methodological and analytic issues relevant to chronic epidemiologic research; causal inference; major environmental risk factors; genetic susceptibility; and examples of current research and critiques of literature. Prerequisite: 225 or consent of instructor.
3 units, Win (Nelson, L)

HRP 230. Cancer Epidemiology
Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors; genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225 or consent of instructor.
2-3 units, alternate years, not given this year

HRP 231. Epidemiology of Infectious Diseases
Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.
3 units, Win (Staff)

HRP 235. Molecular Biology of Infectious Diseases
Prerequisite: HRP 225 or consent of instructor. Focus is on the biotechnology industry, with some discussion of the med tech and medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. Group project making law and business recommendations about a biotech firm.
3 units, Spr (Greely, H)

HRP 236. Epidemiology Research Seminar
Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.
1 unit, Aut (Henderson, V), Win (West, D), Spr (Whittemore, A)

HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health
(Same as HUMBIO 159) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.
2-3 units, Win (Popat, R)

HRP 239. Understanding Statistical Models and their Social Science Applications
(Same as EDUC 260X, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data; mediation and moderating variables. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods
3 units, Win (Rogosa, D)

HRP 251. Design and Conduct of Clinical Trials
The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.
3 units, Spr (Henderson, V; Lavori, P)

HRP 252. Outcomes Analysis
(Same as BIOMEDIN 251) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including reanalyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.
3 units, Spr (Bhattacharya, J)

HRP 256. Economics of Health and Medical Care
(Same as BIOMEDIN 156, BIOMEDIN 256, ECON 126) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.
5 units, Aut (Bhattacharya, J)

HRP 258. Introduction to Probability and Statistics for Clinical Research
Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.
3 units, Spr (Sainani, K)

HRP 259. Introduction to Probability and Statistics for Epidemiology
Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of
variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications.
4-5 units, Aut (Sainani, K)

HRP 260A. Workshop in Biostatistics
(Same as STATS 260A) Applications of statistical techniques to current problems in medical science.
1-2 units, Aut (Olishen, R)

HRP 260B. Workshop in Biostatistics
(Same as STATS 260B) Applications of statistical techniques to current problems in medical science.
1-2 units, Win (Olishen, R)

HRP 260C. Workshop in Biostatistics
(Same as STATS 260C) Applications of statistical techniques to current problems in medical science.
1-2 units, Spr (Olishen, R)

HRP 261. Intermediate Biostatistics: Analysis of Discrete Data
(Same as BIOMEDIN 233, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenszel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.
3 units, Win (Sainani, K)

HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis
(Same as STATS 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile likelihood, matching data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.
3 units, Spr (Staff)

HRP 280. Spanish for Medical Students
(Same as SPANLANG 121M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Aut (Corso, I)

HRP 281. Spanish for Medical Students
(Same as SPANLANG 122M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Win (Corso, I)

HRP 282. Spanish for Medical Students
(Same as SPANLANG 123M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Spr (Corso, I)

HRP 283. Health Services Research Core Seminar
Presentation of research in progress and tutorials in the field of health services research.
1 unit, Aut (Haberland, C), Win (Haberland, C), Spr (Haberland, C)

HRP 290. Advanced Medical Spanish Oral Communication
Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.
3 units, Aut (Corso, I), Win (Corso, I), Spr (Corso, I)

HRP 299. Directed Reading in Health Research and Policy
Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 351. Health Care Technology: From Innovators to Providers to Patients
(Same as GSBBGEN 351) How health care businesses use biotechnology, medical technology and information technology to improve patient outcomes and manage costs. New technologies commercialized by innovator biotech and pharmaceutical companies, device manufacturers, diagnostics developers, and health IT companies, and adopted by hospitals and physicians in patient care and paid for by third-party payers. Case studies: how innovators finance and manage new product development; clinical trial management and gaining regulatory approval; product adoption; business models to drive innovation; clinical and business models for adopting new technology; organizational change; criteria for reimbursement and coverage decisions; selective provider network design to manage added costs; and IT-intensive business models. Guest speakers and panelists.
4 units, not given this year

HIST 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 391. Health Care Regulation, Finance and Policy
(Same as PUBLPOL 231) (SAME AS LAW 348) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid), employer-sponsored insurance, the uninsured, medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.
3 units, Win (Kessler, D)

HRP 392. Analysis of Costs, Risks, and Benefits of Health Care
(Same as BIOMEDIN 432) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.
4 units, Aut (Garber, A; Owens, D)

HRP 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY (HISTORY)

UNDERGRADUATE COURSES IN HISTORY

HISTORY 6N. Utopia: History of Nowhere Land
(F.Sem) Stanford Introductory Seminar. What would the perfect society be? How would work be organized, and education, honor and profit be distributed? How would children be raised, and who would govern? Such questions have engaged philosophers, revolutionaries, and dreamers in every historical age. Examines utopian literature from ancient Greece through the modern age, focusing on the early modern period. GER.DB-Hum
4 units, Spr (Stokes, L)

HISTORY 7S. The Age of Discovery: Maritime Imperialism and Science, 1400-1850
Chinese, Portuguese, Spanish, and British voyages of trade, exploration and science. The voyages of Zheng He, Da Gama, Magellan, Cook, Malaspina, Darwin. Topics include: developments in maritime technology during this period; the interrelationship between science and empire in the early modern world; non-European accounts of the Age of Discovery with examples from Japan, Malac-
ca., and E. Africa; and changing perspectives on exploration and explorers, using Columbus and Zheng He as comparisons.

5 units, Aut (Aranda, M)

HISTORY 10A. Europe from Antiquity to 1500
(Same as History 110A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and enserfment; courtly love; and scholasticism.

3 units, Win (Buc, P)

HISTORY 10B. Early Modern Europe
(Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include religious war, state building and revolt, exploration and colonialism, gender and society.

3 units, Spr (Stokes, L)

HISTORY 13N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History
(Same as CLASSHIS 23N) Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus’ rebellion; how the dramatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick’s 1960 film.

3 units, Aut (Saller, R)

HISTORY 14N. The Crusades
(F,Sem) Stanford Introductory Seminar. What were the European crusades? How can we explain this phenomenon, which mobilized entire societies for holy wars against pagans, Muslims, heretics, and sometimes bad kings? Was religion the main motivator, or should one factor in economics and political ambitions? How did European minorities, including Jews, fit within this phenomenon? Was there a difference between crusading warfare and ordinary warfare? GER:DB-Hum

5 units, Aut (Buc, P)

HISTORY 20A. Russian Civilization from Beginnings to the Enlightenment
(Same as HISTORY 120A. History majors and others taking 5 units, register for 120A.) Fundamental building blocks of Russian civilization, treated thematically, from the tenth to the eighteenth centuries: religion, art and architecture, literature, social structures, political ideology, and political culture.

3 units, Aut (Kollmann, N)

HISTORY 20Q. Russia in the Early Modern European Imagination
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The contrast between the early modern image of Europe as free, civilized, democratic, rational, and clean against the notion of New World Indians, Turks, and Chinese as savage. The more difficult, contemporary problem regarding E. Europe and Russia which seemed both European and exotic. Readings concerning E. Europe and Russia from the Renaissance to the Enlightenment; how they construct a positive image of Europe and conversely a negative stereotype of E. Europe. Prerequisite: PWR 1. GER:DB-Hum, EC-GlobalCom

5 units, Spr (Kollmann, N)

HISTORY 22N. Crime, Punishment, and Rebellion in Early Modern Russia
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Goal is to understand the social values that shaped and moderated violence in Russia and the stresses created by the rise of the early modern state. Rising crime and banditry, corporal and capital punishment, and bloody rebellions as response to the rising demands that the state placed on society. The early modern state-building project, a process of empire building and military reform that required higher taxation and more stringent social control. Forms in which violence erupted in early modern Russia. Causes, the moral economy of violence and rebellion, and the symbolism of public executions. Readings include law codes, court cases, and studies of rebellions in the time of troubles and in Catherine the Great’s time. Violence engendered by religious dissidents in the name of true faith in the late 17th century. GER:DB-Hum

5 units, Win (Kollmann, N)

HISTORY 24S. The Soviet Union Through Western Eyes: Workers’ Paradise and Evil Empire
Soviet history through the experiences and perceptions of foreigners including travelers, diplomats, writers, journalists, and statesmen. Events and topics include: the 1917 Revolution; NEP and the 1920s; collectivization, industrialization, and Stalinist terror; World War II; Cold War; developed socialism; last years and downfall of the Soviet Union. Issues of perception and historical interpretation, and the problems and opportunities of observing secretive totalitarian societies.

5 units, Win (Frese, A)

Sources such as declarations by the Allies, speeches, Berliners’ diaries, novels, examples of East and West Berlin art, popular music, and film. Topics include the emergence of the Cold War, postwar reconstruction, 60s youth protests in the West, life under Stasi surveillance, the fall of the wall, and historical memory.

5 units, Aut (Matro, K)

HISTORY 30C. Culture and Society in Reformation England
(Same as HISTORY 130C. History majors and others taking 5 units, register for 130C.) Focuses on the appeal of both Reform and Catholic ideas in the political and cultural contexts of early modern Europe. Topics include: the Lutheran revolt; the spread of Protestant ideas; Calvin’s Geneva; the English Reformation; Tridentine reform and the Jesuits; toleration and the underground churches; wars and religious violence; and the making of European confessional identities. Sources include sermons, religious polemics, autobiographies, graphic prints, poetry, and music.

3 units, not given this year

HISTORY 30Q. English Society Through Fiction
(S,Sem) Stanford Introductory Seminar. Preference to sophomores. England from the eighteenth century to the twentieth century through the reading of seven novels ranging from Henry Fielding’s Joseph Andrews, to Evelyn Waugh’s A Handful of Dust. Focus is on the novels themselves and the historical context of the novels to acquire a knowledge of British history over two hundred years. GER:DB-Hum

4 units, Spr (Stansky, P)

HISTORY 31S. The Renaissance of War: War, Technology, and Art in the High Renaissance
How did the Renaissance contribute to the history of warfare? The Italian Wars (1494-1530) were a critical period of military innovation, laying the foundations for European military advantage. Topics include tactics, grand strategy, and the development of diplomatic system, state-building, and war finance. Also examines the rapid development of field artillery, handguns, new fortifications, and how military technology interacted with the art world and literature. Sources include Ariosto, Castiglione, Cellini, Contarini, da Vinci, Giuccidardini, Machiavelli, Michelangelo, Vasari.

5 units, Win (Brege, B)

HISTORY 33A. Blood and Roses: The Age of the Tudors
(Same as HISTORY 133A. History majors and others taking 5 units, register for 133A.) English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheaval of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes.

3 units, Win (Como, D)

HISTORY 33S. The France of Louis XIV
Louis XIV’s reign as the foundation of France’s modern global eminence despite the imposition of governing practices that undermined France’s chance of effective modernization. Sources include 17th-century documents and a computer simulation in game format to define the problems faced by the Sun King and his contemporaries in an era of economic, political, and social change. GER:DB-Hum

5 units, not given this year

HISTORY 34A. European Witch Hunts
(Same as HISTORY 134A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of
state building and scientific discovery, Europeans conducted deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Witch trials and early modern demonology as well as historians’ interpretations of events to seek answers to this question. 3 units, Aut (Stokes, L)

HISTORY 34S. From Tears of Joy to the Reign of Terror: The French Revolution, 1789-1794
How politicians described themselves and each other, and how competing political groups claimed to speak for the people, energized the French Revolution of 1789. Declaring themselves representatives of the people against traitors, royalists, aristocrats, and most of Europe, French politicians destroyed the social order and reformed it with a mixture of bombastic rhetoric and practical solutions. The changing political discourse that first spoke of an ideal community and eventually declared it necessary to kill political opponents. 5 units, Spr (St Meyer, J)

HISTORY 36N. Gay Autobiography
(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Loerke. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers’ experiences? GER:DB-Hum, EC-Gender
4 units, Spr (Robinson, P)

HISTORY 36S. Folk Tales, Fairy Tales, Carnival & Magic: Popular Culture in Early Modern Europe
How did popular culture in early modern Europe affect people’s worldviews and vice versa? What role did the popular play in the past? What can popular culture tell us about human behavior? How do historians use cultural sources to understand the past? Stories, rituals, festivals, how-to manuals and other sources point to the possibilities and problems of studying history through the lens of popular culture.
5 units, Aut (Otto, H)

HISTORY 39. Modern Britain and the Empire
(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain.
3 units, Spr (Satia, P)

HISTORY 40. World History of Science, Technology and Medicine: From Prehistory to the Scientific Revolution
(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as culture and religion.
3 units, Win (Proctor, R)

HISTORY 41A. The Emergence of Medicine: The Middle Ages and Renaissance
(Same as HISTORY 141A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci
3 units, Win (Findlen, P)
their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, Win (Samoff, J)

HISTORY 50A. Colonial and Revolutionary America
(Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

3 units, Aut (Winterer, C)

HISTORY 50B. 19th Century America
(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

3 units, Win (White, R)

HISTORY 50C. The United States in the Twentieth Century
(Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WWII; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War.

3 units, Spr (Chang, G)

HISTORY 50S. The History of Development in Africa
Africa’s experience with international development. Large- and small-scale development projects, from state-led development schemes to community education, examining the doctors, institutions, and agencies that have sought to pursue development. From the colonial to the postcolonial era; the complicated and politically charged processes by which development theory becomes translated into development practice.

5 units, Spr (Bourbonniere, M)

HISTORY 51. Slavery and Freedom in American History
(Same as HISTORY 151. History majors and others taking 5 units, register for 151.) What does the fact that the preamble to the Declaration of Independence, with its professions about equality and unalienable rights, was written by a slaveowner tell us about the history of the U.S., and about the experience of African Americans? Topics include: the Atlantic slave trade, slavery and the American Revolution, the Haitian Revolution, the African colonization movement, abolitionism, the Civil War, and Reconstruction.

3 units, Aut (Campbell, J)

HISTORY 54. 19th-Century U.S. Cultural and Intellectual History, 1790-1860
(Same as HISTORY 154. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images.

3 units, Spr (Winterer, C)

HISTORY 54N. African American Women’s Lives
(F.Sem) (Same as AFRICAAM 54N) Stanford Introductory Seminar. Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality. GER:DB-Hum

4-5 units, Aut (Hobbs, A)

HISTORY 57. The Constitution: A Short History
(Same as POLISCI 128S) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantival due process; the rights revolution; and the Constitution in wartime. GER:EC-AmerCul

5 units, Win (Rakove, J)

HISTORY 59. Introduction to Asian American History
The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative texts, primary material, and historical fiction. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

HISTORY 62N. The Atomic Bomb in Policy and History
(F.Sem) Stanford Introductory Seminar. Preference to freshmen. Emphasis is on declassified files from WW II and recent interpretations. Why did the U.S. drop A-bombs on Japan? Were there viable alternatives, and, if so, why were they not pursued? What did the use of the A-bombs mean then and later? How have post-war interpreters explained, and justified or criticized, the A-bombings? Approaches from history, international relations, American studies, political science, and ethics address the underlying conceptions, the roles of evidence, the logic and models of explanation, ethical values, and cultural/social influences.

GER:DB-SocSci

3 units, Spr (Bernstein, B)

HISTORY 64C. From Freedom to Freedom Now!: African American History, 1865-1965
(Same as AFRICAAM 64C) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Sources include memoirs, letters, personal journals, pamphlets, speeches, literature, film and music.

GER:EC-AmerCul

3 units, Win (Hobbs, A)

HISTORY 67S. The Virgin Mary: Religion and Identity from Mexico City to Los Angeles
Examines the cult of Latin America’s most venerated saint, the Virgin of Guadalupe. Focuses on Mexico and the American Southwest from the colonial period to the twentieth century and emphasizes national and ethnic identity, gender, family, syncretism, and the role of religion in immigrant communities.

5 units, Spr (Fontes, G)

HISTORY 68S. The Cultural Margins of America: Witches, Indians, Africans, Arabs in the 18th-Century Imagination
Contradictions in the myth of a cultural melting pot: instances in early American history when groups, such as women, Africans, Native Americans, and Arabs, were excluded from and not absorbed into the ideal of America. Sources include: 18th-century documents; modern theories in sociology, anthropology, and history to understand the judicial, literary, and linguistic processes that European settlers used to define their communities; case studies that show how cultural myths sustain collective identities.

5 units, Win (Mansfield, J)

HISTORY 70. Culture, Politics, and Society in Latin America
Introduction to the political and social history of Latin America. Emphasis is on interactions among institutional change, social structure, and political movements, emphasizing the environment and cultural values. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

HISTORY 70A. Colonial Latin America
(Same as HISTORY 170. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources.

3 units, Win (Herzog, T)
HISTORY 84Q. The American Empire in the Middle East since the Cold War: Afghanistan, Iraq, and Israel/Palestine (S, Sem) Stanford Introductory Seminar. What were the traditional objectives of U.S. policy in the Middle East since the end of WW II? What forces shaped U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq, and Israel/Palestine. GER:DB-SocSci, EC-GlobalCom
3 units, Aut (Beanin, J)

HISTORY 90S. The Social and Cultural History of Tokugawa Japan, 1603–1868
Lived experience and culture of ordinary Japanese people in the samurai era, from the age of Tokugawa shogun to Perry’s arrival. Topics include: peasant uprisings; village life; agrarian economy and commercial civilization; gender and women; class status and tensions; pilgrimage; system of affiliation between Buddhist temples and households; tourism; publishing boom; popular culture of townspeople; and people’s riots on the eve of the Meiji revolution. Sources include historical maps, popular novels, legal documents, and folktales.
5 units (Sakakibara, S)

HISTORY 91D. China: The Northern and Southern Dynasties (Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization.
3 units, Spr (Lewis, M)

HISTORY 91S. The Making of Nationalism in Modern China Nationalism as a force in fueling historical change in China. How has the meaning of Chinese nationalism changed over time? How nationalism has been constructed and expressed from the late 1890s to the 2008 Olympics. Sources include government documents, memoirs, revolutionary texts, and Internet discussion forums, reflecting distinct perspectives and ideologies.
5 units, Win (Vanden Bussche, E)

HISTORY 92A. The Historical Roots of Modern East Asia (Same as HISTORY 392E) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire. GER:DB-SocSci, EC-GlobalCom
4-5 units, not given this year

HISTORY 93. Late Imperial China (Same as HISTORY 193) History majors and others taking 5 units, register for 193.) From the Tang-Song transition until the collapse of imperial order. The rise of absolutism and gentry society, and concomitant shifts in culture, gender relations, and the economy. The threat of steppe nomadism which produced the Mongol and Manchu conquest dynasties. The last imperial dynasty, the Qing, which solved traditional problems but was confronted by new ones. How simultaneous disasters of internal rebellion and Western imperialist invasion destroyed the old order.
3 units, Win (Sommer, M)

HISTORY 94B. Japan in the Age of the Samurai (Same as HISTORY 194B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National policies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community.
3 units, Aut (Wigen, K)

HISTORY 95. Modern Korean History (Same as HISTORY 195. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan’s colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War.
3 units, Spr (Moon, Y)

HISTORY 95C. Modern Japanese History (Same as History 195C. History majors and others taking 5 units, register for 195C.) Japan’s modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and ma-laise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions.
3 units, Win (Uchida, J)

HISTORY 96. Modern South Asia (Same as HISTORY 196. History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religions experiences that shaped S. Asian modernity; from Edmund Burke to Gandhi; East India Company’s statemaking to origins of nationality; Tagore to Iqbal; peasants and rebels to liberals and revolutionaries; decolonization and Partition.
3 units, Aut (Kumar, A)

HISTORY 98. The History of Modern China (Same as HISTORY 198. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008.
3 units, Aut (Mullaney, T)

HISTORY 102. The History of the International System World politics and international relations from the dominance of empires and nation states at the turn of the century to the present. The influence of communism, fascism, and anti-imperialism, and the emergence of society as a factor in international relations. Questions of sovereignty versus the new world order. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Ward, J)

HISTORY 103E. History of Nuclear Weapons (Same as POLISCI 116) The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far and whether it can be avoided in the future. GER:DB-SocSci
5 units, Spr (Holloway, D)

HISTORY 104. Trials that Made History: Courtroom Martyrs and Villains from the Classical to the Modern Period Socrates, the Knights Templar, Galileo, Salem witchcraft, and the Scopes (monkey) trials. How trials reflect cultural conflicts and political climate. Tensions between individuals and the state and between science and religion that are evident in trials. The role of trials in public discourse. Trial as drama. Reading assignments are interdisciplinary and range from surviving trial transcripts to the work of literary scholars and filmmakers. GER:DB-Hum
5 units, not given this year

HISTORY 105. Gandhi, King, and Nonviolence (Same as RELIGST 118) Lives, times, theory, and practice of Mohandas Gandhi and Martin Luther King, Jr.; their significance to issues of violence and nonviolence today. GER:DB-Hum
4 units, not given this year

HISTORY 106A. Global Human Geography: Asia and Africa (Same as INTNLREL 161A) Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes. GER:DB-SocSci
5 units, Aut (Staff)
HISTORY 106A. Global Human Geography: Asia and Africa
Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Lewis, M)

HISTORY 106B. Global Human Geography: Europe and Americas
Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Lewis, M)

HISTORY 106C. Global Historical Geography
The sweep of human history through the medium of maps. The rise, expansion, and fall of kingdoms, empires, and other states; the spread of major religions; the paths of explorers, conquerors, and diseases; and the development and intensification of trade networks. Overview of the prehistoric period and ancient times, but focus is on the modern world.
5 units, Win (Buc, P)

HISTORY 110A. Europe from Late Antiquity to 1500
(Same as HISTORY 10A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and inquisition; courtly love; and scholasticism. GER:DB-Hum, WIM
5 units, Win (Stokes, L)

HISTORY 110B. Early Modern Europe
(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include religious war, state building and revolt, exploration and colonialism, gender and society. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Stokes, L)

HISTORY 110C. Introduction to Modern Europe
From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. Political ideologies such as liberalism, socialism, communism, and fascism that Europeans developed in response to revolution, nation building, imperialism, and international competition. GER:DB-Hum
5 units, Aut (Daughton, J)

HISTORY 120A. Russian Civilization from Beginnings to the Enlightenment
(Same as HISTORY 20A. History majors and others taking 5 units, register for 120A.) Fundamental building blocks of Russian civilization, treated thematically, from the tenth to the eighteenth centuries: religion, art and architecture, literature, social structures, political ideology, and political culture. GER:DB-Hum, EC-GlobalCom
5 units, Aut (Kollmann, N)

HISTORY 120B. The Russian Empire
From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources. GER:DB-Hum
5 units, not given this year

HISTORY 120C. 20th-Century Russian and Soviet History
The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology, the Russian Empire in 1917. Cau-
sation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, force-paced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multietnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia. GER:DB-Hum
5 units, not given this year

HISTORY 125. 20th-Century Eastern Europe
5 units, Win (Jolluck, K)

HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe
What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people’s lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideals; war and crime; and gender and sexuality. GER:DB-Hum
5 units, not given this year

HISTORY 132A. Enlightenment and the Arts
Gateway course for the History, Literature, and the Arts track of the History major. Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them. GER:DB-Hum
5 units, Spr (Loungee Chappell, C)

HISTORY 132B. Revolutionary England: The Stuart Age
From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como) GER:DB-Hum
5 units, not given this year

HISTORY 134A. The European Witch Hunts
(Same as HISTORY 34A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of state-building and scientific discovery, Europeans conducted a series of deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Examines witch trials and early modern demonology as well as historians’ interpretations of events to seek answers to this question. GER:DB-Hum
5 units, Aut (Stokes, L)

HISTORY 135. History of European Law, Medieval to Contemporary
(Same as HISTORY 335) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions. GER:DB-SocSci
4-5 units, Spr (Herzog, T)

HISTORY 137. The Holocaust
(Same as HISTORY 337) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry. GER:DB-Hum
4-5 units, Win (Felshtiner, M)

HISTORY 137A. Europe, 1945-2002
Europe’s transformation from the end of WW II to an expanded EU. Political, cultural, economic, and social history. Topics: post-war reconstruction, Cold War, consumer versus socialist culture, collapse of Communism, postcommunist integration. GER:DB-SocSci
5 units, not given this year
HISTORY 138A. Germany and the World Wars, 1870-1990
Germany’s history from Bismarck’s wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain. GER:DB-SocSci, EC-AmerCul
5 units, Spr (Sheffer, E)

HISTORY 139. Modern Britain and the Empire
(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom
5 units, Spr (Satia, P)

HISTORY 140A. The Scientific Revolution
What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding about the nature of knowledge engendered by individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe. GER:DB-Hum
5 units, not given this year

HISTORY 141A. The Emergence of Medicine: The Middle Age and the Renaissance
(Same as HISTORY 41A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey.
5 units, Win (Findlen, P)

HISTORY 142. Darwin in the History of Life
(Same as HISTORY 42. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. creationism, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evodevo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci
5 units, Spr (Proctor, R)

HISTORY 145A. Africa Until European Conquest
Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority. WIM GER:DB-Hum, EC-GlobalCom
5 units, not given this year

HISTORY 145B. Africa in the 20th Century
(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Roberts, R)

HISTORY 145C. Africa in the Age of Empire
Radical transformations in political, social, economic, and cultural systems that took place in Africa in the 19th century. The formation of indigenous empires in West, East, and South Africa; the struggles of warlords and independent entrepreneurs to control the continuing slave trade and slave production; the modernization of state bureaucracies and ideologies; and the gradual collapse of African political autonomy in the face of growing European colonial involvement. GER:DB-SocSci
5 units, Spr (Green, J)

HISTORY 147. History of South Africa
(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDs crisis. GER:DB-SocSci
5 units, Aut (Campbell, J)

HISTORY 150A. Colonial and Revolutionary America
(Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul
5 units, Aut (Winterer, C)

HISTORY 150B. 19th-Century America
(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul
5 units, Win (White, R)

HISTORY 150C. The United States in the Twentieth Century
(Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul
5 units, Spr (Chang, G)

HISTORY 151. Slavery and Freedom in American History
(Same as HISTORY 51. History majors and others taking 5 units, register for 151.) What does the fact that the preamble to the Declaration of Independence, with its professions about equality and unalienable rights, was written by a slaveowner tell us about the history of the U.S., and about the experience of African Americans? Topics: the transatlantic slave trade, slavery and the American Revolution, the Haitian Revolution, the African colonization movement, abolitionism, the Civil War, and Reconstruction. GER:DB-SocSci
5 units, Aut (Campbell, J)

HISTORY 154. 19th-Century U.S. Cultural and Intellectual History, 1790-1860
(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul
5 units, Spr (Winterer, C)

HISTORY 154A. Religion and American Society
How and why is the U.S. at once the most secular and the most religious industrialized nation in the world; why does it matter?
How has American religion influenced reform, wars, politics, civil rights, popular culture, and national identity? Larger connections between religion and society; how religious institutions and movements have shaped the American experience and vice versa. GER:DB-Hum, EC-AmerCul
5 units, Aut (Herzog, J)

HISTORY 158. The United States Since 1945
Focus is on foreign policy and politics with less attention to social and intellectual history. Topics include nuclear weapons in WWII, the Cold War, the Korean and Vietnam wars, Eisenhower revisionism, the Bay of Pigs and Cuban missile crisis, civil rights and the black freedom struggle, the women’s movement, the Great Society and backlash, welfare policy, conservatism and liberalism, the 60s anti-war movement, Watergate and the growth of executive power, Iran-Contra and Reagan revisionism, Silicon Valley, the Gulf War, the Clinton impeachment controversy, 2004 election, and 9/11 and Iraq war. GER:DB-SocSci, EC-AmerCul
4-5 units, not given this year

HISTORY 161. U.S. Women’s History, 1890s-1990s
The transformation of Victorian womanhood in the late 19th century, including the workforce participation of immigrant and black women, educational and professional opportunities for middle class white women, impact of wars and depression on 20th-century women’s lives, and rebirth of feminism. GER:DB-SocSci, EC-Gender
5 units, not given this year

HISTORY 163. A History of North American Wests
The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil. GER:DB-SocSci
5 units, not given this year

HISTORY 164C. From Freedom to Freedom Now!: African American History, 1865-1965
(Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Sources include memoirs, letters, personal journals, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul
5 units, Win (Hobbs, A)

HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle
Focus is on political thought and protest movements after 1930. Individuals who have shaped and been shaped by modern African American struggles for freedom and justice. Sources include audiovisual materials, Research projects required for fifth unit. GER:DB-SocSci, EC-AmerCul
4-5 units, Spr (Carson, C)

HISTORY 168. American History in Film: Since World War II
U.S. society, culture, and politics since WWII through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identity; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include The Best Years of Our Lives, Salt of the Earth, On the Waterfront, Raisin in the Sun, Medium Cool, and Broadcast News. GER:DB-Hum
3-4 units, Sum (Carroll, P)

HISTORY 170. Colonial Latin America
(Same as HISTORY 70A. History majors and others taking 5 units, register for 170A. 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci
5 units, Win (Herzog, T)

HISTORY 181B. The Middle East in the 20th Century
(Formerly 187B.) The history of the Middle East since WW I, focusing on the eastern Arab world, Egypt, the Fertile Crescent, and the Arabian Peninsula, with attention to Turkey, Iran, Iraq, and Israel.
5 units, Spr (Beinin, J)

HISTORY 182A. The Ottoman Empire
From the rise of the Empire in the 13th century to its end in WW I. Geographic coverage from the Balkans to Iraq and from N. Africa to the Caucasus. Military expansion; political, religious, and cultural institutions; relations with Iran, Europe, Africa, and S. Asia; nature of imperial rule; gender; trade; landholding; popular culture; law. GER:DB-SocSci
5 units, not given this year

HISTORY 182B. Three Empires of Islam: The Ottomans, Safavids, and Mughals
Comparative history of Islam’s three major early modern empires. Comparative treatment of topics including representations of political authority, the arts, gender, trade, science, and social life.
3 units, Win (Mikhall, A)

HISTORY 182C. From Prophet to Empire: The Making of the Muslim Middle East, 600-1500
Traces the establishment of a Muslim religious and political presence in the Middle East from the formative years of conquest in Arabia and early experiments in state formation to the emergence of empires defining the early modern world. Explores the construction of a remarkable social, intellectual and artistic culture out of the various indigenous and imported elements then available. GER:DB-SocSci
5 units, Aut (Staff)

HISTORY 185B. Jews in the Modern World
Possible themes: the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe, the transformation of Jewish life in E. Europe under the authoritarian Russian regime, colonialism in the Sephardic world, new ideologies (Reform Judaism and Jewish nationalisms), the persistence and renewal of antisemitism, the destruction of European Jewry under the Nazis, new Jewish centers in the U.S., and the State of Israel. GER:DB-Hum, EC-GlobalCom
5 units, Aut (Zipperstein, S)

HISTORY 191. East Asia in the Early Buddhist Age
(Same as HISTORY 391) Evolution of cities in imperial China through early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative examination of cases from European history. GER:DB-Hum, EC-GlobalCom
4-5 units, not given this year

HISTORY 191D. China: The Northern and Southern Dynasties
(Same as HISTORY 91D. History majors and others taking 5 units, register for 91D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum
5 units, Spr (Lewis, M)

HISTORY 192. China: The Early Empires
How China was transformed as a consequence of its political unification by the Qin dynasty. The geographical reorganization of China in the process of unification. The changing nature of rulership, cities, rural society, military organization, kinship structure, religion, literary practice, law, and relations to the outside world. The nature of empire as a political system. GER:DB-Hum
3-5 units, not given this year

HISTORY 193. Late Imperial China
(Same as HISTORY 93. History majors and others taking 5 units, register for 93.) From the Tang-Song transition until the collapse of imperial order. The rise of absolutism and gentry society, and concomitant shifts in culture, gender relations, and the economy. The threat of steppe nomadism which produced the Mongol and Manchu conquest dynasties. The last imperial dynasty, the Qing, which solved traditional problems but was confronted by new ones. How simultaneous disasters of internal rebellion and Western imperialist invasion destroyed the old order. GER:DB-Hum
5 units, Win (Sommer, M)

HISTORY 194B. Japan in the Age of the Samurai
(Same as HISTORY 94B. History majors and others taking 5 units, register for 94B.) From the Warring States Period to the Meiji
COURSES OF INSTRUCTION

GER:DB-Hum

GER:DB-SocSci

EC:Gender

EC:History

HISTORY 195. Modern Japanese History
(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan’s colonial rule; Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC:GlobalCom

5 units, Spring (Moon, Y)

HISTORY 195C. Modern Japanese History
(Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan’s modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions. GER:DB-SocSci, EC:GlobalCom

5 units, Winter (Uchida, J)

HISTORY 196. Modern South Asia
(Same as HISTORY 96. History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religious experiences that shaped S. GER:DB-SocSci, EC:GlobalCom

5 units, Aut (Kumar, A)

HISTORY 198. The History of Modern China
(Same as HISTORY 98. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci, DB-SocSci, EC:GlobalCom

5 units, Autumn (Mullaney, T)

HISTORY 201. Introduction to Public History in the U.S., 19th Century to the Present
(Same as HISTORY 301) Gateway course for the History and Public Service interdiscipilinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. GER:DB-SocSci

4-5 units, Aut (McKibben, C)

HISTORY 201G. Sexual Encounters: The Middle East and Europe
(Same as HISTORY 301G) The Middle East and Europe have been engaged for millennia. Examines this relationship from the middle ages to the present through romance, desire, sex, love, sexuality, and gender. Topics include: travel, homosexuality, marriage, family, violence, prostitution, and policing.

4-5 units, Win (Mikhaij, A; Sheffer, E)

HISTORY 202. International History and International Relations Theory
(Same as HISTORY 306E, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system. GER:DB-SocSci

3 units, Win (Staff)

HISTORY 204G. War, Culture, and Society in the Modern Age
(Same as HISTORY 304G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated. GER:DB-SocSci

3 units, not given this year

HISTORY 205B. Quantitative Methods in Historical Research
(Same as HISTORY 305B) Latest techniques applied to research issues in current historical debates. Preparation of data, processing, statistical procedures to examine theoretical historical issues, and how to present quantitative materials in historical writing. Mathematical or statistical training not required. GER:DB-SocSci

4-5 units, Spr (Klein, H)

HISTORY 207. Biography and History
(Same as HISTORY 307) Relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt’s Possession, Bernard Malamud’s Dubin’s Lives) that illuminate the intellectual underpinnings of biographical labor. GER:DB-Hum

4-5 units, Spr (Zipperstein, S)

Changing contexts of women’s lives and how women’s actions have shaped and responded to those contexts. GER:DB-Hum, EC:Gender

3 units, Win (Loungee Chappell, C)

HISTORY 208A. Science and Law in History
(Same as HISTORY 308A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof. GER:DB-SocSci

4-5 units, Win (Riskin, J)

HISTORY 208B. Women Activists’ Response to War
(Same as HISTORY 308B) Theoretical issues, historical origins, changing forms of women’s activism in response to war in the 20th century, and cases such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and Cindy Sheehan. Focus is on the U.S. and Europe. With attention to Israel, England, and Argentina. GER:DB-Hum, EC:Gender

4-5 units, not given this year

HISTORY 208S. Facing the Past: The Politics of Retrospective Justice
Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetary reparations. Case studies chart the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts. GER:DB-SocSci

3 units, Win (Campbell, J)

HISTORY 209B. The Century: Problem of the Present in Twentieth-Century Thought
(Same as HISTORY 309B) What is the present? Can it stand on its own, without invoking history and without promising a future? How did the 20th century make sense of itself, as violent and raptured from all preceding centuries as it was, yet so prolific and promising in its revolutionary achievements and futures? The century through four concepts: time, ambiguity, cruelty, and crisis. 20th-century politics through what happened to dialectic, humanism, history, and Europe.

4-5 units, Win (Kumar, A)
HISTORY 209C. Liberalism and Violence: A Conceptual History
GER:EC-EthicReas
5 units, Aut (Kumar, A)

HISTORY 209S. Research Seminar for Majors
Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on United States topics; winter quarter on European topics; spring quarter on History of Science topics. 
5 units, Aut (Hobbs, A), Win (Baker, K), Spr (Riskin, J)

HISTORY 211B. Jews under Islam and Christianity in the Middle Ages
(Same as HISTORY 311B) Addresses the relationship between the Jews and the host Islamic and Christian societies during the Middle Ages (AD 500-1500). Themes, covered in a comparative context, include: the Jews' legal status, economic and political role, tolerance and persecutions, adaptation and acculturation, and religious polemics. 
GER:DB-SocSci
4-5 units, Spr (Staff)

HISTORY 212. Holy Wars: Medieval Perspectives
(Same as HISTORY 312) Cultural and societal factors at play in Christian holy war from late antiquity to the early modern era. Topics include: the Crusades and their meanings; armed struggle against heresy; and the wars of religion. Prerequisite: consent of instructor. 
GER:DB-Hum
4-5 units, not given this year

HISTORY 216A. Muslims and Infidels: Islam and the Crusades
(Same as HISTORY 316A) The impact of the Crusades on the Muslim world and consciousness from the Middle Ages and to the present. Primary and secondary sources. Themes include: jihad, cultural interaction between Muslims and Christians in the Holy Land; and military, political, and ideological developments in the 12th and 13th centuries. Modern interpretations and debates about jihadist theology and global jihad. 
GER:DB-Hum
4-5 units, not given this year

HISTORY 217A. Poverty and Charity in Medieval Christianity, Judaism, and Islam
(Same as HISTORY 317A) Topics include: Jewish, Christian, and Islamic theoretical discussions of poverty and charity; normative law versus actual practice; the voice of the poor in available source; and formal and informal institutions of charity in the medieval Mediterranean region. 
GER:DB-Hum
4-5 units, not given this year

HISTORY 217B. Land of Three Religions: Medieval Spain
(Same as HISTORY 317B) The history of the Iberian peninsula from the Islamic conquest of 711 to the Christian expulsion of the Jews in 1492. Focus is on forms of confrontation, confluence, and hostile indifference among medieval Jews, Christians, and Muslims. What were undercurrents of aggression that gave rise to persecution of the other; what elements of commonality among groups gave rise to intellectual advancements? 
GER:DB-SocSci
4-5 units, Aut (Miller, K)

HISTORY 218A. Barcelona to Berlin: Muslim Minorities in History
(Same as HISTORY 318A) Muslim minorities under non-Muslim rule in different historical contexts and configurations such as enclaves and diasporas, from the Middle Ages to the present. 
GER:DB-SocSci
4-5 units, Spr (Miller, K)

HISTORY 220G. Demons, Witches, Holy Fools, and Folk Belief: Popular Religion in Russia, 19th and 20th Centuries
(Same as HISTORY 320G) Popular religion in Russia, focusing on life in the provinces and villages in the nineteenth and early twentieth centuries. The double faith of Orthodox Christianity combined with folk beliefs. Topics include: parish priests, witchcraft, possession, Holy Fools, Old Believers, spiritual elders, saints, icons, religious cults, and women's lay religious movements. 
4-5 units, Win (Kollmann, J)

HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
Social values, gender relations, and social change in an era of rapid change; challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos: patrimonial autocracy and the reality of female rule in the late 17th and 18th century. 
GER:DB-Hum, DB-Hum, EC-Gender
5 units, Win (Kollmann, N)

HISTORY 221B. The Woman Question in Modern Russia
Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia. 
GER:DB-SocSci, EC-Gender
5 units, Spr (Jolluck, K)

HISTORY 222. Honor, Law, and Modernity
How Europe evolved from medieval to modern; focus is on standards for conflict resolution emphasizing insults to honor. How attitudes towards the self and society, and the state's relationship to individuals, changed from the 16th to 18th centuries in Europe and Russia. Traditional concepts of honor and patterns of settling disputes contrasted to early modern concepts of honor, private life, civility, and crime and punishment. 
GER:DB-Hum
4-5 units, not given this year

HISTORY 223. Art and Ideas in Imperial Russia
(Same as HISTORY 323) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia. 
GER:DB-Hum
4-5 units, not given this year

HISTORY 222F. The Nationality Question in the Russian Empire and the Soviet Union
(Same as HISTORY 322F) Examines the shaping of ethnonational identity and nationalities policy in imperial Russia and the Soviet Union, concluding with an overview of nationalism in the post-Soviet states. Topics include the cultural strategies pursued by governments in St. Petersburg and Moscow under the Romanovs and the Soviets, Marxist ideology on the nationality question, the influence of the Second World War on national identities inside the Soviet Union, and the role of ethnonationalism in the break up of the USSR. 
GER:DB-SocSci
5 units, Win (Kollmann, N)

HISTORY 224B. Modern Afghanistan
(Same as HISTORY 324B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder. 
GER:DB-SocSci
4-5 units, not given this year

HISTORY 227. East European Women and War in the 20th Century
(Same as HISTORY 327) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation,
and sexual violation. GER:DB-SocSci, EC-Gender
4-5 units, Win (Jolluck, K)

HISTORY 228. Circles of Hell: Poland in World War II
(Same as HISTORY 328) The experience and representation of Poland’s wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society. GER:DB-SocSci
5 units, not given this year

HISTORY 229. Poles and Jews
(Same as HISTORY 329) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and cultural mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today. GER:DB-Hum, DB-Hum, EC-GlobalCom
4-5 units, Spr (Jolluck, K)

HISTORY 231S. Early Modern Things
(Same as HISTORY 431) How do objects reveal their histories? How do we be formed by the past by studying things? The material culture of early modern Europe, ca 1450-1750. Recent work on the circulation, use, and consumption of things, starting with the Columbian exchange which expanded the material horizons of the early modern world in the late 15th century, exploring challenges to the meaning of things in the age of the Reformation and Scientific Revolution, and ending with the birth of consumer society in the 18th century. How did the meaning of things and people’s relationships to them change over these centuries? What objects, ordinary and extraordinary, secular and sacred, natural and man-made, came to define the emerging features of the early modern world?
4-5 units, Win (Findlen, P)

HISTORY 232D. Rome: The City and the World, 1350-1750
(Same as HISTORY 332D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the reign of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday life of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners. GER:DB-Hum
4-5 units, not given this year

HISTORY 233. Reformation, Political Culture, and the Origins of the English Civil War
(Same as HISTORY 333) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War. GER:DB-Hum
4-5 units, not given this year

HISTORY 233B. Early Modern Sexualities
(Same as HISTORY 333B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources. GER:DB-SocSci, EC-Gender
4-5 units, not given this year

HISTORY 233C. Two British Revolutions
(Same as HISTORY 333C) Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II. GER:DB-Hum
4-5 units, Aut (Como, D)

HISTORY 233F. Political Thought in Early Modern Britain
1500 to 1700. Theorists include Hobbes, Locke, Harrington, the Levellers, and lesser known writers and schools. Foundational ideas and problems underlying modern British and American political thought and life. GER:DB-Hum
3 units, not given this year

HISTORY 234C. Counterinsurgency in History
(Same as HISTORY 334C) Classic texts and case studies of insurgency and counterinsurgency from the 19th century to the present. GER:DB-SocSci
4-5 units, Win (Sheehan, J)

HISTORY 235A. European Nationalism, 1600 to the Present
(Same as HISTORY 336A) Theory and practice of nationalism from its genesis. What is the nation and how is it built? What is its relationship to the state? How do national movements adapt to changing ideological and geopolitical contexts? Focus is on Europe; attention to other parts of the world as required by theory studies. GER:DB-SocSci
4-5 units, Aut (Ward, J)

HISTORY 235B. The Idea of Society
(Same as HISTORY 336B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber.
4-5 units, Win (Baker, K; Sheehan, J)

HISTORY 236. The Ethics of Imperialism
(Same as HISTORY 336C) Classic texts in social theory from the seventeenth century to the present. The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideals were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitarism. Texts include primary sources, philosophical treatises, and historical studies. GER:DB-Hum
5 units, not given this year

HISTORY 236A. European Nationalism, 1600 to the Present
(Same as HISTORY 336A) Theory and practice of nationalism from its genesis. What is the nation and how is it built? What is its relationship to the state? How do national movements adapt to changing ideological and geopolitical contexts? Focus is on Europe; attention to other parts of the world as required by theory studies. GER:DB-SocSci
4-5 units, Win (Sheehan, J)

HISTORY 236C. Reordering Europe, 1917-1923
(Same as HISTORY 336C) The struggle to craft a new European order after the disaster of the First World War. Topics: Wilsonian thinking in the Atlantic World from the Renaissance to the French Revolution. GER:DB-SocSci
4-5 units, Spr (Staff)

HISTORY 237E. Violence, Law, and Order in Eighteenth- and Nineteenth-Century Ireland
Experiences of and attitudes to both violence and the law in eighteenth and nineteenth century Ireland on both the interpersonal and collaborative levels. Topics include the varying causes and motives for violent activity in Irish society; the role of the law and, in particular, its effectiveness in controlling violent activity in Irish society; how legal provisions interacted with and were shaped by the broader sociocultural conditions from the eighteenth century onwards; and the impact that Irish patterns of violent activity and attitudes to law and authority had overseas, particularly in N. America. GER:DB-SocSci
3 units, Win (Staff)

HISTORY 238K. European Collaboration, Resistance, and Retribution: 1938-1948
Experiences of European populations under occupation or suzerainty during WWII. How did populations respond to an invader
or hegemonic power such as Nazi Germany? What other options were open to them? How and why did postwar Europe judge their choices? Readings span high politics and individual lives. GER:DB-SocSci

5 units, Aut (Ward, J)

HISTORY 239D. Capital and Empire
(Same as HISTORY 339D, HUMNTIES 191S) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development. GER:DB-SocSci

4-5 units, Spr (Satia, P)

HISTORY 239F. Empire and Information
(Same as HISTORY 339F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable. GER:DB-Hum, EC-GlobalCom

4-5 units, not given this year

HISTORY 239H. Colonialism and Empire in Modern Europe
To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism? GER:DB-SocSci

5 units, Win (Naranch, B)

HISTORY 243C. 18th-Century Colonial Science and Medicine
(Same as HISTORY 343C) The exchange of knowledge, technologies, plants, people and diseases between Europe and the Americas during the eighteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism? GER:DB-SocSci

4-5 units, not given this year

HISTORY 243G. Tobacco and Health in World History
(Same as HISTORY 343G) GER:DB-SocSci

4-5 units, Aut (Proctor, R)

HISTORY 243J. Climate Change in the West: A History of the Future
(Same as EARTHSYS 143) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history help us think more clearly about the current crisis and our choices for the future? Examines the long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaptation, scientific predictions, and science fiction. 5 units, Spr (Christensen, J)

HISTORY 243S. Human Origins: History, Evidence, and Controversy
(Same as HISTORY 443A) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required. GER:DB-SocSci

4-5 units, not given this year

HISTORY 244C. The History of the Body in Science, Medicine, and Culture
(Same as HISTORY 444C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic. GER:DB-SocSci, EC-Gender

4-5 units, not given this year

HISTORY 245E. Health and Society in Africa
(Same as HISTORY 347E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease. GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

HISTORY 245G. Law and Colonialism in Africa
(Same as HISTORY 348D) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority. GER:DB-SocSci

4-5 units, Win (Roberts, R)

HISTORY 246S. Research Seminar: African Nationalism and Beyond
(Same as HISTORY 446A) African intellectual, political, social and cultural institutions confronting issues of sovereignty, authority, hierarchy, and power during the 19th and 20th centuries. GER:DB-SocSci

4-5 units, not given this year

HISTORY 247S. Intellectual and Cultural History in Modern Africa
(Same as HISTORY 447A) GER:DB-SocSci, EC-GlobalCom

4-5 units, Win (Hanretta, S)

HISTORY 248. Islam in Africa
(Same as HISTORY 348) Relations between African Muslims and the broader Islamic tradition over the last 1200 years. The roots of the Islamic tradition, its adoption, endogenization, and elaboration by African Muslims. The interplay of religion, politics, culture and society, and how tradition exercises influence even while being transformed. The worldviews and lives of African Muslims; how and why these worldviews and experiences changed. GER:DB-Hum, EC-GlobalCom

4-5 units, Spr (Hanretta, S)

HISTORY 248S. African Societies and Colonial States
(Same as HISTORY 448A) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter. GER:DB-SocSci

4-5 units, not given this year

HISTORY 249. History without Documents
(Same as HISTORY 349) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written trace? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art. GER:DB-Hum

4-5 units, not given this year

HISTORY 251. Creating the American Republic
(Same as POLISCI 222P) Concepts and developments in the late 18th-century invention of American constitutionalism; the politics of constitution making and ratifying; emergence of theories of constitutional interpretation including originalism; early notions of judicial review. Primary and secondary sources. 5 units, Win (Rakove, J)
HISTORY 252. Decision Making in International Crises: The A-Bomb, the Korean War, and the Cuban Missile Crisis  
(Same as HISTORY 355) For advanced undergraduates and graduate students. Primary documents and secondary literature. Topics include: the decision to use the atomic bomb on Japan, the Korean War, and the Cuban missile crisis. GER:DB-SocSci  
4-5 units, Aut (Bernstein, B)

HISTORY 253D. Approaches to American Legal History  
(Same as POLISCI 226U) Legal history, once primarily devoted to exploring legal doctrines and key judicial opinions and thus of interest mainly to legal scholars and lawyers, now resembles historical writing more generally; the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Recent writings in American legal history; how the field reflects developments in historical writing; and how the use of legal materials affects understanding of American history.  
5 units, Aut (Rakove, J)

HISTORY 254. Popular Culture and American Nature  
Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with moldering popular attitudes toward the natural world than politicians, ecologists, and activists. Disney as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships. GER:DB-Hum, WIM  
5 units, Aut (White, R)

HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice  
The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel. GER:DB-Hum  
5 units, not given this year

HISTORY 255D. Racial Identity in the American Imagination  
(Same as AFRICAAM 255, HISTORY 355D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music. GER:DB-SocSci, EC-AmerCul  
4-5 units, Win (Chang, G)

HISTORY 256. U.S.-China Relations: From the Opium War to Tiananmen  
(Same as HISTORY 356) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past. WIM GER:DB-SocSci, EC-GlobalCom  
4-5 units, Win (Chang, G)

HISTORY 258. History of Sexuality in the U.S.  
(Same as HISTORY 358) (Formerly 265A) Priority to History and Feminist Studies majors; a limited number of graduate students may be admitted. Recent historical interpretations of sexual violence, emphasizing the intersections of gender and race in the construction of rape in early America and in Canada, the racialization of rape in the U.S., lynching and anti-lynching in the U.S., and feminist responses to sexual violence. Prerequisite: consent of instructor. GER:DB-SocSci, EC-Gender  
4-5 units, not given this year

HISTORY 259A. Poverty and Homelessness in America  
Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. GER:DB-SocSci  
4-5 units, Win (Camarillo, A)

HISTORY 259B. Poverty and Homelessness in America II  
Students participate in an internship with the Emergency Housing Consortium, the primary agency providing shelter for homeless people in Santa Clara and San Mateo counties, while learning about homelessness and poverty through readings and discussions. Prerequisite: interview with instructor. Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. GER:DB-SocSci  
4-5 units, not given this year

HISTORY 260. California’s Minority-Majority Cities  
Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. GER:DB-SocSci, EC-AmerCul  
3 units, Spr (McKibben, C)

HISTORY 261. Race, Gender, and Class in Jim Crow America  
How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions, and music, resistance and social activism. Primary sources including visual materials, literature, and film; historical interpretations of the period. GER:DB-SocSci  
3 units, not given this year

HISTORY 265. Writing Asian American History  
(Same as HISTORY 365) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper. GER:DB-SocSci, EC-AmerCul  
3 units, Win (Chang, G)

HISTORY 268E. American Foreign Policy and International History, 1941-2009  
(Same as HISTORY 368E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war. GER:DB-SocSci  
4-5 units, Spr (Bernstein, B)

HISTORY 273. The European Expansion  
(Same as HISTORY 373A) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.  
4-5 units, not given this year

HISTORY 275F. Social Change in Latin America Since 1900  
(Same as HISTORY 375F, LATINAM 201, LATINAM 301) Changes in the social and demographic characteristics of Latin American populations since 1900 and the response of national governments in terms of the evolution of social welfare, health, and educational systems. Fulfills requirement for Latin American Studies master’s students. GER:DB-SocSci  
4-5 units, Spr (Camarillo, A)

HISTORY 278A. Political Economy of Property Rights  
(Same as POLISCI 242D) This course seeks to understand how property rights systems influence economic growth and the stewardship of resources. We are also interested in explaining the political process by which societies create property systems. In order to answer these questions we will read and discuss the work of political scientists, economists, and historians.  
3 units, Win (Haber, S)

HISTORY 279. Latin American Development: Economy and Society, 1800-2000  
(Same as HISTORY 379) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice. GER:DB-SocSci, EC-GlobalCom  
4-5 units, not given this year
HISTORY 281. Economic and Social History of the Modern Middle East  
(Same as HISTORY 381) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci  
4-5 units, Aut (Beinin, J)  
HISTORY 281A. Twentieth-Century Iraq: A Political and Social History  
The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context. GER:DB-SocSci  
5 units, not given this year  
HISTORY 281B. Modern Egypt  
(Same as HISTORY 381B) From just before the Napoleonic expedition of 1798 to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt. GER:DB-SocSci  
4-5 units, not given this year  
HISTORY 281C. Urban History of the Middle East: Aleppo and Istanbul on the Eve of Modernity, 1650-1850  
(Same as HISTORY 381C) Questions both Orientalist and modernist assumptions concerning urban life in the Middle East during a transformative moment in global history, commercialization and the emergence of modern imperialism. The critical relevance of cultural debates and institutional changes in provincial cities such as Aleppo to the unfolding of a modern Ottoman Empire. GER:DB-SocSci  
5 units, Spr (Staff)  
HISTORY 281D. The Origins and Formation of Islam  
(Same as HISTORY 381D) The modern debate over the origins of Islam and the appearance of distinctive disciplines and institutions in the ninth century. Course taught in English; however, students with a proficiency in Arabic may do separate work.  
4-5 units, Win (Staff)  
HISTORY 282. The United States and the Middle East since 1945  
(Same as HISTORY 382) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself? GER:DB-SocSci, EC-GlobalCom  
4-5 units, Spr (Staff)  
HISTORY 282D. The Late Ottoman Empire, its Collapse, and the Making of the Turkish Nation State  
(Same as HISTORY 382D) The turbulent 1910s and the WW I, the catastrophe of the old European and Ottoman world. Focus is on the political elites, their biographies, networks, and ideologies (Ottomanism, Islamism, Turkism, social Darwinism). Topics include the Young Turk revolution of 1908, the entrance into world war, the Armenian genocide, and the Turkish revolution of the 20s. GER:DB-SocSci  
4-5 units, Win (Staff)  
HISTORY 283. The New Global Economy, Oil, and Islamic Movements in the Middle East  
(Same as HISTORY 383) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci  
4-5 units, not given this year  
HISTORY 285K. History of Modern Antisemitism  
(Same as HISTORY 385K) Focus is on Europe. Topics include: origins of modern antisemitism and difference from theological forms of hatred, differences in antisemitic patterns in eastern central and western Europe; intellectual origins of modern racism, the question of Jewish self-hatred and internalization of antisemitic stereotypes; connections between philo-semitism and antisemitism; contemporary patterns of antisemitism. Emphasis is on cultural and intellectual history as well as a discussion of Jews’ major ideological, political, and social responses to antisemitism.  
4-5 units, Spr (Staff)  
HISTORY 287C. Zionism and Its Critics  
(Same as HISTORY 387C) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Hashkalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.  
4-5 units, Aut (Staff)  
HISTORY 287D. Tel Aviv: Site, Symbol, City  
(Same as HISTORY 387D) Tel Aviv, the first Israeli city, from a cultural history perspective combining high and low cultural texts. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv’s early years; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; as the site of the Israeli Zionist and post-Zionist intellectuals. Sources include art, cinema, and literature. GER:DB-Hum  
4-5 units, Win (Staff)  
HISTORY 287E. Jewish Intellectuals and Modernity  
(Same as HISTORY 387E) Intellectual responses of Jewish thinkers to the age of extremes. Readings include a wide assemblage of twentieth-century thinkers, such as Theodor Adorno, Leo Strauss, Hannah Arendt, Isaiah Berlin, Isaac Deutscher, Hans Kohn, Lionel Trilling, Judith Shklar, George Steiner, Emmanuel Levinas, and Jacques Derrida. From these readings, an analysis of enlightenment, nationalism and socialism; political response to totalitarian ideologies, and the extent to which the Jewishness of these political thinkers and philosophers notify their writings.  
4-5 units, Spr (Staff)  
HISTORY 288. Palestine and the Arab-Israeli Conflict  
(Same as HISTORY 388, IPS 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum  
4-5 units, Win (Beinin, J)  
HISTORY 291A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times  
(Same as HISTORY 391A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts. GER:DB-SocSci  
4-5 units, not given this year  
HISTORY 291B. The City in Imperial China  
(Same as HISTORY 391B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.  
3-5 units, not given this year  
HISTORY 291D. Colonialism and Collaboration in East Asia  
(Same as HISTORY 391D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations. GER:DB-SocSci  
4-5 units, Win (Moon, Y)  
HISTORY 291E. Maps, Borders, and Conflict in East Asia  
(Same as HISTORY 391E) The nature of borders and border con-
HISTORY 292. The Korean War: The Origins, Outbreak, and Aftermath
(Same as HISTORY 392) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include World War II in East Asia; Korean communist movements during Japan's colonial rule; the Cold War in East Asia; the roles of the US, China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War. GER:DB-SocSci
4-5 units, Win (Moon, Y)

HISTORY 292D. Japan in Asia, Asia in Japan
(Same as HISTORY 392D) How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
4-5 units, Aut (Uchida, J)

HISTORY 292F. Traditional Korea: History and Culture
(Same as HISTORY 392F) How iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the creation of Korean alphabets and its aftermath, commerce and travelers, Korean food and art, religions, the life of women and ordinary people, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary historical debates.
4-5 units, Spr (Moon, Y)

HISTORY 293. Law and Society in Late Imperial China
(Same as HISTORY 392B) Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history. GER:DB-Hum
4-5 units, not given this year

HISTORY 293B. Homosexuality in Historical and Comparative Perspective
(Same as HISTORY 393B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S. GER:EC-Gender
4-5 units, not given this year

HISTORY 293D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought
(Same as HISTORY 393D) GER:DB-SocSci
4-5 units, not given this year

HISTORY 295F. Race and Ethnicity in East Asia
(Same as HISTORY 395F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People’s Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science. GER:DB-SocSci
4-5 units, Win (Mullaney, T)

HISTORY 295J. Chinese Women’s History
The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women’s studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily disciplines and constraints such as medical, reproductive, and cosmetic technologies? How relevant is the experience of Western women to women elsewhere? By what standards should liberation be defined? GER:DB-Hum, EC-Gender
5 units, Aut (Sommer, M)

HISTORY 296. Communism and Revolution in China
From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People’s Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC. GER:DB-Hum
5 units, not given this year

HISTORY 296E. Contentious Identities: The Formation of Race, Ethnicity, and Nationhood in Modern Japan
(Same as HISTORY 396E) Examination of the exclusion and assimilation of minority groups including Ainu, Burakumin, Okinawans, Koreans, and Taiwanese; how this process was related to the construction of national, racial, and ethnic self-understanding in modern Japan. Ethno-racial formation and nationalism in Japanese society. GER:DB-SocSci
4-5 units, Spr (Shin, H)

HISTORY 299A. Senior Research I
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299B. Senior Research II
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299C. Senior Research III
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299H. Junior Honors Colloquium
Required of junior History majors planning to write a History honors thesis during senior year. Meets twice during quarter, including the first Friday class day of the quarter.
1 unit, Win (Sommer, M)

HISTORY 299M. Undergraduate Directed Research: Martin Luther King, Jr., Research and Education Institute
May be repeated for credit.
1-4 units, Aut (Carson, C), Win (Staff), Spr (Staff)

HISTORY 299S. Undergraduate Directed Research and Writing
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 299W. Undergraduate Directed Writing
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 299X. Design and Methodology for International Field Research
(Same as HISTORY 399X) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.
1 unit, Spr (Kollmann, N; Roberts, R)

GRADUATE COURSES IN HISTORY

HISTORY 158B. History of Education in the United States
(Same as EDUC 201) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)
3-5 units, Win (Gordon, L), Spr (Gordon, L)

HISTORY 158C. History of Higher Education in the U.S.
(Same as EDUC 165, EDUC 265) Major periods of evolution, particularly since the mid-19th century. Premiere: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)
3-5 units, Aut (Gordon, L)
HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990
(Same as EDUC 216X) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.
3-5 units, Spr (Gordon, L)

HISTORY 258D. School: What Is It Good For?
(Same as EDUC 207X) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schools promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.
3-4 units, Win (Labarree, D)

HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as EDUC 220D) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3-5 units, Aut (Labarree, D)

HISTORY 258F. Education Schools: Historical and Sociological Perspectives
(Same as EDUC 231X) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.
3-4 units, Spr (Labarree, D)

HISTORY 301. Introduction to Public History in the U.S., 19th Century to the Present
(Same as HISTORY 201) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions.
4-5 units, Aut (McKibben, C)

HISTORY 301G. Sexual Encounters: The Middle East and Europe
(Same as HISTORY 201G) The Middle East and Europe have been engaged for millennia. Examines this relationship from the middle ages to the present through romance, desire, sex, love, sexuality, and gender. Topics include: travel, homosexuality, marriage, family, violence, prostitution, and policing.
4-5 units, Win (Mikhall, A; Shefler, E)

HISTORY 304. Approaches to History
Required of first-year History Ph.D. students.
4-5 units, Aut (Baker, K)

HISTORY 304G. War, Culture, and Society in the Modern Age
(Same as HISTORY 204G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.
5 units, not given this year

HISTORY 305. Graduate Workshop in Teaching
Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: use of technology in teaching lectures and seminars. Addressing today’s classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities
1 unit, Spr (Kollmann, N)

HISTORY 305B. Quantitative Methods in Historical Research
(Same as HISTORY 205B) Latest techniques applied to research issues in current historical debates. Preparation of data, processing, statistical procedures to examine theoretical historical issues, and how to present quantitative materials in historical writing. Mathematical or statistical training not required.
4-5 units, Spr (Klein, H)

HISTORY 306D. World History: Graduate Colloquium
How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynbee, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306E.
4 units, Aut (Wigen, K; Lewis, M)

HISTORY 306E. International History and International Relations Theory
(Same as HISTORY 202, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.
5 units, Win (Staff)

HISTORY 306F. Identities and Identification in the Atlantic World
How identities and processes of identification changed in Europe, Africa, and the Americas during the early modern period and as a result of the engagement of the inhabitants of these three continents in the Atlantic world.
4-5 units, Win (Herzog, T)

HISTORY 306K. World History Pedagogy Workshop
Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.
1 unit, Aut (Wigen, K; Lewis, M)

HISTORY 307A. Legal History Workshop
(Same as LAW 372.) Faculty and students from the Law school and the History department discuss research in the field of legal history. Guest speakers. Secondary literature relevant to the speaker’s research. Undergraduates require consent of instructors.
4-5 units, Spr (Herzog, T; Kessler, A)

HISTORY 308. Biography and History
(Same as HISTORY 207) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt’s Possession, Bernard Malamud’s Dubin’s Lives) that illuminate the intellectual underpinnings of biographical labor.
4-5 units, Spr (Zipperstein, S)

HISTORY 308A. Science and Law in History
(Same as HISTORY 208A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.
4-5 units, Win (Riskin, J)

HISTORY 308B. Women Activists’ Response to War
(Same as HISTORY 208B) Theoretical issues, historical origins, changing forms of women’s activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.
4-5 units, not given this year

HISTORY 309A. Postcolonial Theory and Universal History
Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.
4-5 units, Win (Kumar, A)
HISTORY 309B. The Century: Problem of the Present in Twentieth-Century Thought
(Same as HISTORY 209B) What is the present? Can it stand on its own, without invoking history and without promising a future? How did the 20th century make sense of itself, as violent and ruptured from all preceding centuries as it was, yet so prolific and promising in its revolutionary achievements and futures? The century through four concepts: time, ambiguity, cruelty, and crisis. 20th-century politics through what happened to dialectic, humanism, history, and Europe.
4-5 units, Win (Kumar, A)

HISTORY 309E. History Meets Geography
Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.
4-5 units, not given this year

HISTORY 309F. Historical Geography Colloquium: Maps in the Early Modern World
The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include research from Asia, Europe, and the Americas.
4-5 units, not given this year

HISTORY 311A. Family, Gender, and Production in Ancient Rome
(Same as CLASSGEN 220) Seminar. The household as the basic unit of production in Rome in the context of family relations and ideologies of gender. Methodological challenges of doing social and economic history from literary, epigraphic, and literary texts. Demography of family and kinship in ancient Rome. Ideologies of gender and family roles and their influence on economic production. Economic theories of the family and human capital.
4-5 units, not given this year

HISTORY 311B. Jews under Islam and Christianity in the Middle Ages
(Same as HISTORY 211B) Addresses the relationship between the Jews and the host Islamic and Christian societies during the Middle Ages (AD 500-1500). Themes, covered in a comparative context, include: the Jews’ legal status, economic and political rule, toleration and persecution, adaptation and acculturation, and religious polemics.
4-5 units, Spr (Staff)

HISTORY 311E. Ancient War
(Same as CLASSHIS 235A) Seminar on Greco-Roman warfare, looking at why and how wars were fought, their causes and consequences, and the experience and expense of fighting. Emphasis on comparative approaches, juxtaposing ancient Mediterranean war with warfare in other parts of the world, wars in earlier and later periods, and conflict among other species.
3-5 units, Win (Morris, I; Scheidel, W)

HISTORY 311F. Ancient War
(Same as CLASSHIS 235B) Continuation of 135A. Seminar on Greco-Roman warfare, looking at why and how wars were fought, their causes and consequences, and the experience and expense of fighting. Emphasis on comparative approaches, juxtaposing ancient Mediterranean war with warfare in other parts of the world, wars in earlier and later periods, and conflict among other species.
3-5 units, Spr (Morris, I)

HISTORY 311G. Big Ancient History
(Same as CLASSES 312) How the shift away from thinking about European history in terms of a western civilization model toward embedding it in stories of how global history affects research and teaching on ancient Greece and Rome. Conventional, evolutionary, and global history narratives of the past 5,000 to 15,000 years and some new ideas about how Greco-Roman history might fit into different storylines.
4-5 units, not given this year

HISTORY 312. Holy Wars: Medieval Perspectives
(Same as HISTORY 212) Cultural and societal factors at play in Christian holy war from late antiquity to the early modern era. Topics include: the Crusades and their meanings; armed struggle against heresy; and the wars of religion. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 313. Core Colloquium in Medieval European History
4-5 units, not given this year

HISTORY 314. Graduate Core Colloquium in Medieval European History
4-5 units, Aut (Miller, K)

HISTORY 316A. Muslims and Infidels: Islam and the Crusades
(Same as HISTORY 216A) The impact of the Crusades on the Muslim world and consciousness from the Middle Ages and to the present. Primary and secondary sources. Themes include: jihad; cultural interaction between Muslims and Christians in the Holy Land; and military, political, and ideological developments in the 12th and 13th centuries. Modern interpretations and debates about jihadist theology and global jihad.
4-5 units, not given this year

HISTORY 317. Medieval Seminar: Classics and Key Works
(Same as HUMNTIES 322) Colloquium focused on key primary sources that allow entry into Medieval European culture. Readings include: Augustine, On Christian Doctrine; Gregory the Great, Moralia on the Book of Job; Beowulf; the Song of Roland; and Aquinas, Summa Theologia.
3-5 units, not given this year

HISTORY 317A. Poverty and Charity in Medieval Christianity, Judaism, and Islam
(Same as HISTORY 217A) Topics include: Jewish, Christian, and Islamic theoretical discussions of poverty and charity; normative law versus actual practice; the voice of the poor in available source; and formal and informal institutions of charity in the medieval Mediterranean region.
4-5 units, Spr (Miller, K)

HISTORY 317B. Land of Three Religions: Medieval Spain
(Same as HISTORY 217B) The history of the Iberian peninsula from the Islamic conquest of 711 to the Christian expulsion of the Jews in 1492. Focus is on forms of confrontation, confluence, and hostile indifference among medieval Jews, Christians, and Muslims. What were undercurrents of aggression that gave rise to persecution of the other; what elements of commonality among groups gave rise to intellectual advancements?
4-5 units, Aut (Miller, K)

HISTORY 318A. Barcelona to Berlin: Muslim Minorities in History
(Same as HISTORY 218A) Muslim minorities under non-Muslim rule in different historical contexts and configurations such as enclaves and diasporas, from the Middle Ages to the present.
4-5 units, Spr (Miller, K)

HISTORY 319B. Secularity
Classic theories of secularity. Is a secular world possible? How does, historically seen, the notion of the secular emerge, impose itself, and get challenged? Readings include Max Weber, E. Durkheim, R.A. Markus, Carl Schmitt, and Hans Blumenberg, and studies bearing on the Middle Ages, English monastic secularization, the French Revolution, and 20th-century political religions.
4-5 units, Spr (Buc, P)

HISTORY 320G. Demons, Witches, Holy Fools, and Folk Belief: Popular Religion in Russia, 19th and 20th Centuries
(Same as HISTORY 220G) Popular religion in Russia, focusing on life in the provinces in ages in the nineteenth and early twentieth centuries. The double faith of Orthodox Christianity combined with folk beliefs. Topics include: parish priests, witchcraft, possession, Holy Fools, Old Believers, spiritual elders, saints, icons, religious cults, and women’s lay religious movements.
4-5 units, Win (Kollmann, J)

HISTORY 321A. Classics of Russian Historiography
Main trends of Russian intellectual history as seen through major historians’ treatment of Muscovy: Romanticism, Slavophilism,
Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.
4-5 units, Aut (Kollmann, N)

HISTORY 321B. Imperial Russian Historiography
4-5 units, not given this year

HISTORY 321C. Historiography of the Soviet Union
Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories.
4-5 units, not given this year

HISTORY 322. Topics in Early Modern Russian History
4-5 units, not given this year

HISTORY 323. Art and Ideas in Imperial Russia
(Same as HISTORY 223) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.
4-5 units, not given this year

HISTORY 323B. Research Methodologies in Early Modern Russian History
4-5 units, not given this year

HISTORY 323F. The Nationality Question in the Russian Empire and the Soviet Union
(Same as HISTORY 223F) Examines the shaping of ethnonational identity and nationalities policy in imperial Russia and the Soviet Union, concluding with an overview of nationalism in the post-Soviet states. Topics include the cultural strategies pursued by governments in St. Petersburg and Moscow under the Romanovs and the Soviets, Marxist ideology on the nationality question, the influence of the Second World War on national identities inside the Soviet Union, and the role of ethnonationalism in the break up of the USSR.
4-5 units, Spr (Patenaude, B)

HISTORY 324B. Modern Afghanistan
(Same as HISTORY 224B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder.
4-5 units, not given this year

HISTORY 324F. The Caucasus and the Muslim World
The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.
4-5 units, not given this year

HISTORY 327. East European Women and War in the 20th Century
(Same as HISTORY 227) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women’s involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activitists in peace movements, and objects of wartime destruction, displacement, and sexual violation.
4-5 units, Win (Jolluck, K)

HISTORY 328. Circles of Hell: Poland in World War II
(Same as HISTORY 228) The experience and representation of Poland’s wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society.
5 units, not given this year

HISTORY 329. Poles and Jews
(Same as HISTORY 229) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today.
4-5 units, Spr (Jolluck, K)

HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Regime
Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.
4-5 units, not given this year

HISTORY 330A. Core Colloquium on Early Modern Europe
Historiographical survey from the Renaissance to the Enlightenment. Topics include the Reformations, European expansion, state and nation building, invention and scientific discovery, intellectual history, and gender. In-depth reviews determined by student interests.
4-5 units, Aut (Stokes, L)

HISTORY 331B. Core Colloquium on Modern Europe: The 19th Century
The major events and historiographical debates of the 19th century from the French Revolution to WW I.
4-5 units, not given this year

HISTORY 331C. Core Colloquium on Modern Europe
The historiography of 20th-century Europe. Topics include WW I, the Russian Revolution, National Socialism, and the EU.
4-5 units, Win (Satta, P)

HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History
4-5 units, not given this year

HISTORY 332A. Power, Art, and Knowledge in Renaissance Italy
4-5 units, not given this year

HISTORY 332B. Rome: The City and the World, 1350-1750
(Same as HISTORY 232) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.
4-5 units, not given this year

HISTORY 332D. Rome: The City and the World, 1350-1750
(Same as HISTORY 232D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.
4-5 units, not given this year

HISTORY 332F. The Scientific Revolution
What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.
4-5 units, not given this year

HISTORY 333. Reformation, Political Culture, and the Origins of the English Civil War
(Same as HISTORY 233) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War.
4-5 units, not given this year

HISTORY 333B. Early Modern Sexualities
(Same as HISTORY 233B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources.
4-5 units, not given this year
HISTORY 333C. Two British Revolutions
(Same as HISTORY 233C) Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.
4-5 units, Aut (Como, D)

HISTORY 333K. The Invention of the Modern Republic
(Same as HISTORY 233K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.
4-5 units, Spr (Staff)

HISTORY 334. Enlightenment Seminar
(Same as HUMNTIES 324) The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.
3-5 units, Win (Riskin, J)

HISTORY 334C. Counterinsurgency in History
(Same as HISTORY 234C) Classic texts and case studies of insurgency and counterinsurgency from the 19th century to the present.
4-5 units, Win (Sheehan, J)

HISTORY 335. History of European Law, Medieval to Contemporary
(Same as HISTORY 135) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, and the legal professions.
4-5 units, Spr (Herzog, T)

HISTORY 336. Modern France
4-5 units, not given this year

HISTORY 336A. European Nationalism, 1600 to the Present
(Same as HISTORY 236A) Theory and practice of nationalism from its genesis. What is the nation and how is it built? What is its relationship to the state? How do national movements adapt to changing ideological and geopolitical contexts? Focus is on Europe; attention to other parts of the world as required by theory studies.
4-5 units, Aut (Ward, J)

HISTORY 336B. The Idea of Society
(Same as HISTORY 236B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber.
4-5 units, Win (Baker, K; Sheehan, J)

HISTORY 336C. Reordering Europe, 1917-1923
(Same as HISTORY 236C) The struggle to craft a new European order after the disaster of the First World War. Topics: Wilsonian versus Leninist visions for Europe, Paris Peace Conference, early Weimar Germany, state-building in Yugoslavia, Greek-Turkish population exchanges, Polish-Soviet War, and Fascist rise to power in Italy. Major component of course involves student presentations and research with primary sources.
4-5 units, Win (Ward, J)

HISTORY 336E. Violence in History and Theory
Methodological challenges associated with defining and analyzing violence in late-19th- and 20th-century contexts. How people witnessed, coped with, and survived violent episodes. Cases of state violence, ethnic and religious conflict, warfare, genocide, and decolonization. The notion of everyday suffering in the contemporary world. Sources include anthropology, sociology, and history.
4-5 units, not given this year

HISTORY 337. The Holocaust
(Same as HISTORY 137) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.
4-5 units, Win (Felstiner, M)

HISTORY 337C. Memory, History, and Education
(Same as EDUC 356) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwart its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to this process?
3-5 units, not given this year

HISTORY 338A. Modern Britain: Facing Europe and Empire, Part I
Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.
4-5 units, not given this year

HISTORY 338B. Modern Britain, Part II
Themes include empire and racism, the crisis of liberalism, the rise of the welfare state, national identity, the experience of total war, the politics of decline, and modernity and British culture.
4-5 units, not given this year

HISTORY 339D. Capital and Empire
(Same as HISTORY 239D, HUMNTIES 191S) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development.
4-5 units, Spr (Satta, P)

HISTORY 339F. Empire and Information
(Same as HISTORY 239F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.
4-5 units, not given this year

HISTORY 339H. Modern European History in a Global Age
How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, postcolonialism, modern warfare, and the media.
4-5 units, Aut (Naranch, B)

HISTORY 341A. The Emergence of Medicine: The Middle Ages and the Renaissance
How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. Students are required to attend the concurrent lectures of HISTORY 141A.
4-5 units, Win (Findlen, P)

HISTORY 342. Darwin in the History of Life
Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of death and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. Attendance at the lectures of HISTORY 142 is required.
4-5 units, Spr (Proctor, R)
and why those worldviews and experiences changed.

by African Muslims. The interplay of religion, politics, culture and
c and household change in the period before the scramble for Africa in
 slavery in Africa, the impact of the slave trade on African socie-
ties, state formation, economic change, religious change, and
household change in the period before the scramble for Africa in
the late 19th century.

4-5 units, not given this year

HISTORY 343G. Tobacco and Health in World History
(Same as HIST 243G)
4-5 units, Aut (Proctor, R)

HISTORY 345A. Africa in the Era of the Slave Trade
The slave trade, including the trans-Saharan, Indian Ocean, and
trans-Atlantic trades, constituted nearly a millennium of interaction
with the wider world and set in motion transformations in African
societies, polities, and cultures. Topics include the debates about
slavery in Africa, the impact of the slave trade on African socie-
ties, state formation, economic change, religious change, and
household change in the period before the scramble for Africa in
the late 19th century.

4-5 units, Aut (Roberts, R)

HISTORY 346. The Dynamics of Change in Africa
(Same as AFRICAST 301A) Crossdisciplinary colloquium; re-
quired for the M.A. degree in African Studies. Addresses critical
issues in African Studies by exploring intersections of the organi-
zation of power, structure of the economy, and patterns of social
stratification. Interpretive debates on Africa’s engagement with the
slave trade, impact of colonialism, decolonization, democratization
and civil wars, health and society, and Africa’s engagement with
globalization. The process of knowledge production and its social
localization. The process of knowledge production and its social
location, and the current state of knowledge.

4-5 units, Aut (Roberts, R)

HISTORY 347E. Health and Society in Africa
(Same as HISTORY 245E) The history of disease, therapeutic and
diagnostic systems, and the definition of health in precolonial,
colonial, and postcolonial Africa. The social and political histories
of specific epidemics, including sleeping sickness, influenza, TB,
mental illness, and AIDS. The colonial contexts of epidemics and
the social consequences of disease.

4-5 units, not given this year

HISTORY 348. Islam in Africa
(Same as HISTORY 248) Relations between African Muslims and
the broader Islamic tradition over the last 1200 years. The roots of
the Islamic tradition, its adoption, endogenization, and elaboration
by African Muslims. The interplay of religion, politics, culture and
society, and how tradition exercises influence even while being
transformed. The worldviews and lives of African Muslims; how
and why those worldviews and experiences changed.

4-5 units, Spr (Hanretta, S)

HISTORY 348D. Law and Colonialism in Africa
(Same as HISTORY 245G) Law in colonial Africa provides an
opportunity to examine the meanings of social, cultural, and eco-

nomic change in the anthropological, legal, and historical ap-

proaches. Court cases as a new frontier for the social history of
Africa. Topics: meanings of conflicts over marriage, divorce, inhe-

ritance, property, and authority.

4-5 units, Win (Roberts, R)

HISTORY 349, History without Documents
(Same as HISTORY 249) Can history be written about places and
times for which are no written sources, or for people in literate
societies who left no written traces? Practical training in historical
methods for non-documentary sources, including oral traditions
and history, archaeology, ecological sources, historical linguistics,
ethnography, rituals, myths, songs, and art.

4-5 units, not given this year

HISTORY 351B. Core in American History, Part II
4-5 units, Aut (Winterer, C)

HISTORY 351C. Core in American History, Part III
4-5 units, not given this year

HISTORY 351D. Core in American History, Part IV
4-5 units, Win (White, R)

HISTORY 351E. Core in American History, Part V
4-5 units, not given this year

HISTORY 351F. Core in American History, Part VI
Required of all first-year Ph.D. students in U.S. History.
4-5 units, Spr (Chang, G)

HISTORY 352. Creating the American Republic
(Same as LAW 246, POLISCI 222P) Concepts and developments
in the late 18th-century invention of American constitutionalism;
the politics of constitution making and ratifying; emergence of
theories of constitutional interpretation including originalism; early
notions of judicial review. Primary and secondary sources.

4-5 units, History (Winterer, C)

HISTORY 352B. History of American Law
(Same as LAW 318.) Modern history of American law, legal
thought, legal institutions and the legal profession. Topics include
law and regulation of corporate organizations and labor relations
in the age of enterprise, law of race relations in the South and North,
development of classical legalism, critiques of classical legalism,
modern administrative state, organized legal profession, New Deal
legal thought and legislation, legal order of the 50s, expansion of
enterprise liability, civil rights movements from 1940, rights revolu-
tion of the Warren Court and Great Society.

5 units, Spr (Friedman, L)

HISTORY 353D. Approaches to American Legal History
(Same as LAW 651.) Legal history may once have been primarily
dedicated to explaining legal doctrines and key judicial opinions, and
thus to be of interest mainly to legal scholars and lawyers. Now,
the best writing in legal history resembles historical writing more
generally, and the study of legal ideas and practices is increasingly
integrated with social, intellectual, cultural, and political history.
Examines recent writings in American legal history, ranging
broadly across time and space to ask how the field reflects develop-
ments in historical writing more generally, and how the use of
legal materials affects our understanding of major aspects of
American history.

4-5 units, Aut (Rakove, J)

HISTORY 355. Decision Making in International Crises: The
A-Bomb, the Korean War, and the Cuban Missile Crisis
(Same as HISTORY 252) For advanced undergraduates and grad-
uate students. Primary documents and secondary literature. Topics
include: the decision to use the atomic bomb on Japan, the Korean
War, and the Cuban missile crisis.

4-5 units, Aut (Winterer, C)

HISTORY 355D. Racial Identity in the American Imagination
(Same as AFRICAAM 255, HISTORY 255D) Major historical
transformations shaping the understanding of racial identity and
how it has been experienced, represented, and contested in Ameri-
can history. Topics include: racial passing and racial performance;
migration, immigration, and racial identity in the urban context;
the interplay between racial identity and American identity; the
problems of class, gender, and sexuality in the construction of
racial identity. Sources include historical and legal texts, memoirs,
photography, literature, film, and music.

4-5 units, Spr (Hobbs, A)

HISTORY 356. U.S.-China Relations: From the Opium War
to Tiananmen
(Same as HISTORY 256) The history of turbulent relations, mili-
tary conflict, and cultural clashes between the U.S. and China, and
the implications for the domestic lives of these increasingly inter-
connected countries. Diplomatic, political, social, cultural, and
military themes from early contact to the recent past. WIM
4-5 units, Win (Chang, G)

HISTORY 358. History of Sexuality in the U.S.
(Same as HISTORY 258) Priority to History and Feminist Studies
majors; a limited number of graduate students may be admitted.
Recent historical interpretations of sexual violence, emphasizing
the intersections of gender and race in the construction of rape in early
America and in Canada, the racialization of rape, lynching and anti-
lynching in the U.S., and feminist responses to sexual violence.
4-5 units, not given this year

HISTORY 365. Writing Asian American History
(Same as HISTORY 265) Recent scholarship in Asian American
history, with attention to methodologies and sources. Topics: racial
ideologies, gender, transnationalism, culture, and Asian American
art history. Primary research paper.
3 units, Win (Chang, G)
COURSES OF INSTRUCTION

HISTORY 368E. American Foreign Policy and International History, 1941-2009
(Same as HISTORY 268E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war.
4-5 units, Spr (Bernstein, B)

HISTORY 373A. The European Expansion
(Same as HISTORY 273) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.
4-5 units, not given this year

HISTORY 375F. Social Change in Latin America Since 1900
(Same as HISTORY 275F, LATINAM 201, LATINAM 301) Changes in the social and demographic characteristics of Latin American populations since 1900 and the response of national governments in terms of the evolution of social welfare, health, and educational systems. Fulfills requirement for Latin American Studies honors seminar. Required core course for Latin American Studies master’s students.
4-5 units, Spr (Klein, H)

HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern
(Same as POLISCI 346S) If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.
5 units, not given this year

HISTORY 378E. Political Economy of Development
